Course Overview

Building information modeling solutions create and operate on digital databases for collaboration, manage change throughout those databases so that a change to any part of the database is coordinated in all other parts, and capture and preserve information for reuse by additional industry-specific applications. Through the application of information technology to the problem of describing a building in software, they enable higher quality work, greater speed, and improved cost effectiveness for the design, construction, and operation of buildings. The course will focus on the starting stages of the Building Information Modeling concepts and then introducing the tools required to accomplish the BIM concepts throughout the course. The course starts with the initial phase of understanding the BIM concepts clearly. Each chapter within a Module will contain lectures on the BIM concepts which include the industry standards, demand in the industry etc.

Course Objective
