1. To understand Blockchain's fundamental components, and examine decentralization using blockchain.
2. To understand Cryptocurrency and its background concepts.
3. To learn smart contract programing language solidity.
4. To understand public blockchain application development platform and develop distributed applications.
5. To understand enterprise blockchain application development platform and develop distributed enterprise applications

UNIT I	**INTRODUCTION**	9
Need for Distributed Record Keeping, Modeling faults and adversaries, Byzantine Generals problem, Consensus algorithms and their scalability problems, Nakamoto's concept with Blockchain based cryptocurrency, Technologies Borrowed in Blockchain – hash function, consensus, byzantine fault-tolerant, distributed computing, 51% attack, digital cash etc.		CO1
UNIT II	**CRYPTOCURRENCY BASICS**	9
Bitcoin blockchain, Challenges and solutions, Crypto mining, mining types, mining hardware, proof of work, Proof of stake, alternatives to Bitcoin consensus, other crypto currencies like Ethereum, Tether, BNB etc		CO2
UNIT III	**SOLIDITY WALKTHROUGH**	9
Introduction to Ethereum blockchain – Ethereum Virtual Machine – remix IDE - MetaMask wallet – running simple smart contract – voting application – Lottery application – File sharing application		CO3
UNIT IV	**PUBLIC BLOCKCHAIN APPLICATION DEVELOPMENT**	9
Create Github Account, Create Repository, Create Azure Organization, Create a new pipeline, Build a sample code, Modify azure-pipelines.yaml file		CO4
UNIT V	**ENTERPRISE BLOCKCHAIN APPLICATION DEVELOPMENT**	9
Introduction to Hyperledger – Hyperledger Fabric architecture- language supports for hyperledger fabric – setting up hyprledger fabric - Building application in hyperledger fabric.		CO5

TOTAL : 45 PERIODS

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Understand Blockchain's fundamental components, and examine decentralization using blockchain.
CO2	Understand Cryptocurrency and its background concepts
CO3	Write smart contract using programing language solidity.
CO4	Develop distributed applications using public blockchain application development platform Ethereum.
CO5	Develop distributed applications using enterprise blockchain application development platform Hyperledger

VAC005	INDUSTRIAL PRACTICES WITH DEVOPS	L	T	P	C
		1	0	2	2

OBJECTIVES

1. To introduce DevOps terminology, definition & concepts
2. To understand the Maven, Profiles and Plugins
3. To understand the concepts of Continuous Integration/ Continuous Testing/ ContinuousDeployment using Jenkins
4. To understand to leverage Cloud-based DevOps tools using Azure DevOps
5. Illustrate the benefits and drive the adoption of cloud-based Devops tools to solve realworld problems

UNIT I	**INTRODUCTION TO DEVOPS**	**9**
Devops Essentials - Introduction to AWS, GCP, Azure - Version control systems: Git and Github		**CO1**
UNIT II	**COMPILE AND BUILD USING MAVEN & GRADLE**	**9**
Introduction, Installation of Maven, POM files, Maven Build lifecycle, Build phases (compile build, test, package) Maven Profiles, Maven repositories (local, central, global), Maven plugins, Maven create and build Artifacts, Dependency management, Installation of Gradle, understand build using Gradle		**CO2**
UNIT III	**CONTINUOUS INTEGRATION USING JENKINS**	**9**
Install & Configure Jenkins, Jenkins Architecture Overview, creating a Jenkins Job, configuring a Jenkins job, Introduction to Plugins, Adding Plugins to Jenkins, commonly used plugins (Git Plugin, Parameter Plugin, HTML Publisher, Copy Artifact and Extended choice parameters). Configuring Jenkins to work with java, Git and Maven, Creating a Jenkins Build and Jenkins workspace		**CO3**
UNIT IV	**BUILDING DEVOPS PIPELINES USING AZURE**	**9**
Create Github Account, Create Repository, Create Azure Organization, Create a new pipeline, Build a sample code, Modify azure-pipelines.yaml file		**CO4**
UNIT V	**DEVOPS PRACTICALS**	**9**
Create Maven Build pipeline in Azure - Run regression tests using Maven Build pipeline in Azure - Install Jenkins in Cloud - Create CI pipeline using Jenkins - Create a CD pipeline in Jenkins and deploy in Cloud		**CO5**
		TOTAL : 45PERIODS

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Understand different actions performed through Version control tools like Git.
CO2	Compile and Build using Maven & Gradle applications
CO3	Ability to Perform Continuous Integration using Jenkins.
CO4	Understand to leverage Cloud-based DevOps tools using Azure DevOps
CO5	Develop various Devops applications

VAC006	APPLIED MACHINE LEARNING WITH PYTHON	L	T	P	C
		1	0	2	2

OBJECTIVES

- To provide a basic understanding of data manipulation.
- To understand scikit learn for model evaluation.
- To provide a comprehensive understanding of neural networks and computer vision.

UNIT I	**DATA MANIPULATION WITH PYTHON LIBRARIES**	9
Overview of Data Manipulation with Python-Introduction to Pandas and NumPy-Data Cleaning and Preprocessing-Handling Missing Data-Data Exploration and Analysis		CO1
UNIT II	**MACHINE LEARNING BASICS WITH SCIKIT-LEARN**	9
Introduction to Machine Learning-Types of Machine Learning Algorithms-Overview of Decision Trees and Random Forests-Hands-on Implementation with Scikit-Learn-Model Evaluation and Validation.		CO2
UNIT III	**LINEAR REGRESSION AND BEYOND**	9
Linear Regression Fundamentals-Implementing Linear Regression from Scratch-Logistic Regression for Classification-Introduction to Support Vector Machines (SVM)-Hands-on Exercises with Scikit-Learn.		CO3
UNIT IV	**ADVANCED MACHINE LEARNING TECHNIQUES**	9
Introduction to Gradient Boosting-Implementation of Gradient Boosting with XGBoost-Neural Networks Basics with PyTorch-Deep Learning Fundamentals-Applications of Neural Networks.		CO4
UNIT V	**COMPUTER VISION AND TRANSFER LEARNING**	9
Image Classification with Convolutional Neural Networks (CNN)-Transfer Learning Concepts and Applications-Hands-on Image Classification with PyTorch-Fine-tuning Pre-trained Models-Building Custom Models for Specific Tasks.		CO5
	TOTAL: 45 PERIODS

1. “Data Wrangling with Pandas" by Kevin Markham - A practical guide that delves into data cleaning, preprocessing, handling missing data, and exploratory data analysis using Pandas. 2. "Hands-On Machine Learning with Scikit-Learn, Keras, and TensorFlow" by Aurélien Géron - A comprehensive guide that covers a wide range of machine learning topics, including decision trees, random forests, and model evaluation with scikit-learn.	
COURSE OUTCOMES	
Upon completion of the course, students will be able to	
CO1	To understand a predictive model that can classify or regress on data by recursively partitioning.
CO2	To develop a foundational understanding of the underlying algorithms, optimizing model parameters
CO3	To build a robust and high-performance ensemble model for regression or classification tasks.
CO4	To understand the automatic learning of hierarchical representations from data for tasks such as classification, regression, and feature extraction.
CO5	To incorporating transfer learning are to leverage pre-trained models to efficiently learn and classify features in images, facilitating accurate predictions.

St. JOSEPH'S COLLEGE OF ENGINEERING

(An Autonomous Institution)

St. JOSEPH'S GROUP OF INSTITUTIONS

OMR, CHENNAI - 119

B.TECH. ARTIFICIAL INTELLIGENCE AND DATA SCIENCE

REGULATION – 2021

CHOICE BASED CREDIT SYSTEM

I - VIII SEMESTERS CURRICULA AND SYLLABI

Batch-(2021-2025)

PROGRAM EDUCATIONAL OBJECTIVES (PEOs)

PEO1: Graduates to exploit the knowledge of basic science, mathematics, statistics, and data science to build systems that require management and analysis of large volumes of real time data.

PEO2: To enrich the graduates with technical and professional skills to apply the concept of Artificial Intelligence to develop elegant solutions for the complex problems in various domains.

PEO3: To enable the graduates to think logically, pursue lifelong learning, and pioneering research in the field of Artificial Intelligence and Data Science to create disruptive and sustainable solutions for the real world issues.

PEO4: To inculcate ethical attitude, social responsibilities, and soft skills to work as a team to solve social, business and environmental problems.

PROGRAM OUTCOMES (POs)

Engineering Graduates will be able to:

PO1: **Engineering knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals and an engineering specialization to the solution of complex engineering problems.

PO2: **Problem analysis:** Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3: **Design/development of solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4: **Conduct investigations of complex problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO5: **Modern tool usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

PO6: **The engineer and society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

PO7: **Environment and sustainability:** Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PO8: **Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

PO9: **Individual and team work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PO10: **Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PO11: **Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

PO12: **Life-long learning:** Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PROGRAM SPECIFIC OUTCOMES (PSOs)

PSO1: Understand, Analyze, evolve and develop AI based efficient domain specific processes for effective decision making in several domains such as business, IT and governance.

PSO2: Able to arrive at actionable foresight, insight, hindsight from data for solving business and engineering problems by applying mathematical, statistical and computational principles

PSO3: Create, select and apply the theoretical knowledge of AI and Data Analytics along with practical industrial tools and techniques to manage and solve societal problems.

	Common for all Branches of B.E. / B. Tech Programmes	3	0	0	3

OBJECTIVES

- To develop the basic reading and writing skills of first year engineering and technology students.
- To help learners develop their listening skills, which will, enable them listen to lectures and comprehend them by asking questions; seeking clarifications.
- To help learners develop their speaking skills and speak fluently in real contexts.
- To help learners develop vocabulary of a general kind by developing their reading skills.

UNIT I	**SHARING INFORMATION RELATED TO ONESELF/FAMILY& FRIENDS**	9
Reading–critical reading–finding key information in a given text – shifting facts from opinions - Writing -autobiographical writing - developing hints. Listening- short texts- short formal and informal conversations. Speaking- basics in speaking - introducing oneself - exchanging personal information- speaking on given topics & situations Language development–voices-Wh- Questions- asking and answering-yes or no questions–parts of speech. Vocabulary development-- prefixes- suffixes- articles - Polite Expressions.		CO1
UNIT II	**GENERAL READING AND FREE WRITING**	9
Reading: Short narratives and descriptions from newspapers (including dialogues and conversations; Reading Comprehension Texts with varied question types - Writing – paragraph writing- topic sentence- main ideas- free writing, short narrative descriptions using some suggested vocabulary and structures –. Listening-long texts-TED talks-extensive speech on current affairs and discussions Speaking–describing a simple process–asking and answering questions - Language development – prepositions, clauses. Vocabulary development- guessing meanings of words in context –use of sequence words.		CO2
UNIT III	**GRAMMAR AND LANGUAGE DEVELOPMENT**	9
Reading- short texts and longer passages (close reading) & making a critical analysis of the given text Writing–types of paragraph and writing essays – rearrangement of jumbled sentences. Listening: Listening to ted talks and long speeches for comprehension. Speaking- role plays - asking about routine actions and expressing opinions. Language development- degrees of comparison- pronouns- Direct vs. Indirect Questions. Vocabulary development – idioms and phrases- cause & effect expressions, adverbs.		CO3
UNIT IV	**READING AND LANGUAGE DEVELOPMENT**	9
Reading- comprehension-reading longer texts- reading different types of texts- magazines. Writing- letter writing, informal or personal letters-e-mails-conventions of personal email- Listening: Listening comprehension (IELTS, TOEFL and others). Speaking –Speaking about friends/places/hobbies - Language development- Tenses- simple present-simple past- present continuous and past continuous- conditionals – if, unless, in case, when and others Vocabulary development- synonyms-antonyms- Single word substitutes- Collocations.		CO4
UNIT V	**EXTENDED WRITING**	9
Reading: Reading for comparisons and contrast and other deeper levels of meaning –Writing- brainstorming -writing short essays – developing an outline- identifying main and subordinate ideas- dialogue writing-Listening - popular speeches and presentations - Speaking- impromptu speeches & debates Language development-modal verbs- present/ past perfect tense - Vocabulary development-Phrasal verbs- fixed and semi-fixed expressions.		CO5
		TOTAL : 45 PERIODS

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Speak clearly, confidently, comprehensibly, and communicate with one or many listeners using appropriate communicative strategies.
CO2	Write cohesively and coherently and flawlessly avoiding grammatical errors, using a wide vocabulary range, organizing their ideas logically on a topic.
CO3	Read different genres of texts adopting various reading strategies.
CO4	Listen/view and comprehend different spoken discourses/excerpts in different accents
CO5	Identify topics and formulate questions for productive inquiry

MA1102	ENGINEERING MATHEMATICS–1	L	T	P	C
	Common for all branches of B.E. / B. Tech Programmes	3	1	0	4

OBJECTIVES

- The goal of this course is to achieve conceptual understanding and to retain the best traditions of traditional calculus.
- The syllabus is designed to provide the basic tools of calculus mainly for the purpose of modeling the engineering problems mathematically and obtaining solutions.
- Matrix Algebra is one of the powerful tools to handle practical problems arising in the field of engineering.
- This is a foundation course of Single Variable and multivariable calculus plays an important role in the understanding of science, engineering, economics and computer science, among other disciplines.

UNIT I	**MATRICES**	9+3
Eigenvalues and Eigenvectors of a real matrix – Characteristic equation – Properties of Eigenvalues and Eigenvectors – Cayley-Hamilton theorem – Diagonalization of matrices – Reduction of a quadratic form to canonical form by orthogonal transformation – Nature of quadratic forms		CO1
UNIT II	**CALCULUS OF ONE VARIABLE**	9+3
Limit of a function - Continuity - Derivatives - Differentiation rules – Interval of increasing and decreasing functions – Maxima and Minima - Intervals of concavity and convexity.		CO2
UNIT III	**CALCULUS OF SEVERAL VARIABLES**	9+3
Partial differentiation – Homogeneous functions and Euler's theorem – Total derivative – Change of variables – Jacobians – Partial differentiation of implicit functions – Taylor's series for functions of two variables – Maxima and minima of functions of two variables – Lagrange's method of undetermined multipliers.		CO3
UNIT IV	**INTEGRAL CALCULUS**	9+3
Definite and Indefinite integrals - Substitution rule - Techniques of Integration - Integration by parts, Trigonometric integrals, Trigonometric substitutions, Integration of rational functions by partial fraction, Integration of irrational functions - Improper integrals.		CO4
UNIT V	**MULTIPLE INTEGRALS**	9+3
Double integrals – Change of order of integration – Double integrals in polar coordinates – Area enclosed by plane curves – Change of variables from Cartesian to polar in double integrals-Triple integrals – Volume of solids		CO5
		TOTAL : 60 PERIODS

TEXT BOOKS

1. Grewal B.S., Higher Engineering Mathematics‖, Khanna Publishers, New Delhi, 43rd Edition, 2014.
2. James Stewart, "Calculus: Early Transcendental", Cengage Learning, 7th Edition, New Delhi,2015. [For Units I & III - Sections 2.2, 2.3, 2.5, 2.7(Tangents problems only), 2.8, 3.1 to 3.6,

3.11, 4.1, 4.3, 5.1(Area problems only), 5.2, 5.3, 5.4 (excluding net change theorem), 5.5, 7.2 - 7.4 and 7.8].

REFERENCE BOOKS

1. Anton, H, Bivens, I and Davis, S, "Calculus", Wiley, 10th Edition, 2016.
2. Jain R.K. and Iyengar S.R.K., —Advanced Engineering Mathematics‖, Narosa Publications, New Delhi, 3rd Edition, 2007.
3. Narayanan, S. and Manicavachagom Pillai, T. K., —Calculus" Volume I and II, S. Viswanathan Publishers Pvt. Ltd., Chennai, 2007.
4. Srimantha Pal and Bhunia, S.C, "Engineering Mathematics" Oxford University Press, 2015.
5. T. Veerarajan. Engineering Mathematics – I, McGraw Hill Education; First edition 2017.

COURSE OUTCOMES
Upon completion of the course, students will be able to

CO1	Have a clear idea of matrix algebra pertaining Eigenvalues and Eigenvectors in addition dealing with quadratic forms.
CO2	Understand the concept of limit of a function and apply the same to deal with continuity and derivative of a given function. Apply differentiation to solve maxima and minima problems, which are related to real world problems.
CO3	Have the idea of extension of a function of one variable to several variables. Multivariable functions of real variables are inevitable in engineering.
CO4	Understand the concept of integration through fundamental theorem of calculus. Also acquire skills to evaluate the integrals using the techniques of substitution, partial fraction and integration by parts along with the knowledge of improper integrals.
CO5	Do double and triple integration so that they can handle integrals of higher order which are applied in engineering field.

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)

PH1103	ENGINEERING PHYSICS	L	T	P	C
	Common for all branches of B.E. / B. Tech Programmes	3	0	0	3

OBJECTIVES

- To make the students to understand about the elastic property and stress strain diagram.
- To educate the students about principle of laser and its role in optical fibers and its applications as sensors and communication.
- To teach the students about the heat transfer through solids and liquids.
- To educate the students about the quantum concepts and its use to explain black body radiation, Compton effect, tunnelling electron microscopy and its applications.
- To make the students to understand the importance of various crystal structures and various growth techniques.

UNIT I	PROPERTIESOF MATTER	9
	Elasticity – Stress-strain diagram and its uses - factors affecting elastic modulus and tensile strength – torsional stress and deformations – twisting couple - torsion pendulum: theory and experiment - bending of beams - bending moment – cantilever: theory and experiment – uniform and non-uniform bending: theory and experiment – Practical applications of modulus of elasticity-I-shaped girders - stress due to bending in beams.	CO1
UNIT II	LASER ANDFIBER OPTICS	9
	Lasers : population of energy levels, Einstein's A and B coefficients derivation – resonant cavity, optical amplification (qualitative) – Nd-YAG Laser-Semiconductor lasers: homo junction and heterojunction – Industrial and medical applications of Laser– Fiber optics: principle, numerical aperture and acceptance angle - types of optical fibres (material, refractive index, mode) – losses associated with optical fibers – Fabrication of Optical fiber-Double crucible method-fibre optic sensors: pressure and displacement-Industrial and medical applications of optical fiber-Endoscopy-Fiber optic communication system.	CO2
UNIT III	THERMAL PHYSICS	9
	Transfer of heat energy – thermal expansion of solids and liquids – expansion joints - bimetallic strips - thermal conduction, convection and radiation – heat conductions in solids – thermal conductivity –Rectilinear flow of heat- Lee's disc method: theory and experiment - conduction through compound media (series and parallel)-Radial flow of heat– thermal insulation – applications: heat exchangers, refrigerators, oven, Induction furnace and solar water heaters.	CO3
UNIT IV	QUANTUMPHYSICS	9
	Black body radiation – Planck's theory (derivation) – Compton effect: theory and experimental verification – wave particle duality – electron diffraction – concept of wave function and its physical significance – Schrödinger's wave equation – time independent and time dependent equations – particle in a one-dimensional rigid box – Electron microscope-tunnelling (qualitative) - scanning tunnelling microscope-Applications of electron microscopy.	CO4
UNIT V	CRYSTAL PHYSICS	9
	Single crystalline, polycrystalline and amorphous materials – single crystals: unit cell, crystal systems, Bravais lattices, directions and planes in a crystal, Miller indices – inter-planar distances coordination number and packing factor for SC, BCC, FCC, HCP and diamond structures – Graphite structure-crystal imperfections: point defects, line defects – Burger vectors, stacking faults – growth of single crystals: solution and melt growth techniques-Epitaxial growth-Applications of Single crystal (Qualitative).	CO5

TEXT BOOKS

1. Bhattacharya, D.K. & Poonam, T. “Engineering Physics”. Oxford University Press,2019.
2. Gaur, R.K. & Gupta, S.L. “Engineering Physics”. Dhanpat Rai Publishers,2017.
3. Pandey, B.K. & Chaturvedi, S. “Engineering Physics”. Cengage Learning India,2019.

REFERENCE BOOKS

1. Halliday, D., Resnick, R. & Walker, J. “Principles of Physics”. Wiley,2015.
2. Serway, R.A. & Jewett, J.W. “Physics for Scientists and Engineers”. Cengage Learning, 2019.
3. Tipler, P.A. & Mosca, G. “Physics for Scientists and Engineers with Modern Physics’. W.H.Freeman,2007.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Gain knowledge on the basics of properties of matter and itsapplications,
CO2	Acquire knowledge on the concepts of waves and optical devices and their applications in fibreoptics.
CO3	Have adequate knowledge on the concepts of thermal properties of materials and their applications in expansion joints and heatexchangers.
CO4	Get knowledge on advanced physics concepts of quantum theory and its applications in tunneling microscopes,and
CO5	Understand the basics of crystals, their structures and different crystal growthtechniques.

CY1104	ENGINEERING CHEMISTRY	L	T	P	C
	Common for all branches of B.E. / B. Tech Programmes	3	0	0	3

OBJECTIVES

- Principles of water characterization and treatment for industrial purposes.
- Principles and applications of surface chemistry and catalysis.
- Phase rule and various types of alloys.
- Various types of fuels, applications and combustion.
- Conventional and non–conventional energy sources and energy storage device.

UNIT I	WATER AND ITS TREATMENT	9
Hardness of water – Types – Expression of hardness – Units – Estimation of hardness by EDTA method – Numerical problems on EDTA method – Boiler troubles (scale and sludge, caustic embrittlement , boiler corrosion, priming and foaming) – Treatment of boiler feed water – Internal treatment (carbonate, phosphate, colloidal, sodium aluminate and calgon conditioning) – External treatment – Ion exchange process, Zeolite process – Desalination of brackish water by reverse Osmosis.		CO1
UNIT II	**SURFACE CHEMISTRY AND CATALYSIS**	9
Surface chemistry: Types of adsorption – Adsorption of gases on solids – Adsorption of solute from solutions – Adsorption isotherms – Freundlich's adsorption isotherm – Langmuir's adsorption isotherm – Kinetics of uni-molecular surface reactions – Adsorption in chromatography – Applications of adsorption in pollution abatement using PAC. Catalysis: Catalyst – Types of catalysis – Criteria – Contact theory – Catalytic poisoning and catalytic promoters – Industrial applications of catalysts – Catalytic convertor – Auto catalysis – Enzyme catalysis – Michaelis-Menten equation.		CO2
UNIT III	**PHASE RULE AND ALLOYS**	9
Phase rule: Introduction – Definition of terms with examples – One component system – Water system – Reduced phase rule – Thermal analysis and cooling curves – Two component systems – Lead-silver system – Pattinson process. Alloys: Introduction – Definition – Properties of alloys – Significance of alloying – Functions and effect of alloying elements – Nichrome, Alnico, Stainless steel (18/8) – Heat treatment of steel – Non-ferrous alloys – Brass and bronze.		CO3
UNIT IV	**FUELS AND COMBUSTION**	9
Fuels: Introduction – classification of fuels – Comparison of solid, liquid, gaseous fuels – Coal – Analysis of coal (proximate and ultimate). – Carbonization – Manufacture of metallurgical coke (Otto Hoffmann method) – Petroleum – Cracking – Manufacture of synthetic petrol (Bergius process, Fischer Tropsch Process) – Knocking – Octane number – Diesel oil – Cetane number – Compressed natural gas (CNG) – Liquefied petroleum gases (LPG) – Power alcohol and biodiesel. Combustion of fuels: Introduction – Calorific value – Higher and lower calorific values – Theoretical calculation of calorific value – Ignition temperature – Spontaneous ignition temperature – Explosive range – Flue gas analysis by Orsat Method.		CO4
UNIT V	**NON–CONVENTIONAL ENERGY SOURCES AND STORAGE DEVICES**	9
Nuclear energy – Fission and fusion reactions – Differences – Chain reactions – Nuclear reactors – Classification of reactors – Light water nuclear reactor for power generation – Breeder reactor – Solar energy conversion – Solar cells – Wind energy – Fuel cells – Hydrogen-oxygen fuel cell . Batteries – Types of batteries - Alkaline batteries – Lead-acid, Nickel-cadmium and Lithium batteries.		CO5

5. A. Pahari, B. Chauhan, "Engineering Chemistry", Firewall Media., New Delhi., (2010).
6. Sheik Mideen., Engineering Chemistry, Airwalk Publications, Chennai (2018).

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Able to understand impurities in industrial water, boiler troubles, internal and external treatment methods of purifying water.
CO2	Able to understand concepts of absorption, adsorption, adsorption isotherms, application of adsorption for pollution abatement, catalysis and enzyme kinetics.
CO3	Able to recognize significance of alloying, functions of alloying elements and types of alloys, uses of alloys. They should be acquainted with phase rule and reduced phase and its applications in alloying.
CO4	Able to identify various types of fuels, properties, uses and analysis of fuels. They should be able to understand combustion of fuels, method of preparation of bio-diesel, synthetic petrol.
CO5	Able to understand conventional, non–conventional energy sources, nuclear fission and fusion, power generation by nuclear reactor, wind, solar energy and preparation, uses of various batteries.

MAPPING OF COs WITH POs AND PSOs

GE1105	PROBLEM SOLVING AND PYTHON PROGRAMMING	L	T	P	C
	Common for all branches of B.E. / B. Tech Programmes	3	0	0	3

OBJECTIVES

- To know the basics of algorithmic problem solving
- To write simple python programs
- To develop python program by using control structures and functions
- To use python predefined data structures
- To write file-based program

UNIT I	**ALGORITHMIC PROBLEM SOLVING**	9
Algorithms, Building blocks of algorithms: statements, state, control flow, functions, Notation: pseudo code, flow chart, programming language, Algorithmic problem solving: Basic algorithms, flowcharts and pseudocode for sequential, decision processing and iterative processing strategies, Illustrative problems: find minimum in a list, insert a card in a list of sorted cards, guess an integer number in a range, Towers of Hanoi.		CO1
UNIT II	**INTRODUCTION TO PYTHON**	9
Python Introduction, Technical Strength of Python, Python interpreter and interactive mode, Introduction to colab , pycharm and jupyter idle(s) ,Values and types: int, float, boolean, string, and list; Built-in data types, variables, Literals, Constants, statements, Operators: Assignment, Arithmetic, Relational, Logical, Bitwise operators and their precedence, Expressions, tuple assignment, Accepting input from Console, printing statements, Simple Python programs.		CO2
UNIT III	**CONTROL FLOW, FUNCTIONS AND STRINGS**	9
Conditionals: Boolean values and operators, conditional (if), alternative (if-else), chained conditional (if-elif-else); Iteration: while, for; Loop manipulation using pass, break, continue, and else; Modules and Functions: function definition and use, flow of execution, parameters and arguments, local and global scope, return values, function composition, recursion. Strings: string slices, immutability, string functions and methods, string module; Illustrative programs: square root, gcd, exponentiation, sum an array of numbers, linear search, binary search.		CO3
UNIT IV	**LISTS, TUPLES, DICTIONARIES**	9
Lists: Defining list and list slicing, list operations, list slices, list methods, list loop, list Manipulation, mutability, aliasing, cloning lists, list parameters, lists as arrays. Tuples: tuple assignment, tuple as return value, tuple Manipulation; Dictionaries: operations and methods; advanced list processing – list comprehension; Illustrative programs: selection sort, insertion sort, merge sort, histogram.		CO4
UNIT V	**FILES, MODULES, PACKAGES**	9
Files and exception: Concept of Files, Text Files; File opening in various modes and closing of a file, Format Operators, Reading from a file, Writing onto a file, File functions- open(), close(), read(),readline(), readlines(),write(), writelines(),tell(),seek(), Command Line arguments; Errors		CO5

and exceptions: handling exceptions; modules, packages; introduction to numpy, matplotlib. Illustrative programs: word count, copy a file.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Develop algorithmic solutions to simple computational problems
CO2	Develop simple console application in python
CO3	Develop python program by applying control structure and decompose program into functions.
CO4	Represent compound data using python lists, tuples, and dictionaries.
CO5	Read and write data from/to files in Python.

MAPPING OF COs WITH POs AND PSOs

<table>
<tr><td rowspan="2">GE1106</td><td>ENGINEERING GRAPHICS</td><td>L</td><td>T</td><td>P</td><td>C</td></tr>
<tr><td>Common for all branches of B.E. / B. Tech Programmes</td><td>2</td><td>0</td><td>4</td><td>4</td></tr>
</table>

OBJECTIVES

- To develop in students, graphic skills for communication of concepts, ideas and design of Engineering products
- To expose them to existing national standards related to technical drawings.

CONCEPTS AND CONVENTIONS (Not for Examination)		1
Importance of graphics in engineering applications – Use of drafting instruments – BIS conventions and specifications – Size, layout and folding of drawing sheets – Lettering and dimensioning.		
UNIT I	**PLANE CURVES AND FREEHAND SKETCHING**	7+12
Basic Geometrical constructions, Curves used in engineering practices: Conics – Construction of ellipse, parabola and hyperbola by eccentricity method – Construction of cycloid – construction of involutes of square and circle – Drawing of tangents and normal to the above curves. Visualization concepts and Free Hand sketching: Visualization principles –Representation of Three-Dimensional objects – Layout of views- Freehand sketching of multiple views from pictorial views of objects		CO1
UNIT II	**PROJECTION OF POINTS, LINES AND PLANE SURFACE**	6+12
Orthographic projection- principles-Principal Planes-First angle projection-projection of points. Projection of straight lines (only First angle projections) inclined to both the principal planes - Determination of true lengths and true inclinations by rotating line method and traces Projection of planes (polygonal and circular surfaces) inclined to both the principal planes by rotating object method.		CO2
UNIT III	**PROJECTION OF SOLIDS**	5+12
Projection of simple solids like prisms, pyramids, cylinder, cone and truncated solids when the axis is inclined to one of the principal planes by rotating object method.		CO3
UNIT IV	**PROJECTION OF SECTIONED SOLIDS AND DEVELOPMENT OFSURFACES**	6+12
Sectioning of above solids in simple vertical position when the cutting plane is inclined to the one of the principal planes and perpendicular to the other – obtaining true shape of section. Development of lateral surfaces of simple and sectioned solids – Prisms, pyramids cylinders and cones.		CO4
UNIT V	**ISOMETRIC AND PERSPECTIVE PROJECTIONS**	6+12
Principles of isometric projection – isometric scale –Isometric projections of simple solids and truncated solids - Prisms, pyramids, cylinders, cones- combination of two solid objects in simple vertical positions - Perspective projection of simple solids-Prisms, pyramids and cylinders by visual ray method.		CO5

6. Shah M.B., and Rana B.C., “Engineering Drawing”, Pearson, 2nd Edition, 2009.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Understand the fundamentals and standards of Engineering graphics
CO2	Perform freehand sketching of basic geometrical constructions and multiple views of objects
CO3	Understand the concept of orthographic projections of lines and plane surfaces
CO4	Draw the projections of section of solids and development of surfaces
CO5	Visualize and to project isometric and perspective sections of simple solids

GE1107	PYTHON PROGRAMMING LABORATORY	L	T	P	C
	Common for all branches of B.E. / B. Tech Programmes	**0**	**0**	**4**	**2**

OBJECTIVES

- To write, test, and debug simple Python programs.
- To implement Python programs with conditionals and loops.
- Use functions for structuring Python programs.
- Represent compound data using Python lists, tuples, and dictionaries.
- Read and write data from/to files in Python.

LIST OF EXPERIMENTS

1. Write an algorithm and draw flowchart illustrating mail merge concept.	CO1
2. Write an algorithm, draw flowchart and write pseudo code for a real life or scientific or technical problems	
3. Scientific problem-solving using decision making and looping. • Armstrong number, palindrome of a number, Perfect number.	
4. Simple programming for one dimensional and two-dimensional arrays. • Transpose, addition, multiplication, scalar, determinant of a matrix	
5. Program to explore string functions and recursive functions.	CO2
6. Utilizing 'Functions' in Python • Find mean, median, mode for the given set of numbers in a list. • Write a function dups to find all duplicates in the list. • Write a function unique to find all the unique elements of a list. • Write function to compute gcd, lcm of two numbers.	
7. Demonstrate the use of Dictionaries and tuples with sample programs.	
8. Implement Searching Operations: Linear and Binary Search.	
9. To sort the 'n' numbers using: Selection, Merge sort and Insertion Sort.	
10. Find the most frequent words in a text of file using command line arguments.	CO3
11. Demonstrate Exceptions in Python.	
12. Applications: Implementing GUI using turtle, pygame.

BS1108	PHYSICS AND CHEMISTRY LABORATORY	L	T	P	C
	(Common to all branches of B.E. / B. Tech Programmes)	0	0	4	2

OBJECTIVES

The students will be trained to perform experiments to study the following.

- The Properties of Matter
- The Optical properties, Characteristics of Lasers & Optical Fibre
- Electrical & Thermal properties of Materials
- Enable the students to enhance accuracy in experimental measurements.
- To make the student to acquire practical skills in the determination of water quality parameters through volumetric analysis
- Instrumental method of analysis such as potentiometry, conductometry and pHmetry

LIST OF EXPERIMENTS – PHYSICS

(A minimum of 5 experiments to be performed from the given list)

1. Determination of Young's modulus of the material of the given beam by Non-uniform bending method.	CO1
2. Determination of Young's modulus of the material of the given beam by uniform bending method.	
3. Determination of rigidity modulus of the material of the given wire using torsion pendulum.	
4. Determination of wavelength of mercury spectra using Spectrometer and grating.	CO2
5. Determination of dispersive power of prism using Spectrometer.	
6. (a) Determination of wavelength and particle size using a laser. 7. (b) Determination of Numerical and acceptance angle of an optical fibre.	
8. Determination of energy band gap of the semiconductor.	
9. Determination of coefficient of thermal conductivity of the given bad conductor using Lee's disc.	

DEMONSTRATION EXPERIMENT

1. Determination of thickness of a thin sheet / wire – Air wedge method	CO1

LIST OF EXPERIMENTS – CHEMISTRY

(A minimum of 6 experiments to be performed from the given list)

1. Determination of chloride content of water sample by argentometric method.	CO3
2. Estimation of copper content of the given solution by Iodometry.	
3. Determination of strength of given hydrochloric acid using pH meter.	
4. Determination of strength of acids in a mixture of acids using conductivity meter.	CO4
5. Estimation of iron content of the given solution using potentiometer.	

6. Determination of molecular weight of polyvinyl alcohol using Ostwald viscometer.	
7. Conductometric titration of strong acid vs strong base.	
8. Estimation of HCl using Na_2CO_3 as primary standard and determination of alkalinity in water sample.	CO5
9. Determination of total, temporary & permanent hardness of water by EDTA method.	
10. Determination of DO content of water sample by Winkler's method.	

DEMONSTRATION EXPERIMENTS	
1. Estimation of iron content of the water sample using spectrophotometer (1,10-Phenanthroline / thiocyanate method).	**CO3**
2. Estimation of sodium and potassium present in water using flame photometer.	**CO5**
TOTAL: 60 PERIODS

COURSE OUTCOMES
Upon completion of the course, students will be able to

CO1	Able to understand the concept about the basic properties of matter like stress, strain and types of moduli Able to understand the concept of optics like reflection, refraction, diffraction by using spectrometer grating.
CO2	Able to understand the thermal properties of solids, specific heat and some models for specific heat calculation. Able to understand the working principle of laser components and working of different laser system. Able to understand the phenomenon of light, applications of fibre optics.
CO3	Able to understand the concept of determining the pH value by using pH meter. Able to understand the concept about the amount of chloride present in the given sample of water.
CO4	Able to understand the concept of determining the emf values by using potentiometer Able to understand the concept about the measurement of conductance of strong acid and strong base by using conductivity meter.
CO5	Able to understand the amount of dissolved oxygen present in the water. Able to understand the concept of estimation of hardness of water by EDTA method. Able to understand the concept of estimation of alkalinity in water sample.

HS1201	PROFESSIONAL ENGLISH	L	T	P	C
	Common for all branches of B.E. / B. Tech Programmes	3	0	0	3

OBJECTIVES

The Course prepares second semester engineering and Technology students to:

- Develop strategies and skills to enhance their ability to read and comprehend Engineering and technology texts.
- Foster their ability to write convincing job applications and effective reports.
- Develop their speaking skills to make technical presentations, participate in group discussions.
- Strengthen their listening skill which will help them comprehend lectures and talks in their areas of specialization.

UNIT	TITLE / CONTENT	PERIODS / CO
UNIT I	**INTRODUCTION TO PROFESSIONAL ENGLISH**	9
	Listening: Listening to technical talks with comprehension tasks - Speaking– conversationmethodsinreallifeoccurrencesusingexpressions of different emotions and imperative usages- Reading – reading short technical texts from journals- newspapers- Writing- purpose statements – extended definitions – writing instructions – checklists- recommendations-Vocabulary Development- technical vocabulary Language Development – tenses- subject verb agreement - compound words.	CO1
UNIT II	**READING AND STUDY SKILLS**	9
	Listening-Listening Comprehension of a discussion on a technical topic of common interest by three or four participants (real life as well as online videos). -Speaking – describing a process- Reading: Practice in chunking and speed reading - Paragraphing- Writing- interpreting charts, graphs- Vocabulary Development: Important foreign expressions in Use, homonyms, homophones, homographs-easily confused words Language Development- impersonal passive voice, numerical adjectives.	CO2
UNIT III	**TECHNICAL WRITING AND GRAMMAR**	9
	Listening–listening to conversation–effective use of words and their sound aspects, stress, intonation & pronunciation- Speaking – mechanics of presentations -Reading: Reading longer texts for detailed understanding. (GRE/IELTS practice tests); Writing-Describing a process, use of sequence words- Vocabulary Development- sequence words- Informal vocabulary and formal substitutes-Misspelled words. Language Development- embedded sentences and Ellipsis.	CO3
UNIT IV	**REPORT WRITING**	9
	Listening – Model debates & documentaries and making notes. Speaking– expressing agreement/disagreement, assertiveness in expressing opinions-Reading: Technical reports, advertisements and minutes of meeting - Writing- email etiquette- job application – cover letter –Résumé preparation(via email and hard copy)- analytical essays and issue based essays--Vocabulary Development- finding suitable synonyms-paraphrasing- Language Development- clauses- if conditionals.	CO4
UNIT V	**GROUP DISCUSSION AND JOB APPLICATIONS**	9
	Listening: Extensive Listening. (radio plays, rendering of poems, audio books and others) Speaking –participating in a group discussion - Reading: Extensive Reading (short stories, novels, poetry and others)– Writing reports- minutes of a meeting- accident and survey- Writing a letter/ sending an email to the Editor - cause and effect sentences -Vocabulary Development- verbal analogies. Language Development- reported speech.	CO5
		TOTAL : 45 PERIODS

COURSE OUTCOMES
Upon completion of the course, students will be able to

CO1	Speak clearly, confidently, comprehensibly, and communicate with one or many listeners using appropriate communicative strategies.
CO2	Write cohesively and coherently and flawlessly avoiding grammatical errors, using a wide vocabulary range, organizing their ideas logically on a topic.
CO3	Read different genres of texts adopting various reading strategies.
CO4	Listen/view and comprehend different spoken discourses/excerpts in different accents
CO5	Identify topics and formulate questions for productive inquiry

MA1251	LINEAR ALGEBRA	L	T	P	C
	Common for AI-DS and AI-ML	3	1	0	4

OBJECTIVES

- To test the consistency and solve the system of linear equations
- To find the basis and dimension of vector space
- To obtain the matrix of linear transformation and its eigenvalues and eigenvectors
- To find orthonormal basis of inner product space and find least square approximation
- To find eigenvalues of a matrix using numerical techniques and perform matrix decomposition.

UNIT I	**MATRICES AND SYSTEM OF LINEAR EQUATIONS**	9+3
Matrices - Row echelon form - Rank - System of linear equations - Consistency - Gauss elimination method - Gauss Jordon method.		CO1
UNIT II	**VECTOR SPACES**	9+3
Vector spaces, Subspaces, Linear combinations, Linear independence and linear dependence, Bases and dimensions.		CO2
UNIT III	**LINEAR TRANSFORMATION**	9+3
Linear transformation - Rank space and null space - Rank and nullity - Dimension theorem - Matrix representation of linear transformation - Eigenvalues and eigenvectors of linear transformation.		CO3
UNIT IV	**INNER PRODUCT SPACES**	9+3
INNER product and norms - Properties - Orthogonal, Orthonormal vectors - Gram Schmidt orthonormalization process - Least square approximation		CO4
UNIT V	**EIGEN VALUE PROBLEMS AND MATRIX DECOMPOSITION**	9+3
Eigen value Problems: Power method, Jacobi rotation method - Singular value decomposition - QR decomposition.		CO5
		TOTAL : 60 PERIODS

PH1252	PHYSICS FOR INFORMATION SCIENCE	L	T	P	C
	Common for CSE, IT, AI-DS and AI-ML	3	0	0	3

OBJECTIVES

- To acquire knowledge on the electron transport properties
- To understand the essential principles of semiconductor device
- To have the necessary understanding in optical properties of materials.
- To grasp the principles of magnetic materials and its applications.
- To understand the basics of Nano-electronic devices.

UNIT I	**ELECTRICAL PROPERTIES OF MATERIALS**	9
Classical free electron theory - Expression for electrical conductivity - Thermal conductivity, expression - Wiedemann-Franz law - Success and failures - electrons in metals - Particle in a three dimensional box - degenerate states - Fermi- Dirac statistics - Density of energy states - Electron in periodic potential - Energy bands in solids - Electron effective mass - concept of hole - Applications of low resistive and high resistive materials.		CO1
UNIT II	**SEMICONDUCTOR PHYSICS**	9
Intrinsic semiconductors - Energy band diagram - direct and indirect band gap semiconductors - carrier concentration in intrinsic semiconductors - extrinsic semiconductors - carrier concentration in n-type & p-type semiconductors - variation of carrier concentration with temperature - variation of Fermi level with temperature and impurity concentration - carrier transport in semiconductors - Hall effect and devices - Ohmic contacts – Schottky diode - Semiconducting polymers.		CO2
UNIT III	**MAGNETIC PROPERTIES OF MATERIALS**	9
Magnetism in materials - magnetic dipole moment - magnetic permeability and susceptibility - Microscopic classification of magnetic materials : diamagnetism - paramagnetism - ferromagnetism – antiferromagnetism - ferrimagnetism - Curie temperature - Domain Theory - M versus H behavior - Hard and soft magnetic materials - examples and uses - Magnetic principle in computer data storage - Magnetic hard disc - Spintronics - GMR Sensor (Giant Magnetoresistance) - TMR (Tunnel Magnetoresistance)		CO3
UNIT IV	**OPTICAL PROPERTIES OF MATERIALS**	9
Classification of optical materials - carrier generation and recombination processes - Absorption emission and scattering of light in metals, insulators and semiconductors (concepts only) - photo current in a P-N diode - solar cell - LED - Organic LED - p-i-n Photodiodes - Avalanche Photodiodes -Optical data storage techniques- Holography - applications.		CO4
UNIT V	**NANO DEVICES**	9

Electron density in bulk material - Size dependence of Fermi energy - Quantum confinement - Quantum structures - Density of states in quantum well, quantum wire and quantum dot structure - Band gap of nanomaterials - Tunneling: single electron phenomena and single electron transistor - Quantum dot laser - Ballistic transport - Carbon nanotubes: properties and applications - Material Processing by chemical vapor deposition and Laser ablation method - Graphene: properties and applications.	CO5

COURSE OUTCOMES
Upon completion of the course, students will be able to

CO1	Gain knowledge on classical and quantum electron theories, and energy band structures.
CO2	Acquire knowledge on basics of semiconductor physics and its applications in various Devices.
CO3	Get knowledge on magnetic properties of materials and their applications in data storage.
CO4	Have the necessary understanding on the functioning of optical materials for Opto electronics.
CO5	Understand the basics of quantum structures and their applications in carbon electronics.

GE1204	ENVIRONMENTAL SCIENCE AND ENGINEERING	L	T	P	C
	Common for all Branches of B.E. / B. Tech Programmes	3	0	0	3

OBJECTIVES

- To study the inter relationship between living organism and environment.
- To appreciate the importance of environment by assessing its impact on the human world; envision the surrounding environment, its functions and its value.
- To find and implement scientific, technological, economic and political solutions to environmental problems.
- To study the integrated themes and biodiversity, natural resources, pollution control and waste management.
- To study the dynamic processes and understand the features of the earth's interior and surface.

UNIT I	ENVIRONMENT, ECOSYSTEM AND BIODIVERSITY	9
	Definition, scope and importance of environment – Need for public awareness – Role of Individual in Environmental protection – Concept of an ecosystem – Structure and function of an ecosystem – Producers, consumers and decomposers – Energy flow in the ecosystem – Food chains, food webs and ecological pyramids – Ecological succession – Types, characteristic features, structure and function of forest, grass land, desert and aquatic (ponds, lakes, rivers, oceans, estuaries) ecosystem. Biodiversity – Definition – Genetic, species and ecosystem diversity – Value of biodiversity – Consumptive use, productive use, social, ethical, aesthetic and option values – Biodiversity at global, national and local levels – India as a mega diversity nation – Hot spots of biodiversity – Threats to biodiversity– Habitat loss, poaching of wild life, human-wildlife conflicts – Wildlife protection act and forest conservation act – Endangered and endemic species – Conservation of biodiversity – In-situ and ex-situ conservation of biodiversity.	CO1
UNIT II	ENVIRONMENTAL POLLUTION	9
	Definition – Causes, effects and control measures of: (a) Air pollution (b) Water pollution (c) Soil pollution (d) Marine pollution (e) Noise pollution (f) Thermal pollution (g) Nuclear hazards – Solid waste management: causes, effects and control measures of municipal solid wastes – Problems of e-waste – Role of an individual in prevention of pollution – Pollution case studies – Disaster management – Floods, earthquake, cyclone, tsunami and landslides – Field study of local polluted site – Urban / Rural / Industrial / Agricultural.	CO2
UNIT III	NATURAL RESOURCES	9
	Forest resources: Uses and over-exploitation – Deforestation – Case studies – Timber extraction, mining, dams and their effects on forests and tribal people – Water resources – Use and overutilization of surface and ground water, floods, drought, conflicts over water – Dams: benefits and problems – Mineral resources: Uses and exploitation – Environmental effects of extracting and using mineral resources – Case studies – Food resources: World food problems – Changes caused by agriculture and overgrazing – Effects of modern agriculture: fertilizer–pesticide problems, water logging, salinity – Case studies – Energy resources: Growing energy needs – Renewable and non renewable energy sources – Use of alternate energy sources – Case studies – Land resources: Land as a resource – Land degradation, man induced landslides, soil erosion and desertification – Role of an individual in conservation of natural resources – Equitable use of resources for sustainable lifestyles – Field study of local area to document environmental assets – River / Forest / Grassland / Hill / Mountain.	CO3

UNIT IV	SOCIAL ISSUES AND THE ENVIRONMENT	9
From unsustainable to sustainable development – Urban problems related to energy – Water conservation, rain water harvesting, watershed management – Resettlement and rehabilitation of people; its problems and concerns, case studies – Role of non-governmental organization – Environmental ethics – Issues and possible solutions – Climate change – Global warming – Acid rain, Ozone layer depletion –Nuclear accidents and holocaust – Case studies – Wasteland reclamation – Consumerism and waste products – Principles of Green Chemistry – Environment protection act – Air (Prevention and Control of Pollution) Act – Water (Prevention and control of Pollution) Act – Wildlife protection Act – Forest conservation Act – Enforcement machinery involved in environmental legislation– Central and state pollution control boards– National Green Tribunal – Public awareness.		CO4
UNIT V	**HUMAN POPULATION AND THE ENVIRONMENT**	9
Population growth – Variation among nations – Population explosion – Family welfare programme – Environment and human health – Human rights – Value education – HIV / AIDS – COVID 19 – Women and child welfare – Role of information technology in environment and human health – Case studies		CO5

BE1251	BASIC ELECTRICAL,ELECTRONICS AND MEASUREMENT ENGINEERING	L	T	P	C
	Common for CSE, IT, AI-DS & AI-ML	**3**	**0**	**0**	**3**

OBJECTIVES

- To learn the fundamental laws, network theorems and analyse the electric circuits.
- To study the basic principles of electrical machines and their performance.
- To study the fundamentals of power systems.
- To learn the characteristics of various electron devices and Op Amp integrated circuit.
- To understand the principle and operation of measuring instruments and transducers.

UNIT I	**ELECTRIC CIRCUITS ANALYSIS**	9
Ohms Law, Kirchhoff's Law-Instantaneous power - Series and parallel circuit: analysis of resistive, capacitive and inductive network, star delta conversion, Nodal analysis and mesh analysis. Network theorems: Thevenin's theorem, Norton's theorem, superposition theorem and maximum power transfer theorem. Three phase ac supply –Instantaneous power, Reactive power and apparent power.		CO1
UNIT II	**ELECTRICAL MACHINES**	9
DC and AC ROTATING MACHINES: Types, Construction, principle, EMF and torque equation, application, Speed Control. Basics of Stepper Motor and Brushless DC motors. Transformers-Introduction, types and construction, working principle of Ideal transformer, EMF equation, All day efficiency calculation.		CO2
UNIT III	**FUNDAMENTALS OF POWER SYSTEM**	9
Structure of power system. Sources of electrical energy – Non-renewable, Renewable- Storage systems: Batteries-Ni-Cd, Pb -Acid and Li-ion, SOC (State of Charge), DOD (Depth of Discharge)Characteristics. Utilization of electrical power - DC and AC load applications. - Electric circuit Protection-need for earthing, fuses and circuit breakers.		CO3
UNIT IV	**ELECTRON DEVICES AND INTEGRATED CIRCUITS**	9
PN Junction-VI Characteristics of Diode, Zener diode, Rectifiers, Zener voltage regulator. Transistor configurations – CE amplifier - RC and LC oscillators. Op Amps – Basic characteristics and its applications.		CO4
UNIT V	**MEASURING INSTRUMENTS AND TRANSDUCERS**	9
Characteristic of measurement-errors in measurement – Principle and working of indicting instrument- Moving Coil meter, Moving Iron meter, Energy meter and watt meter, Cathode Ray Oscilloscope –- Transducers, thermo-electric, RTD, Strain gauge, LVDT, LDR, and piezoelectric transducer.		CO5
	TOTAL : 45 PERIODS

6. C.L.Wadhwa, ―Generation, Distribution and Utilisation of Electrical Energy‖, New Age international pvt.ltd.,2003

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Ability to learn the fundamental laws, theorems of electrical circuits and to analyze them
CO2	Ability to understand the basic construction and operating principle of dc and ac machines.
CO3	Ability to understand the electrical power generation, energy storage and utilization of electric power.
CO4	Ability to understand the characteristics of various electronic devices and Op Amp integrated circuit.
CO5	Ability to understand the principles and operation of measuring instruments and transducers.

CS1206	PROGRAMMING IN C	L	T	P	C
	Common for CSE, IT, AI-DS, AI-ML	3	0	0	3

OBJECTIVES

- To develop C Programs using basic programming constructs
- To develop C programs using arrays, strings and functions
- To develop applications in C using pointers
- To develop applications in C using structures and union
- To develop applications using sequential and random-access file processing.

UNIT I	BASICS OF C PROGRAMMING	9
An overview of C: History of C; Compiler Vs. Interpreter, Structure of a C Program, Compiling a C Program; Basic data types: Modifiers, Variables: Type qualifiers, Storage class specifiers; Constants: Enumeration Constants; Keywords; Operators: Precedence and Associativity; Expressions: Order of evaluation, Type conversion in expression, Casts; Input/Output statements; Assignment statements, Selection statements; Iteration statements; Jump statements; Expression statements; Pre-processor directives: Compilation process.		CO1
UNIT II	**ARRAYS, STRINGS AND FUNCTIONS**	9
Introduction to Arrays: Declaration, Initialization, Single dimensional array, Two dimensional array, Array manipulations; String operations: length, compare, concatenate, copy; Functions: General form of a function, Function Arguments, Built-in functions, return statement, Recursion		CO2
UNIT III	**POINTERS**	9
Pointers: Declaring and defining pointers, Pointer operators, Pointer expression; Pointer assignment, Pointer conversions, Pointer arithmetic, Pointer comparisons; Pointers and Arrays: Array of pointers; Multiple indirection; Pointers to function; Problems with pointers; Parameter passing: Pass by value, Pass by reference.		CO3
UNIT IV	**STRUCTURES AND UNIONS**	9
Structure: Accessing structure members, structure assignments; Nested structures; Pointer and Structures; Array of structures; Passing structures to functions: Passing structure member to function, Passing entire structure to functions; Arrays in structures; Self-referential structures; Dynamic memory allocation; typedef statement, Union and Enumeration.		CO4
UNIT V	**FILE PROCESSING**	9
File system basics: File pointer, opening and closing a File; reading and writing character; working with String: fputs() and fgets(); rewind(); ferror(); fread() and fwrite(); Erasing files; Types of file		CO5

processing: Sequential access; Random access: fprintf() and fscanf(), fseek() and ftell(); Command line arguments.

TOTAL : 45 PERIODS

5. Byron S. Gottfried, "Schaum's Outline of Theory and Problems of Programming with C",McGraw-Hill Education,1996.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Develop simple applications in C using basic constructs.
CO2	Design and implement applications using arrays, strings and functions.
CO3	Develop and implement applications in C using pointers.
CO4	Develop applications in C usingstructures and union.
CO5	Design applications using sequential and random-access fileprocessing.

GE1207	ENGINEERING PRACTICES LABORATORY	L	P	T	C
	(Common to all branches of B.E. / B. Tech Programmes)	0	0	4	2

OBJECTIVES

- To provide exposure to the students with hands on experience on various basic engineering practices in Civil, Mechanical, Electrical and Electronics Engineering

LIST OF EXPERIMENTS

GROUP A (CIVIL & MECHANICAL)

I CIVIL ENGINEERING PRACTICE 13 CO1

Buildings:

(a) Study of plumbing and carpentry components of residential and industrial buildings. Safety aspects.

Plumbing Works:

(a) Study of pipeline joints, its location and functions: valves, taps, couplings, unions, reducers, elbows in household fittings.

(b) Study of pipe connections requirements for pumps and turbines.

(c) Preparation of plumbing line sketches for water supply and sewage works.

(d) Hands-on-exercise:Basic pipe connections – Mixed pipe material connection – Pipe connections with different joining components.

(e) Demonstration of plumbing requirements of high-rise buildings.

Carpentry using Power Tools only:

a) Study of the joints in roofs, doors, windows and furniture.

b) Hands-on-exercise: Wood work, joints by sawing, planing and cutting.

II MECHANICAL ENGINEERING PRACTICE 18 CO2

Welding:

a) Preparation of butt joints, lap joints and T- joints by Shielded metal arc welding.

b) Gas welding practice

Basic Machining:

a) Simple Turning and Taper turning

b) Drilling Practice

Sheet Metal Work:

a) Forming & Bending.

b) Model making – Trays and funnels.

c) Different type of joints.

Machine assembly practice:

a) Study of centrifugal pump

b) Study of air conditioner

Demonstration on:

a) Smithy operations, upsetting, swaging, setting down and bending. Example – Exercise – Production of hexagonal headed bolt.

b) Foundry operations like mould preparation for gear and step cone pulley.

c) Fitting – Exercises – Preparation of square fitting and V – fitting models.

GROUP B (ELECTRICAL & ELECTRONICS)	
III **ELECTRICAL ENGINEERING PRACTICE** 13 1. **Residential house wiring using switches, fuse, indicator, lamp and energy meter.** 2. **Fluorescent lamp wiring.** 3. **Stair case wiring** 4. **Measurement of electrical quantities – voltage, current, power & power factor in RLC circuit.**	**CO3**
5. **Measurement of energy using single phase energy meter.** 6. **Measurement of resistance to earth of an electrical equipment.**	**CO4**
IV **ELECTRONICS ENGINEERING PRACTICE** 16 1. **Study of electronic components and equipment's – Resistor, colour coding measurement of AC signal parameter (peak-peak, rms period, frequency) using CR.** 2. **Study of logic gates AND, OR, EX-OR and NOT.** 3. **Generation of Clock Signal.** 4. **Soldering practice – Components Devices and Circuits – Using general purpose PCB. Measurement of ripple factor of HWR and FWR.**	**CO5**
TOTAL: 60 PERIODS	

LIST OF EQUIPMENT FOR A BATCH OF 30 STUDENTS

S.No.	**Description of Equipment**	**Quantity required**
	CIVIL	
1.	Assorted components for plumbing consisting of metallic pipes, plastic pipes, flexible pipes, couplings, unions, elbows, plugs and other fittings.	15 sets
2.	Carpentry vice (fitted to work bench)	15 Nos
3.	Standard woodworking tools 15 Sets.	15 Sets.
4.	Models of industrial trusses, door joints, furniture joints	5 each
5.	**Power Tools:** (a) Rotary Hammer (b) Demolition Hammer (c) Circular Saw (d) Planer (e) Hand Drilling Machine (f) Jigsaw	2 Nos
	MECHANICAL	
1.	Arc welding transformer with cables and holders.	5 Nos
2.	Welding booth with exhaust facility.	5 Nos

3.	Welding accessories like welding shield, chipping hammer, wire brush, etc.	5 Sets
4.	Oxygen and acetylene gas cylinders, blow pipe and other welding outfit.	2 Nos
5.	Centre lathe.	2 Nos
6.	Hearth furnace, anvil and smithy tools.	2 Sets
7.	Moulding table, foundry tools.	2 Sets
8.	Power Tool: Angle Grinder.	2 Nos
9.	**Study-purpose items:** centrifugal pump, air-conditioner.	1 each
	ELECTRICAL	
1.	Assorted electrical components for house wiring.	15 Sets
2.	Electrical measuring instruments.	10 Sets
3.	**Study purpose items:** Iron box, fan and regulator, emergency lamp.	1 each
4.	Megger (250V/500V).	1 No.
5.	**Power Tools:** (a) Range Finder (b) Digital Live-wire detector	2 Nos
	ELECTRONICS	
1.	Soldering guns 10 Nos.	10 Nos.
2.	Assorted electronic components for making circuits 50 Nos.	50 Nos.
3.	Small PCBs.	10 Nos.
4.	Multimeters	10 Nos.
5.	**Study purpose items:** Telephone, FM radio, low-voltage power supply	1 each

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Fabricate carpentry components and pipe connections including plumbing works. Use welding equipment's to join the structures.
CO2	Carry out the basic machining operations Make the models using sheet metal works
CO3	Carry out basic home electrical works and appliances.
CO4	Measure the electrical quantities
CO5	Elaborate on the components, gates, soldering practices

MAPPING OF COs WITH POs AND PSOs

COs	**PROGRAM OUTCOMES (POs)**												**PROGRAM SPECIFIC OUTCOMES (PSOs)**

CS1208	PROGRAMMING IN C LABORATORY	L	T	P	C
	Common for CSE, IT, AI-DS & AI-ML	0	0	4	2

OBJECTIVES

- To develop programs in C using basic constructs.
- To develop applications in C using strings, pointers, functions, structures.
- To develop applications in C using file processing

LIST OF EXPERIMENTS

1. C programming using simple statements and expressions.	CO1
2. Scientific problem-solving using decision making and looping.	
3. Generating different patterns using multiple control statements.	
4. Problems solving using one dimensional array.	
5. Mathematical problem solving using two dimensional arrays.	
6. Solving problems using string functions.	CO2
7. Solving problems with user defined functions.	
8. Solving problems using recursive function.	
9. Solving problems with dynamic memory allocation.	
10. Realtime application using structures and unions.	CO3
11. Realtime problem solving using sequential and random-access file.	
12. Solving problems with command line argument.	

TOTAL : 60 PERIODS

REFERENCE BOOKS

1. Problem Solving and Program Design in C, 4th edition, by jeri R. Hanly and Elli B.Koffman.
2. Reema Thareja, “Programming in C”, Oxford University Press, Second Edition, 2016.
3. Programming in C by Pradip Dey, Manas Ghosh 2nd edition Oxford University Press.
4. E.Balaguruswamy, Programming in ANSI C 5th Edition McGraw-Hill.
5. A first book of ANSI C by Gray J.Brosin 3rd edition Cengagedelmer Learning India P.Ltd.
6. AL Kelly, Iraphol,Programming in C,4th edition Addison-Wesley – Professional.
7. Brain W.Kernighan & Dennis Ritchie, C Programming Language, 2nd edition, PHI.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Develop C programs for simple applications making use of basic constructs.
CO2	Develop C programs involving string, functions, recursion, pointers, andstructures.
CO3	Design applications using sequential and random-access fileprocessing.

MAPPING OF COs WITH POs AND PSOs

MA1351	PROBABILITY AND STATISTICS	L	T	P	C
	Common for CSE, IT & AI-DS	3	1	0	4

OBJECTIVES

- To understand the basic concepts of probability, one- and two-dimensional random variables and to introduce some standard distributions applicable to engineering which can describe real life phenomenon.
- To understand the basic concepts of random processes which are widely used in engineering applications.
- To acquaint the knowledge of testing of hypothesis for small and large samples, which plays an important role in real life problems.
- To introduce the basic concepts of classifications of design of experiments which plays very important roles in the field of agriculture and statistical quality control.

UNIT I	**PROBABILITY AND RANDOM VARIABLES**	9+3
Probability – The axioms of probability – Conditional probability – Baye's theorem - Discrete and continuous random variables – Moments – Moment generating functions – Binomial, Poisson, Geometric, Uniform, Exponential and Normal distributions.		CO1
UNIT II	**TWO - DIMENSIONAL RANDOM VARIABLES**	9+3
Joint distributions – Marginal and conditional distributions – Covariance – Correlation and linear regression – Central limit theorem (for independent and identically distributed random variables).		CO2
UNIT III	**RANDOM PROCESSES**	9+3
Classification – Stationary process – Markov process - Poisson process – Discrete parameter Markov chain – Chapman Kolmogorov equations – Limiting distributions.		CO3
UNIT IV	**TESTING OF HYPOTHESIS**	9+3
Sampling distributions - Estimation of parameters - Statistical hypothesis - Large sample tests based on Normal distribution for single mean and difference of means -Tests based on t, Chi-square and F distributions for mean, variance and proportion - Contingency table (test for independent) – Goodness of fit.		CO4
UNIT V	**DESIGN OF EXPERIMENTS**	9+3
One way and Two way classifications - Completely randomized design – Randomized block design –Latin square design - 2^2 factorial design.		CO5
		TOTAL : 60 PERIODS

TEXT BOOKS

1. Johnson, R.A., Miller, I and Freund J., "Miller and Freund's Probability and Statistics for Engineers", Pearson Education, Asia, 9th Edition, 2017.
2. Ibe, O.C., —Fundamentals of Applied Probability and Random Processes", Elsevier, 2nd Indian Reprint, 2014.

REFERENCE BOOKS
1. Hwei Hsu, "Schaum's Outline of Theory and Problems of Probability, Random Variables and Random Processes", Tata McGraw Hill Edition, New Delhi, 2017. 2. Yates, R.D. and Goodman. D. J., "Probability and Stochastic Processes", 2nd Edition, Wiley India Pvt. Ltd., Bangalore, 2014. 3. Papoulis, A. and Unnikrishnapillai, S., "Probability, Random Variables and Stochastic Processes", McGraw Hill Education India, 4th Edition, New Delhi, 2017. 4. Ross, S.M., "Introduction to Probability and Statistics for Engineers and Scientists", 4th Edition,Elsevier, 2009. 5. Spiegel. M.R., Schiller. J. and Srinivasan, R.A., "Schaum's Outline of Theory and Problems of Probability and Statistics", Tata McGraw Hill Edition, 2008.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Get exposure to random variables and well-founded knowledge of standard distributions which can describe real life phenomena.
CO2	Get ideas to handle situations involving more than one random variable.
CO3	Gain an understanding and characterizes phenomena which evolve with respect to time in a probabilistic manner and modelling the real-life phenomena.
CO4	Gain the knowledge on Large Samples and Small Samples. These concepts are very useful in biological, economical and social experiments and all kinds of generalizations based on information about a smaller sample and larger samples. Apply the appropriate test in the problems related with sampling.
CO5	Do design of experiments, carry them out, and analyze the data.

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

DS1301	COMPUTER ORGANIZATION AND ARCHITECTURE	L	T	P	C
		3	0	0	3

OBJECTIVES

- To make students understand the basic structure and operation of digital computer
- To familiarize with implementation of fixed point and floating-point arithmetic operations
- To study the design of data path unit and control unit for processor
- To understand the concept of various memories and interfacing
- To introduce the parallel processing technique

UNIT I	**COMPUTER ORGANIZATION & INSTRUCTIONS**	9
Basics of a computer system: Evolution, Ideas, Technology, Performance, Power wall, Uniprocessors to Multiprocessors. Addressing and addressing modes. Instructions: Operations and Operands, Representing instructions, Logical operations, control operations		**CO1**
UNIT II	**ARITHMETIC UNIT**	9
Fixed point Addition, Subtraction, Multiplication and Division. Floating Point arithmetic, High performance arithmetic, Subword parallelism		CO2
UNIT III	**PROCESSOR AND CONTROL UNIT**	9
Introduction, Logic Design Conventions, Building a Datapath - A Simple Implementation scheme - An Overview of Pipelining - Pipelined Datapath and Control. Data Hazards: Forwarding versus Stalling, Control Hazards, Exceptions, Parallelism via Instructions		CO3
UNIT IV	**MEMORY AND I/O ORGANIZATION**	9
Memory hierarchy, Memory Chip Organization, Cache memory, Virtual memory. Parallel Bus Architectures, Internal Communication Methodologies, Serial Bus Architectures, Mass storage, Input and Output Devices		CO4
UNIT V	**ADVANCED COMPUTER ARCHITECTURE**	9
Parallel processing architectures and challenges, Hardware multithreading, Multicore and shared memory multiprocessors, Introduction to Graphics Processing Units, Clusters and Warehouse scale computers - Introduction to Multiprocessor network topologies		CO5
		TOTAL : 45 PERIODS

TEXT BOOKS

1. David A. Patterson and John L. Hennessey, ―Computer Organization and Design, Fifth edition, Morgan Kauffman / Elsevier, 2014. (UNIT I-V)
2. Miles J. Murdocca and Vincent P. Heuring, ―Computer Architecture and Organization: An Integrated approach, Second edition, Wiley India Pvt Ltd, 2015 (UNIT IV,V)

REFERENCE BOOKS

1. V. Carl Hamacher, Zvonko G. Varanesic and Safat G. Zaky, —Computer Organization—, Fifth edition, Mc Graw-Hill Education India Pvt Ltd, 2014.
2. William Stallings —Computer Organization and Architecture‖, Seventh Edition, Pearson Education, 2006.
3. Govindarajalu, —Computer Architecture and Organization, Design Principles and Applications", Second edition, McGraw-Hill Education India Pvt Ltd, 2014

COURSE OUTCOMES
Upon completion of the course, students will be able to

CO1	Describe data representation, instruction formats and the operation of a digital computer
CO2	Illustrate the fixed point and floating-point arithmetic for ALU operation
CO3	Discuss about implementation schemes of control unit and pipeline performance
CO4	Explain the concept of various memories, interfacing and organization of multiple processors
CO5	Discuss parallel processing technique and unconventional architectures

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)

CO4	2	3	2	1	2	-	-	1	-	-	1	2	3	3	2
CO5	2	3	2	1	2	-	-	1	-	-	1	2	3	2	2

CS1302	DATA STRUCTURES	L	T	P	C
	Common to CSE, IT, AI-DS, AI-ML & ECE Semester IV	3	0	0	3

OBJECTIVES

- To understand the concepts of ADTs.
- To learn linear data structures like lists, stacks, and queues.
- To learn Non-linear tree data structures.
- To apply Graph structures
- To understand sorting, searching and hashing algorithms

UNIT I	**LINEAR DATA STRUCTURES – LIST**	9
Abstract Data Types (ADTs) – List ADT – array-based implementation – linked list implementation — singly linked lists- circularly linked lists- doubly-linked lists – applications of lists –Polynomial Manipulation – All operations (Insertion, Deletion, Merge, Traversal).		CO1
UNIT II	**LINEAR DATA STRUCTURES – STACKS, QUEUES**	9
Stack ADT – Operations – Applications – Evaluating arithmetic expressions- Conversion of Infix to postfix expression – Queue ADT – Operations – Circular Queue – Priority Queue – deQueue – applications of queues.		CO2
UNIT III	**NON-LINEAR DATA STRUCTURES – TREES**	9
Tree ADT – tree traversals – Binary Tree ADT – expression trees – applications of trees – binary search tree ADT –Threaded Binary Trees- AVL Trees – B-Tree – B+ Tree – Heap – Applications of heap.		CO3
UNIT IV	**NON-LINEAR DATA STRUCTURES – GRAPHS**	9
Definition – Representation of Graph – Types of graph – Breadth-first traversal – Depth-first traversal – Topological Sort – Bi-connectivity –Graph Algorithms – Shortest Path Algorithms: Dijkstra's Algorithm – All pair shortest Path Algorithms: Floyds warshall Algorithm – Minimum Spanning Tree: Prim's Algorithm – Kruskal's Algorithm – Applications of Graph.		CO4
UNIT V	**SEARCHING, SORTING AND HASHING TECHNIQUES**	9
Searching- Linear Search – Binary Search. Sorting – Bubble sort – Selection sort – Insertion sort – Shell sort – Radix sort - Merge sort – Quick sort. Hashing- Hash Functions – Separate Chaining – Open Addressing – Rehashing – Extendible Hashing.		CO5
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Mark Allen Weiss, —Data Structures and Algorithm Analysis in C‖, 2nd Edition, Pearson Education, 1997.
2. Reema Thareja, —Data Structures Using C‖, Second Edition , Oxford University Press, 2011.
3. Michael T. Goodrich, Roberto Tamassia, Michael H. Goldwasser, Data Structures and Algorithms in Python, Wiley,2013.
4. Bradley N. Miller, David L. Ranum, " Problem Solving with Algorithms and Data Structures using Python " , Second Edition, 2013.
5. Rance D. Necaise, Data Structures and Algorithms Using Python, John Wiley & Sons, 2011.

COURSE OUTCOMES **Upon completion of the course, students will be able to**	
CO1	Implement abstract data types for linear data structures.
CO2	Apply the different linear data structures to problem solutions.
CO3	Implement abstract data types for non-linear data structures.
CO4	Apply Graph data structure for the real world problems.
CO5	Critically analyze the various sorting, searching algorithms and hash functions that result in a collision free scenario for data storage and retrieval.

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

DS1302	OBJECT ORIENTED PROGRAMMING (Lab Integrated)	L	T	P	C
	(Common to AI-DS,EEE & EIE)	3	0	2	4

OBJECTIVES

- Analyze the necessity for Object Oriented Programming paradigm over structured programming and become familiar with the fundamental concepts in OOP like encapsulation, Inheritance and Polymorphism
- Design an object-oriented system, GUI components and multithreaded processes as per needs and specifications
- To provide a Strong foundation for advanced programming using Object Oriented Programming Concepts.

UNIT I	JAVA FUNDAMENTALS	9 +6
	Programming Language types and paradigms – Object Oriented Programming Concepts- History of Java - Java buzzwords- JVM architecture – Java Source File Structure – Naming Convention – Data Types – Literals in Java- Scope and life time of variables – Operators in Java- Control Statements in Java - Array – String and StringBuffer **Lab Component:** 1. Write a Java program that prints all real solutions to the quadratic equation $ax^2 +bx + c = 0$. Read in a, b, c and use the quadratic formula. If the discriminate $b^2 -4ac$ is negative, display a message stating that there are no real solutions. 2. The Fibonacci sequence is defined by the following rule: The first two values in the sequence are 1 and 1. Every subsequent value is the sum of the two values preceding it. Write a Java program that uses both recursive and non recursive functions to print the n^{th} value in the Fibonacci sequence	CO1
UNIT II	OBJECT-ORIENTED PROGRAMMING, INTERFACES AND INHERITANCE	9 + 6
	Working with Objects - Implementing Classes - Object Construction - Static Variables and Methods – Packages - Nested Classes – Abstract Class - Interfaces – Static, Default and Private Methods – Local and Anonymous Classes – Inheritance – Extending a class - Object: The Cosmic Superclass – Wrapper classes. **Lab Component:** 1. Write a java program to create an abstract class named Shape that contains an empty method named number of Sides ( ). Provide three classes named Trapezoid, Triangle and Hexagon such that each one of the classes extends the class Shape. Each one of the classes contains only the method number of Sides ( ) that shows the number of sides in the given geometrical figures 2. Write a Java program that counts the number of objects created by using static variable	CO2
UNIT III	EXCEPTIONS, COLLECTIONS AND STREAMS	9 + 6
	Exceptions – exception hierarchy – throwing and catching exceptions – built-in exceptions, creating own exceptions, Stack Trace Elements. Input / Output Basics – Streams – Byte streams and Character streams – Reading and Writing Console – Reading and Writing Files. **Lab Component:** 1. Write a Java program to make frequency count of words in a given text 2. Write a Java program to implement a Queue using user defined Exception Handling (also make use of throw, throws.).	CO3

UNIT IV	CONCURRENT PROGRAMMING AND GUI PROGRAMMING	9 + 6
	Threads – Multithreaded Programming – Thread Creation – Life Cycle – Thread Priorities - Synchronization of Threads - Event Handling: Event Listeners, Delegation event model, handling mouse and keyboard events, Adapter classes. Swing: Introduction, Limitations of AWT, MVC Architecture, Components, Containers, Exploring Swing Components - Handling menus, Layout Manager – Layout Management types – Border, Grid, Flow, Card and Grid Bag. 1. Write a Java program that creates three threads. First thread displays “Good Morning” everyone second, the second thread displays “Hello” every two seconds and the third thread displays “Welcome” every three seconds. 2. Write a java Program to create a window when we press i. M or m the window displays Good Morning ii. A or a the window displays Good After Noon iii. E or e the window displays Good Evening iv. N or n the window displays Good Night	**CO4**
UNIT V	**JAVA SERVER TECHNOLOGIES AND NETWORK PROGRAMMING**	**9 + 6**
	Introduction to Servlet - Servlet Life Cycle - The Servlet API - Developing and Deploying Servlets - Exploring Deployment - Networking Basics – Exploring java.net classes and interfaces, InetAddress, TCP/IP Client and Server Sockets – Cookies and Datagrams. 1. Develop a program for executing the remote command using TCP Socket 2. Create a GUI program in java with the following components. i. A frame with Flow layout. ii. Add the following components on to the frame. a) Two Text Field b) A button with the label display iii. Allow the user to enter data into the JTextField iv. When the button is clicked paint the frame by displaying the data entered in the JTextField v. Allow the user to properly close the frame	**CO5**

PRACTICALS : 45 PERIODS	THEORY : 30 PERIODS	TOTAL:75 PERIODS

TEXT BOOKS

1. Herbert schildt , “The complete reference”, 11th Edition, Tata Mc Graw Hill, New Delhi. 2018.
2. Cay S. Horstmann, “Core Java SE 9 for the Impatient”, 2nd Edition, Addison-Wesley,2017 .
3. Paul Deitel, Harvey M. Deitel, “Java How to Program”, 11th Edition, Pearson Education, 2018.

REFERENCE BOOKS

1. T. Budd, “An Introduction to Object Oriented Programming”, 3rd Edition, Pearson Education, 2009.
2. Y. Daniel Liang , “Introduction to Java programming”, 7th Edition, Pearson education, 2010.
3. C Xavier , “Java Programming – A Practical Approach”, Tata McGraw-Hill Edition, 2011.
4. K. Arnold and J. Gosling, “The Java programming language”, 3rd Edition, Pearson Education, 2000.

COURSE OUTCOMES **Upon completion of the course, students will be able to**	
CO1	Understand the fundamental ideas behind the object-oriented approach to programming
CO2	Inculcate concepts of inheritance to create new classes from existing one & Design the classes needed given a problem specification
CO3	A modern coverage of concurrent programming that focuses on high-level synchronization constructs
CO4	Know the concept of event handling used in GUI.
CO5	Develop Server Programming Applications

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

DS1303	INTRODUCTION TO ARTIFICIAL INTELLIGENCE	L	T	P	C
	Common for AI-DS & AI-ML	3	0	0	3

OBJECTIVES

- To impart basic knowledge about Artificial Intelligence
- To learn the methods of solving problems using Artificial Intelligence
- To learn to represent knowledge in solving AI problems
- To understand the concept of Planning in various situations
- To understand the application of AI namely Expert Systems

UNIT I	INTRODUCTION	9
	Introduction–Definition – Foundation and History of AI - Future of Artificial Intelligence – Characteristics of Intelligent Agents– Agents and Environments – Nature of Environments – Structure of Agents - Typical Intelligent Agents	CO1
UNIT II	**PROBLEM SOLVING METHODS**	9
	Problem solving Methods - Search Strategies- Uninformed - Informed - Heuristics - Local Search Algorithms and Optimization Problems - Searching with Partial Observations - Constraint Satisfaction Problems – Constraint Propagation - Backtracking Search - Game Playing – Optimal Decisions in Games – Alpha - Beta Pruning	CO2
UNIT III	**KNOWLEDGE REPRESENTATION**	9
	First Order Predicate Logic – Prolog Programming – Unification – Forward Chaining-Backward Chaining – Resolution – Knowledge Representation - Ontological Engineering-Categories and Objects – Events - Mental Events and Mental Objects - Reasoning Systems for categories – Reasoning with Default Information	CO3
UNIT IV	**PLANNING**	9
	Planning – Introduction – Planning Problem – Planning with State Space Search - Partial Order planning – Construction and Use of Planning Graphs - Conditional Planning – Continuous Planning – Multi Agent Planning	CO4
UNIT V	**EXPERT SYSTEMS**	9
	Expert systems – Architecture of expert systems, Roles of expert systems – Knowledge Acquisition – Meta knowledge, Heuristics. Typical expert systems – MYCIN, DART, XOON, Expert systems shells.	CO5

TOTAL : 45 PERIODS

TEXT BOOKS

1. Russell S and Norvig P, "Artificial Intelligence: A Modern Approach, Prentice Hall, Third Edition, 2009.
2. Kevin Night and Elaine Rich, Nair B., “Artificial Intelligence (SIE)”, Mc Graw Hill- 2008.

3. Peter Jackson, “Introduction to Expert Systems”, 3rd Edition, Pearson Education, 2007.

4. Dan W. Patterson - Introduction to Artificial Intelligence and Expert Systems, PHI, New Delhi, 2006.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Implement basic AI Algorithms
CO2	Use appropriate search algorithms to solve AI based problems
CO3	Represent a problem using first order and predicatelogic
CO4	Design a simple agent system with associated planning technique.
CO5	Apply AI techniques to real-world problems to develop expert system

MAPPING OF COs WITH POs AND PSOs

DS1304	FOUNDATIONS OF DATA SCIENCE	L	T	P	C
		3	0	0	3

OBJECTIVES

- To understand the data science fundamentals and process.
- To learn to describe the data for the data science process.
- To learn to describe the relationship between data.
- To utilize the Python libraries for Data Science.
- To present and interpret data using visualization.

UNIT I	INTRODUCTION	9
Data Science: Benefits and uses – facets of data – Data Science Process: Overview – Defining research goals – Retrieving data – Data preparation – Exploratory Data analysis – build the model– presenting findings and building applications – Machine learning: The Modeling Process – Types of Machine Learning – Semi Supervised Learning		CO1
UNIT II	**ORGANIZING AND SUMMARIZING DATA**	9
Types of Data – Types of Variables - Describing Data with Tables and Graphs – Describing Data with Averages – Describing Variability – Handling large data on a single computer: The problems you face when handling large data - General techniques for handling large volumes of data - General programming tips for dealing with large datasets.		CO2
UNIT III	**DESCRIBING RELATIONSHIPS**	9
Correlation – Scatter plots – correlation coefficient for quantitative data – computational formula for correlation coefficient – Regression – regression line – least squares regression line – Standard error of estimate – interpretation of r2 – multiple regression equations – regression towards the mean		CO3
UNIT IV	**PYTHON LIBRARIES FOR DATA SCIENCE**	9
Algorithms for Massive Data Problems: Frequency Moments of Data Streams – Matrix Algorithms using Sampling, Sketches of Documents; Clustering: k-Means Clustering, k-Center Clustering - Spectral Clustering – Community Finding and Graph Partitioning.		CO4
UNIT V	**DATA VISUALIZATION**	9
Importing Matplotlib – Line plots – Scatter plots – visualizing errors – density and contour plots – Histograms – legends – colors – subplots – text and annotation – customization – three dimensional plotting – Geographic Data with Basemap – Visualization using Tableau.		CO5
		TOTAL: 45 PERIODS

7. Allen B. Downey, "Think Stats: Exploratory Data Analysis in Python", Green Tea Press,2014.

COURSE OUTCOMES
Upon completion of the course, students will be able to

CO1	Define the data science process
CO2	Understand different types of data description for data science process
CO3	Gain knowledge on relationships between data
CO4	Use the Python Libraries for Data Science
CO5	Apply visualization Libraries in Python to interpret and explore data.

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)

DS1307	DATA STRUCTURE LABORATORY USING PYTHON	L	T	P	C
	Common for AI-DS & AI-ML	0	0	4	2

OBJECTIVES

- To introduce the concepts of primitive data structures.
- To understand the process in linear and non-linear data structures.
- To introduce the concepts of sorting, searching and hashing.

LIST OF EXPERIMENTS

CO1

1. IMPLIMENTATION OF LIST

Write Python programs to

a. Array implementation of Stack ADTs.
b. Array implementation of Queue ADTs.

2. LIST ADT

Array implementation of List ADT.

3. IMPLEMENTATION OF STACK AND QUEUE

Write Python programs to

a. Design and implement Single Linked List.
b. Design and implement Stack and its operations using List.
c. Design and implement Queue and its operations using List.

CO2

4. APPLICATIONS OF LINEAR DATA STRUCTURE

Write Python programs for the following:

a. Design and implement polynomial ADT using list
b. Uses Stack operations to convert infix expression into postfix expression.
c. Uses Stack operations for evaluating the postfix expression.

5. APPLICATIONS OF TREE

a. Write a Python program to Design and implement binary tree.
b. Traverse the above binary tree recursively in pre-order, post-order & in-order.

6. IMPLEMENTATION OF TREE

Write a Python program to Design and implement binary search tree.

CO3

7. IMPLEMENTATION OF ADVANCED TREE

a. Design and Implement AVL tree using Templates.
b. Design and Implement heap tree using Templates.

8. IMPLEMENTATION OF SHORTEST PATH ALGORITHMS

Write Python programs for the following:

a. Design and Implement Dijkstra's algorithm
b. Design and Implement Floyd Warshall algorithm.

9. IMPLEMENTATION OF MINIMUM SPANNING TREE

Write Python programs for the following:

a. Design and Implement Kruskal's algorithm.
b. Design and Implement Prim's algorithm.

10. GRAPH TRAVERSAL & APPLICATIONS

Write Python programs to implement the following algorithms:

a. Depth first search.

b. Breadth first search.
c. Toplogical Sorting.

11. SORTING &SEARCHING AND HASH TABLE IMPLEMENTATION

a. Write Python programs for implementing the following sorting techniques to arrange a list of integers in ascending order.
   i. Insertion sort
   ii. Selection sort
   iii. Quick sort
   iv. Merge sort
b. Write Python programs for implement linear search and binary search.
c. Write Python programs for implement Hashing – any two collision techniques

TOTAL : 60 PERIODS

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Write functions to implement linear and non-linear data structure operations
CO2	Suggest appropriate linear / non-linear data structure operations for solving a given problem
CO3	Apply appropriate hash functions that result in a collision free scenario for data storage and retrieval

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	3	3	3	1	1	-	-	2	2	2	3	3	3	3	2
CO2	3	3	3	1	1	-	-	2	2	2	3	3	3	3	2
CO3	3	3	3	1	1	-	-	2	2	2	3	3	3	3	2

DS1308	ARTIFICIAL INTELLIGENCE LABORATORY	L	T	P	C
	Common for AI-DS & AI-ML	0	0	4	2

OBJECTIVES

- To get familiarized with the structure of agents
- To solve simple toy world problems
- To understand and develop solutions through search strategies.
- To develop solutions for constraint satisfaction problems.
- To increase the knowledge about real-world problems and how to plan and act in the real world and to get familiarized with expert systems

LIST OF EXPERIMENTS

1. Developed a simple reflex agent program in Python for the vacuum-cleaner world problem. This particular world has just two locations: squares A and B. The vacuum agent perceives which square it is in and whether there is dirt in the square. It can choose to move left, move right, suck up the dirt, or do nothing.	CO1
2. Solve the 8-puzzle problem, which consists of a 3×3 board with eight numbered tiles and a blank space. A tile adjacent to the blank space can slide into the space. The objective is to reach a specified goal state as given below. Find minimum number of steps required to reach the goal.  Goal State	
3. Write a Python program to solve N Queen Problem using backtracking. The N Queen is the problem of placing N chess queens on an N×N chessboard so that no two queens attack each other.	
4. Write a Python program for a path search problem to find a path from point A to point B using A* Search Algorithm.	CO2
5. Using Hill Climbing Search Algorithm, find the solution for a Travelling Salesman Problem, which has to find the shortest route from a starting location and back to the starting location after visiting all the other cities.	
6. Given an undirected graph and a number m, determine if the graph can be coloured with at most m colours such that no two adjacent vertices of the graph are colored with the same color. Here coloring of a graph means the assignment of colors to all vertices.	
7. Solve the cryptarithmetic puzzle SEND+MORE=MONEY using a Python program. Find digits that replace letters to make a mathematical statement true. Each letter in the	

problem represents one digit (0–9). No two letters can represent the same digit. When a letter repeats, it means a digit repeats in the solution.	
8. Write a Python program to solve Sudoko. Given an initial 9x9 grid of cells containig numbers between 1 and 9 or blanks, all blanks must be filled with numbers. You win Sudoko if you find all values such that every row, column, and 3x3 subsquare contains the numbers 1–9, each with a single occurrence.	
9. A job shop consists of a set of distinct machines that process jobs. Each job is a series of tasks that require use of particular machines for known durations, and which must be completed in specified order. Implement the job shop scheduling problem to schedule the jobs on the machines to minimize the time necessary to process all jobs.	CO3
10. Demonstrate the use of MYCIN: a medical expert system. Implement a small example of an expert system; which defines a few contexts, parameters, and rules, and presents a rudimentary user interface to collect data about an infection in order to determine the identity of the infecting organism.	

TOTAL : 60 PERIODS

COURSE OUTCOMES
Upon completion of the course, students will be able to

CO1	Familiarized with the structure of agents, implement simple agents and develop solutions for simple toy world problems.
CO2	Implement and develop solutions for problems through different search strategies. Identify constraints of problems and develop solutions for constraint satisfaction problems.
CO3	Approach a real-world problem, develop a plan and then solve those problems and use expert systems.

MAPPING OF COs WITH POs AND PSOs

MA1453	DISCRETE MATHEMATICS	L	T	P	C
	Common for CSE, IT & AI-DS	3	1	0	4

OBJECTIVES

- To introduce Mathematical Logic, Inference Theory and proof methods.
- To provide fundamental principles on combinatorial counting techniques.
- To introduce graph models, their representation, connectivity and traverse ability.
- To explain the fundamental algebraic structures, groups and their algebraic properties.
- To introduce partial ordering and some functions on a set.

UNIT I	LOGIC AND PROOFS	9+3
Propositional Logic – Propositional Equivalences – Normal Forms - Predicates and Quantifiers – Nested Quantifiers – Rules of Inference – Introduction to Proofs – Proof Methods and Strategy.		CO1
UNIT II	**COMBINATORICS**	9+3
Mathematical Induction – Strong Induction and Well Ordering – The Basics of Counting - The Pigeonhole Principle – Permutations and Combinations – Recurrence Relations -Generating Functions - Solving Linear Recurrence Relations Using Generating Functions– Inclusion – Exclusion – Principle and Its Applications.		CO2
UNIT III	**SETS AND FUNCTIONS**	9+3
Set -Relations on sets – Types of relations and their properties – Partitions – Equivalence relations – Partial ordering – Poset – Hasse diagram. Functions: Characteristic function of a set – Hashing functions – Recursive functions – Permutation functions.		CO3
UNIT IV	**GRAPHS**	9+3
Graphs and Graph Models – Graph Terminology and Special Types of Graphs – Matrix Representation of Graphs and Graph Isomorphism – Connectivity – Euler and Hamilton Paths.		CO4
UNIT V	**ALGEBRAIC STRUCTURES**	9+3
Groups – Subgroups – Homomorphisms – Isomorphism - Normal Subgroup and Coset – Lagrange's Theorem.		CO5

TOTAL : 60 PERIODS

TEXT BOOKS

1. Kenneth H. Rosen, "Discrete Mathematics and its Applications", Tata McGraw Hill Pub. Co.Ltd., Seventh Edition, Special Indian Edition, New Delhi, 2012.
2. Tremblay J.P. and Manohar R, "Discrete Mathematical Structures with Applications to Computer Science", Tata McGraw Hill Pub. Co. Ltd, Thirtieth Reprint, New Delhi, 2011.

REFERENCE BOOKS		

1. Ralph. P. Grimaldi, “Discrete and Combinatorial Mathematics: An Applied Introduction”, Pearson Education, Fifth Edition, New Delhi, 2014
2. Seymour Lipschutz and Mark Lipson,” Discrete Mathematics”, Schaum‘s Outlines, Tata McGraw Hill Pub. Co. Ltd., Third Edition, New Delhi, 2013.
3. Thomas Koshy,” Discrete Mathematics with Applications”, Elsevier Publications, Boston, 2004.

COURSE OUTCOMES
Upon completion of the course, students will be able to

CO1	Construct proofs by using direct proof, proof by contraposition, proof by contradiction. Construct mathematical arguments using logical connectives and quantifiers and verify the correctness of an argument using propositions. Logic helps in arriving inferences for any problem.
CO2	Solve problems on permutation and combination. Prove mathematical theorems using mathematical induction. Demonstrate basic counting principles, compute and interpret the meaning in the context of the particular application which helps to apply the combinatorial techniques in Algorithms and Data structure for analysis and design.
CO3	Understand relations on a set and functions on a set
CO4	Apply the concepts of graph theory in data structures, data mining, image segmentation and in clustering.
CO5	Familiar with algebraic systems, groups, sub groups, Lagrange’s theorem and normal subgroups. In Coding algorithms and in theoretical computer science algebraic structures are applied.

MAPPING OF COs WITH POs AND PSOs

CS1401	DESIGN AND ANALYSIS OF ALGORITHMS	L	T	P	C
	Common for CSE, IT, AI-DS & AI-ML	3	0	0	3

OBJECTIVES

- To learn the general framework for analyzing algorithm efficiency
- To be conversant with algorithms for common problems.
- To analyse the algorithms for time/space complexity.
- To write algorithms for a given problem using different design paradigms.
- To understand computational complexity of problems

UNIT I	**INTRODUCTION**	9
Algorithm – Fundamentals of Algorithmic Problem Solving – Important Problem Types – The Analysis Framework – Asymptotic Notations and Basic Efficiency Classes – Mathematical Analysis of Nonrecursive and Recursive Algorithms – Empirical Analysis of Algorithms.		CO1
UNIT II	**DECREASE AND CONQUER AND DIVIDE-AND-CONQUER**	9
Decrease-and-Conquer– Insertion Sort – Binary Search – Computing a Median and the Selection Problem – Divide-and-Conquer – Merge Sort – Quicksort – The Closest –Pair and Convex –Hull Problems by Divide-and-Conquer.		CO2
UNIT III	**DYMANIC PROGRAMMING AND GREEDY TECHNIQUE**	9
The Knapsack Problem and Memory Functions – Optimal Binary Search Trees – Warshall's Algorithm – Floyd's Algorithm – Greedy Technique – Prim's Algorithm – Kruskal's Algorithm – Dijkstra's Algorithm – Huffman Trees and Codes.		CO3
UNIT IV	**ITERATIVE IMPROVEMENT**	9
Graphical Method – The Simplex Method – The maximum Flow Problem – Maximum Matching in Bipartite Graphs – The Stable Marriage Problem.		CO4
UNIT V	**BACKTRACKING, BRANCH-AND-BOUND AND APPROXIMATION ALGORITHMS**	9
P, NP, and NP- Complete Problems – Backtracking – n-Queens Problem – Hamiltonian Circuit Problem – Subset-Sum Problem – Branch-and-Bound – Assignment Problem – Knapsack Problem – Traveling Salesman Problem – Approximation Algorithms for the Traveling Salesman Problem and the Knapsack Problem.		CO5

3. Donald E. Knuth, "Art of Computer Programming, Volume I - Fundamental Algorithms", Third Edition, Addison Wesley, 1997.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Ability to investigate an algorithm's efficiency with respect to running time
CO2	Design and implement problems using algorithmic design techniques such as decrease and conquer and divide and conquer
CO3	Ability to understand the design techniques such as Dynamic programming and Greedy technique
CO4	Ability to understand the iterative design techniques
CO5	Understand the variations among tractable and intractable problems

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

CO4	3	3	3	3	2	-	-	-	3	-	2	3	3	2	2
CO5	3	3	3	3	2	-	-	-	3	-	2	3	3	2	2

CS1402	OPERATING SYSTEMS	L	T	P	C
	Common for CSE, IT, AI-DS & AI-ML	3	0	0	3

OBJECTIVES

- To understand the basic concepts and functions of operating systems.
- To understand Processes and Threads
- To analyze Scheduling algorithms.
- To understand the concept of Deadlocks.
- To analyze various memory management schemes.
- To understand I/O management and File systems.
- To be familiar with the basics of Linux system and Mobile OS like iOS and Android

UNIT I	OPERATING SYSTEM OVERVIEW	9
Computer System Overview-Basic Elements, Instruction Execution, Interrupts, Memory Hierarchy, Cache Memory, Direct Memory Access, Multiprocessor and Multicore Organization. Operating system overview-objectives and functions, Evolution of Operating System.- Computer System Organization Operating System Structure and Operations- System Calls, System Programs, OS Generation and System Boot.		CO1
UNIT II	**PROCESS MANAGEMENT**	9
Processes – Process Concept, Process Scheduling, Operations on Processes, Inter-process Communication; CPU Scheduling – Scheduling criteria, Scheduling algorithms, Multiple-processor scheduling; Threads- Overview, Multithreading models, Threading issues; Process Synchronization – The critical-section problem, Semaphores, Classical problems of synchronization, Monitors; Deadlock – System model, Deadlock characterization, Methods for handling deadlocks, Deadlock prevention, Deadlock avoidance, Deadlock detection, Recovery from deadlock.		CO2
UNIT III	**STORAGE MANAGEMENT**	9
Main Memory – Background, Swapping, Contiguous Memory Allocation, Paging, Segmentation, Segmentation with paging, 32 and 64 bit architecture Examples; Virtual Memory – Background, Demand Paging, Need for Page Replacement, Page Replacement Algorithm, Allocation, Thrashing; Allocating Kernel Memory, OS Examples.		CO3
UNIT IV	**FILE SYSTEMS AND I/O SYSTEMS**	9
Mass Storage system – Overview of Mass Storage Structure, Disk Structure, Disk Scheduling and Management, swap space management; File-System Interface - File concept, Access methods, Directory Structure, Directory organization, File Sharing and Protection; File System Implementation- File System Structure, Directory implementation, Allocation Methods, Free Space Management, Efficiency and Performance, Recovery; I/O Systems – I/O Hardware, Application I/O interface, Kernel I/O subsystem, Streams, Performance.		CO4
UNIT V	**CASE STUDY**	9
Linux System - Design Principles, Kernel Modules, Process Management, Scheduling, Memory Management, Input-Output Management, File System, Inter-process Communication; Mobile		CO5

OS - iOS and Android - Architecture and SDK Framework, Media Layer, Services Layer, Core OS Layer, File System.

COURSE OUTCOMES
Upon completion of the course, students will be able to

CO1	Analyze various scheduling algorithms.
CO2	Understand deadlock, prevention and avoidance algorithms.
CO3	Compare and contrast various memory management schemes.
CO4	Understand the functionality of file systems.
CO5	Perform administrative tasks on Linux Servers and Compare iOS and Android

CS1403	DATABASE DESIGN AND MANAGEMENT (Lab Integrated)	L	T	P	C
	Common to CSE, IT, AI-DS & AI-ML	3	0	2	4

OBJECTIVES

- To learn the fundamentals of data models, ER diagrams and to study SQL and relational database design.
- To familiarize relational model with Relational Database design and Normal Forms.
- To understand the fundamental concepts of transaction processing- concurrency control techniques and recovery procedures.
- To understand the implementation techniques by learning file organization and Query Optimization.
- To understand the concepts of distributed databases, Object oriented databases and XML databases.

UNIT I	INTRODUCTION TO RELATIONAL DATABASES	9 + 6
Purpose of Database System – Views of data – Data Models – Database System Architecture Entity-Relationship model – E-R Diagrams – Enhanced-ER Model – ER-to-Relational Mapping– Introduction to relational databases – Relational Model – Keys – Relational Algebra – SQL fundamentals – Advanced SQL features **Lab Component** • Data Definition Commands, Data Manipulation Commands for inserting, deleting, updating and retrieving Tables and Transaction Control statements .Database Querying – Simple queries, Nested queries, Sub queries and Joins • Queries using Aggregate functions (COUNT, SUM, AVG, MAX and MIN), GROUP BY, HAVING and Creation and dropping of Views, Synonyms, Sequences. • Conceptual Designing using ER Diagrams (Identifying entities, attributes, keys and relationships between entities, cardinalities, generalization, specialization etc.)		CO1
UNIT II	**RELATIONAL DATABASE DESIGN**	9 + 6
Embedded SQL– Dynamic SQL - Functional Dependencies – Non-loss Decomposition – First, Second, Third Normal Forms, Dependency Preservation – Boyce/Codd Normal Form – Multi-valued Dependencies and Fourth Normal Form – Join Dependencies and Fifth Normal Form **Lab Component** • Simple Embedded SQL Program to demonstrate the concepts. • Database Design using normalization and Implementation for any application.		CO2
UNIT III	**TRANSACTIONS**	9 + 6
Transaction Concepts – ACID Properties – Schedules – Serializability – Concurrency Control – Need for Concurrency – Locking Protocols – Two Phase Locking – Deadlock – Transaction Recovery – Save Points – Isolation Levels – SQL Facilities for Concurrency and Recovery. **Lab Component** • Usage of Transaction control language commands like commit, rollback and save point. • Develop Programs using BEFORE and AFTER Triggers for INSERT, DELETE and UPDATE statements		CO3

UNIT IV	IMPLEMENTATION TECHNIQUES	9 + 6
RAID – File Organization – Organization of Records in Files – Indexing and Hashing –Ordered Indices – B+ tree Index Files – B tree Index Files – Static Hashing – Dynamic Hashing. Query Processing Overview – Algorithms for SELECT and JOIN operations – Query optimization using Heuristics and Cost Estimation. **Lab Component** • Implementation of B tree and B+ Tree. • Develop programs to demonstrate hashing techniques.		CO4
UNIT V	**ADVANCED TOPICS**	9 + 6
Distributed Databases: Architecture, Data Storage, Data Fragmentation - Replication and Allocation Techniques for Distributed Database Design. Distributed Databases: Architecture, Data Storage, Transaction Processing – Object-based Databases: Object Database Concepts, Object-Relational features, ODMG Object Model, ODL, OQL - XML Databases: XML Hierarchical Model, DTD, XML Schema, XQuery. **Lab Component** • Database Connectivity with Front End Tools • Case Study using real life database applications.		CO5

PRACTICALS: 30 PERIODS	THEORY: 45 PERIODS	TOTAL : 75 PERIODS

1. Ramez Elmasri and Shamkant B. Navathe; Fundamentals of Database Systems, Pearson, Seventh Edition, Global Edition,2016
2. A Silberschatz, H Korth, S Sudarshan, "Database System and Concepts", fifth Edition McGraw-Hill,2012.
3. Vlad Vlasceanu, Wendy A. Neu, Andy Oram, Sam Alapati, An Introduction to Cloud Databases,O'Reilly Media, Inc.,2019.

REFERENCE BOOKS

1. C.J.Date, "An Introduction to Database Systems", Eighth Edition, Pearson Education,2004.
2. Raghu Ramakrishnan, —Database Management Systems‖, Fourth Edition, McGraw-Hill College Publications, 2015.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Map ER model to Relational model to perform database design effectively
CO2	Able to understand the various normal forms and to minimize the redundancy in the relations
CO3	Able to know the logic behind the transaction processing, concurrency control and to recover system from failures.
CO4	Able to organize, index the files and to optimize the given queries
CO5	Able to know the concepts of distributed databases, Object Oriented databases and XML databases

ML1401	FOUNDATIONS OF MACHINE LEARNING	L	T	P	C
	Common for IT, AI-DS & AI-ML	3	0	0	3

OBJECTIVES

- To understand the basic concepts of machine learning and probability theory.
- To appreciate supervised learning and their applications.
- To understand unsupervised learning like clustering and EM algorithms.
- To understand the theoretical and practical aspects of probabilistic graphical models.
- To learn other learning aspects such as reinforcement learning, representation learning, deep learning, neural networks and other technologies.

UNIT I	INTRODUCTION	9
Machine Learning – Types of Machine Learning – Supervised Learning – Unsupervised Learning – Basic Concepts in Machine Learning – Machine Learning Process – Weight Space – Testing Machine Learning Algorithms – A Brief Review of Probability Theory –Turning Data into Probabilities – The Bias-Variance Trade-off, FIND–S Algorithm, Candidate Elimination Algorithm		CO1
UNIT II	**SUPERVISED LEARNING**	9
Linear Models for Regression – Linear Basis Function Models – The Bias-Variance Decomposition – Bayesian Linear Regression – Common Regression Algorithms – Simple Linear Regression – Multiple Linear Regression – Linear Models for Classification – Discriminant Functions – Probabilistic Generative Models – Probabilistic Discriminative Models – Laplace Approximation – Bayesian Logistic Regression – Common Classification Algorithms – k-Nearest Neighbors – Decision Trees – Random Forest model – Support Vector Machines		CO2
UNIT III	**UNSUPERVISED LEARNING**	9
Mixture Models and EM – K-Means Clustering – Dirichlet Process Mixture Models – Spectral Clustering – Hierarchical Clustering – The Curse of Dimensionality – Dimensionality Reduction – Principal Component Analysis – Latent Variable Models (LVM) – Latent Dirichlet Allocation (LDA)		CO3
UNIT IV	**GRAPHICAL MODELS**	9
Bayesian Networks – Conditional Independence – Markov Random Fields – Learning – Naive Bayes Classifiers – Markov Model – Hidden Markov Model.		CO4
UNIT V	**ADVANCED LEARNING**	9
Reinforcement Learning – Representation Learning – Neural Networks – Active Learning – Ensemble Learning – Bootstrap Aggregation – Boosting – Gradient Boosting Machines – Deep Learning		CO5
		TOTAL : 45 PERIODS

TEXT BOOKS

6. Fabio Nelli, “Python Data Analytics with Pandas, Numpy, and Matplotlib”, Second Edition, Apress, 2018.

COURSE OUTCOMES Upon completion of the course, students will be able to	
CO1	Gain knowledge about basic concepts of machine learning techniques
CO2	Develop predictive model based on both input and output data
CO3	Ability to understand the unsupervised learning algorithm and dimensionality reduction techniques
CO4	Design systems that use the appropriate graphical models of machine learning
CO5	Ability to address the problem of learning control strategies for autonomous agents

DS1401	PYTHON PROGRAMMING FOR DATA SCIENCE	L	T	P	C
		3	0	0	3

OBJECTIVES

- To familiarize the data scientists, work environment like IPython and Jupyter.
- To understand ndarray object for efficient storage and manipulation of dense data arrays in python using NumPy.
- To understand DataFrame object for efficient storage and manipulation of labelled / columnar data in python using Pandas.
- To perform data visualizations in python using Matplotlib.
- To practice machine learning algorithms in python using Scikit-Learn.

UNIT I	IPYTHON: BEYOND NORMAL PYTHON	9
Shell and Notebook- Help and Documentation in IPython- Keyboard Shortcuts in the IPython Shell- IPython Magic Commands- Input and Output History- IPython and Shell Commands- Errors and Debugging- Profiling and Timing Code.		CO1
UNIT II	**INTRODUCTION TO NUMPY**	9
Understanding Data Types in Python- The Basics of NumPy Arrays- Computation on NumPy Arrays: Universal Functions- Aggregations- Computation on Arrays- Comparisons, Masks, and Boolean Logic- Fancy Indexing- Sorting Arrays- Structured Data.		CO2
UNIT III	**DATA MANIPULATION WITH PANDAS**	9
Installing and Using Pandas- Introducing Pandas Objects- Data Indexing and Selection- Operating on Data in Pandas- Handling Missing Data- Hierarchical Indexing- Combining Datasets- Aggregation and Grouping- Pivot Tables- Vectorized String Operations- Working with Time Series- High-Performance Pandas.		CO3
UNIT IV	**VISUALIZATION WITH MATPLOTLIB**	9
General Matplotlib Tips- Simple Line Plots- Simple Scatter Plots- Visualizing Errors- Density and Contour Plots- Histograms, Binnings, and Density- Customizing Plot Legends- Customizing Colorbars- Multiple Subplots- Text and Annotation- Customizing Ticks- Customizing Matplotlib- Three-Dimensional Plotting in Matplotlib- Geographic Data with Basemap- Visualization with Seaborn.		CO4
UNIT V	**MACHINE LEARNING WITH SCIKIT-LEARN**	9
Machine Learning- Introducing Scikit-Learn- Hyperparameters and Model Validation- Feature Engineering- Naive Bayes Classification- Linear Regression- Support Vector Machines- Decision Trees and Random Forests- Principal Component Analysis- k-Means Clustering- Gaussian Mixture Models- Application: A Face Detection Pipeline.		CO5
		TOTAL : 45 PERIODS

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Use data scientists work environment like IPython and Jupyter.
CO2	Use ndarray object for efficient storage and manipulation of dense data arrays in python using NumPy.
CO3	Use DataFrame object for efficient storage and manipulation of labeled/columnar data in python using Pandas.
CO4	Perform data visualizations in python using Matplotlib.
CO5	Use machine learning algorithms in python using Scikit-Learn.

DS1407	DATA SCIENCE LABORATORY USING PYTHON	L	T	P	C
		0	0	4	2

OBJECTIVES

- To provide knowledge of Data Exploration using Programming APIs and Freely Available Tools.
- To understand the concept of Data Formation.
- To visualize the data using various Python API.
- To use latest python libraries for Data Science in Real Time Applications.

LIST OF EXPERIMENTS

	Experiment	CO
1.	Python Environment Setup using Anaconda.	CO1
2.	Perform Mathematical Computing using NumPy - Array and Matrices.	
3.	Data Manipulation using Pandas – Importing Data, Understanding Data Frame, Indexing Data Frames, View and Select Data Demo	CO2
4.	Data Manipulation using Pandas – Data Operations, Missing Values, Renaming Columns, File Read and Write, Pandas SQL Operations.	
5.	Scientific Computing using SciPy - Special Function Package, Linear Algebra - Feature Engineering	
6.	Scientific Computing using SciPy - Linear Regression- Support Vector Machines	CO3
7.	Scientific Computing using SciPy – Naive Bayes Classification, Decision Trees and Random Forests, Principal Component Analysis, k-Means Clustering.	
8.	Data Visualization using Matplotlib – Types of plots such as HISTOGRAM, Scatter Plots, Line, Bar, Pie Chart.	

TOTAL : 60 PERIODS

COURSE OUTCOMES **Upon completion of the course, students will be able to**	
CO1	Understand the concept of data formation with the help of crawling and usage of APIs
CO2	Apply various Data cleaning, data transformation, data exploration and data visualization techniques in Python programming language.
CO3	Explore and visualize data using various data science tools and python APIs.

ML1408	**MACHINE LEARNING LABORATORY**	**L**	**T**	**P**	**C**
	Common for IT, AI-DS & AI-ML	**0**	**0**	**4**	**2**

OBJECTIVES

- To make use of Data sets in implementing the machine learning algorithms
- To implement the machine learning concepts and algorithms in any suitable language of choice
- To understand the practical aspects of probabilistic graphical models.

LIST OF EXPERIMENTS

1. Implement and demonstrate the FIND-S algorithm for finding the most specific hypothesis based on a given set of training data samples. Read the training data from a .CSV File	CO1
2. For a given set of training data examples stored in a .CSV file, implement and demonstrate the Candidate-Elimination algorithm. Output a description of the set of all hypotheses consistent with the training examples.	
3. Write a program to demonstrate the working of the decision tree based ID3 algorithm. Use an appropriate data set for building the decision tree and apply this knowledge to classify a new sample	CO2
4. Build an Artificial Neural Network by implementing the Back propagation algorithm and test the same using appropriate data sets	
5. Write a program to implement the naïve Bayesian classifier for a sample training data set stored as a .CSV file. Compute the accuracy of the classifier, considering few test data sets.	
6. Assuming a set of documents that need to be classified, use the naïve Bayesian Classifier model to perform this task. Built-in Java classes/API can be used to write the program. Calculate the accuracy, precision, and recall for your data set.	CO3
7. Write a program to construct a Bayesian network considering medical data. Use this model to demonstrate the diagnosis of heart patients using standard Heart Disease Data Set. You can use Java/Python ML library lasses/API	
8. Apply EM algorithm to cluster a set of data stored in a .CSV file. Use the same data set for clustering using k-Means algorithm. Compare the results of these two algorithms and comment on the quality of clustering. You can add Java/Python ML library lasses/API in the program.	
9. Write a program to implement k-Nearest Neighbor algorithm to classify the iris data set. Print both correct and wrong predictions. Java/Python ML library classes can be used for this problem.	
10. Implement the non-parametric Locally Weighted Regression algorithm in order to fit data points. Select appropriate data set for your experiment and draw graphs

HS1310	PROFESSIONAL SKILLS LABORATORY	L	T	P	C
	Common for CSE & AI-DS	0	0	2	1

OBJECTIVES

- Enhance the Employability and Career Skills of students
- Orient the students towards grooming as a professional
- Make them Employable Graduates
- Develop their confidence and help them attend interviews successfully.

LIST OF EXPERIMENTS

UNIT I	6
Introduction to Soft Skills- Hard skills & soft skills - employability and career Skills—Grooming as a professional with values—Making an Oral Presentation–Planning and preparing a model presentation; Organizing the presentation to suit the audience and context; Connecting with the audience during presentation; Projecting a positive image while speaking; Emphasis on effective body language-General awareness of Current Affairs.	CO1
UNIT II	6
Self-Introduction-organizing the material - Introducing oneself to the audience – introducing the topic – answering questions – individual presentation practice—– Making a Power Point Presentation -- Structure and format; Covering elements of an effective presentation; Body language dynamics. Making an Oral Presentation–Planning and preparing a model presentation; Organizing the presentation to suit the audience and context; Connecting with the audience during presentation; Projecting a positive image while speaking; Emphasis on effective body language	CO2
UNIT III	6
Introduction to Group Discussion— Participating in group discussions – understanding group dynamics - brainstorming the topic -– questioning and clarifying –GD strategies- Structure and dynamics of a GD; Techniques of effective participation in group discussion; Preparing for group discussion; Accepting others' views / ideas; Arguing against others' views or ideas, etc	CO3
UNIT IV	6
Basics of public speaking; Preparing for a speech; Features of a good speech; Speaking with a microphone. (Famous speeches may be played as model speeches for learning the art of public speaking). Interview etiquette – dress code – body language – attending job interviews– telephone/skype interview -one to one interview &panel interview –Job Interviews: purpose and process; How to prepare for an interview; Language and style to be used in an interview; Types of interview questions and how to answer them.	CO4
UNIT V	6
Recognizing differences between groups and teams- managing time managing stress- networking professionally- respecting social protocols understanding career management- developing a long- term career plan making career changes	CO5

TOTAL : 30 PERIODS

DS1501	OPTIMIZATION IN DATA ANALYSIS	L	T	P	C
		4	0	0	4

OBJECTIVES

- To use convex sets and convex functions
- To understand Regression analysis
- To learn clustering and classification
- To learn multivariate analysis

UNIT I	**CONVEX SETS**	9
Iteration principles- Fixed point algorithms- Convex sets and convex cones- Best approximation paradigms- Projection methods in convex feasibility problems- applications to data fusion and image recovery		CO1
UNIT II	**CONVEX FUNCTIONS**	9
Convex functions-Conjugation of convex functions-Duality in convex optimization-Sub differential calculus-Sub gradient algorithms for convex feasibility and best approximation-applications in inverse problems		CO2
UNIT III	**REGRESSION ANALYSIS**	9
Regression Analysis: Linear Regression-Logistic Regression- Polynomial Regression- Stepwise Regression- Ridge Regression- Lasso Regression- ElasticNet Regression		CO3
UNIT IV	**CLUSTER ANALYSIS AND CLASSIFICATIONS**	9
Cluster Analysis: Affinity Propagation- Agglomerative Clustering- BIRCH- DBSCAN- k-Means, Mini-Batch k-Means, Mean Shift, OPTICS, Spectral Clustering, Mixture of Gaissian, Classification Analysis: Naïve Bayes, Stochastic gradient dissent, k-Nearest Neighbors, Random Forest, Support Vector Machine		CO4
UNIT V	**MULTIVARIATE ANALYSIS**	9
Random vectors and matrices – Mean vectors and covariance matrices – Multivariate normal density and its properties – Principal components - Population principal components – Principal components from standardized variables		CO5

TOTAL : 45 PERIODS

REFERENCE BOOKS

2. Douglas C. Montgomery, Elizabeth A. Peck, G. Geoffrey Vining, Introduction to Linear Regression Analysis, Wiley-2017
3. Gareth James,Daniela Witten,Trevor Hastie,Rob Tibshirani , An Introduction to statistical Learning, Springer

COURSE OUTCOMES **Upon completion of the course, students will be able to**	
CO1	Understand and apply convex sets for data fusion
CO2	Understand and apply convex functions in inverse problems
CO3	Apply regression analysis for forecasting
CO4	Apply clustering and classification to classify the objects
CO5	Understand and apply multivariate analysis

MAPPING OF COs WITH POs AND PSOs

DS1502	ADVANCED ARTIFICIAL INTELLIGENCE	L	T	P	C
	Common for AI-DS & AI-ML	3	0	0	3

OBJECTIVES

- To analyze Probabilistic Reasoning for knowledge
- To give understanding of main abstractions of decision making.
- To understand a wide variety of learning algorithms.
- To understand the different ways of designing software agents
- To understand the application of AI namely Robotics

UNIT I	UNCERTAINTY AND REASONING	9
	Uncertainty - Basic Probability Notation – Axioms of Probability – Bayes Rule - Probabilistic Reasoning – Bayesian Networks – Semantics – Inference – Other Approaches to Uncertain Reasoning – Dempster Shafer Theory – Fuzzy sets and Fuzzy Logic	CO1
UNIT II	**DECISION MAKING**	9
	Utility Theory - Utility Functions – Decision Networks – Value of Information – Decision Theoretic Expert Systems – Sequential Decision Problems – Value Iteration – Policy Iteration – Decision Theoretic Agents	CO2
UNIT III	**LEARNING METHODS**	9
	Learning from Observations - Forms of Learning – Inductive Learning – Learning Decision Trees – Ensemble Learning - Explanation Based Learning – Learning with Complete Data – Naïve Bayes Models – Learning with Hidden Variables – The EM Algorithm – Neural Networks	CO3
UNIT IV	**SOFTWARE AGENTS**	9
	Architecture for Intelligent Agents – Examples - Agent communication – KQML- KIF – FIPA ACL – Speech Acts - Argumentation among Agents – Trust and Reputation in Multi-agent systems	CO4
UNIT V	**ROBOTICS**	9
	Robot Hardware – Robotic Perception – Planning to Move, Planning Uncertain Movements – Moving – Robotic Software Architectures – Application Domains	CO5
		TOTAL: 45 PERIODS

TEXT BOOKS

1. Russell S and Norvig P, - Artificial Intelligence: A Modern Approach", Prentice Hall, Third Edition, 2009.
2. Gerhard Weiss, - Multiagent Systems: A Modern Approach to Distributed Artificial Intelligence, Second Edition, The MIT Press, 2013.

REFERENCE BOOKS

1. Kaushik, Artificial Intelligence, Cengage Learning, 1st Edition, 2011

3. Kevin Night and Elaine Rich, Nair B., "Artificial Intelligence (SIE)", Mc Graw Hill- 2008.
4. Nils J. Nilsson,- The Quest for Artificial Intelligence, Cambridge University Press,2009

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Acquire theoretical knowledge about principles for logic-based representation and reasoning
CO2	Develop a decision-making model that utilizes Artificial Intelligence.
CO3	Develop an understanding what is involved in learning models from data.
CO4	Select appropriately from a range of techniques when implementing intelligent systems
CO5	Gain knowledge on the functions of Robots

DS1503	DATA MINING	L	T	P	C
		3	0	0	3

OBJECTIVES

- Learn data mining concepts understand association rules mining
- Discuss classification algorithms learn how data is grouped using clustering techniques
- To develop the abilities of critical analysis to data mining systems and applications
- To implement practical and theoretical understanding of the technologies for data mining
- To understand the strengths and limitations of various data mining models

UNIT	TITLE / CONTENT	PERIODS / CO
UNIT I	**INTRODUCTION**	9
	Introduction, What is Data Mining, Definition, KDD, Challenges, Data Mining Tasks, Data Preprocessing, Data Cleaning, Missing data, Dimensionality Reduction, Feature Subset Selection, Discretization and Binaryzation, Data Transformation; Measures of Similarity and Dissimilarity-Basics	CO1
UNIT II	**ASSOCIATION RULE**	9
	Problem Definition, Frequent Item Set Generation, The APRIORI Principle, Support and Confidence Measures, Association Rule Generation; APRIOIRI Algorithm, The Partition Algorithms, FP-Growth Algorithms, Compact Representation of Frequent Item Set- Maximal Frequent Item Set, Closed Frequent Item Set	CO2
UNIT III	**CLASSIFICATION**	9
	Problem Definition, General Approaches to solving a classification problem , Evaluation of Classifiers , Classification techniques, Decision Trees-Decision tree Construction , Methods for Expressing attribute test conditions, Measures for Selecting the Best Split, Algorithm for Decision tree Induction ; Naive-Bayes Classifier, Bayesian Belief Networks; K- Nearest neighbor classification-Algorithm and Characteristics	CO3
UNIT IV	**CLUSTERING**	9
	Problem Definition, Clustering Overview, Evaluation of Clustering Algorithms, Partitioning Clustering-K-Means Algorithm, K-Means Additional issues, PAM Algorithm; Hierarchical Clustering-Agglomerative Methods and divisive methods, Basic Agglomerative Hierarchical Clustering Algorithm, Specific techniques, Key Issues in Hierarchical Clustering, Strengths and Weakness; Outlier Detection	CO4
UNIT V	**WEB AND TEXT MINING**	9
	Introduction, web mining, web content mining, web structure mining, we usage mining, Text mining –unstructured text, episode rule discovery for texts, hierarchy of categories, text clustering	CO5

TOTAL : 45 PERIODS

TEXT BOOKS

1. Jiawei Han, Micheline Kamber, Data Mining- Concepts and Techniques, Morgan Kaufmann Publishers, Elsevier, 2 Edition, 2006

DS1504	EXPLORATORY DATA ANALYSIS	L	T	P	C
		3	0	0	3

OBJECTIVES

- To learn the fundamentals Exploratory Data Analysis
- To understand the theoretical foundation of working with data.
- To learn essential statistical measures
- To understand time-series data and how to perform EDA on it.
- To get knowledge about quality on data analysis.

UNIT	TITLE	PERIODS / CO
UNIT I	**INTRODUCTION TO EXPLORATORY DATA ANALYSIS**	9
Exploratory Data Analysis Fundamentals - Understanding data science - The significance of EDA - Making sense of data - Comparing EDA with classical and Bayesian analysis - Software tools available for EDA - Visual aids for EDA – Types of Charts		CO1
UNIT II	**DATA TRANSFORMATION**	9
EDA with personal Email - Loading the dataset - Data transformation - Data Analysis - Merging database-style data frames - Transformation techniques - Benefits of Transformation		CO2
UNIT III	**DESCRIPTIVE STATISTICS, GROUPING DATASETS**	9
Understanding statistics - Measures of central tendency - Measures of dispersion - Grouping Datasets - Understanding groupby() - Data aggregation - Pivot tables and cross-tabulations - Correlation - Types of analysis - multivariate analysis using the Titanic dataset		CO3
UNIT IV	**TIME SERIES ANALYSIS, MODEL DEVELOPMENT AND EVALUATION**	9
Understanding the time series - Time Series Analysis with Open Power System - Hypothesis Testing and Regression - Hypothesis testing - p-hacking - Understanding regression - Model development and evaluation		CO4
UNIT V	**MACHINE LEARNING, EDA ON WINE QUALITY DATA ANALYSIS**	9
Types of machine learning - Supervised learning - Unsupervised learning - Reinforcement Learning - Unified machine learning workflow - Disclosing the wine quality dataset - Analyzing red wine - Analyzing white wine – Model Development and Evaluation		CO5

TOTAL : 45 PERIODS

TEXT BOOKS

1. Suresh Kumar Mukhiya, Usman Ahmed, “Hands-On Exploratory Data Analysis with Python: Perform EDA techniques to understand, summarize, and investigate your data”, First Edition, Packt Publication, 2020.

3. Glenn J. Myatt and Wayne P. Johnson, “Making Sense of Data II: A Practical Guide to Data Visualization, Advanced Data Mining Methods and Applications”, Wiley Publications, 2009.

COURSE OUTCOMES **Upon completion of the course, students will be able to**	
CO1	Understand the fundamental concepts of exploratory data analysis using Python
CO2	Implement EDA with personal mail and to work with data transformation
CO3	Understand the variance and standard deviation of datasets
CO4	Describe the visualization and analysis of time series and survival calculations.
CO5	Understand different types of machine learning and to apply all the techniques learnt to perform EDA on a wine quality dataset.

DS1507	DATA PREPARATION AND ANALYSIS LABORATORY	L	T	P	C
		0	0	4	2

OBJECTIVES

- ❖ Learn pre-processing method for multi-dimensional data
- ❖ Practice on data cleaning mechanisms
- ❖ Learn various data exploratory analysis
- ❖ Develop the visualizations for clusters or partitions

LIST OF EXPERIMENTS

Experiment	CO
1. DATA PRE-PROCESSING AND DATA CUBE Data pre-processing methods on student and labour datasets Implement data cube for data warehouse on 3-dimensional data	CO1
2. DATA CLEANING Implement various missing handling mechanisms, Implement various noisy handling mechanisms	
3. EXPLORATORY ANALYSIS Develop k-means and MST based clustering techniques, Develop the methodology for assessment of clusters for given dataset	CO2
4. ASSOCIATION ANALYSIS Design algorithms for association rule mining algorithms	
5. HYPTOTHYSIS GENERATION Derive the hypothesis for association rules to discovery of strong association rules; Use confidence and support thresholds	
6. TRANSFORMATION TECHNIQUES Construct Haar wavelet transformation for numerical data, Construct principal component analysis (PCA) for 5-dimensional data.	
7. DATA VISUALIZATION Implement binning visualizations for any real time dataset, Implement linear regression techniques	CO3
8. CLUSTERS ASSESSMENT Visualize the clusters for any synthetic dataset, Implement the program for converting the clusters into histograms	
9. HIERARCHICAL CLUSTERING Write a program to implement agglomerative clustering technique, write a program to implement divisive hierarchical clustering technique	
10. SCALABILITY ALGORITHMS Develop scalable clustering algorithms, Develop scalable a priori algorithm	

TOTAL : 60 PERIODS

CO3	3	3	3	1	1	-	-	2	2	2	-	2	3	3	2

DS1508	ADVANCED ARTIFICIAL INTELLIGENCE LABORATORY	L	T	P	C
	Common for AI-DS & AI-ML	0	0	4	2

OBJECTIVES

- ❖ To be able to reason under uncertainty of the real-world.
- ❖ To understand supervised learning techniques.
- ❖ To increase knowledge about learning with hidden variables.
- ❖ To understand how to use natural language processing.
- ❖ To get familiarized with basics of robotics.

LIST OF EXPERIMENTS

1. Implement a Python program of automatic Tic Tac Toe game using random number.	CO1
2. Apply Bayes' Rule to a scenario of drug screening, which is a mandatory testing for federal or many other jobs which promise a drug-free work environment.	
3. Demonstrate the application of Bayesian Network for the Monty Hall Problem. The Monty Hall problem is a brain teaser, in the form of a probability puzzle. Assume that you're on a game show, and you're given the choice of three doors: Behind one door is a car; behind the others, goats. You pick a door, say No. 1, and the host, who knows what's behind the doors, opens another door, say No. 3, which has a goat. He then says to you, "Do you want to pick door No. 2?" Is it to your advantage to switch your choice?	
4. Write a Python program to create a fuzzy control system which models how you might choose to tip at a restaurant. When tipping, you consider the service and food quality, rated between 0 and 10. You use this to leave a tip of between 0 and 25%.	
5. Formulate a decision tree, which is applicable in the field of medical sciences that will help predict whether or not a patient has diabetes.	CO2
6. Implement Adaptive Boosting in Python for a simple fruit classification problem. Consider classification of the fruits into oranges or apples. The characteristics that are provided for the fruits to be classified are weight and size (diameter). Classify a new fruit as either apple or orange just based on the data on the size and weights.	
7. For a coin toss example with incomplete information, we have missing data and the problem of estimating θ, where θ is the probability of heads or tails is harder to solve. Apply Expectation Maximization (EM) Algorithm to start with a guess for θ, then calculate z, then update θ using this new value for z, and repeat till convergence. The label of the coin is indicated by z.	
8. Perform text classification for a real-world example. Consider a model capable of predicting whether a given movie review is positive or negative. Use people's sentiments which are classified into different categories and based upon the text classification give either a positive review or a negative review.	CO3
9. Given a robot which can only move in four directions, UP (U), DOWN (D), LEFT (L), and RIGHT®. Given a string consisting of instructions to move. Output the coordinates of a robot after executing the instructions. Initial position of robot is at origin (0, 0).	
10. A robot moves in a plane starting from the original point (0, 0). The robot can move toward UP, DOWN, LEFT and RIGHT with a given steps. Write a program to compute the distance from current position after a sequence of movement and original point. If the distance is a float, then just print the nearest integer.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Approach a real-world problem, which is uncertain and provide appropriate reasoning.
CO2	Develop solutions using supervised learning techniques and know how to deal with problems with hidden variables.
CO3	Use natural language processing and program basics of robotics.

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

		3	0	0	3

OBJECTIVES

- To become skilled at JavaScript and JQuery.
- To learn the concepts of Angular JS.
- To understand the basic framework of Node JS.
- To learn the various Features of PowerShell.
- To become familiar with the concepts of LINQ

UNIT I	**JAVASCRIPT AND JQUERY**	9
Introduction to JavaScript - Syntax - Variables and data types -JavaScript Control Statements - Functions -Objects - Fundamentals of JQuery –JQuery selectors - Traversing - Manipulators – Events		CO1
UNIT II	**ANGULAR JS**	9
Introduction to Angular JS –Directives –Expression –controllers –scope-events –services – Filters – Modules – Forms –Validation –Exception Handling		CO2
UNIT III	**NODE JS**	9
Introduction to Node JS – NPM – Callbacks –Events- Express Framework –Database Connectivity		CO3
UNIT IV	**POWER SHELL**	9
Introduction to Power shell –Variables –Operators –Arrays - Conditional Statements – Looping Statements Regular Expressions –File Operations		CO4
UNIT V	**LINQ**	9
Introduction to LINQ –Query Operators –SQL –XML – Objects –XML –Entities		CO5

TOTAL : 45 PERIODS

TEXT BOOKS

1. "HTML 5 Covers CSS3, JavaScript, XML, XHTML, AJAX, PHP & jQuery Black Book", Kogent Learning Solutions Inc., 2011
2. Pedro Teixeira, "Professional Node.js", John Wiley & sons, Inc., 2013

REFERENCE BOOKS

1. Valeri Karpov & Diego Netto, "Professional Angular JS", publication: John Wiley & sons, Inc., 2015
2. Bruce Payette, "Windows Powershell in Action", Manning Publication, 2011.
3. Fabrice Marguerie, Steve Eichert, Jim Wooley, "LINQ in Action", Manning Publication, 2008

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Apply JavaScript and JQuery to solve problems
CO2	Explore the Angular JS concepts
CO3	Understand and analyze the Node JS framework
CO4	Understand and analyze the Node JS framework
CO5	Understand LINQ Scripting language

MAPPING OF COs WITH POs AND PSOs

DS1602	COMPUTATIONAL LINGUISTICS	L	T	P	C
		3	0	0	3

OBJECTIVES

- Learn about expressing words
- Learn how to translate text to speech
- Learn the process of analysing a string of symbols
- Analyse the meaning of the word with and without considering the context
- Learn how to automatically extracting structured information

UNIT I	WORDS	9
Regular Expressions and Automata, Words and Transducers, N-grams, Part-of-Speech Tagging, Hidden Markov and Maximum Entropy Models		CO1
UNIT II	**SPEECH**	9
Phonetics, Speech Synthesis, Automatic Speech Recognition, Speech Recognition, Advanced Topics, Computational Phonology		CO2
UNIT III	**SYNTAX**	9
Formal Grammars of English, Syntactic Parsing, Statistical Parsing, Features and Unification Language and Complexity		CO3
UNIT IV	**SEMANTICS AND PRAGMATICS**	9
The Representation of Meaning, Computational Semantics, Lexical Semantics, Computational Lexical Semantics, Computational Discourse		CO4
UNIT V	**APPLICATIONS**	9
Information Extraction, Question Answering and Summarization, Dialog and Conversational Agents, Machine Translation		CO5
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Daniel Jurafsky and James H. Martin, Speech and Language Processing, Second Edition

REFERENCE BOOKS

1. Ralph Grishman, Computational Linguistics: An Introduction, Studios in Natural Language Processing
2. Roland Hausser, Foundations of Computational Linguistics, Springer, Third Edition

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Apply regular expression to describe the word
CO2	Translate text to speech
CO3	Analyze the string of symbols
CO4	Analyze the meaning of the word with and without the context
CO5	Extract structured information automatically

MAPPING OF COs WITH POs AND PSOs

DS1603	DATA VISUALIZATION	L	T	P	C
		3	0	0	3

OBJECTIVES

- To understand how accurately represent voluminous complex data set in web and from other data sources
- To understand the methodologies used to visualize large data sets
- To understand the process involved in data visualization and security aspects involved in data visualization

UNIT I	INTRODUCTION	9
Context of data visualization – Definition, Methodology, Visualization design objectives. Key Factors – Purpose, visualization function and tone, visualization design options – Data representation, Data Presentation, Seven stages of data visualization, widgets, data visualization tools.		CO1
UNIT II	**VISUALIZING DATA METHODS**	9
Mapping - Time series - Connections and correlations - Scatterplot maps - Trees, Hierarchies and Recursion - Networks and Graphs, Info graphics		CO2
UNIT III	**VISUALIZING DATA PROCESS**	9
Acquiring data, - Where to Find Data, Tools for Acquiring Data from the Internet, Locating Files for Use with Processing, Loading Text Data, Dealing with Files and Folders, Listing Files in a Folder, Asynchronous Image Downloads, Advanced Web Techniques, using a Database, Dealing with a Large Number of Files. Parsing data - Levels of Effort, Tools for Gathering Clues, Text Is Best, Text Markup Languages, Regular Expressions (regexps), Grammars and BNF Notation, Compressed Data, Vectors and Geometry, Binary Data Formats, Advanced Detective Work.		CO3
UNIT IV	**INTERACTIVE DATA VISUALIZATION**	9
Drawing with data – Scales – Axes – Updates, Transition and Motion – Interactivity - Layouts – Geomapping – Exporting, Framework – T3, .js, tablo.		CO4
UNIT V	**SECURITY DATA VISUALIZATION**	9
Port scan visualization - Vulnerability assessment and exploitation - Firewall log visualization - Intrusion detection log visualization -Attacking and defending visualization systems - Creating security visualization system.		CO5

TOTAL : 45 PERIODS

TEXT BOOKS

1. Scott Murray, "Interactive data visualization for the web", O‟Reilly Media, Inc., 2013.

DS1604	DATA ANALYTICS (Lab Integrated)	L	T	P	C
		3	0	2	4

OBJECTIVES

- To learn the fundamentals of data science and big data.
- To gain in-depth knowledge on descriptive data analytical techniques.
- Togainknowledgetoimplementsimpletocomplexanalytical.Algorithmsinbigdata frameworks.
- To develop programming skills using required libraries and packages to perform data analysis in Python.
- To under standand perform data visualization ,webscraping,machine learning and natural Language processing using various Data Science tools.

UNIT I	INTRODUCTION TO BIGDATA	9

Introduction to Big Data – Characteristics of Data – Evolution of Big Data – Big Data Analytics – Classification of Analytics – Top Challenges Facing Big Data – Importance of Big Data Analytics – Data Analytics Tools. Data Collections: Types of Data Sources - Sampling - Types of Data Elements - Visual Data Exploration and Exploratory - Statistical Analysis - Missing Values - Outlier Detection and Treatment - Standardizing Data - Categorization - Weights of Evidence Coding - Variable Selection – Segmentation. CO1

Lab Component:

1. Create and Analyze NYC Taxi Patterns: Develop a comprehensive framework to uncover, visualize, and analyze hidden patterns, correlations, and insights within the NYC Taxi and Limousine Commission (TLC) Trip Record Data. Utilize Apache Hadoop for optional data storage, Apache Spark for detailed data analysis, and Python libraries such as Pandas, Matplotlib, and Seaborn for advanced data manipulation and visualization techniques. Focus on exploring trip distances, fare amounts, trip durations, and other variables to extract meaningful insights into taxi and limousine usage patterns in NYC, including peak usage times and popular locations.
2. Develop a Predictive Model for Social Media Engagement: Construct a unified machine learning model framework using Apache Spark and the MLlib library, integrated with Python via the PySpark library, to predict user engagement metrics (likes, shares, comments) on a large social media platform dataset containing detailed user information. This task encompasses feature engineering to enhance predictive accuracy, model training, optimization through hyperparameter tuning and cross-validation, and a thorough evaluation of the model's performance in accurately forecasting user engagement levels.

UNIT II	DESCRIPTIVE DATA ANALYTICS	9

Types of Data Analysis – Descriptive, Diagnostic, Predictive and Prescriptive. Mean, Median and Mode – Standard Deviation and Variance – Probability – Probability Density Function – Types of Data Distribution – Percentiles and Moments – Correlation and Covariance – Conditional Probability – Bayes' Theorem – Introduction to Univariate, Bivariate and Multivariate Analysis – Dimensionality Reduction using Principal Component Analysis and LDA – Dimensionality CO2

<table>
<tr><td colspan="2">Reduction using Principal Component Analysis and Linear Discriminant Analysis (LDA) – Principal Component Analysis (PCA).
Lab Component:
3. Integrate Statistical Measures and Probability Analysis: Craft a comprehensive code base to perform statistical analysis and apply probability theories on a dataset, encompassing the calculation and summarization of mean, median, mode, standard deviation, and variance for dataset features. Develop visualizations to represent various data distributions and employ probability density function (PDF), percentiles, moments, correlation, and covariance to explore dataset characteristics further. Additionally, construct a practical application scenario for Bayes' Theorem, detailing the use of conditional probability to solve real-world problems demonstrated within the dataset context.
4. Implement and Compare Dimensionality Reduction Methods:Generate a succinct overview on the necessity of dimensionality reduction, highlighting the distinctions between feature selection and feature extraction methods. Execute Principal Component Analysis (PCA) to reduce dataset dimensions, creating visual aids to elucidate the variance captured by principal components and interpreting the implications of the reduced-dimensional space. Further, apply Linear Discriminant Analysis (LDA) to the same dataset with an aim to enhance class separability, and conduct a comparative analysis of PCA and LDA outcomes. Incorporate a simple multivariate analysis post-reduction to demonstrate the practical utility and insights gained from applying these dimensionality reduction techniques.</td><td></td></tr>
<tr><td>UNIT III</td><td>PREDICTIVE DATA ANALYTICS</td><td>9</td></tr>
<tr><td colspan="2">Linear Regression – Polynomial Regression – Multivariate Regression – Multi Level Models– Data Warehousing Overview – Bias/Variance Trade Off – K Fold Cross Validation – Data Cleaning and Normalization – Cleaning Web Log Data – Normalizing Numerical Data –Detecting Outliers – Introduction to Supervised and Unsupervised Learning – Reinforcement Learning – Dealing with Real World Data – Machine Learning Algorithms –Clustering –Python Based Application.
Lab Component:
5. Implement Regression Techniques and Data Pre-processing:Delve into regression analysis by writing code to apply linear regression, polynomial regression, and multivariate regression techniques on a selected dataset. Expand this analysis to include multi-level models, providing a robust framework for predicting outcomes based on various input variables. Complement this with a comprehensive data preprocessing phase, focusing on data cleaning, normalization, and outlier detection. This should include cleaning web log data, normalizing numerical data, and employing strategies to effectively manage and mitigate the bias/variance trade-off. Utilize Python for the implementation, ensuring a practical understanding of these concepts through application.
6. Explore Machine Learning Techniques with Real-World Data: Create a structured approach to understand and apply different machine learning paradigms, including supervised,</td><td>CO3</td></tr>
</table>

	unsupervised, and reinforcement learning, using Python-based applications. Focus on dealing with real-world data challenges by implementing K-fold cross-validation for model evaluation and exploring clustering techniques for data segmentation. Additionally, investigate a variety of machine learning algorithms to address specific problem types. The experiment should culminate in a project that applies these concepts to a real-world dataset, demonstrating the practical application of machine learning techniques to derive meaningful insights and predictions.	
UNIT IV	**DATA ANALYTICS FRAMEWORKS**	9
Introducing Hadoop –Hadoop Overview – RDBMS versus Hadoop – HDFS (Hadoop Distributed File System): Components and Block Replication – Processing Data with Hadoop – Introduction to MapReduce – NoSQL – MongoDB: RDBMS Vs MongoDB – Mongo DB Database Model – Data Types and Sharding – Introduction to Hive – Hive Architecture – Hive Query Language (HQL). PIG – Introduction to PIG. Lab Component: 7. Installation of Hadoop Framework, it's components and study the HADOOP ecosystem. 8. Write a program to implement word count program using MapReduce. 9. Experiment on Hadoop Map-Reduce / PySpark: -Implementing simple algorithms in Map-Reduce: Matrix multiplication. 10. Install and configure MongoDB/ Cassandra/ HBase/ Hypertable to execute NoSQL Commands.		CO4
UNIT V	**DATA STREAMS AND VISUALIZATION**	9
Mining Data Streams – Stream Data Model – Sampling Data in stream- Filtering Stream – Counting Distinct Elements in a Stream – Estimating Moments – Counting Oneness in a Window – Decaying Window. Visual data analysis techniques-Interaction Techniques-Systems and applications - Analyzing big data with twitter- Big data for E-Commerce-Big data for blogs. Lab Component: 11. Develop a framework using Python and relevant libraries like Scikit-multiflow or MOA for real-time mining and analysis of data streams. Write code to model streaming data, effectively sample and filter stream content, implement algorithms for counting distinct elements, estimating moments, and managing time-sensitive data with decaying windows. The goal is to construct a practical application that demonstrates the handling and analysis of streaming data, emphasizing dynamic data processing techniques. 12. Craft a comprehensive codebase in Python, employing libraries such as Matplotlib, Seaborn for data visualization, Tweepy for Twitter data integration, and Beautiful Soup for blog data extraction. Develop visualizations to uncover trends, sentiments, and engagement patterns in social media data, specifically focusing on Twitter and blogs. Extend the analysis to explore the impact of big data on e-commerce strategies and blog content optimization, highlighting the use of predictive analytics in understanding consumer behavior and enhancing content engagement.		CO5

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Identify the real-world business problems and model with analytical solutions.
CO2	Solve analytical problem with relevant mathematics background knowledge.
CO3	Convert any real-world decision-making problem to hypothesis and apply suitable Statistical testing.
CO4	Write and demonstrate simple applications involving analytics using Hadoop and MapReduce.
CO5	Use open-source frameworks for modeling and storing data and visualize using Python.

MAPPING OF COs WITH POs AND PSOs

DS1607	DATA VISUALIZATION LABORATORY	L	T	P	C
		0	0	4	2

OBJECTIVES

- Understand how to apply ggplot for visualizing the data
- Understand how to visualize single variable
- Understand visualizing two or more variables
- Learn about customizing the plots with color and labels

LIST OF EXPERIMENTS

Experiment	CO
1. The built-in R data set quakes gives the locations of earthquakes off of Fiji in the 1960's. Create a plot of the locations of these earthquakes, showing depth with color and magnitude with size	CO1
2. Create a boxplot of highway mileage for each different cylinder in mtcars, and display on one plot with highway mileage on the y-axis and cylinder on the x-axis	
3. Create a barplot of the word lengths of the words in the data set, faceted by novel using austen data set from the fosdata package	
4. The pres_election data set gives voting results from the 2010-2016 U.S. presidential elections. Produce five bar charts, one for each election, that show the total number of votes received by each political party. Use facet_wrap to put all five charts into the same visualization.	
5. The pres_election data set gives voting results from the 2010-2016 U.S. presidential elections. Produce five bar charts, one for each election, that show the total number of votes received by each political party. Use facet_wrap to put all five charts into the same visualization.	
6. Create a scatterplot of highway mileage versus city mileage colored by the number of cylinders, using the mtcars data set. Experiment using categorical and sequential coloring.	CO2
7. In Emma, restrict to words that have non-zero sentiment score. Create a scatterplot of the percentage of words that have a positive sentiment score versus chapter. Add a line using geom_line or geom_smooth and explain your choice using austen data set from the fosdata package	
8. Make a scatterplot showing CO2 uptake as a function of concentration level for the built-in data set CO2. Include a smoothed fit line and color by Type. Facet your plot to one plot for each Plant	
9. Consider the ecars data set create a visualization showing scatterplots with the chargeTimeHrs variable on the x axis and the kwhTotal variable on the y axis. Facet your visualization with one plot per day of week and platform. Remove the web platform cars, so you have 14 facets in two rows and seven columns. Be sure your weekdays display in a reasonable order	
10. Consider the scotland_births data set in the fosdata package. This data set contains the number of births in Scotland by age of the mother for each year from 1945-2019. a. Create a line plot of births by year from 1945-2019 for each age group represented in the data. b. Highlight and color ages 20 and 30, and provide meaningful labels and titles	CO3

11. Consider the frogs data set in the fosdata package. This data was used to argue that a new species of frog had been found in a densely populated area of Bangladesh. Create a scatterplot of head length distance from tip of snout to back of mandible versus forearm length distance from corner of elbow to proximal end of outer palmar metacarpal tubercle, colored by species.

12. Use the babynames data set from the babynames package
    a. Make a line graph of the total number of babies of each sex versus year
    b. Make a line graph of the number of different names used for each sex versus year
    c. Make a line graph of the total number of babies with your name versus year. If your name doesn't appear in the data, use the name "Alexa"
    d. Make a line graph comparing the number of boys named Bryan and the number of boys named Brian from 1920 to the present

13. Use the Batting data set from the Lahman package, gives the batting statistics of every player who has played baseball from 1871 through the present day
    a. Create a scatterplot of the number of doubles hit in each year of baseball history.
    b. Create a scatterplot of the number of doubles hit in each year, in each league. Show only the leagues 'NL' and 'AL', and color the NL blue and the AL red
    c. Create boxplots for total runs scored per year in the AL and the NL from 1969 to the present
    d. Create a histogram of lifetime batting averages (H/AB) for all players who have at least 1000 career AB's.

OBJECTIVES

- ❖ Get familiarized with different architectures and training algorithms of neural networks.
- ❖ Get exposed to the various neural modelling and control techniques with case study using simulation tool box.
- ❖ Gain Knowledge on fuzzy set theory and fuzzy rules.
- ❖ Able to design and implement the fuzzy logic controller with case study using simulation tool box.
- ❖ Capable of designing hybrid control schemes, selected optimization algorithms with case study using simulation tool box

UNIT	TITLE / CONTENT	
UNIT I	**ARTIFICIAL NEURAL NETWORK**	9
	Review of fundamentals – Biological neuron, artificial neuron, activation function, single layer perception – Limitation – Multilayer perception – Back Propagation Algorithm (BPA) – Recurrent Neural Network (RNN) – Adaptive Resonance Theory (ART) based network – Radial basis function network – online learning algorithms, BP through time – RTRL algorithms – Reinforcement learning	CO1
UNIT II	**NEURAL NETWORKS FOR MODELING AND CONTROL**	9
	Modelling of non-linear systems using ANN – Generation of training data – Optimal architecture–Model validation – Control of non-linear systems using ANN – Direct and indirect Neuro control schemes – Adaptive Neuro controller – Familiarization with neural network toolbox	CO2
UNIT III	**FUZZY SET THEORY**	9
	Fuzzy set theory – Fuzzy sets – Operation on fuzzy sets – Scalar cardinality, fuzzy cardinality, union and intersection, complement (Yager and Sugeno), equilibrium points, aggregation, projection, composition, cylindrical extension, fuzzy relation – Fuzzy membership functions	CO3
UNIT IV	**FUZZY LOGIC FOR MODELING AND CONTROL**	9
	Modelling of non-linear systems using fuzzy models – TSK model – Fuzzy logic controller – Fuzzification – Knowledge base – Decision making logic – Defuzzification – Adaptive fuzzy systems – Familiarization with fuzzy logic toolbox	CO4
UNIT V	**HYBRID CONTROL SCHEMES**	9
	Fuzzification and rule base using ANN – Neuro fuzzy systems – ANFIS – Fuzzy neuron– Introduction to GA – Optimization of membership function and rule base using Genetic Algorithm – Introduction to support vector machine – Particle swarm optimization – Case study – Familiarization with ANFIS toolbox	CO5

DS1702	TEXT ANALYTICS	L	T	P	C
		3	0	0	3

OBJECTIVES

- To get introduced to language processing technologies for processing the text data.
- To get introduced to Text analytics concepts and framework.
- To acquire knowledge on text data analytics and its classification using language models.
- To understand the need of Text similarity analysing and Clustering algorithms.
- To learn the theoretical techniques, tools and applications of text analytics.

UNIT I	INTRODUCTION TO NATURAL LANGUAGE PROCESSING	9
Natural Language Processing - Linguistic Background - Language syntax and structure - Grammar - Language Semantics - Mathematical Foundations - Morphological Analysis - Boundary Determination- Reading unstructured data - Representing text data - Text Analysis Framework.		CO1
UNIT II	**PROCESSING AND UNDERSTANDING TEXT**	9
Text Tokenization - Sentence Tokenization - Word Tokenization - Text Normalization - Cleaning Text -Tokenizing Text - Removing Special Characters - Expanding Contractions - Case Conversions - Removing Stop words - Correcting Words - Stemming - Lemmatization - Understanding Text Syntax and Structure - Installing Necessary Dependencies - Important Machine - Part of speech (POS) tagging - Shallow parsing - Dependency-based parsing - Constituency-based parsing.		CO2
UNIT III	**TEXT CLASSIFICATION**	9
Automated text classification - Text Normalization - Bag of words Model - TF-IDF Model - Classification Algorithms - Multinomial Naive Bayes - Support Vector Machines - Evaluating Classification Models - Building a Multi-Class Classification System - Application and uses.		CO3
UNIT IV	**TEXT SIMILARITY AND CLUSTERING**	9
Important concepts - Analysing Term Similarity - Analysing Document Similarity - Document Clustering - K Means - Affinity Propagation - Ward's Agglomerative Hierarchical Clustering - Semantic Analysis - Exploring WordNet - Word Sense Disambiguation - Named Entity Recognition - Analysing Semantic Representation - Proposition Logic - First Order Logic		CO4
UNIT V	**TEXT ANALYTICS APPLICATION**	9
Tools – Natural Language Tool kit, Apache OpenNLP. Applications of Text Analytics – Applications in Social media - Life science - Legal Text–Visualization -Case studies- Sentimental Analysis - Sentiment Analysis of IMDB Movie Reviews - Setting up Dependencies - Preparing Datasets - Supervised Machine Learning Technique - Unsupervised Lexicon - based Techniques - Comparing Model Performances.		CO5
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Christopher D. Manning and Hinrich Schutze, "Foundations of Statistical Natural Language Processing", MIT Press, 1999.
2. Dipanjan Sarkar "Text Analytics with Python-A Practical Real-World Approach to Gaining Actionable Insights from Your Data", Apress ,2016

REFERENCE BOOKS	
1. Steven Struhl, “Practical Text Analytics: Interpreting Text and Unstructured Data for Business Intelligence”, Kogan Page, 2015. 2. Matthew A. Russell, “Mining the Social Web”, O'Reilly Media, 2013. 4. Steven Bird, Ewan Klein and Edward Loper, “Natural Language Processing with Python”, 1 st Edition, O'Reilly Media, 2009. 3. James Allen, “Natural Language Understanding”, Second Edition, 2003, Pearson Education. 4. Daniel Jurafsky & James H.Martin, “ Speech and Language Processing”, Pearson Education (Singapore) Pte. Ltd., 2002. 5. Benjamin Bengfort, Rebecca Bilbro, Tony Ojeda ,” Applied Text Analysis with Python” ,1 st Edition, O'Reilly Media,2018	
COURSE OUTCOMES **Upon completion of the course, students will be able to**	
CO1	Gain basic knowledge over language processing technologies for processing the text data.
CO2	Extract the key information from Text data and process it at semantic level.
CO3	Analyze the text content to provide predictions related to a specific domain using language models.
CO4	Interpret the results, gain insights, and recommend possible actions from analytics performed on text data
CO5	Perform a variety of NLP tasks.

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

DS1703	COMPUTER VISION	L	T	P	C
		3	0	0	3

OBJECTIVES

- ❖ To review image processing techniques for computer vision.
- ❖ To understand shape and region analysis.
- ❖ To understand Hough, Transform and its applications to detect lines, circles, ellipses.
- ❖ To understand three-dimensional image analysis techniques and motion analysis.
- ❖ To study some applications of computer vision algorithms.

UNIT I	**IMAGE PROCESSINGFOUNDATIONS**	9
Review of image processing techniques – classical filtering operations – thresholding techniques - edge detection techniques – corner and interest point detection – mathematical morphology – texture.		CO1
UNIT II	**SHAPESAND REGIONS**	9
Binary shape analysis – connectedness – object labeling and counting – size filtering – distance functions – skeletons and thinning – deformable shape analysis – boundary tracking procedures – active contours – shape models and shape recognition – centroidal profiles – handling occlusion – boundary length measures – boundary descriptors – chain codes – Fourier descriptors – region descriptors – moments.		CO2
UNIT III	**HOUGH TRANSFORM**	9
Line detection – Hough Transform (HT) for line detection – foot-of-normal method – line localization – line fitting – RANSAC for straight line detection – HT based circular object detection – accurate center location – speed problem – ellipse detection – Case study: Human Iris location – hole detection – generalized Hough Transform (GHT) – spatial matched filtering – GHT for ellipse detection – object location – GHT for feature collation.		CO3
UNIT IV	**3D VISION AND MOTION**	9
Methods for 3D vision – projection schemes – shape from shading – photometric stereo – shape from texture – shape from focus – active range finding – surface representations – point-based representation – volumetric representations – 3D object recognition – 3D reconstruction – introduction to motion – triangulation – bundle adjustment – translational alignment – parametric motion – spline-based motion – optical flow – layered motion.		CO4
UNIT V	**APPLICATIONS**	9
Application: Photo album – Face detection – Face recognition – Eigen faces – Active appearance and 3D shape models of faces Application: Surveillance – foreground-background separation – particle filters – Chamfer matching, tracking, and occlusion – combining views from multiple cameras – human gait analysis Application- In-vehicle vision system- locating roadway – road markings – identifying road signs – locating pedestrians.		CO5

TOTAL: 45 PERIODS

TEXT BOOKS

1. Baggio D L et al., Mastering OpenCV with Practical Computer Vision Projects, Packt Publishing, 2012.

REFERENCE BOOKS

1. E. R. Davies, —Computer & Machine Vision‖, Fourth Edition, Academic Press, 2012.
2. Jan Erik Solem, —Programming Computer Vision with Python: Tools and algorithms for analyzing images‖, O'Reilly Media, 2012.
3. Mark Nixon and Alberto S. Aquado, —Feature Extraction & Image Processing for Computer Vision‖, Third Edition, Academic Press, 2012.
4. R. Szeliski, —Computer Vision: Algorithms and Applications‖, Springer 2011.
5. Simon J. D. Prince, —Computer Vision: Models, Learning, and Inference‖, Cambridge University Press, 2012.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Implement fundamental image processing techniques required for computer vision.
CO2	Implement boundary tracking techniques and perform shape analysis
CO3	Apply Hough Transform for line, circle, and ellipse detections.
CO4	Apply 3D vision techniques and implement motion relatedtechniques.
CO5	Develop applications using computer vision techniques.

MAPPING OF COs WITH POs AND PSOs

DS1704	BIG DATA MANAGEMENT	L	T	P	C
		3	0	0	3

OBJECTIVES

- To Understand the differences and benefits of in-memory data management.
- To Understand the execution flow of a distributed query.
- To Identify the difficulties of scalability and parallelization.
- To Design a distributed database using NoSQL tools.
- To Produce a functional program to process Big Data in a Cloud environment.
- To Manage and process a Data Stream.
- To Design the architecture of a Big Data management system.

UNIT I	**INTRODUCTION**	9
Introduction to Big Data, Cloud Computing, Scalability - Big Data Design - Polyglot systems; Schema less databases; Key-value stores; Wide-column stores; Document-stores		CO1
UNIT II	**DATA MANAGEMENT**	9
Distributed Data Management: Transparency layers; Distributed file systems; File formats; Fragmentation; Replication and synchronization; Sharding; Consistent hash; LSM-Trees. In-memory Data Management: NUMA architectures; Columnar storage; Late reconstruction; Light-weight compression		CO2
UNIT III	**DATA PROCESSING**	9
Distributed Data Processing: Distributed Query Processing; Sequential access; Pipelining; Parallelism; Synchronization barriers; Multitenancy; Map Reduce; Resilient Distributed Datasets; Spark. Stream management and processing: One-pass algorithms; Sliding window; Stream to relation operations; Micro-batching; Sampling; Filtering; Sketching		CO3
UNIT IV	**DATA ANALYTICS FRAMEWORKS**	9
Big Data Architectures: Centralized and Distributed functional architectures of relational systems; Data Warehousing architectures; Service Oriented Architecture; Lambda architecture		CO4
UNIT V	**NOSQL DATA MANAGEMENT FOR BIG DATA**	9
Introduction to Big Data Storage Platforms for Large Scale Data Storage, CAP Theorem, Eventual Consistency, Consistency Trade-O-s, ACID and BASE, Introduction to Zookeeper and Paxos, Introduction to Cassandra, Cassandra Internals, Introduction to HBase, HBase Internals. NoSQL Databases: Schema-less Models: Increasing Flexibility for Data Manipulation-Key Value Stores-Document Stores - Tabular Stores - Object Data Stores - Graph Databases-Hive – Sharding. Bigtable: a distributed storage system for structured data.		CO5
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Mining of massive datasets - Leskovec, J.; Rajaraman, A.; Ullman, J.D, Cambridge University Press, 2020. ISBN: 9781108476348
2. In-memory data management - Plattner, H.; Zeier, A, Springer, 2012. ISBN: 9783642295744
3. Principles of distributed database systems - Özsu, M.T.; Valduriez, P, Springer, 2020. ISBN: 9783030262525.
4. NoSQL distilled: a brief guide to the emerging world of polygot persistence - Sadalage, P.J.; Fowler, M, Addison-Wesley, 2013. ISBN: 9780321826626

REFERENCE BOOKS
1. Zaharia, M ,An architecture for fast and general data processing on large clusters -, ACM Books, 2016.

COURSE OUTCOMES Upon completion of the course, students will be able to	
CO1	Identify the real-world business problems and model with analytical solutions.
CO2	Understand the differences and benefits of in-memory data management.
CO3	Understand the execution flow of a distributed query.
CO4	Design the architecture of a Big Data management system.
CO5	Design a distributed database using NoSQL tools

DS1707	NEURO-FUZZY COMPUTING LABORATORY	L	T	P	C
		0	0	4	2

OBJECTIVES

- Understand Fuzzy concepts
- Learn neural networks with back propagation and without preparation
- Learn the operators of genetic algorithms
- Practice on crisp partitions.

LIST OF EXPERIMENTS

Experiment	CO
1. Implementation of Perceptron.	CO1
2. Implementation of Perceptron Rule	
3. Implementation of Artificial Neural Networks	
4. Implementation of Fuzzy Sets	CO2
5. Implementation of Covariance	
6. Data Fitting by Regression	
7. Implementation of Crisp Model	
8. Implementation of Logic Gates	CO3
9. Implementation of Genetic Algorithms	
10. Implementation of Classification Algorithm	

TOTAL : 60 PERIODS

SEMESTER V

PROFESSIONAL ELECTIVE – I

DS1511	XML AND WEB SERVICES	L	T	P	C
		3	0	0	3

OBJECTIVES

- To understand the basics of XML.
- To learn XML based technologies and SOAP
- To evaluate the technologies behind Web Services
- To learn to work with RESTful web services
- To implement and consume RESTful web services

UNIT I	**INTRODUCTION**	9
Role of XML - XML and the Web - XML Language Basics - SOAP - Web Services - Revolutions of XML - Service Oriented Architecture		CO1
UNIT II	**SOAP**	9
Overview Of SOAP - HTTP - XML-RPC - SOAP: Protocol - Message Structure - Intermediaries - Actors - Design Patterns And Faults - SOAP With Attachments		CO2
UNIT III	**WEB SERVICE TECHNOLOGIES**	9
Overview - Architecture - Key Technologies -UDDI - WSDL - ebXML - SOAP And Web Services In E-Com -Overview Of .NET And J2EE		CO3
UNIT IV	**INRTODUCTION TO RESFUL WEBSERVICES**	9
Kinds of Things on the Programmable Web - HTTP: Documents in Envelopes - Method Information - Scoping Information - The Competing Architectures - Technologies on the Programmable Web -Leftover Terminology - Web Services are Web Sites - del.icio.us: The Sample Application - Making the Request: HTTP Libraries - Processing the Response: XML Parsers -JSON Parsers: Handling Serialized Data - Clients Made Easy with WADL		CO4
UNIT V	**DEVELOPING AND CONSUMING RESTFUL WEB SERVICES**	9
9 Introducing the Simple Storage Service -Object-Oriented Design of S3 - Resources -HTTP Response Codes Resource URIs - Addressability - Statelessness - Representations - Links and Connectedness - The Uniform Interface –A Service Implementation.		CO5
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Frank. P. Coyle, XML, Web Services And The Data Revolution, Pearson Education, 2002.
2. Leonard Richardson and Sam Ruby, RESTful Web Services, O'Reilly Media, 2007.
3. Lindsay Bassett, Introduction to JavaScript Object Notation, O'Reilly Media, 2015.

REFERENCE BOOKS

2. Sandeep Chatterjee, James Webber, "Developing Enterprise Web Services", Pearson Education, 2004.
3. McGovern, et al., "Java Web Services Architecture", Morgan Kaufmann Publishers,2005

COURSE OUTCOMES Upon completion of the course, students will be able to	
CO1	Understand how to write XML documents
CO2	Apply XML based technologies and SOAP
CO3	Analyze the structure and implement Web Services
CO4	Understand and use RESTful web services
CO5	Create and Consume RESTful web service using JSON

DS1512	R PROGRAMMING FOR DATA SCIENCE	L	T	P	C
		3	0	0	3

OBJECTIVES

- To learn basics and importance of R programming
- To define and manipulate R data structures, including vectors, factors, lists, and data frames.
- To read, write, and save data files and to tabulate the data using Factors
- To create artful graphs to visualize complex data sets and functions and to query the database
- To perform statistical analysis on variety of data

UNIT	TITLE / CONTENT	PERIODS / CO
UNIT I	**INTRODUCTION TO R PROGRAMMING**	9
	History and overview of R - Install and configuration of R programming environment - Starting and ending R, R as a scientific calculator, handling package, workspace, inspecting variables, operators and expressions in R- Conditions and Loops –Functions: built-in and user-defined functions.	CO1
UNIT II	**DATA STRUCTURES AND DATA MANIPULATION**	9
	Vectors - Combining multiple vectors - Arrays and Matrices, Lists – Creating lists - List operations – Applying functions to lists – Recursive lists, Data frames–Creating and Accessing Data frames - Merging Data Frames – Applying functions to Data frames, Data Transformation, Outlier Detection, String Operations - Regular Expressions - Date and Time Format	CO2
UNIT III	**WORKING WITH DATA**	9
	Reading CSV, Excel, and Built-in Datasets - Reading Text Files - Writing and Saving to Files - HTTP Request and REST API - Web Scraping: Working with Messy Data - Renaming Columns(Variable Names) - Attaching / Detaching - Tabulating Data: Constructing Simple Frequency Tables - Ordering Factor Variables	CO3
UNIT IV	**GRAPHICS AND VISUALIZATION**	9
	Visualize data using ggplot2package - Apply themes from ggthemes to refine and customize charts and graphs - Scatter Plots - Box Plots - Scatter Plots and Box and-Whisker Plots – Histograms - Building data graphics for dynamic reporting. Data Querying - Writing SQL statements - Using the Select, From, Where, Is, Like, Order By, Limit, Max, Min SQL functions.- Data wrangling with dplyr.	CO4
UNIT V	**STATISTICAL ANALYSIS**	9
	Importing data files, exporting data, outputting results, exporting - Performing data analysis tasks: R commands for descriptive statistics, data aggregation, representation of multivariate data, code factorization and optimization, statistical libraries in R.	CO5

DS1513	PROLOG PROGRAMMING FOR ARTIFICIAL INTELLIGENCE	L	T	P	C
		3	0	0	3

OBJECTIVES

- To learn the background and basics of Prolog programming
- To learn the programming constructs to develop solution for specific problems
- To handle input and output operation through prolog and implementing data structure concepts
- To use prolog for artificial intelligence
- To apply prolog for machine learning, game playing and meta programming

UNIT I	AN OVERVIEW OF PROLOG	9
An Example program: defining family relations – extending the example program by rule – a recursive rule definition - how prolog answers questions – declarative and procedural meaning of programs; Syntax and meaning of Prolog Programs: Data objects – Matching – Declarative and Procedural meaning – Orders of clauses and goals; Relation between Prolog and Logic		CO1
UNIT II	PROGRAMMING CONSTRUTS	9
List – Operators – Arithmetic; Using Structures: Retrieving structured information from database – Data abstraction – simulating a non-deterministic automation – travel planning – Eight queen problem; Controlling Backtracking: Preventing backtracking – Examples using cut – Negation as failure – problems with cut and negation		CO2
UNIT III	I/O AND DATA STRUCTURES	9
Input and Output: Communication with files – Processing file of terms – Constructing and Decomposing atoms; Built-in Procedures – Programming Style and Techniques – Operations on Data Structures: Representing and sorting list – Representing sets by binary trees – Insertion and deletion in binary dictionary – Displaying trees – Graphs; Advanced Tree Representations: 2-3 dictionary – AVL-tree		CO3
UNIT IV	PROLOG IN ARTIFICIAL INTELLIGENCE	9
Basic problem solving strategies – Best Fit – Problem Reduction and AND/OR Graphs – Expert Systems and Knowledge Representation – An Expert System shell – Planning – Language Processing with Grammar Rule		CO4
UNIT V	MACHINE LEARNING, GAME PLAYING AND META-PROGRAMMING	9
Introduction: The problem of learning concepts – Learning concept by induction – A Program that learns relational descriptions – Learning simple attributional descriptions – Induction of decision trees – Success of learning; Game Playing: Two person – The minimax principle – The alpha-beta algorithm; Meta-Programming: Meta-programs and meta-interpreters – Prolog meta-interpreters – Explanation-based generalization – Object-oriented programming – Pattern directed programming		CO5
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Ivan Bratko, Prolog Programming for Artificial Intelligence, Addison Wesley Publishing Company, Fourth Edition, 2012

REFERENCE BOOKS

2. Bramer M, Logic Programming with Prolog, Springer, 2013
3. Clocksin W, Mellish C S, Programming in Prolog, Springer, 2003

COURSE OUTCOMES Upon completion of the course, students will be able to	
CO1	Understand the basics of prolog
CO2	Develop solutions using programming constructs
CO3	Implement data structure concepts using prolog
CO4	Apply prolog in artificial intelligence
CO5	Apply prolog to implement game programming and meta programming

DS1514	DATA SCIENCE TOOLS	L	T	P	C
		3	0	0	3

OBJECTIVES

- To understand the concept of Data Science and import data on Tools
- To perform statistical tests using Data Science Tools.
- To perform specific statistical test using Data Science Tools
- To perform data storage, analysis and modeling using Data Science Tools.
- To learn visualization of data.

UNIT I	**INTRODUCTION**	9
Introduction to Data Tools – Why Data Science – Where to get data – Importing data into Excel, Apache Open Office, R and Rattle, Rstudio, KNIME.		CO1
UNIT II	**STATISTICAL TESTS USING TOOLS**	9
Descriptive Statistics using Excel, Open Office, RStudio / Rattle, KNIME - Cumulative Probability Charts using Excel, Open Office, RStudio / Rattle, KNIME – T – Test using Excel, Open Office, RStudio / Rattle, KNIME. - Correlation using using Excel, Open Office, RStudio / Rattle, KNIME – Regression using Excel, Open Office, RStudio / Rattle, KNIME – Confidence Interval using Excel, Open Office, RStudio / Rattle, KNIME – Random Sampling using using Excel, Open Office, RStudio / Rattle, KNIME.		CO2
UNIT III	**STATISTICAL METHODS FOR SPECIFIC TOOLS**	9
Power –R/ RStudio / Rattle. – F-Test – Excel, R/ Rstudio / Rattle. Benford – Rattle, Lift – KNIME, Wordcloud – R/Rstudio, KNIME. Filtering – All Tools.		CO3
UNIT IV	**DATASCIENCE TOOLS FOR DATA STORAGE**	9
Apache Hadoop – Microsoft HD insights – Data Science Tools for Exploratory Data Analysis – Informatica PowerCenter – RapidMiner. Data Science Tools for Data Modelling – H2o.ai – Data Robot.		CO4
UNIT V	**DATA VISUALIZATION TOOLS**	9
Data Science Tools for Visualization – Tableau – Qlikview. –DataScience Projects using R – Define Problem Statements – Data Cleaning – Data Exploration & Analysis – Data Modeling – Deployment & Optimzation.		CO5

TOTAL : 45 PERIODS

TEXT BOOKS

1. Data Science Tools: R • Excel • KNIME • OpenOfficeby Christopher Greco , 2020.

REFERENCE BOOKS

1. Learning tableau 2019: Tools for business intelligence, data prep and visual analytics (3rd edition)
2. QlikView 11 for Developers, Barry Harsen

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Understand the concept of Data Science and import data on Tools
CO2	Perform statistical tests using Data Science Tools.
CO3	Perform specific statistical test using Data Science Tools
CO4	Perform data storage, analysis and modeling using Data Science Tools.
CO5	Learn visualization of data.

IT1514	KNOWLEDGE ENGINEERING	L	T	P	C
		3	0	0	3

OBJECTIVES

- To learn about first order logics
- To acquire knowledge about reasoning
- To apply object-oriented concepts for various expert systems
- To assess uncertainty using non monotonic logic
- To understand various action and planning strategies for problem solving

UNIT I	**INTRODUCTION**	9
Knowledge Representation and Reasoning – First order Logic – Syntax- Semantics Pragmatics – Expressing Knowledge – Levels of Representation – Knowledge Acquisition and Sharing – Sharing Ontologies – Language Ontologies –Language Patterns – Tools for Knowledge Acquisition		CO1
UNIT II	**RESOLUTION AND REASONING**	9
Proportional Case – Handling Variables and Quantifiers – Dealing with Intractability – Reasoning with Horn Clauses - Procedural Control of Reasoning – Rules in Production– Description Logic - Issues in Engineering		CO2
UNIT III	**REPRESENTATION**	9
Object Oriented Representations – Frame Formalism – Structured Descriptions – Meaning and Entailment - Taxonomies and Classification – Inheritance – Networks – Strategies for Defeasible Inheritance – Formal Account of Inheritance Networks		CO3
UNIT IV	**DEFAULTS, UNCERTAINTY AND EXPRESSIVENESS**	9
Defaults – Introduction – Closed World Reasoning – Circumscription – Default Logic imitations of Logic – Fuzzy Logic – Non monotonic Logic – Theories and World – Semiotics – Auto epistemic Logic - Vagueness – Uncertainty and Degrees of Belief – Non categorical Reasoning – Objective and Subjective Probability- linguistic fuzzy rule-based classification system - fuzzy cognitive maps- fuzzy for large data		CO4
UNIT V	**ACTIONS AND PLANNING**	9
Explanation and Diagnosis – Purpose – Syntax, Semantics of Context – First Order Reasoning Modal Reasoning in Context – Encapsulating Objects in Context – Agents – Actions – Situational Calculus – Frame Problem – Complex Actions – Planning –Strips– Planning as Reasoning – Hierarchical and Conditional Planning		CO5
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Michael K. Bergman “A Knowledge Representation Practionary: Guidance from Charles Sanders Peirce.” Springer -2018.
2. Ronald Brachman, Hector Levesque, “Knowledge Representation and Reasoning “, The Morgan Kaufmann Series, First Edition.

REFERENCE BOOKS

1. John F. Sowa, “Knowledge Representation: Logical, Philosophical, and Computational Foundations”, Brokes/Cole, First Edition, 2000.
2. Arthur B. Markman, “Knowledge Representation”, Lawrence Erlbaum Associates,1998.
3. Elaine Rich and Kevin Knight, “Artificial Intelligence”, Tata McGraw-Hill Publishing Company Ltd., New Delhi, Third Edition,

COURSE OUTCOMES **Upon completion of the course, students will be able to**	
CO1	Formulate problem in first order logic and ontologies
CO2	Improve resolution and reasoning with horn clauses
CO3	Apply object-oriented abstractions for knowledge representation
CO4	Solve problems with uncertainty using fuzzy rules
CO5	Design and develop applications with action and planning

SEMESTER VI

PROFESSIONAL ELECTIVE – II

DS1611	IMAGE AND VIDEO ANALYTICS	L	T	P	C
		3	0	0	3

OBJECTIVES

- To provide a basic foundation towards digital image processing and video processing.
- To learn about image and video enhancement and restoration techniques.
- To provide Compression methods for image analytics applications.
- To Understand Compression methods for video analytics applications
- To learn about feature detection and description

UNIT I	INTRODUCTION TO DIGITAL IMAGE AND VIDEO PROCESSING	9
	Digital image representation, Sampling and Quantization, Types of Images, Basic Relations between Pixels - Neighbors, Connectivity, Distance Measures between pixels, Linear and Non Linear Operations, Introduction to Digital Video, Sampled Video, Video Transmission. Gray-Level Processing: Image Histogram, Linear and Non-linear point operations on Images, Arithmetic Operations between Images, Geometric Image Operations. Binary Image Processing: Image Thresholding, Region labeling, Binary Image Morphology	CO1
UNIT II	**IMAGE AND VIDEO ENHANCEMENT AND RESTORATION**	9
	Spatial domain - Linear and Non-linear Filtering, Morphological filtering, Frequency domain – Homomorphic Filtering, Blotch Detection and Removal - Blotch Detection, Motion Vector Repair and Interpolating Corrupted Intensities, Intensity Flicker Correction - Flicker Parameter Estimation, Brief introduction towards Wavelets, Wavelet based image denoising, Basic methods for image restoration using deconvolution filters	CO2
UNIT III	**IMAGE ANALYSIS**	9
	Image Compression: Huffman coding, Run length coding, LZW coding, Lossless Coding, Wavelets based image compression	CO3
UNIT IV	**VIDEO ANALYSIS**	9
	Video Compression: Basic Concepts and Techniques of Video Coding and the H.264 Standard, MPEG-1 and MPEG-2 Video Standards	CO4
UNIT V	**FEATURE DETECTION AND DESCRIPTION**	9
	Introduction to feature detectors, descriptors, matching and tracking, Basic edge detectors – canny, sobel, prewitt etc., Image Segmentation - Region Based Segmentation – Region Growing and Region Splitting and Merging, Thresholding – Basic global thresholding, optimum global thresholding using Otsu's Method	CO5
		TOTAL : 45 PERIODS

TEXT BOOK

1. Alan Bovik, Handbook of Image and Video Processing, Second Edition, Academic Press, 2005.
2. Rafael C. Gonzalez and Richard E. Woods, Digital Image Processing, Third Edition, Pearson Education, 2008.
3. Richard Szeliski, Computer Vision – Algorithms and Applications, Springer, 2011

REFERENCE BOOKS

1. Anil K Jain, Fundamentals of Digital Image Processing, PHI, 2011.
2. Oge Marques, Practical Image and Video Processing Using MatLab, Wiley, 2011.
3. John W. Woods, Multidimensional Signal, Image, Video Processing and Coding, Academic Press, 2006

COURSE OUTCOMES **Upon completion of the course, students will be able to**	
CO1	Understand the fundamental principles of image and video analysis
CO2	Apply different filters for enhancement of image and video
CO3	Investigate different coding techniques.
CO4	Comprehend different compression techniques for video.
CO5	Apply the image and video analysis approaches to solve real world problems.

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

DS1612	HEALTHCARE ANALYTICS	L	T	P	C
		3	0	0	3

OBJECTIVES

- To discuss the role of data analytics in Healthcare and Biomedical data.
- To understand advanced Healthcare data analytics.
- To Identify techniques for data processing
- To understand various optimization and generalization techniques
- To understand various data model

UNIT I	**INTRODUCTION**	9
Introduction to Healthcare Data Analytics- Healthcare Data Sources and Basic Analytics- Electronic Health Records - Biomedical Image Analysis- Mining of Sensor Data in Healthcare- Biomedical Signal Analysis- Genomic Data Analysis for Personalized Medicine- Natural Language Processing and Data Mining for Clinical Text - Mining the Biomedical Literature.		CO1
UNIT II	**ADVANCED HEALTHCARE DATA ANALYTICS**	9
Advanced Data Analytics: Advanced Data Analytics for Healthcare– Review of Clinical. Prediction Models- Temporal Data Mining for Healthcare Data- Visual Analytics for Healthcare- Predictive Models for Integrating Clinical and Genomic Data- Information Retrieval for Healthcare- Privacy-Preserving Data Publishing Methods in Healthcare.		CO2
UNIT III	**DEEP NETWORKS AND DIMENTIONALITY REDUCTION**	9
History of Deep Learning- A Probabilistic Theory of Deep Learning- Backpropagation and regularization, batch normalization- VC Dimension and Neural Nets-Deep Vs Shallow Networks Convolutional Networks- Generative Adversarial Networks (GAN), Semi-supervised Learning, Linear (PCA, LDA) and manifolds, metric learning - Auto encoders and dimensionality reduction in networks - Introduction to Convnet - Architectures – AlexNet, VGG, Inception, ResNet - Training a Convnet: weights initialization, batch normalization, hyperparameter optimization.		CO3
UNIT IV	**OPTIMIZATION AND GENERALIZATION**	9
Optimization in deep learning– Non-convex optimization for deep networks- Stochastic Optimization Generalization in neural networks- Spatial Transformer Networks- Recurrent networks, LSTM - Recurrent Neural Network Language Models- Word-Level RNNs & Deep Reinforcement Learning - Computational & Artificial Neuroscience.		CO4
UNIT V	**BIGDATA ANALTICS FRAMEWORKS**	9
Introduction to NoSQL – Aggregate Data Models – Hbase: Data Model and Implementations – Hbase Clients – Examples – .Cassandra: Data Model – Examples – Cassandra Clients – Hadoop Integration. Pig – Grunt – Pig Data Model – Pig Latin – developing and testing Pig Latin scripts. Hive – Data Types and File Formats – HiveQL Data Definition – HiveQL Data Manipulation – HiveQL Queries.		CO5
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Chandan K. Reddy and Charu C. Aggarwal,” Healthcare Data Analytics”, First Edition , Chapman & Hall /CRC Press 2015.
2. Deng & Yu, Deep Learning: Methods and Applications, Now Publishers, 2013.

REFERENCE BOOKS

1. Ross M. Mullner Edward M. Rafalski, “Healthcare Analytics – Foundations and Frontiers” First Edition, T&F/Routledge, 2020.
2. Hui Yang and Eva K. Lee, “Healthcare Analytics: From Data to Knowledge to Healthcare Improvement, Wiley, 2016.
3. El Morr, Christo, Ali-Hassan, Hossam ,“ Analytics in Healthcare”,springer 2019.
4. P. J. Sadalage and M. Fowler, "NoSQL Distilled: A Brief Guide to the Emerging World of Polyglot Persistence", Addison-Wesley Professional, 2012.
5. Cosma Rohilla Shalizi, Advanced Data Analysis from an Elementary Point of View, 2015.
6. Ian Goodfellow, Yoshua Bengio, Aaron Courville, Deep Learning, MIT Press, 2016.
7. Michael Nielsen, Neural Networks and Deep Learning, Determination Press, 2015.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Describe the role of data analytics in healthcare institutions.
CO2	Describe advanced data analytics methods.
CO3	Apply data processing methods for processing healthcare data.
CO4	Apply Optimization and generalization Techniques.
CO5	Design Data Model that integrates healthcare data.

DS1613	CLOUD COMPUTING FOR DATA ANALYSIS	L	T	P	C
		3	0	0	3

OBJECTIVES

- To learn the basics of Cloud computing.
- To understand cloud storage
- To discuss serverless concept
- To provide basics of edge computing
- To develop projects pertaining to data science and cloud computing

UNIT I	**CLOUD COMPUTING FOUNDATIONS**	9
Overview of Cloud Computing – PaaS Continuous Delivery – IaC – Continuous Delivery for Hugo Static Site from Zero; Virtualization & Containerization: CPU – Memory – I/O – Elastic Resources – Kubernetes in the cloud		CO1
UNIT II	**CLOUD STORAGE**	9
Cloud Databases: HBase, MongoDB, Cassandra, DynamoDB, Google BigQuery;		CO2
UNIT III	**SERVERLESS**	9
FaaS (Function as a Service) - AWS Lambda - GCP Cloud Functions - Azure Functions - AWS Cloud-Native Primitives Overview - AWS Step Machines - AWS SQS - AWS SNS - AWS Cognito - AWS API Gateway		CO3
UNIT IV	**EDGE COMPUTING**	9
IoT Overview - AWS Greengrass - Raspberry Pi - Edge Machine Learning Solutions Overview - Google AutoML - Tensorflow lite - Intel Movidius - Apple X12		CO4
UNIT V	**DATA SCIENCE CASE STUDIES AND PROJECTS**	9
Case Study: Datascience meets intermittent fasting - Coronavirus Epidemic; Applied Computer Vision Overview; Project: AWS DeepLense Edge Computer Vision - Rasberry Pi - Intel Movidius Edge Computer Vision - Serverless Data Engineering Pipelines - Operationalizing Containerized Machine Learning Models - Continuous Delivery of GCP PaaS		CO5

TOTAL : 45 PERIODS

TEXT BOOKS

1. Noah Gift, Cloud Computing for Data Science, Pragmatic AI Labs, 2020

REFERENCE BOOKS

1. Francesco Diaz and Roberto Freato, Cloud Data Design, Orchestration, and Management Using Microsoft Azure, Apress

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Understand the core concepts of the cloud computing paradigm.
CO2	Illustrate the fundamental concepts of cloud storage and demonstrate their use in storage systems.
CO3	Apply AWS for problem solving
CO4	Comprehend edge computing
CO5	Develop data science models and apply them to solve problems on the cloud.

MAPPING OF COs WITH POs AND PSOs															
COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

DS1614	COMPUTATIONAL THINKING	L	T	P	C
		3	0	0	3

OBJECTIVES

- To understand different optimization problems.
- To learn about random and stochastic process
- To learn about simulation condition for optimization problems
- To provide students with an understanding of the role statistics.
- To use algorithms for classification and clustering problems.

UNIT I	**OPTIMIZATION PROBLEMS**	9
Knapsack problem: Greedy Algorithms – 0/1 Knapsack Problem; Graph Optimization Problem: Some classic Graph theoretical problems – Shortest Path: Depth first and Breadth first search; Dynamic Programming: Fibonacci sequences – 0/1 knapsack problem – divide and conquer		CO1
UNIT II	**RANDOM WALKS AND STOCHASTIC PROGRAMS**	9
Random walks – The Drunkard's walk – Biased Random walks – Treacherous Fields; Stochastic Programs – Calculating simple probabilities – Inferential Statistics – Distributions – Hashing and Collisions		CO2
UNIT III	**SIMULATION AND SAMPLING**	9
Monte Carlo Simulation: Pascal's Problem – Pass or Don't Pass? – Using Table Lookup to Improve Performance – Finding π; Sampling and Confidence intervals: Sampling the Boston Marathon – The Central Limit Theorem – Standard Error of the Mean; Understanding the experimental data: The behavior of springs – The behavior of Projectiles		CO3
UNIT IV	**RANDOMIZED TRIALS AND STATISTICS**	9
Checking significance – Beware of P-values – One tail and one sample tests – Multiple Hypothesis; Conditional Probability and Bayesian statistics: Conditional Probabilities – Bayes Theorem – Bayesian Updating; Lies, Demned Lies and statistics: Garbage In and Garbage Out – Sampling Bias – Context Matters		CO4
UNIT V	**CLUSTERING AND CLASSIFICATION**	9
A Quick Look at Machine Learning: Feature vectors – Distance Metrics; Clustering: Class cluster – k-means clustering – A Contrived Example – A Less Contrived Example; Classification Methods: Evaluating Classifiers – Predicting the Gender of Runner – k-nearest neighbors – Regression based classifiers – Surviving the Titanic		CO5
		TOTAL : 45 PERIODS

TEXT BOOK

1. John V Guttag, Introduction to Computation and Programming using python: with application to understanding data, MIT Press, Second Edition

REFERENCE BOOKS

1. Karl Beecher, Computational Thinking: A beginner's guide to problem solving and programming, BCS, The Charted Institute for IT

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Understand of the role computation in solving problems.
CO2	Apply stochastic models for problem solving
CO3	Apply probability theory for simulation
CO4	Apply statistical models for computation.
CO5	Develop projects pertaining to classification and clustering.

MAPPING OF COs WITH POs AND PSOs

DS1615	ETHICS IN DATA SCIENCE	L	T	P	C
		3	0	0	3

OBJECTIVES

- To apply ethical frameworks, guidelines, and codes to all phases of the analytics process.
- To describe the historical efforts in developing ethical practices in research.
- To identify how current standards provide a necessary but insufficient foundation for applying ethics in data science and analytics.
- To reflect on and acknowledge the centrality of the human in the analytics process.
- To distinguish between what an organization would like to do, what can be done technically, what can be done legally, and what should be done from an ethical perspective when performing and managing analytics projects.

UNIT I	**INTRODUCTION**	9
Ethics Review; Business Ethics; Elements of Big Data Ethics: Cambridge Analytica (example), Ethical Guidelines and Codes.		CO1
UNIT II	**ARTIFICIAL INTELLIGENCE**	9
Algorithmic Bias, Analyzing Behavioral Big Data: Methodological, Practical, Ethical, & Moral Issues, AI’s White Guy Problem Data Mining to Recruit Sick People License Plate Readers.		CO2
UNIT III	**RESEARCH ETHICS**	9
Necessary but Not Sufficient, Legal Frameworks; Regional (US, Europe, Asia) Differences, The 4R’s: Reuse, Repurposing, (Re)Combining, Reanalysis.		CO3
UNIT IV	**ETHICAL ISSUES**	9
Ethical Issues in Sports and Healthcare; Wearable Device Data; Ethical Issues in HR & Talent Analytics; Analytics for Social Good.		CO4
UNIT V	**CASE STUDY**	9
Facebook Mood Manipulation Facebook Faces New World Opioid Crisis; Disney / Staples Center Monitoring Is Alexa So Dangerous? Smart Toys; Reducing Costs of Employee Churn Boss Using Slack to Spy on You; Combatting Fake News Can AI Wipe Unconscious Bias? Child Abuse Prevention.		CO5
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Davis, Kord, Ethics of Big Data, O’Reilly,

REFERENCE BOOKS

1. Loukides, Mike, Hilary Mason, and DJ Patil. 2018. Ethics and Data Science. Sebastopol, CA: O’Reilly Media.
2. Global Engineering Ethics (2017), by Heinz Luegenbiehl and Rockwell Clancy, Elsevier Press

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Apply ethical frameworks, guidelines, and codes to all phases of the analytics process.
CO2	Describe the historical efforts in developing ethical practices in research.
CO3	Identify how current standards provide a necessary but insufficient foundation for applying ethics in data science and analytics.
CO4	Reflect on and acknowledge the centrality of the human in the analytics process.

CO5	Distinguish between what an organization would like to do, what can be done technically, what can be done legally, and what should be done from an ethical perspective when performing and managing analytics projects.

SEMESTER VII

PROFESSIONAL ELECTIVE – III

DS1711	**DATA AND INFORMATION SECURITY**	**L**	**T**	**P**	**C**
		3	**0**	**0**	**3**

OBJECTIVES

- To understand the data security fundamentals as well as Cryptography Theories, Algorithms and Systems.
- To apply the various Authentication Schemes to simulate different applications.
- To understand the various security standards, threats and vulnerabilities.
- To understand fundamentals of information security in various fields
- To understand various security services and their practices.

UNIT I	**DATA SECURITY FUNDAMENTALS**	9
Security trends – Security attacks, services and mechanisms – OSI security architecture -Types of Classical Encryption Techniques - Block Ciphers and stream ciphers - DES – AES -Public key cryptosystems - RSA-Diffie Hellman Key Exchange - Elliptic curve Cryptography.		CO1
UNIT II	**MESSAGE AUTHENTICATION AND INTEGRITY**	9
Authentication requirement – Authentication function – MAC – Hash function – SHA –Digital signature and authentication protocols – DSS- Entity Authentication: Biometrics, Passwords, Challenge Response protocols- Authentication applications – Kerberos, X.509-key distribution.		CO2
UNIT III	**SYSTEM SECURITY**	9
Electronic Mail security – PGP, S/MIME – IP security – Web Security – SYSTEM SECURITY: Intruders – Malicious software – viruses – Firewalls.		CO3
UNIT IV	**INFORMATION SECURITY**	9
Introduction-What is information security-Identification and Authentication-Authorization and Access Control-Auditing and Accountability-Operation Security.		CO4
UNIT V	**SECURITY PRACTICES**	9
Human Element Security -Physical Security-Mobile, Embedded and IoT Security-Application Security-Assessing security.		CO5
		TOTAL : 45 PERIODS

TEXT BOOKS

1. William Stallings, Cryptography and Network Security Principles and Practice, 6th Edition,Pearson Education,2014.
2. Jason Andress, Foundations of Information security (A Straightforward Introduction) no starch press,San Francisco,William Pollock,2019.

REFERENCE BOOKS

1. C K Shyamala, N Harini and Dr. T R Padmanabhan: Cryptography and NetworkSecurity, Wiley India Pvt.Ltd, 2011.
2. BehrouzA.Foruzan, Cryptography and Network Security, Tata McGraw Hill 2007.
3. Charlie Kaufman, Radia Perlman, and Mike Speciner, Network Security: PRIVATE Communication in a PUBLIC World, Prentice Hall, ISBN 0-13-046019-2, 2012.

COURSE OUTCOMES Upon completion of the course, students will be able to	
CO1	Understand the fundamentals of data security and apply the different cryptographic operations of symmetric and public cryptographic algorithms.
CO2	Apply the various Authentication schemes to simulate different applications.
CO3	Understand various System security standards, threats and vulnerabilities.
CO4	Understand fundamentals of information security in various fields.
CO5	Understand various security services and their security practices.

DS1712	EVOLUTIONARY COMPUTATION	L	T	P	C
		3	0	0	3

OBJECTIVES

- Understand the relations between the most important evolutionary algorithms presented in the course, new algorithms to be found in the literature now or in the future, and other search and optimisation techniques.
- Understand the implementation issues of evolutionary algorithms.
- Determine the appropriate parameter settings to make different evolutionary algorithms work well.
- Formulate a problem as an evolutionary computation search/optimization by specifying representations, selection and variation operators.
- Design new evolutionary operators, representations and fitness functions for specific practical and scientific applications.

UNIT I	INTRODUCTION	9
Optimization – Robust Adaptation – Machine Intelligence – Applications of Evolutionary Computation: Applications in Planning – Design – Simulation and Identification – Control – Classification; Principles of Evolutionary Processes - Principles of Genetics: Fundamental concepts in genetics – the gene – options for change – population thinking; Evolutionary Programming – Genetic Algorithms – Evolution strategies		CO1
UNIT II	**EVOLUTIONARY ALGORITUMS AND TUEIR STANDARDINSTANCES**	9
General outline of evolutionary algorithms – Genetic algorithms: basics and some variations – mutations and crossover – Representation – Parallel genetic algorithms; Evolution strategies: the archetype of evolution strategies – contemporary evolution strategies – nested evolution strategies; Evolutionary Programming - Derivative methods in genetic programming - Learning classifier systems - Hybrid methods		CO2
UNIT III	**REPRESENTATION**	9
Introduction to representations: Solutions and representations - Irnportant representations - Combined representations; Binary strings - Real-valued vectors; Permutations - Mapping integers to permutations - The mapping function - Matrix representations - Alternative representations - Ordering schemata and other metrics - Operator descriptions and local search; Finite-state representations - Parse trees - Other representations: Mixed-integer structures – Introns - Diploid representations		CO3
UNIT IV	**SELECTION**	9
Introduction to selection: Working mechanisms – Pseudocode - Theory of selective pressure; Proportional selection and sampling algorithms: Fitness functions - Selection probabilities – Sampling – Theory; Tournament selection - Rank-based selection - Boltzmann selection - Other selection methods - Generation gap methods - comparison of selection mechanisms - Interactive evolution		CO4
UNIT V	**SEARCH OPERATORS**	9
Mutation operators: Binary strings - Real-valued vectors - Permutations - Finite-state machines - Parse trees - Other representations; Recombination: Binary strings - Real-valued vectors - Permutations - Finite-state machines - Crossover: parse trees - Other representations - Multiparent recombination; Other operators: The Baldwin effect - Knowledge-augmented operators - Gene duplication and deletion		CO5
		TOTAL: 45 PERIODS

TEXT BOOKS

1. Thomas Bäck, David B Fogel and Zbigniew Michalewicz, Evolutionary Computation 1 - Basic Algorithms and Operators, Taylor & Francis

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Review the evolutionary computation techniques
CO2	Investigate evolutionary algorithms
CO3	Apply representation concept for evolutionary computation problems
CO4	Analyze selection operation concept for evolutionary computation problems
CO5	Formulate a problem as an evolutionary computation search/optimization by specifying representations, selection and variation operators.

DS1713	PATTERN RECOGNITION	L	T	P	C
		3	0	0	3

OBJECTIVES

- To understand the basic pattern recognition concepts.
- Apply the mathematical foundations for recognition of patterns.
- Identify the pattern Recognition models.
- To study various pattern matching techniques.
- Apply the non-parametric techniques and clustering techniques in pattern Recognition in real time applications.

UNIT I	**INTRODUCTION**	9
Introduction: Basics of pattern recognition – Design principles of pattern recognition system – Learning and adaptation – Pattern recognition approaches. Mathematical foundations: Linear algebra – Probability theory – Expectation – Mean and Covariance – Normal distribution – Multivariate normal densities – Chi square test of hypothesis.		CO1
UNIT II	**STATISTICAL PATTERN RECOGNITION**	9
Statistical Patten Recognition: Bayesian Decision Theory – Classifiers – Normal density and discriminant functions.		CO2
UNIT III	**MODELS**	9
Parameter estimation methods: Maximum-Likelihood estimation – Bayesian Parameter estimation – Dimension reduction methods – Principal Component Analysis (PCA) – Fisher Linear discriminant analysis – Expectation – maximization (EM) – Hidden Markov Models (HMM) – Gaussian mixture models.		CO3
UNIT IV	**NON-PARAMETRIC TECHNIQUES**	9
Nonparametric Techniques: Density Estimation – Parzen Windows – K-Nearest Neighbor Estimation – Nearest Neighbor Rule – Fuzzy classification.		CO4
UNIT V	**CLUSTERING TECHNIQUES**	9
Unsupervised Learning and Clustering: Criterion functions for clustering – Clustering Techniques: Iterative square – Error partitional clustering – K-Means – agglomerative hierarchical clustering – Cluster validation.		CO5

TOTAL: 45 PERIODS

REFERENCE BOOKS

1. Richard O. Duda, Peter E. Hart and David G. Stork, "Pattern Classification", Second Edition, John Wiley, 2006.
2. Bishop, Christopher M., "Pattern Recognition and Machine Learning", First Edition, Springer, 2009.

DS1714	WEB ANALYTICS	L	T	P	C
		3	0	0	3

OBJECTIVES

- To be introduced to Web Analytics.
- Be aware of some Web-based Analytics and software products.
- Be aware of the different analytics tools.
- Learn Affiliate, Internet, and Referral Marketing.
- Understand advertising using analytics.

UNIT I	**INTRODUCTION**	9
Understanding web analytics – The foundations of Web analytics: Techniques and Technologies – Present and Future of Web analytics.		CO1
UNIT II	**DATA COLLECTION**	9
Importance and Options –Web server log files: Click stream data – User submitted information – Web server performance data – Page tags –First and third party tracking		CO2
UNIT III	**WEB ANALYTICS STRATEGY**	9
Key performance indicators – Web analytics process – Heuristics evaluations – Site visits – Surveys – Measuring reach – Measuring acquisition – Measuring conversion – Measuring retention – Security and privacy implications of Web analytics		CO3
UNIT IV	**WEB ANALYTICS TOOLS**	9
Content organization tools – Process measurement tools – Visitor segmentation tools – Campaign analysis tools – Commerce measurement tools – Google analytics – Omniture – Web trends – Yahoo! Web analytics		CO4
UNIT V	**GOOGLE ANALYTICS**	9
Key features and capabilities – Quantitative and qualitative data - Working of Google analytics – Privacy - Tracking visitor clicks, Outbound links and Non HTML files		CO5
		TOTAL: 45 PERIODS

TEXT BOOKS

1. Bernard J. Jansen, Understanding User-Web Interactions via Web analytics, Morgan and Claypool, 2009.
2. Justin Cutroni, Google Analytics, O"Reilly, 2015.

REFERENCE BOOKS

1. Avinash Kaushik, Web Analytics2.0, John Wiley and Sons, 2010.
2. Brian Clifton, Advanced web metrics with Google analytics, John Wiley and Sons, 2012.
3. Jerri L. Ledford, Joe Teixeira and Mary E. Tyler, Google Analytics, John Wiley and Sons, 2013

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Explain the foundations of Web analytics
CO2	Compare and contrast the clickstream data collection techniques, their impact on metrics, and their inherent limitations
CO3	Apply web analytics techniques to effectively use the resulting insights to support website design decisions, campaign optimization, search analytics, etc
CO4	Understand the basics of software tools, techniques, and reports that are relevant to web analytics apply them to solve problems

CO5	Analyze and interpret web channel data and understand the difficulties and issues involved in it

MG1001	PRINCIPLE OF MANAGEMENT	L	T	P	C
	Common to CSE & AI-DS	3	0	0	3

OBJECTIVES

- To enable the students to study the evolution of Management
- To study the functions and principles of management
- To learn the application of the principles in an organization

UNIT I	INTRODUCTION TO MANAGEMENT AND ORGANIZATIONS	9
	Definition of Management – Science or Art – Manager vs Entrepreneur - types of managers - managerial roles and skills – Evolution of Management – Scientific, human relations , system and contingency approaches – Types of Business organization - Sole proprietorship, partnership, company-public and private sector enterprises - Organization culture and Environment – Current trends and issues in Management.	CO1
UNIT II	**PLANNING**	9
	Nature and purpose of planning – planning process – types of planning – objectives – setting objectives – policies – Planning premises – Strategic Management – Planning Tools and Techniques – Decision making steps and process.	CO2
UNIT III	**ORGANISING**	9
	Nature and purpose – Formal and informal organization – organization chart – organization structure – types – Line and staff authority – departmentalization – delegation of authority –77 centralization and decentralization – Job Design - Human Resource Management – HR Planning, Recruitment, selection, Training and Development, Performance Management , Career planning and management	CO3
UNIT IV	**DIRECTING**	9
	Foundations of individual and group behaviour – motivation – motivation theories – motivational techniques – job satisfaction – job enrichment – leadership – types and theories of leadership – communication – process of communication – barrier in communication – effective communication –communication and IT.	CO4
UNIT V	**CONTROLLING**	9
	System and process of controlling – budgetary and non-budgetary control techniques – use of computers and IT in Management control – Productivity problems and management – control and performance – direct and preventive control – reporting.	CO5

TOTAL : 45 PERIODS

TEXT BOOKS

1. Stephen P. Robbins & Mary Coulter, “Management”, Prentice Hall (India) Pvt. Ltd., 10th Edition, 2009.
2. JAF Stoner, Freeman R.E and Daniel R Gilbert “Management”, Pearson Education, 6th Edition, 2004.

REFERENCE BOOKS

1. Stephen A. Robbins & David A. Decenzo & Mary Coulter, “Fundamentals of Management” Pearson Education, 7th Edition, 2011.
2. Robert Kreitner & Mamata Mohapatra, “ Management”, Biztantra, 2008.
3. Harold Koontz & Heinz Weihrich “Essentials of management” Tata McGraw Hill,1998.
4. Tripathy PC & Reddy PN, “Principles of Management”, Tata McGraw Hill, 1999

COURSE OUTCOMES Upon completion of the course, students will be able to	
CO1	Familiar with Management and Organizations task
CO2	Decision Making and Planning
CO3	Know about HRM, Performance Management, HR planning.
CO4	Communication and Motivational Theories
CO5	Familiar with controlling of process and reporting

SEMESTER VII

PROFESSIONAL ELECTIVE – IV

DS1721	STOCHASTIC PROCESS	L	T	P	C
		3	0	0	3

OBJECTIVES

- Study of the basic concepts of the theory of stochastic processes;
- Introduce of the most important types of stochastic processes;
- Study simplest and important classes of stochastic processes namely Poisson processes, Branching processes, Renewal Processes and Markov chains.
- Learn the applications of Stationary Processes

UNIT I	**INTRODUCTION TO STOCHASTIC PROCESSES**	9
Classification of Stochastic Processes, Markov Processes – Markov Chain - Countable State Markov Chain. Transition Probabilities, Transition Probability Matrix. Chapman - Kolmogorov's Equations, Calculation of n - step Transition Probability and its limit		CO1
UNIT II	**POISSON PROCESS**	9
Classification of States, Recurrent and Transient States - Transient Markov Chain, Random Walk and Gambler's Ruin Problem. Continuous Time Markov Process:, Poisson Processes, Birth and Death Processes, Kolmogorov's Differential Equations, Applications		CO2
UNIT III	**BRANCHING PROCESS**	9
Branching Processes – Galton – Watson Branching Process - Properties of Generating Functions – Extinction Probabilities – Distribution of Total Number of Progeny. Concept of Weiner Process		CO3
UNIT IV	**RENEWAL PROCESS**	9
Renewal Processes – Renewal Process in Discrete and Continuous Time – Renewal Interval – Renewal Function and Renewal Density – Renewal Equation – Renewal theorems: Elementary Renewal Theorem. Probability Generating Function of Renewal Processes		CO4
UNIT V	**STATIONARY PROCESS**	9
Stationary Processes: Discrete Parameter Stochastic Process – Application to Time Series. Auto-covariance and Auto-correlation functions and their properties. Moving Average, Autoregressive, Autoregressive Moving Average, Autoregressive Integrated Moving Average Processes. Basic ideas of residual analysis, diagnostic checking, forecasting		CO5

TOTAL: 45 PERIODS

TEXT BOOKS

1. R.G Gallager, Stochastic Processes, Cambridge University Press, 2013.
2. S.M Ross, Stochastic Processes, Wiley India Pvt. Ltd, 2008

REFERENCE BOOKS

1. Stochastic Processes from Applications to Theory, P.D Moral and S. Penev, CRC Press, 2016
2. B..C. Liliana, A Viswanathan, S. Dharmaraja, Introduction to Probability and Stochastic Processes with Applications, Wiley Pvt. Ltd, 2012.

COURSE OUTCOMES **Upon completion of the course, students will be able to**	
CO1	Classify a stochastic process, understand markov processes and handle discrete state markov chain properties with transition probability matrix.
CO2	Understand the classification of states of markov chain, continuous markov chain and Poisson processes
CO3	Explore the Branching processes
CO4	Explore the Renewal processes
CO5	Understand the Stationary Processes and apply the same for some real life applications.

DS1722	SOFTWARE TESTING USING AUTOMATED TOOLS	L	T	P	C
		3	0	0	3

OBJECTIVES

- To develop and validate a test plan
- To select and prepare test cases
- To identify the need for testing
- To prepare testing policies and standards
- To use testing aids and tools

UNIT I	INTRODUCTION	9
Testing as an Engineering Activity – Testing as a Process – testing axioms - Basic Definitions – Software Testing Principles – The Tester's Role in a Software Development Organization – Origins of Defects – cost of defects - Defect Classes – The Defect Repository and Test Design – Defect Examples – Developer/Tester Support for Developing a Defect Repository – Defect Prevention Strategies – Software Testing Life cycle – V model		CO1
UNIT II	**TEST CASE DESIGN**	9
Test Case Design Strategies – Using Black Box Approach to Test Case Design - Random Testing – Requirements based testing –Boundary Value Analysis – Decision tables - Equivalence Cl ass Partitioning - State-based testing – Cause-effect graphing – Error guessing - Compatibility testing – User documentation testing –Domain testing Using White Box Approach to Test design – Test Adequacy Criteria – static testing vs. structural testing – code functional testing - Coverage and Control Flow Graphs – Covering Code Logic – Paths – Their Role in White–box Based Test Design –code complexity testing – Evaluating Test Adequacy Criteria		CO2
UNIT III	**LEVELS OF TESTING**	9
The Need for Levels of Testing – Unit Test – Unit Test Planning –Designing the Unit Tests - The Test Harness – Running the Unit tests and Recording results – Integration tests – Designing Integration Tests – Integration Test Planning – Scenario testing – Defect bash elimination System Testing – Acceptance testing – Performance testing - Regression Testing – Internationalization testing – Ad-hoc testing -Alpha , Beta Tests – testing OO systems – Usability and Accessibility testing – Configuration testing - Compatibility testing – Testing the documentation –Website testing –Static testing –reviews - walkthrough		CO3
UNIT IV	**TEST MANAGEMENT**	9
People and organizational issues in testing – organization structures for testing teams – testing services - Test Planning – Test Plan Components – Test Pl and Attachments – Locating Test Items – test. management – test process - Reporting Test Results – The role of three groups in Test Planning and Policy Development – Introducing the test specialist – Skills needed by a test specialist – Building a Testing Group – Designing test cases using MS-Excel –Test Data management		CO4
UNIT V	**TEST AUTOMATION**	9
Software test automation – skills needed for automation – scope of automation – design and architecture for automation –requirements for a test tool – challenges in automation - Introduction to Selenium, using Selenium IDE for automation testing, using Selenium Web driver for automation testing, understanding Testing framework with Selenium Web driver for automation testing		CO5
		TOTAL : 45 PERIODS

TEXT BOOKS
1. Srinivasan Desikan and Gopalaswamy Ramesh, “Software Testing – Principles and Practices”, Pearson education, 2006. 2. Ilene Burnstein, “Practical Software Testing”, Springer International Edition, 2012
REFERENCE BOOKS
1. Ron Patton, “Software Testing”, Second Edition, Sams Publishing, Pearson,2007 2. Renu Rajani, Pradeep Oak, “Software Testing –Effective Methods, Tools and Techniques”,TMH 2004. 3. Rex Black (2001), Managing the Testing Process (2nd edition), John Wiley & Son 4. Dorothy Graham, Erik van Veenendaal, Isabel Evans, Foundations of software testing, Rex Black 5. Elfriede Dustin, Implementing Automated Software Testing: How to Save Time and Lower Costs While Raising Quality

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Understand the types of errors and fault models
CO2	Create test cases from requirements
CO3	Analyze use o various testing tools
CO4	Evaluate adequacy assessment using: control flow, data flow, and program mutations
CO5	Apply software testing techniques in commercial environments

MAPPING OF COs WITH POs AND PSOs

DS1723	SOCIAL NETWORK ANALYTICS	L	T	P	C
		3	0	0	3

OBJECTIVES

- To understand the concept of semantic web and related applications.
- To learn knowledge representation using ontology.
- To detect communities in social networks.
- To understand human behaviour in social web and related communities.
- To learn visualization of social networks.

UNIT I	**INTRODUCTION**	9
Introduction to Semantic Web: Limitations of current Web - Development of Semantic Web - Emergence of the Social Web - Social Network analysis: Statistical properties of social Networks-Definitions-Data Descriptions-Static properties- Dynamic properties-Development of Social Network Analysis - Key concepts and measures in network analysis - Electronic sources for network analysis: Electronic discussion networks, Blogs and online communities - Web-based networks - Applications of Social Network Analysis.		CO1
UNIT II	**MODELLING, AGGREGATING AND KNOWLEDGE REPRESENTATION**	9
Ontology and their role in the Semantic Web: Ontology-based knowledge Representation - Ontology languages for the Semantic Web: Resource Description Framework - Web Ontology Language - Modelling and aggregating social network data: State-of-the-art in network data representation - Ontological representation of social individuals - Ontological representation of social relationships - Aggregating and reasoning with social network data - Advanced representations.		CO2
UNIT III	**EXTRACTION AND MINING COMMUNITIES IN WEB SOCIAL NETWORKS**	9
Extracting evolution of Web Community from a Series of Web Archive - Detecting communities in social networks - Definition of community - Evaluating communities - Methods for community detection and mining - Applications of community mining algorithms - Tools for detecting communities social network infrastructures - Decentralized online social networks - Multi-Relational characterization of dynamic social network communities.		CO3
UNIT IV	**PREDICTING HUMAN BEHAVIOUR AND PRIVACY ISSUES**	9
Understanding and predicting human behaviour for social communities - User data management - Inference and Distribution - Enabling new human experiences - Reality mining - Context - Awareness - Privacy in online social networks - Trust in online environment - Trust models based on subjective logic - Trust network analysis - Trust transitivity analysis - Combining trust and reputation - Trust derivation based on trust comparisons - Attack spectrum and countermeasures.		CO4
UNIT V	**VISUALIZATION AND APPLICATIONS OF SOCIAL NETWORKS**	9
Graph theory - Centrality - Clustering - Node-Edge Diagrams - Matrix representation - Visualizing online social networks, Visualizing social networks with matrix-based representations - Matrix and Node-Link Diagrams - Hybrid representations - Applications - Cover networks - Community welfare - Collaboration networks - Co-Citation networks-Random Walk based Proximity Measures -Clustering with random walk based measures-Algorithms for Computing Personalized PageRank and Sim Rank –Application-Computer Vision - Text Analysis - Collaborative Filtering - Combating Web Spam.		CO5

TOTAL : 45 PERIODS

TEXT BOOKS

1. Peter Mika, “Social Networks and the Semantic Web”, First Edition, Springer 2007.
2. Borko Furht, “Handbook of Social Network Technologies and Applications”, 1st Edition, Springer, 2010.
3. Charu C. Aggarwal, “Social Network Data Analytics”, First Edition, Springer 2011.

REFERENCE BOOKS

1. David Camacho,Angel, Gema Bello and Antonio,”The Four Dimensions of Social Network Analysis: An Overview of Research Methods, Applications, and Software Tools” Feb 2020.
2. Guandong Xu ,Yanchun Zhang and Lin Li, “Web Mining and Social Networking – Techniques and applications”, First Edition, Springer, 2011.
3. John G. Breslin, Alexander Passant and Stefan Decker, “The Social Semantic Web”, Springer, 2009.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Develop semantic web related applications.
CO2	Represent knowledge using ontology.
CO3	Detect communities in social networks.
CO4	Predict human behavior in social web and related communities.
CO5	Visualize social networks.

DS1724	MULTIVARIATE ANALYSIS	L	T	P	C
		3	0	0	3

OBJECTIVES

- To give mathematical and statistical background to handle the analysis involving multivariable.
- To explore the joint performance of the variables as well as to determine the effect of each variable in the presence of the others.
- To intelligently analyze data using appropriate multivariate methods
- Likelihood ratio tests, MANOVA models, Discriminate procedures and Factor analysis are included with the objective to handle and understand the concept of exploratory and confirmatory data analysis

UNIT	TITLE	HOURS / CO
UNIT I	**INTRODUCTION**	9
	Basic concepts on multivariate variable. Multivariate normal distribution, Marginal and conditional distribution, Concept of random vector: Its expectation and Variance-Covariance matrix. Marginal and joint distributions. Conditional distributions and Independence of random vectors. Multinomial distribution. Sample mean vector and its distribution	CO1
UNIT II	**DISTRIBUTION**	9
	Sample mean vector and its distribution. Likelihood ratio tests: Tests of hypotheses about the mean vectors and covariance matrices for multivariate normal populations. Independence of sub vectors and sphericity test	CO2
UNIT III	**MULTIVARIATE ANALYSIS**	9
	Multivariate analysis of variance (MANOVA) of one and two- way classified data. Multivariate analysis of covariance. Wishart distribution, Hotelling's T2 and Mahalanobis' D2 statistics, Null distribution of Hotelling's T2. Rao's U statistics and its distribution	CO3
UNIT IV	**CLASSIFICATION AND DISCRIMINANT PROCEDURES**	9
	Bayes, minimax, and Fisher's criteria for discrimination between two multivariate normal populations. Sample discriminant function. Tests associated with discriminant functions. Probabilities of misclassification and their estimation. Discrimination for several multivariate normal populations	CO4
UNIT V	**PRINCIPAL COMPONENT and FACTOR ANALYSIS**	9
	Principal components, sample principal components asymptotic properties. Canonical variables and canonical correlations: definition, estimation, computations. Test for significance of canonical correlations. Factor analysis: Orthogonal factor model, factor loadings, estimation of factor loadings, factor scores. Applications	CO5

TOTAL: 45 PERIODS

TEXT BOOKS

1. Anderson, T.W. 2009. An Introduction to Multivariate Statistical Analysis, 3rd Edition, John Wiley.
2. Everitt B, Hothorn T, 2011. An Introduction to Applied Multivariate Analysis with R, Springer.
3. Barry J. Babin, Hair, Rolph E Anderson, and William C. Blac, 2013, Multivariate Data Analysis, Pearson New International Edition

REFERENCE BOOKS

1. Giri, N.C. 1977. Multivariate Statistical Inference. Academic Press.
2. Chatfield, C. and Collins, A.J. 1982. Introduction to Multivariate analysis. Prentice Hall

3. Srivastava, M.S. and Khatri, C.G. 1979. An Introduction to Multivariate Statistics. North Holland

COURSE OUTCOMES Upon completion of the course, students will be able to	
CO1	Describe properties of multivariate distributions such as multivariate normal.
CO2	Do Likelihood ratio tests on mean vectors and covariance matrices , understand and interpret the computations of the critical values associated with these tests
CO3	Do Testing of various hypotheses for multivariate analysis of variance (MANOVA) models
CO4	Discriminate between groups and classify new observations using various discriminate procedures
CO5	Use principal component analysis effectively for data exploration and data dimension reduction. Use factor analysis effectively for exploratory and confirmatory data analysis.

MAPPING OF COs WITH POs AND PSOs

MG1725	ENTREPRENEURSHIP	L	T	P	C
		3	0	0	3

OBJECTIVES

- To learn about how to establish a company
- To know how to find financial resources
- To learn the survival skills in accounting and financial management
- To know the fundamentals of finance and marketing
- To know about intellectual properties and prepare patents

UNIT I	**HOW TO ESTABLISH THE COMPANY**	9
The Founder and Team –Legal Procedure –Executive Summary –Management and Organization – Product/Service – Business Plan –Marketing Plan –Operating and Control Systems –Micro and Mac ro Environmental Fa ctors – Growth Plan –Financial Plan		CO1
UNIT II	**HOW TO FIND FINANCIAL RESOURCES**	9
Debt and Equity: Stock or Loan –Partnership –Venture Capital/Angel Money –Bank Loans – Research Funds: Small Business Innovation Research Programs –Successful Proposal Writing – Successful Proposal Presentation		CO2
UNIT III	**SURVIVAL SKILLS IN ACCOUNTING AND FINANCIAL MANAGEMENT**	9
Accounting Management –Sales and Payroll: Daily Accounting –Financial Statements –Demand, Supply, and Market Equilibrium –Break-even Analysis –Tax reduction considerations - Cash Flow Analysis		CO3
UNIT IV	**FUNDAMENTALS OF FINANCE AND MARKETING**	9
Key Financial Ratios –Financial forecasting –Time Value of Money –Short-term Financing – Investment Decisions – Marketing Research: The Five P's of Marketing Research – Target Marketing – Marketing Research Examples, Portfolio Model, Marketing Mix Four P's: Product, Price, Place, Promotion		CO4
UNIT V	**INTELLECTUAL PROPERTIES**	9
Intellectual Properties –Why is Intellectual Properties important –Patent preparation –Patent infringement (Law suits)		CO5
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Kenji Uchino, "Entrepreneurship for Engineers", CRC Press, 2010 Second book

REFERENCE BOOKS

1. Paul Swamidass, "Engineering Entrepreneurship from Idea to Business Plan", Cambridge University Press, 2016.
2. Hisrich, "Entrepreneurship", Tata McGraw Hill, 9th Edition, 2014

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Know how to establish a company
CO2	Understand how to find financial resources
CO3	Determine the survival skills in accounting and financial management
CO4	Understand the fundamentals of finance and marketing
CO5	Know about intellectual properties and patent preparation

SEMESTER VIII

PROFESSIONAL ELECTIVE – V

DS1811	**DATA MINING AND INFORMATION SECURITY**	**L**	**T**	**P**	**C**
		3	**0**	**0**	**3**

OBJECTIVES

- To understand data pre-processing and data visualization techniques.
- To study algorithms in pattern mining.
- To understand and apply various classification and clustering techniques using tools.
- To study advanced concepts in Information security and Risk management.
- To understand and apply security technologies.

UNIT I	**DATA MINING – INTRODUCTION**	9
Introduction to Data Mining Systems – Knowledge Discovery Process – Data Mining Techniques– Issues – applications- Data Objects and attribute types, Statistical description of data, Data Visualization, Data similarity and dissimilarity measures, Data Preprocessing: Cleaning, Integration, Reduction, Transformation and discretization.		CO1
UNIT II	**PATTERN MINING**	9
Mining Frequent Patterns, Associations, and Correlations: Basic Concepts and Methods-Frequent Itemset Mining Methods-Advanced Pattern Mining: Pattern Mining in Multilevel, Multidimensional Space-Constraint-Based Frequent Pattern Mining-Mining High-Dimensional Data and Colossal Patterns-Mining Compressed or Approximate Patterns-Pattern Exploration and Application		CO2
UNIT III	**CLASSIFICATION AND CLUSTERING**	9
Basic concepts-Decision Tree Induction - Bayes Classification Methods– Rule Based Classification – Model Evaluation and Selection-Techniques to Improve Classification Accuracy-Advanced methods: Bayesian Belief Networks-Classification by Back Propagation – Support Vector machines –– Lazy Learners - Clustering Techniques – Cluster analysis-Partitioning Methods - Hierarchical Methods – Density Based Methods - Grid Based Methods – Evaluation of clustering – Clustering high dimensional data- Clustering Graph and Network Data-Clustering with constraints.		CO3
UNIT IV	**INFORMATION SECURITY: ADVANCED CONCEPTS**	9
The need for security-legal, Ethical and professional issues-Risk management: Risk Identification, Risk Assessment, Risk control strategies-selecting a risk control strategy.		CO4
UNIT V	**SECURITY TECHNOLOGY AND IMPLEMENTATION**	9
Intrusion detection and prevention systems-Honeypots and honeynets-Scanning and analysis tools-Biometric access control-Information security project management-Technical aspects of implementation-information security maintenance.		CO5
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Jiawei Han and Micheline Kamber, “Data Mining Concepts and Techniques”, Third Edition,Elsevier, 2012.
2. Michael e Whitman, Herbert J Mattord,“Principles of Information security”,Fourth Edition,2011

REFERENCE BOOKS

1. Charu C. Aggarwal ,Jiawei Han , “Frequent Pattern Mining”, Springer,2014.
2. Malcolm W. Harkins, “Managing Risk and Information Security”, 2016.

COURSE OUTCOMES **Upon completion of the course, students will be able to**	
CO1	Apply suitable pre-processing and visualization techniques for data analysis
CO2	Apply frequent pattern and association rule mining techniques for data analysis
CO3	Apply appropriate classification and clustering techniques for data analysis
CO4	Apply concepts in Information security and Risk management.

MAPPING OF COs WITH POs AND PSOs

DS1812	SPEECH PROCESSING AND SYNTHESIS	L	T	P	C
		3	0	0	3

OBJECTIVES

- To understand the mathematical foundations needed for speech processing
- To understand the basic concepts and algorithms of speech processing and synthesis
- To familiarize the students with the various speech signal representation, coding and recognition techniques
- To appreciate the use of speech processing in current technologies and to expose the students to real– world applications of speech processing

UNIT I	FUNDAMENTALS OF SPEECH PROCESSING	9
Introduction – Spoken Language Structure – Phonetics and Phonology – Syllables and Words – Syntax and Semantics – Probability, Statistics and Information Theory – Probability Theory – Estimation Theory – Significance Testing – Information Theory.		CO1
UNIT II	**SPEECH SIGNAL REPRESENTATIONS AND CODING**	9
Overview of Digital Signal Processing – Speech Signal Representations – Short time Fourier Analysis – Acoustic Model of Speech Production – Linear Predictive Coding – Cepstral Processing – Formant Frequencies – The Role of Pitch – Speech Coding – LPC Coder.		CO2
UNIT III	**SPEECH RECOGNITION**	9
Hidden Markov Models – Definition – Continuous and Discontinuous HMMs – Practical Issues – Limitations. Acoustic Modeling – Variability in the Speech Signal – Extracting Features – Phonetic Modeling – Adaptive Techniques – Confidence Measures – Other Techniques.		CO3
UNIT IV	**TEXT ANALYSIS**	9
Lexicon – Document Structure Detection – Text Normalization – Linguistic Analysis – Homograph Disambiguation – Morphological Analysis – Letter-to-sound Conversion – Prosody – Generation schematic – Speaking Style – Symbolic Prosody – Duration Assignment – Pitch Generation		CO4
UNIT V	**SPEECH SYNTHESIS**	9
Attributes – Formant Speech Synthesis – Concatenative Speech Synthesis – Prosodic Modification of Speech – Source-filter Models for Prosody Modification – Evaluation of TTS Systems.		CO5
		TOTAL : 45 PERIODS

6. Xuedong Huang, Alex Acero, Hsiao-Wuen Hon, ―Spoken Language Processing – A guide to Theory, Algorithm and System Development‖, Prentice Hall PTR, 2001.

COURSE OUTCOMES Upon completion of the course, students will be able to	
CO1	Identify the various temporal, spectral and cepstral features required for identifying speech units – phoneme, syllable and word
CO2	Determine and apply Mel-frequency cepstral coefficients for processing all types of signals
CO3	Justify the use of formant and concatenative approaches to speech synthesis
CO4	Identify the apt approach of speech synthesis depending on the language to be processed
CO5	Determine the various encoding techniques for representing speech.

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)

DS1813	CYBER SECURITY	L	T	P	C
		3	0	0	3

OBJECTIVES

- Students should be able to understand.
- The difference between threat, risk, attack and vulnerability.
- How threats materialize into attacks.
- Where to find information about threats, vulnerabilities and attacks.
- Typical threats, attacks and exploits and the motivations behind them.

UNIT	TITLE / CONTENT	
UNIT I	**INTRODUCTION TO CYBER SECURITY**	9
	Introduction -Computer Security - Threats -Harm - Vulnerabilities - Controls - Authentication - Access Control and Cryptography - Web—User Side - Browser Attacks - Web Attacks Targeting Users - Obtaining User or Website Data - Email Attacks	CO1
UNIT II	**SECURITY IN OPERATING SYSTEM & NETWORKS**	9
	Security in Operating Systems - Security in the Design of Operating Systems -Rootkit - Network security attack- Threats to Network Communications - Wireless Network Security - Denial of Service - Distributed Denial-of-Service.	CO2
UNIT III	**DEFENCES: SECURITY COUNTERMEASURES**	9
	Cryptography in Network Security - Firewalls - Intrusion Detection and Prevention Systems - Network Management - Databases - Security Requirements of Databases - Reliability and Integrity - Database Disclosure - Data Mining and Big Data.	CO3
UNIT IV	**PRIVACY IN CYBERSPACE**	9
	Privacy Concepts -Privacy Principles and Policies -Authentication and Privacy - Data Mining - Privacy on the Web - Email Security - Privacy Impacts of Emerging Technologies - Where the Field Is Headed.	CO4
UNIT V	**MANAGEMENT AND INCIDENTS**	9
	Security Planning - Business Continuity Planning - Handling Incidents - Risk Analysis - Dealing with Disaster - Emerging Technologies - The Internet of Things - Economics - Electronic Voting - Cyber Warfare- Cyberspace and the Law - International Laws - Cyber crime - Cyber Warfare and Home Land Security.	CO5
		TOTAL : 45 PERIODS

REFERENCE BOOKS

1. Charles P. Pfleeger Shari Lawrence Pfleeger Jonathan Margulies, Security in Computing, 5th Edition , Pearson Education , 2015

4. Nelson Phillips and Enfinger Steuart, ―Computer Forensics and Investigations‖, Cengage Learning, New Delhi, 2009.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Describe and understand the basics of the ethical hacking
CO2	Perform the foot printing and scanning - Demonstrate the techniques for system hacking
CO3	Characterize the malware and their attacks and detect and prevent them
CO4	Determine the signature of different attacks and prevent them
CO5	Detect and prevent the security attacks in different environments

MAPPING OF COs WITH POs AND PSOs

DS1814	PREDICTIVE ANALYTICS	L	T	P	C
		3	0	0	3

OBJECTIVES

- To learn, how to develop models to predict categorical and continuous outcomes, using such techniques as neural networks, logistic regression, support vector machines and , K-nearest –Neighbour classifiers.
- To know the use of the binary classifier and numeric predictor nodes to automate model selection.
- To advice on when and how to use each model.
- Also learn how to combine two or more models to improve prediction
- To learn about supervised and unsupervised learning

UNIT I	LINEAR METHODS FOR REGRESSION AND CLASSIFICATION	9
Overview of supervised learning, Linear regression models and least squares, Multiple regression, Multiple outputs, Subset selection, Ridge regression, Lasso regression, Linear Discriminant Analysis, Logistic regression, Perceptron learning algorithm.		CO1
UNIT II	**MODEL ASSESMENT AND SELECTION**	9
Bias, Variance, and model complexity, Bias-variance trade off, Optimism of the training error rate, Esimate of In-sample prediction error, Effective number of parameters, Bayesian approach and BIC, Cross- validation, Boot strap methods, conditional or expected test error.		CO2
UNIT III	**ADDITIVE MODELS, TREES AND BOOSTING**	9
Generalized additive models, Regression and classification trees, Boosting methods-exponential loss and AdaBoost, Numerical Optimization via gradient boosting, Examples (Spam data, California housing, NewZealand fish, Demographic data)		CO3
UNIT IV	**NEURAL NETWORKS(NN) , SUPPORT VECTOR MACHINES(SVM), AND K-NEAREST NEIGHBOR**	9
Fitting neural networks, Back propagation, Issues in training NN, SVM for classification, Reproducing Kernels, SVM for regression, K-nearest –Neighbour classifiers(Image Scene Classification)		CO4
UNIT V	**UNSUPERVISED LEARNING AND RANDOM FORESTS**	9
Association rules, Cluster analysis, Principal Components, Random forests and analysis.		CO5
		TOTAL : 45 PERIODS

REFERENCE BOOKS

1. G.James,D.Witten,T.Hastie,R.Tibshirani-An introduction to statistical learning with applications in R,Springer,2013.

4. C.M.Bishop –Pattern Recognition and Machine Learning,Springer,2006.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Develop simple applications regression and classifications.
CO2	Design and implement model assessment and selection.
CO3	Develop and implement applications using additive models.
CO4	Develop applications using neural network and support vector machine.
CO5	Design applications using cluster and random forest analysis.

DS1815	STATISTICAL COMPUTING	L	T	P	C
		3	0	0	3

OBJECTIVES

- To understand probability distributions, random number generation and density estimations to analysis the different kind of data
- To learn Monte Carlo experiments and sampling techniques
- To learn statistical analysis on data
- To understand statistical tests using tools
- To understand statistical analysis using graphical and numerical methods

UNIT I	DESCRIPTIVE STATISTICS	9
	Diagrammatic representation of data, measures of central tendency, measures of dispersion, measures of skewness and kurtosis, correlation, inference procedure for correlation coefficient, bivariate correlation, multiple correlations, linear regression and its inference procedure, multiple regression. Probability: Measures of probability, conditional probability, independent event, Bayes' theorem, random variable, discrete and continuous probability distributions, expectation and variance, markov inequality, chebyshev's inequality, central limit theorem.	CO1
UNIT II	**INFERENTIAL STATISTICS**	9
	Sampling & Confidence Interval, Inference & Significance. Estimation and Hypothesis Testing, Goodness of fit, Test of Independence, Permutations and Randomization Test, ttest/z-test (one sample, independent, paired), ANOVA, chi-square. Linear Methods for Regression Analysis: multiple regression analysis, orthogonalization by Householder transformations (QR); singular value decomposition (SVD); linear dimension reduction using principal component analysis (PCA)	CO2
UNIT III	**PSEUDO-RANDOM NUMBERS AND MANTE CARLO INTEGRATION**	9
	Pseudo-Random Numbers: Random number generation, Inverse-transform, acceptance-rejection, transformations, multivariate probability calculations. Monte Carlo Integration: Simulation and Monte Carlo integration, variance reduction, Monte Carlo hypothesis testing, antithetic variables/control variates, importance sampling, stratified sampling Markov chain Monte Carlo (McMC): Markov chains; Metropolis-Hastings algorithm; Gibbs sampling; convergence	CO3
UNIT IV	**RESAMPLING METHODS, DENSITY ESTIMATION, & NUMERICAL METHODS**	9
	Resampling Methods: Cross-validation, Bootstrapping, Jackknife resampling, percentile confidence intervals, permutation tests Density Estimation: Univariate density estimation, kernel smoothing, multivariate density estimation Numerical Methods: Root finding; more on numerical integration; numerical maximization/minimization; constrained and unconstrained optimization; EM (Expectation Maximization) algorithm; simplex algorithm	CO4
UNIT V	**INTRODUCTION TO R PROGRAMMING**	9
	History of R programming, starting and ending R, R as a scientific calculator, handling package, workspace, inspecting variables, operators and expressions in R, data objects and types, vectors, matrices and arrays, lists and data frames, built-in and user-defined functions , strings and factors, flow control and loops, advanced looping, date and times. Using R for statistical analysis: Importing data files, exporting data, outputting results, exporting graphs, graphics in R, interactively adding information of plot, performing data analysis tasks. R commands for descriptive statistics, data aggregation, representation of multivariate data, code factorization and optimization, statistical libraries in R	CO5

TOTAL : 45 PERIODS
REFERENCE BOOKS
1. S.C. Gupta & V.K. Kapoor, “Fundamentals of Mathematical Statistics”, Sultan Chand & Sons 2. Sheldon M. Ross, “Introduction to Probability and Statistics for Engineers and Scientists”, Academic Press 3. Dudewicz, E.J., Mishra, S.N., “Modern Mathematical Statistics”, Willy 4. Purohit S. G., Gore S. D., Deshmukh S. K., “Statistics using R, Narosa 5. Rizzo, M. L., “Statistical Computing with R”, Boca Raton, FL: Chapman & Hall/CRC Press

COURSE OUTCOMES
Upon completion of the course, students will be able to

CO1	Understand and apply the probability distributions, random number generation and density estimations to perform analysis of various kinds of data
CO2	Understand and manipulate data, design and perform simple Monte Carlo experiments, and be able to use resampling methods
CO3	Perform statistical analysis on variety of data
CO4	Perform appropriate statistical tests using R and visualize the outcome
CO5	Discuss the results obtained from their analyses after creating customized graphical and numerical summaries

DS1816	DATA EXPLORATION AND VISUALIZATION	L	T	P	C
		3	0	0	3

OBJECTIVES

- To outline an overview of exploratory data analysis and phases involved in data analytics
- To acquire an in-depth knowledge in EDA techniques
- To experiment the data visualization
- To describe the methods of time series analysis
- To explain the basics of tree and hierarchical representation of big data

UNIT I	EXPLORATORY DATA ANALYSIS	9
EDA fundamentals – Understanding data science – Significance of EDA – Making sense of data – Comparing EDA with classical and Bayesian analysis – Software tools for EDA		CO1
UNIT II	**EDA TECHNIQUES**	9
Visual Aids For EDA- Data transformation techniques-merging database, reshaping and pivoting, Transformation techniques -Descriptive Statistics-types of kurtosis, quartiles, Grouping Datasets-data aggregation, group wise transformation.		CO2
UNIT III	**VISUALIZING DATA**	9
The Seven Stages of Visualizing Data, Processing-load and displaying data – functions, sketching and scripting, Mapping-Location, Data, two sided data ranges, smooth interpolation of values over time		CO3
UNIT IV	**TIME SERIES ANALYSIS**	9
Overview of time series analysis-showing data as an area, drawing tabs, handling mouse input, Connections And Correlations – Preprocessing-introducing regular expression, sophisticated sorting, Scatterplot Maps-deployment issues		CO4
UNIT V	**TREES, HIERARCHIES, AND RECURSION**	9
Treemaps - treemap library, directory structure, maintaining context, file item, folder item, Networks and Graphs-approaching network problems-advanced graph example, Acquiring data, Parsing data		CO5

COURSE OUTCOMES
Upon completion of the course, students will be able to

CO1	Explain the overview of exploratory data analysis and phases involved in data analytics
CO2	Explore in-depth knowledge in EDA techniques
CO3	Apply the visualization techniques in data

CO4	Describe the methods of time series analysis
CO5	Represent the data in tree and hierarchical formats

SEMESTER VIII

PROFESSIONAL ELECTIVE – VI

DS1821	COGNITIVE SYSTEMS	L	T	P	C
	Common for AI-DS & AI-ML	3	0	0	3

OBJECTIVES

- To provide an understanding of the central challenges in realizing aspects of human cognition.
- To provide a basic exposition to the goals and methods of human cognition.
- To develop algorithms that use AI and machine learning along with human interaction and feedback to help humans make choices/decisions.
- To support human reasoning by evaluating data in context and presenting relevant findings along with the evidence that justifies the answers.

UNIT I	INTRODUCTION TO COGNITIVE SCIENCE	9
Understanding Cognition, IBM's Watson, Design for Human Cognition, Augmented Intelligence, Cognition Modeling Paradigms: Declarative/ logic-based computational cognitive modeling, connectionist models of cognition, Bayesian models of cognition, a dynamical systems approach to cognition.		CO1
UNIT II	**MODELS**	9
Cognitive Models of memory and language, computational models of episodic and semantic memory, modeling psycholinguistics.		CO2
UNIT III	**COGNITIVE MODELING**	9
modeling the interaction of language, memory and learning, Modeling select aspects of cognition classical models of rationality, symbolic reasoning and decision making.		CO3
UNIT IV	**INDUCTIVE GENERALIZATION**	9
Formal models of inductive generalization, causality, categorization and similarity, the role of analogy in problem solving, Cognitive Development Child concept acquisition. Cognition and Artificial cognitive architectures such as ACT-R, SOAR, OpenCog, CopyCat, Memory Networks.		CO4
UNIT V	**APPLICATION**	9
DeepQA Architecture, Unstructured Information Management Architecture (UIMA), Structured Knowledge, Business Implications, Building Cognitive Applications, Application of Cognitive Computing and Systems		CO5
		TOTAL : 45 PERIODS

REFERENCE BOOKS

1. Formal Approaches in Categorization by Emmanuel M. Pothos, Andy J. Wills, Cambridge University Press,2012.
2. Cognition, Brain and Consciousness: Introduction to Cognitive Neuroscience by Bernard J. Bears, Nicole M. Gage, Academic Press,2013.
3. Cognitive Computing and Big Data Analytics by Hurwitz, Kaufman, and Bowles, Wiley,2012.
4. The Cambridge Handbook of Computational Psychology by Ron Sun (ed.), Cambridge University Press,2008.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Understand what cognitive computing and it's models
CO2	Understand how it differs from traditional approaches.
CO3	Plan and use the primary tools associated with cognitive computing.
CO4	Plan and execute a project that leverages cognitive computing.
CO5	Understand and develop the business implications of cognitive computing.

MAPPING OF COs WITH POs AND PSOs

DS1822	PARALLEL COMPUTING	L	T	P	C
		3	0	0	3

OBJECTIVES

- To understand the development of parallel and massively parallel systems.
- To understand the challenges in heterogeneous processing systems.
- To Use shared programming models for parallel programs.
- To learn to program heterogeneous systems.
- To learn to provide effective parallel solutions for GPGPU architectures.

UNIT I	PARALLEL COMPUTING BASICS	9
Importance of Parallelism – Processes, Tasks and Threads – Modifications to von-Neumann model – ILP – TLP – Parallel Hardware – Flynns Classification – Shared Memory and Distributed Memory Architectures – Cache Coherence – Parallel Software – Performance – Speedup and Scalability – Massive Parallelism – GPUs – GPGPUs.		CO1
UNIT II	**SHARED MEMORY PROGRAMMING WITH OPENMP**	9
OpenMP Program Structure – OpenMP Clauses and Directives – Scheduling Primitives – Synchronization Primitives – Performance Issues with Caches – Case Study – Tree Search.		CO2
UNIT III	**PROGRAMMING GPUS**	9
GPU Architectures – Data Parallelism – CUDA Basics – CUDA Program Structure – Threads, Blocks, Grids – Memory Handling.		CO3
UNIT IV	**PROGRAMMING WITH CUDA**	9
Parallel Patterns – Convolution – Prefix Sum – Sparse matrix – Vector Multiplication – Imaging Case Study.		CO4
UNIT V	**OTHER GPU PROGRAMMING PLATFORMS**	9
Introduction to OpenCL – OpenACC – C++AMP – Thrust – Programming Heterogeneous Clusters – CUDA and MPI.		CO5
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Peter Pacheco, "Introduction to Parallel Programming", Morgan Kauffman, 2011.
2. David B. Kirk, Wen–mei W. Hwu, "Programming Massively Parallel Processors", Third Edition, Morgan Kauffman, 2016.

1. Shane Cook, "CUDA Programming – A Developers Guide To Parallel Computing with GPUs", Morgan Kauffman, 2013.
2. B.R. Gaster, L. Howes, D.R. Kaeli, P. Mistry, D. Schaa, " Heterogeneous Computing with OpenCL 2.0", Morgan Kauffman, 2015.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Identify and Choose the right parallel processing paradigm for a given problem.
CO2	Write parallel programs using OpenMP
CO3	Devise solutions for an application on a heterogeneous multi-core platform.
CO4	Program GPUs using CUDA / OpenCL.
CO5	Compare characteristics of and evaluate different GPU programming platforms.

DS1823	BIO-INSPIRED OPTIMIZATION TECHNIQUES	L	T	P	C
		3	0	0	3

OBJECTIVES

- To Learn bio-inspired theorem and algorithms
- To Understand random walk and simulated annealing
- To Learn genetic algorithm and differential evolution
- To Learn swarm optimization and ant colony for feature selection
- To understand bio-inspired application in image processing

UNIT	TITLE	
UNIT I	**INTRODUCTION**	9
Introduction to algorithm - Newton ' s method - optimization algorithm - No-Free-Lunch Theorems - Nature-Inspired Mataheuristics -Analysis of Algorithms -Nature Inspires Algorithms -Parameter tuning and parameter control.		CO1
UNIT II	**RANDOM WALK AND ANEALING**	9
Random variables - Isotropic random walks - Levy distribution and flights - Markov chains - step sizes and search efficiency - Modality and intermittent search strategy - importance of randomization- Eagle strategy-Annealing and Boltzmann Distribution - parameters -SA algorithm - Stochastic Tunneling.		CO2
UNIT III	**GENETIC ALOGORITHMS AND DIFFERENTIAL EVOLUTION**	9
Introduction to genetic algorithms and - role of genetic operators - choice of parameters - GA varients - schema theorem - convergence analysis - introduction to differential evolution - varients - choice of parameters - convergence analysis - implementation.		CO3
UNIT IV	**SWARM OPTIMIZATION AND FIREFLY ALGORITHM**	9
Swarm intelligence - PSO algorithm - accelerated PSO - implementation - convergence analysis - binary PSO - The Firefly algorithm - algorithm analysis - implementation - varients- Ant colony optimization toward feature selection.		CO4
UNIT V	**APPLICATION IN IMAGE PROCESSING**	9
Bio-Inspired Computation and its Applications in Image Processing: An Overview - Fine- Tuning Enhanced Probabilistic Neural Networks Using Meta-heuristic-driven Optimization - Fine-Tuning Deep Belief Networks using Cuckoo Search - Improved Weighted Thresholded Histogram Equalization Algorithm for Digital Image Contrast Enhancement Using Bat Algorithm - Ground Glass Opacity Nodules Detection and Segmentation using Snake Model - Mobile Object Tracking Using Cuckoo Search		CO5

TOTAL : 45 PERIODS

TEXT BOOKS

1. Xin-She Yang , Jaao Paulo papa, "Bio-Inspired Computing and Applications in Image Processing",Elsevier 2016.

REFERENCE BOOKS

1. Eiben,A.E.,Smith,James E, "Introduction to Evolutionary Computing", Springer 2015.

DS1824	INFORMATION STORAGE MANAGEMENT	L	T	P	C
		3	0	0	3

OBJECTIVES

- To understand the basic components of Storage System Environment.
- To understand the Storage Area Network Characteristics and Components.
- To examine emerging technologies including IP-SAN.
- To consider the factors which optimize the information retrieval process;
- To examine current issues in information retrieval.

UNIT I	STORAGE SYSTEMS	9
Introduction to Information Storage and Management: Information Storage, Evolution of Storage Technology and Architecture, Data Center Infrastructure, Key Challenges in Managing Information, Information Lifecycle. Storage System Environment: Components of the Host. RAID: Implementation of RAID, RAID Array Components, RAID Levels, RAID Comparison, RAID Impact on Disk Performance, Hot Spares. Intelligent Storage System: Components, Intelligent Storage Array.		CO1
UNIT II	**STORAGE NETWORKING TECHNOLOGIES**	9
Direct-Attached Storage and Introduction to SCSI: Types of DAS, DAS Benefits and Limitations, Disk Drive Interfaces, Introduction to Parallel SCSI, SCSI Command Model. Storage Area Networks: Fiber Channel, SAN Evolution, SAN Components, Fiber Channel Connectivity, Fiber Channel Ports, Fiber Channel Architecture, Zoning, Fiber Channel Login Types, Fiber Channel Topologies. Network Attached Storage: Benefits of NAS, NAS File I/Components of NAS, NAS Implementations, NAS-Implementations, NAS File Sharing Protocols, NAS I/O Operations.		CO2
UNIT III	**ADVANCED STORAGE NETWORKING AND VIRTUALIZATION**	9
IP SAN: iSCSI, FCIP. Content-Addressed Storage: Fixed Content and Archives, Types of Archives, Features and Benefits of CAS, CAS Architecture, Object Storage and Retrieval in CAS, CAS Examples. Storage Virtualization: Forms of Virtualization, NIA Storage Virtualization Taxonomy, Storage Virtualization Configurations, Storage Virtualization Challenges, Types of Storage Virtualization.		CO3
UNIT IV	**BUSINESS CONTINUITY**	9
Introduction to Business Continuity: Information Availability, BC Terminology, BC Planning Lifecycle, Failure Analysis, Business Impact Analysis, BC Technology Solutions. Backup and Recovery: Backup Purpose, Considerations, Granularity, Recovery Considerations, Backup Methods and Process, Backup and Restore Operations, Backup Topologies, Backup in NAS Environments, Backup Technologies.		CO4
UNIT V	**REPLICATION**	9
Local Replication: Source and Target, Uses of Local Replicas, Data Consistency, Local Replication Technologies, Restore and Restart Considerations, Creating Multiple Replicas, Management Interface. Remote Replication: Modes of Remote Replication and its technologies, Network Infrastructure.		CO5
		TOTAL : 45 PERIODS

REFERENCE BOOKS

1. EMC Corporation, "Information Storage and Management: Storing, Managing, and Protecting Digital Information", Wiley, India, 2010
2. Marc Farley, ―Building Storage Networks‖, Tata McGraw Hill ,Osborne, 2001.
3. Robert Spalding, ―Storage Networks: The Complete Reference―, Tata McGraw Hill, Osborne, 2003.

COURSE OUTCOMES **Upon completion of the course, students will be able to**	
CO1	Select from various storage technologies to suit for required application.
CO2	Apply theories to effectively solve information retrieval problems in real world situations.
CO3	Apply security measures to safeguard storage & farm.
CO4	Analyze QoS on Storage.

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)

MG1825	ENGINEERING ECONOMICS	L	T	P	C
		3	0	0	3

OBJECTIVES

- Acquire knowledge of economics to facilitate the process of economic decision making
- To analyze cost/revenue data and carry out make economic analyses in the decision-making process to justify or reject alternatives/projects on an economic basis.
- To obtain professional licensure
- To function in the business and management side of professional engineering practice.
- Prepare engineering and computer science students to write technical reports.

UNIT I	INTRODUCTION TO ECONOMICS	9
Introduction to Economics- Flow in an economy, Law of supply and demand, Concept of Engineering Economics – Engineering efficiency, Economic efficiency, Scope of engineering economics – Element of costs, Marginal cost, Marginal Revenue, Sunk cost, Opportunity cost, Break-even analysis – V ratio, Elementary economic Analysis – Material selection for product Design selection for a product, Process planning.		CO1
UNIT II	**VALUE ENGINEERING**	9
Make or buy decision, Value engineering – Function, aims, Value engineering procedure. Interest formulae and their applications –Time value of money, Single payment compound amount factor, Single payment present worth factor, Equal payment series sinking fund factor, Equal payment series payment Present worth factor- equal payment series capital recovery factor – Uniform gradient series annual equivalent factor, Effective interest rate, Examples in all the methods.		CO2
UNIT III	**CASH FLOW**	9
Methods of comparison of alternatives – present worth method (Revenue dominated cash flow diagram), Future worth method (Revenue dominated cash flow diagram, cost dominated cash flow diagram), Annual equivalent method (Revenue dominated cash flow diagram, cost dominated cash flow diagram), rate of return method, Examples in all the methods.		CO3
UNIT IV	**REPLACEMENT AND MAINTENANCE ANALYSIS**	9
Replacement and Maintenance analysis – Types of maintenance, types of replacement problem, determination of economic life of an asset, Replacement of an asset with a new asset – capital recovery with return and concept of challenger and defender, Simple probabilistic model for items which fail completely.		CO4
UNIT V	**DEPRECIATION**	9
Depreciation- Introduction, Straight line method of depreciation, declining balance method of depreciation-Sum of the years digits method of depreciation, sinking fund method of depreciation/ Annuity method of depreciation, service output method of depreciation-Evaluation of public alternatives- introduction, Examples, Inflation adjusted decisions – procedure to adjust inflation, Examples on comparison of alternatives and determination of economic life of asset.		CO5
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Pravin Kumar, “ Engineering Economy Management” Wiley Publication,2019.
2. R.Panneerselvam, “Engineering Economics”, PHI, 2013.

REFERENCE BOOKS

1. Zahid A. Khan , Arshad N. Siddiquee, Brajesh Kumar, Mustufa H. Abidi , “Principles of Engineering Economics with Applications”, Cambridge,Second Edition, 2018.

COURSE OUTCOMES Upon completion of the course, students will be able to	
CO1	Evaluate the economic theories, cost concepts and pricing policies
CO2	Understand the market structures and integration concepts
CO3	Understand the measures of national income, the functions of banks and concepts of globalization
CO4	Provide the students with a basic understanding of replacement analysis.
CO5	Understand ethical business practices.

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

OPEN ELECTIVES – I & II

OBT101	INDUSTRIAL BIOTECHNOLOGY	L	T	P	C
		3	0	0	3

OBJECTIVE

- To motivate students to excel in research and to practice the technologies in the field of Industrial biotechnology. To provide students with a solid understanding of Biotechnology fundamentals and applications required to solve real life problems. To provide students with an academic environment that is aware of professional excellence and leadership through interaction with professional bodies

UNIT I	**OVERVIEW OF THE CELL**	9
Cell, structure and properties, prokaryotic and eukaryotic cells, structural organization and function of intracellular organelles; Cell wall, Nucleus, Mitochondria, Golgi bodies, Lysosomes, Endoplasmic reticulum, Peroxisomes and Chloroplast.		CO1
UNIT II	**MICROBIAL GROWTH: PURE CULTURE TECHNIQUES**	9
Enrichment culture techniques for isolation of chemoautotrophs, chemoheterotrophs and photosynthetic microorganisms. The definition of growth, mathematical expression of growth, Growth curve, availability of oxygen, culture collection and maintenance of cultures. Media formulation: principles of microbial nutrition, formulation of culture medium, selective media, factors influencing the choice of various carbon and nitrogen sources, vitamins, minerals, precursors and antifoam agents. Importance of pH.		CO2
UNIT III	**MANAGEMENT OF WASTE**	9
Management of Contaminated land, lake sediments and Solid Waste, Anaerobic digestion, Biostimulation, Bioaugmentation, Phytoremediation, Natural attenuation, Vermicomposting		CO3
UNIT IV	**BIOREMEDIATION**	9
Definition, constraints and priorities of Bioremediation, Types of bioremediation, In-situ and Ex-situ bioremediation techniques, Factors affecting bioremediation. Bioremediation of Hydrocarbons. Lignocellulosic Compounds.		CO4
UNIT V	**BIOENERGY AND BIOMINING**	9
Bio energy: Energy and Biomass Production from wastes, biofuels, bio hydrogen and biomass. Biomining: Bioleaching, monitoring of pollutants, microbially enhanced oil recovery, microbial fuel cells.		CO5
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Molecular Biology of cell, Alberts. B et al. Developmental Biology, SF Gilbert, Sinauer Associates Inc.
2. AVN Swamy, Industrial Pollution Control Engineering, 2006, Galgotia Publication,

REFERENCE BOOKS

1. Environmental Biotechnology - Allan Stagg.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Design, perform experiments, analyze and interpret data for investigating complex problems in Biotechnology, Engineering and related fields.
CO2	Decide and apply appropriate tools and techniques in biotechnological manipulation.
CO3	Justify societal, health, safety and legal issues
CO4	Understand his responsibilities in biotechnological engineering practices
CO5	Understand the need and impact of biotechnological solutions on environment and societal context keeping in view need for sustainable solution.

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	1	1	2	1	1	2	2	3	2	1	1	1	2	1	1

CO3	3	3	2	1	1	2	3	3	1	2	3	3	1	2	2
CO4	3	3	2	3	2	1	1	1	2	1	3	2	1	2	2
CO5	2	1	3	3	2	3	3	2	1	2	3	1	1	2	2

OBT104	BIOSENSORS	L	T	P	C
		3	0	0	3

OBJECTIVE

- Understand protein based biosensors and their enzyme reactivity, stability and their application

UNIT I	**PROTEIN BASED BIOSENSORS**	9
Nano structure for enzyme stabilization - Single enzyme nano particles - Nanotubes microporus silica - Protein based nanocrystalline Diamond thin film for processing		CO1
UNIT II	**DNA BASED BIOSENSOR**	9
Heavy metal complexing with DNA and its determination water and food samples - DNA zymo biosensors		CO2
UNIT III	**ELECTRO CHEMICAL APPLICATION**	9
Detection in biosensors - Flurorescence - Absorption - Electrochemical. Integration of various techniques - Fibre optic biosensors		CO3
UNIT IV	**FABRICATION OF BIOSENSORS**	9
Techniques used for microfabrication - Microfabrication of electrodes - On chip analysis		CO4
UNIT V	**BIOSENSORS IN RESEARCH**	9
Future direction in biosensor research - Designed protein pores-as components of biosensors - Molecular design -Bionanotechnology for cellular biosensing - Biosensors for drug discovery - Nanoscale biosensors		CO5
		TOTAL : 45 PERIODS

REFERENCE BOOKS

1. Biosensors: A Practical Approach, J. Cooper & C. Tass, Oxford University Press, 2004
2. Nanomaterials for Biosensors, Cs. Kumar, Willey - VCH, 2007
3. Smart Biosensor Technology, G.K. Knoff, A.S. Bassi, CRC Press, 2006.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	The students will able to understand protein based biosensors and their enzyme reactivity, stability and their application in protein based nano crystalline thin film processing
CO2	The students will able to describe DNA based biosensors to study the presence of heavy metals in the food products

CO3	The students will able to understand fluorescence, UV-Vis and electrochemical applications of biosensors
CO4	The students will able to study about the fabrication of biosensors and its application as nanochipanalyzer
CO5	To understand the Future direction in biosensor research

MAPPING OF COs WITH POs AND PSOs															
COs	**PROGRAM OUTCOMES (POs)**												**PROGRAM SPECIFIC OUTCOMES (PSOs)**

OBT105	INTRODUCTION TO NANOSCIENCE AND NANOTECHNOLOGY	L	T	P	C
		3	0	0	3

OBJECTIVE

- Understand the principles of processing, manufacturing and characterization of nanomaterials and nanostructures.

UNIT I	**BASICS OF NANOTECHNOLOGY**	9
Introduction - Time and length scale in structures -Definition of a nanosystem -Dimensionality and size dependent phenomena -Surface to volume ratio -Fraction of surface atoms - Surface energy and surface stress- surface defects-Effect of nanoscale on various properties - Structural, thermal, mechanical, magnetic, optical and electronic properties.		CO1
UNIT II	**DIFFERENT CLASSES OF NANOMATERIALS**	9
Classification based on dimensionality-Quantum Dots,Wells and Wires - Carbon based nano materials (buckyballs, nanotubes, grapheme) - Metal based nanomaterials (nanogold, nanosilver and metal oxides) - Nanocomposites-Nanopolymers - Nano ceramics -Biological nanomaterials.		CO2
UNIT III	**SYNTHESIS OF NANOMATERIALS**	9
Chemical Methods: Metal Nanocrystals by Reduction -Sol - gel processing - Solvothermal Synthesis - Photochemical Synthesis - Chemical Vapor Deposition(CVD) - Metal Oxide - Chemical Vapor Deposition (MOCVD).Physical Methods: Ball Milling - Electrodeposition - Spray Pyrolysis - DC/RF Magnetron Sputtering - Molecular Beam Epitaxy (MBE).		CO3
UNIT IV	**CHARACTERIZATION OF NANOSTRUCTURES**	9
Introduction, structural characterization, X-ray diffraction (XRD-Powder/Single crystal), Small angle X-ray scattering (SAXS), Scanning Electron Microscopy (SEM) - Energy Dispersive X-ray analysis (EDAX)- Transmission Electron Microscope (TEM) - Scanning Tunneling Microscope (STM)-Atomic Force Microscopy (AFM), UV-vis spectroscopy (liquid and solid state) - Raman Spectroscopy -X-ray Photoelectron Spectroscopy (XPS) - Auger Electron spectroscopy (AES).		CO4
UNIT V	**APPLICATIONS**	9
Solar energy conversion and catalysis - Molecular electronics and printed electronics - Nanoelectronics -Polymers with a special architecture - Liquid crystalline systems - Applications in displays and other devices -Nanomaterials for data storage -Photonics, Plasmonics- Chemical and biosensors -Nanomedicine and Nanobiotechnology		CO5
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Nano Technology: Basic Science and Emerging Technologies, Mick Wilson, Kamali Kannargare., Geoff Smith Overseas Press (2005)

2. A Textbook of Nanoscience and Nanotechnology,Pradeep T., Tata McGrawHill Education Pvt. Ltd., 2012.
3. Nanostructured Materials and Nanotechnology,Hari Singh Nalwa,Academic Press, 2002.
4. Introduction to Nanotechnology, Charles P.Poole, FrankJ.Owens, Wiley Interscience (2003)
5. Textbook of Nanoscience and Nanotechnology, B.S. Murty, P. Shankar, Baldev Raj, B BRath, James Murday, Springer Science & Business Media, 2013.

REFERENCE BOOKS

1. Nanotechnology: A gentle introduction to the next Big idea, Mark A.Ratner, Daniel Ratner, Mark Ratne, Prentice Hall P7R:1st Edition (2002)
2. Fundamental properties of nanostructed materials Ed D. Fioran, G.Sberveglier, World Scientific 1994
3. Nanoscience: Nanotechnologies and Nanophysics, Dupas C., Houdy P., Lahmani M., Springer-Verlag Berlin Heidelberg, 2007

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Demonstrate the understanding of length scales concepts, nanostructures and nanotechnology
CO2	Understand the different classes of nanomaterials.
CO3	Identify the CVD, MOCVD
CO4	Outline the applications of nanotechnology and
CO5	Develop an ability to critically evaluate the promise of a nanotechnology device.

MAPPING OF COs WITH POs AND PSOs

OCE102	INTRODUCTION TO GEOGRAPHIC INFORMATION SYSTEM	L	P	T	C
		3	0	0	3

OBJECTIVES

- To introduce the fundamentals and components of Geographic Information System
- To provide details of spatial data models.
- To know the details of data input and topology
- To know the knowledge on data management and output processes
- To know the data quality and standards

UNIT I	FUNDAMENTALS OF GIS	9
Introduction to GIS - Basic spatial concepts - Coordinate Systems - GIS and Information Systems – Definitions – History of GIS - Components of a GIS – Hardware, Software, Data, People, Methods – Proprietary and open-source Software - Types of data – Spatial, Attribute data-types of attributes – scales/ levels of measurements.		CO1
UNIT II	**SPATIAL DATAMODELS**	9
Database Structures – Relational, Object Oriented – ER diagram - spatial data models – Raster Data Structures – Raster Data Compression - Vector Data Structures - Raster vs Vector ModelsTIN and GRID data models - OGC standards - Data Quality.		CO2
UNIT III	**DATA INPUT AND TOPOLOGY**	9
Scanner - Raster Data Input – Raster Data File Formats – Vector Data Input –Digitiser – Topology - Adjacency, connectivity and containment – Topological Consistency rules – Attribute Data linking – ODBC – GPS - Concept GPS based mapping.		CO3
UNIT IV	**DATA ANALYSIS**	9
Vector Data Analysis tools - Data Analysis tools - Network Analysis - Digital Education models - 3D data collection and utilisation.		CO4
UNIT V	**APPLICATIONS**	9
GIS Applicant - Natural Resource Management - Engineering - Navigation - Vehicle tracking and fleet management - Marketing and Business applications - Case studies.		CO5
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Kang - Tsung Chang, Introduction to Geographic Information Systems, McGraw Hill Publishing, 2nd Edition,2011.
2. Ian Heywood, Sarah Cornelius, Steve Carver,Srinivasa Raju, “An Introduction Geographical Information Systems, Pearson Education, 2ndEdition,2007.

REFERENCE BOOKS

1. Lo.C.P., Albert K.W. Yeung, Concepts and Techniques of Geographic Information Systems,

Prentice-Hall India Publishers,2006

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Have basic idea about the fundamentals of GIS.
CO2	Understand the types of data models.
CO3	Get knowledge about data input and topology.
CO4	Gain knowledge on data quality and standards.
CO5	Understand data management functions and data output

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)

CO4	2	2	1	1	2	-	1	-	-	-	-	2	2	2	1
CO5	2	2	1	1	2	-	1	-	-	-	-	2	2	2	2

OCH101	HOSPITAL MANAGEMENT	L	T	P	C
		3	0	0	3

OBJECTIVES

- To understand the fundamentals of hospital administration and management.
- To know the market related research process and its HRM
- To understand the recruitment and training processes in hospitals
- To explore various information management systems and relative supportive services.
- To learn the quality and safety aspects in hospital.

UNIT I	**OVERVIEW OF HOSPITAL ADMINISTRATION**	9
Distinction between Hospital and Industry, Challenges in Hospital Administration – Hospital Planning- Equipment Planning – Functional Planning		CO1
UNIT II	**HUMAN RESOURCE MANAGEMENT IN HOSPITAL**	9
Principles of HRM – Functions of HRM – Profile of HRD Manager –Human Resource Inventory – Manpower Planning.		CO2
UNIT III	**RECRUITMENT AND TRAINING**	9
Different Departments of Hospital, Recruitment, Selection, Training Guidelines – Methods of Training – Evaluation of Training – Leadership grooming and Training, Promotion – Transfer.		CO3
UNIT IV	**SUPPORTIVE SERVICES**	9
Medical Records Department – Central Sterilization and Supply Department – Pharmacy – Food Services - Laundry Services.		CO4
UNIT V	**COMMUNICATION AND SAFETY ASPECTS IN HOSPITAL**	9
Purposes – Planning of Communication, Modes of Communication – Telephone, ISDN, Public Address and Piped Music – CCTV.Security – Loss Prevention – Fire Safety – Alarm System – Safety Rules.		CO5

TOTAL : 45 PERIODS

TEXT BOOKS

1. R.C.Goyal, "Hospital Administration and Human Resource Management", PHI – Fourth Edition, 2006.
2. G.D.Kunders, "Hospitals – Facilities Planning and Management – TMH, New Delhi – Fifth Reprint 2007.

REFERENCE BOOKS

1. Cesar A.Caceres and Albert Zara, "The Practice of Clinical Engineering, Academic Press, New York, 1977.
2. Norman Metzger, "Handbook of Health Care Human Resources Management", 2nd edition Aspen Publication Inc. Rockville, Maryland, USA, 1990.
3. Peter Berman "Health Sector Reform in Developing Countries" - Harvard University Press, 1995.
4. William A. Reinke "Health Planning For Effective Management" - Oxford University Press.1988
5. Blane, David, Brunner, "Health and SOCIAL Organization: Towards a Health Policy for the 21st Century", Eric Calrendon Press 2002.
6. Arnold D. Kalcizony & Stephen M. Shortell, "Health Care Management", 6th Edition Cengage Learning, 2011.

COURSE OUTCOMES **Upon completion of the course, students will be able to**	
CO1	Explain the principles of Hospital administration.
CO2	Identify the importance of Human resource management.
CO3	List various marketing research techniques.
CO4	Identify Information management systems and issues in supporting departments of hospitals
CO5	Understand safety procedures followed in hospitals

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)

OEC103	BASICS OF EMBEDDED SYSTEMS AND IoT	L	T	P	C
		3	0	0	3

OBJECTIVES

- Understand the concepts of embedded system design and analysis
- Learn the architecture and programming of ARM processor
- Be exposed to the basic concepts of embedded programming
- Learn the concepts of IoT

UNIT	TITLE	
UNIT I	**INTRODUCTION TO EMBEDDED SYSTEM**	9
	Complex systems and microprocessors– Embedded system design process - Design methodologies- Design flows - Requirement Analysis – Specifications-System analysis and architecture design – Quality Assurance techniques–Design example: Model train controller.	CO1
UNIT II	**BASICS OF ARM ARCHITECTURE AND PERIPHERAL INTERFACING**	9
	ARM Architecture Versions – ARM Architecture – Instruction Set – Stacks and Subroutines – Features of the LPC 214X Family – Peripherals – The Timer Unit – Pulse Width Modulation Unit – UART – Block Diagram of ARM9 and ARM Cortex M3 MCU	CO2
UNIT III	**EMBEDDED PROGRAMMING CONCEPTS**	9
	Components for embedded programs- Models of programs- Assembly, linking and loading – compilation techniques- Program level performance analysis – Software performance optimization – Program level energy and power analysis and optimization – Analysis and optimization of program size- Program validation and testing	CO3
UNIT IV	**INTRODUCTION TO IoT**	9
	Functional blocks of an IoT system - Basics of Physical and logical design of IoT - IoT enabled domains - Difference between IoT - Passive and active sensors - Different applications of sensors - IoT front-end hardware Case Studies – Smart Parking, Air Pollution Monitoring.	CO4
UNIT V	**COMMUNICATION PROTOCOLS FOR EMBEDDED AND IoT**	9
	Embedded Networking: Introduction-Serial/Parallel Communication - Serial communication protocols- RS485 - Synchronous Serial Protocols - Serial Peripheral Interface (SPI) - Inter Integrated Circuits (I2C). IoT Infrastructure - 6LowPAN - IPv6 - Wi-Fi, Bluetooth, ZigBee.	CO5

TOTAL : 45 PERIODS

TEXT BOOKS

1. Marilyn Wolf, —Computers as Components - Principles of Embedded Computing System Design‖, Third Edition —Morgan Kaufmann Publisher (An imprint from Elsevier), 2012. (UNIT I, II, III, IV)
2. Arshdeep Bahga, Vijay Madisetti, "Internet of Things, A Hands-on-Approach", 1st Edition, Universities press Pvt. Ltd., India, 2015.
3. Daniel Minoli, "Building the Internet of Things with IPv6 and MIPv6, 1st Edition, John Wiley & Sons", Inc, USA, 2013

REFERENCE BOOKS

a. Adrian McEwen and Hakim Cassimally, "Designing the Internet of Things", 1st Edition, John Wiley & Sons Ltd, UK, 2014

b. Peter Waher, "Learning Internet of Things", 1st Edition, Packt Publishing Ltd, UK, 2015.

c. Charles Bell, "Beginning Sensor Networks with Arduino and Raspberry Pi" , 1st Edition, Apress Publishers, USA, 2013.

d. Raj Kamal, Internet of Things, Architecture and Design Principles, McGraw-Hill, 2017

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Understand the Embedded System Design Process
CO2	Describe the architecture and programming of ARM processor
CO3	Outline the concepts of embedded system programming
CO4	Explain the basic concepts of IOT
CO5	Model Networked systems with basic protocols

MAPPING OF COs WITH POs AND PSOs

OEE101	BASIC CIRCUIT THEORY		L	P	T	C
			3	0	0	3

OBJECTIVES

- To introduce electric circuits and its analysis
- To impart knowledge on solving circuit equations using network theorems
- To introduce the phenomenon of resonance in coupled circuits.
- To introduce Phasor diagrams and analysis of three phase circuits

UNIT I	**BASIC CIRCUITS ANALYSIS**	9
Resistive elements - Resistors in series and parallel circuits; Ohm's Law; Kirchoffs laws – methods of analysis-Mesh current and node voltage.		CO1
UNIT II	**NETWORK REDUCTION AND THEOREMS FOR DC CIRCUITS**	9
Network reduction- voltage and current division, source transformation, star delta conversion; Network theorems- Thevenins and Norton Theorems, Superposition Theorem, Maximum power transfer theorem, Reciprocity Theorem, Millman's theorem.		CO2
UNIT III	**ANALYSIS OF AC CIRCUITS**	9
Introduction to AC circuits- Inductive reactance, Capacitive reactance, Phasor diagrams, real power, reactive power, apparent power, power factor; RL, RC , RLC networks; Network reductions- voltage and current division, source transformation; Mesh and node analysis; Network theorems- Thevenins and Norton Theorems, Superposition Theorem , Maximum power transfer theorem, Reciprocity Theorem, Millman's theorem.		CO3
UNIT IV	**THREE PHASE CIRCUITS**	9
A.C. circuits – Average and RMS value, Phasor Diagram, Power, Power Factor and Energy; Analysis of three phase 3-wire and 4-wire circuits with star and delta connected loads, balanced & un balanced; phasor diagram of voltages and currents; power measurement in three phase circuits.		CO4
UNIT V	**RESONANCE AND COUPLED CIRCUITS**	9
Series and parallel resonance – frequency response, Quality factor and Bandwidth; Self and mutual inductance; Coefficient of coupling; Tuned circuits – Single tuned circuits.		CO5
		TOTAL : 45 PERIODS

TEXT BOOKS

1. William H. Hayt Jr, Jack E. Kemmerly and Steven M. Durbin, "Engineering Circuits Analysis", McGraw Hill publishers, edition, New Delhi, 2013.

2. Charles K. Alexander, Mathew N.O. Sadiku, “Fundamentals of Electric Circuits”,Second Edition, McGraw Hill, 2013.
3. Allan H. Robbins, Wilhelm C. Miller, “Circuit Analysis Theory and Practice”, Cengage Learning India, 2013.

REFERENCE BOOKS

7. Sudhakar A and Shyam Mohan SP, “Circuits and Network Analysis and Synthesis”,McGraw Hill, 2015.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Ability to introduce electric circuits and its analysis
CO2	Ability to impart knowledge on solving circuit equations using network theorems
CO3	Ability to introduce the phenomenon of resonance in coupled circuits.
CO4	Ability to introduce Phasor diagrams and analysis of three phase circuits
CO5	Ability to impart knowledge on resonance and coupled circuits

OEE103	INTRODUCTION TO RENEWABLE ENERGY SYSTEMS	L	P	T	C
		3	0	0	3

OBJECTIVES

- About the stand alone and grid connected renewable energy systems.
- Design of power converters for renewable energy applications.
- Wind electrical generators and solar energy systems.
- Power converters used for renewable energy systems.

UNIT I	**INTRODUCTION**	9
Environmental aspects of electric energy conversion: impacts of renewable energy generation on environment (cost-GHG Emission) - Qualitative study of different renewable energy resources: Solar, wind, ocean, Biomass, Fuel cell, Hydrogen energy systems and hybrid renewable energy systems.		CO1
UNIT II	**ELECTRICAL MACHINES FOR RENEWABLE ENERGY CONVERSION**	9
Reference theory fundamentals-principle of operation and analysis: IG and PMSG		CO2
UNIT III	**POWER CONVERTERS**	9
Solar: Block diagram of solar photo voltaic system -Principle of operation: line commutated converters (inversion-mode) - Boost and buck-boost converters- selection of inverter, battery sizing, array sizing Wind: Three phase AC voltage controllers		CO3
UNIT IV	**ANALYSIS OF WIND AND PV SYSTEMS**	9
Standalone operation of fixed and variability speed wind energy conversion systems and solar system-Grid connection Issues -Grid integrated PMSG, SCIG Based WECS, grid Integrated solar system		CO4
UNIT V	**HYBRID RENEWABLE ENERGY SYSTEMS**	9
Need for Hybrid Systems- Range and type of Hybrid systems- Case studies of Wind-PV Maximum Power Point Tracking (MPPT).		CO5
		TOTAL : 45 PERIODS

TEXT BOOKS

1. S. N. Bhadra, D.Kastha, S.Banerjee, "Wind Electrical Systems", Oxford University Press, 2005.
2. B.H.Khan, "Non-conventional Energy Sources", Tata McGraw-hill Publishing Company, New Delhi, 2017.

REFERENCE BOOKS

1. Muhammad H. Rashid, "Power Electronics Hand Book", Third Edition, Butterworth- Heinemann, 2015.
2. Ion Boldea, "Variability Speed Generators", Second Edition, CRC Press, 2015.
3. Rai. G.D, "Non- conventional Energy Sources", Khanna Publishers, 2004.
4. Gray, L. Johnson, "Wind Energy Systems", Prentice Hall, 2006.
5. Andrzej M. Trzynnadlowski, "Introduction to Modern Power Electronics", Third Edition, Wiley India Pvt. Ltd, 2016.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Ability to understand and analyze power system operation, stability, control and protection.
CO2	Ability to handle the engineering aspects of electrical energy generation and utilization.
CO3	Ability to understand the stand alone and grid connected renewable energy systems.
CO4	Ability to design of power converters for renewable energy applications.
CO5	Ability to acquire knowledge on wind electrical generators and solar energy systems.

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)

OEI102	ROBOTICS	L	T	P	C
		3	0	0	3

OBJECTIVE

- To understand the functions of the basic components of a Robot.
- To study the use of various types of End of Effectors and Sensors
- To impart knowledge in Robot Kinematics and Programming
- To learn Robot safety issues and economics.

UNIT I	**FUNDAMENTALSOF ROBOT**	9
Robot - Definition - Robot Anatomy - Coordinate Systems, Work Envelope Types and Classification- Specifications-Pitch, Yaw, Roll, Joint Notations, Speed of Motion, Pay Load- Robot Parts and their Functions-Need for Robots-Different Applications.		CO1
UNIT II	**ROBOT DRIVE SYSTEMS ANDEND EFFECTORS**	9
Pneumatic Drives-Hydraulic Drives-Mechanical Drives-Electrical Drives-D.C. Servo Motors, Stepper Motors, A.C. Servo Motors-Salient Features, Applications and Comparison of all these Drives, End Effectors-Grippers-Mechanical Grippers, Pneumatic and Hydraulic- Grippers, Magnetic Grippers, Vacuum Grippers; Two Fingered and Three Fingered Grippers; Internal Grippers and External Grippers; Selection and Design Considerations.		CO2
UNIT III	**SENSORS AND MACHINEVISION**	9
Requirements of a sensor, Principles and Applications of the following types of sensors- Position sensors - Piezo Electric Sensor, LVDT, Resolvers, Optical Encoders, pneumatic Position Sensors, Range Sensors Triangulations Principles, Structured, Lighting Approach, Time of Flight, Range Finders, Laser Range Meters, Touch Sensors ,binary Sensors., Analog Sensors, Wrist Sensors, Compliance Sensors, Slip Sensors, Camera, Frame Grabber, Sensing and Digitizing Image Data-Signal Conversion, Image Storage, Lighting Techniques, Image Processing and Analysis-Data Reduction, Segmentation, Feature Extraction, Object Recognition, Other Algorithms, Applications- Inspection, Identification, Visual Serving and Navigation.		CO3
UNIT IV	**ROBOT KINEMATICS AND ROBOTPROGRAMMING**	9
Forward Kinematics, Inverse Kinematics and Difference; Forward Kinematics and Reverse Kinematics of manipulators with Two, Three Degrees of Freedom (in 2 Dimension), Four Degrees of freedom (in 3 Dimension) Jacobians, Velocity and Forces-Manipulator Dynamics, Trajectory Generator, Manipulator Mechanism Design-Derivations and problems. Lead through Programming, Robot programming Languages-VAL Programming-Motion Commands, Sensor Commands, End Effector commands and simple Programs.		CO4
UNIT V	**IMPLEMENTATION ANDROBOTECONOMICS**	9
RGV, AGV; Implementation of Robots in Industries-Various Steps; Safety Considerations for Robot Operations - Economic Analysis of Robots.		CO5
		TOTAL : 45 PERIODS

TEXT BOOKS

7. **Surender Kumar, "Industrial Robots and Computer Integrated Manufacturing", Oxford and IBH Publishing Co. Pvt. Ltd.,1991.**

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Understand the functions of the basic components of a Robot.
CO2	Study the use of various types of End of Effectors and Sensors
CO3	Understand Sensors and Machine Vision of Robot
CO4	Understand Robot Kinematics and Robot Programming
CO5	Understand the Implementation of Robots in Industries

OMB101	TOTAL QUALITY MANAGEMENT	L T P C
		3 0 0 3
OBJECTIVES ❖ To learn the quality philosophies and tools in the managerial perspective.		
UNIT I	**INTRODUCTION**	9
Quality – vision, mission and policy statements. Customer Focus – customer perception of quality, Translating needs into requirements, customer retention. Dimensions of product and service quality. Cost of quality.		CO1
UNIT II	**PRINCIPLES AND PHILOSOPHIES OF QUALITY MANAGEMENT**	9
Overview of the contributions of Deming, Juran Crosby, Masaaki Imai, Feigenbaum, Ishikawa, Taguchi techniques – introduction, loss function, parameter and tolerance design, signal to noise ratio. Concepts of Quality circle, Japanese 5S principles and 8D methodology		CO2
UNIT III	**STATISTICAL PROCESS CONTROL**	9
Meaning and significance of statistical process control (SPC) – construction of control charts for variables and attributed. Process capability – meaning, significance and measurement – Six sigma - concepts of process capability. Reliability concepts – definitions, reliability in series and parallel, product life characteristics curve. Total productive maintenance (TMP), Terotechnology. Business process Improvement (BPI) – principles, applications, reengineering process, benefits and limitations.		CO3
UNIT IV	**TOOLS AND TECHNIQUES FOR QUALITY MANAGEMENT**	9
Quality functions development (QFD) – Benefits, Voice of customer, information organization, House of quality (HOQ), building a HOQ, QFD process. Failure mode effect analysis (FMEA) – requirements of reliability, failure rate, FMEA stages, design, process and documentation. Seven Tools (old & new). Bench marking and POKA YOKE.		CO4
UNIT V	**QUALITY SYSTEMS ORGANIZING AND IMPLEMENTATION**	9
Introduction to IS/ISO 9004:2000 – quality management systems – guidelines for performance improvements. Quality Audits. TQM culture, Leadership – quality council, employee involvement, motivation, empowerment, recognition and reward - TQM framework, benefits, awareness and obstacles.		CO5
		TOTAL : 45 PERIODS

TEXT BOOKS
1. Dale H.Besterfield, Carol Besterfield – Michna, Glen H. Besterfield, Mary Besterfield – Sacre Hermant – Urdhwareshe, Rashmi Urdhwareshe, Total Quality Management, Revised Third edition, Pearson Education, 2011 2. Shridhara Bhat K, Total Quality Management – Text and Cases, Himalaya Publishing House, First Edition 2002.
REFERENCE BOOKS
1. Douglas C. Montgomory, Introduction to Statistical Quality Control, Wiley Student Edition, 4th Edition, Wiley India Pvt Limited, 2008. 2. James R. Evans and William M. Lindsay, The Management and Control of Quality, Sixth Edition, Thomson, 2005. 3. Poornima M.Charantimath, Total Quality Management, Pearson Education, First Indian Reprint 2003. 4. Indian standard – quality management systems – Guidelines for performance improvement (Fifth Revision), Bureau of Indian standards, New Delhi.

COURSE OUTCOMES

At the end of the course, the student should be able:

CO1	To apply quality philosophies and tools to facilitate continuous improvement and ensure customer delight.
CO2	To understand the principles of business process improvement
CO3	To understand and apply the concepts of statistical process control
CO4	To apply the tools and techniques used for quality management
CO5	To understand the methods in organizing and implementation of quality systems

MAPPING OF COs WITH POs AND PSOs

OME104	INDUSTRIAL SAFETY ENGINEERING	L	T	P	C
		3	0	0	3

OBJECTIVES

- To provide exposure to the students about safety and health provisions related to hazardous processes as laid out in Factories act 1948
- To familiarize students with powers of inspectorate of factories
- To help students to learn about Environment act 1986 and rules framed under the act.
- To provide wide exposure to the students about various legislations applicable to an industrial unit.
- To prepare onsite and offsite emergency plan.

UNIT I	**FACTORIES ACT – 1948**	9
Statutory authorities – inspecting staff, health, safety, provisions relating to hazardous processes, welfare, working hours, employment of young persons – special provisions – penalties and procedures-Tamil Nadu Factories Rules 1950 under Safety and health chapters of Factories Act 1948		CO1
UNIT II	**ENVIRONMENT ACT – 1986**	9
General powers of the central government, prevention, control and abatement of environmental pollution-Biomedical waste (Management and handling Rules, 1989-The noise pollution (Regulation and control) Rules, 2000-The Batteries (Management and Handling Rules) 2001- No Objection certificate from statutory authorities like pollution control board. Air Act 1981 and Water Act 1974: Central and state boards for the prevention and control of air pollution-powers and functions of boards – prevention and control of air pollution and water pollution – fund – accounts and audit, penalties and procedures.		CO2
UNIT III	**MANUFACTURE, STORAGE AND IMPORT OF HAZARDOUS CHEMICAL RULES 1989**	9
Definitions – duties of authorities – responsibilities of occupier – notification of major accidents – information to be furnished – preparation of offsite and onsite plans – list of hazardous and toxic chemicals – safety reports – safety data sheets.		CO3
UNIT IV	**OTHER ACTS AND RULES**	9
Indian Boiler Act 1923, static and mobile pressure vessel rules (SMPV), motor vehicle rules, mines act 1952, workman compensation act, rules – electricity act and rules – hazardous wastes (management and handling) rules, 1989, with amendments in 2000- the building and other construction workers act 1996., Petroleum rules, Gas cyclinder rules-Explosives Act 1983-Pesticides Act		CO4
UNIT V	**INTERNATIONAL ACTS AND STANDARDS**	9
Occupational Safety and Health act of USA (The Williames - Steiger Act of 1970) – Health and safety work act (HASAWA 1974, UK) – OSHAS 18000 – ISO 14000 – American National Standards Institute (ANSI).		CO5
		TOTAL : 45 PERIODS

TEXT BOOKS

1. The Factories Act 1948, Madras Book Agency, Chennai, 2000
2. The Environment Act (Protection) 1986, Commercial Law Publishers (India) Pvt.Ltd., New Delhi.
3. Water (Prevention and control of pollution) act 1974, Commercial Law publishers (India) Pvt.Ltd., New Delhi.

REFERENCE BOOKS

1. Air (Prevention and control of pollution) act 1981, Commercial Law Publishers (India) Pvt.Ltd., New Delhi.
2. The Indian boilers act 1923, Commercial Law Publishers (India) Pvt.Ltd., Allahabad.
3. The manufacture, storage and import of hazardous chemical rules 1989, Madras Book Agency, Chennai.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	To list out important legislations related to health, Safety and Environment.
CO2	To list out requirements mentioned in factories act for the prevention of accidents.
CO3	To understand the health and welfare provisions given in factories act.
CO4	To understand the statutory requirements for an Industry on registration, license and its renewal.
CO5	To prepare onsite and offsite emergency plan.

OTHER COURSES OFFERED BY CSE

CS1406	FUNDAMENTALS OF DATA STRUCTURES IN C (LAB INTEGRATED)	L	T	P	C
	Common to EEE and EIE	3	0	2	4

OBJECTIVES

- To learn the basics of C Programming
- To learn the advanced features of C Programming
- To explore the applications of linear data structures
- To learn about how to represent and implement non-linear data structure
- To learn about the basics of sorting, searching and Hash Table.

UNIT I	C PROGRAMMING BASICS	9 + 6
	Structure of C program – Data Types — Storage classes – Variables— Constants — Keywords — Operators – Input/Output statements, Assignment statements — Decision making statements – Switch statement – Looping statements — Introduction to Arrays: Declaration, Initialization — One dimensional array — Two dimensional arrays. **Lab Component** • Implementation of basic c programs a. Find greatest of three numbers b. Create a simple Calculator • Implementation of array a. Computing Mean, Median and Mode b. Matrix Addition	CO1
UNIT II	FUNCTIONS, POINTERS AND STRUCTURES	9 + 6
	Introduction to functions: Function prototype, function definition, function call, Recursion — Pointers — Pointer operators — Pointer arithmetic — Array of pointers — Parameter passing: Pass by value, Pass by reference. Structure – Nested structures — Pointer and Structures — Array of structures — Self-referential structures — Dynamic memory allocation. **Lab Component** • Implementation of user defined data types a. Computation of Sine series. b. Swapping of two numbers and changing the value of a variable using pass by reference	CO2
UNIT III	LINEAR DATA STRUCTURES	9 + 6
	List – Singly Linked lists – Application of List - Polynomial addition - Linked list implementation of Stacks – Applications of Stack - Evaluating arithmetic expressions - Linked list implementation of Queues – Application of Queue. **Lab Component** • Implementation of linear data structure a. List implementation of List, Stack, Queue. b. Implement polynomial addition using list. c. Evaluate arithmetic expression.	CO3
UNIT IV	NON-LINEAR DATA STRUCTURES	9 + 6

Trees – Binary Trees – Binary tree representation and traversals –Binary Search Trees – Applications of trees. Graph and its representations – Graph Traversals – Topological Sort – Applications of graphs. **Lab Component** • Implementation of tree a. Construct binary search tree. b. Traverse the binary tree recursively in pre-order, post-order and in-order. • Graph traversal a. Depth first search b. Breadth first search.	**CO4**

UNIT V	**SEARCHING, SORTING AND HASH TABLE**	**9 + 6**
Linear Search – Binary Search. Bubble Sort – Insertion sort – Merge sort – Quick sort – Hashing functions - Hash tables – Introduction to Overflow handling. **Lab Component** • Sorting & Searching a. Insertion sort b. Merge sort c. Linear Search d. Binary Search		**CO5**

THEORY : 45 PERIODS	**PRACTICAL : 30 PERIODS**	**TOTAL : 75 PERIODS**

TEXT BOOKS

1. Reema Thareja, ―Data Structures Using C, Second Edition, Oxford University Press, 2014.

REFERENCE BOOKS

1. Mark Allen Weiss, "Data Structures and Algorithm Analysis in C", Fourth Edition, Pearson Education, 2013.
2. Ellis Horowitz, Sartaj Sahni, Susan Anderson-Freed, ―Fundamentals of Data Structures in C, Second Edition, University Press, 2008.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Implement basics of C
CO2	Implement advanced features of C
CO3	Apply the different linear data structures to problem solutions.
CO4	Implement Tree and Graph data structure.
CO5	Analyse the various sorting, searching algorithms and hash table.

MAPPING OF COs WITH POs AND PSOs															
COs	**PROGRAM OUTCOMES (POs)**											**PROGRAM SPECIFIC OUTCOMES (PSOs)**

CS1516	VISUAL PROGRAMMING	L	T	P	C
	Common to EEE and EIE	3	0	0	3

OBJECTIVES

- To study about the concepts of windows programming models, MFC applications, drawing with the GDI, getting inputs from Mouse and the Keyboard.
- To study the concepts of Menu basics, menu magic and classic controls of the windows programming using VC++.
- To study the concept of Document/View Architecture with single & multiple document interface, toolbars, status bars and File I/O Serialization.
- To study about the integrated development programming event driven programming, variability's, constants, procedures and basic ActiveX controls in visual basic.
- To understand the database and the database management system, visual data manager, data bound controls and ADO controls in VB

UNIT I	FUNDAMENTALS OF WINDOWS AND MFC	9
Messages : Windows programming - SDK style - Hungarian notation and windows data types - SDK programming in perspective. The benefits of C++ and MFC - MFC design philosophy – Document / View architecture - MFC class hierarchy - AFX functions. Application object - Frame window object - Message map. Drawing the lines – Curves – Ellipse – Polygons and other shapes. GDI pens – Brushes - GDI fonts - Deleting GDI objects and deselecting GDI objects. Getting input from the mouse: Client & Non-client - Area mouse messages - Mouse wheel - Cursor. Getting input from the keyboard: Input focus - Keystroke messages - Virtual key codes - Character & dead key messages.		CO1
UNIT II	**RESOURCES AND CONTROLS**	9
Creating a menu – Loading and displaying a menu – Responding to menu commands – Command ranges - Updating the items in menu, update ranges – Keyboard accelerators. Creating menus programmatically - Modifying menus programmatically - The system menu - Owner draw menus – Cascading menus - Context menus. The C button class – C list box class – C static class - The font view application – C edit class – C combo box class – C scrollbar class. Model dialog boxes – Modeless dialog boxes.		CO2
UNIT III	**DOCUMENT / VIEW ARCHITECTURE**	9
The in existence function revisited – Document object – View object – Frame window object Dynamic object creation. SDI document template - Command routing. Synchronizing multiple views of a document – Mid squares application – Supporting multiple document types – Alternatives to MDI. Splitter Windows: Dynamic splitter window – Static splitter windows. Creating & initializing a toolbar - Controlling the toolbar's visibility – Creating & initializing a status bar - Creating custom status bar panes – Status bar support in app wizard. Opening, closing and creating the files - Reading & Writing – C file derivatives – Serialization basics - Writing serializability classes.		CO3
UNIT IV	**FUNDAMENTALS OF VISUAL BASIC**	9
Menu bar – Tool bar – Project explorer – Toolbox – Properties window – Form designer – Form layout – Intermediate window. Designing the user interface: Aligning the controls – Running the application – Visual development and event driven programming. Variabilitys: Declaration – Types – Converting variability types – User defined data types - Lifetime of a variability. Constants - Arrays – Types of arrays. Procedures: Subroutines –		CO4

Functions – Calling procedures. Text box controls – List box & Combo box controls – Scroll bar and slider controls – File controls.		
UNIT V	**DATABASE PROGRAMMING WITH VB**	9
Record sets – Data control – Data control properties, methods. Visual data manager: Specifying indices with the visual data manager – Entering data with the visual data manager. Data bound list control – Data bound combo box – Data bound grid control. Mapping databases: Database object – Tability def object, Query def object. Programming the active database objects – ADO object model – Establishing a connection - Executing SQL statements–Cursortypes and locking mechanism–Manipulating the record set object – Simple record editing and updating.		CO5

TOTAL : 45 PERIODS

TEXT BOOKS

1. Jeff Prosise, 'Programming Windows With MFC', Second Edition, WP Publishers & Distributors (P) Ltd, Reprinted,2002.
2. Evangelos Petroutsos, 'Mastering Visual Basic 6.0', BPB Publications,2002.

REFERENCE BOOKS

1. Herbert Schildt, 'MFC Programming From the Ground Up', Second Edition, McGraw Hill, reprinted,2002.
2. John Paul Muller, 'Visual C++ 6 From the Ground Up Second Edition', McGraw Hill, Reprinted,2002.
3. Curtis Smith & Micheal Amundsen, 'Teach Yourself Database Programming with Visual Basic 6 in 21 days', Tech media Pub,1999.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Understand study about the concepts of windows programming models.
CO2	Understand the concepts of Menu basics, menu magic and classic controls.
CO3	Understand the concept of Document/View Architecture with single & multiple document interface.
CO4	Understand the integrated development programming event driven document interface.
CO5	Understand the database and the database management system programming.

CO4	2	1	1	1	1	1	1	1	1	1	1	2	3	2	2
CO5	2	2	1	1	1	1	1	1	1	1	1	2	3	2	2

OPEN ELECTIVE COURSES OFFERED BY CSE, IT, AI-DS & AI-ML

OCS101	INTRODUCTION TO C PROGRAMMING	L	T	P	C
		3	0	0	3

OBJECTIVES

- To understand the basic concepts in C Programming Language.
- To understand Input and Output Statements.
- To enhance analyzing and problem solving skills and use the same for writing programs in C.
- To familiarize the basic syntax in arrays and pointers
- To provide exposure to problem-solving through programming

UNIT I	INTRODUCTORY CONCEPTS & C FUNDAMENTALS	9
Introduction to Computers - Computer Characteristics - Modes of Operation - Types of Programming Languages - Introduction to C - Some Simple C Programs - Desirable Program Characteristics - The C Character Set - Identifiers and Keywords - Data Types - Constants - Variables and Arrays - Declarations - Expressions - Statements - Symbolic Constants.		CO1
UNIT II	**OPERATORS, EXPRESSIONS, DATA INPUT & OUTPUT AND CONTROL STATEMENTS**	9
Arithmetic Operators - Unary Operators - Relational and Logical Operators - Assignment Operators - The Conditional Operator - Library Functions - getchar, putchar, scanf, printf, gets and puts Functions - Preliminaries - Branching: The if else Statement - Looping: The while Statement - do while Statement - for Statement - Nested Control Structures - The switch Statement - The break Statement - The continue Statement - The Comma Operator - The goto Statement		CO2
UNIT III	**FUNCTIONS & PROGRAM STRUCTURE**	9
Defining a Function - Accessing a Function - Function Prototypes - Passing Arguments to a Function – Recursion - Storage Classes - Automatic Variables - External (Global) Variables - Static Variables - Multifile Programs - More About Library Functions		CO3
UNIT IV	**ARRAYS & POINTERS**	9
Defining an Array - Processing an Array - Passing Arrays to Functions - Multidimensional Arrays - Arrays and Strings - Fundamentals - Pointer Declarations - Passing Pointers to Functions - Pointers and One-Dimensional Arrays - Dynamic Memory Allocation - Operations on Pointers - Pointers and Multidimensional Arrays - Arrays of Pointers - Passing Functions to Other Functions		CO4
UNIT V	**STRUCTURES, UNIONS & DATA FILES**	9
Defining a Structure - Processing a Structure - User-Defined Data Types (typedef) - Structures and Pointers - Passing Structures to Functions - Self-Referential Structures – Unions - Opening and Closing a Data File - Creating a Data File - Processing a Data File - Unformatted Data Files		CO5
		TOTAL : 45 PERIODS

TEXT BOOKS
1. Byron Gottfried - Schaum's Outline of Programming with C, 2nd Edition, McGraw-Hill, 1996.

REFERENCE BOOKS	
1. The C Programming Language by Brian Kernighan and Dennis Ritchie 2nd Edition. **2.** Let Us C Yashavant kanetkar, BPB	
COURSE OUTCOMES **Upon completion of the course, students will be able to**	
CO1	Identify situations where computational methods and computers would be useful.
CO2	Demonstrate the use of operators, input and output statements and control statements
CO3	Identify solution to a problem and apply control structures and user defined functions for solving the problem
CO4	Demonstrate the use of numeric arrays and pointers
CO5	Demonstrate the ability to design creative solutions to real life problems faced by the industry.

MAPPING OF COs WITH POs AND PSOs

OCS102	PROGRAMMING AND DATA STRUCTURES	L	T	P	C
		3	0	0	3

OBJECTIVES

- To learn the basics of C Programming
- To learn the advanced features of C Programming
- To explore the applications of linear data structures
- To learn about how to represent and implement non-linear data structure
- To learn about the basics of sorting, searching and Hash Table

UNIT I	**C PROGRAMMING BASICS**	9
Structure of C program – Data Types — Storage classes – Variables— Constants — Keywords — Operators – Input/Output statements, Assignment statements — Decision making statements – Switch statement – Looping statements — Introduction to Arrays: Declaration, Initialization — One dimensional array — Two dimensional arrays.		CO1
UNIT II	**FUNCTIONS, POINTERS AND STRUCTURES**	9
Introduction to functions: Function prototype, function definition, function call, Recursion — Pointers — Pointer operators — Pointer arithmetic — Array of pointers — Parameter passing: Pass by value, Pass by reference. Structure – Nested structures — Pointer and Structures — Array of structures — Self-referential structures — Dynamic memory allocation.		CO2
UNIT III	**LINEAR DATA STRUCTURES**	9
List – Singly Linked lists – Application of List - Polynomial addition - Linked list implementation of Stacks – Applications of Stack - Evaluating arithmetic expressions - Linked list implementation of Queues – Application of Queue..		CO3
UNIT IV	**NON-LINEAR DATA STRUCTURES**	9
Trees – Binary Trees – Binary tree representation and traversals –Binary Search Trees – Applications of trees. Graph and its representations – Graph Traversals – Topological Sort – Applications of graphs.		CO4
UNIT V	**SEARCHING, SORTING AND HASH TABLE**	9
Linear Search – Binary Search. Bubble Sort – Insertion sort – Merge sort – Quick sort – Hashing functions - Hash tables – Introduction to Overflow handling.		CO5
		TOTAL : 45 PERIODS

TEXT BOOKS

Reema Thareja, —Data Structures Using C, Second Edition, Oxford University Press, 2014.

REFERENCE BOOKS

1. Mark Allen Weiss, "Data Structures and Algorithm Analysis in C", Fourth Edition, Pearson Education, 2013.
2. Ellis Horowitz, Sartaj Sahni, Susan Anderson-Freed, —Fundamentals of Data Structures in C, Second Edition, University Press, 2008.

COURSE OUTCOMES **Upon completion of the course, students will be able to**	
CO1	Implement basics of C
CO2	Implement advanced features of C
CO3	Apply the different linear data structures to problem solutions.
CO4	Implement Tree and Graph data structure.
CO5	Analyse the various sorting, searching algorithms and hash table.

MAPPING OF COs WITH POs AND PSOs

OCS103	INTRODUCTION TO CLOUD COMPUTING	L	T	P	C
		3	0	0	3

OBJECTIVES

- To have the fundamental ideas behind Cloud Computing, the evolution of the paradigm, its applicability, benefits, as well as current and future challenges
- To have knowledge on the various virtualization techniques that serve in computation and storage services on the cloud
- To understand the technologies, architecture and applications of cloud computing
- To understand the key security and compliance challenges of cloud computing

UNIT	TITLE / CONTENT	
UNIT I	**INTRODUCTION**	9
Introduction to Cloud Computing – Roots of Cloud Computing- Parallel and Distributed Computing, Mainframe and Grid Computing, Desired Features and benefits of Cloud Computing – Challenges and Risks of Cloud Computing		CO1
UNIT II	**VIRTUALIZATION**	9
Introduction to Virtualization Technology – Load Balancing and Virtualization – Understanding Hypervisor and its types, Types of Virtualizations – Hardware, OS, Memory, Application Virtualization, Levels of Virtualization		CO2
UNIT III	**CLOUD ARCHITECTURE, SERVICES AND STORAGE**	9
NIST Cloud Computing Reference Architecture, Layered Cloud Architecture, Architectural Design Challenges – Deployment models of cloud, Services of cloud – Cloud Storage.		CO3
UNIT IV	**RESOURCE MANAGEMENT AND SECURITY IN CLOUD**	9
Inter Cloud Resource Management – Resource Provisioning Methods – Security Overview – Cloud Security Architecture-Cloud Security Challenges – Data Security –Application Security – Virtual Machine Security.		CO4
UNIT V	**CASE STUDIES**	9
Google App Engine (GAE) – GAE Architecture – Functional Modules of GAE – Amazon Web Services (AWS) – GAE Applications – Cloud Software Environments – Bio-data Platform & Bio Cloud		CO5
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Buyya R., Broberg J., Goscinski A., “Cloud Computing: Principles and Paradigm”, First Edition, John Wiley & Sons,2011.
2. Kai Hwang, Geoffrey C. Fox, Jack G. Dongarra, "Distributed and Cloud Computing, From Parallel Processing to the Internet of Things", Morgan Kaufmann Publishers,2012.
3. Rittinghouse, John W., and James F. Ransome, “Cloud Computing: Implementation, Management, And Security”, CRC Press,2017.

REFERENCE BOOKS

1. Rajkumar Buyya, Christian Vecchiola, S. ThamaraiSelvi, “Mastering Cloud Computing”, Tata Mcgraw Hill,2013.
2. Toby Velte, Anthony Velte, Robert Elsenpeter, "Cloud Computing - A Practical Approach”, Tata Mcgraw Hill,2009.
3. George Reese, "Cloud Application Architectures: Building Applications and Infrastructure in the Cloud: Transactional Systems for EC2 and Beyond (Theory in Practice)”, O'Reilly,2009.

COURSE OUTCOMES **Upon completion of the course, students will be able to**	
CO1	Articulate the main concepts, key technologies, strengths, and limitations of cloud computing and the possible applications for state-of-the-art cloud computing
CO2	Understanding of fundamentals and technological aspects of virtualization along with various terminologies used in Cloud Computing
CO3	Identify the architecture and infrastructure of cloud computing, including SaaS, PaaS, IaaS, public cloud, private cloud, hybrid cloud, etc.
CO4	Enlighten the core issues of cloud computing such as security, privacy, and interoperability.
CO5	Be familiarization with areas of cloud technologies and working experience in several of them

MAPPING OF COs WITH POs AND PSOs

OCS104	FUNDAMENTALS OF DATABASE DESIGN	L	T	P	C
		3	0	0	3

OBJECTIVES

- To learn the fundamentals of data models and to represent a database system using ER diagrams.
- To study the database design and SQL
- To make the students to understand the fundamentals of Transaction Processing and concurrency
- To have an basic knowledge about the Storage implementation and query processing
- To understand database security concepts and database programming

UNIT I	INTRODUCTION	9
Purpose of Database System – Views of data – Data Models – Database System Architecture – Introduction to relational databases – Relational Model – Keys – Relational Algebra – SQL fundamentals – DDL-DML-DCL-TCL- Advanced SQL features - Embedded SQL-Static Vs Dynamic SQL		CO1
UNIT II	**DATABASE DESIGN**	9
Entity-Relationship model – E-R Diagrams – Enhanced-ER Model – ER-to-Relational Mapping – Functional Dependencies – Non-loss Decomposition – First, Second, Third Normal Forms, Dependency Preservation – Boyce/Codd Normal Form – Multi-valued Dependencies and Fourth Normal Form – Join Dependencies and Fifth Normal Form		CO2
UNIT III	**TRANSACTION CONCEPTS AND CONCURRENCY CONTROL**	9
Introduction-Properties of Transaction- Serializability- Concurrency Control – Locking Mechanisms- Two Phase Locking -Two Phase Commit Protocol-Dead lock- SQL Facilities for Concurrency and Recovery		CO3
UNIT IV	**IMPLEMENTATION TECHNIQUES**	9
RAID – File Organization – Organization of Records in Files – Indexing and Hashing –Ordered Indices – B+ tree Index Files – B tree Index Files – Static Hashing – Dynamic Hashing – Query Processing Overview –Query optimization using Heuristics and Cost Estimation		CO4
UNIT V	**ADVANCED TOPICS AND DATABASE PROGRAMMING**	9
Database security issues – Discretionary access control – role based access – Encryption and public key infrastructures – challenges. Information Retrieval: IR Concepts, Retrieval Models, Queries in IR systems. Implementing functions, views, and triggers in MySQL / Oracle. ODBC/JDBC connectivity with front end tools		CO5
	TOTAL : 45 PERIODS	

TEXT BOOKS

1. RamezElmasri, Shamkant B. Navathe, “Fundamentals of Database Systems”, Sixth Edition , Pearson.
2. Abraham Silberschatz, Henry F. Korth, S. Sudharshan, “Database System Concepts”, Sixth Edition, Tata McGraw Hill.

REFERENCE BOOKS

1. C.J.Date, A.Kannan, S.Swamynathan, “An Introduction to Database Systems”, Eighth Edition, Pearson Education.
2. Raghu Ramakrishnan, —Database Management Systems‖, Fourth Edition, McGraw-Hill College Publications.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	To understand relational data model, evolve conceptual model of a given problem and SQL
CO2	To understand Relational model and normalization to perform database design effectively
CO3	Apply and relate the concept of transaction, concurrency control and recovery in database
CO4	To understand the implementation technique and query processing
CO5	To understand the concepts of database security and database programming

MAPPING OF COs WITH POs AND PSOs

COs	**PROGRAM OUTCOMES (POs)**												**PROGRAM SPECIFIC OUTCOMES (PSOs)**

OCS105	DATA ANALYTICS WITH R PROGRAMMING	L	T	P	C
		3	0	0	3

OBJECTIVES

- Students will learn R. Programming language, data analytics, data visualization and statistical model for data analytics
- By completion of this course, students will be able to become data analyst

UNIT I	**INTRODUCTION TO DATA ANALYSIS**	9
Overview of Data Analytics, Need of Data Analytics, Nature of Data, Classification of Data: Structured, Semi-Structured, Unstructured, Characteristics of Data, Applications of Data Analytics		CO1
UNIT II	**R PROGRAMMING BASICS**	9
Overview of R programming, Environment setup with R Studio, R Commands, Variables and Data Types, Control Structures, Array, Matrix, Vectors, Factors, Functions, R packages		CO2
UNIT III	**DATA VISUALIZATION USING R**	9
Reading and getting data into R (External Data): Using CSV files, XML files, Web Data, JSON files, Databases, Excel files. Working with R Charts and Graphs: Histograms, Boxplots, Bar Charts, Line Graphs, Scatterplots, Pie Charts		CO3
UNIT IV	**STATISTICS WITH R**	9
Random Forest, Decision Tree, Normal and Binomial distributions, Time Series Analysis, Linear and Multiple Regression, Logistic Regression		CO4
UNIT V	**PRESCRIPTIVE ANALYTICS**	9
Creating data for analytics through designed experiments, Creating data for analytics through active learning, Creating data for analytics through reinforcement learning		CO5
	TOTAL : 45 PERIODS	

TEXT BOOKS

1. An Introduction to R, Notes on R: A Programming Environment for Data Analysis and Graphics. W. N. Venables, D.M. Smith and the R Development Core Team.

   URL: https://cran.r-project.org/doc/manuals/r-release/R-intro.pdf

REFERENCE BOOKS

1. Jared P Lander, R for everyone: advanced analytics and graphics, Pearson Education, 2013 Dunlop, Dorothy D., and Ajit C. Tamhane. Statistics and data analysis: from elementary to intermediate. Prentice Hall, 2000.
2. G Casella and R.L. Berger, Statistical Inference, Thomson Learning 2002.
3. P. Dalgaard. Introductory Statistics with R, 2nd Edition. (Springer 2008)

5. Hastie, Trevor, et al.The elements of statistical learning.Vol. 2. No. 1. New York: springer, 2009.
6. Montgomery, Douglas C., and George C. Runger. Applied Statistics and Probability for Engineers. John Wiley &Sons, 2010
7. Joseph F Hair, William C Black etal , "Multivariate Data Analysis" , Pearson Education, 7th edition, 2013.
8. Mark Gardener, "Beginning R - The Statistical Programming Language", John Wiley & Sons, Inc., 2012.
9. W. N. Venables, D. M. Smith and the R Core Team, "An Introduction to R", 2013

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Understand the basics of data analytics
CO2	Understand and apply the R-Programming concepts
CO3	Apply R-Programming for data visualization
CO4	Implement various classification techniques using R
CO5	Apply R programming to perform perspective analytics on data

MAPPING OF COs WITH POs AND PSOs

OCS106	DATA COMMUNICATIONS AND NETWORKING	L	T	P	C
		3	0	0	3

OBJECTIVES

- To understand the protocol layering and physical level communication and to analyze the performance of a network.
- To analyze the contents of Data Link layer packet, based on the layer concept.
- To learn the functions of network layer and the various routing protocols.
- To familiarize the functions and protocols of the Transport layer.
- To know about different application layer protocols

UNIT I	**INTRODUCTION AND PHYSICAL LAYER**	9
Networks – Network Types – Protocol Layering – TCP/IP Protocol suite – OSI Model – Physical Layer: Performance – Transmission media – Switching – Circuit-switched Networks – Packet Switching.		CO1
UNIT II	**DATA-LINK LAYER & MEDIA ACCESS**	9
Introduction – Link-Layer Addressing – DLC Services – Data-Link Layer Protocols – HDLC – PPP – Media Access Control – Wired LANs: Ethernet – Wireless LANs – Introduction – IEEE 802.11, Bluetooth – Connecting Devices.		CO2
UNIT III	**NETWORK LAYER**	9
Network Layer Services – IPV4 Addresses – Forwarding of IP Packets – Network Layer Protocols: IP, ICMP v4 – Unicast Routing Algorithms – Protocols – Multicasting Basics – IPV6 Addressing – IPV6 Protocol.		CO3
UNIT IV	**TRANSPORT LAYER**	9
Introduction – Transport Layer Protocols – Services – Port Numbers – User Datagram Protocol – Transmission Control Protocol-Congestion Control Mechanisms-Streaming Control Transmission Protocol.		CO4
UNIT V	**APPLICATION LAYER**	9
WWW and HTTP – FTP – Email –Telnet –SSH – DNS – SNMP- Internet Multimedia.		CO5

TOTAL : 45 PERIODS

TEXT BOOKS

1. Behrouz A. Forouzan, Data Communications and Networking, Fifth Edition TMH, 2013
2. William Stallings, Data and Computer Communications, Tenth Edition, Pearson Education, 2014.

REFERENCE BOOKS

1. Larry L. Peterson, Bruce S. Davie, Computer Networks: A Systems Approach, Fifth Edition, Morgan Kaufmann Publishers Inc., 2012
2. Nader F. Mir, Computer and Communication Networks, Second Edition, Prentice Hall, 2014.
3. Ying-Dar Lin, Ren-Hung Hwang and Fred Baker, Computer Networks: An Open Source Approach, McGraw Hill Publisher, 2011
4. James F. Kurose, Keith W. Ross, Computer Networking, A Top-Down Approach Featuring the Internet, Sixth Edition, Pearson Education, 2013.

COURSE OUTCOMES **Upon completion of the course, students will be able to**	
CO1	Understand the basic layers, functions in computer networks and to evaluate the performance of a network.
CO2	Understand the basics of how data flows from one node to another.
CO3	Analyse and design routing algorithms.
CO4	Understand design goals of Connectionless and Connection oriented protocols.
CO5	Understand the working of various application layer protocols.

MAPPING OF COs WITH POs AND PSOs

AUDIT COURSES

AD1001	CONSTITUTION OF INDIA	L	T	P	C
		2	0	0	0

OBJECTIVES

- Teach history and philosophy of Indian Constitution.
- Describe the premises informing the twin themes of liberty and freedom from a civil rights perspective.
- Summarize powers and functions of Indian government.
- Explain emergency rule.
- Explain structure and functions of local administration.

UNIT I	**INTRODUCTION**	9
History of Making of the Indian Constitution-Drafting Committee- (Composition & Working) - Philosophy of the Indian Constitution-Preamble-Salient Features		CO1
UNIT II	**CONTOURS OF CONSTITUTIONAL RIGHTS & DUTIES**	9
Fundamental Rights-Right to Equality-Right to Freedom-Right against Exploitation Right to Freedom of Religion-Cultural and Educational Rights-Right to Constitutional Remedies Directive Principles of State Policy-Fundamental Duties		CO2
UNIT III	**ORGANS OF GOVERNANCE**	9
Parliament-Composition-Qualifications and Disqualifications-Powers and Functions-Executive President-Governor-Council of Ministers-Judiciary, Appointment and Transfer of Judges, Qualifications Powers and Functions		CO3
UNIT IV	**EMERGENCY PROVISIONS**	9
Emergency Provisions - National Emergency, President Rule, Financial Emergency		CO4
UNIT V	**LOCAL ADMINISTRATION**	9
District's Administration head- Role and Importance-Municipalities- Introduction- Mayor and role of Elected Representative-CEO of Municipal Corporation-Pachayati raj- Introduction- PRI-Zila Pachayat-Elected officials and their roles- CEO Zila Pachayat- Position and role-Block level Organizational Hierarchy (Different departments)-Village level- Role of Elected and Appointed officials-Importance of grass root democracy		CO5
		TOTAL : 45 PERIODS

TEXT BOOKS	
1. Basu D D, Introduction to the Constitution of India, Lexis Nexis, 2015. 2. Busi S N, Ambedkar B R framing of Indian Constitution, 1st Edition, 2015. 3. Jain M P, Indian Constitution Law, 7th Edn., Lexis Nexis, 2014. 4. The Constitution of India (Bare Act), Government	
COURSE OUTCOMES **Upon completion of the course, students will be able to**	
CO1	Able to understand history and philosophy of Indian Constitution.
CO2	Able to understand the premises informing the twin themes of liberty and freedom from a civil rights perspective.
CO3	Able to understand powers and functions of Indian government.
CO4	Able to understand emergency rule.
CO5	Able to understand structure and functions of local administration.

AD1002	VALUE EDUCATION	L	T	P	C
		2	0	0	0

OBJECTIVES

- Develop knowledge of self-development
- Explain the importance of Human values
- Develop the overall personality through value education
- Overcome the self destructive habits with value education
- Interpret social empowerment with value education

UNIT I	INTRODUCTION TO VALUE EDUCATION	9
Values and self-development –Social values and individual attitudes, Work ethics, Indian vision of humanism, Moral and non- moral valuation, Standards and principles, Value judgments		CO1
UNIT II	**IMPORTANCE OF VALUES**	9
Importance of cultivation of values, Sense of duty, Devotion, Self-reliance, Confidence, Concentration, Truthfulness, Cleanliness. Honesty, Humanity, Power of faith, National Unity, Patriotism, Love for nature, Discipline		CO2
UNIT III	**INFLUENCE OF VALUE EDUCATION**	9
Personality and Behaviour development - Soul and Scientific attitude. Positive Thinking, Integrityand discipline, Punctuality, Love and Kindness, Avoid fault Thinking, Free from anger, Dignity of labour, Universal brotherhood and religious tolerance, True friendship Happiness Vs suffering,love for truth.		CO3
UNIT IV	**REINCARNATION THROUGH VALUE EDUCATION**	9
Aware of self-destructive habits, Association and Cooperation, Doing best for saving nature Character and Competence –Holy books vs Blind faith, Self-management and Good health, Science of reincarnation		CO4
UNIT V	**VALUE EDUCATION IN SOCIAL EMPOWERMENT**	9
Equality, Non violence, Humility, Role of Women, All religions and same message, Mind your Mind, Self-control, Honesty, Studying effectively		CO5

TOTAL : 45 PERIODS

REFERENCE BOOKS

1. Chakroborty , S.K. "Values and Ethics for organizations Theory and practice", Oxford University Press ,New Delhi

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Gain knowledge of self-development

CO2	Learn the importance of Human values
CO3	Develop the overall personality through value education
CO4	Overcome the self destructive habits with value education
CO5	Interpret social empowerment with value education

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)

AD1003	PEDAGOGY STUDIES	L	T	P	C
		2	0	0	0

OBJECTIVES

- Understand the methodology of pedagogy.
- Compare pedagogical practices used by teachers in formal and informal classrooms in developing countries.
- Infer how can teacher education (curriculum and practicum) and the school curriculum and guidance materials best support effective pedagogy.
- Illustrate the factors necessary for professional development.
- Identify the Research gaps in pedagogy.

UNIT I	**INTRODUCTION AND METHODOLOGY**	9
Aims and rationale, Policy background, Conceptual framework and terminology - Theories of learning, Curriculum, Teacher education - Conceptual framework, Research questions – Overview of methodology and Searching.		CO1
UNIT II	**THEMATIC OVERVIEW**	9
Pedagogical practices are being used by teachers in formal and informal classrooms in developing countries - Curriculum, Teacher education.		CO2
UNIT III	**EVIDENCE ON THE EFFECTIVENESS OF PEDAGOGICAL PRACTICES**	9
Methodology for the in depth stage: quality assessment of included studies - How can teacher education (curriculum and practicum) and the school curriculum and guidance materials best support effective pedagogy? - Theory of change - Strength and nature of the body of evidence for effective pedagogical practices - Pedagogic theory and pedagogical approaches - Teachers' attitudes and beliefs and Pedagogic strategies.		CO3
UNIT IV	**PROFESSIONAL DEVELOPMENT**	9
Professional development: alignment with classroom practices and follow up support – Peer support - Support from the head teacher and the community - Curriculum and assessment – Barriers to learning: limited resources and large class sizes		CO4
UNIT V	**RESEARCH GAPS AND FUTURE DIRECTIONS**	9
Research design – Contexts – Pedagogy - Teacher education - Curriculum and assessment - Dissemination and research impact.		CO5
		TOTAL : 45 PERIODS

REFERENCE BOOKS

1. Ackers J, Hardman F (2001) Classroom interaction in Kenyan primary schools, Compare, 31 (2): 245-261.
2. Agrawal M (2004) Curricular reform in schools: The importance of evaluation, Journal of Curriculum Studies, 36 (3): 361-379.
3. Akyeampong K (2003) Teacher training in Ghana - does it count? Multi-site teacher education research project (MUSTER) country report 1. London: DFID.

4. Akyeampong K, Lussier K, Pryor J, Westbrook J (2013) Improving teaching and learning of basic maths and reading in Africa: Does teacher preparation count? International Journal Educational Development, 33 (3): 272–282.
5. Alexander RJ (2001) Culture and pedagogy: International comparisons in primary education. Oxford and Boston: Blackwell.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Understand the methodology of pedagogy
CO2	Understand Pedagogical practices used by teachers in formal and informal classrooms in developing countries.
CO3	Find how can teacher education (curriculum and practicum) and the school curriculum and guidance materials best support effective pedagogy.
CO4	Know the factors necessary for professional development.
CO5	Identify the Research gaps in pedagogy.

MAPPING OF COs WITH POs AND PSOs

AD1004	STRESS MANAGEMENT BY YOGA	L	T	P	C
		2	0	0	0

OBJECTIVES

- Develop healthy mind in a healthy body thus improving social health also improve efficiency
- Invent Do’s and Don’t’s in life through Yam
- Categorize Do’s and Don’t’s in life through Niyam
- Develop a healthy mind and body through Yog Asans
- Invent breathing techniques through Pranayam

UNIT I	**INTRODUCTION TO YOGA**	9
Definitions of Eight parts of yog.(Ashtanga)		CO1
UNIT II	**YAM**	9
Do`s and Don’t’s in life.Shaucha, santosh, tapa, swadhyay, ishwarpranidhan		CO2
UNIT III	**NIYAM**	9
Do`s and Don’t’s in life. Ahinsa, satya, astheya, bramhacharya and aparigraha		CO3
UNIT IV	**ASAN**	9
Various yog poses and their benefits for mind & body		CO4
UNIT V	**PRANAYAM**	9
Regularization of breathing techniques and its effects-Types of pranayam		CO5
		TOTAL : 45 PERIODS

REFERENCE BOOKS

1. “Rajayoga or conquering the Internal Nature” by Swami Vivekananda, Advaita Ashrama (Publication Department), Kolkata
2. ‘Yogic Asanas for Group Tarining-Part-I” : Janardan Swami Yogabhyasi Mandal, Nagpur

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Develop healthy mind in a healthy body thus improving social health also improve efficiency
CO2	Learn Do’s and Don’t’s in life through Yam
CO3	Learn Do’s and Don’t’s in life through Niyam

CO4	Develop a healthy mind and body through Yog Asans
CO5	Learn breathing techniques through Pranayam

AD1005	PERSONALITY DEVELOPMENT THROUGH LIFE ENLIGHTENMENT SKILLS	L	T	P	C
		2	0	0	0

OBJECTIVES

- Develop basic personality skills holistically
- Develop deep personality skills holistically to achieve happy goals
- Rewrite the responsibilities
- Reframe a person with stable mind

UNIT I	**NEETISATAKAM-HOLISTIC DEVELOPMENT OF PERSONALITY - I**	9
Verses- 19,20,21,22 (wisdom) - Verses- 29,31,32 (pride & heroism) – Verses- 26,28,63,65 (virtue)		CO1
UNIT II	**NEETISATAKAM-HOLISTIC DEVELOPMENT OF PERSONALITY - II**	9
Verses- 52,53,59 (dont's) - Verses- 71,73,75,78 (do's)		CO2
UNIT III	**ORGANS OF GOVERNANCE**	9
Shrimad Bhagwad Geeta: Chapter 2-Verses 41, 47,48 - Chapter 3-Verses 13, 21, 27, 35 Chapter6-Verses 5,13,17,23, 35 - Chapter 18-Verses 45, 46, 48		CO3
UNIT IV	**EMERGENCY PROVISIONS**	9
Statements of basic knowledge - Shrimad Bhagwad Geeta: Chapter2-Verses 56, 62, 68 Chapter12 -Verses 13, 14, 15, 16,17, 18		CO4
UNIT V	**LOCAL ADMINISTRATION**	9
Chapter 2-Verses 17, Chapter 3-Verses 36,37,42 - Chapter 4-Verses 18, 38,39 Chapter 18 – Verses 37,38,63		CO5
		TOTAL : 45 PERIODS

2. Swami Swarupananda , Srimad Bhagavad Gita, Advaita Ashram,Publication Department, Kolkata,2016.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	To develop basic personality skills holistically
CO2	To develop deep personality skills holistically to achieve happy goals
CO3	To rewrite the responsibilities

CO4	To reframe a person with stable mind, pleasing personality and determination
CO5	To awaken wisdom in students

AD1006	UNNAT BHARAT ABHIYAN	L	T	P	C
		2	0	0	0

OBJECTIVES

- To engage the students in understanding rural realities
- To identify and select existing innovative technologies, enable customization of technologies, or devise implementation method for innovative solutions, as per the local needs.
- To leverage the knowledge base of the institutions to devise processes for effective implementation of various government programmes
- To understand causes for rural distress and poverty and explore solutions for the same
- To apply classroom knowledge of courses to field realities and thereby improve quality of learning

UNIT I	**QUALITY OF RURAL LIFE IN VILLAGES AND UNNAT BHARAT ABHIYAN**	9
Introduction to Unnat Bharat Abhiyan - concept, scope and objectives, rural life, rural society, cast and gender relations, rural values with respect to community, nature and resources, elaboration of "Soul of India lies in villages" – (Gandhi Ji), Rural infrastructure, problems in rural area. Assignment: Prepare a map (Physical, visual and digital) of the village you visited and write an essay about inter-family relation in that village.		CO1
UNIT II	**RURAL ECONOMY AND LIVELIHOOD**	9
Agriculture, farming, land ownership pattern, water management, animal husbandry, non-farm livelihoods and artisans, rural entrepreneurs, rural market. Assignment: Describe your analysis of rural household economy, it's challenges and possible pathways to address them. Group discussion in class- (4) Field visit 3.		CO2
UNIT III	**RURAL INSTITUTIONS**	9
History of Rural Development, Traditional rural organizations, Self Help Groups, Gram Swaraj and 3- Tier Panchayat Raj Institutions (Gram Sabha, Gram Panchayat, Standing Committee), local civil society, local administration. Introduction to Constitution, Constitutional Amendments in Panchayati Raj – Fundamental Rights and Directive Principles. Assignment: Panchayati Raj institutions in villages? What would you suggest to improve their effectiveness? Present a case study (written or audio-visual). Field Visit – 4.		CO3
UNIT IV	**RURAL DEVELOPMENT PROGRAMMES**	9

National programmes - Sarva Shiksha Abhiyan, Beti Bachao, Beti Padhao, Ayushman Bharat, Swatchh Bharat, PM Awass Yojana, Skill India, Gram Panchayat Decentralised Planning, NRLM, MNREGA, etc. Written Assignment: Describe the benefits received and challenges faced in the delivery of one of these programmes in the rural community, give suggestions about improving implementation of the programme for the rural poor.		CO4
UNIT V	**FIELD WORK**	9
Each student selects one programme for field visit Field based practical activities: ❖ Interaction with SHG women members, and study of their functions and challenges; planning for their skill building and livelihood activities ❖ Visit MGNREGS project sites, interact with beneficiaries and interview functionaries at the work site ❖ Field visit to Swachh Bharat project sites, conduct analysis and initiate problem solving measures ❖ Conduct Mission Antyodaya surveys to support under Gram Panchayat Development Plan(GPDP) ❖ Interactive community exercise with local leaders, panchayat functionaries, grass-root officials and local institutions regarding village development plan preparation and resource mobilization ❖ Visit Rural Schools I mid-day meal centres, study Academic and infrastructural resources and gaps ❖ Participate in Gram Sabha meetings, and study community participation ❖ Associate with Social audit exercises at the Gram Panchayat level, and interact with programme beneficiaries ❖ Attend Parent Teacher Association meetings, and interview school drop outs ❖ Visit local Anganwadi Centre and observe the services being provided ❖ Visit local NGOs, civil society organisations and interact with their staff and beneficiaries. ❖ Organize awareness programmes, health camps, Disability camps and cleanliness camps o Conduct soil health test, drinking water analysis, energy use and fuel efficiency surveys ❖ Raise understanding of people's impacts of climate change, building up community's disaster preparedness ❖ Organise orientation programmes for farmers regarding organic cultivation, rational use of irrigation and fertilizers and promotion of traditional species of crops and plants ❖ Formation of committees for common property resource management, village pond		CO5

maintenance and fishing.

TOTAL : 45 PERIODS

TEXT BOOKS

4. Singh, Katar, Rural Development Principles, Policies and Management, Sage Publications, New Delhi, 2015
5. A Hand book on Village Panchayat Administration, Rajiv Gandhi Chair for Panchayati Raj Studies, 2002
6. United Nations, Sustainable Development Goals, 2015 un.org/sdgs

REFERENCE BOOKS

2. M.P.Boraian, Best Practices in Rural Development, Shanlax Publishers
3. Unnat Bharat Abhiyan Website : www.unnatbharatabhiyan.gov.in

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Understand of rural life, culture and social realities
CO2	Understand the concept of measurement by comparison or balance of parameters.
CO3	Develop a sense of empathy and bonds of mutuality with local community
CO4	Appreciate significant contributions of local communities to Indian society and economy
CO5	Value the local knowledge and wisdom of the community

AD1007	ESSENCE OF INDIAN KNOWLEDGE TRADITION	L	T	P	C
		2	0	0	0

OBJECTIVES

- Get a knowledge about Indian Culture
- Know Indian Languages and Literature religion and philosophy and the fine arts in India
- Explore the Science and Scientists of Ancient, Medieval and Modern India
- Understand education systems in India

UNIT I	**INTRODUCTION TO CULTURE**	9
Culture, civilization, culture and heritage, general characteristics of culture, importance of culture in human literature, Indian Culture, Ancient India, Medieval India, Modern India		CO1
UNIT II	**INDIAN LANGUAGES AND LITERATURE**	9
Indian Languages and Literature – I: Languages and Literature of South India, – Indian Languages and Literature – II: Northern Indian Languages & Literature		CO2
UNIT III	**RELIGION AND PHILOSOPHY**	9
Major religions practiced in India and Understanding their Philosophy – religious movements in Modern India (Selected movements only)		CO3
UNIT IV	**FINE ARTS IN INDIA (ART, TECHNOLOGY& ENGINEERING)**	9
Indian Painting, Indian handicrafts, Music, divisions of Indian classic music, modern Indian music, Dance and Drama, Indian Architecture (ancient, medieval and modern), Science and Technology in India, development of science in ancient, medieval and modern India		CO4
UNIT V	**EDUCATION SYSTEM IN INDIA**	9
Education in ancient, medieval and modern India, aims of education, subjects, languages, Science and Scientists of Ancient India, Science and Scientists of Medieval India, Scientists of Modern India		CO5

TOTAL : 45 PERIODS

REFERENCE BOOKS

1. Kapil Kapoor, “Text and Interpretation: The India Tradition”,ISBN: 81246033375, 2005

6. M. Hiriyanna, “Essentials of Indian Philosophy”, Motilal Banarsidass Publishers, ISBN 13: 978-8120810990, 2014

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Understand philosophy of Indian culture.
CO2	Distinguish the Indian languages and literature.
CO3	Learn the philosophy of ancient, medieval and modern India.
CO4	Acquire the information about the fine arts in India.
CO5	Understand education systems in India

AD1008	SANGA TAMIL LITERATURE APPRECIATION	L	T	P	C
		2	0	0	0

OBJECTIVES

- Introduction to Sanga Tamil Literature.
- ‘Agathinai’ and‘Purathinai’ in SangaTamil Literature.
- ‘Attruppadai’ in SangaTamil Literature.
- ‘Puranaanuru’ in SangaTamil Literature.
- ‘Pathitrupaththu’ in SangaTamil Literature.

UNIT I	SANGA TAMIL LITERATURE – AN INTRODUCTION	9
Introduction to Tamil Sangam–History of Tamil Three Sangams–Introduction to Tamil SangamLiterature–Special Branches in Tamil Sangam Literature- Tamil Sangam Literature’s GrammarTamil Sangam Literature’s parables.		CO1
UNIT II	**‘AGATHINAI’AND‘PURATHINAI’**	9
Tholkappiyar’s Meaningful Verses–Three literature materials–Agathinai’s message- History ofCulturefrom Agathinai– Purathinai–Classification–Mesaage to Society from Purathinai.		CO2
UNIT III	**‘ATTRUPPADAI’**	9
Attruppadai Literature – Attruppadaiin ‘Puranaanuru’ – Attruppadaiin ‘Pathitrupaththu’- Attruppadaiin ‘Paththupaattu’.		CO3
UNIT IV	**‘PURANAANURU’**	9
Puranaanuru on Good Administration, Ruler and Subjects–Emotion & its Effect in Puranaanuru.		CO4
UNIT V	**‘PATHITRUPATHTHU’**	9
Pathitrupaththuin ‘Ettuthogai’ – Pathitrupaththu’s Parables –Tamildynasty: Valor, Administration, Charity in Pathitrupaththu - Mesaage to Society from Pathitrupaththu.		CO5

5. XavierS.Thani Nayagam, Landscape and poetry:a study of nature in classical Tamil poetry,Asia Pub.House, 1967.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Appreciate and apply the messages in Sanga Tamil Literature in their life.
CO2	Differentiate ‘Agathinai’ and ‘Purathinai’in their personal and societal life.
CO3	Appreciate and apply the messages in‘ Attruppadai’ in their personal and societal life.
CO4	Appreciate and apply the messages in‘ Puranaanuru’ in their personal and societal life.
CO5	Appreciate and apply the messages in‘ Pathitrupaththu’ in their personal and societal life.

VAC001	INDUSTRIAL INTERNET OF THINGS	L	T	P	C
		1	0	2	2

OBJECTIVES

1.The main learning objective of this course is to make the students an appreciation for:

2. To provide students with good depth of knowledge of Designing Industrial IOT Systems for various application.

3. Knowledge for the design and analysis of Industry 4.0Systems for Electronics Engineering students

UNIT I	**INTRODUCTION TO INDUSTRIAL IOT (IIOT) SYSTEMS**	6
The Various Industrial Revolutions – Role of Internet of Things (IoT) & Industrial Internet of Things (IIoT) in Industry – Industry 4.0 revolutions – Support System for Industry 4.0 – Smart Factories.		CO1
UNIT II	**IMPLEMENTATION SYSTEMS FOR IIOT**	6
Sensors and Actuators for Industrial Processes, Sensor networks, Process automation and Data Acquisitions on IoT Platform, Microcontrollers and Embedded PC roles in IIoT, Wireless Sensor nodes with Bluetooth, WiFi, and LoRa Protocols and IoT Hub systems.		CO2
UNIT III	**IIOT DATA MONITORING & CONTROL**	6
IoT Gate way – IoT Edge Systems and It's Programming – Cloud computing – Real Time Dashboard for Data Monitoring – Data Analytics and Predictive Maintenance with IIoT technology		CO3
UNIT IV	**IIOT Sensors & Networks**	6
Next Generation Sensors – Collaborative Platform and Product Lifecycle Management – Industrial IoT- Layers – Software Defined Networks: IIoT Analytics – Security and Fog Computing – Fog Computing in IIoT – Emerging descriptive data standards for IIoT – Cloud data base.		CO4
UNIT V	**INDUSTRIAL IOT- APPLICATIONS**	6
Healthcare Power Plants – Inventory Management & Quality Control – Plant Safety and Security Oil – Chemical and Pharmaceutical industry – Applications of UAVs in Industries.		CO5
		TOTAL : 30 PERIODS

REFERENCE:

1. .Industry 4.0: The Industrial Internet of Things Alasdair Gilchrist Publications: Apress.

2. The Concept Industry 4.0 An Empirical Analysis of Technologies and Applications in Production Logistics Authors: Bartodziej, Christoph Jan Springer: Publication in the field of economic science.

3. Embedded System: Architecture, Programming and Design by Rajkamal, TMH3.

4. Dr. OvidiuVermesan, Dr. Peter Friess, “Internet of Things: Converging Technologies for Smart Environments and Integrated Ecosystems”, River Publishers.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Students can develop a comprehensive understanding of Internet of Things (IoT) technologies, including sensors, communication protocols, cloud computing, and data analytics.
CO2	The program can provide students with hands-on experience in designing, implementing, and managing IoT-based solutions for industrial applications.
CO3	The program can provide students with an understanding of IoT security and privacy issues, including data encryption, access control, and device authentication.
CO4	The program can help students develop effective communication and teamwork skills through group projects and case studies, which are essential for working in cross-functional teams in industrial IoT settings.
CO5	Graduates of the program can be better equipped to take on roles in IoT-based industrial applications and other areas of technology, due to their in-depth knowledge of IoT technologies and their practical experience in designing and implementing industrial IoT solutions.

MAPPING OF COs WITH POs AND PSOs

VAC002	AUGMENTED REALITY & VIRTUAL REALITY	L	T	P	C
		1	0	2	2

OBJECTIVES

The main learning objective of this course is to make the students an appreciation for:

1. To provide students with good depth of knowledge of Augmented Reality and Virtual Reality
2. Knowledge on Tools and Applications of Augmented Reality and Virtual Reality

UNIT I	**Introduction to Augmented Reality and Virtual Reality (VR)**	6
History of AR - Augmented reality characteristics– Difference between Augmented Reality and Virtual Reality– AR technological components– Technologies used in AR– Feature Extraction– Hardware components – AR devices – Importance of AR - Real world uses of AR – AR types – Software tools available for AR.		CO1
UNIT II	**Computer Graphics and Geometric Modeling**	6
The Virtual world space, positioning the virtual observer, the perspective projection, human vision, stereo perspective projection, Color theory, Conversion From 2D to 3D, 3D space curves, 3D boundary representation, Simple 3D modelling, 3D clipping, Illumination models, Reflection models, Shading algorithms, Geometrical Transformations: Introduction, Frames of reference.		CO2
UNIT III	**Need of technologies for Augmented Reality & Virtual Reality**	6
Hardware technology– virtual scenes – 3D objects– AR & VR components Display – HMD – Eyeglasses– Contact Lenses– significance of AR – AR powered devices – Motion tracking –Virtual environment - VR technology, AR & VR application development drawbacks– Compatibility Performance.		CO3
UNIT IV	**Tools and Applications of Augmented Reality & Virtual Reality**	6
Tools available for Augmented Reality and Recognition - Hardware: Introduction, sensor hardware, Head-coupled displays, Acoustic hardware, Integrated VR systems - Software: Introduction, Modelling virtual world, Physical simulation, VR toolkits, Introduction to VRML.		CO4
UNIT V	**Augmented Realities and Virtual Reality for Micro Learning**	6
Micro learning techniques – Utilizing VR for learning – VR for Practical online assessment – VR info graphics – Virtual case considerations - Utilizing AR for learning– Accessible learning – sensible data– elevated learner engagement- Engineering, Entertainment, Science, Training, Game Development		CO5

TOTAL : 30 PERIODS

1. Charles Palmer, John Williamson, “Virtual Reality Blueprints: Create compelling VR experiences for mobile”, Packt Publisher, 2018
2. Dieter Schmalstieg, Tobias Hollerer, “Augmented Reality: Principles & Practice”, Addison Wesley, 2016

COURSE OUTCOMES **Upon completion of the course, students will be able to**	
CO1	Understand the importance of augmented reality in Industry 4.0 with real-time examples
CO2	To describe the history and recent developments of AR
CO3	To provide the need on emerging technologies AR and VR
CO4	To discuss the revolution and impact of AR
CO5	To understand the applications of AR and VR

VAC003	ETHICAL HACKING - CYBER SECURITY	L	T	P	C
		1	0	2	2

OBJECTIVES:

- To learn the fundamentals of Cyber Security and Ethical Hacking
- To learn the Foot printing & Reconnaissance and Scanning Networks
- To understand Enumeration and Vulnerability Analysis
- To understand Exploitation on Network
- To learn the Web Attacks and Report Writing

UNITI	**FUNDAMENTALS OF CYBER SECURITY AND ETHICAL HACKING**	6
Introduction to Cyber Security - Cyber Security & Ethical Hacking - Domains of Cyber Security - Principles of Cybersecurity (CIA Triad, Security Models, Principles of Privileges) - Offensive & Defensive Security - Cyber Kill Chain - Types of Security Teams (Red Team, Blue Team, Purple Team) - Cyber Security Frameworks (NIST, MITRE, ISO/IEC) Phases & Methodologies in Ethical Hacking - Introduction to Malware - Types of Malware		CO1
UNITII	**FOOTPRINTING RECONNAISSANCE AND SCANNING NETWORKS**	6
Introduction to Foot printing Reconnaissance - Types of Reconnaissance (Passive & Active) - Active Reconnaissance (Ping, Traceroute, Telnet, Whatweb, Wappalyzer, Netcraft) - Passive Reconnaissance (nslookup, whois, dig, DNSDumpster, Shodan) - Introduction to OSINT (OSINT Framework, OSRFRAMEWORK, Social Searcher,) - Introduction to Scanning Networks - Types of Network Scanning (Port Scan, Service Scan, Vulnerability Scan) - Scanning Techniques - Port Scanning (TCP, UDP) - Host Discovery (ICMP, ARP) - Introduction to Wireshark - Capturing Data Packets - Packet Analysis.		CO2
UNITIII	**ENUMERATION AND VULNERABILITY ANALYSIS**	6
Internet of Things - Physical Design- Logical Design- IoT Enabling Technologies - IoT Levels & Deployment Templates - OGC architecture - IoT reference model - Domain model - information model - functional model - communication model - IoT reference architecture.		CO3
UNITIV	**EXPLOITATION ON NETWORK**	6
Introduction to Exploitation - What is Shell - Types of Linux Shells (Bash, Csh/Tcsh, Ksh, Zsh, Fish) - What is Gaining Access & Maintaining Access - Reverse Shell & Bind Shell - Introduction to Metasploit Framework - Metasploit Modules - Staged Payload & Non-Staged Payload - Using Metasploit Framework Gaining the User Shell Acess - Gaining Root Shell Acess in Metasploit Framework - Introduction to Manual Exploitation - Gaining User Shell in Manual Exploitation - What is Privilege Escalation - Linux & Windows Privilege Escalation - Using Linpeass Script Finding Non-Privilege Path on Linux System - Using Winpeass Script Finding Non-Privilege Path on Windows System - Hands-on Windows & Linux Privilege Escalation - Introduction to Post Exploitation.		CO4
UNITV	**WEB ATTACKS AND REPORT DOCUMENTATION**	6
Introduction to OWAP TOP 10 and SANS TOP 25 - Web Server & Web Application Attack Methodology - Indirect Object Reference (IDOR) - SQL Injection - Cross Site Scripting - XML Injection or XML External Internal - Account Hijacking - Sensitive Data Exposure - Server Side Forgery - Race Condition - Generate Proper Vulnerability Assessment Penetration Testing Report Document.		CO5
		TOTAL:30 PERIODS

REFERENCE:

1. Michael T. Simpson, Kent Backman, and James E. Corley, Hands-On Ethical Hacking and Network Defense, Course Technology, Delmar Cengage Learning, 2010.

2. The Basics of Hacking and Penetration Testing - Patrick Engebretson, SYNGRESS, Elsevier, 2013. 3. The Web Application Hacker’s Handbook: Finding and Exploiting Security Flaws, Dafydd Stuttard and Marcus Pinto, 2011.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Understand the importance of fundamentals of cyber security and ethical hacking
CO2	To gain understanding on different foot printing, reconnaissance and scanning methods.
CO3	To demonstrate the enumeration and vulnerability analysis methods
CO4	To acquire knowledge on the options for network protection.
CO5	To gain knowledge on hacking options available in Web applications.

VAC004	BLOCKCHAIN AND CRYPTO CURRENCIES	L	T	P	C
		1	0	2	2

OBJECTIVES

1. To understand Blockchain's fundamental components, and examine decentralization using blockchain.
2. To understand Cryptocurrency and its background concepts.
3. To learn smart contract programing language solidity.
4. To understand public blockchain application development platform and develop distributed applications.
5. To understand enterprise blockchain application development platform and develop distributed enterprise applications

UNIT I	**Introduction**	6
Need for Distributed Record Keeping, Modeling faults and adversaries, Byzantine Generals problem, Consensus algorithms and their scalability problems, Nakamoto's concept with Blockchain based cryptocurrency, Technologies Borrowed in Blockchain – hash function, consensus, byzantine fault-tolerant, distributed computing, 51% attack, digital cash etc.		CO1
UNIT II	**Cryptocurrency Basics**	6
Bitcoin blockchain, Challenges and solutions, Crypto mining, mining types, mining hardware, proof of work, Proof of stake, alternatives to Bitcoin consensus, other crypto currencies like Ethereum, Tether, BNB etc		CO2
UNIT III	**Solidity Walkthrough**	6
Introduction to Ethereum blockchain – Ethereum Virtual Machine – remix IDE - MetaMask wallet – running simple smart contract – voting application – Lottery application – File sharing application		CO3
UNIT IV	**Public Blockchain Application Development**	6
Create Github Account, Create Repository, Create Azure Organization, Create a new pipeline, Build a sample code, Modify azure-pipelines.yaml file		CO4
UNIT V	**Enterprise Blockchain Application Development**	6
Introduction to Hyperledger – Hyperledger Fabric architecture– language supports for hyperledger fabric – setting up hyprledger fabric - Building application in hyperledger fabric.		CO5

TOTAL : 30 PERIODS

VAC005	INDUSTRIAL PRACTICES WITH DEVOPS	L	T	P	C
		1	0	2	2

OBJECTIVES

1. TointroduceDevOpsterminology,definition&concepts
2. TounderstandtheMaven, Profiles and Plugins
3. To understand the concepts of Continuous Integration/ Continuous Testing/ ContinuousDeployment using Jenkins
4. To understandtoleverageCloud-basedDevOpstoolsusingAzureDevOps
5. Illustrate the benefits and drive the adoption of cloud-based Devops tools to solve realworld problems

UNIT I	**INTRODUCTION TO DEVOPS**	6
Devops Essentials - Introduction to AWS, GCP, Azure - Version control systems: Git and Github		CO1
UNIT II	**COMPILE AND BUILD USING MAVEN & GRADLE**	6
Introduction, Installation of Maven, POM files, Maven Build lifecycle, Build phases (compile build, test, package) Maven Profiles, Maven repositories (local, central, global), Maven plugins, Maven create and build Artifacts, Dependency management, Installation of Gradle, understand build using Gradle		CO2
UNIT III	**CONTINUOUS INTEGRATION USING JENKINS**	6
Install & Configure Jenkins, Jenkins Architecture Overview, creating a Jenkins Job, configuring a Jenkins job, Introduction to Plugins, Adding Plugins to Jenkins, commonly used plugins (Git Plugin, Parameter Plugin, HTML Publisher, Copy Artifact and Extended choice parameters). Configuring Jenkins to work with java, Git and Maven, Creating a Jenkins Build and Jenkins workspace		CO3
UNIT IV	**BUILDING DEVOPS PIPELINES USING AZURE**	6
Create Github Account, Create Repository, Create Azure Organization, Create a new pipeline, Build a sample code, Modify azure-pipelines.yaml file		CO4
UNIT V	**DEVOPS PRACTICALS**	6
Create Maven Build pipeline in Azure - Run regression tests using Maven Build pipeline in Azure - Install Jenkins in Cloud - Create CI pipeline using Jenkins - Create a CD pipeline in Jenkins and deploy in Cloud		CO5

TOTAL : 30 PERIODS

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Understand different actions performed through Version control tools like Git.
CO2	Compile and Build using Maven & Gradle applications
CO3	Ability to Perform Continuous Integration using Jenkins.
CO4	Understand to leverage Cloud-based DevOps tools using Azure DevOps
CO5	Develop various Devops applications

MAPPING OF COs WITH POs AND PSOs

VAC006	APPLIED MACHINE LEARNING WITH PYTHON	L	T	P	C
		1	0	2	2

OBJECTIVES

- To provide a basic understanding of data manipulation.
- To understand scikit learn for model evaluation.
- To provide a comprehensive understanding of neural networks and computer vision.

UNIT I	**DATA MANIPULATION WITH PYTHON LIBRARIES**	6
Overview of Data Manipulation with Python-Introduction to Pandas and NumPy-Data Cleaning and Preprocessing-Handling Missing Data-Data Exploration and Analysis		CO1
UNIT II	**MACHINE LEARNING BASICS WITH SCIKIT-LEARN**	6
Introduction to Machine Learning-Types of Machine Learning Algorithms-Overview of Decision Trees and Random Forests-Hands-on Implementation with Scikit-Learn-Model Evaluation and Validation.		CO2
UNIT III	**LINEAR REGRESSION AND BEYOND**	6
Linear Regression Fundamentals-Implementing Linear Regression from Scratch-Logistic Regression for Classification-Introduction to Support Vector Machines (SVM)-Hands-on Exercises with Scikit-Learn.		CO3
UNIT IV	**ADVANCED MACHINE LEARNING TECHNIQUES**	6
Introduction to Gradient Boosting-Implementation of Gradient Boosting with XGBoost-Neural Networks Basics with PyTorch-Deep Learning Fundamentals-Applications of Neural Networks.		CO4
UNIT V	**COMPUTER VISION AND TRANSFER LEARNING**	6
Image Classification with Convolutional Neural Networks (CNN)-Transfer Learning Concepts and Applications-Hands-on Image Classification with PyTorch-Fine-tuning Pre-trained Models-Building Custom Models for Specific Tasks.		CO5

TOTAL : 30 PERIODS

REFERENCE:

1. " Data Wrangling with Pandas" by Kevin Markham - A practical guide that delves into data cleaning, preprocessing, handling missing data, and exploratory data analysis using Pandas.

2. "Hands-On Machine Learning with Scikit-Learn, Keras, and TensorFlow" by Aurélien Géron - A comprehensive guide that covers a wide range of machine learning topics, including decision trees, random forests, and model evaluation with scikit-learn.

COURSE OUTCOMES **Upon completion of the course, students will be able to**	
CO1	To understand a predictive models that can classify or regress on data by recursively partitioning.
CO2	To develop a foundational understanding of the underlying algorithms, optimizing model parameters
CO3	To build a robust and high-performance ensemble model for regression or classification tasks.
CO4	To understand the automatic learning of hierarchical representations from data for tasks such as classification, regression, and feature extraction.
CO5	To incorporating transfer learning are to leverage pre-trained models to efficiently learn and classify features in images, facilitating accurate predictions.

CT1701	ADVANCED DATA MANAGEMENT AND MACHINE INTELLIGENCE	L	T	P	C
		0	0	2	1

OBJECTIVES

- ❖To recall data warehousing and business intelligence fundamentals with examples. State Data Lakehouse and its importance. Compare Data Lakehouse to the traditional SQL data warehouse.
- ❖To write SQL queries to perform complex operations. Learn advanced SQL concept with examples and differentiate NO SQL with RDBMS (which uses SQL) by their advantages and disadvantages.
- ❖To get clear understanding of AWS, Azure, GCP fundamentals. Cloud Computing- Benefits of it. Basic knowledge on few products and services provided by AWS, Azure, GCP.
- ❖Be aware of advanced Python concepts programming with real-life examples.
- ❖To gain insights of fundamental concepts of Artificial Intelligence (AI), Basics of Machine Learning and how to use concepts, Prompt Engineering.

UNIT I	MODERN DATA INTEGRATION	6
	Data Warehouse concepts :Need for BI, Data Warehouse, Key terminologies related to DWH Architecture -OLTP vs OLAP, ETL, Data Mart, Metadata, DWH Architecture. Data Lakehouse : Data Lake to Data Swamp, SQL Relational Databases, Transaction Processing, Relational Database Workload Types, Architectural Challenges, Databricks Evolution. ETL :Extract Data Dump from source, Data format consistency, Data Quality rules, Truncate & Load, Load strategies, Load Approach, Transform, Mapping, Enriching, Joins, filter, Remove Duplicates, Aggregation, Load, Dimension, Facts, EDW Tables, Data Marts. Variety of ETL Tools:Apache Airflow, Datastage,Oracle Data Integrator, SSIS, Talend, Hadoop, AWS Glue, Azure Data Factory, Google Cloud Dataflow, Stitch, SAP, Hevo, Qlik, Airbyte	CO1
UNIT II	**FOUNDATIONS OF DATA MANAGEMENT AND ANALYSIS**	6
	Informatica:Informatica Architecture, Informatica PowerCenter & Repository, Informatica PowerCenter Designer, Informatica Power Center workflow manager, Informatica PowerCenter workflow monitor, Run Mappings, Workflow creation & Deletion. SQL:DQL, DDL, DML, Filtering and sorting Data, Grouping and Aggregating Data, Joins and Subqueries, Window Functions, Optimizing SQL queries, Automation,Store Procedure, Trigger, Views, Functions. NoSQL:Fundamentals and Comparison with SQL,Connecting Data Sources and DataBases, Data Modeling, Creating Calculated Fields in Power BI.	CO2
UNIT III	**CLOUD COMPUTING PLATFORMS DEMYSTIFIED**	6
	Python :Variables, Operators, functions, Libraries, Methods, Refactoring, Enum, Tuples, Dictionaries, sets, Map, filter, reduce, Class & objects, Exceptions, Overloading ,Iterators, Modules, Packages, Generators, List, Comprehensions, Regular expressions, Serialization, Partial functions, closures, Decorators. AWS :Benefits of AWS, AWS Services - Computer, Storage, Database Service, Networking Service, Security Service, Management tool Service, Developer tool Service. Azure :Cloud Computing, Services in Azure - Compute, Containers, Databases, Identity, Security, Networking, Storage. GCP:Cloud Computing, Benefits of GCP, GCP services, AWS vs Azure vs GCP	CO3
UNIT IV	**PYTHON FOR DATA SCIENCE AND AI**	6
	Python with Deep Learning : Python Data Science Libraries,Numpy, Scipy, Pandas, Matplotlib, Scikit-Learn, Statsmodels, Pandas, Sorting, Concatenate, Preprocessing - Time Series Data, Visualization	CO4

Python with AI : Introduction, Demand of AI, What is AI, Types of AI, Why python for AI, Python Packages for AI Artificial Intelligence : Artificial intelligence and its types, AI Roadmap, Machine learning and its types, Linear regression Analysis, Classifications in Machine Learning.AI vs ML, Classification vs regression, Supervised learning, Unsupervised learning, Training Model, Preparing Data, K-Nearest Neighbors, Naive Bayes, Logistic Regression, Support Vector Machine, Neural Networks, Tensorflow, K-Means Clustering, Principal Component Analysis, KMeans and PCA Implementations .		
UNIT V	**EXPLORING AI FOUNDATIONS**	6
Prompt Engineering : Introduction to AI, Linguistics, Language Models, Prompt Engineering Mindset, Zero shot and few shot prompts, AI hallucinations, Vectors/text embeddings.Generative AI Fundamentals:Generative AI and its use cases, How do LLMS (Large Language Models) work, LLMs generates output for NLP task, LLM model decision criteria, Proprietary models, Fine tuned models, Mixing LLM flavors in workflow, Data privacy, Data security.		CO5
		TOTAL PERIOD: 30

COURSE OUTCOMES **Upon completion of the course, students will be able to**	
CO1	Gain a solid understanding of AI fundamentals, including machine learning algorithms, natural language processing techniques, and data science libraries, enabling you to work on AI projects effectively.
CO2	Acquire skills in data warehousing, SQL and NoSQL databases, data modeling, and data integration, allowing you to efficiently manage and analyze large datasets.
CO3	Develop expertise in utilizing cloud computing platforms like AWS, Azure, and GCP, enabling you to deploy, scale, and manage applications and services in the cloud.
CO4	Learn advanced data analysis techniques, including sorting, preprocessing, visualization, and statistical modeling, empowering you to derive meaningful insights from complex datasets.
CO5	Understand the ethical implications of AI technologies, including data privacy, security, and bias mitigation, and learn how to implement responsible AI solutions in compliance with ethical standards and regulations

St. JOSEPH'S COLLEGE OF ENGINEERING

(An Autonomous Institution)

St. Joseph's Group of Institutions

Jeppiaar Educational Trust

OMR, Chennai - 119.

FACULTY OF ELECTRICAL ENGINEERING

REGULATIONS – 2021

M.E. POWER ELECTRONICS AND DRIVES
(Choice Based Credit System–CBCS)

I–IV Semesters CURRICULUM AND SYLLABUS

Vision of the department

- To promote the Department of Electrical and Electronics Engineering as a pioneer in education and research by imparting quality education, creating and upgrading the academic facilities and inculcating professional values to the students to face the challenges in the dynamic global society.

Mission of the department

- To attain utmost qualities of teaching–learning process and provide a vibrant environment for the students to exhibit their fullest potential in the field of Electrical and Electronics Engineering.
- To improve research and development skills among students towards providing technical solutions with ethical values to meet social challenges.
- To develop the students to face the technological requirements of the industry with professional values and make them employable and to impart the spirit of entrepreneurship for their successful career.

Program Education Objectives (PEOs)

PEO1: Graduates of this program will have technical knowledge with the ability to design, develop and test power electronic converters and incorporate them in the control of electric drives in real time applications.

PEO2: Graduates of this program will be equipped skillfully to carry out academic and industrial research with cutting edge technologies thereby providing appropriate solutions with insightful innovations.

PEO3: Graduates of this program will show strong aptitude towards continuous learning and exhibit exemplary determination towards being a part of academia and exhibit higher order of ethical responsibility.

PEO4: Graduates of this program will show involvement and willingness in assuming responsibility in societal and environmental causes to promote sustainable growth in satisfying energy needs.

Program Specific Outcomes (PSOs)

PSO1: Understand and analyze the need for different modern power electronic converters and implement them for the operation of real time adjustable speed drives for flexible control.

PSO2: Contribute towards effective utilization of renewable energy sources by enabling the harness of maximum power with the help of power electronic conversion topologies.

PSO3: Design robust controllers for efficient energy storage and consumption by real time control of energy storage devices.

PSO4: Enhance knowledge by formulating and carrying out experiments to promote active research in the field of power electronics and drives, in order to improve the performance of electrical power systems.

Program Outcomes (POs)

PO1 – Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2 – Problem analysis: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3 – Design/development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4 – Conduct investigations of complex problems: Use research–based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO5 – Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PO6 – The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

PO7 – Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PO8 – Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

PO9 – Individual and team work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PO10 – Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PO11 – Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

PO12 – Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and life- long learning in the broadest context of technological change

MA1153	APPLIED MATHEMATICS FOR ELECTRICAL ENGINEERS	L	T	P	C
		4	0	0	4

Objectives

- The main objective of this course is to demonstrate various analytical skills in applied mathematics and extensive experience with the tactics of problem solving and logical thinking applicable for the students of electrical engineering.
- To formulate and construct a mathematical model for a linear programming problem in real life situation.
- This course also will help the students to identify, formulate, abstract, and solve problems in electrical engineering using mathematical tools from a variety of mathematical areas, including matrix theory, calculus of variations, probability, and Fourier series.

UNIT – I	MATRIX THEORY	12

Cholesky decomposition – Generalized Eigenvectors – Canonical basis – QR Factorization – Least squares method – Singular value decomposition.

UNIT – II	CALCULUS OF VARIATIONS	12

Concept of variation and its properties – Euler's equation – Functional dependant on first and higher order derivatives – Functionals dependant on functions of several independent variables – Variational problems with moving boundaries – Isoperimetric problems – Direct methods: Ritz and Kantorovich methods.

UNIT – III	PROBABILITY AND RANDOM VARIABLES	12

Probability – Axioms of probability – Conditional probability – Baye's theorem – Random variables – Probability function – Moments – Moment generating functions and their properties – Binomial, Poisson, Geometric, Uniform, Exponential, Gamma and Normal distributions – Function of a random variable.

UNIT – IV	LINEAR PROGRAMMING	12

Formulation – Graphical solution – Simplex method – Big M method – Two phase method – Transportation and Assignment models.

UNIT – V	FOURIER SERIES	12

Fourier trigonometric series: Periodic function as power signals – Convergence of series – Even and odd function: Cosine and sine series – Non periodic function: Extension to other intervals – Power signals: Exponential Fourier series – Parseval's theorem and power spectrum – Eigen value problems and orthogonal functions – Regular Sturm – Liouville systems – Generalized Fourier series.

Total Periods:	**60**

Course Outcomes (CO)

CO1	Apply various methods in matrix theory to solve system of linear equations.
CO2	Maximizing and minimizing the functional that occurs in electrical engineering disciplines.
CO3	Computation of probability and moments, standard distributions of discrete and continuous random variables and functions of a random variable.
CO4	Could develop a fundamental understanding of linear programming models, able to develop a linear programming model from problem description, apply the simplex method for solving linear programming problems.
CO5	Fourier series analysis and its uses in representing the power signals. Able to expand the periodic and non–periodic as a power signals and Regular Sturm – Liouville systems, Generalized form of Fourier series.

Course Outcomes	**Program Outcomes**												**PSO**			
	a	**b**	**c**	**d**	**e**	**f**	**g**	**h**	**i**	**j**	**k**	**l**	**1**	**2**	**3**	**4**

PE1101	POWER SEMICONDUCTOR DEVICES	L	T	P	C
		3	0	0	3

Objectives

- To improve power semiconductor device structures for adjustable speed motor control applications.
- To understand the static and dynamic characteristics of current controlled power semiconductor devices
- To understand the static and dynamic characteristics of voltage–controlled power semiconductor devices
- To enable the students for the selection of devices for different power electronics applications
- To understand the control and firing circuit for different devices.

UNIT – I	INTRODUCTION	9

Power switching devices overview – Attributes of an ideal switch, application requirements, circuit symbols; Power handling capability – (SOA); Device selection strategy – On–state and switching losses – EMI due to switching – Power diodes – Types, forward and reverse characteristics, switching characteristics – rating.

UNIT – II	CURRENTCONTROLLED DEVICES	9

BJT's – Construction, static characteristics, switching characteristics; negative temperature coefficient and second breakdown; – Thyristors – Physical and electrical principle underlying operating mode, two transistor analogy – Concept of latching; Gate and switching characteristics; converter grade and inverter grade and other types; series and parallel operation; comparison of BJT and Thyristor – Steady state and dynamic models of BJT & Thyristor – Basics of GTO, MCT, FCT, RCT

UNIT – III	VOLTAGE CONTROLLED DEVICES	9

Power MOSFETs and IGBTs – Principle of voltage – Controlled devices, construction, types, static and switching characteristics, steady state and dynamic models of MOSFET and IGBTs – and IGCT. New semiconductor materials for devices – Intelligent power modules – Integrated gate commutated thyristor (IGCT) – Comparison of all power devices.

UNIT – IV	FIRING AND PROTECTING CIRCUITS	9

Necessity of isolation, pulse transformer, optocoupler – Gate drives circuit: SCR, MOSFET, IGBTs and base driving for power BJT – Over voltage, over current and gate protections; Design of snubbers.

UNIT – V	THERMAL PROTECTION	9

Heat transfer – conduction, convection and radiation; Cooling – liquid cooling, vapour –

phase cooling; Guidance for hear sink selection – Thermal resistance and impedance – Electrical analogy of thermal components, heat sink types and design – Mounting types – Switching loss calculation for power device.

Total Periods: 45

Text Books:

1. B. W. Williams, 'Power Electronics Circuit Devices and Applications'. McGraw Hill Higher Education; 2nd edition, 1992.
2. M. H. Rashid, 'Power Electronics Circuits, Devices and Applications', Prentice Hall India, Third Edition, New Delhi, 2004.

Reference Books:

2. Mohan, Undeland and Robins, 'Power Electronics – Concepts, applications and Design, John Wiley and Sons, Singapore,2000.
3. Joseph Vithayathil, Power Electronics: Principles and Applications, Delhi, Tata McGraw–Hill, 2010.

Course Outcomes (CO)

CO1	Able to understand and analyse different types of power semiconductor devices and their switching characteristics.
CO2	Able to understand and analyse different current controlled semiconductor devices and their switching characteristics.
CO3	Able to understand and analyse different voltage–controlled semiconductor devices and their switching characteristics.
CO4	Design and analyse the Firing and Protecting Circuits For various semiconductor devices
CO5	Design and analyse the cooling and thermal control of semiconductor devices

Course Outcomes	Program Outcomes												PSO			
	a	b	c	d	e	f	g	h	i	j	k	l	1	2	3	4

PE1102	ANALYSIS OF ELECTRICAL MACHINES	L	T	P	C
		3	0	0	3

Objectives

- To provide knowledge about the fundamentals of magnetic circuits, energy, force and torque of multi–excited systems.
- To analyze the steady state and dynamic state operation of DC machine through mathematical modelling and simulation in digital computer.
- To provide the knowledge of theory of transformation of three phase variables to two phase variables.
- To analyze the steady state and dynamic state operation of three–phase induction machines using transformation theory based mathematical modeling and digital computer simulation.
- To analyze the steady state and dynamic state operation of three– phase synchronous machines using transformation theory based mathematical modeling and digital computer simulation.

UNIT – I	PRINCIPLES OF ELECTROMAGNETICENERGY CONVERSION	9

Magnetic circuits, Permanent magnet, Stored magnetic energy, Co–energy – Force and torque in singly and doubly excited systems – Machine windings and air gap MMF – Winding inductances and voltage equations

UNIT – II	DC MACHINES	9

Elementary DC machine and analysis of steady state operation – Voltage and torque equations dynamic characteristics of permanent magnet and shunt D.C. motors – Time domain block diagrams – Solution of dynamic characteristic by Laplace transformation – Digital computer simulation of permanent magnet and shunt D.C. Machines

UNIT – III	REFERENCE FRAME THEORY	9

Historical background – Phase transformation and Commutator transformation – Transformation of variables from stationary to arbitrary reference frame – Variables observed from several frames of reference.

UNIT – IV	INDUCTION MACHINES	9

Three phase induction machine, equivalent circuit and analysis of steady state operation – Free acceleration characteristics – Voltage and torque equations in machine variables and arbitrary reference frame variables – Analysis of dynamic performance for load torque variations – Digital computer simulation.

UNIT – V	**SYNCHRONOUS MACHINES**	**9**
Three phase synchronous machine and analysis of steady state operation – Voltage and torque equations in machine variables and rotor reference frame variables (Park's equations) – Analysis of dynamic performance for load torque variations – Generalized theory of rotating electrical machine and Kron's primitive machine.		
	Total Periods:	**45**

Text Books:

1. Paul C. Krause, Oleg Wasyzczuk, Scott S, Sudhoff, 'Analysis of Electric Machinery and Drive Systems', John Wiley, Second Edition, 2010.

Reference Books:

1. P S Bimbhra, 'Generalized Theory of Electrical Machines', Khanna Publishers, 2008.
2. A.E, Fitzgerald, Charles Kingsley, Jr, and Stephan D, Umanx, 'Electric Machinery', Tata McGraw Hill, 5th Edition, 1992.
3. R. Krishnan, 'Electric Motor & Drives: Modelling, Analysis and Control', New Delhi, Prentice Hall of India, 2001.

Course Outcomes (CO)

CO1	Ability to understand the various electrical parameters in mathematical form.
CO2	Ability to find the electrical machine equivalent circuit parameters and modelling of DC machine.
CO3	Ability to understand the different types of reference frame theories and transformation relationships.
CO4	Ability to find the electrical machine equivalent circuit parameters and modeling of Induction machine.
CO5	Ability to find the electrical machine equivalent circuit parameters and modeling of Synchronous machine.

PE1103	ANALYSIS AND DESIGN OF POWER CONVERTERS	L	T	P	C
		3	0	0	3

OBJECTIVES

- To understand and analyse the operation, characteristics of controlled rectifiers.
- To apply switching techniques and basic topologies of DC–DC switching regulators.
- To introduce power converter components and to design the power converters.
- To provide an in–depth knowledge about resonant converters.
- To comprehend the concepts of AC–AC power converters and their applications.

UNIT – I	SINGLE PHASE & THREE PHASE CONVERTERS	9

Principle of phase–controlled converter operation – Single–phase full converter and semi–converter (RL, RLE load single phase dual converter – Three phase operation full converter and semi–converter (R, RL, RLE load) – Reactive power – Power factor improvement techniques – PWM rectifiers.

UNIT – II	DC–DC CONVERTERS	9

Limitations of linear power supplies, switched mode power conversion, Non–isolated DC–DC converters: operation and analysis of Buck, Boost, Buck–Boost, Cuk & SEPIC – under continuous and discontinuous operation – Isolated converters: basic operation of Flyback, Forward and Push–pull topologies

UNIT – III	DESIGN OF POWER CONVERTER COMPONENTS	9

Introduction to magnetic materials – hard and soft magnetic materials – Types of cores, copper windings – Design of transformer – Inductor design equations – Inductor design for buck/ boost/ fly–back converter – Selection of output filter capacitors – Selection of ratings for devices – Input filter design.

UNIT – IV	RESONANT DC–DC CONVERTERS	9

Switching loss, hard switching, and basic principles of soft switching – Classification of resonant converters – Load resonant converters – Series and parallel – Resonant switch converters – Operation and analysis of ZVS, ZCS converters comparison of ZCS/ZVS, ZVT/ZCT PWM converters.

UNIT – V	AC–AC CONVERTERS	9

Principle of on–off and phase angle control – Single phase ac voltage controller – Analysis with R & RL load – Three phase ac voltage controller – Principle of operation of cyclo converter – Single phase and three phase cyclo converters – Single phase matrix converters and three phase matrix converters

Total Periods:	**45**

PE1104	SYSTEM THEORY	L	T	P	C
		3	2	0	4

Objectives

- To understand the fundamentals of physical systems in terms of its linear and nonlinear models.
- To educate on representing systems in state variable form
- To educate on solving linear and non–linear state equations
- To exploit the properties of linear systems such as controllability and observability
- To educate on stability analysis of systems using Lyapunov's theory
- To educate on modal concepts and design of state and output feedback controllers and estimators

UNIT – I	STATE VARIABLE REPRESENTATION	9

Introduction – Concept of State – State equations for Dynamic Systems – Time invariance and linearity – Non uniqueness of state model – Physical Systems and State Assignment – Free and forced responses – State Diagrams.

UNIT – II	SOLUTION OF STATE EQUATIONS	9

Existence and uniqueness of solutions to Continuous – Time state equations – Solution of Nonlinear and Linear Time Varying State equations – State transition matrix and its properties – Evaluation of matrix exponential – System modes – Role of Eigen values and Eigen vectors.

UNIT – III	STABILITY ANALYSIS OF LINEAR SYSTEMS	9

Controllability and Observability definitions and Kalman's rank conditions – Stabilizability and Detectability – Test for Continuous time Systems – Time varying and Time invariant case – Output Controllability – Reducibility – System Realizations.

UNIT – IV	STATE FEEDBACK CONTROL AND STATE ESTIMATOR	9

Introduction – Controllable and Observable Companion Forms – SISO and MIMO Systems – The Effect of State Feedback on Controllability and Observability – Pole Placement by State Feedback for both SISO and MIMO Systems – Full Order and Reduced Order Observers.

UNIT – V	LYAPUNOV STABILTY ANALYSIS	9

Introduction – Equilibrium Points – BIBO Stability – Stability of LTI Systems – Stability in the sense of Lyapunov – Equilibrium Stability of Nonlinear Continuous – Time Autonomous Systems – The Direct Method of Lyapunov and the Linear Continuous – Time Autonomous Systems – Finding Lyapunov Functions for Nonlinear Continuous – Time Autonomous Systems – Krasovskil's and Variable – Gradient Method.

Total Periods:	45+30 = 75 PERIODS

4. C.T. Chen, 'Linear Systems Theory and Design', Oxford University Press, 3rd Edition, 1999.
5. M. Vidyasagar, 'Nonlinear Systems Analysis', 2nd edition, Prentice Hall, Englewood Cliffs, NewJersey.

Course Outcomes (CO)

CO1	Ability to understand the fundamentals of physical systems in terms of its linear and nonlinear models and also educate on representing systems in state variable form
CO2	Ability to understand on solving linear and non–linear state equations
CO3	Ability to represent the time–invariant systems in state space form as well as analyze, whether the system is stabilizable, controllable, observable and detectable.
CO4	Ability to design modal concepts and design of state and output feedback controllers, state observers and estimators
CO5	Ability to understand the stability analysis of systems using Lyapunov's theory.

Course Outcomes	**Program Outcomes**												**PSO**			
	a	**b**	**c**	**d**	**e**	**f**	**g**	**h**	**i**	**j**	**k**	**l**	**1**	**2**	**3**	**4**

RM1106	RESEARCH METHODOLOGY AND IPR	L	T	P	C
	Common to CSE, AE, PED, MF, MBA, BT.	2	0	0	2

Objectives

- Problem formulation, analysis and solutions.
- Technical paper writing / presentation without violating professional ethics
- Patent drafting and filing patents.

UNIT – I	RESEARCH PROBLEM FORMULATION	6

Meaning of research problem – Sources of research problem, criteria characteristics of a good research problem, errors in selecting a research problem, scope and objectives of research problem. Approaches of investigation of solutions for research problem, data collection, analysis, interpretation, necessary instrumentations

UNIT – II	LITERATURE REVIEW	6

Effective literature studies approaches, analysis, plagiarism, and research ethics.

UNIT – III	TECHNICALWRITING /PRESENTATION	6

Effective technical writing, how to write report, paper, developing a research proposal, format of research proposal, a presentation and assessment by a review committee.

UNIT – IV	INTRODUCTION TO INTELLECTUAL PROPERTY RIGHTS (IPR)	6

Nature of Intellectual Property: Patents, Designs, Trade and Copyright. Process of Patenting and Development: technological research, innovation, patenting, development. International Scenario: International cooperation on Intellectual Property. Procedure for grants of patents, Patenting under PCT.

UNIT – V	INTELLECTUAL PROPERTY RIGHTS (IPR)	6

Patent Rights: Scope of Patent Rights. Licensing and transfer of technology. Patent information and databases. Geographical Indications. New Developments in IPR: Administration of Patent System, IPR of Biological Systems, Computer Software etc. Traditional knowledge Case Studies, IPR and IITs.

Total Periods: 30

Reference Books:

PE1111	POWER ELECTRONIC CIRCUIT SIMULATION LABORATORY	L	T	P	C
		0	0	4	2

Objectives

- To understand the dynamics and different operating modes of power converters
- To analyze, design and simulate different rectifier circuits for generic load
- To simulate different DC to DC Converter topologies.
- To understand the dynamics and different operating modes of AC to AC converters
- To simulate different inverter topologies.
- To develop skills on PCB design and fabrication among the students

List of experiments

1. Simulation of Single–Phase Half Converter with different loads using MATLAB.
2. Simulation of Single–Phase Full Converter with different loads using MATLAB.
3. Simulation of Operation of Single–Phase Semi Converter with motor load using MATLAB.
4. Simulation of Three Phase Full Controlled Rectifier with R, RL loads using MATLAB.
5. Simulation of step–down chopper with different loads using MATLAB.
6. Simulation of Buck Converter using MATLAB.
7. Simulation of Boost Converter using MATLAB.
8. Simulation of Buck–Boost Converter using MATLAB.
9. Simulation of Single–phase half wave AC Voltage Controller with R load using MATLAB.
10. Simulation of Single–phase full wave AC Voltage Controller with R load using MATLAB.
11. Simulation of Three phase full wave AC Voltage Controller with R load using MATLAB.
12. Circuit Simulation of Voltage Source Inverter and study of spectrum analysis with and without filter using MATLAB.
13. PCB design and fabrication of DC power supply using any PCB design software (open source)

Total Periods:	**60 PERIODS**

LIST OF EQUIPMENT FOR A BATCH OF 25 STUDENTS

1. Personal Computers (Intel Core i3, 250 GB,1 GB RAM) – 10
2. Printer – 1
3. Server (Intel Core i3, 4 GB RAM) (High Speed Processor) – 1
4. Software MATLAB/SIMULINK/SCILAB/PSPICE Software – 10

Course Outcomes (CO)	
CO1	Comprehensive understanding on mathematical modeling of Rectifier and ability to implement the same using simulation tools
CO2	Ability to implement the DC to DC converter using simulation tools
CO3	Ability to implement the AC to AC converter using simulation tools
CO4	Ability to implement the DC to AC converter using simulation tools
CO5	Exposure to PCB designing and fabrication

Course Outcomes	**Program Outcomes**												**PSO**			
	a	**b**	**c**	**d**	**e**	**f**	**g**	**h**	**i**	**j**	**k**	**l**	**1**	**2**	**3**	**4**

PE1112	POWER CONVERTERS LABORATORY	L	T	P	C
		0	0	4	2

Objectives

- To provide hands on experience with power electronic converter design and testing

List of experiments

1. Single Phase Half and Full converter with R, RL, RLE loads.
2. Voltage Commutated Chopper.
3. Current Commutated Chopper.
4. IGBT based speed control of three phase induction motor using PWM technique.
5. AC voltage regulator.
6. Series Inverter.
7. Parallel Inverter.
8. McMurray–Bedford Inverter.
9. Resonant DC to DC Converter.
10. Study of Cycloconverters.

Total Periods:	**60 PERIODS**

LIST OF EQUIPMENT FOR A BATCH OF 25 STUDENTS

1. Full converter – 2
2. IGBT/MOSFET, OPAMPS/SCR – 10
3. Single phase square wave inverter – 2
4. Regulator DC Power supplies – 5
5. CROs – 10
6. Resistive load – 5
7. Inductive load – 5
8. Capacitive load – 5
9. Breadboards – 20
10. Digital Multimeter – 10
11. Digital Storage Oscilloscope – 5
12. Single phase Isolation Transformer – 5
13. Single–phase step–down transformer – 5
14. Three phase sine PWM Inverter – 5
15. Single phase sine PWM Inverter – 5
16. Single phase auto transformer – 2
17. Three phase Auto transformer – 2

Course Outcomes (CO)	
CO1	Ability to analyze about AC to DC converter circuits.
CO2	Ability to analyze about DC to DC converter circuits.
CO3	Ability to analyze about DC to AC converters.
CO4	Ability to acquire knowledge on AC to AC converters.
CO5	Ability to understand the concepts of resonant converter and its implementation in real time applications.

Course Outcomes	**Program Outcomes**												**PSO**

PE1201	ANALYSIS AND DESIGN OF INVERTERS	L	T	P	C
		3	0	0	3

Objectives

- To Provide the electrical circuit concepts behind the different working modes of inverters so as to enable deep understanding of their operation.
- To equip with required skills to derive the criteria for the design of inverters for UPS, drives etc.,
- To analyze and comprehend the various operating modes of different configurations of inverters.
- To design different single phase and three phase inverters.
- To impart knowledge on multilevel inverters and modulation techniques

UNIT – I	SINGLE PHASE INVERTERS	9

Principle of operation of half and full bridge inverters – Performance parameters – Voltage control of single–phase inverters using various PWM techniques – Various harmonic elimination techniques – Forced commutated thyristor inverters

UNIT – II	THREE PHASE VOLTAGESOURCE INVERTERS	9

180–degree and 120–degree conduction mode inverters with star and delta connected loads – Voltage control of three phase inverters: single, multi pulse, sinusoidal, space vector modulation techniques – Application to drive system

UNIT – III	CURRENT SOURCE INVERTERS	9

Operation of six–step thyristor inverter – Inverter operation modes – Load–commutated inverters – Auto sequential current source inverter (ASCI) – Current pulsations – Comparison of current source inverter and voltage source inverters – PWM techniques for current source inverters.

UNIT – IV	MULTILEVEL & BOOST INVERTERS	9

Multilevel concept – Diode clamped – Flying capacitor – Cascade type multilevel inverters – Comparison of multilevel inverters – Application of multilevel inverters – PWM techniques for MLI – Single phase & Three phase Impedance source inverters.

UNIT – V	RESONANT INVERTERS AND POWER CONDITIONERS	9

Series and parallel resonant inverters – Voltage control of resonant inverters – Class E resonant inverter – Resonant DC–Link inverters – Power line disturbances – Power conditioners – UPS: offline UPS, online UPS

Total Periods:	**45**

4. P. C. Sen, 'Modern Power Electronics', Wheeler Publishing Co, First Edition, New Delhi, 1998.

Course Outcomes (CO)

CO1	To design and analyze working modes and operation of single–Phase inverters
CO2	To design and analyze working modes and operation of three phase inverters
CO3	To design and analyze working modes and operation of current source inverter
CO4	To design and analyze working modes and operation of multi–level and boos inverter
CO5	To analyze the working modes and operation of resonant inverters and power conditioners

Course Outcomes	Program Outcomes												PSO

PE1202	Analysis of Electrical Drives	L	T	P	C
		3	2	0	4

Objectives

- To study and analyze the operation of the converter fed DC drives, both qualitatively and quantitatively.
- To study and analyze the operation of the chopper fed DC drives, both qualitatively and quantitatively.
- To familiarize the students on the operation of VSI and CSI fed induction motor drives.
- To understand the field–oriented control of induction machines.
- To impart knowledge on the control of synchronous motor drives.

UNIT – I	RECTIFIER CONTROL OF DC DRIVES	9

Principle of phase control – Fundamental relations; Analysis of series and separately excited DC motor with single–phase and three–phase converters – Waveforms, performance parameters, performance characteristics. Continuous and discontinuous armature current operations; Current ripple and its effect on performance; Operation with freewheeling diode; Implementation of braking schemes; Drive employing dual converter.

UNIT – II	CHOPPER CONTROL OF DC DRIVES	9

Introduction to time ratio control and frequency modulation; Class A, B, C, D and E chopper – Controlled DC motor – Performance analysis, multi–quadrant control – Chopper based implementation of braking schemes; Multi–phase chopper; Related problems

UNIT – III	CONTROL OF INDUCTION MOTOR DRIVES – STATOR SIDE AND ROTORSIDE	9

AC voltage controller circuit, six step inverter voltage control, closed loop variable frequency PWM inverter with dynamic braking, CSI fed variable frequency drives, comparison of CSI and VSI fed Drive, Static rotor resistance control, Injection of voltage in the rotor circuit, Static Scherbius drives, Power factor considerations, Modified Kramer drives.

UNIT – IV	FIELD ORIENTED CONTROL OF INDUCTION MOTOR DRIVES	9

Field oriented control of induction machines – Theory, DC drive analogy, Direct and Indirect methods, Flux vector estimation, Direct torque control of Induction Machines, Torque expression with stator and rotor fluxes, DTC control strategy.

UNIT – V	SYNCHRONOUS MOTOR DRIVES	9

Wound field cylindrical rotor motor: Equivalent circuits, Performance equations for operation from a voltage source, Starting and braking, V curves, Self–control, Margin angle control, Torque control, Power factor control, Brushless excitation systems.

Total Periods: 45

Course Outcomes (CO)

CO1	Will be able to formulate, design and analyze converter fed DC drives.
CO2	Will be able to formulate, design and analyze chopper fed DC drives.
CO3	Will acquire knowledge on the operation of VSI and CSI fed induction motor drives.
CO4	Will get expertise in the field–oriented control of Induction motor drives.
CO5	Will be able to formulate the control schemes for synchronous motor drives.

PE1203	Electric Vehicle and Power Management	L	T	P	C
		3	0	0	3

Objectives

- To familiarize about the significance of EV than conventional vehicles.
- To understand the concept of hybrid electric vehicles and its types with their Performance.
- To understand the EV transmission and electric propulsion using various drives.
- To understand the various converter topologies for EV vehicle.
- To understand the different strategies related to battery technology and energy storage systems.

UNIT – I	Introduction to conventional and Electric Vehicles	9

Conventional Vehicles: Internal combustion Engines – Working principle, Engine Operation Characteristics, Emission Control. EV vehicles: EV system – Configurations of EVs – Components of EV – Recent EVs and HEVs – EVs advantages – EVs market – Environmental Impact.

UNIT – II	Hybrid Electric Vehicles	9

Concept of Hybrid Electric drive, Types of Hybrids, Architectures of Hybrid Electric Drive Trains, Design of HEV, Plug–in Hybrid Electric Vehicles (PHEVs), Fuel Cell Electric Vehicles (FCEVs), Comparison of Different Vehicle Specifications

UNIT – III	Electric Trains and propulsion	9

EV Transmission configurations, Transmission components, Ideal Gearbox: Steady State Model, EV Motor Sizing. Electric Propulsion: DC motor drives, Configuration and control of DC Motor drives, Configuration and control of Induction Motor drives, Configuration and control of Permanent Magnet Motor drives, Configuration and control of Switch Reluctance Motor drives.

UNIT – IV	Power Converter Topologies for EV/PHEV Charging	9

Power converter topology, Grid and Photovoltaic (PV) System for EV/PHEV Charging, Design of DC/DC Converters and DC/AC Inverters for Grid/PV, Integrated converter, With and without Transformer Based Isolated Charger topology.

UNIT – V	Energy Storage and Battery management systems for EV	9

Battery Technologies – Analysis: Lead–Acid Battery, Nickel–Based Batteries, Lithium – Based Batteries – Battery parameters, Fuel cell – types and characteristics, Ultra capacitors–based energy storage and its analysis, ultra–high–speed flywheels–based energy storage and its analysis, Hybridization of energy storage devices, Battery management systems – SOC Estimation, SOH Estimation.

Total Periods:	**45**

5. Sheldon S. Williamson, 'Energy Management Strategies for Electric and Plug–in Hybrid Electric Vehicles', Springer, 2013.
6. Gregory L. Plett, 'Battery Management systems', ARTECH House, London, 2016.

Course Outcomes (CO)

CO1	Learned the significance of Electric Vehicle compared to conventional vehicles.
CO2	Able to understand the concept of hybrid electric vehicles architecture with their performance.
CO3	Acquired the knowledge in EV transmission and electric propulsion using various drives train.
CO4	Ability to design the various converter topologies for EV vehicle.
CO5	Concept of different strategies related to battery technology and energy storage systems are analysed.

PE1204	**Embedded Controllers**	**L**	**T**	**P**	**C**
		3	0	0	3

Objectives

- To get Introduced to PIC controllers.
- To learn the concepts of ARM and DSP processors
- To learn the real–time embedded tools.
- To learn embedded –C coding of various applications
- To understand the embedded peripheral concepts with its structure and programs.

UNIT – I	**Introduction to PIC Microcontroller**	**9**
PIC 16C and PIC 16F series, PIC 18F series – Pin diagram and architecture, Pipelining, memory mapping, SFR's (Special Function Registers), Timers – Structure of timer, interrupt structure, Instruction Set – Addressing modes – Simple ASM programs.		

UNIT – II	**ARM PROCESSOR**	**9**
ARM core architecture – Cortex 9, typical Pin diagram, ARM development tools, memory hierarchy, Instruction Set – Addressing modes – ASM programs for basic arithmetic operations, Co–processor.		

UNIT – III	**DSP PROCESSOR**	**9**
DSP processors: TMS320C2407 – Architecture and pin diagram, General purpose Input/Output (GPIO) Functionality– Interrupts – A/D converter–Event Managers (EVA, EVB) – PWM signal generation.		

UNIT – IV	**Embedded tools and application programs**	**9**
Compilers – KEIL**,** Circuit Schematic Simulation software's – PROTEUS. Application Programs using C: **I**/O port handling, Keypad and multiplexer display, Timers and counters, interrupt handling, Pulse generation program, Capture and compare (CCP), A/D program.		

UNIT – V	**SYSTEM DESIGN – CASE STUDY**	**9**
Voltage regulation of DC–DC converters (buck and boost converter) – Stepper motor and DC motor control – Clarke's and parks transformation – Space vector PWM – Control of Induction Motors and PMSM.		

Total Periods:	**45**

Text Books:

1. Muhammad Ali Mazidi, Rolin D. Mckinlay, Danny Causey 'PIC Microcontroller and Embedded Systems using Assembly and C for PIC18', Pearson Education, 2008.
2. S. Furber, 'ARM System on Chip Architecture' Addison Wesley trade Computer Publication, 2000.
3. Hamid A. Toliyat, Steven Campbell, 'DSP based electromechanical motion control', CRC Press, 2003.

Reference Books:

1. John B. Peatman, 'Design with PIC Microcontrollers,' Pearson Education, Asia 2004.
2. John Iovine, 'PIC Microcontroller Project Book', McGraw Hill 2000.

Course Outcomes (CO)

CO1	Ability to understand the features, architectures of PIC, Ability to write the assembly language program.
CO2	Ability to understand the features, architectures of ARM Processor and ability to write the assembly language program.
CO3	Ability to understand the features, architectures of DSP Processor.
CO4	Ability to work on compiler tool and simulation software tool. Ability to develop embedded C program
CO5	Ability to grasp the embedded peripheral design concepts and its applications.

PE1211	EMBEDDED CONTROLLER LABOROTORY	L	T	P	C
		0	0	4	2

Objectives

- To perform simple arithmetic operations using various embedded and DSP processors.
- To perform simulation experiments of interrupts and ports interface using Keil compiler.
- To simulate circuit of power converters using Proteus along with compilation in keil compilers.

LIST OF EXPERIMENTS

1. Simple arithmetic operations using PIC, ARM, TMS320C2407
2. Experiments using Keil Compiler:
   i. I/O port handling
   ii. Timer handling using different modes
   iii. Timer as counter
   iv. External Interrupt handling program
   v. Internal interrupt handling program
3. Experiments using Proteus with keil compiler
   i) Pulse generation for DC–DC power electronic converter
   ii) Pulse generation for single phase fully controlled bridge converter
   iii) Pulse generation for H–bridge DC motor driver
   iv) Stepper motor position control.
   v) Message Display using 2–line LCD.

Total Periods: 60

LIST OF EQUIPMENT FOR A BATCH OF 25 STUDENTS

1. PIC microcontroller (1 No)
2. ARM Processor (3 Nos)
3. TMS320C2407 – DSP Processor (1 No)
4. Keil Compiler (Open Source)
5. Proteus (Open Source)

Course Outcomes (CO)

CO1	Acquire knowledge on interfacing peripheral devices using embedded processors
CO2	Acquire practical knowledge on embedded tools and its real–time oriented application
CO3	Ability to utilize the knowledge of embedded controllers for the application in the field of Electrical Engineering.
CO4	Acquire knowledge on advanced DSP processors and programming in embedded controllers.
CO5	Acquire practical knowledge on various embedded tools and its real–time applications.

Course Outcomes	Program Outcomes												PSO

PE1311	ELECTRICAL DRIVES LABORATORY	L	T	P	C
		0	0	4	2

Objectives

- To design and analyze the various DC and AC drives.
- To generate the firing pulses for converters and inverters using digital processors.
- Design of controllers for linear and nonlinear systems.
- Implementation of closed loop system using hardware simulation.
- To perform DSP based speed control of Switched Reluctance Motor.

LIST OF EXPERIMENTS

1. Speed control of Converter fed DC motor.
2. Speed control of Chopper fed DC motor.
3. V/f control of three–phase induction motor.
4. Micro controller–based speed control of Stepper motor.
5. Speed control of BLDC motor.
6. DSP based speed control of Switched Reluctance Motor.
7. Voltage Regulation of three–phase Synchronous Generator.
8. Cycloconverter fed Induction motor drives.
9. Single phase Multi Level Inverter based induction motor drive.
10. Study of power quality analyzer.

Total Periods:	**60**

LIST OF EQUIPMENTS FOR A BATCH OF 25 STUDENTS

1. Converter fed DC motor drive – 1
2. Chopper fed DC motor drive – 1
3. V/f control–based Induction motor devices – 1
4. Cyclo converter fed induction motor drive – 1
5. Three phase synchronous generator – 1
6. SRM Drive with DSP controller – 1
7. PMBLDC Drive – 1
8. Stepper motor drive with microprocessor–based control – 1
9. Single phase multilevel inverter fed with motor drive – 1
10. Power Quality Analyser – 1
11. Tachometers – 10
12. Ammeters – 10
13. Voltmeters – 10
14. Digital storage oscilloscope – 5

Course Outcomes (CO)	
CO1	Ability to simulate different types of machines, converters in a system.
CO2	Analyze the performance of various electric drive systems.
CO3	Ability to perform both hardware and software simulation.
CO4	To perform speed control of DSP based Switched Reluctance Motor.
CO5	To perform voltage regulation of three phase Synchronous Generator.

Course Outcomes	**Program Outcomes**												**PSO**

PE1251	ARTIFICIAL INTELLIGENCE AND MACHINE LEARNING	L	T	P	C
		3	0	0	3

OBJECTIVES

- To impart knowledge about AI and Machine learning
- To learn and analyze the Fuzzy based expert system
- To study the basics of supervised learning and their applications.
- To understand unsupervised learning and deep learning algorithms
- To understand and apply the concept of AI / ML for real time applications.

UNIT – I	INTRODUCTION TO ARTIFICIAL INTELLIGENCE (AI)	9

History and evolution of artificial intelligence, strong AI and weak AI, definitions of Artificial Intelligence, emergence of AI – Technological advances, Machine Learning (ML) – Deep Learning, Functions of AI, Characteristics of AI, Applications of AI – Industry 4.0, education sector, Business and Finance Sector, society.

UNIT – II	AI – EXPERT SYSTEMS	9

Classical sets – Fuzzy sets – Fuzzy relations – Fuzzification – Fuzzy rules – Membership function – Knowledge base – Decision–making logic – Defuzzification – Introduction to Neuro–Fuzzy system – Adaptive Fuzzy system (Qualitative analysis).

UNIT – III	SUPERVISED LEARNING	9

Linear Models for Classification – Discriminant Functions – Probabilistic Generative Models – Probabilistic Discriminative Models – Bayesian Logistic Regression – Decision Trees – Classification Trees – Regression Trees – Pruning. Neural Networks – Feed–forward Network Functions – Error – Back propagation – Regularization – Mixture Density and Bayesian Neural Networks – Kernel Methods – Dual Representations – Radial Basis Function Networks. Ensemble methods – Bagging– Boosting (Qualitative analysis).

UNIT – IV	UNSUPERVISED LEARNING	9

Clustering – K–means – EM – Mixtures of Gaussians – The EM Algorithm in General – Model selection for latent variable models – high–dimensional spaces – The Curse of Dimensionality – Dimensionality Reduction – Factor analysis – Principal Component Analysis – Probabilistic PCA – Independent components analysis – RNN – LSTM (Qualitative analysis).

UNIT – V	REAL TIME APPLICATIONS	9

Smart cities – Vehicle Parking and Traffic Management System – smart waste and disposal management system – smart mobility – Bio–medical image processing – Inventory control – Demand Prediction for Inventory Management

Total Periods:	**45**

PE1252	ELECTROMAGNETIC FIELD COMPUTATION AND MODELLING	L	T	P	C
		3	0	0	3

Objectives

- To refresh the fundamentals of Electromagnetic Field Theory.
- To provide foundation in formulation and computation of Electromagnetic Fields using analytical and numerical methods.
- To impart in–depth knowledge on Finite Element Method in solving Electromagnetic field problems.
- To introduce the concept of mathematical modeling and design of electrical apparatus.

UNIT – I	INTRODUCTION	9

Review of basic field theory – Maxwell's equations – Constitutive relationships and Continuity equations – Laplace, Poisson and Helmholtz equation – principle of energy conversion – Force / torque calculation

UNIT – II	BASIC SOLUTION METHODS FOR FIELD EQUATIONS	9

Limitations of the conventional design procedure, need for the field analysis–based design, problem definition, boundary conditions, solution by analytical methods – Direct integration method – Variable separable method – Method of images, solution by numerical methods – Finite Difference Method.

UNIT – III	FORMULATION OF FINITE ELEMENT METHOD (FEM)	9

Variational Formulation – Energy minimization – Discretization – Shape functions –Stiffness matrix – 1D and 2D planar and axial symmetry problems.

UNIT – IV	COMPUTATION OF BASIC QUANTITIES USING FEM PACKAGES	9

Basic quantities – Energy stored in Electric Field – Capacitance – Magnetic Field – Linked Flux – Inductance – Force – Torque – Skin effect – Resistance.

UNIT – V	DESIGN APPLICATIONS	9

Design of Insulators – Cylindrical magnetic actuators – Transformers – Rotating machines.

Total Periods: 45

Course Outcomes (CO)

CO1	Ability to understand the fundamental concept of electromagnetic field theory.
CO2	Ability to provide basic solution methodology for field equations.
CO3	Ability to formulate the FEM method for symmetry problems.
CO4	Ability to understand the basic quantities of field theory by using FEM package.
CO5	Apply the concepts in the design of transformer and rotating machines

PE1253	CONTROL SYSTEM DESIGN FOR POWER ELECTRONICS	L	T	P	C
		3	0	0	3

Objectives

- To explore conceptual bridges between the fields of Control Systems and Power Electronics
- To Study Control theories and techniques relevant to the design of feedback controllers in Power Electronics.

UNIT – I	MODELLING OF DC–TO–DC POWER CONVERTERS	9

Modelling of Buck Converter, Boost Converter, Buck–Boost Converter, Cuk Converter, Sepic Converter, Zeta Converter, Quadratic Buck Converter, Double Buck–Boost Converter, Boost–Boost Converter General Mathematical Model for Power Electronics Devices.

UNIT – II	SLIDING MODE CONTROLLER DESIGN	9

Variable Structure Systems. Single Switch Regulated Systems Sliding Surfaces, Accessibility of the Sliding Surface Sliding Mode Control Implementation of Boost Converter, Buck–Boost Converter, Cuk Converter, Sepic Converter, Zeta Converter, Quadratic Buck Converter, Double Buck–Boost Converter, Boost–Boost Converter.

UNIT – III	APPROXIMATE LINEARIZATION CONTROLLER DESIGN	9

Linear Feedback Control, Pole Placement by Full State Feedback, Pole Placement Based on Observer Design, Reduced Order Observers, Generalized Proportional Integral Controllers, Passivity Based Control, Sliding Mode Control Implementation of Buck Converter, Boost Converter, Buck–Boost Converter

UNIT – IV	NONLINEAR CONTROLLER DESIGN	9

Feedback Linearization Isidori's Canonical Form, Input–Output Feedback Linearization, State Feedback Linearization, Passivity Based Control, Full Order Observers, Reduced Order Observers

UNIT – V	PREDICTIVE CONTROL OF POWER CONVERTERS	9

Basic Concepts, Theory, and Methods, Application of Predictive Control in Power Electronics, AC–DC–AC Converter System, Faults and Diagnosis Systems in Power Converters.

Total Periods:	**45**

Reference Books:

Course Outcomes (CO)

CO1	Ability to understand and model the different types of DC–DC power converters.
CO2	Ability to gain knowledge on sliding mode controller design.
CO3	Ability to understand an overview on modern linear control strategies for power electronics devices
CO4	Ability to understand an overview on modern nonlinear control strategies for power electronics devices
CO5	Ability to model modern power electronic converters for industrial applications and to design appropriate controllers for modern power electronics devices.

Course Outcomes	Program Outcomes												PSO			
	a	b	C	d	e	f	g	h	i	j	k	l	1	2	3	4

PE1254	ANALOG AND DIGITAL CONTROLLERS	L	T	P	C
		3	0	0	3

Objectives

- To provide an overview of the control system and converter control methodologies
- To provide an insight to the analog controllers generally used in practice
- To introduce Embedded Processers for Digital Control
- To study on the driving techniques, isolation requirements, signal conditioning and protection methods
- To implement an analog and a digital controller on a converter

UNIT – I	CONTROL SYSTEM–OVERVIEW	9

Feedback and Feed–forward control, Right Half Plane Zero, Gain margin and Phase Margin, Stability, Analysis and Transfer function of P, PI, PD and PID controllers and its effects. Voltage mode control, Peak Current mode Control, Average Current mode Control for Converters – Need, advantages and disadvantages.

UNIT – II	ANALOG CONTROLLERS	9

Major components of a controller – Op–Amp based PI and PID controller – Proportional, Integral and Differential gains in terms of Resistance and Capacitance, Error Amplifiers, PWM generator using Ramp or Triangular generator and comparator, and Driver, Voltage mode controller design using UC3524, Peak Current mode controller design using UC3842, Average Current mode controller design using UC3854.

UNIT – III	DIGITAL CONTROLLERS	9

Micro Controllers and Digital Signal Controllers for Converter Control Application, Interface Modules for Converter Control – A/D, Capture, Compare and PWM, Analog Comparators for instantaneous over current detection, interrupts, Discrete PI and PID equations, Algorithm for PI and PID implementation, Example Code for PWM generation.

UNIT – IV	SIGNAL CONDITIONING, DRIVER, ISOLATION AND PROTECTION	9

Voltage feedback sensing circuits, Hall effect sensors and Shunts for current feedback sensing, Low offset Op–Amps for signal conditioning, Single and dual supply op–amps, Totem pole drivers, need for isolated drivers, optically isolated drivers, low side drivers, high side drivers with bootstrap power supply, Vce sat sensing, CT based Device current sensing and pulse blocking.

UNIT – V	CONTROLLER IMPLEMENTATION	9

Analog and Digital Controller Design for Buck Converter – Power circuit transfer function and bode plot, PI controller bode plot, combined bode plot with required Gain and Phase margins, Implementation of Analog controller and Digital controller.

2. Agilent Data Sheets.
3. Microchip application notes, Reference Manuals and Data sheets.

Course Outcomes (CO)

CO1	Acquire knowledge on control system and converter control methodologies
CO2	Understand the analog controllers generally used in practice
CO3	Study the embedded Processers for Digital Control
CO4	Understand the driving techniques, isolation requirements, signal and conditioning protection methods
CO5	Implementing an analog and a digital controller on a converter

PE1255	FLEXIBLE AC TRANSMISSION SYSTEMS	L	T	P	C
		3	0	0	3

OBJECTIVES

- The problems in AC transmission systems and establish the Flexible AC transmission systems.
- The operation and control of SVC and its applications to enhance the stability and damping.
- The different modes of operation TCSC and to model it for power flow and stability studies.
- The basic operation and control of voltage source converter–based FACTS controllers.
- The advanced FACTS controllers

UNIT – I	INTRODUCTION	9

Reactive power control in electrical power transmission lines – loads & system compensation, Uncompensated transmission line – shunt and series compensation. Basic concepts of Static Var Compensator (SVC) – Thyristor Controlled Series Capacitor (TCSC)

UNIT – II	SHUNT COMPENSATION USING STATIC VAR COMPENSATOR	9

Voltage control by SVC – Advantages of slope in dynamic characteristics – Influence of SVC on system voltage – Design of SVC voltage regulator – Modelling of SVC for power flow and fast transient stability – Applications: Enhancement of transient stability – Steady state power transfer – Enhancement of power system damping.

UNIT – III	THYRISTOR CONTROLLER BASED SERIES CAPACITOR, GTO AND APPLICATIONS	9

Operation of the TCSC – Different modes of operation – Modelling of TCSC, Variable reactance model– Modelling for Power Flow and stability studies. Applications: Improvement of the system stability limit – Enhancement of system damping, GTO Characteristics and applications.

UNIT – IV	VOLTAGE SOURCE CONVERTER BASED FACTS CONTROLLERS	9

Static Synchronous Compensator (STATCOM) – Principle of operation – V–I Characteristics. Applications: Steady state power transfer – Enhancement of transient stability – Prevention of voltage instability. SSSC – Operation of SSSC and the control of power flow – Modelling of SSSC in load flow and transient stability studies.

UNIT – V	ADVANCED CONTROLLERS AND COORDINATION BETWEEN FACTS CONTROLLERS	9

Interline DVR (IDVR) – Unified Power flow controller (UPFC) – Interline power flow controller (IPFC) – Unified Power quality conditioner (UPQC). FACTS Controller interactions – SVC–SVC interaction – Co–ordination of multiple controllers using linear control techniques – Quantitative treatment of control coordination.

Total Periods:	**45**

TEXT BOOKS:

1. R. Mohan Mathur, Rajiv K. Varma, 'Thyristor–Based Facts Controllers for Electrical Transmission Systems', IEEE press and John Wiley & Sons, Inc, 2002.
2. Narain G. Hingorani, 'Understanding FACTS – Concepts and Technology of Flexible AC Transmission Systems', Standard Publishers Distributors, Delhi–110006, 2011.

Reference Books:

2. V. K. Sood, 'HVDC and FACTS controllers – Applications of Static Converters in Power System', April 2004, Kluwer Academic Publishers, 2004.

COURSE OUTCOMES (CO)

CO1	Analyse the reactive power flow in transmission networks and understand the importance of voltage stability
CO2	Analyse and understand the operation of shunt compensated devices namely SVC
CO3	Analyse and understand the operation of series compensated devices namely TCSC and GTO
CO4	Acquire knowledge about the effectiveness of active compensation and usage of SSSC
CO5	Acquire knowledge about new age compensators and their interaction with the system.

PE1256	MODERN RECTIFIERS AND RESONANT CONVERTERS	L	T	P	C
		3	0	0	3

Objectives

- To gain knowledge about the harmonic's standards and operation of rectifiers in CCM & DCM.
- To analyze and design power factor correction rectifiers for UPS applications.
- To know the operation of resonant converters for SMPS applications.
- To carry out dynamic analysis of DC– DC Converters.
- To introduce the source current shaping methods for rectifiers

UNIT – I	**POWER SYSTEM HARMONICS & LINECOMMUTATEDRECTIFIERS**	**9**

Average power – RMS value of waveform – Effect of Power factor – Current and voltage harmonics – Effect of source and load impedance – AC line current harmonic standards IEC1000 – IEEE 519 – CCM and DCM operation of single–phase full wave rectifier – Behavior of full wave rectifier for large and small values of capacitance – CCM and DCM operation of three phase full wave rectifier – 12 pulse converters – Harmonic trap filters

UNIT – II	**PULSE WIDTH MODULATED RECTIFIERS**	**9**

Properties of Ideal single–phase rectifiers – Realization of nearly ideal rectifier – Single–phase converter systems incorporating ideal rectifiers – Losses and efficiency in CCM high quality rectifiers – single–phase PWM rectifier – PWM concepts – Device selection for rectifiers – IGBT based PWM rectifier, comparison with SCR based converters with respect to harmonic content – Applications of rectifiers.

UNIT – III	**RESONANTCONVERTERS**	**9**

Soft Switching – Classification of resonant converters – Quasi resonant converters – Basics of ZVS and ZCS – Half wave and full wave operation (qualitative treatment) – Multi resonant converters – Operation and analysis of ZVS and ZCS multi resonant converter – Zero voltage transition PWM converters – Zero current transition PWM converters

UNIT – IV	**DYNAMIC ANALYSIS OFSWITCHINGCONVERTERS**	**9**

Review of linear system analysis – State Space Averaging – Basic State Space Average Model – State Space Averaged model for an ideal Buck Converter, ideal Boost Converter, ideal Buck Boost Converter and an ideal Cuk Converter. Pulse Width modulation – Voltage Mode PWM Scheme – Current Mode PWM Scheme – Design of PI controller.

UNIT – V	**SOURCE CURRENT SHAPINGOF RECTIFIERS**	**9**

Need for current shaping – Power factor – Functions of current shaper – Input current shaping methods – Passive shaping methods – Input inductor filter – Resonant input filter – Active methods – Boost rectifier employing peak current control – Average current control – Hysteresis control – Nonlinear carrier control.

Course Outcomes (CO)

CO1	Apply the concept of various types of rectifiers.
CO2	Simulate and design the operation of resonant converter and its importance.
CO3	Identify the importance of linear system, state space model, PI controller.
CO4	Design the DC power supplies using advanced techniques.
CO5	Understand the standards for supply current harmonics and its significance.

PE1257	ELECTROMAGNETIC INTERFERENCE AND COMPATIBILITY	L	T	P	C
		3	0	0	3

Objectives

- To provide fundamental knowledge on electromagnetic interference and electromagnetic compatibility.
- To study the important techniques to control EMI and EMC. To expose the knowledge on testing techniques as per Indian and international standards in EMI measurement.

UNIT – I	INTRODUCTION	9

Definitions of EMI/EMC – Sources of EMI – Inter systems and Intra system – Conducted and radiated interference – Characteristics – Designing for electromagnetic compatibility (EMC) – EMC regulation typical noise path – EMI predictions and modelling, Cross talk – Methods of eliminating interferences.

UNIT – II	GROUNDING AND CABLING	9

Cabling – types of cables, mechanism of EMI emission / coupling in cables – Capacitive coupling inductive coupling – Shielding to prevent magnetic radiation – Shield transfer impedance, Grounding – Safety grounds – Signal grounds – Single point and multipoint ground systems hybrid grounds – Functional ground layout – Grounding of cable shields – Guard shields– isolation, neutralizing transformers, shield grounding at high frequencies, digital grounding – Earth measurement Methods.

UNIT – III	BALANCING, FILTERING AND SHIELDING	9

Power supply decoupling – Decoupling filters – Amplifier filtering – High frequency filtering – EMI filters characteristics of LPF, HPF, BPF, BEF and power line filter design –Choice of capacitors, inductors, transformers and resistors, EMC design components –Shielding – Near and far fields shielding effectiveness – Absorption and reflection loss – Magnetic materials as a shield, shield discontinuities, slots and holes, seams and joints, conductive gaskets – Windows and coatings – Grounding of shields

UNIT – IV	EMI IN ELEMENTS AND CIRCUITS	9

Electromagnetic emissions, noise from relays and switches, non–linearities in circuits, passive inter modulation, transients in power supply lines, EMI from power electronic equipment, EMI as combination of radiation and conduction

UNIT – V	ELECTROSTATIC DISCHARGE, STANDARDS AND TESTING	9

Static Generation – Human body model – Static discharges – ESD versus EMC, ESD protection in equipment's – Standards – FCC requirements – EMI measurements – Open area test site measurements and precautions – Radiated and conducted interference measurements, Control requirements and testing methods.

6. A. Weston David, 'Electromagnetic Compatibility, Principles and Applications', CRC Press, 2006.

Course Outcomes (CO)

CO1	To understand the basic definition, sources of EMI and the design of EMC.
CO2	To understand the design of cabling and grounding for EMC.
CO3	To understand the various EMI filters and the shielding design for EMC.
CO4	To understand the various sources of EMI in power systems and its effect.
CO5	To understand the electrostatic discharge, standards and various measurement techniques of EMI.

Course Outcomes	**Program Outcomes**												**PSO**			
	a	**b**	**c**	**d**	**e**	**f**	**g**	**h**	**I**	**j**	**k**	**L**	**1**	**2**	**3**	**4**

PE1258	MEMS TECHNOLOGY	L	T	P	C
		3	0	0	3

Objectives

- To teach the students properties of materials, micro structure and fabrication methods.
- To teach the design and modeling of Electrostatic sensors and actuators.
- To teach the characterizing thermal sensors and actuators through design and modeling
- To teach the fundamentals of piezoelectric sensors and actuators through exposure to different MEMS and NEMS devices.
- To involve Discussions / Practice / Exercise onto revising & familiarizing the concepts acquired over the 5 Units of the subject for improved employability skills.

UNIT – I	MICRO–FABRICATION, MATERIALS AND ELECTRO–MECHANICAL CONCEPTS	9

Overview of micro fabrication – Silicon and other material–based fabrication processes – Concepts: Conductivity of semiconductors–Crystal planes and orientation–stress and strain–flexural beam bending analysis – Torsional deflections – Intrinsic stress – Resonant frequency and quality factor.

UNIT – II	ELECTROSTATIC SENSORS AND ACTUATION	9

Principle, material, design and fabrication of parallel plate capacitors as electrostatic sensors and actuators – Applications

UNIT – III	THERMAL SENSING AND ACTUATION	9

Principle, material, design and fabrication of thermal couples, thermal bimorph sensors, thermal resistor sensors – Applications.

UNIT – IV	PIEZOELECTRIC SENSING AND ACTUATION	9

Piezoelectric effect – Cantilever piezoelectric actuator model – Properties of piezoelectric materials – Applications.

UNIT – V	CASE STUDIES	9

Piezo resistive sensors, Magnetic actuation, Micro fluidics applications, medical applications, Optical MEMS – NEMS Devices
Note: Class room discussions and tutorials can include the following guidelines for improved teaching /learning process: Discussions/Exercise/Practice on Workbench: on the basics /device model design aspects of thermal/peizo/resistive sensors etc.

Total Periods:	**45**

Reference Books:

1. Chang Liu, 'Foundations of MEMS', Pearson International Edition,2 006.

3. Boston, 'Micro machined Transducers Sourcebook', WCB McGraw Hill,1998.
4. M. H. Bao 'Micromechanical transducers: Pressure sensors, accelerometers and gyroscopes', Elsevier, New york, 2000.

Course Outcomes (CO)

CO1	Understand basics of micro fabrication, develop models and simulate electrostatic and electromagnetic sensors and actuators.
CO2	Understand material properties important for MEMS system performance, analyze dynamics of resonant micro mechanical structures.
CO3	The learning process delivers insight onto design of micro sensors, embedded sensors & actuators in power aware systems like grid.
CO4	Understand the design process and validation for MEMS devices and systems, and learn the state of the art in optical micro systems.
CO5	Improved Employability and entrepreneurship capacity due to knowledge up gradation on recent trends in embedded systems design.

PE1259	DISTRIBUTED GENERATION AND MICROGRID	L	T	P	C
		3	0	0	3

Objectives

- To illustrate the concept of distributed generation
- To analyze the impact of grid integration.
- To study concept of Microgrid and its configuration

UNIT – I	INTRODUCTION	9

Conventional power generation: advantages and disadvantages, Energy crises, Non–conventional energy (NCE) resources: review of Solar PV, Wind Energy systems, Fuel Cells, micro–turbines, biomass, and tidal sources.

UNIT – II	DISTRIBUTED GENERATIONS (DG)	9

Concept of distributed generations, topologies, selection of sources, regulatory standards/ framework, Standards for interconnecting Distributed resources to electric power systems: IEEE 1547. DG installation classes, security issues in DG implementations. Energy storage elements: Batteries, ultra–capacitors, flywheels. Captive power plants.

UNIT – III	IMPACT OF GRID INTEGRATION	9

Requirements for grid interconnection, limits on operational parameters: voltage, frequency, THD, response to grid abnormal operating conditions, islanding issues. Impact of grid integration with NCE sources on existing power system: reliability, stability and power quality issues.

UNIT – IV	BASICS OF A MICROGRID	9

Concept and definition of Microgrid, Microgrid drivers and benefits, review of sources of Microgrids, typical structure and configuration of a Microgrid, AC and DC microgrids, Power Electronics interfaces in DC and AC Microgrids.

UNIT – V	CONTROL AND OPERATION OF MICROGRID	9

Modes of operation and control of Microgrid: grid connected and islanded mode, Active and reactive power control, protection issues, anti–islanding schemes: passive, active and communication–based techniques, Microgrid communication infrastructure, Power quality issues in Microgrids, regulatory standards, Microgrid economics, Introduction to smart Microgrids.

Total Periods:	**45**

6. John Twidell and Tony Weir, 'Renewable Energy Resources' Taylor and Francis Publications, Second edition 2006.

Course Outcomes (CO)

CO1	Understand the various conventional and non conventional sources of electrical energy.
CO2	Understand the various topologies, standards and energy storage elements of the distributed generations.
CO3	Understand the grid integration, stability and power quality issues of distributed generations.
CO4	Understand the different configurations and interfaces of the Microgrid.
CO5	Understand the control of Microgrids and the concept of smart Microgrids.

PE1351	**HIGH VOLTAGE DIRECT CURRENT TRANSMISSION**	**L**	**T**	**P**	**C**
		3	0	0	3

Objectives

- To impart knowledge on operation, modelling and control of HVDC link.
- To perform steady state analysis of AC/DC system.
- To expose various HVDC simulators.

UNIT – I	**DC POWER TRANSMISSION TECHNOLOGY**	**9**

Introduction – Comparison of AC and DC transmission – Application of DC transmission – Description of DC transmission system – Planning for HVDC transmission – Modern trends in DC transmission – DC breakers – Cables, VSC based HVDC.

UNIT – II	**THYRISTOR BASED HVDC CONVERTERS AND HVDC SYSTEM CONTROL**	**9**

Pulse number, choice of converter configuration – Simplified analysis of Graetz circuit – Converter bridge characteristics – Characteristics of a twelve–pulse converter – Detailed analysis of converters. General principles of DC link control – Converter control characteristics – System control hierarchy – Firing angle control – Current and extinction angle control – Generation of harmonics and filtering – Power control – Higher level controllers – Valve tests

UNIT – III	**MULTI TERMINAL DC SYSTEMS**	**9**

Introduction – Potential applications of MTDC systems – Types of MTDC systems – Control and protection of MTDC systems – Study of MTDC systems

UNIT – IV	**POWER FLOW ANALYSIS IN AC/DC SYSTEMS**	**9**

Per unit system for DC Quantities – Modelling of DC links – Solution of DC load flow – Solution of AC–DC power flow – Unified, Sequential and Substitution of power injection method

UNIT – V	**SIMULATION OF HVDC SYSTEMS**	**9**

Introduction – DC LINK Modelling, Converter Modeling and State Space Analysis, Philosophy and tools – HVDC system simulation, online and off–line simulators – Dynamic interactions between DC and AC systems

Total Periods:	**45**

Text Books:

1. P. Kundur, 'Power System Stability and Control', McGraw–Hill,1993

PE1352	SOLAR AND ENERGY STORAGE SYSTEMS	L	T	P	C
		3	0	0	3

Objectives

- To Study about solar modules and PV system design and their applications.
- To Deal with grid connected PV systems.
- To Discuss about different energy storage systems.

UNIT – I	INTRODUCTION	9

Characteristics of sunlight – Semiconductors and P–N junctions – Behaviour of solar cells – Cell properties – PV cell interconnection.

UNIT – II	STAND ALONE PV SYSTEM	9

Solar modules – Storage systems – Power conditioning and regulation – MPPT– Protection – Stand–alone PV systems design – Sizing.

UNIT – III	GRID CONNECTED PV SYSTEMS	9

PV systems in buildings – Design issues for central power stations – Safety – Economic aspect – Efficiency and performance – International PV programs.

UNIT – IV	ENERGY STORAGE SYSTEMS	9

Impact of intermittent generation – Battery energy storage – Solar thermal energy storage – Pumped hydroelectric energy storage.

UNIT – V	APPLICATIONS	9

Water pumping – Battery chargers – Solar car – Direct–drive applications – Space – Telecommunications.

Text Books:

1. Solanki C.S., 'Solar Photovoltaics: Fundamentals, Technologies and Applications', PHI Learning Pvt. Ltd., 2015.
2. Stuart R. Wenham, Martin A. Green, Muriel E. Watt and Richard Corkish, 'Applied Photovoltaics', Third edition, 2012, Earthscan, UK.

Reference Books:

1. Eduardo Lorenzo G. Araujo, 'Solar electricity engineering of photovoltaic systems', Progensa, 1994.
2. Frank S. Barnes & Jonah G. Levine, 'Large Energy storage Systems Handbook', CRC Press, 2011.

3. McNeils, Frenkel, Desai, 'Solar & Wind Energy Technologies', Wiley Eastern, 1990.
4. S. P. Sukhatme, 'Solar Energy', Fourth edition, Tata McGraw Hill Education, 2017.

Course Outcomes (CO)

CO1	Students will develop more understanding on solar radiation and solar cell interconnections.
CO2	Students will develop basic knowledge on standalone PV system.
CO3	Students will understand the issues in grid connected PV systems.
CO4	Students will study about the modelling of different energy storage systems and their performances.
CO5	Students will attain more on different applications of solar energy.

PE1353	WIND ENERGY CONVERSION SYSTEMS	L	T	P	C
		3	0	0	3

Objectives

- To learn basic scientific working principles, various parts design and efficiency computation theories of wind turbine.
- To learn the design and control principles of Wind turbine.
- To understand the concepts of fixed speed wind energy conversion systems.
- To understand the concepts of variable speed wind energy conversion systems.
- To analyze the grid integration and its issues.

UNIT – I	**INTRODUCTION**	**9**

Components of WECS – WECS schemes – Power obtained from wind – Simple momentum theory – Power coefficient – Sabinin's theory – Aerodynamics of Wind turbine.

UNIT – II	**WIND TURBINES**	**9**

HAWT – VAWT – Power developed – Thrust–Efficiency – Rotor selection – Rotor design considerations – Tip speed ratio – No. of Blades – Blade profile – Power Regulation – Yaw control – Pitch angle control – Stall control – Schemes for maximum power extraction.

UNIT – III	**FIXED SPEED SYSTEMS**	**9**

Generating Systems – Constant speed constant frequency systems – Choice of Generators– Deciding factors – Synchronous Generator – Squirrel Cage Induction Generator – Model of Wind Speed – Model wind turbine rotor – Drive Train model – Generator model for Steady state and Transient stability analysis.

UNIT – IV	**VARIABLESPEED SYSTEMS**	**9**

Need of variable speed systems – Power–wind speed characteristics – Variable speed constant frequency systems synchronous generator – DFIG – PMSG – Variable speed generators modeling Variable speed variable frequency schemes.

UNIT – V	**GRID CONNECTED SYSTEMS**	**9**

Wind interconnection requirements, Low–Voltage Ride Through (LVRT), ramp rate limitations, and supply of ancillary services for frequency and voltage control, current practices and industry trends wind interconnection impact on steady – state and dynamic performance of the power system including modeling issue.

Total Periods:	**45**

Reference Books:

1. L. L. Freris, 'Wind Energy conversion Systems', Prentice Hall, 1990.
2. S. N. Bhadra, D. Kastha, S. Banerjee, 'Wind Electrical Systems', Oxford University Press, 2010.
3. Ion Boldea, 'Variable speed generators', Taylor & Francis group, 2006.

5. N. Jenkins, 'Wind Energy Technology', John Wiley & Sons, 1997.
6. S. Heir, 'Grid Integration of WECS', Wiley 1998.

Course Outcomes (CO)

CO1	Acquire knowledge on the basic concepts of Wind energy conversion system.
CO2	Understand the mathematical modeling and control of the Wind turbine
CO3	Develop more understanding on the design of Fixed speed system.
CO4	Study about the need of Variable speed system and its modeling.
CO5	Able to learn about Grid integration issues and current practices of wind interconnections with power system.

PE1354	ENERGY MANAGEMENT AND AUDITING	L	T	P	C
		3	0	0	3

Objectives

- To study the concepts behind economic analysis and Load management.
- To emphasize the energy management on various electrical equipment and metering.
- To Illustrate the concept of lighting systems and cogeneration.

UNIT – I	INTRODUCTION	9

Need for energy management – Energy basics – Designing and starting an energy management program – Energy accounting – Energy monitoring, targeting and reporting – Energy audit process.

UNIT – II	ENERGY COST AND LOAD MANAGEMENT	9

Important concepts in an economic analysis – Economic models – Time value of money – Utility rate structures – Cost of electricity – Loss evaluation – Load management: Demand control techniques – Utility monitoring and control system – HVAC and energy management – Economic justification.

UNIT – III	ENERGY MANAGEMENT FOR MOTORS, SYSTEMS AND ELECTRICAL EQUIPMENT	9

Systems and equipment – Electric motors – Transformers and reactors – Capacitors and synchronous machines.

UNIT – IV	METERING FOR ENERGY MANAGEMENT	9

Relationships between parameters – Units of measure – Typical cost factors – Utility meters –Timing of meter disc for kilowatt measurement – Demand meters – Paralleling of current transformers – Instrument transformer burdens – Multitasking solid – State meters – Metering location vs. requirements – Metering techniques and practical examples.

UNIT – V	LIGHTING SYSTEMS & COGENERATION	9

Concept of lighting systems – The task and the working space – Light sources – Ballasts – Luminaries – Lighting controls – Optimizing lighting energy – Power factor and effect of harmonics on power quality – Cost analysis techniques – Lighting and energy standards Cogeneration: Forms of cogeneration – Feasibility of cogeneration – Electrical interconnection.

Total Periods:	**45**

Reference Books:

4 'IEEE Recommended Practice for Energy Management in Industrial and Commercial Facilities', IEEE,1996
5 Amit K. Tyagi, 'Handbook on Energy Audits and Management', TERI,2003.

Course Outcomes (CO)

CO1	Students will develop the ability to learn about the need for energy management and auditing process.
CO2	Learners will learn about basic concepts of economic analysis and load management.
CO3	Students will understand the energy management on various electrical equipment.
CO4	Students will have knowledge on the concepts of metering and factors influencing cost function.
CO5	Students will be able to learn about the concept of lighting systems, light sources and various forms of cogeneration.

PE1355	NON–LINEAR DYNAMICS FOR POWER ELECTRONIC CIRCUITS	L	T	P	C
		3	0	0	3

Objectives

- To understand the non–linear behaviour of power electronic converters
- To understand the techniques for investigation on non – linear behaviour of power electronic converters
- To analyze the non – linear phenomena in DC to DC converters
- To analyze the non – linear phenomena in AC and DC Drives
- To introduce the control techniques for control of non – linear behaviour in power electronic systems

UNIT – I	BASICS OF NON–LINEAR DYNAMICS	9

Basics of Nonlinear Dynamics: System, state and state space model, Vector field – Modelling of Linear, nonlinear and Linearized systems, Attractors, chaos, Poincare map, Dynamics of Discrete time system, Lyapunov Exponent, Bifurcations, Bifurcations of smooth map, Bifurcations in piece wise smooth maps, border crossing and border collision bifurcation.

UNIT – II	TECHNIQUES FOR INVESTIGATION OF NON–LINEAR PHENOMENA	9

Techniques for experimental investigation, Techniques for numerical investigation, Computation of averages under chaos, Computations of spectral peaks, Computation of the bifurcation and analyzing stability.

UNIT – III	NON–LINEAR PHENOMENA IN DC–DC CONVERTERS	9

Border collision in the Current Mode controlled Boost Converter, Bifurcation and chaos in the Voltage controlled Buck Converter with latch, Bifurcation and chaos in the Voltage controlled Buck Converter without latch, Bifurcation and chaos in Cuk Converter. Nonlinear phenomenon in the inverter under tolerance band control.

UNIT – IV	NON–LINEAR PHENOMENA IN DRIVES	9

Nonlinear Phenomenon in Current controlled and voltage–controlled DC Drives, Nonlinear Phenomenon in PMSM Drives.

UNIT – V	CONTROL OF CHAOS	9

Hysteresis control, sliding mode and switching surface control, OGY Method, Pyragas method, Time Delay control. Application of the techniques to the Power electronics circuit and drives.

Total Periods: 45

Reference Books:

1. Steven H Strogatz, Nonlinear Dynamics and Chaos, West view Press, 2001.
2. C.K.TSE Complex Behaviour of Switching Power Converters, CRC Press, 2003.
3. George C. Vargheese, July 2001 Wiley – IEEE Press S Banerjee, Nonlinear Phenomena in Power Electronics, IEEE Press 3.

Course Outcomes (CO)

CO1	Ability to comprehend the non – linear behaviour of power electronic converters
CO2	Ability to understand the techniques for investigation on non – linear behaviour of power electronic converters
CO3	To analyse the non–linear phenomena in DC to DC converters
CO4	To analyse the non–linear phenomena in AC and DC Drives
CO5	Ability to explain the control techniques for control of non–linear behaviour in power electronic systems

PS1356	SMART GRID	L	T	P	C
		3	0	0	3

Objectives

- To Study about Smart Grid technologies, different smart meters and advanced metering infrastructure.
- To familiarize the power quality management issues in Smart Grid.
- To familiarize the high–performance computing for Smart Grid application

UNIT – I	INTRODUCTION TO SMART GRID	9

Evolution of Electric Grid, Concept, Definitions and Need for Smart Grid, Smart grid drivers, functions, opportunities, challenges and benefits, Difference between conventional & Smart Grid, National and International Initiatives in Smart Grid

UNIT – II	SMART GRID TECHNOLOGIES	9

Technology Drivers, Smart energy resources, Smart substations, Substation Automation, Feeder Automation, Transmission systems: EMS, FACTS and HVDC, Wide area monitoring, Protection and control, Distribution systems: DMS, Volt/Var control, Fault Detection, Isolation and service restoration, Outage management, High–Efficiency Distribution Transformers, Phase Shifting Transformers, Plug in Hybrid Electric Vehicles (PHEV)

UNIT – III	SMART METERS AND ADVANCED METERING INFRASTRUCTURE	9

Introduction to Smart Meters, Advanced Metering infrastructure (AMI) drivers and benefits, AMI protocols, standards and initiatives, AMI needs in the smart grid, Phasor Measurement Unit(PMU), Intelligent Electronic Devices (IED) & their application for monitoring & protection

UNIT – IV	POWER QUALITY MANAGEMENT INSMART GRID	9

Power Quality & EMC in Smart Grid, Power Quality issues of Grid connected Renewable Energy Sources, Power Quality Conditioners for Smart Grid, Web based Power Quality monitoring, Power Quality Audit

UNIT – V	HIGH PERFORMANCE COMPUTING FOR SMART GRID APPLICATIONS	9

Local Area Network (LAN), House Area Network (HAN), Wide Area Network (WAN), Broadband over Power line (BPL), IP based Protocols, Basics of Web Service and CLOUD Computing to make Smart Grids smarter, Cyber Security for Smart Grid

Total Periods:	**45**

Text Books:

1. Stuart Borlase 'Smart Grid: Infrastructure, Technology and Solutions', CRC Press, 2012.
2. Janaka Ekanayake, Nick Jenkins, Kithsiri Liyanage, Jianzhong Wu, Akihiko Yokoyama, 'Smart Grid: Technology and Applications', Wiley, 2012.

Reference Books:

1. Vehbi C. Güngör, Dilan Sahin, Taskin Kocak, Salih Ergüt, Concettina Buccella, Carlo Cecati and Gerhard P. Hancke, 'Smart Grid Technologies: Communication Technologies and Standards', IEEE Transactions on Industrial Informatics, Vol. 7, No. 4, November 2011.
2. Xi Fang, Satyajayant Misra, Guoliang Xue, and Dejun Yang, 'Smart Grid – The New and Improved Power Grid: A Survey', IEEE Transaction on Smart Grids, Vol. 14, 2012.

Course Outcomes (CO):

CO1	Learners will develop more understanding on the concepts of Smart Grid and its present developments.
CO2	Learners will study about different Smart Grid technologies.
CO3	Learners will acquire knowledge about different smart meters and advanced metering infrastructure.
CO4	Learners will have knowledge on power quality management in Smart Grids
CO5	Learners will develop more understanding on LAN, WAN and Cloud Computing for Smart Grid applications.

PE1357	POWER ELECTRONICS FOR RENEWABLE ENERGY SYSTEMS	L	T	P	C
		3	0	0	3

Objectives

- To provide knowledge about the stand alone and grid connected renewable energy systems.
- To equip with required skills to derive the criteria for the design of power converters for renewable energy applications.
- To analyse and comprehend the various operating modes of wind electrical generators and solar energy systems.
- To design different power converters namely AC to DC, DC to DC and AC to AC converters for renewable energy systems.
- To develop maximum power point tracking algorithms

UNIT – I	INTRODUCTION	9

Environmental aspects of electric energy conversion: impacts of renewable energy generation on environment (cost–GHG Emission) – Qualitative study of different renewable energy resources ocean, Biomass, Hydrogen energy systems: operating principles and characteristics of: Solar PV, Fuel cells, wind electrical systems – Control strategy, operating area.

UNIT – II	ELECTRICAL MACHINES FOR RENEWABLE ENERGY CONVERSION	9

Review of reference theory fundamentals – Principle of operation and analysis: IG, PMSG, SCIG and DFIG.

UNIT – III	POWER ELECTRONICS FOR SOLAR	9

Block diagram of solar photo voltaic system: line commutated converters (inversion–mode) – Boost and buck–boost converters – Selection of inverter, battery sizing, array sizing – Standalone PV systems – Grid tied and grid interactive inverters – Grid connection issues.

UNIT – IV	POWER ELECTRONICS FOR WIND	9

Three phase AC voltage controllers – AC–DC–AC converters: uncontrolled rectifiers, PWM Inverters, matrix converters – Standalone operation of fixed and variable speed wind energy conversion systems – Grid connection Issues – Grid integrated PMSG and SCIG Based WECS.

UNIT – V	HYBRID RENEWABLE ENERGY SYSTEMS	9

Need for Hybrid Systems – Range and type of Hybrid Systems – Case studies of Wind – PV– Maximum Power Point Tracking (MPPT).

Total Periods:	**45**

Text Books:

1 S. N. Bhadra, D. Kastha, & S. Banerjee 'Wind Electrical Systems', Oxford University Press, 2009.
2 M. H. Rashid, 'Power electronics Hand book', Academic press, 2001.
3 G.D. Rai, 'Non–conventional energy sources', Khanna publishes, 1993.
4 G.D. Rai, 'Solar energy utilization', Khanna publishes, 1993.

Reference Books:

1 Gray, L. Johnson, 'Wind energy system', Prentice Hall linc, 1995.
2 B. H. Khan, 'Non–conventional Energy sources', Tata McGraw Hill Publishing Company.

4 Fang Lin Luo Hong Ye, 'Renewable Energy systems', Taylor & Francis Group, 2013.
5 R. Seyezhai and R. Ramaprabha, 'Power Electronics for Renewable Energy Systems', Scitech Publications, 2015.

Course Outcomes (CO)

CO1	Discuss and analyze the various types of renewable energy sources
CO2	Analyze the performance of IG, PMSG, SCIG AND DFIG
CO3	Design different power converters namely AC to DC, DC to DC and AC to AC converters for renewable energy sources
CO4	Analyze various operating modes of wind electrical generators and solar energy systems
CO5	Develop maximum power point tracking algorithms

PE1358	ROBOTICS AND CONTROL	L	T	P	C
		3	0	0	3

Objectives

- To introduce robot terminologies and robotic sensors
- To educate direct and inverse kinematic relations
- To educate on formulation of manipulator Jacobians and introduce path planning techniques
- To educate on robot dynamics
- To introduce robot control techniques

UNIT – I	**INTRODUCTION AND TERMINOLOGIES**	**9**

Definition – Classification – History – Robot's components – Degrees of freedom – Robot joints – Coordinates – Reference frames – Workspace – Robot languages – Actuators – Sensors: Position, Velocity, Acceleration, Torque, Tactile, Touch, Proximity and range sensors – Vision system – Social issues.

UNIT – II	**KINEMATICS**	**9**

Mechanism – Matrix representation – Homogenous transformation – DH representation – Inverse kinematics solution and programming – Degeneracy and Dexterity

UNIT – III	**DIFFERENTIAL MOTION AND PATH PLANNING**	**9**

Jacobian – Differential motion of frames – Interpretation – Calculation of Jacobian – Inverse Jacobian – Robot Path planning.

UNIT – IV	**DYNAMIC MODELLING**	**9**

Lagrangian mechanics – Two–DOF manipulator – Lagrange – Euler formulation – Newton – Euler formulation – Inverse dynamics

UNIT – V	**ROBOT CONTROL SYSTEM**	**9**

Linear control schemes – Joint actuators – Decentralized PID control – Computed torque control – Force control – Hybrid position force control – Impedance / Torque control

Total Periods: 45

Text Books:

1. R.K. Mittal and I J Nagrath, 'Robotics and Control', Tata MacGraw Hill, Fourth edition.
2. Saeed B. Niku, 'Introduction to Robotics', Pearson Education, 2002.

Reference Books:

1. K. S. Fu, R.C. Gonzalez and C.S.G. Lee, 'Robotics: Control, Sensing, Vision and Intelligence' McGraw Hill Education India, 1986.

3. R.D. Klafter, T. A. Chmielewski and M. Negin, 'Robotic Engineering – An Integrated Approach', Prentice Hall, 2003.
4. M. P. Groover, 'Industrial Robotics – Technology Programming and Applications', McGraw Hill, 2001.

Course Outcomes (CO)

CO1	Ability to understand the components and basic terminology of Robotics
CO2	Ability to understand the basics of kinematics relations
CO3	Ability to model the motion of Robots and analyze the workspace and trajectory panning of robots
CO4	Ability to develop application–based Robots
CO5	Ability to formulate models for the control of mobile robots in various industrial applications

PE1359	NON–LINEAR CONTROL	L	T	P	C
		3	0	0	3

Objectives

- To impart knowledge on phase plane analysis of non–linear systems.
- To impart knowledge on Describing function–based approach to non–linear systems.
- To educate on stability analysis of systems using Lyapunov's theory.
- To introduce the concept of sliding mode control.

UNIT – I	PHASE PLANE ANALYSIS	9

Concepts of phase plane analysis – Phase portraits – Singular points – Symmetry in phase plane portraits – Constructing Phase Portraits – Phase plane Analysis of Linear and Nonlinear Systems – Existence of Limit Cycles. simulation of phase portraits in MATLAB.

UNIT – II	DESCRIBING FUNCTION	9

Describing Function Fundamentals – Definitions – Assumptions – Computing Describing Functions – Common Nonlinearities and its Describing Functions – Nyquist Criterion and its Extension – Existence of Limit Cycles – Stability of limit Cycles. Simulation of limit cycles in MATLAB.

UNIT – III	LYAPUNOV THEORY	9

Nonlinear Systems and Equilibrium Points – Concepts of Stability – Linearization and Local Stability – Lyapunov's Direct Method – Positive definite Functions and Lyapunov Functions – Equilibrium Point Theorems – Invariant Set Theorems – LTI System Analysis based on Lyapunov's Direct Method – Krasovski's Method – Variable Gradient Method – Physically – Control Design based on Lyapunov's Direct Method.

UNIT – IV	FEEDBACK LINEARIZATION	9

Feedback Linearization and the Canonical Form–Mathematical Tools – Input–State Linearization of SISO Systems – input–Output Linearization of SISO Systems – Generating a Linear Input – Output Relation – Normal Forms – The Zero–Dynamics – Stabilization and Tracking – Inverse Dynamics and Non–Minimum–Phase Systems – Feedback Linearization of MIMO Systems Zero–Dynamics and Control Design. Simulation of tracking problems in MATLAB.

UNIT – V	SLIDING MODE CONTROL	9

Sliding Surfaces – Continuous approximations of Switching Control laws – The Modelling / Performance Trade – Offs – MIMO Systems. Simulation of sliding mode controller in MATLAB.

Total Periods: 45

Text Books:

1 J. A. E. Slotine and W. Li, Applied Nonlinear control, PHI,1991.
2 K. P. Mohandas, Modern Control Engineering, Sanguine, India,2006.
3 Hasan Khalil, 'Nonlinear systems and control', Prentice Hall, 2002.

2 Torkel Glad and Lennart Ljung, 'Control Theory – Multivariable and Nonlinear Methods', Taylor& Francis, 2002.
3 G. J. Thaler, 'Automatic control systems', Jaico publishers, 2006.

Course Outcomes (CO)

CO1	Ability to understand the phase plane analysis of non–linear systems.
CO2	Ability to understand the function–based approach to non–linear systems
CO3	Ability to understand the stability analysis of systems using Lyapunov's theory.
CO4	Ability to understand about feedback linearization.
CO5	Ability to introduce the concept of sliding mode control.

OE1001	Business Data Analytics	L	T	P	C
		2	0	0	0

Objectives

- To understand the basics of business analytics and its life cycle.
- To gain knowledge about fundamental business analytics.
- To learn modeling for uncertainty and statistical inference.
- To understand analytics using Hadoop and Map Reduce frameworks.
- To acquire insight on other analytical frameworks.

UNIT – I	OVERVIEW OF BUSINESS ANALYTICS	9

Introduction – Drivers for Business Analytics – Applications of Business Analytics: Marketing and Sales, Human Resource, Healthcare, Product Design, Service Design, Customer Service and Support – Skills Required for a Business Analyst – Framework for Business Analytics Life Cycle for Business Analytics Process.

Suggested Activities:

- Case studies on applications involving business analytics.
- Converting real–time decision–making problems into hypothesis.
- Group discussion on entrepreneurial opportunities in Business Analytics.

Suggested Evaluation Methods:

- Assignment on business scenario and business analytical life cycle process.
- Group presentation on big data applications with societal need.
- Quiz on case studies.

UNIT – II	ESSENTIALS OF BUSINESS ANALYTICS	9

Descriptive Statistics – Using Data – Types of Data – Data Distribution Metrics: Frequency, Mean, Median, Mode, Range, Variance, Standard Deviation, Percentile, Quartile, Z–Score, Covariance, Correlation – Data Visualization: Tables, Charts, Line Charts, Bar and Column Chart, Bubble Chart, Heat Map – Data Dashboards.

Suggested Activities:

- Solve numerical problems on basic statistics.
- Explore chart wizard in MS Excel Case using sample real time data for data visualization.
- Use R tool for data visualization.

Suggested Evaluation Methods:

- Assignment on descriptive analytics using benchmark data.
- Quiz on data visualization for univariate, bivariate data.

UNIT – III	**MODELING UNCERTAINTY AND STATISTICAL INFERENCE**	**9**

Modeling Uncertainty: Events and Probabilities – Conditional Probability – Random Variables – Discrete Probability Distributions – Continuous Probability Distribution – Statistical Inference: Data Sampling – Selecting a Sample – Point Estimation – Sampling Distributions – Interval Estimation – Hypothesis Testing.

Suggested Activities:

- Solving numerical problems in sampling, probability, probability distributions and
- Hypothesis testing.
- Converting real–time decision–making problems into hypothesis.

Suggested Evaluation Methods:

- Assignments on hypothesis testing.
- Group presentation on real time applications involving data sampling and hypothesis testing.
- Quizzes on topics like sampling and probability.

UNIT – IV	**ANALYTICS USING HADOOP AND MAPREDUCE FRAMEWORK**	**9**

Introducing Hadoop – RDBMS versus Hadoop – Hadoop Overview – HDFS (Hadoop Distributed File System) – Processing Data with Hadoop – Introduction to MapReduce – Features of MapReduce – Algorithms Using Map–Reduce: Matrix–Vector Multiplication, Relational Algebra Operations, Grouping and Aggregation – Extensions to MapReduce.

Suggested Activities:

- Practical – Install and configure Hadoop.
- Practical – Use web–based tools to monitor Hadoop setup.
- Practical – Design and develop MapReduce tasks for word count, searching involving text corpus etc.

Suggested Evaluation Methods:

- Evaluation of the practical implementations.
- Quizzes on topics like HDFS and extensions to MapReduce.

UNIT – V	**OTHER DATA ANALYTICAL FRAMEWORKS**	**9**

Overview of Application development Languages for Hadoop – PigLatin – Hive – Hive Query Language (HQL) – Introduction to Pentaho, JAQL – Introduction to Apache: Sqoop, Drill and Spark, Cloudera Impala – Introduction to NoSQL Databases – Hbase and MongoDB.

Suggested Activities:

- Practical – Installation of NoSQL database like MongoDB.
- Practical – Demonstration on Sharding in MongoDB.
- Practical – Install and run Pig
- Practical – Write PigLatin scripts to sort, group, join, project, and filter data.
- Design and develop algorithms to be executed in MapReduce involving numerical methods for analytics.

Suggested Evaluation Methods:

- Mini Project (Group) – Real time data collection, saving in NoSQL, implement analytical techniques using Map–Reduce Tasks and Result Projection

Total Periods: 45

Reference Books:

1. Vignesh Prajapati, 'Big Data Analytics with R and Hadoop', Packt Publishing, 2013.

Course Outcomes (CO)

CO1	Identify the real–world business problems and model with analytical solutions.
CO2	Solve analytical problem with relevant mathematics background knowledge.
CO3	Convert any real–world decision–making problem to hypothesis and apply suitable statistical testing.
CO4	Write and demonstrate simple applications involving analytics using Hadoop and MapReduce
CO5	Use open–source frameworks for modeling and storing data and apply suitable visualization technique using R for visualizing voluminous data

OE1002	INDUSTRIAL SAFETY	L	T	P	C
		2	0	0	0

Objectives

- Summarize basics of industrial safety
- Describe fundamentals of maintenance engineering
- Explain wear and corrosion
- Illustrate fault tracing
- Identify preventive and periodic maintenance

UNIT – I	INTRODUCTION	9

Accident, causes, types, results and control, mechanical and electrical hazards, types, causes and preventive steps / procedure, describe salient points of factories act 1948 for health and safety, wash rooms, drinking water layouts, light, cleanliness, fire, guarding, pressure vessels, etc, Safety color codes. Fire prevention and firefighting, equipment and methods.

UNIT – II	FUNDAMENTALS OF MAINTENANCE ENGINEERING	9

Definition and aim of maintenance engineering, Primary and secondary functions and responsibility of maintenance department, Types of maintenance, Types and applications of tools used for maintenance, Maintenance cost & its relation with replacement economy, Service life of equipment.

UNIT – III	WEAR AND CORROSION AND THEIR PREVENTION	9

Wear– types, causes, effects, wear reduction methods, lubricants–types and applications, Lubrication methods, general sketch, working and applications, i. Screw down grease cup, ii. Pressure grease gun, iii. Splash lubrication, iv. Gravity lubrication, v. Wick feed lubrication vi. Side feed lubrication, vii. Ring lubrication, Definition, principle and factors affecting the corrosion. Types of corrosion, corrosion prevention methods.

UNIT – IV	FAULT TRACING	9

Fault tracing–concept and importance, decision tree concept, need and applications, sequence of fault–finding activities, show as decision tree, draw decision tree for problems in machine tools, hydraulic, pneumatic, automotive, thermal and electrical equipment's like, i. Any one machine tool, ii. Pump iii. Air compressor, iv. Internal combustion engine, v. Boiler, vi. Electrical motors, Types of faults in machine tools and their general causes.

UNIT – V	PERIODIC AND PREVENTIVE MAINTENANCE	9

Periodic inspection–concept and need, degreasing, cleaning and repairing schemes, overhauling of mechanical components, overhauling of electrical motor, common troubles and remedies of electric motor, repair complexities and its use, definition, need, steps and advantages of preventive maintenance. Steps/procedure for periodic and preventive maintenance of: i. Machine tools, ii. Pumps, iii. Air compressors, iv. Diesel generating (DG) sets, Program and schedule of preventive maintenance of mechanical and electrical equipment, advantages of preventive maintenance. Repair cycle concept and importance

Total Periods: 45

Reference Books:

1. Audels, 'Pump–hydraulic Compressors', Mcgrew Hill Publication, 1978.
2. H. P. Garg, 'Maintenance Engineering', S. Chand and Company, 1987.
3. Hans F. Winterkorn, 'Foundation Engineering Handbook', Chapman & Hall London, 2013.
4. Higgins & Morrow,' Maintenance Engineering Handbook', Eighth Edition, 2008.

Course Outcomes (CO)

CO1	Ability to summarize basics of industrial safety
CO2	Ability to describe fundamentals of maintenance engineering
CO3	Ability to explain wear and corrosion
CO4	Ability to illustrate fault tracing
CO5	Ability to identify preventive and periodic maintenance

Course Outcomes	**Program Outcomes**												**PSO**

OE1003	OPERATIONS RESEARCH	L	T	P	C
		2	0	0	0

Objectives

- Solve linear programming problem and solve using graphical method.
- Solve LPP using simplex method
- Solve transportation, assignment problems
- Solve project management problems
- Solve scheduling problems

UNIT – I	LINEAR PROGRAMMING	9

Introduction to Operations Research – assumptions of linear programming problems – Formulations of linear programming problem – Graphical method

UNIT – II	ADVANCES IN LINEAR PROGRAMMING	9

Solutions to LPP using simplex algorithm – Revised simplex method – Primal dual relationships – Dual simplex algorithm – Sensitivity analysis

UNIT – III	NETWORK ANALYSIS – I	9

Transportation problems – Northwest corner rule, least cost method, Voges's approximation method – Assignment problem – Hungarian algorithm

UNIT – IV	NETWORK ANALYSIS – II	9

Shortest path problem: Dijkstra's algorithms, Floyd's algorithm, systematic method – CPM / PERT

UNIT – V	NETWORK ANALYSIS – III	9

Scheduling and sequencing – Single server and multiple server models – Deterministic inventory models – Probabilistic inventory control models

Total Periods: 45

Reference Books:

1. Harvey M Wagner, 'Principles of Operations Research', Prentice Hall of India, 2010.

OE1004	COST MANAGEMENTOF ENGINEERING PROJECTS	L	T	P	C
		2	0	0	0

Objectives

- Summarize the costing concepts and their role in decision making
- Infer the project management concepts and their various aspects in selection
- Interpret costing concepts with project execution
- Develop knowledge of costing techniques in service sector and various budgetary control techniques
- Illustrate with quantitative techniques in cost management

UNIT – I	INTRODUCTION TO COSTING CONCEPTS	9

Objectives of a Costing System; Cost concepts in decision–making; Relevant cost, Differential cost, Incremental cost and Opportunity cost; Creation of a Database for operational control.

UNIT – II	INTRODUCTION TO PROJECT MANAGEMENT	9

Project: meaning, Different types, why to manage, cost overruns centres, various stages of project execution: conception to commissioning. Project execution as conglomeration of technical and nontechnical activities, Detailed Engineering activities, Pre project execution main clearances and documents, Project team: Role of each member, Importance Project site: Data required with significance, Project contracts.

UNIT – III	PROJECT EXECUTION AND COSTING CONCEPTS	9

Project execution Project cost control, Bar charts and Network diagram, Project commissioning: mechanical and process, Cost Behavior and Profit Planning Marginal Costing; Distinction between Marginal Costing and Absorption Costing; Break–even Analysis, Cost–Volume–Profit Analysis, Various decision–making problems, Pricing strategies: Pareto Analysis, Target costing, Life Cycle Costing.

UNIT – IV	COSTING OF SERVICE SECTOR AND BUDGETERY CONTROL	9

Just–in–time approach, Material Requirement Planning, Enterprise Resource Planning, Activity– Based Cost Management, Bench Marking; Balanced Score Card and Value–Chain Analysis, Budgetary Control: Flexible Budgets; Performance budgets; Zero–based budgets.

UNIT – V	QUANTITATIVE TECHNIQUES FOR COST MANAGEMENT	9

Linear Programming, PERT/CPM, Transportation problems, Assignment problems, Learning Curve Theory.

Total Periods:	**45**

Reference Books:

1. Ashish K. Bhattacharya, 'Principles & Practices of Cost Accounting' A. H. Wheeler publisher, 1991.
2. Charles T. Horngren and George Foster, 'Advanced Management Accounting', Pearson Prentice Hall, 1988.
3. Charles T. Horngren et. Al. 'Cost Accounting A Managerial Emphasis', Prentice Hall of India, New Delhi, 2011.
4. Robert S Kaplan and Anthony A. Alkinson, 'Management & Cost Accounting', Pearson Prentice Hall, 2003.
5. N. D. Vohra, 'Quantitative Techniques in Management', Tata McGraw Hill Book Co. Ltd, 2007.

Course Outcomes (CO)

CO1	Understand the costing concepts and their role in decision making
CO2	Understand the project management concepts and their various aspects in selection
CO3	Interpret costing concepts with project execution
CO4	Gain knowledge of costing techniques in service sector and various budgetary control techniques
CO5	Become familiar with quantitative techniques in cost management

OE1005	COMPOSITE MATERIALS	L	T	P	C
		2	0	0	0

Objectives

- Summarize the characteristics of composite materials and effect of reinforcement in composite materials.
- Identify the various reinforcements used in composite materials.
- Compare the manufacturing process of metal matrix composites.
- Understand the manufacturing processes of polymer matrix composites.
- Analyze the strength of composite materials.

UNIT – I	INTRODUCTION	9

Definition – Classification and characteristics of Composite materials – Advantages and application of composites – Functional requirements of reinforcement and matrix – Effect of reinforcement (size, shape, distribution, volume fraction) on overall composite performance.

UNIT – II	REINFORCEMENTS	9

Preparation–layup, curing, properties and applications of glass fibers, carbon fibers, Kevlar fibers and Boron fibers – Properties and applications of whiskers, particle reinforcements – Mechanical Behavior of composites: Rule of mixtures, Inverse rule of mixtures – Isostrain and Isostress conditions.

UNIT – III	MANUFACTURING OF METAL MATRIX COMPOSITES	9

Casting – Solid State diffusion technique – Cladding – Hot Isostatic pressing – Properties and applications. Manufacturing of Ceramic Matrix Composites: Liquid Metal Infiltration – Liquid phase sintering. Manufacturing of Carbon – Carbon composites: Knitting, Braiding, Weaving – Properties and applications.

UNIT – IV	MANUFACTURING OF POLYMER MATRIX COMPOSITES	9

Preparation of Moulding compounds and prepregs – hand layup method – Autoclave method – Filament winding method – Compression moulding – Reaction injection moulding – Properties and applications.

UNIT – V	STRENGTH	9

Laminar Failure Criteria–strength ratio, maximum stress criteria, maximum strain criteria, interacting failure criteria, hygrothermal failure. Laminate first play failure–insight strength; Laminate strength–ply discount truncated maximum strain criterion; strength design using caplet plots; stress concentrations.

Total Periods:	**45**

Reference Books:

1. R. W. Cahn, 'Material Science and Technology', Vol. 13, Composites, VCH, West Germany.
2. Callister, W.D Jr., Adapted by Balasubramaniam R, 'Materials Science and Engineering, An introduction', John Wiley & Sons, NY, Indian edition, 2007.
3. K. K. Chawla, 'Composite Materials', 2013.
4. G. Lubin, Hand Book of Composite Materials, 2013.

Course Outcomes (CO)

CO1	Know the characteristics of composite materials and effect of reinforcement in composite materials.
CO2	Know the various reinforcements used in composite materials.
CO3	Understand the manufacturing processes of metal matrix composites.
CO4	Understand the manufacturing processes of polymer matrix composites.
CO5	Analyze the strength of composite materials.

OE1006	WASTE TO ENERGY	L	T	P	C
		2	0	0	0

Objectives

- Interpret the various types of wastes from which energy can be generated
- Develop knowledge on biomass pyrolysis process and its applications
- Develop knowledge on various types of biomass gasifiers and their operations
- Invent knowledge on biomass combustors and its applications on generating energy
- Summarize the principles of bio–energy systems and their features

UNIT – I	INTRODUCTION TO EXTRACTION OF ENERGY FROM WASTE	9

Classification of waste as fuel – Agro based, Forest residue, Industrial waste – MSW – Conversion devices – Incinerators, gasifiers, digestors

UNIT – II	BIOMASS PYROLYSIS	9

Pyrolysis – Types, slow fast – Manufacture of charcoal – Methods – Yields and application – Manufacture of pyrolytic oils and gases, yields and applications.

UNIT – III	BIOMASS GASIFICATION	9

Gasifiers – Fixed bed system – Downdraft and updraft gasifiers – Fluidized bed gasifiers – Design, construction and operation – Gasifier burner arrangement for thermal heating – Gasifier engine arrangement and electrical power – Equilibrium and kinetic consideration in gasifier operation.

UNIT – IV	BIOMASS COMBUSTION	9

Biomass stoves – Improved chullahs, types, some exotic designs, Fixed bed combustors, Types, inclined grate combustors, Fluidized bed combustors, Design, construction and operation – Operation of all the above biomass combustors.

UNIT – V	BIO ENERGY	9

Properties of biogas (Calorific value and composition), Biogas plant technology and status – Bio energy system – Design and constructional features – Biomass resources and their classification – Biomass conversion processes – Thermo chemical conversion – Direct combustion – biomass gasification – pyrolysis and liquefaction – biochemical conversion – anaerobic digestion – Types of biogas Plants – Applications – Alcohol production from biomass – Bio diesel production – Urban waste to energy conversion – Biomass energy programme in India.

Total Periods:	**45**

Reference Books:

1. K. C. Khandelwal and S. S. Mahdi, 'Biogas Technology – A Practical Hand Book – Vol. I & II', Tata McGraw Hill Publishing Co. Ltd., 1983.
2. C. Y. WereKo–Brobby and E. B. Hagan, 'Biomass Conversion and Technology', John Wiley & Sons, 1996.
3. D. S. Challal, 'Food, Feed and Fuel from Biomass', IBH Publishing Co. Pvt. Ltd., 1991.
4. Ashok V. Desai, 'Non–Conventional Energy', Wiley Eastern Ltd., 1990.

Course Outcomes (CO)

CO1	Understand the various types of wastes from which energy can be generated
CO2	Gain knowledge on biomass pyrolysis process and its applications
CO3	Develop knowledge on various types of biomass gasifiers and their operations
CO4	Gain knowledge on biomass combustors and its applications on generating energy
CO5	Understand the principles of bio–energy systems and their features

AX1001	ENGLISH FOR RESEARCH PAPER WRITING	L	T	P	C
		2	0	0	0

Objectives

- Teach how to improve writing skills and level of readability.
- Tell about what to write in each section.
- Summarize the skills needed when writing a title.
- Infer the skills needed when writing the conclusion.
- Ensure the quality of paper at very first–time submission.

UNIT – I	INTRODUCTION TO RESEARCH PAPER WRITING	6

Planning and Preparation, Word Order, breaking up long sentences, Structuring Paragraphs and Sentences, Being Concise and Removing Redundancy, Avoiding Ambiguity and Vagueness.

UNIT – II	PRESENTATION SKILLS	6

Clarifying Who Did What, Highlighting Your Findings, Hedging and Criticizing, Paraphrasing and Plagiarism, Sections of a Paper, Abstracts, Introduction.

UNIT – III	TITLE WRITING SKILLS	6

Key skills are needed when writing a Title, key skills are needed when writing an Abstract, key skills are needed when writing an Introduction, skills needed when writing a Review of the Literature, Methods, Results, Discussion, Conclusions, The Final Check.

UNIT – IV	RESULT WRITING SKILLS	6

Skills are needed when writing the Methods, skills needed when writing the Results, skills are needed when writing the Discussion, skills are needed when writing the Conclusions.

UNIT – V	VERIFICATION SKILLS	6

Useful phrases, checking Plagiarism, how to ensure paper is as good as it could possibly be the first–time submission.

Total Periods:	**30**

Reference Books:

1. Adrian Wallwork, 'English for Writing Research Papers', Springer New York Dordrecht Heidelberg London, 2011.
2. R. Day, 'How to Write and Publish a Scientific Paper', Cambridge University Press, 2006.
3. R. Goldbort, 'Writing for Science', Yale University Press, 2006.
4. N. Highman, 'Handbook of Writing for the Mathematical Sciences', SIAM, Highman's book, 1998.

Course Outcomes (CO)

CO1	Understand that how to improve your writing skills and level of readability
CO2	Learn about what to write in each section
CO3	Understand the skills needed when writing a Title
CO4	Understand the skills needed when writing the Conclusion
CO5	Ensure the good quality of paper at very first–time submission

AX1002	DISASTER MANAGEMENT	L	T	P	C
		2	0	0	0

Objectives

- Summarize basics of disaster
- Explain a critical understanding of key concepts in disaster risk reduction and humanitarian response.
- Illustrate disaster risk reduction and humanitarian response policy and practice from multiple perspectives.
- Describe an understanding of standards of humanitarian response and practical relevance in specific types of disasters and conflict situations.
- Develop the strengths and weaknesses of disaster management approaches.

UNIT – I	INTRODUCTION	6

Disaster: Definition, Factors and Significance; Difference between Hazard and Disaster; Natural and Manmade Disasters: Difference, Nature, Types and Magnitude.

UNIT – II	REPERCUSSIONS OF DISASTERS AND HAZARDS	6

Economic Damage, Loss of Human and Animal Life, Destruction of Ecosystem. Natural Disasters: Earthquakes, Volcanisms, Cyclones, Tsunamis, Floods, Droughts and Famines, Landslides And Avalanches, Man–made disaster: Nuclear Reactor Meltdown, Industrial Accidents, Oil Slicks And Spills, Outbreaks of Disease And Epidemics, War And Conflicts.

UNIT – III	DISASTER PRONE AREAS IN INDIA	6

Study of Seismic Zones; Areas Prone to Floods and Droughts, Landslides And Avalanches; Areas Prone To Cyclonic and Coastal Hazards with Special Reference to Tsunami; Post–Disaster Diseases and Epidemics

UNIT – IV	DISASTER PREPAREDNESS AND MANAGEMENT	6

Preparedness: Monitoring of Phenomena Triggering a Disaster or Hazard; Evaluation of Risk: Application of Remote Sensing, Data from Meteorological and Other Agencies, Media Reports: Governmental and Community Preparedness.

UNIT – V	RISK ASSESSMENT	6

Disaster Risk: Concept and Elements, Disaster Risk Reduction, Global and National Disaster Risk Situation. Techniques of Risk Assessment, Global Co–Operation in Risk Assessment and Warning, People's Participation in Risk Assessment. Strategies for Survival

Total Periods: 30

Reference Books:

1. S. L. Goel, 'Disaster Administration and Management Text And Case Studies', Deep & Deep Publication, Pvt. Ltd., New Delhi, 2009.
2. Nishitha Rai, A. K. Singh, 'Disaster Management in India: Perspectives, issues and strategies', New Royal book Company, 2007.
3. Sahni, Pardeep, Et. Al., 'Disaster Mitigation Experiences And Reflections', Prentice Hall of India, New Delhi, 2001.

Course Outcomes (CO)

CO1	Ability to summarize basics of disaster
CO2	Ability to explain critical understanding of key concepts in disaster risk reduction and humanitarian response
CO3	Ability to illustrate disaster risk reduction and humanitarian response policy and practice from multiple perspectives.
CO4	Ability to describe an understanding of standards of humanitarian response and practical relevance in specific types of disasters and conflict situations.
CO5	Ability to develop the strengths and weaknesses of disaster management approaches

AX1003	**VALUE EDUCATION**	**L**	**T**	**P**	**C**
		2	0	0	0

Objectives

- Understand value of education and self–development
- Imbibe good values in students
- Let the students know about the importance of character

UNIT – I		**6**

Values and self–development–Social values and individual attitudes. Work ethics, Indian vision of humanism. Moral and non–moral valuation. Standards and principles. Value judgements

UNIT – II		**6**

Importance of cultivation of values. Sense of duty. Devotion, Self–reliance. Confidence, Concentration. Truthfulness, Cleanliness. Honesty, Humanity. Power of faith, National Unity. Patriotism. Love for nature, Discipline.

UNIT – III		**6**

Personality and Behavior Development–Soul and Scientific attitude. Positive Thinking. Integrity and discipline. Punctuality, Love and Kindness. Avoid fault Thinking. Free from anger, Dignity of labour. Universal brother hood and religious tolerance. True friendship. Happiness Vs suffering, love for truth. Aware of self–destructive habits. Association and Cooperation. Doing best for saving nature.

UNIT – IV		**6**

Character and Competence – Holy books vs Blind faith. Self–management and good health. Science of reincarnation. Equality, Nonviolence, Humility, Role of Women. All religions and same message. Mind your Mind, Self–control. Honesty, Studying effectively.

Total Periods:	**30**

Reference Books:

1. Chakroborty, S.K.'Values and Ethics for organizations Theory and practice', Oxford University Press, New Delhi

Course Outcomes (CO)

CO1	Knowledge of self–development
CO2	Learn the importance of Human values
CO3	Developing the overall personality.
CO4	Developing the competence and self–control

Course Outcomes	Program Outcomes												PSO				
	a	b	c	d	e	f	g	h	i	j	k	l	1	2	3	4	5

AX1004	CONSTITUTION OF INDIA	L	T	P	C
		2	0	0	0

Objectives

- Understand the premises informing the twin themes of liberty and freedom from a civil rights perspective.
- To address the growth of Indian opinion regarding modern Indian intellectuals' constitutional
- Role and entitlement to civil and economic rights as well as the emergence nation hood in the early years of Indian nationalism.
- To address the role of socialism in India after the commencement of the Bolshevik Revolution in 1917and its impact on the initial drafting of the Indian Constitution.

UNIT – I	HISTORY OF MAKING OF THE INDIAN CONSTITUTION	5

History, Drafting Committee, (Composition & Working)

UNIT – II	PHILOSOPHY OF THE INDIAN CONSTITUTION	5

Preamble, Salient Features

UNIT – III	CONTOURS OF CONSTITUTIONAL RIGHTS AND DUTIES	5

Fundamental Rights, Right to Equality, Right to Freedom, Right against Exploitation, Right to Freedom of Religion, Cultural and Educational Rights, Right to Constitutional Remedies, Directive Principles of State Policy, Fundamental Duties.

UNIT – IV	ORGANS OF GOVERNANCE	5

Parliament, Composition, Qualifications and Disqualifications, Powers and Functions, Executive, President, Governor, Council of Ministers, Judiciary, Appointment and Transfer of Judges, Qualifications, Powers and Functions.

UNIT – V	LOCAL ADMINISTRATION	5

District's Administration head: Role and Importance, Municipalities: Introduction, Mayor and role of Elected Representative, CEO, Municipal Corporation. Panchayati raj: Introduction, PRI: Zila Panchayat. Elected officials and their roles, CEO Zila Panchayat: Position and role. Block level: Organizational Hierarchy (Different departments), Village level: Role of Elected and Appointed officials, Importance of grass root democracy.

UNIT – VI	ELECTION COMMISSION	5

Election Commission: Role and Functioning. Chief Election Commissioner and Election Commissioners – Institute and Bodies for the welfare of SC/ST/OBC and women.

Total Periods:	**30**

Reference Books:

1. The Constitution of India, 1950 (Bare Act), Government Publication.
2. Dr. S. N. Busi, Dr. B. R. Ambedkar 'Framing of Indian Constitution', 1st Edition, 2015.
3. M. P. Jain, Indian Constitution Law, 7th Edition, Lexis Nexis, 2014.
4. D.D. Basu, Introduction to the Constitution of India, Lexis Nexis, 2015

Course Outcomes (CO)

CO1	Discuss the growth of the demand for civil rights in India for the bulk of Indians before the arrival of Gandhi in Indian politics
CO2	Discuss the intellectual origins of the framework of argument that informed the conceptualization of social reforms leading to revolution in India
CO3	Discuss the circumstances surrounding the foundation of the Congress Socialist Party [CSP] under the leadership of Jawaharlal Nehru and the eventual failure of the proposal of direct elections through adult suffrage in the Indian Constitution
CO4	Discuss the passage of the Hindu Code Bill of 1956.

Course Outcomes	Program Outcomes												PSO

AX1005	PEDAGOGY STUDIES	L	T	P	C
		2	0	0	0

Objectives

- Review existing evidence on their view topic to inform programme design and policy
- Making under taken by the DFID, other agencies and researchers.
- Identify critical evidence gaps to guide the development

UNIT – I	INTRODUCTION AND METHODOLOGY	6

Aims and rationale, Policy background, Conceptual framework and terminology – Theories of learning, Curriculum, Teacher education – Conceptual framework, Research questions – Overview of methodology and Searching.

UNIT – II	THEMATIC OVERVIEW	6

Pedagogical practices are being used by teachers in formal and informal classrooms in developing countries – Curriculum, Teacher education.

UNIT – III	EVIDENCE ON THE EFFECTIVENESS OF PEDAGOGICAL PRACTICES	6

Methodology for the in–depth stage: quality assessment of included studies – How can teacher education (curriculum and practicum) and the school curriculum and guidance materials best support effective pedagogy? – Theory of change – Strength and nature of the body of evidence for effective pedagogical practices – Pedagogic theory and pedagogical approaches – Teachers' attitudes and beliefs and Pedagogic strategies.

UNIT – IV	PROFESSIONAL DEVELOPMENT	6

Professional development: alignment with classroom practices and follow up support – Peer support – Support from the head teacher and the community – Curriculum and assessment – Barriers to learning: limited resources and large class sizes.

UNIT – V	RESEARCH GAPS AND FUTURE DIRECTIONS	6

Research design – Contexts – Pedagogy – Teacher education – Curriculum and assessment – Dissemination and research impact.

Total Periods:	**30**

Course Outcomes (CO)

CO1	Students will be able to understand what pedagogical practices are being used by teachers in informal and informal classrooms in developing countries.
CO2	Students will be able to understand the evidence on the effectiveness of these pedagogical practices, in what conditions, and with what population of learners.
CO3	Students will be able to understand how can teacher education (curriculum and practicum) and the school curriculum and guidance materials best support effective pedagogy.

Course Outcomes	Program Outcomes												PSO				
	a	b	c	d	e	f	g	h	i	j	k	l	1	2	3	4	5
CO1	1	1	1	1	1	1	1	1	2	2	1	2	1	1	1	1	1
CO2	1	1	1	1	1	1	1	1	2	2	1	2	1	1	1	1	1
CO3	1	1	1	1	1	1	1	1	2	2	1	2	1	1	1	1	1

AX1006	STRESS MANAGEMENT BY YOGA	L	T	P	C
		2	0	0	0

Objectives

- To achieve overall health of body and mind
- To overcome stress

UNIT – I **10**

Definitions of Eight parts of yoga. (Ashtanga)

UNIT – II **10**

Yam and Niyam – Do`s and Don't's in life – i) Ahinsa, satya, astheya, bramhacharya and aparigraha, ii) Ahinsa, satya, astheya, bramhacharya and aparigraha.

UNIT – III **10**

Asan and Pranayam – Various yoga poses and their benefits for mind & body – Regularization of breathing techniques and its effects – Types of pranayam

Total Periods: 30

Reference Books:

1. 'Yogic Asanas for Group Tarining–Part–I', Janardan Swami Yoga bhyasi Mandal, Nagpur.
2. 'Rajayoga or conquering the Internal Nature, by Swami Vivekananda, Advaita Ashrama (Publication Department), Kolkata.

Course Outcomes (CO)

CO1	Students will be able to develop healthy mind in a healthy body thus improving social health also
CO2	Improve efficiency

Course Outcomes	Program Outcomes												PSO				
	a	b	c	d	e	f	g	h	i	j	k	l	1	2	3	4	5
CO1	1	1	1	1	1	1	1	1	1	1	1	3	1	1	1	1	1
CO2	1	1	1	1	1	1	1	1	1	1	1	3	1	1	1	1	1

AX1007	PERSONALITY DEVELOPMENT THROUGH LIFE ENLIGHTENMENT SKILLS	L	T	P	C
		2	0	0	0

Objectives

- To learn to achieve the highest goal happily
- To become a person with stable mind, pleasing personality and determination
- To awaken wisdom in students

UNIT – I **10**

Neetisatakam – holistic development of personality – Verses–19,20,21,22 (wisdom) – Verses–29,31,32 (pride & heroism) – Verses–26,28,63,65 (virtue) – Verses–52,53,59 (dont's) – Verses–71,73,75,78 (do's)

UNIT – II **10**

Approach to day–to–day work and duties – Shrimad Bhagwad Geeta: Chapter 2 – Verses 41, 47,48 – Chapter 3 – Verses 13, 21, 27, 35 Chapter 6–Verses 5,13,1

UNIT – III **10**

Statements of basic knowledge – Shrimad Bhagwad Geeta: Chapter2 – Verses 56, 62, 68 Chapter 12 – Verses 13, 14, 15, 16,17, 18 – Personality of role model – Shrimad Bhagwad Geeta – Chapter2 – Verses 17, Chapter 3 – Verses 36,37,42 – Chapter 4 – Verses 18, 38,39 Chapter18 – Verses 37,38,63

Total Periods: 30

Reference Books:

1. Gopinath, P. Rashtriya Sanskrit Sansthanam, 'Bhartrihari's Three Satakam', Niti–sringar–vairagya, New Delhi, 2010.
2. Swami Swarupananda, 'Srimad Bhagavad Gita', Advaita Ashram, Publication Department, Kolkata, 2016.

Course Outcomes (CO)

CO1	Students will be able to study the Shrimad–Bhagwad–Geeta that will help the student in developing his personality and achieve the highest goal in life
CO2	The person who has studied Geeta will lead the nation and mankind to peace and prosperity
CO3	Study of Neet is hatakam will help in developing versatile personality of students.

EMPLOYABILITY ENHANCEMENT COURSES (EEC)

Sl. No.	Course Code	Course Title	Category	Contact Periods	L	T	P	C
1	HS1310	Professional Skills Laboratory	EEC	2	0	0	2	1
2	ME1409	Technical Seminar - I (Manufacturing)	EEC	2	0	0	2	0
3	ME1508	Technical Seminar - II (Thermal Sciences)	EEC	2	0	0	2	0
4	ME1609	Design and Fabrication Project	EEC	4	0	0	4	2
5	ME1709	Technical Seminar - III (Design)	EEC	2	0	0	2	0
6	ME1710	Internship**	EEC	0	0	0	0	1
7	MV0001	3D Printing#	EEC	3	1	0	2	2
8	MV0002	Entrepreneurship in Solar PV Technology#	EEC	3	1	0	2	2
9	MV0003	Electrical Harness and Routing Design for Electric Vehicles#	EEC	3	1	0	2	2
10	ME1807	Project Work	EEC	20	0	0	20	10

** Students will undergo Industrial Training / Internship during 6th semester vacation and the credits earned will be over and above the total credit to be earned by the students.

Students will undergo any one Value Added Courses mentioned above and the credits earned will be over and above the total credit to be earned by the students.

PROFESSIONAL ELECTIVE COURSES (PEC)

SEMESTER V

PROFESSIONAL ELECTIVE COURSE - I

Sl. No.	Course Code	Course Title	Category	Contact Periods	L	T	P	C
1	ME1511	Design of Heat Exchangers	PEC	3	3	0	0	3
2	ME1512	Energy Conservation and Auditing	PEC	3	3	0	0	3
3	ME1513	Experimental Design and Analysis	PEC	3	3	0	0	3
4	ME1514	Gas Dynamics and Jet Propulsion	PEC	3	3	0	0	3
5	ME1515	Refrigeration and Air conditioning	PEC	3	3	0	0	3
6	ME1516	Turbomachines	PEC	3	3	0	0	3
7	ME1517	Bioenergy Conversion Technologies	PEC	3	3	0	0	3
8	ME1518	Energy Efficient Buildings	PEC	3	3	0	0	3
9	ME1519	Energy Storage Technologies	PEC	3	3	0	0	3
10	ME1520	Renewable Powered off Highway Vehicles and Emission Control Technology	PEC	3	3	0	0	3

SEMESTER VI

PROFESSIONAL ELECTIVE COURSE - II

Sl. No.	Course Code	Course Title	Category	Contact Periods	L	T	P	C
1	ME1621	Applied Hydraulics and Pneumatics	PEC	3	3	0	0	3
2	ME1622	Design of Jigs, Fixtures and Press Tools	PEC	3	3	0	0	3
3	ME1623	Fluid Power Automation	PEC	3	3	0	0	3
4	ME1624	Low Cost Automation	PEC	3	3	0	0	3
5	ME1625	Product Design Engineering and Management	PEC	3	3	0	0	3
6	ME1626	Vibration and Noise Control Techniques for Machines and Automobiles	PEC	3	3	0	0	3
7	ME1627	Design Thinking	PEC	3	3	0	0	3
8	ME1628	New Product Development	PEC	3	3	0	0	3
9	ME1629	Product Life Cycle Management	PEC	3	3	0	0	3

PROFESSIONAL ELECTIVE COURSE - III

Sl. No.	Course Code	Course Title	Category	Contact Periods	L	T	P	C
1	ME1631	Additive Manufacturing	PEC	3	3	0	0	3
2	ME1632	Non Destructive Testing and Evaluation	PEC	3	3	0	0	3
3	ME1633	Polymers and Composites	PEC	3	3	0	0	3
4	ME1634	Testing and Characterization of Materials	PEC	3	3	0	0	3
5	ME1635	Unconventional Machining Processes	PEC	3	3	0	0	3
6	ME1636	Welding Technology	PEC	3	3	0	0	3
7	ME1637	Green Manufacturing Design and Practices	PEC	3	3	0	0	3
8	ME1638	Green Supply Chain Management	PEC	3	3	0	0	3
9	ME1639	Industry 4.0 for Mechanical Engineering	PEC	3	3	0	0	3
10	ME1640	Lean Manufacturing	PEC	3	3	0	0	3

SEMESTER VII

PROFESSIONAL ELECTIVE COURSE - IV

Sl. No.	Course Code	Course Title	Category	Contact Periods	L	T	P	C
1	MG1003	Applied Operations Research	PEC	3	3	0	0	3
2	ME1741	Computer Integrated Manufacturing Systems and Automation	PEC	3	3	0	0	3
3	ME1742	Maintenance Engineering	PEC	3	3	0	0	3
4	EC1008	MEMS and NEMS	PEC	3	3	0	0	3
5	ME1743	Safety Engineering and Disaster Management	PEC	3	3	0	0	3
6	ME1744	Total Quality Management and Reliability Engineering	PEC	3	3	0	0	3
7	ME1745	Design for Manufacturing	PEC	3	3	0	0	3
8	ME1746	Digital Manufacturing and IoT	PEC	3	3	0	0	3
9	ME1747	Precision Manufacturing	PEC	3	3	0	0	3
10	ME1748	Surface Engineering	PEC	3	3	0	0	3

PROFESSIONAL ELECTIVE COURSE - V

Sl. No.	Course Code	Course Title	Category	Contact Periods	L	T	P	C
1	ME1751	Advanced Internal Combustion Engines	PEC	3	3	0	0	3
2	ME1752	Automobile Technology	PEC	3	3	0	0	3
3	ME1753	Computational Fluid Dynamics	PEC	3	3	0	0	3
4	GE1004	Fundamentals of Nano Science	PEC	3	3	0	0	3
5	ME1754	Mechanics of Composite Materials	PEC	3	3	0	0	3
6	MG1001	Principles of Management	PEC	3	3	0	0	3
7	ME1755	Carbon Footprint Estimation and Reduction Techniques	PEC	3	3	0	0	3
8	ME1756	Industrial Safety	PEC	3	3	0	0	3
9	ME1757	Thermal Management of Batteries and Fuel Cells	PEC	3	3	0	0	3
10	ME1758	Value Engineering	PEC	3	3	0	0	3

SEMESTER VIII

PROFESSIONAL ELECTIVE COURSE - VI

Sl. No.	Course Code	Course Title	Category	Contact Periods	L	T	P	C
1	ME1861	Entrepreneurship Development	PEC	3	3	0	0	3
2	ME1862	Industrial Tribology	PEC	3	3	0	0	3
3	GE1001	Intellectual Property Rights	PEC	3	3	0	0	3
4	ME1863	Lean Six Sigma	PEC	3	3	0	0	3
5	ME1864	Production Planning and Control	PEC	3	3	0	0	3
6	GE1003	Professional Ethics in Engineering	PEC	3	3	0	0	3
7	ME1865	Advanced Vehicle Engineering	PEC	3	3	0	0	3
8	ME1866	Design Codes and Standards	PEC	3	3	0	0	3
9	ME1867	Design of Pressure Vessels	PEC	3	3	0	0	3
10	ME1868	Power Generation Equipment Design	PEC	3	3	0	0	3

OPEN ELECTIVE COURSES (OEC)

SEMESTER VI

OPEN ELECTIVE COURSE - I

Sl. No.	Course Code	Course Title	Category	Contact Periods	L	T	P	C
1	OEC103	Basics of Embedded Systems and IOT	OEC	3	3	0	0	3
2	OCS108	Introduction to Python Programming	OEC	3	3	0	0	3
3	OEE104	Electric Vehicle Technology	OEC	3	3	0	0	3

CURRICULUM AND SYLLABI

SEMESTER I

Sl. No.	Course Code	Course Title	Category	Contact Periods	L	T	P	C
		THEORY						
1	HS1101	Communicative English	HSMC	3	3	0	0	3
2	MA1102	Engineering Mathematics – I	BSC	4	4	0	0	4
3	PH1103	Engineering Physics	BSC	3	3	0	0	3
4	CY1104	Engineering Chemistry	BSC	3	3	0	0	3
5	GE1105	Problem Solving and Python Programming	ESC	3	3	0	0	3
6	GE1106	Engineering Graphics	ESC	6	2	0	4	4
7	GE1209	தமிழர் மரபு / Heritage of Tamils	HSMC	1	1	0	0	1
		PRACTICALS						
8	GE1107	Python Programming Laboratory	ESC	4	0	0	4	2
9	BS1108	Physics and Chemistry Laboratory	BSC	4	0	0	4	2
			Total	**31**	**19**	**0**	**12**	**25**

SEMESTER II

Sl. No.	Course Code	Course Title	Category	Contact Periods	L	T	P	C
		THEORY						
1	HS1201	Professional English	HSMC	3	3	0	0	3
2	MA1202	Engineering Mathematics – II	BSC	4	4	0	0	4
3	PH1254	Materials Science	BSC	3	3	0	0	3
4	GE1204	Environmental Science and Engineering	HSMC	3	3	0	0	3
5	BE1252	Basic Electrical, Electronics and Instrumentation Engineering	ESC	3	3	0	0	3
6	GE1206	Engineering Mechanics	ESC	4	3	1	0	4
7	GE1210	தமிழரும் தொழில்நுட்பமும் / Tamils and Technology	HSMC	1	1	0	0	1
		PRACTICALS						
8	GE1207	Engineering Practices Laboratory	ESC	4	0	0	4	2
9	BE1258	Basic Electrical, Electronics and Instrumentation Engineering Laboratory	ESC	4	0	0	4	2
			Total	**29**	**20**	**1**	**8**	**25**

SEMESTER III

Sl. No.	Course Code	Course Title	Category	Contact Periods	L	T	P	C
THEORY								
1	MA1301	Transforms and Partial Differential Equations	BSC	4	4	0	0	4
2	EE1352	Electrical Drives and Controls	ESC	3	3	0	0	3
3	CE1301	Fluid Mechanics and Machinery	ESC	3	3	0	0	3
4	ME1301	Engineering Thermodynamics	PCC	4	3	1	0	4
5	ME1302	Manufacturing Processes	PCC	3	3	0	0	3
PRACTICALS								
6	EE1358	Electrical Engineering Laboratory	ESC	4	0	0	4	2
7	ME1307	Manufacturing Processes Laboratory	PCC	4	0	0	4	2
8	HS1310	Professional Skills Laboratory	EEC	2	0	0	2	1
			Total	**27**	**16**	**1**	**10**	**22**

SEMESTER IV

Sl. No.	Course Code	Course Title	Category	Contact Periods	L	T	P	C
THEORY								
1	MA1401	Statistics and Numerical Methods	BSC	4	4	0	0	4
2	CE1401	Strength of Materials for Mechanical Engineers	ESC	3	3	0	0	3
3	ME1401	Thermal Engineering	PCC	3	3	0	0	3
4	ME1402	Kinematics of Machinery	PCC	3	3	0	0	3
5	ME1403	Engineering Metallurgy	PCC	3	3	0	0	3
6	ME1404	Metal Cutting and Machine Tools	PCC	3	3	0	0	3
PRACTICALS								
7	CE1409	Strength of Materials and Fluid Mechanics and Machinery Laboratory	ESC	4	0	0	4	2
8	ME1407	Internal Combustion Engineering Laboratory	PCC	4	0	0	4	2
9	ME1408	Machine Tools Laboratory	PCC	4	0	0	4	2
10	ME1409	Technical Seminar - I (Manufacturing)	EEC	2	0	0	2	0
			Total	**33**	**19**	**0**	**14**	**25**

SEMESTER V

Sl. No.	Course Code	Course Title	Category	Contact Periods	L	T	P	C
THEORY								
1	ME1501	Computer Aided Design and Manufacturing	PCC	3	3	0	0	3
2	ME1502	Design of Machine Elements	PCC	4	3	1	0	4
3	ME1503	Metrology and Measurements (Lab Integrated)	PCC	5	3	0	2	4
4	ME1504	Dynamics of Machinery	PCC	3	3	0	0	3
5	---	Professional Elective Course - I	PEC	3	3	0	0	3
6	---	Audit Course*	AC	2	2	0	0	0
PRACTICALS								
7	ME1506	Computer Aided Machine Drawing Laboratory	PCC	4	0	0	4	2
8	ME1507	Kinematics and Dynamics Laboratory	PCC	4	0	0	4	2
9	ME1508	Technical Seminar - II (Thermal Sciences)	EEC	2	0	0	2	0
			Total	**30**	**17**	**1**	**12**	**21**

SEMESTER VI

Sl. No.	Course Code	Course Title	Category	Contact Periods	L	T	P	C
THEORY								
1	ME1601	Design of Transmission Systems	PCC	4	3	1	0	4
2	ME1602	Finite Element Analysis	PCC	3	3	0	0	3
3	ME1603	Heat and Mass Transfer	PCC	4	3	1	0	4
4	---	Professional Elective Course - II	PEC	3	3	0	0	3
5	---	Professional Elective Course - III	PEC	3	3	0	0	3
6	---	Open Elective Course - I	OEC	3	3	0	0	3
PRACTICALS								
7	ME1607	CAD /CAM Laboratory	PCC	4	0	0	4	2
8	ME1608	Heat Transfer and Refrigeration and Air-Conditioning Laboratory	PCC	4	0	0	4	2
9	ME1609	Design and Fabrication Project	EEC	4	0	0	4	2
			Total	**32**	**18**	**2**	**12**	**26**

SEMESTER VII

Sl. No.	Course Code	Course Title	Category	Contact Periods	L	T	P	C
THEORY								
1	ME1701	Process Planning and Cost Estimation	PCC	3	3	0	0	3
2	ME1702	Mechatronics	PCC	3	3	0	0	3
3	ME1703	Power Plant Engineering	PCC	3	3	0	0	3
4	---	Professional Elective Course - IV	PEC	3	3	0	0	3
5	---	Professional Elective Course - V	PEC	3	3	0	0	3
6	---	Open Elective Course - II	OEC	3	3	0	0	3
PRACTICALS								
7	ME1707	Simulation and Analysis Laboratory	PCC	4	0	0	4	2
8	ME1708	Mechatronics Laboratory	PCC	4	0	0	4	2
9	ME1709	Technical Seminar - III (Design)	EEC	2	0	0	2	0
10	ME1710	Internship**	EEC	0	0	0	0	1
			Total	**28**	**18**	**0**	**10**	**22**

SEMESTER VIII

Sl. No.	Course Code	Course Title	Category	Contact Periods	L	T	P	C
THEORY								
1	MG1801	Industrial Economics	HSMC	3	3	0	0	3
2	---	Professional Elective Course - VI	PEC	3	3	0	0	3
PRACTICALS								
3	ME1807	Project Work	EEC	20	0	0	20	10
			Total	**26**	**6**	**0**	**20**	**16**

* Audit Course is optional.

** Students will undergo Industrial Training / Internship during 6th semester vacation and the credits earned will be over and above the total credit to be earned by the students.

TOTAL NUMBER OF CREDITS TO BE EARNED FOR AWARD OF THE DEGREE = 182

HUMANITIES AND SOCIAL SCIENCES INCLUDING MANAGEMENT COURSES (HSMC)

Sl. No.	Course Code	Course Title	Category	Contact Periods	L	T	P	C
1	HS1101	Communicative English	HSMC	3	3	0	0	3
2	GE1209	தமிழர் மரபு / Heritage of Tamils	HSMC	1	1	0	0	1

9	EE1358	Electrical Engineering Laboratory	ESC	4	0	0	4	2
10	CE1401	Strength of Materials for Mechanical Engineers	ESC	3	3	0	0	3
11	CE1301	Fluid Mechanics and Machinery	ESC	3	3	0	0	3
12	CE1409	Strength of Materials and Fluid Mechanics and Machinery Laboratory	ESC	4	0	0	4	2

PROFESSIONAL CORE COURSES (PCC)

Sl. No.	Course Code	Course Title	Category	Contact Periods	L	T	P	C
1	ME1301	Engineering Thermodynamics	PCC	4	3	1	0	4
2	ME1302	Manufacturing Processes	PCC	3	3	0	0	3
3	ME1307	Manufacturing Processes Laboratory	PCC	4	0	0	4	2
4	ME1401	Thermal Engineering	PCC	3	3	0	0	3
5	ME1402	Kinematics of Machinery	PCC	3	3	0	0	3
6	ME1403	Engineering Metallurgy	PCC	3	3	0	0	3
7	ME1404	Metal Cutting and Machine Tools	PCC	3	3	0	0	3
8	ME1407	Internal Combustion Engineering Laboratory	PCC	4	0	0	4	2
9	ME1408	Machine Tools Laboratory	PCC	4	0	0	4	2
10	ME1501	Computer Aided Design and Manufacturing	PCC	3	3	0	0	3
11	ME1502	Design of Machine Elements	PCC	4	3	1	0	4
12	ME1503	Metrology and Measurements (Lab Integrated)	PCC	5	3	0	2	4
13	ME1504	Dynamics of Machinery	PCC	3	3	0	0	3
14	ME1506	Computer Aided Machine Drawing Laboratory	PCC	4	0	0	4	2
15	ME1507	Kinematics and Dynamics Laboratory	PCC	4	0	0	4	2
16	ME1601	Design of Transmission Systems	PCC	4	3	1	0	4
17	ME1602	Finite Element Analysis	PCC	3	3	0	0	3
18	ME1603	Heat and Mass Transfer	PCC	4	3	1	0	4
19	ME1607	CAD / CAM Laboratory	PCC	4	0	0	4	2
20	ME1608	Heat Transfer and Refrigeration and Air-Conditioning Laboratory	PCC	4	0	0	4	2
21	ME1701	Process Planning and Cost Estimation	PCC	3	3	0	0	3
22	ME1702	Mechatronics	PCC	3	3	0	0	3
23	ME1703	Power Plant Engineering	PCC	3	3	0	0	3
24	ME1707	Simulation and Analysis Laboratory	PCC	4	0	0	4	2
25	ME1708	Mechatronics Laboratory	PCC	4	0	0	4	2

EMPLOYABILITY ENHANCEMENT COURSES (EEC)

Sl. No.	Course Code	Course Title	Category	Contact Periods	L	T	P	C
1	HS1310	Professional Skills Laboratory	EEC	2	0	0	2	1
2	ME1409	Technical Seminar - I (Manufacturing)	EEC	2	0	0	2	0
3	ME1508	Technical Seminar - II (Thermal Sciences)	EEC	2	0	0	2	0
4	ME1609	Design and Fabrication Project	EEC	4	0	0	4	2
5	ME1709	Technical Seminar - III (Design)	EEC	2	0	0	2	0
6	ME1710	Internship**	EEC	0	0	0	0	1
7	MV0001	3D Printing#	EEC	3	1	0	2	2
8	MV0002	Entrepreneurship in Solar PV Technology#	EEC	3	1	0	2	2
9	MV0003	Electrical Harness and Routing Design for Electric Vehicles#	EEC	3	1	0	2	2
10	ME1807	Project Work	EEC	20	0	0	20	10

** Students will undergo Industrial Training / Internship during 6th semester vacation and the credits earned will be over and above the total credit to be earned by the students.

Students will undergo any one Value Added Courses mentioned above and the credits earned will be over and above the total credit to be earned by the students.

PROFESSIONAL ELECTIVE COURSES (PEC)

SEMESTER V

PROFESSIONAL ELECTIVE COURSE - I

Sl. No.	Course Code	Course Title	Category	Contact Periods	L	T	P	C
1	ME1511	Design of Heat Exchangers	PEC	3	3	0	0	3
2	ME1512	Energy Conservation and Auditing	PEC	3	3	0	0	3
3	ME1513	Experimental Design and Analysis	PEC	3	3	0	0	3
4	ME1514	Gas Dynamics and Jet Propulsion	PEC	3	3	0	0	3
5	ME1515	Refrigeration and Air conditioning	PEC	3	3	0	0	3
6	ME1516	Turbomachines	PEC	3	3	0	0	3
7	ME1517	Bioenergy Conversion Technologies	PEC	3	3	0	0	3
8	ME1518	Energy Efficient Buildings	PEC	3	3	0	0	3
9	ME1519	Energy Storage Technologies	PEC	3	3	0	0	3
10	ME1520	Renewable Powered off Highway Vehicles and Emission Control Technology	PEC	3	3	0	0	3

SEMESTER VI

PROFESSIONAL ELECTIVE COURSE - II

Sl. No.	Course Code	Course Title	Category	Contact Periods	L	T	P	C
1	ME1621	Applied Hydraulics and Pneumatics	PEC	3	3	0	0	3
2	ME1622	Design of Jigs, Fixtures and Press Tools	PEC	3	3	0	0	3
3	ME1623	Fluid Power Automation	PEC	3	3	0	0	3
4	ME1624	Low Cost Automation	PEC	3	3	0	0	3
5	ME1625	Product Design Engineering and Management	PEC	3	3	0	0	3
6	ME1626	Vibration and Noise Control Techniques for Machines and Automobiles	PEC	3	3	0	0	3
7	ME1627	Design Thinking	PEC	3	3	0	0	3
8	ME1628	New Product Development	PEC	3	3	0	0	3
9	ME1629	Product Life Cycle Management	PEC	3	3	0	0	3

PROFESSIONAL ELECTIVE COURSE - III

Sl. No.	Course Code	Course Title	Category	Contact Periods	L	T	P	C
1	ME1631	Additive Manufacturing	PEC	3	3	0	0	3
2	ME1632	Non Destructive Testing and Evaluation	PEC	3	3	0	0	3
3	ME1633	Polymers and Composites	PEC	3	3	0	0	3
4	ME1634	Testing and Characterization of Materials	PEC	3	3	0	0	3
5	ME1635	Unconventional Machining Processes	PEC	3	3	0	0	3
6	ME1636	Welding Technology	PEC	3	3	0	0	3
7	ME1637	Green Manufacturing Design and Practices	PEC	3	3	0	0	3
8	ME1638	Green Supply Chain Management	PEC	3	3	0	0	3
9	ME1639	Industry 4.0 for Mechanical Engineering	PEC	3	3	0	0	3
10	ME1640	Lean Manufacturing	PEC	3	3	0	0	3

SEMESTER VII

PROFESSIONAL ELECTIVE COURSE - IV

Sl. No.	Course Code	Course Title	Category	Contact Periods	L	T	P	C
1	MG1003	Applied Operations Research	PEC	3	3	0	0	3
2	ME1741	Computer Integrated Manufacturing Systems and Automation	PEC	3	3	0	0	3
3	ME1742	Maintenance Engineering	PEC	3	3	0	0	3
4	EC1008	MEMS and NEMS	PEC	3	3	0	0	3
5	ME1743	Safety Engineering and Disaster Management	PEC	3	3	0	0	3
6	ME1744	Total Quality Management and Reliability Engineering	PEC	3	3	0	0	3
7	ME1745	Design for Manufacturing	PEC	3	3	0	0	3
8	ME1746	Digital Manufacturing and IoT	PEC	3	3	0	0	3
9	ME1747	Precision Manufacturing	PEC	3	3	0	0	3
10	ME1748	Surface Engineering	PEC	3	3	0	0	3

PROFESSIONAL ELECTIVE COURSE - V

Sl. No.	Course Code	Course Title	Category	Contact Periods	L	T	P	C
1	ME1751	Advanced Internal Combustion Engines	PEC	3	3	0	0	3
2	ME1752	Automobile Technology	PEC	3	3	0	0	3
3	ME1753	Computational Fluid Dynamics	PEC	3	3	0	0	3
4	GE1004	Fundamentals of Nano Science	PEC	3	3	0	0	3
5	ME1754	Mechanics of Composite Materials	PEC	3	3	0	0	3
6	MG1001	Principles of Management	PEC	3	3	0	0	3
7	ME1755	Carbon Footprint Estimation and Reduction Techniques	PEC	3	3	0	0	3
8	ME1756	Industrial Safety	PEC	3	3	0	0	3
9	ME1757	Thermal Management of Batteries and Fuel Cells	PEC	3	3	0	0	3
10	ME1758	Value Engineering	PEC	3	3	0	0	3

SEMESTER VIII

PROFESSIONAL ELECTIVE COURSE - VI

Sl. No.	Course Code	Course Title	Category	Contact Periods	L	T	P	C
1	ME1861	Entrepreneurship Development	PEC	3	3	0	0	3
2	ME1862	Industrial Tribology	PEC	3	3	0	0	3
3	GE1001	Intellectual Property Rights	PEC	3	3	0	0	3
4	ME1863	Lean Six Sigma	PEC	3	3	0	0	3
5	ME1864	Production Planning and Control	PEC	3	3	0	0	3
6	GE1003	Professional Ethics in Engineering	PEC	3	3	0	0	3
7	ME1865	Advanced Vehicle Engineering	PEC	3	3	0	0	3
8	ME1866	Design Codes and Standards	PEC	3	3	0	0	3
9	ME1867	Design of Pressure Vessels	PEC	3	3	0	0	3
10	ME1868	Power Generation Equipment Design	PEC	3	3	0	0	3

OPEN ELECTIVE COURSES (OEC)

SEMESTER VI

OPEN ELECTIVE COURSE - I

Sl. No.	Course Code	Course Title	Category	Contact Periods	L	T	P	C
1	OEC103	Basics of Embedded Systems and IOT	OEC	3	3	0	0	3
2	OCS102	Programming and Data Structures	OEC	3	3	0	0	3

CURRICULUM AND SYLLABI

SEMESTER I

Sl. No.	Course Code	Course Title	Category	Contact Periods	L	T	P	C
		THEORY						
1	HS1101	Communicative English	HSMC	3	3	0	0	3
2	MA1102	Engineering Mathematics – I	BSC	4	4	0	0	4
3	PH1103	Engineering Physics	BSC	3	3	0	0	3
4	CY1104	Engineering Chemistry	BSC	3	3	0	0	3
5	GE1105	Problem Solving and Python Programming	ESC	3	3	0	0	3
6	GE1106	Engineering Graphics	ESC	6	2	0	4	4
		PRACTICALS						
7	GE1107	Python Programming Laboratory	ESC	4	0	0	4	2
8	BS1108	Physics and Chemistry Laboratory	BSC	4	0	0	4	2
			Total	**30**	**18**	**0**	**12**	**24**

SEMESTER II

Sl. No.	Course Code	Course Title	Category	Contact Periods	L	T	P	C
		THEORY						
1	HS1201	Professional English	HSMC	3	3	0	0	3
2	MA1202	Engineering Mathematics – II	BSC	4	4	0	0	4
3	PH1254	Materials Science	BSC	3	3	0	0	3
4	GE1204	Environmental Science and Engineering	HSMC	3	3	0	0	3
5	BE1252	Basic Electrical, Electronics and Instrumentation Engineering	ESC	3	3	0	0	3
6	GE1206	Engineering Mechanics	ESC	4	3	1	0	4
7	GE1209	தமிழர் மரபு / Heritage of Tamils	HSMC	1	1	0	0	1
		PRACTICALS						
8	GE1207	Engineering Practices Laboratory	ESC	4	0	0	4	2
9	BE1258	Basic Electrical, Electronics and Instrumentation Engineering Laboratory	ESC	4	0	0	4	2
			Total	**29**	**20**	**1**	**8**	**25**

SEMESTER III

Sl. No.	Course Code	Course Title	Category	Contact Periods	L	T	P	C
THEORY								
1	MA1301	Transforms and Partial Differential Equations	BSC	4	4	0	0	4
2	EE1352	Electrical Drives and Controls	ESC	3	3	0	0	3
3	CE1301	Fluid Mechanics and Machinery	ESC	3	3	0	0	3
4	ME1301	Engineering Thermodynamics	PCC	4	3	1	0	4
5	ME1302	Manufacturing Processes	PCC	3	3	0	0	3
6	GE1210	தமிழரும் தொழில்நுட்பமும் / Tamils and Technology	HSMC	1	1	0	0	1
PRACTICALS								
6	EE1358	Electrical Engineering Laboratory	ESC	4	0	0	4	2
7	ME1307	Manufacturing Processes Laboratory	PCC	4	0	0	4	2
8	HS1310	Professional Skills Laboratory	EEC	2	0	0	2	1
			Total	**28**	**17**	**1**	**10**	**23**

SEMESTER IV

Sl. No.	Course Code	Course Title	Category	Contact Periods	L	T	P	C
THEORY								
1	MA1401	Statistics and Numerical Methods	BSC	4	4	0	0	4
2	CE1401	Strength of Materials for Mechanical Engineers	ESC	3	3	0	0	3
3	ME1401	Thermal Engineering	PCC	3	3	0	0	3
4	ME1402	Kinematics of Machinery	PCC	3	3	0	0	3
5	ME1403	Engineering Metallurgy	PCC	3	3	0	0	3
6	ME1404	Metal Cutting and Machine Tools	PCC	3	3	0	0	3

12	CE1409	Strength of Materials and Fluid Mechanics and Machinery Laboratory	ESC	4	0	0	4	2

PROFESSIONAL CORE COURSES (PCC)

Sl. No.	Course Code	Course Title	Category	Contact Periods	L	T	P	C
1	ME1301	Engineering Thermodynamics	PCC	4	3	1	0	4
2	ME1302	Manufacturing Processes	PCC	3	3	0	0	3
3	ME1307	Manufacturing Processes Laboratory	PCC	4	0	0	4	2
4	ME1401	Thermal Engineering	PCC	3	3	0	0	3
5	ME1402	Kinematics of Machinery	PCC	3	3	0	0	3
6	ME1403	Engineering Metallurgy	PCC	3	3	0	0	3
7	ME1404	Metal Cutting and Machine Tools	PCC	3	3	0	0	3
8	ME1407	Internal Combustion Engineering Laboratory	PCC	4	0	0	4	2
9	ME1408	Machine Tools Laboratory	PCC	4	0	0	4	2
10	ME1501	Computer Aided Design and Manufacturing	PCC	3	3	0	0	3
11	ME1502	Design of Machine Elements	PCC	4	3	1	0	4
12	ME1503	Metrology and Measurements (Lab Integrated)	PCC	5	3	0	2	4
13	ME1504	Dynamics of Machinery	PCC	3	3	0	0	3
14	ME1506	Computer Aided Machine Drawing Laboratory	PCC	4	0	0	4	2
15	ME1507	Kinematics and Dynamics Laboratory	PCC	4	0	0	4	2
16	ME1601	Design of Transmission Systems	PCC	4	3	1	0	4
17	ME1602	Finite Element Analysis	PCC	3	3	0	0	3
18	ME1603	Heat and Mass Transfer	PCC	4	3	1	0	4
19	ME1607	CAD / CAM Laboratory	PCC	4	0	0	4	2
20	ME1608	Heat Transfer and Refrigeration and Air-Conditioning Laboratory	PCC	4	0	0	4	2
21	ME1701	Process Planning and Cost Estimation	PCC	3	3	0	0	3
22	ME1702	Mechatronics	PCC	3	3	0	0	3
23	ME1703	Power Plant Engineering	PCC	3	3	0	0	3
24	ME1707	Simulation and Analysis Laboratory	PCC	4	0	0	4	2
25	ME1708	Mechatronics Laboratory	PCC	4	0	0	4	2

EMPLOYABILITY ENHANCEMENT COURSES (EEC)

Sl. No.	Course Code	Course Title	Category	Contact Periods	L	T	P	C
1	HS1310	Professional Skills Laboratory	EEC	2	0	0	2	1
2	ME1409	Technical Seminar - I (Manufacturing)	EEC	2	0	0	2	0
3	ME1508	Technical Seminar - II (Thermal Sciences)	EEC	2	0	0	2	0
4	ME1609	Design and Fabrication Project	EEC	4	0	0	4	2
5	ME1709	Technical Seminar – III (Design)	EEC	2	0	0	2	0
6	ME1710	Internship**	EEC	0	0	0	0	1
7	MV0001	3D Printing#	EEC	3	1	0	2	2
8	MV0002	Entrepreneurship in Solar PV Technology#	EEC	3	1	0	2	2
9	MV0003	Electrical Harness and Routing Design for Electric Vehicles#	EEC	3	1	0	2	2
10	ME1807	Project Work	EEC	20	0	0	20	10

** Students will undergo Industrial Training / Internship during 6th semester vacation and the credits earned will be over and above the total credit to be earned by the students.

Students will undergo any one Value Added Courses mentioned above and the credits earned will be over and above the total credit to be earned by the students.

PROFESSIONAL ELECTIVE COURSES (PEC)
SEMESTER V

PROFESSIONAL ELECTIVE COURSE - I

Sl. No.	Course Code	Course Title	Category	Contact Periods	L	T	P	C
1	ME1511	Design of Heat Exchangers	PEC	3	3	0	0	3
2	ME1512	Energy Conservation and Auditing	PEC	3	3	0	0	3
3	ME1513	Experimental Design and Analysis	PEC	3	3	0	0	3
4	ME1514	Gas Dynamics and Jet Propulsion	PEC	3	3	0	0	3
5	ME1515	Refrigeration and Air conditioning	PEC	3	3	0	0	3
6	ME1516	Turbomachines	PEC	3	3	0	0	3
7	ME1517	Bioenergy Conversion Technologies	PEC	3	3	0	0	3
8	ME1518	Energy Efficient Buildings	PEC	3	3	0	0	3
9	ME1519	Energy Storage Technologies	PEC	3	3	0	0	3
10	ME1520	Renewable Powered off Highway Vehicles and Emission Control Technology	PEC	3	3	0	0	3

SEMESTER VI

PROFESSIONAL ELECTIVE COURSE - II

Sl. No.	Course Code	Course Title	Category	Contact Periods	L	T	P	C
1	ME1621	Applied Hydraulics and Pneumatics	PEC	3	3	0	0	3
2	ME1622	Design of Jigs, Fixtures and Press Tools	PEC	3	3	0	0	3
3	ME1623	Fluid Power Automation	PEC	3	3	0	0	3
4	ME1624	Low Cost Automation	PEC	3	3	0	0	3
5	ME1625	Product Design Engineering and Management	PEC	3	3	0	0	3
6	ME1626	Vibration and Noise Control Techniques for Machines and Automobiles	PEC	3	3	0	0	3
7	ME1627	Design Thinking	PEC	3	3	0	0	3
8	ME1628	New Product Development	PEC	3	3	0	0	3
9	ME1629	Product Life Cycle Management	PEC	3	3	0	0	3

PROFESSIONAL ELECTIVE COURSE - III

Sl. No.	Course Code	Course Title	Category	Contact Periods	L	T	P	C
1	ME1631	Additive Manufacturing	PEC	3	3	0	0	3
2	ME1632	Non Destructive Testing and Evaluation	PEC	3	3	0	0	3
3	ME1633	Polymers and Composites	PEC	3	3	0	0	3
4	ME1634	Testing and Characterization of Materials	PEC	3	3	0	0	3
5	ME1635	Unconventional Machining Processes	PEC	3	3	0	0	3
6	ME1636	Welding Technology	PEC	3	3	0	0	3
7	ME1637	Green Manufacturing Design and Practices	PEC	3	3	0	0	3
8	ME1638	Green Supply Chain Management	PEC	3	3	0	0	3
9	ME1639	Industry 4.0 for Mechanical Engineering	PEC	3	3	0	0	3
10	ME1640	Lean Manufacturing	PEC	3	3	0	0	3

SEMESTER VII

PROFESSIONAL ELECTIVE COURSE - IV

Sl. No.	Course Code	Course Title	Category	Contact Periods	L	T	P	C
1	MG1003	Applied Operations Research	PEC	3	3	0	0	3
2	ME1741	Computer Integrated Manufacturing Systems and Automation	PEC	3	3	0	0	3
3	ME1742	Maintenance Engineering	PEC	3	3	0	0	3
4	EC1008	MEMS and NEMS	PEC	3	3	0	0	3
5	ME1743	Safety Engineering and Disaster Management	PEC	3	3	0	0	3
6	ME1744	Total Quality Management and Reliability Engineering	PEC	3	3	0	0	3
7	ME1745	Design for Manufacturing	PEC	3	3	0	0	3
8	ME1746	Digital Manufacturing and IoT	PEC	3	3	0	0	3
9	ME1747	Precision Manufacturing	PEC	3	3	0	0	3
10	ME1748	Surface Engineering	PEC	3	3	0	0	3

PROFESSIONAL ELECTIVE COURSE - V

Sl. No.	Course Code	Course Title	Category	Contact Periods	L	T	P	C
1	ME1751	Advanced Internal Combustion Engines	PEC	3	3	0	0	3
2	ME1752	Automobile Technology	PEC	3	3	0	0	3
3	ME1753	Computational Fluid Dynamics	PEC	3	3	0	0	3
4	GE1004	Fundamentals of Nano Science	PEC	3	3	0	0	3
5	ME1754	Mechanics of Composite Materials	PEC	3	3	0	0	3
6	MG1001	Principles of Management	PEC	3	3	0	0	3
7	ME1755	Carbon Footprint Estimation and Reduction Techniques	PEC	3	3	0	0	3
8	ME1756	Industrial Safety	PEC	3	3	0	0	3
9	ME1757	Thermal Management of Batteries and Fuel Cells	PEC	3	3	0	0	3
10	ME1758	Value Engineering	PEC	3	3	0	0	3

SEMESTER VIII

PROFESSIONAL ELECTIVE COURSE - VI

Sl. No.	Course Code	Course Title	Category	Contact Periods	L	T	P	C
1	ME1861	Entrepreneurship Development	PEC	3	3	0	0	3
2	ME1862	Industrial Tribology	PEC	3	3	0	0	3
3	GE1001	Intellectual Property Rights	PEC	3	3	0	0	3
4	ME1863	Lean Six Sigma	PEC	3	3	0	0	3
5	ME1864	Production Planning and Control	PEC	3	3	0	0	3
6	GE1003	Professional Ethics in Engineering	PEC	3	3	0	0	3
7	ME1865	Advanced Vehicle Engineering	PEC	3	3	0	0	3
8	ME1866	Design Codes and Standards	PEC	3	3	0	0	3
9	ME1867	Design of Pressure Vessels	PEC	3	3	0	0	3
10	ME1868	Power Generation Equipment Design	PEC	3	3	0	0	3

OPEN ELECTIVE COURSES (OEC)

SEMESTER VI

OPEN ELECTIVE COURSE - I

Sl. No.	Course Code	Course Title	Category	Contact Periods	L	T	P	C
1	OEC103	Basics of Embedded Systems and IOT	OEC	3	3	0	0	3
2	OCS102	Programming and Data Structures	OEC	3	3	0	0	3

For the Batch Admitted in the Academic Year 2021-2025

CURRICULUM AND SYLLABI

SEMESTER I

Sl. No.	Course Code	Course Title	Category	Contact Periods	L	T	P	C
		THEORY						
1	HS1101	Communicative English	HSMC	3	3	0	0	3
2	MA1102	Engineering Mathematics – I	BSC	4	4	0	0	4
3	PH1103	Engineering Physics	BSC	3	3	0	0	3
4	CY1104	Engineering Chemistry	BSC	3	3	0	0	3
5	GE1105	Problem Solving and Python Programming	ESC	3	3	0	0	3
6	GE1106	Engineering Graphics	ESC	6	2	0	4	4
		PRACTICALS						
7	GE1107	Python Programming Laboratory	ESC	4	0	0	4	2
8	BS1108	Physics and Chemistry Laboratory	BSC	4	0	0	4	2
			Total	**30**	**18**	**0**	**12**	**24**

SEMESTER II

Sl. No.	Course Code	Course Title	Category	Contact Periods	L	T	P	C
		THEORY						
1	HS1201	Professional English	HSMC	3	3	0	0	3
2	MA1202	Engineering Mathematics – II	BSC	4	4	0	0	4
3	PH1254	Materials Science	BSC	3	3	0	0	3
4	GE1204	Environmental Science and Engineering	HSMC	3	3	0	0	3
5	BE1252	Basic Electrical, Electronics and Instrumentation Engineering	ESC	3	3	0	0	3
6	GE1206	Engineering Mechanics	ESC	4	3	1	0	4
		PRACTICALS						
7	GE1207	Engineering Practices Laboratory	ESC	4	0	0	4	2
8	BE1258	Basic Electrical, Electronics and Instrumentation Engineering Laboratory	ESC	4	0	0	4	2
			Total	**28**	**19**	**1**	**8**	**24**

SEMESTER III

Sl. No.	Course Code	Course Title	Category	Contact Periods	L	T	P	C
THEORY								
1	MA1301	Transforms and Partial Differential Equations	BSC	4	4	0	0	4
2	EE1352	Electrical Drives and Controls	ESC	3	3	0	0	3
3	CE1301	Fluid Mechanics and Machinery	ESC	3	3	0	0	3
4	ME1301	Engineering Thermodynamics	PCC	4	3	1	0	4
5	ME1302	Manufacturing Processes	PCC	3	3	0	0	3
PRACTICALS								
6	EE1358	Electrical Engineering Laboratory	ESC	4	0	0	4	2
7	ME1307	Manufacturing Processes Laboratory	PCC	4	0	0	4	2
8	HS1310	Professional Skills Laboratory	EEC	2	0	0	2	1
			Total	**27**	**16**	**1**	**10**	**22**

SEMESTER IV

Sl. No.	Course Code	Course Title	Category	Contact Periods	L	T	P	C
THEORY								
1	MA1401	Statistics and Numerical Methods	BSC	4	4	0	0	4
2	CE1401	Strength of Materials for Mechanical Engineers	ESC	3	3	0	0	3
3	ME1401	Thermal Engineering	PCC	3	3	0	0	3
4	ME1402	Kinematics of Machinery	PCC	3	3	0	0	3
5	ME1403	Engineering Metallurgy	PCC	3	3	0	0	3
6	ME1404	Metal Cutting and Machine Tools	PCC	3	3	0	0	3
PRACTICALS								
7	CE1409	Strength of Materials and Fluid Mechanics and Machinery Laboratory	ESC	4	0	0	4	2
8	ME1407	Internal Combustion Engineering Laboratory	PCC	4	0	0	4	2
9	ME1408	Machine Tools Laboratory	PCC	4	0	0	4	2
10	ME1409	Technical Seminar - I (Manufacturing)	EEC	2	0	0	2	0
			Total	**33**	**19**	**0**	**14**	**25**

SEMESTER V

Sl. No.	Course Code	Course Title	Category	Contact Periods	L	T	P	C
THEORY								
1	ME1501	Computer Aided Design and Manufacturing	PCC	3	3	0	0	3
2	ME1502	Design of Machine Elements	PCC	4	3	1	0	4
3	ME1503	Metrology and Measurements (Lab Integrated)	PCC	5	3	0	2	4
4	ME1504	Dynamics of Machinery	PCC	3	3	0	0	3
5	---	Professional Elective Course - I	PEC	3	3	0	0	3
6	---	Audit Course*	AC	2	2	0	0	0
PRACTICALS								
7	ME1506	Computer Aided Machine Drawing Laboratory	PCC	4	0	0	4	2
8	ME1507	Kinematics and Dynamics Laboratory	PCC	4	0	0	4	2
9	ME1508	Technical Seminar - II (Thermal Sciences)	EEC	2	0	0	2	0
			Total	**30**	**17**	**1**	**12**	**21**

SEMESTER VI

Sl. No.	Course Code	Course Title	Category	Contact Periods	L	T	P	C
THEORY								
1	ME1601	Design of Transmission Systems	PCC	4	3	1	0	4
2	ME1602	Finite Element Analysis	PCC	3	3	0	0	3
3	ME1603	Heat and Mass Transfer	PCC	4	3	1	0	4
4	---	Professional Elective Course - II	PEC	3	3	0	0	3
5	---	Professional Elective Course - III	PEC	3	3	0	0	3
6	---	Open Elective Course - I	OEC	3	3	0	0	3
PRACTICALS								
7	ME1607	CAD /CAM Laboratory	PCC	4	0	0	4	2
8	ME1608	Heat Transfer and Refrigeration and Air-Conditioning Laboratory	PCC	4	0	0	4	2
9	ME1609	Design and Fabrication Project	EEC	4	0	0	4	2
			Total	**32**	**18**	**2**	**12**	**26**

SEMESTER VII

Sl. No.	Course Code	Course Title	Category	Contact Periods	L	T	P	C
THEORY								
1	ME1701	Process Planning and Cost Estimation	PCC	3	3	0	0	3
2	ME1702	Mechatronics	PCC	3	3	0	0	3
3	ME1703	Power Plant Engineering	PCC	3	3	0	0	3
4	---	Professional Elective Course - IV	PEC	3	3	0	0	3
5	---	Professional Elective Course - V	PEC	3	3	0	0	3
6	---	Open Elective Course - II	OEC	3	3	0	0	3
PRACTICALS								
7	ME1707	Simulation and Analysis Laboratory	PCC	4	0	0	4	2
8	ME1708	Mechatronics Laboratory	PCC	4	0	0	4	2
9	ME1709	Technical Seminar - III (Design)	EEC	2	0	0	2	0
10	ME1710	Internship**	EEC	0	0	0	0	1
			Total	**28**	**18**	**0**	**10**	**22**

SEMESTER VIII

Sl. No.	Course Code	Course Title	Category	Contact Periods	L	T	P	C
THEORY								
1	MG1801	Industrial Economics	HSMC	3	3	0	0	3
2	---	Professional Elective Course - VI	PEC	3	3	0	0	3
PRACTICALS								
3	ME1807	Project Work	EEC	20	0	0	20	10
			Total	**26**	**6**	**0**	**20**	**16**

* Audit Course is optional.

** Students will undergo Industrial Training / Internship during 6th semester vacation and the credits earned will be over and above the total credit to be earned by the students.

TOTAL NUMBER OF CREDITS TO BE EARNED FOR AWARD OF THE DEGREE = 180

HUMANITIES AND SOCIAL SCIENCES INCLUDING MANAGEMENT COURSES (HSMC)

Sl. No.	Course Code	Course Title	Category	Contact Periods	L	T	P	C
1	HS1101	Communicative English	HSMC	3	3	0	0	3

10	CE1401	Strength of Materials for Mechanical Engineers	ESC	3	3	0	0	3
11	CE1301	Fluid Mechanics and Machinery	ESC	3	3	0	0	3
12	CE1409	Strength of Materials and Fluid Mechanics and Machinery Laboratory	ESC	4	0	0	4	2

PROFESSIONAL CORE COURSES (PCC)

Sl. No.	Course Code	Course Title	Category	Contact Periods	L	T	P	C
1	ME1301	Engineering Thermodynamics	PCC	4	3	1	0	4
2	ME1302	Manufacturing Processes	PCC	3	3	0	0	3
3	ME1307	Manufacturing Processes Laboratory	PCC	4	0	0	4	2
4	ME1401	Thermal Engineering	PCC	3	3	0	0	3
5	ME1402	Kinematics of Machinery	PCC	3	3	0	0	3
6	ME1403	Engineering Metallurgy	PCC	3	3	0	0	3
7	ME1404	Metal Cutting and Machine Tools	PCC	3	3	0	0	3
8	ME1407	Internal Combustion Engineering Laboratory	PCC	4	0	0	4	2
9	ME1408	Machine Tools Laboratory	PCC	4	0	0	4	2
10	ME1501	Computer Aided Design and Manufacturing	PCC	3	3	0	0	3
11	ME1502	Design of Machine Elements	PCC	4	3	1	0	4
12	ME1503	Metrology and Measurements (Lab Integrated)	PCC	5	3	0	2	4
13	ME1504	Dynamics of Machinery	PCC	3	3	0	0	3
14	ME1506	Computer Aided Machine Drawing Laboratory	PCC	4	0	0	4	2
15	ME1507	Kinematics and Dynamics Laboratory	PCC	4	0	0	4	2
16	ME1601	Design of Transmission Systems	PCC	4	3	1	0	4
17	ME1602	Finite Element Analysis	PCC	3	3	0	0	3
18	ME1603	Heat and Mass Transfer	PCC	4	3	1	0	4
19	ME1607	CAD / CAM Laboratory	PCC	4	0	0	4	2
20	ME1608	Heat Transfer and Refrigeration and Air-Conditioning Laboratory	PCC	4	0	0	4	2
21	ME1701	Process Planning and Cost Estimation	PCC	3	3	0	0	3
22	ME1702	Mechatronics	PCC	3	3	0	0	3
23	ME1703	Power Plant Engineering	PCC	3	3	0	0	3
24	ME1707	Simulation and Analysis Laboratory	PCC	4	0	0	4	2
25	ME1708	Mechatronics Laboratory	PCC	4	0	0	4	2

EMPLOYABILITY ENHANCEMENT COURSES (EEC)

Sl. No.	Course Code	Course Title	Category	Contact Periods	L	T	P	C
1	HS1310	Professional Skills Laboratory	EEC	2	0	0	2	1
2	ME1409	Technical Seminar - I (Manufacturing)	EEC	2	0	0	2	0
3	ME1508	Technical Seminar - II (Thermal Sciences)	EEC	2	0	0	2	0
4	ME1609	Design and Fabrication Project	EEC	4	0	0	4	2
5	ME1709	Technical Seminar - III (Design)	EEC	2	0	0	2	0
6	ME1710	Internship**	EEC	0	0	0	0	1
7	MV0001	3D Printing#	EEC	3	1	0	2	2
8	MV0002	Entrepreneurship in Solar PV Technology#	EEC	3	1	0	2	2
9	ME1807	Project Work	EEC	20	0	0	20	10

** Students will undergo Industrial Training / Internship during 6th semester vacation and the credits earned will be over and above the total credit to be earned by the students.

Students will undergo any one Value Added Courses mentioned above and the credits earned will be over and above the total credit to be earned by the students.

PROFESSIONAL ELECTIVE COURSES (PEC)

SEMESTER V

PROFESSIONAL ELECTIVE COURSE - I

Sl. No.	Course Code	Course Title	Category	Contact Periods	L	T	P	C
1	ME1511	Design of Heat Exchangers	PEC	3	3	0	0	3
2	ME1512	Energy Conservation and Auditing	PEC	3	3	0	0	3
3	ME1513	Experimental Design and Analysis	PEC	3	3	0	0	3
4	ME1514	Gas Dynamics and Jet Propulsion	PEC	3	3	0	0	3
5	ME1515	Refrigeration and Air conditioning	PEC	3	3	0	0	3
6	ME1516	Turbomachines	PEC	3	3	0	0	3
7	ME1517	Bioenergy Conversion Technologies	PEC	3	3	0	0	3
8	ME1518	Energy Efficient Buildings	PEC	3	3	0	0	3
9	ME1519	Energy Storage Technologies	PEC	3	3	0	0	3
10	ME1520	Renewable Powered off Highway Vehicles and Emission Control Technology	PEC	3	3	0	0	3

SEMESTER VI

PROFESSIONAL ELECTIVE COURSE - II

Sl. No.	Course Code	Course Title	Category	Contact Periods	L	T	P	C
1	ME1621	Applied Hydraulics and Pneumatics	PEC	3	3	0	0	3
2	ME1622	Design of Jigs, Fixtures and Press Tools	PEC	3	3	0	0	3
3	ME1623	Fluid Power Automation	PEC	3	3	0	0	3
4	ME1624	Low Cost Automation	PEC	3	3	0	0	3
5	ME1625	Product Design Engineering and Management	PEC	3	3	0	0	3
6	ME1626	Vibration and Noise Control Techniques for Machines and Automobiles	PEC	3	3	0	0	3
7	ME1627	Design Thinking	PEC	3	3	0	0	3
8	ME1628	New Product Development	PEC	3	3	0	0	3
9	ME1629	Product Life Cycle Management	PEC	3	3	0	0	3

PROFESSIONAL ELECTIVE COURSE - III

Sl. No.	Course Code	Course Title	Category	Contact Periods	L	T	P	C
1	ME1631	Additive Manufacturing	PEC	3	3	0	0	3
2	ME1632	Non Destructive Testing and Evaluation	PEC	3	3	0	0	3
3	ME1633	Polymers and Composites	PEC	3	3	0	0	3
4	ME1634	Testing and Characterization of Materials	PEC	3	3	0	0	3
5	ME1635	Unconventional Machining Processes	PEC	3	3	0	0	3
6	ME1636	Welding Technology	PEC	3	3	0	0	3
7	ME1637	Green Manufacturing Design and Practices	PEC	3	3	0	0	3
8	ME1638	Green Supply Chain Management	PEC	3	3	0	0	3
9	ME1639	Industry 4.0 for Mechanical Engineering	PEC	3	3	0	0	3
10	ME1640	Lean Manufacturing	PEC	3	3	0	0	3

SEMESTER VII

PROFESSIONAL ELECTIVE COURSE - IV

Sl. No.	Course Code	Course Title	Category	Contact Periods	L	T	P	C
1	MG1003	Applied Operations Research	PEC	3	3	0	0	3
2	ME1741	Computer Integrated Manufacturing Systems and Automation	PEC	3	3	0	0	3
3	ME1742	Maintenance Engineering	PEC	3	3	0	0	3
4	EC1008	MEMS and NEMS	PEC	3	3	0	0	3
5	ME1743	Safety Engineering and Disaster Management	PEC	3	3	0	0	3
6	ME1744	Total Quality Management and Reliability Engineering	PEC	3	3	0	0	3
7	ME1745	Design for Manufacturing	PEC	3	3	0	0	3
8	ME1746	Digital Manufacturing and IoT	PEC	3	3	0	0	3
9	ME1747	Precision Manufacturing	PEC	3	3	0	0	3
10	ME1748	Surface Engineering	PEC	3	3	0	0	3

PROFESSIONAL ELECTIVE COURSE - V

Sl. No.	Course Code	Course Title	Category	Contact Periods	L	T	P	C
1	ME1751	Advanced Internal Combustion Engines	PEC	3	3	0	0	3
2	ME1752	Automobile Technology	PEC	3	3	0	0	3
3	ME1753	Computational Fluid Dynamics	PEC	3	3	0	0	3
4	GE1004	Fundamentals of Nano Science	PEC	3	3	0	0	3
5	ME1754	Mechanics of Composite Materials	PEC	3	3	0	0	3
6	MG1001	Principles of Management	PEC	3	3	0	0	3
7	ME1755	Carbon Footprint Estimation and Reduction Techniques	PEC	3	3	0	0	3
8	ME1756	Industrial Safety	PEC	3	3	0	0	3
9	ME1757	Thermal Management of Batteries and Fuel Cells	PEC	3	3	0	0	3
10	ME1758	Value Engineering	PEC	3	3	0	0	3

SEMESTER VIII

PROFESSIONAL ELECTIVE COURSE - VI

Sl. No.	Course Code	Course Title	Category	Contact Periods	L	T	P	C
1	ME1861	Entrepreneurship Development	PEC	3	3	0	0	3
2	ME1862	Industrial Tribology	PEC	3	3	0	0	3
3	GE1001	Intellectual Property Rights	PEC	3	3	0	0	3
4	ME1863	Lean Six Sigma	PEC	3	3	0	0	3
5	ME1864	Production Planning and Control	PEC	3	3	0	0	3
6	GE1003	Professional Ethics in Engineering	PEC	3	3	0	0	3
7	ME1865	Advanced Vehicle Engineering	PEC	3	3	0	0	3
8	ME1866	Design Codes and Standards	PEC	3	3	0	0	3
9	ME1867	Design of Pressure Vessels	PEC	3	3	0	0	3
10	ME1868	Power Generation Equipment Design	PEC	3	3	0	0	3

OPEN ELECTIVE COURSES (OEC)

SEMESTER VI

OPEN ELECTIVE COURSE - I

Sl. No.	Course Code	Course Title	Category	Contact Periods	L	T	P	C
1	OEC103	Basics of Embedded Systems and IOT	OEC	3	3	0	0	3
2	OCS102	Programming and Data Structures	OEC	3	3	0	0	3
3	OEE104	Electric Vehicle Technology	OEC	3	3	0	0	3
4	OCE103	Environmental Impact Assessment	OEC	3	3	0	0	3
5	OCH101	Fundamentals of Combustion	OEC	3	3	0	0	3
6	OEE108	Renewable Energy Technologies	OEC	3	3	0	0	3
7	OCS105	Data Analytics with R Programming	OEC	3	3	0	0	3
8	OEI104	Internet of Things	OEC	3	3	0	0	3

SEMESTER VII

OPEN ELECTIVE COURSE - II

Sl. No.	Course Code	Course Title	Category	Contact Periods	L	T	P	C
1	OCE101	Air Pollution and Control	OEC	3	3	0	0	3
2	OCS104	Fundamentals of Database Design	OEC	3	3	0	0	3
3	OCS103	Introduction to Cloud Computing	OEC	3	3	0	0	3
4	OEI102	Robotics	OEC	3	3	0	0	3
5	OEI101	Sensors and Transducers	OEC	3	3	0	0	3
6	OEE107	Solar and Wind Energy Systems	OEC	3	3	0	0	3
7	OEE102	Drone Technologies	OEC	3	3	0	0	3
8	OCS107	Machine Learning for Intelligent Systems	OEC	3	3	0	0	3

AUDIT COURSES (AC)

SEMESTER V

HOD **Dean - Academics** **Principal**

HS1101	COMMUNICATIVE ENGLISH	L T P C
		3 0 0 3

OBJECTIVES

- To develop the basic reading and writing skills of first year engineering and technology students
- To help learners develop their listening skills, which will enable them listen to lectures and comprehend them by asking questions; seeking clarifications.
- To help learners develop their speaking skills and speak fluently in real contexts.
- To help learners develop vocabulary of a general kind by developing their reading skills

UNIT - I SHARING INFORMATION RELATED TO ONESELF/ FAMILY & FRIENDS **9**

Reading - critical reading - finding key information in a given text - shifting facts from opinions - Writing - autobiographical writing - developing hints. Listening- short texts - short formal and informal conversations. Speaking- basics in speaking - introducing oneself - exchanging personal information- speaking on given topics & situations Language development - voices - Wh - Questions- asking and answering - yes or no questions - parts of speech. Vocabulary development - prefixes - suffixes - articles - Polite Expressions. CO1

UNIT - II GENERAL READING AND FREE WRITING **9**

Reading: Short narratives and descriptions from newspapers (including dialogues and conversations); Reading Comprehension Texts with varied question types - Writing - paragraph writing - topic sentence - main ideas - free writing, short narrative descriptions using some suggested vocabulary and structures -. Listening - long texts - TED talks - extensive speech on current affairs and discussions Speaking - describing a simple process - asking and answering questions - Language development - prepositions, clauses. Vocabulary development - guessing meanings of words in context - use of sequence words. CO2

UNIT - III GRAMMAR AND LANGUAGE DEVELOPMENT **9**

Reading - short texts and longer passages (close reading) & making a critical analysis of the given text Writing - types of paragraph and writing essays - rearrangement of jumbled sentences. Listening: Listening to ted talks and long speeches for comprehension. Speaking - role plays - asking about routine actions and expressing opinions. Language development - degrees of comparison - pronouns - Direct vs. Indirect Questions. Vocabulary development - idioms and phrases- cause & effect expressions, adverbs. CO3

UNIT - IV READING AND LANGUAGE DEVELOPMENT **9**

Reading- comprehension-reading longer texts - reading different types of texts- magazines. Writing - letter writing, informal or personal letters - e-mails - conventions of personal email - Listening: Listening comprehension (IELTS, TOEFL and others). Speaking - Speaking about friends/places/hobbies - Language development - Tenses- simple present-simple past - present continuous and past continuous- conditionals - if, unless, in case, when and others Vocabulary development - synonyms - antonyms - Single word substitutes - Collocations. CO4

UNIT - V EXTENDED WRITING **9**

Reading: Reading for comparisons and contrast and other deeper levels of meaning - Writing - brainstorming - writing short essays - developing an outline- identifying main and subordinate ideas - dialogue writing- Listening - popular speeches and presentations - Speaking - impromptu speeches & debates Language development-modal verbs - present/past perfect tense - Vocabulary development-Phrasal verbs- fixed and semi-fixed expressions CO5

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 Speak clearly, confidently, comprehensibly, and communicate with one or many listeners using appropriate communicative strategies.

CO2 Write cohesively and coherently and flawlessly avoiding grammatical errors, using a wide vocabulary range, organizing their ideas logically on a topic.

CO3 Read different genres of texts adopting various reading strategies.

CO4 Listen/view and comprehend different spoken discourses/excerpts in different accents

CO5 Identify topics and formulate questions for productive inquiry

MA1102	ENGINEERING MATHEMATICS - I	L	T	P	C
		4	0	0	4

OBJECTIVES

- The goal of this course is to achieve conceptual understanding and to retain the best traditions of traditional calculus.
- The syllabus is designed to provide the basic tools of calculus mainly for the purpose of modeling the engineering problems mathematically and obtaining solutions.
- Matrix algebra is one of the powerful tools to handle practical problems arising in the field of engineering.
- This is a foundation course of single variable and multivariable calculus which plays an important role in the understanding of science, engineering, economics and computer science, among other disciplines.

UNIT - I MATRICES **12**

Eigen values and Eigenvectors of a real matrix - Characteristic equation - Properties of Eigen values and Eigenvectors - Cayley-Hamilton theorem - Diagonalization of matrices - Reduction of a quadratic form to canonical form by orthogonal transformation - Nature of quadratic forms CO1

UNIT - II CALCULUS OF ONE VARIABLE **12**

Limit of a function - Continuity - Derivatives - Differentiation rules - Interval of increasing and decreasing functions - Maxima and Minima - Intervals of concavity and convexity. CO2

UNIT - III CALCULUS OF SEVERAL VARIABLES **12**

Partial differentiation - Homogeneous functions and Euler's theorem - Total derivative - Change of variables - Jacobians - Partial differentiation of implicit functions - Taylor's series for functions of two variables - Maxima and minima of functions of two variables - Lagrange's method of undetermined multipliers. CO3

UNIT - IV INTEGRAL CALCULUS **12**

Definite and Indefinite integrals - Substitution rule - Techniques of Integration - Integration by parts, Trigonometric integrals, Trigonometric substitutions, Integration of rational functions by partial fraction, Integration of irrational functions - Improper integrals. CO4

UNIT - V MULTIPLE INTEGRALS **12**

Double integrals - Change of order of integration - Double integrals in polar coordinates - Area enclosed by plane curves - Change of variables from Cartesian to polar in double integrals - Triple integrals - Volume of solids. CO5

TOTAL PERIODS: 60

COURSE OUTCOMES

Upon completion of the course, students will be able to

- CO1 Have a clear idea of matrix algebra pertaining to Eigen values and Eigenvectors in addition to dealing with quadratic forms.
- CO2 Understand the concept of limit of a function and apply the same to deal with continuity and derivative of a given function. Apply differentiation to solve maxima and minima problems, which are related to real world problems.
- CO3 Have the idea of extension of a function of one variable to several variables. Multivariable functions of real variables are inevitable in engineering.
- CO4 Understand the concept of integration through the fundamental theorem of calculus. Also acquire skills to evaluate the integrals using the techniques of substitution, partial fraction and integration by parts along with the knowledge of improper integrals.
- CO5 Do double and triple integration so that they can handle integrals of higher order which are applied in the engineering field.

PH1103	ENGINEERING PHYSICS	L	T	P	C
		3	0	0	3

OBJECTIVES

To make the students conversant with

- Elastic properties of materials and various moduli of elasticity.
- Principles of laser and fiber optics and its various technological applications.
- Thermal conduction in solids, heat exchangers and its applications in various devices.
- Quantum concepts to explain black body radiation, Compton effect and matter waves.
- Various crystal structures, Miller indices and crystal growth techniques.

UNIT - I PROPERTIES OF MATTER **9**

Elasticity - Stress-strain diagram and its uses - factors affecting elastic modulus and tensile strength - torsional stress and deformations - twisting couple - torsion pendulum: theory and experiment - bending of beams - bending moment - cantilever: theory and experiment - uniform and non-uniform bending: theory and experiment - Practical applications of modulus of elasticity - I shaped girders - stress due to bending in beams. CO1

UNIT - II LASER AND FIBER OPTICS THERMAL PHYSICS **9**

Lasers: population of energy levels, Einstein's A and B coefficients derivation - resonant cavity, optical amplification (qualitative) - Nd-YAG Laser-Semiconductor lasers: homo junction and hetero junction - Industrial and medical applications of Laser - Fiber optics: principle, numerical aperture and acceptance angle - types of optical fibres (material, refractive index, mode) - losses associated with optical fibers - Fabrication of Optical fiber - Double crucible method - fibre optic sensors: pressure and displacement-Industrial and medical applications of optical fiber - Endoscopy - Fiber optic communication system. CO2

UNIT - III LASER AND FIBER OPTICS THERMAL PHYSICS **9**

Transfer of heat energy - thermal expansion of solids and liquids - expansion joints - bimetallic strips - thermal conduction, convection and radiation - heat conductions in solids - thermal conductivity - Rectilinear flow of heat- conduction through compound media (series and parallel) - Lee's disc method: theory and experiment - Radial flow of heat - thermal insulation - applications: heat exchangers, refrigerators, oven, Induction furnace and solar water heaters. CO3

UNIT IV QUANTUM PHYSICS **9**

Black body radiation - Planck's theory (derivation) - Compton effect: theory and experimental verification - wave particle duality - electron diffraction - concept of wave function and its physical significance - Schrödinger's wave equation - time independent and time dependent equations - particle in a one-dimensional rigid box - Electron microscope - tunnelling (qualitative) - scanning tunnelling microscope - Applications of electron microscopy. CO4

UNIT V CRYSTAL PHYSICS **9**

Single crystalline, polycrystalline and amorphous materials - single crystals: unit cell, crystal systems, Bravais lattices, directions and planes in a crystal, Miller indices - inter-planar distances coordination number and packing factor for SC, BCC, FCC, HCP and diamond structures - Graphite structure - crystal imperfections: point defects, line defects - Burger vectors, stacking faults - growth of single crystals: solution and melt growth techniques - Epitaxial growth-Applications of Single crystal (Qualitative). CO5

TOTAL PERIODS: 45

COURSE OUTCOMES

CO1 The elastic property and stress strain diagram, determination of rigidity modulus by torsional pendulum and Young's modulus by various methods.

CO2 Principle of laser, Einstein's coefficients of laser action, semiconductor laser and its applications, optical fibers and their applications in sensors and communication system.

CO3 The heat transfer through solids and the determination of thermal conductivity in a bad conductor by Lee's disc method and radial flow of heat.

CO4 The quantum concepts and its use to explain black body radiation, Compton effect and wave equation for matter waves, tunnelling electron microscopy and its applications.

CO5 The importance of various crystal structures, Miller indices and various growth techniques.

CY1104	ENGINEERING CHEMISTRY	L	T	P	C
		3	0	0	3

OBJECTIVES

To make the students conversant with

- Principles of water characterization and treatment for industrial purposes.
- Principles and applications of surface chemistry and catalysis.
- Phase rule and various types of alloys
- Various types of fuels, applications and combustion
- Conventional and non-conventional energy sources and energy storage device

UNIT – I WATER AND ITS TREATMENT **9**

Hardness of water - Types - Expression of hardness - Units - Estimation of hardness by EDTA method - Numerical problems on EDTA method - Boiler troubles (scale and sludge, caustic embrittlement , boiler corrosion, priming and foaming) - Treatment of boiler feed water - Internal treatment (carbonate, phosphate, colloidal, sodium aluminate and calgon conditioning) - External treatment - Ion exchange process, Zeolite process - Desalination of brackish water by Reverse Osmosis. CO1

UNIT – II SURFACE CHEMISTRY AND CATALYSIS **9**

Surface chemistry : Types of adsorption - Adsorption of gases on solids - Adsorption of solute from solutions - Adsorption isotherms - Freundlich's adsorption isotherm - Langmuir's adsorption isotherm - Kinetics of uni-molecular surface reactions - Adsorption in chromatography - Applications of adsorption in pollution abatement using PAC. CO2

Catalysis: Catalyst - Types of catalysis - Criteria - Contact theory - Catalytic poisoning and catalytic promoters - Industrial applications of catalysts - Catalytic convertor - Auto catalysis - Enzyme catalysis - Michaelis-Menten equation.

UNIT – III PHASE RULE AND ALLOYS **9**

Phase rule: Introduction - Definition of terms with examples - One component system - Water system - Reduced phase rule - Thermal analysis and cooling curves - Two component systems - Lead-silver system - Pattinson process.
Alloys: Introduction - Definition - Properties of alloys - Significance of alloying - Functions and effect of alloying elements - Nichrome, Alnico, Stainless steel (18/8) - Heat treatment of steel - Non-ferrous alloys - Brass and bronze. CO3

UNIT – IV FUELS AND COMBUSTION **9**

Fuels: Introduction - classification of fuels - Comparison of solid, liquid, gaseous fuels - Coal - Analysis of coal (proximate and ultimate) - Carbonization - Manufacture of metallurgical coke (Otto Hoffmann method) - Petroleum - Cracking - Manufacture of synthetic petrol (Bergius process, Fischer Tropsch Process) - Knocking - Octane number - Diesel oil - Cetane number - Compressed natural gas (CNG) - Liquefied petroleum gases (LPG) - Power alcohol and biodiesel.
Combustion of fuels: Introduction - Calorific value - Higher and lower calorific values - Theoretical calculation of calorific value - Ignition temperature - Spontaneous ignition temperature - Explosive range - Flue gas analysis by Orsat Method. CO4

UNIT – V NON-CONVENTIONAL ENERGY SOURCES AND STORAGE DEVICES **9**

Nuclear energy - Fission and fusion reactions - Differences - Chain reactions - Nuclear reactors - Classification of reactors - Light water nuclear reactor for power generation - Breeder reactor - Solar energy conversion - Solar cells - Wind energy - Fuel cells - Hydrogen-oxygen fuel cell.
Batteries - Types of batteries - Alkaline batteries - Lead-acid, Nickel-cadmium and Lithium batteries. CO5

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 Understand impurities in industrial water, boiler troubles, internal and external treatment methods of purifying water.

CO2 Understand concepts of absorption, adsorption, adsorption isotherms, application of adsorption for pollution abatement, catalysis and enzyme kinetics.

CO3 Recognize significance of alloying, functions of alloying elements and types of alloys, uses of alloys, phase rule, reduced phase and its applications in alloying.

CO4 Identify various types of fuels, properties, uses and analysis of fuels. They should be able to understand combustion of fuels, method of preparation of bio-diesel, synthetic petrol.

CO5 Understand conventional, non-conventional energy sources, nuclear fission and fusion, power generation by nuclear reactor, wind, solar energy and preparation, uses of various batteries.

GE1105	PROBLEM SOLVING AND PYTHON PROGRAMMING	L	T	P	C
		3	0	0	3

OBJECTIVES

- To know the basics of algorithmic problem solving
- To write simple python programs
- To develop python program by using control structures and functions
- To use python predefined data structures
- To write file-based program

UNIT - I ALGORITHMIC PROBLEM SOLVING	**9**
Algorithms, Building blocks of algorithms: statements, state, control flow, functions, Notation: pseudo code, flow chart, programming language, Algorithmic problem solving: Basic algorithms, flowcharts and pseudocode for sequential, decision processing and iterative processing strategies, Illustrative problems: find minimum in a list, insert a card in a list of sorted cards, guess an integer number in a range, Towers of Hanoi.	CO1
UNIT - II INTRODUCTION TO PYTHON	**9**
Python Introduction, Technical Strength of Python, Python interpreter and interactive mode, Introduction to colab , pycharm and jupyter idle(s) ,Values and types: int, float, boolean, string, and list; Built-in data types, variables, Literals, Constants, statements, Operators: Assignment, Arithmetic, Relational, Logical, Bitwise operators and their precedence, Expressions, tuple assignment, Accepting input from Console, printing statements, Simple Python programs.	CO2
UNIT - III CONTROL FLOW, FUNCTIONS AND STRINGS	**9**
Conditionals: Boolean values and operators, conditional (if), alternative (if-else), chained conditional (if-elif-else); Iteration: while, for; Loop manipulation using pass, break, continue, and else; Modules and Functions: function definition and use, flow of execution, parameters and arguments, local and global scope, return values, function composition, recursion. Strings: string slices, immutability, string functions and methods, string module; Illustrative programs: square root, gcd, exponentiation, sum an array of numbers, linear search, binary search.	CO3
UNIT - IV LISTS, TUPLES, DICTIONARIES	**9**
Lists: Defining list and list slicing, list operations, list slices, list methods, list loop, list Manipulation, mutability, aliasing, cloning lists, list parameters, lists as arrays. Tuples: tuple assignment, tuple as return value, tuple Manipulation; Dictionaries: operations and methods; advanced list processing - list comprehension; Illustrative programs: selection sort, insertion sort, merge sort, histogram.	CO4
UNIT - V FILES, MODULES, PACKAGES	**9**
Files and exception: Concept of Files, Text Files; File opening in various modes and closing of a file, Format Operators, Reading from a file, Writing onto a file, File functions- open(), close(), read(), readline(), readlines(),write(), writelines(), tell(), seek(), Command Line arguments; Errors and exceptions: handling exceptions; modules, packages; introduction to numpy, matplotlib. Illustrative programs: word count, copy a file.	CO5

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 Develop algorithmic solutions to simple computational problems
CO2 Develop simple console application in python
CO3 Develop python program by applying control structure and decompose program into functions.
CO4 Represent compound data using python lists, tuples, and dictionaries.
CO5 Read and write data from/to files in Python.

GE1106	ENGINEERING GRAPHICS	L	T	P	C
		2	0	4	4

OBJECTIVES

- To develop graphic skills for communication of concepts, ideas and design of engineering products.
- To inculcate drawing practice in standardized form whenever technical drawing is needed.
- To expose them to existing national standards related to technical drawings.

CONCEPTS AND CONVENTIONS (Not for Examination)

Importance of graphics in engineering applications - Use of drafting instruments - BIS conventions and specifications - Size, layout and folding of drawing sheets - Lettering and dimensioning. **1**

UNIT - I PLANE CURVES AND FREEHAND SKETCHING 7 + 12

Basic Geometrical constructions, Curves used in engineering practices: Conics - Construction of ellipse, parabola and hyperbola by eccentricity method - Construction of cycloidal curves - construction of involutes of square and circle - Drawing of tangents and normal to the above curves. CO1

Visualization concepts and Free Hand sketching: Visualization principles -Representation of Three-Dimensional objects - Layout of views- Freehand sketching of multiple views from pictorial views of objects (Draw without using drawing instruments)

UNIT - II PROJECTION OF POINTS, LINES AND PLANE SURFACE 6 + 12

Orthographic projection - principles-Principal planes - First angle projection-projection of points. Projection of straight lines (only First angle projections) inclined to both the principal planes - Determination of true lengths and true inclinations by rotating line method and traces. Projection of planes (polygonal and circular surfaces) inclined to both the principal planes by rotating object method. CO2

UNIT - III PROJECTION OF SOLIDS 5 + 12

Projection of simple solids like prisms, pyramids, cylinder, cone and truncated solids when the axis is inclined to one of the principal planes when the solid is simply suspended by rotating object method. CO3

UNIT - IV PROJECTION OF SECTIONED SOLIDS AND DEVELOPMENT OF SURFACES 5 + 12

Sectioning of simple solids like prisms, pyramids, cylinder, and cone in a simple vertical position when the cutting plane is inclined to one of the principal planes and perpendicular to the other - obtaining true shape of section.
Development of lateral surfaces of simple and sectioned solids - Prisms, pyramids cylinders and cones - Graphically finding the shortest distance connecting two points. CO4

UNIT - V ISOMETRIC AND PERSPECTIVE PROJECTIONS 6 + 12

Principles of isometric projection - isometric scale -Isometric projections and isometric views of simple solids and truncated solids - Prisms, pyramids, cylinders, cones- combination of two solid objects in simple vertical positions.
Perspective projection of simple solids - Prisms, pyramids and cylinders by visual ray method. CO5

TOTAL PERIODS: 90

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 Understand the fundamentals and standards of Engineering graphics.
CO2 Perform freehand sketching of basic geometrical constructions and multiple views of objects.
CO3 Understand the concept of orthographic projections of lines and plane surfaces.
CO4 Draw projections of the section of solids and development of surfaces.
CO5 Visualize and to project isometric and perspective sections of simple solids.

GE1109 PROBLEM SOLVING AND PROGRAMMING IN C

(Common to all branches of B.E./B.Tech Programmes)

L	T	P	C
3	0	0	3

OBJECTIVES

- To know the problem solving and develop C Programs using basic programming constructs.
- To develop C programs using decision control and looping statements, functions and arrays.
- To develop applications in C using strings and pointers
- To develop applications in C using structures and union
- To develop applications using sequential and random-access file processing.

UNIT- I PROBLEM SOLVING AND BASICS OF C PROGRAMMING **9**

Introduction, Algorithms, building blocks of algorithms, Algorithmic problem-solving steps; Simple Strategies and notation for developing algorithms: Control flow, Flow charts, Pseudo codes, Programming languages; Introduction to C; Structure of a C Program; Compiling and Executing C Programmes, C Tokens and character set, Keywords, Identifiers, Basic Data types, Variables, Constants, Input/Output statements, Operators, Type conversion and Type Casting. CO1

UNIT – II DECISION CONTROL, LOOPING STATEMENTS, FUNCTIONS AND ARRAYS **9**

Conditional Branching statements, Iterative statements, Nested loops, The Break and continue statements, Goto statements; Introduction to Functions: Function declaration, Function definition, Function call, return statement, passing parameters to the function, Recursive Functions; Introduction to Arrays: Declaration, Accessing the Elements, storing values, operations on arrays, Passing Arrays to functions, two-dimensional array, Multidimensional arrays. CO2

UNIT – III STRINGS AND POINTERS **9**

String: Introduction to String, Suppressing Input, String Taxonomy, String operation; Pointers: Introduction to Pointers, declaring pointers variables, Pointer expression and Pointer arithmetic, passing arguments to Function using Pointers, Pointers and Arrays, Array of pointers; Function Pointers, Pointers to Pointers, memory allocation in C Programs, Dynamic memory allocation; Drawbacks of pointers. CO3

UNIT – IV STRUCTURES, UNIONS AND ENUMERATED DATA TYPE **9**

Structure: declaration and initialization, accessing members of structure; Nested structures; Array of structures; Structures and functions; Self-referential structures; Union: declaration and initialization, Accessing members of Union; Array of Union variable; Unions inside Structures, Structures inside unions, Enumerated Data type. CO4

UNIT – V FILE PROCESSING **9**

Introduction to files, using files in C, read data from files, Writing Data to files, Detecting the End of file, Error Handling during file operations; Accepting Command line arguments, Function for selecting a record randomly, Remove and renaming the File, Creating temporary file, Preprocessor directives. CO5

TOTAL PERIODS: 45

TEXT BOOKS

1. Reema Thareja, Programming in C, Oxford University Press, Third Edition, 2023.
2. Herbert Schildt, C The Complete Reference, Fourth Edition, McGraw-Hill, 2017.
3. Kernighan, B.W and Ritchie, D.M, The C Programming language, Second Edition, Pearson Education, 2015.

REFERENCE BOOKS

1. Paul Deitel and Harvey Deitel, How to Program, Ninth edition, Pearson Publication 2022.
2. Dhabal Prasad Sethi and Manoranjan, Concepts and Techniques of Programming In C, Wiley India,2020.
3. Mamta Bhusry, C Concepts & Programming, Wiley India, 2019
4. Dr. Rupinder Singh, Inderpreet Kaur, and Davinder Kaur, C programming Beginners guide, Notion Press, 2020.
5. M.T. Somashekara, D. S. Guru and K. S. Manjunatha, Problem Solving with C, PHI Learning, 2018.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 Develop simple applications in C using basic constructs.
CO2 Design and implement applications using arrays, strings and functions.
CO3 Develop and implement applications in C using pointers.
CO4 Develop applications in C using structures and union.
CO5 Design applications using sequential and random-access file processing.

GE1209	**தமிழர் மரபு**	**L**	**T**	**P**	**C**
	(Common for all Branches of B.E. / B. Tech Programmes)	**1**	**0**	**0**	**1**

அலகு - I மொழி மற்றும் இலக்கியம் 3

இந்திய மொழிக் குடும்பங்கள் - திராவிட மொழிகள் - தமிழ் ஒரு செம்மொழி - தமிழ் செவ்விலக்கியங்கள் - சங்க இலக்கியத்தின் சமயச் சார்பற்ற தன்மை - சங்க இலக்கியத்தில் பகிர்தல் அறம் - திருக்குறளில் மேலாண்மைக் கருத்துக்கள் - தமிழ்க் காப்பியங்கள், தமிழகத்தில் சமண பௌத்த சமயங்களின் தாக்கம் - பக்தி இலக்கியம், ஆழ்வார்கள் மற்றும் நாயன்மார்கள் - சிற்றிலக்கியங்கள் - தமிழில் நவீன இலக்கியத்தின் வளர்ச்சி - தமிழ் இலக்கிய வளர்ச்சியில் பாரதியார் மற்றும் பாரதிதாசன் ஆகியோரின் பங்களிப்பு.

அலகு - II மரபு - பாறை ஓவியங்கள் முதல் நவீன ஓவியங்கள் வரை - சிற்பக் கலை 3

நடுகல் முதல் நவீன சிற்பங்கள் வரை - ஐம்பொன் சிலைகள் - பழங்குடியினர் மற்றும் அவர்கள் தயாரிக்கும் கைவினைப் பொருட்கள், பொம்மைகள் - தேர் செய்யும் கலை - சுடுமண் சிற்பங்கள் - நாட்டுப்புறத் தெய்வங்கள் - குமரிமுனையில் திருவள்ளுவர் சிலை - இசை கருவிகள் - மிருதங்கம், பறை, வீணை, யாழ், நாதஸ்வரம் - தமிழர்களின் சமூக பொருளாதார வாழ்வில் கோவில்களின் பங்கு.

அலகு - III நாட்டுப்புறக் கலைகள் மற்றும் வீர விளையாட்டுகள் 3

தெருக்கூத்து, கரகாட்டம், வில்லுப்பாட்டு, கணியான் கூத்து, ஒயிலாட்டம், தோல்பாவைக் கூத்து, சிலம்பாட்டம், வளரி, புலியாட்டம் தமிழர்களின் விளையாட்டுகள்.

அலகு - IV தமிழர்களின் திணைக் கோட்பாடுகள் 3

தமிழகத்தின் தாவரங்களும், விலங்குகளும் - தொல்காப்பியம் மற்றும் சங்க இலக்கியத்தில் அகம் மற்றும் புறக் கோட்பாடுகள் - தமிழர்கள் போற்றிய அறக்கோட்பாடு - சங்ககாலத்தில் தமிழகத்தில் எழுத்தறிவும், கல்வியும் - சங்ககால நகரங்களும் துறை முகங்களும் - சங்ககாலத்தில் ஏற்றுமதி மற்றும் இறக்குமதி - கடல் கடந்த நாடுகளில் சோழர்களின் வெற்றி.

அலகு - V இந்திய தேசிய இயக்கம் மற்றும் இந்திய பண்பாட்டிற்குத் தமிழர்களின் பங்களிப்பு 3

இந்திய விடுதலைப்போரில் தமிழர்களின் பங்கு - இந்தியாவின பிறப்பகுதிகளில் தமிழ்ப் பண்பாட்டின் தாக்கம் - சுயமரியாதை இயக்கம் - இந்திய மருத்துவத்தில் சித்த மருத்துவத்தின் பங்கு - கல்வெட்டுகள், கையெழுத்துப்படிகள் - தமிழ் புத்தகங்களின் அச்சு வரலாறு.

TOTAL PERIODS : 15

TEXT CUM REFERENCE BOOKS

1. தமிழக வரலாறு - மக்களும் பண்பாடும் – கே. கே. பிள்ளை (வெளியீடு: தமிழ்நாடு பாடநூல் மற்றும் கல்வியியல் பணிகள் கழகம்).

GE1209 HERITAGE OF TAMILS

(Common for all Branches of B.E. / B. Tech Programmes)

L	T	P	C
1	0	0	1

UNIT – I LANGUAGE AND LITERATURE **3**

Language Families in India - Dravidian Languages – Tamil as a Classical Language - Classical Literature in Tamil – Secular Nature of Sangam Literature – Distributive Justice in Sangam Literature - Management Principles in Thirukural - Tamil Epics and Impact of Buddhism & Jainism in Tamil Land - Bakthi Literature Azhwars and Nayanmars - Forms of minor Poetry - Development of Modern literature in Tamil - Contribution of Bharathiyar and Bharathidhasan.

UNIT – II HERITAGE - ROCK ART PAINTINGS TO MODERN ART – SCULPTURE **3**

Hero stone to modern sculpture - Bronze icons - Tribes and their handicrafts - Art of temple car making - Massive Terracotta sculptures, Village deities, Thiruvalluvar Statue at Kanyakumari, Making of musical instruments - Mridhangam, Parai, Veenai, Yazh and Nadhaswaram - Role of Temples in Social and Economic Life of Tamils

UNIT – III FOLK AND MARTIAL ARTS **3**

Therukoothu, Karagattam, Villu Pattu, Kaniyan Koothu, Oyillattam, Leather puppetry, Silambattam, Valari, Tiger dance - Sports and Games of Tamils.

UNIT – IV THINAI CONCEPT OF TAMILS **3**

Flora and Fauna of Tamils & Aham and Puram Concept from Tholkappiyam and Sangam Literature - Aram Concept of Tamils - Education and Literacy during Sangam Age - Ancient Cities and Ports of Sangam Age - Export and Import during Sangam Age - Overseas Conquest of Cholas.

UNIT – V CONTRIBUTION OF TAMILS TO INDIAN NATIONAL MOVEMENT AND INDIAN CULTURE 3 **3**

Contribution of Tamils to Indian Freedom Struggle - The Cultural Influence of Tamils over the other parts of India – Self-Respect Movement - Role of Siddha Medicine in Indigenous Systems of Medicine – Inscriptions & Manuscripts – Print History of Tamil Books.

TOTAL PERIODS : 15

GE1107	PYTHON PROGRAMMING LABORATORY	L	T	P	C
		0	0	4	2

OBJECTIVES

- To write, test, and debug simple Python programs .
- To implement Python programs with conditionals and loops.
- Use functions for structuring Python programs.
- Represent compound data using Python lists, tuples, and dictionaries.
- Read and write data from/to files in Python.

LIST OF EXPERIMENTS

1.	Write an algorithm and draw flowchart illustrating mail merge concept.	
2.	Write an algorithm, draw flowchart and write pseudo code for a real life or scientific or technical problems	
3.	Scientific problem-solving using decision making and looping. ➢ Armstrong number, palindrome of a number, Perfect number.	CO1
4.	Simple programming for one dimensional and two-dimensional arrays. ➢ Transpose, addition, multiplication, scalar, determinant of a matrix	
5.	Program to explore string functions and recursive functions.	CO2

6. Utilizing ‘Functions’ in Python
   - Find mean, median, mode for the given set of numbers in a list.
   - Write a function dups to find all duplicates in the list.
   - Write a function unique to find all the unique elements of a list.
   - Write function to compute gcd, lcm of two numbers.
7. Demonstrate the use of Dictionaries and tuples with sample programs.
8. Implement Searching Operations: Linear and Binary Search.
9. To sort the ‘n’ numbers using: Selection, Merge sort and Insertion Sort.
10. Find the most frequent words in a text of file using command line arguments.
11. Demonstrate Exceptions in Python. CO3
12. Applications**:** Implementing GUI using turtle, pygame.

TOTAL PERIODS: 60

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 Develop simple console applications through python with control structure and functions

CO2 Use python built in data structures like lists, tuples, and dictionaries for representing compound data.

CO3 Read and write data from/to files in Python and applications of python.

WEB REFERENCES:

1. http://www.edx.org

BS1108	PHYSICS AND CHEMISTRY LABORATORY	L	T	P	C
		0	0	4	2

OBJECTIVES

The students will be trained to perform experiments to study the following.

- The properties of matter
- The optical properties, characteristics of lasers & optical fibre
- Electrical & Thermal properties of Materials
- Enable the students to enhance accuracy in experimental measurements.
- To make the student to acquire practical skills in the determination of water quality parameters through volumetric analysis
- Instrumental method of analysis such as potentiometry, conductometry and pHmetry

LIST OF EXPERIMENTS – PHYSICS

A minimum of 5 experiments to be performed from the given list

1. Determination of Young’s modulus of the material of the given beam by Non-uniform bending method.
2. Determination of rigidity modulus of the material of the given wire using torsion pendulum.

3. Determination of wavelength of mercury spectra using Spectrometer and grating.
4. Determination of dispersive power of prism using Spectrometer.
5. (a) Determination of wavelength and particle size using a laser.
   (b) Determination of numerical aperture and acceptance angle of an optical fibre.
   (c) Determination of width of the groove of compact disc using laser
6. Determination of Young's modulus of the material of the given beam by uniform bending method.
7. Determination of energy band gap of the semiconductor.
8. Determination of coefficient of thermal conductivity of the given bad conductor using Lee's disc.

Demonstration Experiment

1. Determination of thickness of a thin sheet / wire - Air wedge method

LIST OF EXPERIMENTS – CHEMISTRY

A minimum of 5 experiments to be performed from the given list

1. Estimation of HCl using Na_2CO_3 as primary standard and determination of alkalinity in water sample.
2. Determination of total, temporary & permanent hardness of water by EDTA method.
3. Determination of DO content of water sample by Winkler's method.
4. Determination of chloride content of water sample by argentometric method.
5. Estimation of copper content of the given solution by Iodometry.
6. Determination of strength of given hydrochloric acid using pH meter.
7. Determination of strength of acids in a mixture of acids using conductivity meter.
8. Estimation of iron content of the given solution using potentiometer.
9. Determination of molecular weight of polyvinyl alcohol using Ostwald viscometer.
10. Conductometric titration of strong acid vs strong base.

Demonstration Experiments

1. Estimation of iron content of the water sample using spectrophotometer (1, 10-Phenanthroline / thiocyanate method).
2. Estimation of sodium and potassium present in water using flame photometer.

TOTAL PERIODS: 60

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 Understand the concept about the basic properties of matter like stress, strain and types of moduli.
Understand the procedure to estimate the amount of dissolved oxygen present in the water.

CO2 Understand the concept of optics like reflection, refraction, diffraction by using spectrometer grating.
Understand the concept about measuring the conductance of strong acid and strong base and mixture of acids by using conductivity meter.

CO3 Understand the thermal properties of solids and to calculate thermal conductivity of a bad conductor.
Understand the principle and procedure involved in the amount of chloride present in the given sample of water.

CO4 Understand the concept of microscope and its applications in determining the moduli.
Understand the concept of determining the emf values by using potentiometer.

CO5 Calculate the particle size of poly crystalline solids.
Understand the concept of determining the pH value and strength of a given acid sample by using pH meter.

GE1110	PROGRAMMING IN C LABORATORY	L	T	P	C
	(Common to all branches of B.E./B.Tech Programmes)	3	0	0	3

OBJECTIVES

- To develop programs in C using basic constructs.
- To develop applications in C using strings, pointers, functions, structures.
- To develop applications in C using file processing.

LIST OF EXPERIMENTS

1. C programming using simple statements and expressions.
2. Scientific problem-solving using decision making and looping.
3. Generating different patterns using multiple control statements. CO1
4. Problems solving using one dimensional array.
5. Mathematical problem solving using two dimensional arrays.
6. Solving problems using string functions.
7. Solving problems with user defined functions.
8. Solving problems using recursive function. CO2
9. Solving problems with dynamic memory allocation.
10. Realtime application using structures and unions.
11. Realtime problem solving using sequential and random-access file.
12. Solving problems with command line argument. CO2

TOTAL PERIODS: 60

REFERENCE BOOKS

1. Problem Solving and Program Design in C, 4th edition, by Jeri R. Hanly and Elli B.Koffman.
2. Reema Thareja, “Programming in C”, Oxford University Press, Second Edition, 2016.
3. Programming in C by Pradip Dey, Manas Ghosh 2nd edition Oxford University Press. E.Balaguruswamy, Programming in ANSI C 5th Edition McGraw-Hill.

5. AL Kelly, Iraphol,Programming in C,4th edition Addison-Wesley – Professional.
6. Brain W.Kernighan & Dennis Ritchie, C Programming Language, 2nd edition, PHI.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 Develop C programs for simple applications making use of basic constructs.
CO2 Develop C programs involving string, functions, recursion, pointers, andstructures.
CO3 Design applications using sequential and random-access fileprocessing.

HS1201	PROFESSIONAL ENGLISH	L	T	P	C
		3	0	0	3

OBJECTIVES

The course prepares second semester engineering and Technology students to:

- Develop strategies and skills to enhance their ability to read and comprehend engineering and technology texts.
- Foster their ability to write convincing job applications and effective reports.
- Develop their speaking skills to make technical presentations, participate in group discussions.
- Strengthen their listening skill which will help them comprehend lectures and talks in their areas of specialization.

UNIT – I	**INTRODUCTION PROFESSIONAL ENGLISH**	**9**	
	Listening: Listening to technical talks with comprehension tasks - Speaking - conversation methods in real life occurrences using expressions of different emotions and imperative usages - Reading - reading short technical texts from journals- newspapers - Writing- purpose statements - extended definitions - writing instructions - checklists-recommendations - Vocabulary Development - technical vocabulary Language Development - tenses - subject verb agreement - compound words		CO1
UNIT – II	**READING AND STUDY SKILLS**	**9**	
	Listening - Listening comprehension of a discussion on a technical topic of common interest by three or four participants (real life as well as online videos). - Speaking - describing a process - Reading: Practice in chunking and speed reading – Paragraphing - Writing- interpreting charts, graphs - Vocabulary Development: Important foreign expressions in Use, homonyms, homophones, homographs - easily confused words Language Development- impersonal passive voice, numerical adjectives.		CO2
UNIT – III	**TECHNICAL WRITING AND GRAMMAR**	**9**	
	Listening - listening to conversation - effective use of words and their sound aspects, stress, intonation & pronunciation - Speaking - mechanics of presentations -Reading: Reading longer texts for detailed understanding. (GRE/IELTS practice tests); Writing-Describing a process, use of sequence words- Vocabulary Development- sequence words- Informal vocabulary and formal substitutes-Misspelled words. Language Development- embedded sentences and Ellipsis.		CO3
UNIT – IV	**REPORT WRITING**	**9**	
	Listening - Model debates & documentaries and making notes. Speaking - expressing agreement/ disagreement, assertiveness in expressing opinions-Reading: Technical reports, advertisements and minutes of meeting - Writing- email etiquette - job application - cover letter - Résumé preparation (via email and hard copy) - analytical essays and issue based essays - Vocabulary Development- finding suitable synonyms-paraphrasing- Language Development- clauses- if conditionals.		CO4
UNIT – V	**GROUP DISCUSSION AND JOBAPPLICATIONS**	**9**	
	Listening: Extensive Listening. (radio plays, rendering of poems, audio books and others) Speaking - participating in a group discussion - Reading: Extensive Reading (short stories, novels, poetry and others) - Writing reports- minutes of a meeting- accident and survey - Writing a letter/ sending an email to the Editor - cause and effect sentences - Vocabulary Development - verbal analogies. Language Development - reported speech.		CO5
	TOTAL PERIODS:	**45**	

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Speak clearly, confidently, comprehensibly, and communicate with one or many listeners using appropriate communicative strategies.
CO2	Write cohesively and coherently and flawlessly avoiding grammatical errors, using a wide vocabulary range, organizing their ideas logically on a topic.
CO3	Read different genres of texts adopting various reading strategies.
CO4	Listen/view and comprehend different spoken discourses/excerpts in different accents
CO5	Identify topics and formulate questions for productive inquiry

TEXT BOOKS:

1. Board of editors. Fluency in English A Course book for Engineering and Technology. Orient Blackswan, Hyderabad: 2016
2. Sudharshana.N.P and Saveetha. C. English for Technical Communication. Cambridge University Press: New Delhi, 2016.

REFERENCE BOOKS:

1. Raman, Meenakshi and Sharma, Sangeetha, Technical Communication Principles and Practice. Oxford University Press: New Delhi, 2014.

3. Booth-L. Diana, Project Work, Oxford University Press, Oxford: 2014.
4. Grussendorf, Marion, English for Presentations, Oxford University Press, Oxford: 2007
5. Means, L. Thomas and Elaine Langlois, English & Communication For Colleges. Cengage Learning, USA: 2007

Students can be asked to read Tagore, Chetan Bhagat and for supplementary reading

MA1202	**ENGINEERING MATHEMATICS – II**	**L**	**T**	**P**	**C**
		4	**0**	**0**	**4**

OBJECTIVES

- This course is designed to cover topics such as Differential Equation, Vector Calculus, Complex Analysis and Laplace Transform. Vector calculus can be widely used for modelling the various laws of physics.
- The various methods of complex analysis and Laplace transforms can be used for efficiently solving the problems that occur in various branches of engineering disciplines.

UNIT - I ORDINARY DIFFERENTIAL EQUATIONS **12**

Higher order linear differential equations with constant coefficients - Method of variation of parameters- Homogenous equation of Euler‘s and Legendre‘s type - System of simultaneous first order linear differential equations with constant coefficients CO1

UNIT - II VECTOR CALCULUS **12**

Gradient and directional derivative - Divergence and curl - Vector identities - Irrotational and Solenoidal vector fields - Line integral over a plane curve - Surface integral - Volume integral - Green‘s, Gauss divergence and Stoke‘s theorems - Verification and simple application in evaluating line, surface and volume integrals. CO2

UNIT - III COMPLEX VARIABLES **12**

Analytic functions - Necessary and sufficient conditions for analyticity in Cartesian and polar coordinates (C-R equations) - Properties - Harmonic conjugates - Construction of analytic function (Milne-Thomphson method) - Conformal mapping - Standard transformations W = Z + C, CZ, 1/Z - Bilinear transformation. CO3

UNIT - IV COMPLEX INTEGRATION **12**

Cauchy integral theorem - Cauchy integral formula - Taylor and Laurent series - Singularities - Residues - Cauchy Residue theorem - Application of residue theorem for evaluation of real integrals - Use of circular contour and semi circular contour(excluding poles on the real line) CO4

UNIT - V LAPLACE TRANSFORMS **12**

Existence conditions - Transforms of elementary functions - Transform of unit step function and unit impulse function - Basic properties - Shifting theorems - transforms of derivatives and integrals -Transform of periodic functions - Inverse transforms using properties, partial fractions and Convolution theorem - Application to solution of linear second order ordinary differential equations with constant coefficients. CO5

TOTAL PERIODS: 60

COURSE OUTCOMES

CO1 The students were imbibed with techniques in solving ordinary differential equations that arises in most of the engineering problems

CO2 The student were acquainted with the concepts of vector calculus-like Gradient, Divergence, Curl, Directional derivative, Irrational vector and Solenoidal vector. The course gives an understanding of Vector integration, needed for problems in all engineering disciplines.

CO3 To develop an understanding of the standard techniques of complex variable and mapping so as to enable the student to apply them with confidence, in application areas such as heat conduction, elasticity, fluid dynamics and flow of electric current .

CO4 The student will be exposed to the concept of Cauchy's integral theorem, Taylor and Laurent expansions, Singular points, Application of residue theorem to evaluate complex integrals.

CO5 To make the students to appreciate the purpose of using transforms to create new domain in which it is easier to handle the problem that is being investigated.

5. T. Veerarajan. Engineering Mathematics - II, McGraw Hill Education; First edition 2017.

PH1254	MATERIALS SCIENCE	L	T	P	C
		3	0	0	3

OBJECTIVES

- To introduce the essential principles of materials science for mechanical and related engineering applications

UNIT - I PHASE DIAGRAMS **9**

Solid solutions - Hume Rothery's rules - the phase rule - single component system - one-component system of iron - binary phase diagrams - isomorphous systems - the tie-line rule - the lever rule - application to isomorphous system - eutectic phase diagram - peritectic phase diagram - other invariant reactions - free energy composition curves for binary systems - microstructural change during cooling. CO1

UNIT - II FERROUS ALLOYS **9**

The iron-carbon equilibrium diagram - phases, invariant reactions - microstructure of slowly cooled steels - eutectoid steel, hypo and hypereutectoid steels - effect of alloying elements on the Fe-C system - diffusion in solids - Fick's laws of diffusion- mechanisms of diffusion, temperature dependence of diffusivity - steady and non-steady state diffusion - factors that influence diffusion - Properties and applications of copper alloys, aluminium alloys and titanium alloys. Phase transformations - T-T-T-diagram for eutectoid steel - pearlitic, baintic and martensitic transformations - tempering of martensite. CO2

UNIT - III MECHANICAL PROPERTIES **9**

Tensile test - plastic deformation mechanisms - slip and twinning - role of dislocations in slip - strengthening methods - strain hardening - refinement of the grain size - solid solution strengthening - precipitation hardening - creep resistance - creep curves - mechanisms of creep - creep-resistant materials - fracture - the Griffith criterion - critical stress intensity factor and its determination- Fatigue failure - fatigue tests - hardness - Rockwell and Brinell hardness - Knoop and Vickers micro hardness. Steps in materials selection process, Factors influencing materials selection, Case studies CO3

UNIT - IV MAGNETIC, DIELECTRIC AND SUPERCONDUCTING MATERIALS **9**

Ferromagnetism - domain theory - types of energy - hysteresis - hard and soft magnetic materials - ferrites - dielectric materials - types of polarization – Langevin - Debye equation - frequency effects on polarization - dielectric breakdown - insulating materials - Ferroelectric materials - superconducting materials and their properties. CO4

UNIT - V NEW MATERIALS **9**

Historical perspective- Material properties and qualities, Classification of Materials - Ceramics - types and applications - composites: classification, role of matrix and reinforcement, processing of fibre reinforced plastics - metallic glasses: types , glass forming ability of alloys, melt spinning process, applications - shape memory alloys: phases, shape memory effect, pseudo elastic effect, NiTi alloy, applications – nano materials: preparation (bottom up and top down approaches), properties and applications. CO5

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 Understand the various forms of solid solutions, equilibrium, and different phase diagrams and their applications in materials system.

CO2 Understand the Fe - Fe_3C phase diagram, invariant reactions, diffusion of solids, mechanism, factors that influence diffusion, properties of copper, aluminium and titanium alloys and various microstructures of ferrous and their alloys.

CO3 Understand the mechanical properties of materials, measurement and materials selections process and their case studies.

CO4 Understand the properties of different types of magnetic materials - Ferromagnetic, Anti ferro magnetic, Ferrites. Understand the phenomenon of superconductivity, and its properties of superconductors and .the properties of dielectric materials, various types of polarization and loss in dielectric materials.

CO5 Understand the importance of various newer materials, like ceramics, composite materials, metallic glass, SMA, Nano materials. Their historical perspective, properties, classification and fabrication and apply to develop alloys of various composition with desirable properties

3. Wahab, M.A. Solid State Physics: Structure and Properties of Materials. Narosa Publishing House, 2009.

GE1204	ENVIRONMENTAL SCIENCE AND ENGINEERING	L	T	P	C
		3	0	0	3

OBJECTIVES

- To study the inter relationship between living organism and environment.
- To appreciate the importance of environment by assessing its impact on the human world; envision the surrounding environment, its functions and its value.
- To find and implement scientific, technological, economic and political solutions to environmental problems.
- To study the integrated themes and biodiversity, natural resources, pollution control and waste management.
- To study the dynamic processes and understand the features of the earth's interior and surface.

UNIT - I ENVIRONMENT, ECOSYSTEM AND BIODIVERSITY **11**

Definition, scope and importance of environment - need for public awareness - Role of Individual in Environment protection - Concept of an ecosystem-structure and function of an ecosystem - Producers, consumers and decomposers - Energy flow in the ecosystem. Food chains, food webs and ecological pyramids. Types, characteristic features, structure and function of forest, grass land, desert and aquatic (ponds, lakes, rivers, oceans, estuaries) ecosystem.

Biodiversity-definition-genetic species and ecosystem diversity. Value of biodiversity-consumptive use, productive use, social, ethical, aesthetic and option values. - Biodiversity at global, national and local levels - India as a mega-diversity nation - Hot spots of biodiversity. Threats to biodiversity-habitat loss, poaching of wild life, human-wildlife conflicts. Wildlife protection act and forest conservation act. Endangered and endemic species. Conservation of biodiversity in-situ and ex-situ conservation of biodiversity. CO1

UNIT - II ENVIRONMENTAL POLLUTION **9**

Definition - causes, effects and control measures of: (a) Air pollution (b) Water pollution (c) Soil pollution (d) Marine pollution (e) Noise pollution (f) Thermal pollution (g) Nuclear hazards - solid waste management: causes, effects and control measures of municipal solid wastes- problems of e-waste - role of an individual in prevention of pollution - pollution case studies - disaster management: floods, earthquake, cyclone, Tsunami and landslides. Field study of local polluted site - Urban / Rural / Industrial / Agricultural. CO2

UNIT - III NATURAL RESOURCES **9**

Forest resources: Use and over-exploitation, deforestation, case studies- timber extraction, mining, dams and their effects on forests and tribal people - Water resources: Use and overutilization of surface and ground water, floods, drought, conflicts over water, dams-benefits and problems - Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources, case studies - Food resources: World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture, fertilizer-pesticide problems, water logging, salinity, case studies - Energy resources: Growing energy needs, renewable and non renewable energy sources, use of alternate energy sources. case studies - Land resources: Land as a resource, land degradation, man induced landslides, soil erosion and desertification - role of an individual in conservation of natural resources - Equitable use of resources for sustainable lifestyles. Field study of local area to document environmental assets - river / forest / grassland / hill / mountain. CO3

UNIT - IV SOCIAL ISSUES AND THE ENVIRONMENT **8**

From unsustainable to sustainable development - urban problems related to energy - water conservation, rain water harvesting, watershed management - resettlement and rehabilitation of people; its problems and concerns, case studies - role of non-governmental organization - environmental ethics: Issues and possible solutions - climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust, case studies. - wasteland reclamation - consumerism and waste products - Principles of Green Chemistry - environment CO4 protection act - Air (Prevention and Control of Pollution) act - Water (Prevention and control of Pollution) act - Wildlife protection act - Forest conservation act - enforcement machinery involved in environmental legislation- central and state pollution control boards- National Green Tribunal - Public awareness.

UNIT - V HUMAN POPULATION AND THE ENVIRONMENT **8**

Population growth, variation among nations - population explosion - family welfare programme - environment and human health - human rights - value education - HIV / AIDS - COVID 19 - women and child welfare - role of information technology in environment and human health - Case studies. CO5

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

- CO1 Obtain knowledge about environment, ecosystems and biodiversity.
- CO2 Take measures to control environmental pollution.
- CO3 Gain knowledge about natural resources and energy sources.
- CO4 Find and implement scientific, technological, economic and political solutions to environmental problems.
- CO5 Understand the impact of environment on human population.

BE1252	BASIC ELECTRICAL, ELECTRONICS AND INSTRUMENTATION ENGINEERING	L	T	P	C
		3	0	0	3

OBJECTIVES

To impart knowledge on

- Electric circuit laws, single and three phase circuits and wiring
- Working Principles of Electrical Machines
- Various Electronic Devices and Measuring Instruments

UNIT - I ELECTRICAL CIRCUITS **9**

Basic circuit components, Ohms Law - Kirchoff's Law - Instantaneous Power - Inductors - Capacitors - Independent and Dependent Sources - steady state solution of DC circuits - Nodal analysis, Mesh analysis - Thevinin's Theorem, Norton's Theorem, Maximum Power transfer theorem, Linearity and Superposition Theorem. CO1

UNIT - II AC CIRCUITS **9**

Introduction to AC circuits - waveforms and RMS value - power and power factor, single phase and three-phase balanced circuits - Three phase loads - housing wiring, industrial wiring, materials of wiring. CO2

UNIT - III ELECTRICAL MACHINES **9**

Principles of operation and characteristics of; DC machines, Transformers (single and three phase), Synchronous machines , three phase and single phase induction motors. CO3

UNIT - IV ELECTRONIC DEVICES AND CIRCUITS		**9**
Types of Materials - Silicon & Germanium - N type and P type materials - PN Junction - Forward and Reverse Bias -Semiconductor Diodes - Bipolar Junction Transistor - Characteristics - Field Effect Transistors - Transistor Biasing - Introduction to operational Amplifier - Inverting Amplifier - Non Inverting Amplifier - DAC - ADC .		CO4
UNIT - V MEASUREMENTS AND INSTRUMENTATION		**9**
Introduction to transducers - Classification of Transducers: Resistive, Inductive, Capacitive, Thermoelectric, piezoelectric, photoelectric, Hall effect and Mechanical - Classification of instruments - Types of indicating Instruments - multimeters – Oscilloscopes - three-phase power measurements - instrument transformers (CT and PT)		CO5
	TOTAL PERIODS:	**45**

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Explain the basic laws and theorems used in Electrical circuits
CO2	Impart knowledge on single phase and three phase AC circuit and wiring
CO3	Comprehend the construction and working principle of Electrical machines
CO4	Explain the fundamentals of semiconductor and applications.
CO5	Impart knowledge on different measuring instruments

GE1206	ENGINEERING MECHANICS	L	T	P	C
		3	0	0	3

OBJECTIVES

- To develop capacity to predict the effect of force.
- To develop motion in the course of carrying out the design functions of Engineering.

UNIT - I STATICS OF PARTICLES	**12**
Introduction - Units and Dimensions - Laws of Mechanics - Lami’s theorem, Parallelogram and triangular Law of forces - Vectorial representation of forces - Vector operations of forces - additions, subtraction, dot product, cross product - Coplanar Forces - rectangular components - Equilibrium of a particle - Forces in space - Equilibrium of a particle in space - Equivalent systems of forces - Principle of transmissibility.	CO1

UNIT - II EQUILIBRIUM OF RIGID BODIES		**12**
Free body diagram - Types of supports -Action and reaction forces - stable equilibrium - Moments and Couples - Moment of a force about a point and about an axis - Vectorial representation of moments and couples - Scalar components of a moment - Varignon's theorem - Single equivalent force -Equilibrium of Rigid bodies in two dimensions - Equilibrium of Rigid bodies in three dimensions.		CO2
UNIT - III PROPERTIES OF SURFACES AND SOLIDS		**12**
Centroids and centre of mass - Centroids of lines and areas - Rectangular, circular, triangular areas by integration - T section, I section, - Angle section, Hollow section by using standard formula - Theorems of Pappus - Area moments of inertia of plane areas - Rectangular, circular, triangular areas by integration - T section, I section, Angle section, Hollow section by using standard formula - Parallel axis theorem and perpendicular axis theorem - Principal moments of inertia of plane areas - Principal axes of inertia-Mass moment of inertia -mass moment of inertia for prismatic, cylindrical and spherical solids from first principle - Relation to area moments of inertia.		CO3
UNIT - IV DYNAMICS OF PARTICLES		**12**
Displacements, Velocity and acceleration, their relationship - Relative motion - Curvilinear motion - Newton's laws of motion - Work Energy Equation- Impulse and Momentum - Impact of elastic bodies.		CO4
UNIT - V FRICTION AND RIGID BODY DYNAMICS		**12**
Friction force - Laws of sliding friction - equilibrium analysis of simple systems with sliding friction - wedge friction-. Rolling resistance -Translation and rotation of rigid bodies - Velocity and acceleration - General Plane motion of simple rigid bodies such as cylinder, disc/wheel and sphere.		CO5
	TOTAL PERIODS:	**60**

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Illustrate the vectorial and scalar representation of forces and moments
CO2	Analyse the rigid body in equilibrium
CO3	Evaluate the properties of surfaces and solids
CO4	Calculate dynamic forces exerted in rigid body
CO5	Determine the friction and the effects by the laws of friction

GE1207 ENGINEERING PRACTICES LABORATORY

L	T	P	C
0	0	4	2

OBJECTIVES

- To provide exposure to the students with hands on experience on various basic engineering practices in Civil, Mechanical, Electrical and Electronics Engineering

GROUP A (CIVIL & MECHANICAL)

I CIVIL ENGINEERING PRACTICE **13**

Buildings:

(a) Study of plumbing and carpentry components of residential and industrial buildings. Safety aspects.

Plumbing Works:

(a) Study of pipeline joints, its location and functions: valves, taps, couplings, unions, reducers, elbows in household fittings.
(b) Study of pipe connections requirements for pumps and turbines.
(c) Preparation of plumbing line sketches for water supply and sewage works.
(d) Hands-on-exercise:
Basic pipe connections - Mixed pipe material connection - Pipe connections with different joining components.
(e) Demonstration of plumbing requirements of high-rise buildings.

Carpentry using Power Tools only:

(a) Study of the joints in roofs, doors, windows and furniture.
(b) Hands-on-exercise:
Wood work, joints by sawing, planing and cutting.

II MECHANICAL ENGINEERING PRACTICE **18**

Welding:

(a) Preparation of butt joints, lap joints and T- joints by Shielded metal arc welding.
(b) Gas welding practice

Basic Machining:

(a) Simple Turning and Taper turning
(b) Drilling Practice

Sheet Metal Work:

(a) Forming & Bending:
(b) Model making - Trays and funnels.
(c) Different type of joints.

Machine assembly practice:

(a) Study of centrifugal pump
(b) Study of air conditioner

Demonstration on:

(a) Smithy operations, upsetting, swaging, setting down and bending. Example - Exercise - Production of hexagonal headed bolt.
(b) Foundry operations like mould preparation for gear and step cone pulley.
(c) Fitting - Exercises - Preparation of square fitting and V - fitting models.

GROUP B (ELECTRICAL & ELECTRONICS))

III ELECTRICAL ENGINEERING PRACTICE **13**

1. Residential house wiring using switches, fuse, indicator, lamp and energy meter.
2. Fluorescent lamp wiring.
3. Stair case wiring
4. Measurement of electrical quantities - voltage, current, power & power factor in RLC circuit.
5. Measurement of energy using single phase energy meter.
6. Measurement of resistance to earth of an electrical equipment.

IV ELECTRONICS ENGINEERING PRACTICE **16**

1. Study of electronic components and equipments - Resistor, colour coding measurement of AC signal parameter (peak-peak, RMS period, frequency) using CR.
2. Study of logic gates AND, OR, EX-OR and NOT.
3. Generation of clock signal.
4. Soldering practice - Components devices and circuits - Using general purpose PCB.
5. Measurement of ripple factor of HWR and FWR.

TOTAL PERIODS: 60

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 Fabricate carpentry components and pipe connections including plumbing works.

CO2 Use welding equipments to join the structures, carry out the basic machining operations, and make the models using sheet metal works.

CO3 Illustrate on centrifugal pump, air conditioner, operations of smithy, foundry and fittings.

CO4 Carry out basic home electrical works and appliances, measure the electrical quantities.

CO5 Elaborate on the electronic components and gates, soldering practices.

BE1258	BASIC ELECTRICAL, ELECTRONICS AND INSTRUMENTATION ENGINEERING LABORATORY	L	T	P	C
		0	0	4	2

OBJECTIVES

- To validate the principles studied in theory by performing experiments in the laboratory

LIST OF EXPERIMENTS

1. Verification of Kirchhoff's voltage and current laws.
2. Verification of Thevenin's and Norton's theorem.
3. Verification of superposition theorem.
4. Verification of Maximum power transfer theorem.
5. Study of CRO and measurement of AC signals.
6. Measurement of three phase power by two-Watt meter method.
7. Characteristics of LVDT.
8. Half wave rectifier with capacitive filter.
9. Characteristics of PN Diode
10. Characteristics of BJT
11. RTD and thermistor
12. Transistor based application circuits

TOTAL PERIODS: 60

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Understand and experimentally verify the basics of electric circuit laws
CO2	Understand and apply circuit theorems and concepts in engineering applications
CO3	Analyze the AC signals, understand the three phase electric networks and study the instruments used for commercial measurement of electrical power.
CO4	Understand and analyze the characteristics of diode, transistor and implement transistor based application
CO5	Understand and analyze the characteristics of different transducers

MA1301 TRANSFORMS AND PARTIAL DIFFERENTIAL EQUATIONS

L	T	P	C
4	0	0	4

OBJECTIVES

- To introduce the basic concepts of Partial differential equation and to find its solutions.
- To introduce Fourier series analysis which is vital to many applications in engineering apart from its use in solving boundary value problems.
- To acquaint the student with Fourier series techniques to solve heat and wave flow problems in engineering.
- To familiarize the student with Fourier transform techniques used in solving various practical engineering problems.
- To introduce the effective mathematical tools for the solutions of different equations that model several physical processes and to develop transform techniques for discrete time systems.

UNIT - I PARTIAL DIFFERENTIAL EQUATIONS 12

Formation of partial differential equations - Singular integrals - Solutions of standard types of first order partial differential equations (except) - Lagrange's linear equation - Linear partial differential equations of second and higher order with constant coefficients of both homogeneous and non-homogeneous types CO1

UNIT - II FOURIER SERIES 12

Dirichlet's conditions -Necessary and sufficient condition for existence of Fourier series - General Fourier series - Odd and even functions - Half range sine series -Half range cosine series - Complex form of Fourier series - Parseval's identity - Harmonic analysis. CO2

UNIT - III APPLICATIONS OF PARTIAL DIFFERENTIAL EQUATIONS 12

Classification of PDE - Method of separation of variables - Fourier Series Solutions of one-dimensional wave equation - One dimensional equation of heat conduction - Steady state solution of two dimensional equation of heat conduction. CO3

UNIT - IV FOURIER TRANSFORMS 12

Statement of Fourier integral theorem - Fourier transform pair - Fourier sine and Cosine transforms - Properties - Transforms of simple functions - Convolution theorem - Parseval's identity. CO4

UNIT - V Z - TRANSFORMS AND DIFFERENCE EQUATIONS 12

Z-transforms - Elementary properties - Inverse Z-transform (using partial fraction and residues) -Initial and final value theorems - Convolution theorem - Formation of difference equations - Solution of difference equations using Z - transform. CO5

TOTAL PERIODS: 60

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 Understand how to solve the partial differential equations and apply these concepts in the field of engineering.

CO2 Learn Fourier series analysis which plays a vital role in the application of electrical engineering, vibration analysis, acoustics, optics, signal and image processing.

CO3 Appreciate the physical significance of Fourier series techniques in solving one and two-dimensional heat flow problems and one dimensional wave equations and this concept is applied in the fields like elasticity, heat transfer ,quantum mechanics and also extensively in physical phenomenon.

CO4 Understand the mathematical principles on transforms and gain the ability to formulate and solve some of the physical problems like designing electrical circuits, signal processing, signal analysis ,image processing etc.

CO5 Learn to use effective mathematical tools like Z- transform for solving difference equations in discrete time signals etc.

TEXT BOOKS:

1. Grewal B.S., "Higher Engineering Mathematics", 44th Edition, Khanna Publishers, New Delhi, 2017.
2. Erwin Kreyszig, "Advanced Engineering Mathematics ", 10th Edition, John Wiley, India, 2016.
3. Bali. N.P and Manish Goyal, "A Textbook of Engineering Mathematics", 9th Edition, Laxmi Publications Pvt. Ltd, 2014.

EE1352	ELECTRICAL DRIVES AND CONTROL	L	T	P	C
		3	0	0	3

OBJECTIVES

- To understand the basic concepts of different types of electrical machines.
- To impart knowledge on performance characteristics of drive motors.
- To study the different methods of starting D.C motors and induction motors.
- To study the conventional and solid-state speed control of DC drives.
- To study the conventional and solid-state speed control of AC drives.

UNIT - I INTRODUCTION **8**

Basic elements - Types of electric drives - factors influencing the choice of electrical drives - heating and cooling curves - Loading conditions and classes of duty - Selection of power rating for drive motors with regard to thermal overloading and Load variation factors. CO1

UNIT - II DRIVE MOTOR CHARACTERISTICS **9**

Mechanical characteristics - Speed-Torque characteristics of various types of load and drive motors - Braking of electrical motors - DC motors: Shunt, series and compound - single phase and three phase induction motors - V and inverted V curve of synchronous motor - Regulation of alternator by EMF & MMF method. CO2

UNIT - III STARTING METHODS **8**

Types of DC Motor starters - Typical control circuits for shunt and series motors - Types of A.C Motor starters - Three phase squirrel cage and slip ring induction motors. CO3

UNIT - IV CONVENTIONAL AND SOLID STATE SPEED CONTROL OF D.C. DRIVES **10**

Speed control of DC series and shunt motors - Armature and field control, Ward-Leonard control system - Using controlled rectifiers and DC choppers -applications. CO4

UNIT - V CONVENTIONAL AND SOLID STATE SPEED CONTROL OF AC DRIVES **10**

Speed control of three phase induction motor - Voltage control, voltage / frequency control, slip power recovery scheme - Using inverters and AC voltage regulators - applications. CO5

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 Understand the basic concepts of different types of electrical machines

CO2 Understand and analyze different drive motors characteristics

CO3 Understand the different methods of starting DC motors and induction motors

CO4 Analyze the conventional and solid-state speed control of DC drives

CO5 Analyze the conventional and solid-state speed control of AC drives

TEXT BOOKS:

CE1301 FLUID MECHANICS AND MACHINERY

L	T	P	C
3	0	0	3

OBJECTIVES

- The properties of fluids and concept of control volume are studied
- The applications of the conservation laws to flow through pipes are studied.
- To understand the importance of dimensional analysis
- To understand the importance of various types of flow in pumps.
- To understand the importance of various types of flow in turbines.

UNIT - I FLUID PROPERTIES AND FLOW CHARACTERISTICS **9**

Units and dimensions - Properties of fluids- mass density, specific weight, specific volume, specific gravity, viscosity, compressibility, vapor pressure, surface tension and capillarity. Flow characteristics - concept of control volume - application of continuity equation, energy equation and momentum equation. CO1

UNIT - II FLOW THROUGH CIRCULAR CONDUITS **9**

Hydraulic and energy gradient - Laminar flow through circular conduits and circular annuli - Boundary layer concepts - types of boundary layer thickness - Darcy Weisbach equation - friction factor- Moody diagram- commercial pipes- minor losses - Flow through pipes in series and parallel. CO2

UNIT - III DIMENSIONAL ANALYSIS **9**

Need for dimensional analysis - methods of dimensional analysis - Similitude - types of similitude - Dimensionless parameters - application of dimensionless parameters - Model analysis. CO3

UNIT - IV PUMPS **9**

Impact of jets - Euler's equation - Theory of roto-dynamic machines - various efficiencies - velocity components at entry and exit of the rotor - velocity triangles - Centrifugal pumps - working principle - work done by the impeller - performance curves - Reciprocating pump - working principle - Rotary pumps -classification. CO4

UNIT - V HYDRAULIC TURBINES **9**

Classification of turbines - heads and efficiencies - velocity triangles. Axial, radial and mixed flow turbines. Pelton wheel, Francis turbine and Kaplan turbines- working principles - work done by water on the runner - draft tube. Specific speed - unit quantities - performance curves for turbines - governing of turbines. CO5

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 Apply mathematical knowledge to predict the properties and characteristics of a fluid.
CO2 Analyze and calculate major and minor losses associated with pipe flow in piping networks.
CO3 Mathematically predict the nature of physical quantities
CO4 Analyze critically the performance of pumps
CO5 Analyze critically the performance of turbines

ME1301 ENGINEERING THERMODYNAMICS

L	T	P	C
3	1	0	4

OBJECTIVES

- To familiarize the students to understand the fundamentals of thermodynamics and to perform thermal analysis on their behaviour and performance.

(Use of Standard and approved Steam Table, Mollier Chart, Compressibility Chart and Psychrometric Chart permitted)

UNIT - I BASIC CONCEPTS AND FIRST LAW **12**

Basic concepts - concept of continuum, comparison of microscopic and macroscopic approach. Path and point functions. Intensive and extensive, total and specific quantities. System and their types. Thermodynamic Equilibrium State, path and process. Quasi-static, reversible and irreversible processes. Heat and work transfer, definition and comparison, sign convention. Displacement work and other modes of work. P-V diagram. Zeroth law of thermodynamics - concept of temperature and thermal equilibrium- relationship between temperature scales - new temperature scales. First law of thermodynamics -application to closed and open systems - steady and unsteady flow processes. CO1

UNIT - II SECOND LAW AND AVAILABILITY ANALYSIS **12**

Heat Reservoir, source and sink. Heat Engine, Refrigerator, Heat pump. Statements of second law and its corollaries. Carnot cycle and Reversed Carnot cycle, Performance. Clausius inequality. Concept of entropy, T-s diagram, Tds Equations, entropy change for - pure substance, ideal gases - different processes, principle of increase in entropy. Applications of II Law. High and low grade energy. Available and non-available energy of a source and finite body. Energy and irreversibility. Expressions for the energy of a closed system and open systems. Energy balance and entropy generation. Irreversibility. I and II law Efficiency. CO2

UNIT - III PROPERTIES OF PURE SUBSTANCE AND STEAM POWER CYCLE **12**

Formation of steam and its thermodynamic properties, p-v, p-T, T-v, T-s, h-s diagrams. P-v-T surface. Use of Steam Table and Mollier Chart. Determination of dryness fraction. Application of I and II law for pure substances. Ideal and actual Rankine cycles, Cycle Improvement Methods - Reheat and Regenerative cycles, Economiser, preheater, Binary and Combined cycles. CO3

UNIT - IV IDEAL AND REAL GASES,THERMODYNAMIC RELATIONS **12**

Properties of Ideal gas - Ideal and real gas comparison - Equations of state for ideal and real gases- Reduced properties. Compressibility factor-.Principle of Corresponding states. Generalised Compressibility Chart and its use. Maxwell relations, TDS Equations, Difference and ratio of heat capacities, Energy equation, Joule-Thomson Coefficient, Clausius Clapeyron equation, Phase Change Processes. Simple Calculations. CO4

UNIT - V GAS MIXTURES AND PSYCHROMETRY **12**

Mole and Mass fraction, Dalton's and Amagat's Law. Properties of gas mixture - Molar mass, gas constant, density, change in internal energy, enthalpy, entropy and Gibbs function. Psychrometric properties, Psychrometric charts. Property calculations of air vapour mixtures by using chart and expressions. Psychrometric process - adiabatic saturation, sensible heating and cooling, humidification, dehumidification, evaporative cooling and adiabatic mixing. Simple Applications CO5

TOTAL PERIODS: 60

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Apply the first law of thermodynamics for simple open and closed systems under steady and unsteady conditions
CO2	Apply second law of thermodynamics to open and closed systems and calculate entropy and availability
CO3	Apply Rankine cycle to steam power plant and compare few cycle improvement methods
CO4	Derive simple thermodynamic relations of ideal and real gases
CO5	Calculate the properties of gas mixtures and moist air and its use in psychrometric processes

ME1302 MANUFACTURING PROCESSES

L	T	P	C
3	0	0	3

OBJECTIVES

- To introduce the concepts of basic manufacturing processes and fabrication techniques, such as metal casting, metal joining, metal forming and manufacture of plastic components.

UNIT I METAL CASTING PROCESSES **9**

Sand Casting: Sand Mould - Type of patterns - Pattern Materials - Pattern allowances - Moulding sand Properties and testing - Cores -Types and applications - Moulding machines - Types and applications; Melting furnaces : Blast and Cupola Furnaces; Principle of special casting processes: Shell - investment - Ceramic mould - Pressure die casting - Centrifugal Casting - CO_2 process - Stir casting; Defects in Sand casting. CO1

UNIT - II JOINING PROCESSES **9**

Operating principle, basic equipment, merits and applications of fusion welding processes: Gas welding - Types - Flame characteristics; Manual metal arc welding - Gas Tungsten arc welding - Gas metal arc welding - Submerged arc welding - Electro slag welding; Operating principle and applications of resistance welding - Plasma arc welding - Thermit welding - Electron beam welding - Friction welding and Friction Stir Welding; Brazing and soldering; Weld defects: types, causes and cure. CO2

UNIT - III METAL FORMING PROCESSES **9**

Hot working and cold working of metals - Forging processes - Open, impression and closed die forging - forging operations. Rolling of metals- Types of Rolling - Flat strip rolling - shape rolling operations - Defects in rolled parts. Principle of rod and wire drawing - Tube drawing - Principles of Extrusion - Types - Hot and Cold extrusion CO3

UNIT - IV SHEET METAL PROCESSES **9**

Sheet metal characteristics - shearing, bending and drawing operations - Stretch forming operations - Formability of sheet metal - Test methods -special forming processes-Working principle and applications - Hydroforming - Rubber pad forming - Metal spinning- Introduction of Explosive forming, magnetic pulse forming, peen forming, Super plastic forming - Micro forming. CO4

UNIT - V MANUFACTURE OF PLASTIC COMPONENTS **9**

Types and characteristics of plastics - Moulding of thermoplastics - working principles and typical applications - injection moulding - Plunger and screw machines - Compression moulding, Transfer Moulding - Typical industrial applications - introduction to blow moulding - Rotational moulding - Film blowing - Extrusion - Thermoforming - Bonding of Thermoplastics. CO5

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Explain different metal casting processes, associated defects, merits and demerits
CO2	Understand different metal joining processes.
CO3	Summarize various hot working and cold working methods of metals.
CO4	Explain various sheet metal making processes.
CO5	Understand various methods of manufacturing plastic components.

EE1358 ELECTRICAL ENGINEERING LABORATORY

L	T	P	C
0	0	4	2

OBJECTIVES

- To validate the principles studied in theory by performing experiments in the laboratory

LIST OF EXPERIMENTS

1. Load test on DC Shunt & DC Series motor
2. O.C.C & Load characteristics of DC Shunt and DC Series generator
3. Speed control of DC shunt motor (Armature, Field control)
4. Load test on single phase transformer
5. O.C & S.C Test on a single phase transformer
6. Regulation of an alternator by EMF & MMF methods.
7. V curves and inverted V curves of synchronous Motor
8. Load test on three phase squirrel cage Induction motor
9. Speed control of three phase slip ring Induction Motor
10. Study of DC & AC Starters

TOTAL PERIODS: 60

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 Perform DC shunt and series motor characteristics and to analyse the speed control behaviour of DC shunt Motor.

CO2 Perform the characteristics of DC Shunt generator on O.C and load conditions.

CO3 Perform open circuit, short circuit and load test on single phase transformer.

CO4 Perform regulation characteristics on the alternator and to analyse the V-curve and Inverted V-curve of a synchronous motor.

CO5 Perform the speed control behaviour of an induction motor and also to know the working principles of AC and DC motor starters.

ME1307 MANUFACTURING PROCESSES LABORATORY

L	T	P	C
0	0	4	2

OBJECTIVES

- To study and practice the various operations that can be performed in lathe, shaper, drilling, milling machines etc. and to equip with the practical knowledge required in the core industries.

LIST OF EXPERIMENTS

1. Machining and Machining time estimations for:

a) Taper Turning
b) External Thread cutting
c) Internal Thread Cutting
d) Eccentric Turning
e) Knurling

2. Casting and Joining processes

a) Joining of plates by horizontal, vertical and overhead welding (arc welding)
b) Joining of plates and pipes using gas metal arc welding/ arc welding /submerged arc welding
c) Preparation of green sand moulds for various patterns
d) Manufacturing of simple sheet metal components using shearing and bending operations.
e) Manufacturing of sheet metal components using metal spinning on a lathe.

TOTAL PERIODS: 60

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 Demonstrate the safety precautions exercised in the mechanical workshop.
CO2 Make the work piece as per given dimensions and calculate machining time for different operations in lathe.
CO3 Join two metals using arc welding
CO4 Use sheet metal fabrication tools and make simple tray and funnel
CO5 Use different moulding tools, patterns and prepare sand moulds

HS1310 PROFESSIONAL SKILLS LABORATORY

L	T	P	C
0	0	2	1

OBJECTIVES

- Enhance the employability and career skills of students
- Orient the students towards grooming as a professional
- Make them employable graduates
- Develop their confidence and help them attend interviews successfully.

UNIT - I

Introduction to Soft Skills - Hard skills & soft skills - employability and career Skills - Grooming as a professional with values - Making an Oral Presentation-Planning and preparing a model presentation; Organizing the presentation to suit the audience and context; Connecting with the audience during presentation; Projecting a positive image while speaking; Emphasis on effective body language-General awareness of Current Affairs.

UNIT – II

Introduction to Group Discussion - Participating in group discussions - understanding group dynamics - brainstorming the topic - questioning and clarifying -GD strategies- Structure and dynamics of a GD; Techniques of effective participation in group discussion; Preparing for group discussion; Accepting others' views / ideas; Arguing against others' views or ideas, etc.

UNIT – III

Basics of public speaking; Preparing for a speech; Features of a good speech; Speaking with a microphone. (Famous speeches may be played as model speeches for learning the art of public speaking). Interview etiquette - dress code - body language - attending job interviews - telephone/skype interview -one to one interview & panel interview - Job Interviews: purpose and process; How to prepare for an interview; Language and style to be used in an interview; Types of interview questions and how to answer them.

UNIT – IV

Self-Introduction - organizing the material - Introducing oneself to the audience - introducing the topic - answering questions - individual presentation practice - Making a Power Point Presentation - Structure and format; Covering elements of an effective presentation; Body language dynamics. Making an Oral Presentation - Planning and preparing a model presentation; Organizing the presentation to suit the audience and context; Connecting with the audience during presentation; Projecting a positive image while speaking; Emphasis on effective body language.

UNIT – V

Recognizing differences between groups and teams- managing time-managing stress - networking professionally - respecting social protocols-understanding career management - developing a long-term career plan - making career changes.

TOTAL PERIODS: 60

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 Make effective presentations

CO2 Participate confidently in group discussions

CO3 Attend job interviews and be successful in them

CO4 Develop adequate soft skills required for the workplace

CO5 Develop their speaking skills to enable them speak fluently in real contexts

MA1401	STATISTICS AND NUMERICAL METHODS	L	T	P	C
		4	0	0	4

OBJECTIVES

- This course aims at providing the necessary basic concepts of a few statistical and numerical methods and give procedures for solving numerically different kinds of problems occurring in engineering and technology.
- To acquire the knowledge of testing hypotheses for small and large samples which plays an important role in real life problems.
- To introduce the basic concepts of solving algebraic and transcendental equations.
- To introduce the Interpolation operators and numerical techniques of interpolation in various intervals, numerical techniques of differentiation and integration which plays an important role in engineering and technology disciplines.
- To acquaint the knowledge of various techniques and methods of solving ordinary differential equations.

UNIT I TESTING OF HYPOTHESIS 12

Sampling distributions - Estimation of parameters - Statistical hypothesis - Large sample tests based on Normal distribution for single mean and difference of means -Tests based on t, Chi-square and F distributions for mean, variance and proportion - Contingency table (test for independent) - Goodness of fit CO1

UNIT - II DESIGN OF EXPERIMENTS 12

One way and two-way classifications - Completely randomized design - Randomized block design - Latin square design - 2^2 factorial design. CO2

UNIT – III SOLUTION OF EQUATIONS AND EIGENVALUE PROBLEMS 12

Solution of algebraic and transcendental equations - Fixed point iteration method - Newton Raphson method - Solution of linear system of equations - Gauss elimination method - Pivoting - Gauss Jordan method - Iterative methods of Gauss Jacobi and Gauss Seidel - Eigenvalues of a matrix by Power method. CO3

UNIT – IV INTERPOLATION, NUMERICAL DIFFERENTIATION AND NUMERICAL INTEGRATION **12**

Interpolation operators (Forward, Backward, shifting operators and its Properties) -- Newton's forward and backward difference interpolation for equal intervals - Lagrange's and Newton's divided difference interpolation for unequal intervals - Approximation of derivatives using interpolation polynomials - Numerical single and double integrations using Trapezoidal and Simpson's 1/3 rules CO4

UNIT - V NUMERICAL SOLUTION OF ORDINARY DIFFERENTIAL EQUATIONS **12**

.Finite difference methods for solving second order two - point linear boundary value problems Single step methods: Taylor's series method - Euler's method - Modified Euler's method - Fourth order Runge-Kutta method for solving first order equations - Multi step methods: Milne's and Adams- Bash forth predictor corrector methods for solving first order equations. CO5

TOTAL PERIODS: 60

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 Students will gain knowledge on large samples and small samples. These concepts are very useful in biological, electric power management, social experiments and also in all kinds of generalizations based on information about a smaller sample and larger samples. Apply the appropriate test in the problems related with sampling.

CO2 ANOVA's statistical significance result is independent of constant bias and scaling of errors. It is used in testing the difference between several treatments in the design of experiments. It checks the impact of one or more factors in any experiment in Engineering.

CO3 Students will learn nonlinear (algebraic or transcendental) equations and linear equations. Students learn to solve the eigen value problem of a matrix numerically when analytical methods tend to fail to give solution and apply all these in the fields like vibrating systems, fluid dynamics.

CO4 Students will learn to construct approximate polynomials that can be used in data representation using interpolation techniques to find the intermediate values. In particular, interpolation methods are extensively applied in the models of the different phenomena where experimental data must be used in computer studies where expressions of those data are required. The learners are introduced to numerical differentiation and integration techniques. The techniques are useful when the function in the analytical form is complicated.

CO5 Students get an insight on ordinary differential equations which will be useful in solving engineering problems. Students learn about the different methods for solving first order and second order differential equations. It will be useful in attempting to solve any engineering problems. ODE is applied in specific mathematical fields like electrical, geometry, analytical mechanics, celestial mechanics and weather modelling.

CE1401	STRENGTH OF MATERIALS FOR MECHANICAL ENGINEERS	L	T	P	C
		3	0	0	3

OBJECTIVES

- To understand the concepts of stress, strain, principal stresses and principal planes.
- To study the concept of shearing force and bending moment due to external ·loads in determinate beams and their effect on stresses.
- To determine stresses and deformation in circular shafts and helical spring due to torsion.
- To compute slopes and deflections in determinate beams by various methods.
- To study the stresses and deformations induced in thin and thick shells.

UNIT I STRESS, STRAIN AND DEFORMATION OF SOLIDS **9**

Rigid bodies and deformable solids - Tension, Compression and Shear Stresses - Deformation of simple and compound bars - Thermal stresses - Elastic constants - Volumetric strains - Stresses on inclined planes - principal stresses and principal planes - Mohr's circle of stress. CO1

UNIT - II TRANSVERSE LOADING ON BEAMS AND STRESSES IN BEAM **9**

Beams - types transverse loading on beams - Shear force and bending moment in beams - Cantilevers - Simply supported beams and over - hanging beams. Theory of simple bending - bending stress distribution - Load carrying capacity - Proportioning of sections - Flitched beams - Shear stress distribution. CO2

UNIT - III TORSION **9**

Torsion formulation stresses and deformation in circular and hollows shafts - Stepped shafts - Deflection in shafts fixed at the both ends - Stresses in helical springs - Deflection of helical springs, carriage springs. CO3

UNIT - IV DEFLECTION OF BEAMS **9**

Double Integration method - Macaulay's method - Area moment method for computation of slopes and deflections in beams - Conjugate beam and strain energy - Maxwell's reciprocal theorems. CO4

UNIT - V THIN CYLINDERS, SPHERES AND THICK CYLINDERS **9**

Stresses in thin cylindrical shell due to internal pressure, circumferential and longitudinal stresses and deformation in thin and thick cylinders - spherical shells subjected to internal pressure - Deformation in spherical shells - Lame's theorem. CO5

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 Understand the concepts of stress and strain in simple and compound bars, the importance of principal stresses and principal planes.

CO2 Understand the load transferring mechanism in beams and stress distribution due to shearing force and bending moment.

CO3 Apply basic equation of simple torsion in designing of shafts and helical spring.

CO4 Calculate the slope and deflection in beams using different methods.

CO5 Analyze and design thin and thick shells for the applied internal and external pressures.

TEXT BOOKS:

4. Subramanian R., "Strength of Materials", Oxford University Press, Oxford Higher Education Series, 2010.

ME1401	THERMAL ENGINEERING	L	T	P	C
		3	0	0	3

OBJECTIVES
- To integrate the concepts, laws and methodologies from the first course in thermodynamics into analysis of cyclic processes
- To apply the thermodynamic concepts into various thermal application like IC engines, Steam Turbines, Compressors and Refrigeration and Air conditioning systems
  (Use of standard refrigerant property data book, Steam Tables, Mollier diagram and Psychrometric chart permitted)

UNIT I GAS POWER CYCLES **9**

Otto, Diesel, Dual, Brayton cycles, Calculation of mean effective pressure, and air standard efficiency - Comparison of cycles. CO1

UNIT - II INTERNAL COMBUSTION ENGINES **9**

Classification - Components and their function. Valve timing diagram and port timing diagram - actual and theoretical p-V diagram of four stroke and two stroke engines. Simple and complete Carburettor. MPFI, Diesel pump and injector system. Battery and Magneto Ignition System - Principles of Combustion and knocking in SI and CI Engines. Lubrication and Cooling systems. Performance calculation. CO2

UNIT - III STEAM NOZZLES AND TURBINES **9**

Flow of steam through nozzles, shapes of nozzles, effect of friction, critical pressure ratio, supersaturated flow. Impulse and Reaction principles, compounding, velocity diagram for simple and multi-stage turbines, speed regulations -Governors. CO3

UNIT - IV AIR COMPRESSOR **9**

Classification and working principle of various types of compressors, work of compression with and without clearance, Volumetric efficiency, Isothermal efficiency and Isentropic efficiency of reciprocating compressors, Multistage air compressor and inter cooling - work of multistage air compressor CO4

UNIT - V REFRIGERATION AND AIR CONDITIONING **9**

Refrigerants - Vapour compression refrigeration cycle- superheat, sub cooling - Performance calculations - working principle of vapour absorption system, Ammonia - Water, Lithium bromide - water systems (Description only). Air conditioning system - Processes, Types and Working Principles. - Concept of RSHF, GSHF, ESHF- Cooling Load calculations. CO5

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Understand and analyse the gas power cycles (Otto, Diesel, Dual and Brayton cycle)
CO2	Understand the working principle of IC engines, its components and compute its performance.
CO3	Design and analyse the steam nozzle & turbines
CO4	Understand the various types of compressor and compute its performance.
CO5	Understand the basic concepts of different types of refrigeration and air conditioning systems, and to compute cooling load calculations

ME1402	KINEMATICS OF MACHINERY	L	T	P	C
		3	0	0	3

OBJECTIVES

- To understand the basic components and layout of linkages in the assembly of a system machine.
- To understand the principles in analyzing the assembly with respect to the displacement, velocity, and acceleration at any point in a link of a mechanism.
- To understand the motion resulting from a specified set of linkages, design few linkage mechanisms and cam mechanisms for specified output motions.
- To understand the basic concepts of toothed gearing and kinematics of gear trains and the effects of friction in motion transmission and in machine components.

UNIT I BASICS OF MECHANISMS **9**

Classification of mechanisms - Basic kinematic concepts and definitions - Degree of freedom, Mobility - Kutzbach criterion, Gruebler’s criterion - Grashof’s Law - Kinematic inversions of four-bar chain and slider crank chains - Limit positions - Mechanical advantage - Transmission Angle - Description of some common mechanisms - Quick return mechanisms, Straight line generators, Universal Joint - rocker mechanisms. CO1

UNIT - II KINEMATICS OF LINKAGE MECHANISMS **9**

Displacement, velocity and acceleration analysis of simple mechanisms - Graphical method-Velocity and acceleration polygons - Velocity analysis using instantaneous centres - kinematic analysis of simple mechanisms - Coincident points - Coriolis component of Acceleration - Introduction to linkage synthesis problem. CO2

UNIT – III KINEMATICS OF CAM MECHANISMS **9**

Classification of cams and followers - Terminology and definitions - Displacement diagrams - Uniform velocity, parabolic, simple harmonic and cycloidal motions - Derivatives of follower motions - Layout of plate cam profiles - Specified contour cams - Circular arc and tangent cams - Pressure angle and undercutting - sizing of cams. CO3

UNIT – IV GEARS AND GEAR TRAINS **9**

Law of toothed gearing - Involutes and cycloidal tooth profiles -Spur Gear terminology and definitions - Gear tooth action - contact ratio - Interference and undercutting. Helical, Bevel, Worm, Rack and Pinion gears [Basics only]. Gear trains - Speed ratio, train value - Parallel axis gear trains - Epicyclic Gear Trains. CO4

UNIT – V FRICTION IN MACHINE ELEMENTS **9**

Surface contacts - Sliding and Rolling friction - Friction drives - Friction in screw threads - Bearings and lubrication - Friction clutches - Belt and rope drives - Friction in brakes - Band and block brakes. CO5

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 Discuss the basics of mechanism

CO2 Calculate velocity and acceleration in simple mechanisms

CO3 Develop CAM profiles

CO4 Solve problems on gears and gear trains

CO5 Examine friction in machine elements

ME1403	**ENGINEERING METALLURGY**	**L**	**T**	**P**	**C**
		3	**0**	**0**	**3**

OBJECTIVES

- To impart knowledge on the structure, properties, treatment, testing and applications of metals and non-metallic materials so as to identify and select suitable materials for various engineering applications.

UNIT I ALLOYS AND PHASE DIAGRAMS 9

Constitution of alloys - Solid solutions, substitutional and interstitial - phase diagrams, Isomorphous, eutectic, eutectoid, peritectic, and peritectoid reactions, Iron - carbon equilibrium diagram. Classification of steel and cast Iron microstructure, properties and application. CO1

UNIT - II HEAT TREATMENT 9

Definition - Full annealing, stress relief, recrystallisation and spheroidising - normalising, hardening and Tempering of steel. Isothermal transformation diagrams - cooling curves superimposed I.T. diagram CCR - Hardenability, Jominy end quench test - Austempering, martempering - case hardening, carburizing, Nitriding, cyaniding, carbonitriding - Flame and Induction hardening - Vacuum and Plasma hardening. CO2

UNIT - III FERROUS AND NON-FERROUS METALS 9

Effect of alloying additions on steel- α and β stabilisers- stainless and tool steels - HSLA, Maraging steels - Cast Iron - Grey, white, malleable, spheroidal - alloy cast irons, Copper and copper alloys Brass, Bronze and Cupronickel - Aluminium and Al-Cu - precipitation strengthening treatment - Bearing alloys, Mg-alloys, Ni-based super alloys and Titanium alloys. CO3

UNIT - IV NON-METALLIC MATERIALS **9**

Polymers - types of polymer, commodity and engineering polymers - Properties and applications of various thermosetting and thermoplastic polymers (PP, PS, PVC, PMMA, PET,PC, PA, ABS, PI, PAI, PPO, PPS, PEEK, PTFE, Polymers - Urea and Phenol formaldehydes)- Engineering Ceramics - Properties and applications of Al_2O_3, SiC, Si_3N_4, PSZ and SIALON -Composites- Classifications- Metal Matrix and FRP - Applications of Composites. CO4

UNIT - V MECHANICAL PROPERTIES AND DEFORMATION MECHANISMS **9**

Mechanisms of plastic deformation, slip and twinning - Types of fracture - Testing of materials under tension, compression and shear loads - Hardness tests (Brinell, Vickers and Rockwell), hardness tests, Impact test- izod and charpy, fatigue and creep failure mechanisms. CO5

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

- CO1 Identify the material constituents from phase diagrams and to understand the classification of steels and cast iron.
- CO2 Understand the classification of various heat treatment processes.
- CO3 Understand the effects of alloying elements and Engineering applications of ferrous and non-ferrous metals
- CO4 Understand the engineering applications of non-metallic materials.
- CO5 Understand the various deformation mechanisms and testing of various mechanical properties of materials

ME1404 METAL CUTTING AND MACHINE TOOLS

L	T	P	C
3	0	0	3

OBJECTIVES

- To understand the concept and basic mechanics of metal cutting, working of standard machine tools such as lathe, shaping, milling, drilling, grinding, broaching and allied machines.
- To understand the basic concepts of Computer Numerical Control (CNC) of machine tools and CNC Programming.

UNIT I THEORY OF METAL CUTTING **9**

Mechanics of chip formation, single point cutting tool, forces in machining, Types of chip, cutting tools- nomenclature, orthogonal metal cutting, thermal aspects, cutting tool materials, tool wear, tool life, surface finish, cutting fluids and Machinability. CO1

UNIT - II TURNING MACHINES **9**

Centre lathe, constructional features, specification, operations - taper turning methods, thread cutting methods, special attachments, machining time and power estimation. Semi automatic lathe- Capstan and turret lathes- tool layout - automatic lathes: - single spindle : Swiss type, screw type - multi spindle automatic lathe- types. CO2

UNIT - III SHAPER, MILLING AND GEAR CUTTING MACHINES **9**

Shaper - Types of operations. Drilling ,reaming, boring, Tapping. Milling operations-types of milling cutter Gear Manufacturing - forming and generation principle - construction of gear milling ,hobbing and gear shaping processes -finishing of gears. CO3

UNIT - IV ABRASIVE PROCESS AND BROACHING **9**

Abrasive processes: grinding wheel - specifications and selection, types of grinding process - cylindrical grinding, surface grinding, centreless grinding and internal grinding - Typical applications - concepts of surface integrity, broaching machines: broach construction - push, pull, surface and continuous broaching machines. CO4

UNIT - V CNC MACHINING **9**

Numerical Control (NC) machine tools - CNC types, constructional details, special features, machining centre, part programming fundamentals CNC - manual part programming - micromachining - wafer machining. CO5

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 Explain the mechanism of material removal processes, cutting fluids, cutting tool materials, Machinability.

CO2 Describe the constructional and operational features of centre lathe and other special purpose lathes.

CO3 Describe the constructional and operational features of shaper, milling, drilling, Gear forming and generating process.

CO4 Explain the types of grinding, broaching and other super finishing processes.

CO5 Summarize NC, CNC machine tools and write a part program.

CS1302	DATA STRUCTURES	L	T	P	C
	Common to CSE, IT, AI-DS, AI-ML, MECHATRONICS- Semester III , ECE, MECHANICAL, Semester IV	3	1	0	3

OBJECTIVES

- To understand the concepts of ADTs.
- To learn linear data structures like lists, stacks, and queues.
- To learn Non-linear tree data structures.
- To apply Graph structures
- To understand sorting, searching and hashing algorithms

UNIT - I LINEAR DATA STRUCTURES – LIST **9**

Abstract Data Types (ADTs) – List ADT – array-based implementation – linked list implementation - singly linked lists- circularly linked lists- doubly-linked lists – applications of lists – Polynomial Manipulation – All operations (Insertion, Deletion, Merge, Traversal). **CO1**

UNIT – II LINEAR DATA STRUCTURES – STACKS, QUEUES **9**

Stack ADT – Operations – Applications – Evaluating arithmetic expressions- Conversion of Infix to postfix expression – Queue ADT – Operations – Circular Queue – Priority Queue – deQueue – applications of queues. **CO2**

UNIT - III NON-LINEAR DATA STRUCTURES – TREES **9**

Tree ADT – tree traversals – Binary Tree ADT – expression trees – applications of trees – binary search tree ADT –Threaded Binary Trees- AVL Trees – B-Tree – B+ Tree – Heap – Applications of heap. **CO3**

UNIT - IV NON-LINEAR DATA STRUCTURES – GRAPHS **9**

Definition – Representation of Graph – Types of graph – Breadth-first traversal – Depth-first traversal – Topological Sort – Bi-connectivity –Graph Algorithms – Shortest Path Algorithms: Dijkstra's Algorithm – All pair shortest Path Algorithms: Floyds warshall Algorithm – Minimum Spanning Tree: Prim's Algorithm – Kruskal's Algorithm – Applications of Graph. **CO4**

UNIT – V SEARCHING, SORTING AND HASHING TECHNIQUES **9**

Searching- Linear Search – Binary Search. Sorting – Bubble sort – Selection sort – Insertion sort – Shell sort – Radix sort - Merge sort – Quick sort. Hashing- Hash Functions – Separate Chaining – Open Addressing – Rehashing – Extendible Hashing. **CO5**

TOTAL PERIODS: 45

TEXT BOOKS

1. Mark Allen Weiss, Data Structures and Algorithm Analysis in C‖, 2nd Edition, Pearson Education,1997.
2. ReemaThareja, Data Structures Using C‖, Second Edition , Oxford University Press, 2011.
3. Michael T. Goodrich, Roberto Tamassia, Michael H. Goldwasser, Data Structures and Algorithms in Python, Wiley,2013.
4. Bradley N. Miller, David L. Ranum, " Problem Solving with Algorithms and Data Structures using Python " , Second Edition, 2013.
5. Rance D. Necaise, Data Structures and Algorithms Using Python, John Wiley & Sons, 2011.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Implement abstract data types for linear data structures.
CO2	Apply the different linear data structures to problem solutions.
CO3	Implement abstract data types for non-linear data structures.
CO4	Apply Graph data structure for the real world problems.
CO5	Critically analyze the various sorting, searching algorithms and hash functions that result in a collision free scenario for data storage and retrieval.

CE1409 STRENGTH OF MATERIALS AND FLUID MECHANICS AND MACHINERY LABORATORY

L	T	P	C
0	0	4	2

OBJECTIVES

- To study the mechanical properties of materials when subjected to different types of loading.
- To verify the principles studied in Fluid Mechanics theory by performing experiments in lab.

STRENGTH OF MATERIALS LABORATORY

1. Tension test on a mild steel rod
2. Double shear test on Mild steel and Aluminium rods
3. Torsion test on mild steel rod
4. Impact test on metal specimen
5. Hardness test on metals - Brinnell and Rockwell Hardness Number
6. Deflection test on beams
7. Compression test on helical springs
8. Strain Measurement using Rosette strain gauge
9. Effect of hardening- Improvement in hardness and impact resistance of steels.
10. Tempering- Improvement Mechanical properties Comparison
    i. Unhardened specimen
    ii. Quenched Specimen and
    iii. Quenched and tempered specimen.
11. Microscopic Examination of
    i. Hardened samples and
    ii. Hardened and tempered samples.

FLUID MECHANICS AND MACHINES LABORATORY

1. Determination of the coefficient of discharge of a given orifice meter.
2. Determination of the coefficient of discharge of a given venturi meter.
3. Calculation of the rate of flow using rotameter.
4. Determination of friction factor for a given set of pipes.
5. Conducting experiments and drawing the characteristic curves of centrifugal pump.
6. Conducting experiments and drawing the characteristic curves of submergible pump.
7. Conducting experiments and drawing the characteristic curves of reciprocating pump.
8. Conducting experiments and drawing the characteristic curves of gear pump.
9. Conducting experiments and drawing the characteristic curves of Pelton wheel turbine.
10. Conducting experiments and drawing the characteristics curves of Francis turbine.
11. Conducting experiments and drawing the characteristic curves of Kaplan turbine.

TOTAL PERIODS: 60

COURSE OUTCOMES
Upon completion of the course, students will be able to

CO1 Perform tension, torsion, hardness, compression, and deformation test on solid materials.
CO2 Use the measurement equipments for flow measurement.
CO3 Perform test on different fluid machineries.
CO4 To study the properties of mild steel specimen in hardened condition.
CO5 Ability to study the micro structural behaviour different of ferrous and nonferrous material.

ME1407 INTERNAL COMBUSTION ENGINEERING LABORATORY

L	T	P	C
0	0	4	2

OBJECTIVES

- To study valve timing diagram for a 4 stroke diesel engine and port timing diagram for a 2 stroke petrol engine
- To study performance and heat balance test on of IC Engines
- To study the characteristics of fuels/lubricates used in IC Engines

LIST OF EXPERIMENTS

1. Valve timing diagram for a 4 stroke diesel engine.
2. Port timing diagram for a 2 stroke petrol engine
3. Actual p-V diagrams of IC engines.
4. Performance test on 4 - stroke petrol engine.
5. Performance test on 4 - stroke diesel engine.
6. Heat balance test on 4 - stroke diesel engine.
7. Morse test on multi-cylinder petrol engine.
8. Retardation test on a diesel engine.
9. Determination of flash point and fire point of various fuels / lubricants.
10. Determination viscosity of various fuels / lubricants

TOTAL PERIODS: 60

COURSE OUTCOMES
Upon completion of the course, students will be able to

CO1 Draw valve timing of a 4-stroke engine and port timing diagram of a 2-stroke engine.
CO2 Conduct experiments on an engine to establish performance characteristics.
CO3 Conduct experiments on an engine to draw heat balance sheet.
CO4 Conduct Morse test and retardation test in internal combustion engines.
CO5 Study the fuel and lubricant characteristics.

ME1408 MACHINE TOOLS LABORATORY

L	T	P	C
0	0	4	2

OBJECTIVES

To Study and acquire knowledge on various basic machining operations in special purpose machines and its applications in real life manufacture of components in the industry.

LIST OF EXPERIMENTS

1. Contour milling using vertical milling machine
2. Spur gear cutting in milling machine
3. Helical gear cutting in milling machine
4. Gear generation in hobbing machine
5. Gear generation in gear shaping machine

6. Square head shaping
7. Plain surface grinding
8. Cylindrical grinding
9. Centreless grinding
10. Tool angle grinding with tool and cutter grinder
11. Measurement of cutting forces in milling / turning Process
12. CNC part programming

TOTAL PERIODS: 60

COURSE OUTCOMES
Upon completion of the course, students will be able to

CO1	Use different milling machine tools.
CO2	Use different machine tools to manufacture gears.
CO3	Use different machine tools for finishing operations
CO4	Manufacture tools using cutter grinder
CO5	Develop CNC part programming

ME1501	COMPUTER AIDED DESIGN AND MANUFACTURING	L	T	P	C
		3	0	0	3

OBJECTIVES
- To provide an overview of how computers are being used in mechanical component design
- To understand the application of computers in various aspects of manufacturing viz., design, proper planning, manufacturing cost, layout & material handling system.

UNIT - I INTRODUCTION **9**

Product cycle - Design process- sequential and concurrent engineering - Computer aided design - CAD system architecture- Computer graphics - coordinate systems - 2D and 3D transformations- homogeneous coordinates - Line drawing – Clipping - viewing transformation - Brief introduction to CAD and CAM - Manufacturing Planning, Manufacturing control- Introduction to CAD/CAM -CAD/CAM concepts - Types of production - Manufacturing models and Metrics - Mathematical models of Production Performance CO1

UNIT - II GEOMETRIC MODELING **9**

Representation of curves - Hermite curve- Bezier curve- B-spline curves-rational curves- Techniques for surface modeling - surface patch- Coons and bicubic patches- Bezier and B-spline surfaces. Solid modeling techniques- CSG and B-rep **CO2**

UNIT - III CAD STANDARDS **9**

Standards for computer graphics- Graphical Kernel System (GKS) - standards for exchange images- Open Graphics Library (OpenGL) - Data exchange standards - IGES, STEP, CALS etc. - communication standards. CO3

UNIT - IV FUNDAMENTAL OF CNC AND PART PROGRAMING **9**

Introduction to NC systems and CNC - Machine axis and Coordinate system - CNC machine tools- Principle of operation CNC - Construction features including structure - Drives and CNC controllers - 2D and 3D machining on CNC- Introduction of Part Programming, types - Detailed Manual part programming on Lathe & Milling machines using G codes and M codes - Cutting Cycles, Loops, Sub program and Macros - Introduction of CAM package. CO4

UNIT - V	**CELLULAR MANUFACTURING AND FLEXIBLE MANUFACTURING SYSTEM (FMS)**	**9**
Group Technology (GT), Part Families - Parts Classification and coding - Simple Problems in Opitz Part Coding system - Production flow Analysis - Cellular Manufacturing - Composite part concept - Types of Flexibility - FMS - FMS Components - FMS Application & Benefits - FMS Planning and Control - Quantitative analysis in FMS.		CO5

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Explain the 2D and 3D transformations, clipping algorithm, Manufacturing models and Metrics.
CO2	Explain the fundamentals of parametric curves, surfaces and Solids.
CO3	Summarize the different types of Standard systems used in CAD.
CO4	Apply NC & CNC programming concepts to develop part programme for Lathe & Milling Machines.
CO5	Summarize the different types of techniques used in Cellular Manufacturing and FMS.

6. Chris McMahon and Jimmie Browne “CAD/CAM Principles", "Practice and Manufacturing Management “ Fifth Edition, Pearson Education, 2008.

		L	T	P	C
ME1502	**DESIGN OF MACHINE ELEMENTS**	**L**	**T**	**P**	**C**
		3	**1**	**0**	**4**

OBJECTIVES

- To familiarize the various steps involved in the design process
- To understand the principles involved in evaluating the shape and dimensions of a component to satisfy functional and strength requirements.
- To learn to use standard practices and standard data
- To learn to use catalogues and standard machine components

(Use of P S G Design Data Book is permitted)

UNIT I STEADY STRESSES AND VARIABLE STRESSES IN MACHINE MEMBERS **15**

Introduction to the design process - factors influencing machine design, selection of materials based on mechanical properties - Preferred numbers, fits and tolerances - Direct, Bending and torsional stress equations - Impact and shock loading - calculation of principle stresses for various load combinations, eccentric loading - curved beams - crane hook and 'C' frame- Factor of safety - theories of failure - Design based on strength and stiffness - stress concentration - Design for variable loading. CO1

UNIT - II SHAFTS AND COUPLINGS **9**

Design of solid and hollow shafts based on strength, rigidity and critical speed - Keys, keyways and splines - Couplings- Rigid and flexible couplings. CO2

UNIT - III TEMPORARY AND PERMANENT JOINTS **12**

Threaded fasteners - Bolted joints including eccentric loading, Knuckle joints, Cotter joints - Welded joints, riveted joints for structures - theory of bonded joints. CO3

UNIT - IV ENERGY STORING ELEMENTS AND ENGINE COMPONENTS **15**

Various types of springs, optimization of helical springs - rubber springs - Flywheels considering stresses in rims and arms for engines and punching machines- Connecting Rods , Crank shafts and Piston CO4

UNIT - V BEARINGS **9**

Sliding contact and rolling contact bearings - Hydrodynamic journal bearings, Sommerfield Number, Raimondi and Boyd graphs, -- Selection of Rolling Contact bearings. CO5

TOTAL PERIODS: 60

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 Understand and analyze stresses and strains in machine elements.

CO2 Analyze and design the components for power transmission.

CO3 Analyze the various stresses developed in temporary and permanent joints.

CO4 Design the energy storing elements, like springs & flywheel and engine components.

CO5 Design and implement the various types of standard bearings.

ME1503	METROLOGY AND MEASUREMENTS (Lab Integrated)	L T P C
		3 0 2 4

OBJECTIVES

- To provide knowledge on various metrological equipments available to measure the dimension of the components.
- To provide knowledge on the correct procedure to be adopted to measure the dimension of the components.
- To familiar with different metrological equipment's and use of this in industry for quality inspection.

UNIT - I BASICS OF METROLOGY 9

Introduction to Metrology - Need - Elements - Work piece, Instruments - Persons - Environment - their effect on Precision and Accuracy - Errors - Errors in Measurements - Types - Control - Types of standards. CO1

UNIT – II LINEAR AND ANGULAR MEASUREMENTS 9

Linear Measuring Instruments - Evolution - Types - Classification - Limit gauges - gauge design - terminology - procedure - concepts of interchange ability and selective assembly - Angular measuring instruments - Types - Bevel protractor clinometers angle gauges, spirit levels sine bar - Angle alignment telescope - Autocollimator - Applications. CO2

UNIT – III ADVANCES IN METROLOGY 9

Basic concept of lasers Advantages of lasers - laser Interferometers - types - DC and AC Lasers interferometer - Applications - Straightness - Alignment. Basic concept of CMM - Types of CMM- Constructional features - Probes - Accessories - Software - Applications - Basic concepts of Machine Vision System - Element - Applications. CO3

UNIT – IV FORM MEASUREMENT 9

Principles and Methods of straightness - Flatness measurement - Thread measurement, gear measurement, surface finish measurement, Roundness measurement - Applications. CO4

UNIT – V MEASUREMENT OF POWER, FLOW AND TEMPERATURE 9

Force, torque, power, speed - mechanical , Pneumatic, Hydraulic and Electrical type. Flow measurement: Venturimeter, Orifice meter, rotameter, pitot tube - Temperature: bimetallic strip, thermocouples, electrical resistance thermometer, Non Contact Temperature Measurement - Reliability and Calibration - Readability and Reliability. CO5

PRACTICAL COURSE 15

1. Calibration and use of measuring instruments - Vernier caliper, micrometer, Vernier height gauge - using gauge blocks
2. Calibration and use of measuring instruments - bore gauge, telescopic gauge
3. Measurement of linear dimensions using comparators
4. Measurement of angles using bevel protractor and sine bar
5. Measurement of screw thread parameters -Two wire method '(floating carriage micrometer)
6. Measurement of gear parameters - disc micrometers, gear tooth vernier caliper
7. Programming of CNC Coordinate Measuring Machines for repeated measurements of identical components
8. Measurement of features in a prismatic component using Coordinate Measuring Machine (CMM)
9. Non-contact (optical) measurement using Toolmaker's microscope, Profile projector and Video measurement system.
10. Measurement of Surface finish in components manufactured using various processes (turning, milling, grinding, etc.,) using stylus based instruments.
11. Machine tool metrology - Level tests using precision level; Testing of straightness of a machine tool guide way using autocollimator, spindle tests.
12. Measurement of displacement, force, torque and temperature

TOTAL PERIODS: 60

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 Describe the concepts of measurements to apply in various metrological instruments

CO2 Outline the principles of linear and angular measurement tools used for industrial Applications

CO3 Explain the procedure for conducting computer aided inspection

CO4 Demonstrate the techniques of form measurement used for industrial components

CO5 Discuss various measuring techniques of mechanical properties in industrial applications

TEXT BOOKS:

ME1504	DYNAMICS OF MACHINERY	L	T	P	C
		3	0	0	3

OBJECTIVES

- To understand the force-motion relationship in components subjected to external forces and analysis of standard mechanisms
- To understand the undesirable effects of unbalances resulting from prescribed motions in mechanism
- To understand the effect of Dynamics of undesirable vibrations

  To understand the principles in mechanisms used for speed control and stability control

UNIT I FORCE ANALYSIS

Dynamic force analysis - Inertia force and Inertia torque- D Alembert's principle -Dynamic Analysis in reciprocating engines - Gas forces - Inertia effect of connecting rod- Bearing loads - Crank shaft torque - Turning moment diagrams -Fly Wheels - Flywheels of punching presses- Dynamics of Cam- follower mechanism CO1

UNIT - II

Static and dynamic balancing - Balancing of rotating masses - Balancing a single cylinder engine - Balancing of Multi-cylinder inline, V-engines - Partial balancing in engines - Balancing of linkages - Balancing machines-Field balancing of discs and rotors CO2

UNIT - III FREE VIBRATION

Basic features of vibratory systems - Degrees of freedom - single degree of freedom - Free vibration- Equations of motion - Natural frequency - Types of Damping - Damped vibration- Torsional vibration of shaft - Critical speeds of shafts - Torsional vibration - Two and three rotor torsional systems **CO3**

UNIT - IV FORCED VIBRATION

Response of one degree freedom systems to periodic forcing - Harmonic disturbances - Disturbance caused by unbalance - Support motion -transmissibility - Vibration isolation vibration measurement CO4

UNIT - V MECHANISM FOR CONTROL

Governors - Types - Centrifugal governors - Gravity controlled and spring controlled centrifugal governors - Characteristics - Effect of friction - Controlling force curves. Gyroscopes -Gyroscopic forces and torques - Gyroscopic stabilization - Gyroscopic effects in Automobiles, ships and airplanes CO5

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 Calculate static and dynamic forces of mechanisms

CO2 Calculate the balancing masses and their locations of reciprocating and rotating masses

CO3 Compute the frequency of free vibration

CO4 Compute the frequency of forced vibration and damping coefficient

CO5 Calculate the speed and lift of the governor and estimate the gyroscopic effect on automobiles, ships and airplanes

6. V.Ramamurthi, "Mechanics of Machines", Narosa Publishing House, 2002

ME1506	COMPUTER AIDED MACHINE DRAWING LABORATORY	L	T	P	C
		0	0	4	2

OBJECTIVES

- To make the students understand and interpret drawings of machine components
- To prepare assembly drawings both manually and using standard CAD packages
- To familiarize the students with Indian Standards on drawing practices and standard components
- To gain practical experience in handling 2D drafting and 3D modeling software systems

UNIT I DRAWING STANDARDS FITS AND TOLERANCES 9

Code of practice for Engineering Drawing, BIS specifications - Welding symbols, riveted joints, keys, fasteners - Reference to hand book for the selection of standard components like bolts, nuts, screws, keys etc. - Limits, Fits - Tolerancing of individual dimensions - Specification of Fits - Preparation of production drawings and reading of part and assembly drawings, basic principles of geometric dimensioning and tolerancing CO1

UNIT - II INTRODUCTION TO 2D DRAFTING 9

Drawing, Editing, Dimensioning, Layering, Hatching, Block, Array, Detailed Drawing-Bearings - Bush bearing, Plummer block, Valves - Safety and non-return valves CO2

UNIT - III 3D GEOMETRIC MODELING AND ASSEMBLY 27

Sketcher - Datum planes - Protrusion - Holes - Part modeling - Extrusion - Revolve - Sweep - Loft - Blend - Fillet - Pattern - Chamfer - Round - Mirror - Section - Assembly OF Couplings - Flange, Universal, Oldham's, Muff, Gear couplings- Joints - Knuckle, Gib& cotter, strap, sleeve & cotter joints -Engine parts - Piston, connecting rod, cross-head (vertical and horizontal), stuffing box, multi-plate clutch- Miscellaneous machine components - Screw jack, machine vice, tail stock, chuck, vane and gear pump CO3 CO4 CO5

Note:

25% of assembly drawings must be done manually and the remaining 75% of assembly drawings must be done by using any CAD software. The above tasks can be performed manually and using standard commercial 2D / 3D CAD software.

TOTAL PERIODS: 60

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Understand the engineering drawing standards and tolerances
CO2	Develop skills to generate 2D sketching of mechanical elements
CO3	Develop skills to generate 3D modeling of mechanical elements
CO4	Develop skills to make functional assemblies and generate 2D drafting
CO5	Apply design and assembly evaluation techniques using commercial software

ME1507 KINEMATICS AND DYNAMICS LABORATORY

L	T	P	C
0	0	4	2

OBJECTIVES

- To supplement the principles learnt in kinematics and dynamics of machinery
- To understand how certain measuring devices are used for dynamic testing.

LIST OF EXPERIMENTS

1. Study of gear parameters.
2. Experimental study of velocity ratios of simple, compound, epicyclic and differential gear trains.
3. Kinematics of four bar, slider crank, crank rocker, double crank, double rocker, oscillating cylinder mechanisms.
4. Kinematics of single and double universal joints.
5. Determination of mass moment of inertia of Fly wheel and Axle system.
6. Determination of mass moment of inertia of axisymmetric bodies using Turn Table apparatus. Determination of mass moment of inertia using bifilar suspension and compound pendulum.
7. Motorized gyroscope - Study of gyroscopic effect and couple.

8. Governor - Determination of range sensitivity, effort etc., for Watts, Porter, Proell, and Hartnell Governors.
9. Cams - Cam profile drawing, Motion curves and study of jump phenomenon
10. Single degree of freedom Spring Mass System - Determination of natural Frequency and verification of Laws of springs – Damping coefficient
11. determination. b) Multi degree freedom suspension system - Determination of influence coefficient.
12. Determination of torsional natural frequency of single and Double Rotor systems. - Undamped and Damped Natural frequencies.
13. Vibration Absorber - Tuned vibration absorber.
14. Vibration of Equivalent Spring mass system - undamped and damped vibration.
15. Whirling of shafts - Determination of critical speeds of shafts with concentrated loads.
16. Balancing of rotating masses.
17. Balancing of reciprocating masses.
18. Transverse vibration of Free-Free beam - with and without concentrated masses.
19. Forced Vibration of Cantilever beam - Mode shapes and natural frequencies.
20. Determination of transmissibility ratio using vibrating table.

TOTAL PERIODS: 60

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 Demonstrate the principles of kinematics of machinery.

CO2 Demonstrate the principles of dynamics of machinery.

CO3 Use the measuring devices for dynamic testing

CO4 Study the parameters of kinematics of machinery.

CO5 Study the parameters of dynamics of machinery.

ME1601	DESIGN OF TRANSMISSION SYSTEMS	L	T	P	C
		3	1	0	4

OBJECTIVES

- To gain knowledge on the principles and procedure for the design of mechanical power Transmission components.
- To understand the standard procedure available for design of transmission of mechanical elements
- To learn to use standard data and catalogues

(Use of P S G Design Data Book permitted)

UNIT - I DESIGN OF FLEXIBLE ELEMENTS 12

Design of Flat belts and pulleys - Selection of V belts and pulleys - Selection of hoisting wire ropes and pulleys - Design of Transmission chains and Sprockets CO1

UNIT - II SPUR GEARS AND PARALLEL AXIS HELICAL GEARS 12

Speed ratios and number of teeth-Force analysis -Tooth stresses - Dynamic effects - Fatigue strength - Factor of safety - Gear materials - Design of straight tooth spur & helical gears based on strength and wear considerations - Pressure angle in the normal and transverse plane- Equivalent number of teeth-forces for helical gears. CO2

UNIT - III BEVEL, WORM AND CROSS HELICAL GEARS 12

Straight bevel gear: Tooth terminology, tooth forces and stresses, equivalent number of teeth. Estimating the dimensions of pair of straight bevel gears. Worm Gear: Merits and demerits-terminology. Thermal capacity, materials-forces and stresses, efficiency, estimating the size of the worm gear pair. Cross helical: Terminology-helix angles-Estimating the size of the pair of cross helical gears. CO3

UNIT - IV GEAR BOXES **12**

Geometric progression - Standard step ratio - Ray diagram, kinematics layout -Design of sliding mesh gear box - Design of multi speed gear box for machine tool applications - Constant mesh gear box - Speed reducer unit. - Variable speed gear box, Fluid Couplings, Torque Converters for automotive applications. CO4

UNIT - V CAMS, CLUTCHES AND BRAKES **12**

Cam Design: Types - pressure angle and under cutting base circle determination - forces and surface stresses. Design of plate clutches - axial clutches -cone clutches - internal expanding rim clutches - Electromagnetic clutches. Band and Block brakes - external shoe brakes - Internal expanding shoe brake. CO5

TOTAL PERIODS: 60

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 Design flexible drive elements like belt, chain and rope drives.

CO2 Design parallel axis helical gears like spur gears.

CO3 Design bevel, worm and cross helical gears.

CO4 Design multi speed gear box for mechanical applications.

CO5 Design cam, clutches and brakes for automotive and mechanical applications.

ME1602	FINITE ELEMENT ANALYSIS	L	T	P	C
		3	0	0	3

OBJECTIVES

- To introduce the concepts of mathematical modeling of engineering problems.
- To appreciate the use of FEM to a range of engineering problems

UNIT - I INTRODUCTION **9**

Historical Background - Mathematical Modeling of field problems in Engineering - Governing Equations - Discrete and continuous models - Boundary, Initial and Eigen Value problems - Weighted Residual Methods - Variational Formulation of Boundary Value Problems - Ritz Technique - Basic concepts of the Finite Element Method. CO1

UNIT - II ONE-DIMENSIONAL PROBLEMS **9**

One Dimensional Second Order Equations - Discretization - Element types - Linear and Higher order Elements - Derivation of Shape functions and Stiffness matrices and force vectors - Assembly of Matrices - Solution of problems from solid mechanics and heat transfer. Longitudinal vibration frequencies and mode shapes. Fourth Order Beam Equation - Transverse deflections and Natural frequencies of beams. CO2

UNIT - III TWO DIMENSIONAL SCALAR VARIABLE PROBLEMS **9**

Second Order 2D Equations involving Scalar Variable Functions - Variational formulation - Finite Element formulation - Triangular elements - Shape functions and element matrices and vectors. Application to Field Problems - Thermal problems - Torsion of Non circular shafts - Quadrilateral elements - Higher Order Elements. CO3

UNIT - IV TWO DIMENSIONAL VECTOR VARIABLE PROBLEMS **9**

Equations of elasticity - Plane stress, plane strain and axisymmetric problems - Body forces and temperature effects - Stress calculations - Plate and shell elements. CO4

UNIT - V ISOPARAMETRIC FORMULATION **9**

Natural co-ordinate systems - Isoparametric elements - Shape functions for iso parametric elements - One and two dimensions - Serendipity elements - Numerical integration and application to plane stress problems - Matrix solution techniques - Solutions Techniques to Dynamic problems - Introduction to Analysis Software. CO5

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Understand the basic concepts of finite element method.
CO2	Apply the finite element method for one dimensional problems
CO3	Understand the finite element method for two dimensional scalar variable problems
CO4	Understand the finite element method for two dimensional vector variable problems
CO5	Gain the knowledge on isoparametric formulation, numerical integration and dynamic Problems.

ME1603	HEAT AND MASS TRANSFER	L	T	P	C
		3	1	0	4

OBJECTIVES

- To understand the mechanisms of heat transfer under steady and transient conditions.
- To understand the concepts of heat transfer through extended surfaces.
- To learn the thermal analysis and sizing of heat exchangers and to understand the basic concepts of mass transfer. (Use of Standard HMT data book permitted)

UNIT - I CONDUCTION **12**

General differential equation of heat conduction - Cartesian and polar Coordinates - One dimensional steady state heat conduction - plane and composite systems - Conduction with internal heat generation - Extended surfaces - Unsteady heat conduction - Lumped analysis - Semi infinite and infinite solids - Use of Heisler's charts. CO1

UNIT - II CONVECTION **12**

Free and forced convection - Hydrodynamic and thermal boundary layer. Free and forced convection during external flow over plates and cylinders and internal flow through tubes. CO2

UNIT - III PHASE CHANGE HEAT TRANSFER AND HEAT EXCHANGERS **12**

Nusselt's theory of condensation - Regimes of pool boiling and flow boiling. Correlations in boiling and condensation. Heat exchanger types - Overall heat transfer coefficient - Fouling factors - Analysis - LMTD method - NTU method CO3

UNIT - IV RADIATION **12**

Black body radiation - Grey body radiation - Shape factor - Electrical analogy - Radiation shields. Radiation through gases. CO4

UNIT - V MASS TRANSFER **12**

Basic concepts - Diffusion mass transfer - Fick's law of diffusion - Steady state molecular diffusion - Convective mass transfer - Momentum, heat and mass transfer analogy - Convective mass transfer correlations. CO5

TOTAL PERIODS: 60

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 Apply heat conduction equations to different surface configurations under steady state and transient conditions and solve problems

CO2 Apply free and forced convective heat transfer correlations to internal and external flows through/over various surface configurations and solve problems

CO3 Explain the phenomena of boiling and condensation, apply LMTD and NTU methods of thermal analysis to different types of heat exchanger configurations and solve problems

CO4 Explain basic laws for radiation and apply these principles to radiative heat transfer between different types of surfaces to solve problems

CO5 Apply diffusive and convective mass transfer equations and correlations to solve problems for different applications

TEXT BOOKS:

1. Holman, J.P., "Heat and Mass Transfer", Tata McGraw Hill, 2010
2. Yunus A. Cengel, "Heat Transfer - A Practical Approach", Tata McGraw Hill, 5th Edition 2015

3. Nag, P.K., "Heat Transfer", Tata McGraw Hill, New Delhi, 2011
4. Ozisik, M.N., "Heat Transfer", McGraw Hill Book Co., 2010.

ME1607	CAD/CAM LABORATORY	L	T	P	C
		0	0	4	2

OBJECTIVES
- To gain practical experience in handling 2D drafting and 3D modelling software systems.
- To study the features of CNC machine tool.
- To expose students to modern control systems (Fanuc, Siemens etc.,)
- To know the application of various CNC machines like CNC lathe, CNC vertical machining centre, CNC EDM and CNC wire-cut and studying of Rapid prototyping.

LIST OF EXPERIMENTS

1. 3D GEOMETRIC MODELLING **30**

1. Introduction of 3D Modelling Software

Creation of 3D assembly model of following machine elements using 3D Modelling software

2. Flange coupling
3. Plummer block
4. Screw jack
5. Lathe tailstock
6. Universal joint
7. Machine vice
8. Stuffing box
9. Crosshead
10. Safety valves
11. Non-return valves
12. Connecting rod
13. Piston
14. Crankshaft

* Students may also be trained in manual drawing of some of the above components

2. Manual Part Programming. **20**

(i) Part Programming - CNC Machining Centre
  (a) Linear Cutting.
  (b) Circular cutting.
  (c) Cutter Radius Compensation.
  (d) Canned Cycle Operations.

(ii) Part Programming - CNC Turning Centre
  (a) Straight, Taper and Radius Turning.
  (b) Thread Cutting.
  (c) Rough and Finish Turning Cycle. d) Drilling and Tapping Cycle.

3. Computer Aided Part Programming **10**

e) CL Data and Post process generation using CAM packages.
f) Application of CAPP in Machining and Turning Centre

TOTAL PERIODS: 60

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 Develop 2D Part Models using Modeling Software.

CO2 Develop 3D Part Models using Modeling Software.

CO3 Assemble 3D Models using Modeling Software.

CO4 Understand the CNC Control in Modern Manufacturing System.

CO5 Prepare CNC Part Programming and Perform Manufacturing.

ME1608 HEAT TRANSFER AND REFRIGERATION AND AIR-CONDITIONING LABORATORY

L	T	P	C
0	0	4	2

OBJECTIVES

- To study the heat transfer phenomena, predict the relevant coefficient using implementation
- To study the performance of refrigeration cycle / components

HEAT TRANSFER LAB :

1. Thermal conductivity measurement of pipe insulation using lagged pipe apparatus.
2. Determination of heat transfer coefficient under natural convection from a vertical cylinder.
3. Determination of heat transfer coefficient under forced convection from a tube.
4. Determination of thermal conductivity of composite wall.
5. Heat transfer from pin-fin apparatus (natural & forced convection modes)
6. Determination of Stefan - Boltzmann constant.
7. Determination of emissivity of a grey surface.
8. Effectiveness of parallel / counter flow heat exchanger.

REFRIGERATION AND AIR CONDITIONING LAB :

1. Determination of COP of a refrigeration system
2. Experiments on psychrometric processes
3. Performance test on a reciprocating air compressor
4. Performance test in a HC refrigeration System
5. Performance test in a fluidized bed cooling tower

TOTAL PERIODS: 60

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 Determine the thermal conductivity, heat transfer coefficient, Stefan Boltzmann constant and emissivity of a grey surface

CO2 Determine the effectiveness of a heat exchanger

CO3 Determine the COP of an AC and refrigeration system

CO4 Conduct experiments on an air compressor and study the performance characteristics.

CO5 Conduct experiments on cooling tower and study the performance characteristics.

ME1609 DESIGN AND FABRICATION PROJECT

L	T	P	C
0	0	4	2

OBJECTIVES

- The main objective is to give an opportunity to the student to get hands on training in the fabrication of one or more components of a complete working model, which is designed by them.

The students in a group of 3 to 4 works on a topic approved by the head of the department under the guidance of a faculty member and prepare a comprehensive project report after completing the work to the satisfaction of the supervisor. The progress of the project is evaluated based on a minimum of three reviews. The review committee may be constituted by the Head of the Department. A project report is required at the end of the semester. The project work is evaluated based on oral presentation and the project report jointly by external and internal examiners constituted by the Head of the Department.

TOTAL PERIODS: 60

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Demonstrate a sound technical knowledge of their selected project topic.
CO2	Undertake problem identification, formulation and solution.
CO3	Design engineering solutions to complex problems utilising a systems approach and conduct a engineering project.
CO4	Communicate with engineers and the community at large in written an oral forms.
CO5	Demonstrate the knowledge, skills and attitudes of a professional engineer.

ME1701 PROCESS PLANNING AND COST ESTIMATION

L	T	P	C
3	0	0	3

OBJECTIVES

- To introduce the process planning concepts to make cost estimation for various products after process planning

UNIT – I INTRODUCTION TO PROCESS PLANNING 9

Introduction - Methods of process planning - Drawing interpretation - Material evaluation - steps in process selection - Production equipment and tooling selection CO1

UNIT - II PROCESS PLANNING ACTIVITIES 9

Process parameters - Calculation for various production processes - Selection of jigs and fixtures selection of quality assurance methods - Set of documents for process planning - Economics of process planning - Case studies. CO2

UNIT - III INTRODUCTION TO COST ESTIMATION 9

Importance of costing and estimation - methods of costing - elements of cost estimation - Types of estimates - Estimating procedure - Estimation of labour cost, material cost - allocation of overhead charges - CNC machine hour rate calculation - Calculation of depreciation cost. CO3

UNIT - IV PRODUCTION COST ESTIMATION 9

Estimation of different types of jobs - Estimation of forging shop, Estimation of welding shop, Estimation of foundry shop CO4

UNIT - V MACHINING TIME CALCULATION 9

Estimation of Machining Time - Importance of Machine Time Calculation- Calculation of Machining Time for Different Lathe Operations, Drilling and Boring - Machining Time Calculation for Milling, Shaping and Planning -Machining Time Calculation for Grinding. CO5

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 Select the process, equipment and tools for various industrial products.
CO2 Prepare process planning activity charts.
CO3 Explain the concept of cost estimation.
CO4 Compute the job order cost for different types of shop floor.
CO5 Calculate the machining time for various machining operations.

ME1702	MECHATRONICS	L	T	P	C
		3	0	0	3

OBJECTIVES

- To impart knowledge about the elements and techniques involved in mechatronics systems which are very much essential to understand the emerging field of automation.

UNIT - I INTRODUCTION	**9**	
Introduction to mechatronics - Systems - Concepts of mechatronics approach - Need for mechatronics - Emerging areas of mechatronics - Classification of mechatronics. Sensors and Transducers: Static and dynamic characteristics of sensor, Potentiometers - LVDT - Capacitance sensors - Strain gauges - Eddy current sensor - Hall effect sensor - Temperature sensors - Light sensors.		CO1
UNIT - II MICROPROCESSOR AND MICROCONTROLLER	**9**	
Introduction - Architecture of 8085 - Pin Configuration - Addressing Modes -Instruction set, Timing diagram of 8085 - Concepts of 8051 microcontroller - Block diagram.		CO2
UNIT - III PROGRAMMABLE PERIPHERAL INTERFACE	**9**	
Introduction - Architecture of 8255, Keyboard interfacing, LED display - interfacing, ADC and DAC interface, Temperature control - Stepper motor control - Traffic control interface.		CO3
UNIT - IV PROGRAMMABLE LOGIC CONTROLLER	**9**	
Introduction - Basic structure - Input and output processing - Programming - Mnemonics - Timers, counters and internal relays - Data handling - Selection of PLC.		CO4
UNIT - V ACTUATORS AND MECHATRONIC SYSTEM DESIGN	**9**	
Types of stepper and servo motors - Construction - Working principle - Advantages and disadvantages. Design process - stages of design process - Traditional and mechatronics design concepts - Case studies of mechatronics systems - Pick and place Robot - Engine Management system - Automatic car park barrier.		CO5

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 Discuss the interdisciplinary applications of electronics, electrical, mechanical and computer systems for the control of mechanical, electronic systems and sensor technology.

CO2 Discuss the architecture of microprocessor and microcontroller, pin diagram, addressing modes of microprocessor and microcontroller.

CO3 Discuss programmable peripheral interface, Architecture of 8255 PPI, and various device interfacing.

CO4 Explain the architecture, programming and application of programmable logic controllers to problems and challenges in the areas of mechatronics engineering.

CO5 Discuss various actuators and mechatronics systems using the knowledge and skills acquired through the course and also from the given case studies.

TEXT BOOKS:

1. W.Bolton, “Mechatronics”, 4th Edition,Prentice Hall, 2013.
2. Ramesh S Gaonkar, “Microprocessor Architecture, Programming, and Applications with the 8085”, 6th Edition, Prentice Hall, 2013.

REFERENCE BOOKS:

2. Clarence W, de Silva, "Mechatronics" CRC Press, First Indian Re-print, 2013.
3. Devadas Shetty and Richard A. Kolk, “Mechatronics Systems Design”, PWS publishing company, 2007.
4. Krishna Kant, “Microprocessors & Microcontrollers”, Prentice Hall of India, 2007.
5. A. NagoorKani “Microprocessors and Microcontrollers”. McGraw Hill Education,2nd Edition,2017.

ME 1703	POWER PLANT ENGINEERING	L	T	P	C
		3	0	0	3

OBJECTIVES

- To provide an overview of Power Plants using conventional and renewable sources of energy
- To create awareness about the economic and environmental issues of power plants

UNIT - I COAL BASED THERMAL POWER PLANTS **9**

Rankine cycle - Improvisations, Layout of modern coal power plant, Super critical boilers, FBC boilers, Turbines, Condensers, Steam & heat rate, Subsystems of thermal power plants, Fuel and ash handling, Draught system, Feed water treatment. Binary Cycles and Cogeneration systems. CO1

UNIT - II DIESEL, GAS TURBINE AND COMBINED CYCLE POWER PLANTS **9**

Otto, diesel, dual & brayton cycle - Analysis & optimisation. Components of diesel and gas turbine power plants. Combined cycle power plants. Integrated gasifier based combined cycle systems. CO2

UNIT - III NUCLEAR POWER PLANTS **9**

Basics of nuclear engineering, Layout and subsystems of nuclear power plants, Working of nuclear reactors: Boiling Water Reactor (BWR), Pressurized Water Reactor (PWR), CANada Deuterium - Uranium reactor (CANDU), breeder, gas cooled and liquid metal cooled reactors. safety measures for nuclear power plants. CO3

UNIT - IV POWER FROM RENEWABLE ENERGY **9**

Hydro electric power plants - Classification, typical layout and associated components including turbines. principle, construction and working of wind, tidal, solar photo voltaic (spv), solar thermal, geo thermal, biogas and fuel cell power systems. CO4

UNIT - V ENERGY, ECONOMIC AND ENVIRONMENTAL ISSUES OF POWER PLANTS **9**

Power tariff types, load distribution parameters, load curve, comparison of site selection criteria, relative merits & demerits, capital & operating cost of different power plants. Pollution control technologies including waste disposal options for coal and nuclear power plants. CO5

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 Understand the layout, construction and working of the components inside a thermal power plant.

CO2 Know about the layout, construction and working of the components inside a diesel, gas and combined cycle power plants

CO3 Understand the layout, construction and working of the components inside nuclear power plants.

CO4 Know about the layout, construction and working of the components inside Renewable energy power plants.

CO5 Gain knowledge about the applications of power plants while extending their knowledge to power plant economics and environmental hazards and estimate the costs of electrical energy production.

TEXT BOOKS:

1. Arora S.C and Domkundwar S, "A Course in Power Plant Engineering", 6th Edition Dhanpat Rai, 2011
2. Nag P.K ,"Power Plant Engineering". 5th edition Tata McGraw- Hill ,2021

REFERENCE BOOKS:

1. El-Wakil. M.M., "Power Plant Technology", Tata McGraw - Hill Publishing Company Ltd., 2010.
2. Godfrey Boyle, "Renewable energy", Open University, Oxford University Press in association with the Open University, 2004.

4. Dr.P.C.Sharma, Power Plant Engineering," S. K. Kataria & Sons, 2013
5. R.K Rajput, " Power Plant Engineering ", Scitech Publications, 2006
6. G.R.Nagpal , "Power Plant Engineering", Khanna Publishers, 1998
7. G.D.Rai, "Introduction to Power Plant technology" Khanna Publishers, 1995

ME1707 SIMULATION AND ANALYSIS LABORATORY

L	T	P	C
0	0	4	2

OBJECTIVES

- To give exposure to software tools needed to analyze engineering problems.
- To expose the students to different applications of simulation and analysis tools

LIST OF EXPERIMENTS

A. SIMULATION

1. MATLAB basics, Dealing with matrices, Graphing-functions of one variable and two variables
2. Use of MAT lab to solve simple problems in vibration
3. Mechanism simulation using multi body dynamic software

B. ANALYSIS

1. Force and stress analysis using link elements in Trusses, cables etc.
2. Stress and deflection analysis in beams with different support conditions.
3. Stress analysis of flat plates and simple shells.
4. Stress analysis of axi - symmetric components.
5. Thermal stress and heat transfer analysis of plates.
6. Thermal stress analysis of cylindrical shells.
7. Vibration analysis of spring-mass systems.
8. Model analysis of Beams.
9. Harmonic, transient and spectrum analysis of simple systems.

TOTAL PERIODS: 60

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Get familiar with 1D, 2D Finite Elements(FE), modelling of structural elements with loading and boundary conditions
CO2	Understand the behaviour of structural engineering problems by 1D and 2D Finite Elements
CO3	Understand the thermal behaviour of engineering problems by using 1D and 2D Finite Elements
CO4	Understand the vibration and dynamic behaviour of 1D and 2D engineering problems
CO5	Learn and solve core mechanical engineering problems using MATLAB computational package

ME1708	MECHATRONICS LABORATORY	L	T	P	C
		0	0	4	2

OBJECTIVES

- To know the method of programming the microprocessor and also the design, modeling & analysis of basic electrical, hydraulic & pneumatic systems which enable the students to understand the concept of mechatronics.

LIST OF EXPERIMENTS

1. Assembly language programming of 8085 - Addition - Subtraction - Multiplication - Division - Sorting - Code Conversion.
2. Stepper motor interface.
3. Traffic light interface.
4. Speed control of DC motor.
5. Study of various types of transducers.
6. Study of hydraulic, pneumatic and electro-pneumatic circuits.
7. Modelling and analysis of basic hydraulic, pneumatic and electrical circuits using software.
8. Study of PLC and its applications.
9. Study of image processing techniques.

TOTAL PERIODS: 60

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Demonstrate the functioning of mechatronics system with various pneumaticsystems.
CO2	Demonstrate the functioning of mechatronics system with various hydraulicsystems.
CO3	Demonstrate the functioning of mechatronics systems with various Electrical and Electro-pneumatic systems.
CO4	Demonstrate the functioning of control systems with the help of PLC and microcontrollers.
CO5	Demonstrate the functioning of control systems with the help of microprocessors.

MG1801 INDUSTRIAL ECONOMICS

L	T	P	C
3	0	0	3

OBJECTIVES

- To enable students to understand the fundamental economic concepts applicable to engineering and to learn the techniques of incorporating inflation factor in economic decision making.

UNIT - I INTRODUCTION TO ECONOMICS		**9**
Introduction to economics- Flow in an economy, Law of supply and demand, Concept of engineering economics - Engineering efficiency, Economic efficiency, Scope of engineering economics - Element of costs, Marginal cost, Marginal revenue, Sunk cost, Opportunity cost, Break-even analysis - P-V ratio, Elementary economic Analysis - Material selection for product - Design selection for a product, Process planning.	CO1	
UNIT - II VALUE ENGINEERING		**9**
Make or buy decision, Value engineering - Function, aims, Value engineering procedure. Interest formulae and their applications - Time value of money, Single payment compound amount factor, Single payment present worth factor, Equal payment series sinking fund factor, Equal payment series Present worth factor - Equal payment series capital recovery factor - Uniform gradient series annual equivalent factor, Effective interest rate	CO2	
UNIT - III CASH FLOW		**9**
Capital budgeting - Balance Sheet - Methods of comparison of alternatives - Present worth method (Revenue dominated cash flow diagram), Future worth method (Revenue dominated cash flow diagram, Cost dominated cash flow diagram), Annual equivalent method (Revenue dominated cash flow diagram, Cost dominated cash flow diagram), Rate of return method - Risk and decision Making - Technological change in global economy - Locating the firm in a global economy - Taxes and decision making.	CO3	
UNIT - IV REPLACEMENT AND MAINTENANCE ANALYSIS		**9**
Replacement and maintenance analysis - Types of maintenance, Types of replacement problem, Determination of economic life of an asset, Replacement of an asset with a new asset - Capital recovery with return and concept of challenger and defender - Exchange rate determination - Marketing - Product life cycle - Marketing research - Branding	CO4	
UNIT - V DEPRECIATION		**9**
Depreciation- Introduction, Straight line method of depreciation, Declining balance method of depreciation - Sum of the years digits method of depreciation, Sinking fund method of depreciation/Annuity method of depreciation, Service output method of depreciation - Evaluation of public alternatives - Introduction, Examples, Inflation adjusted decisions - Procedure to adjust inflation, Examples on comparison of alternatives and determination of economic life of asset.	CO5	

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 Apply basic economic concepts in economic analysis

CO2 Learn time value of money and interest rates

CO3 Learn revenue based and cost based cash flow analysis

CO4 Learn replacement and maintenance based on economic life

CO5 Learn depreciation and inflation based on economic life

TEXT BOOKS:

ME1807	PROJECT WORK	L	T	P	C
		0	0	20	10

OBJECTIVES
- To develop the ability to solve a specific problem right from its identification and literature review till the successful solution of the same.
- To train the students in preparing project reports and to face reviews and viva voce examination.

The students in a group of 3 to 4 work on a topic approved by the head of the department under the guidance of a faculty member and prepare a comprehensive project report after completing the work to the satisfaction of the supervisor. The progress of the project is evaluated based on a minimum of three reviews. The review committee may be constituted by the Head of the Department. A project report is required at the end of the semester. The project work is evaluated based on oral presentation and the project report jointly by external and internal examiners constituted by the Head of the Department.

TOTAL PERIODS: 300

COURSE OUTCOMES
Upon completion of the course, students will be able to

CO1 Demonstrate a sound technical knowledge of their selected project topic.

CO2 Undertake problem identification, formulation and solution.

CO3 Design engineering solutions to complex problems utilising a systems approach and conduct an engineering project.

CO4 Communicate with engineers and the community at large in written and oral forms.

CO5 Demonstrate the knowledge, skills and attitudes of a professional engineer.

ME1511 DESIGN OF HEAT EXCHANGERS

L	T	P	C
3	0	0	3

OBJECTIVES

- To learn the thermal and stress analysis on various parts of the heat exchangers
- To analyze the sizing and rating of the heat exchangers for various applications

UNIT - I INTRODUCTION 9

Types of heat exchangers, shell and tube heat exchangers - regenerators and recuperators - Temperature distribution and its implications - Parts description, Classification as per Tubular Exchanger Manufacturers Association (TEMA).

UNIT - II PROCESS DESIGN OF HEAT EXCHANGERS 9

Heat transfer correlations, Overall heat transfer coefficient, analysis of heat exchangers - LMTD and effectiveness method. Sizing of finned tube heat exchangers, U tube heat exchangers, Design of shell and tube heat exchangers, fouling factors, pressure drop calculations.

UNIT - III STRESS ANALYSIS 9

Stress in tubes - header sheets and pressure vessels - thermal stresses, shear stresses - types of failures, buckling of tubes, flow induced vibration.

UNIT - IV COMPACT AND PLATE HEAT EXCHANGER 9

Types - Merits and Demerits - Design of compact heat exchangers, plate heat exchangers, performance influencing parameters, limitations.

UNIT - V CONDENSERS AND COOLING TOWERS 9

Design of surface and evaporative condensers - Cooling tower - Performance characteristics.

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 Understand the classification of heat exchanger as per TEMA
CO2 Understand the design process of heat exchangers
CO3 Analyse the stress failures in the heat exchanger components
CO4 Study the performance of compact and plate heat exchanger
CO5 Study the performance of condensers and cooling tower

TEXT BOOKS:

ME1512 ENERGY CONSERVATION AND AUDITING

L	T	P	C
3	0	0	3

OBJECTIVES

- To conduct energy audit and suggest methodologies for energy savings
- To understand and analyse the energy data of industries
- To carryout energy accounting and balancing
- To conduct the available resources in optimal ways

UNIT - I INTRODUCTION OF ENERGY CONSERVATION 9

Energy - Power - Past & Present scenario of world; National energy consumption Data - Environmental aspects associated with energy utilization - Energy auditing: Need, Types, Methodology and Barriers. Role of energy managers. Instruments for energy auditing.

UNIT - II THERMAL SYSTEMS 9

Stoichiometry, Boilers, Furnaces and Thermic Fluid Heaters - Efficiency computation and encon measures. Steam: Distribution & Usage: Steam Traps, Condensate Recovery, Flash Steam Utilization, Insulators & Refractories.

UNIT - III ELECTRICAL SYSTEMS 9

Components of EB billing - HT and LT supply, Transformers, Cable Sizing, Concept of Capacitors, Power Factor Improvement, Harmonics, Electric Motors - Motor Efficiency Computation, Energy Efficient Motors, Illumination - Lux, Lumens, Types of lighting, Efficacy, LED Lighting and scope of Encon in Illumination.

UNIT - IV ENERGY CONSERVATION IN MAJOR UTILITIES 9

Pumps, Fans, Blowers, Compressed Air Systems, Refrigeration and Air Conditioning Systems - Cooling Towers - D.G. sets.

UNIT - V ECONOMICS 9

Energy Economics - Discount Rate, Payback Period, Internal Rate of Return, Net Present Value, Life Cycle Costing - ESCO concept.

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 Learn the concept of energy scenario, energy consumption and instruments for energy auditing

CO2 Carry out energy accounting and balancing in electrical system

CO3 Carry out energy accounting and balancing in thermal system system

CO4 Suggest methodologies for energy savings in major utilities

CO5 Understand the economics in energy saving

TEXT BOOKS:

ME1513 EXPERIMENTAL DESIGN AND ANALYSIS

L	T	P	C
3	0	0	3

OBJECTIVES

- To demonstrate knowledge and understanding of Classical Design of Experiments (DOE)
- To demonstrate knowledge and understanding of Taguchi's approach
- To develop skills to design and conduct experiments using DOE and Taguchi's approach
- To develop competency for analysing the data to determine the optimal process parameters that optimize the process

UNIT - I FUNDAMENTALS OF EXPERIMENTAL DESIGNS 9

Basic Principles - Guidelines for Designing Experiments- Hypothesis testing - single mean, two means, dependent/ correlated samples - confidence intervals, Experimentation - need, Simple Comparative Experiments - Conventional test strategies, Analysis of variance, F-test, terminology, basic principles of design, steps in experimentation - choice of sample size - Normal and half-normal probability plot - simple linear and multiple linear regression, testing using Analysis of variance.

UNIT - II SINGLE-FACTOR EXPERIMENTS 9

Basic Definitions - Principles of Factorial Design - The Advantage of Factorial Design - Completely Randomized Design- effect of coding the observations- model adequacy checking - estimation of model parameters, residuals analysis- treatment comparison methods- Duncan's multiple range test, Newman- Keuel's test, Fisher's LSD test, Tukey's test- testing using contrasts- Randomized Block Design - Latin Square Design- Graeco Latin Square Design - Applications.

UNIT - III FACTORIAL DESIGNS 9

Main and Interaction effects - Two and three-factor full factorial designs- Fixed effects and random effects model - Rule for sum of squares and Expected Mean Squares- 2K Design with two and three factors- Yate's Algorithm- fitting regression model- Randomized Block Factorial Design - Practical applications.

UNIT - IV SPECIAL EXPERIMENTAL DESIGNS 9

Blocking and Confounding in 2K Designs- blocking in replicated design - 2K Factorial Design in two blocks - Complete and partial confounding- Confounding 2K Design in four blocks - Two level Fractional Factorial Designs - one-half fraction of 2K Design, design resolution, Construction of one - half fraction with highest design resolution, one-quarter fraction of 2K Design.

UNIT - V ANALYSIS OF SINGLE RESPONSE AND MULTI-RESPONSE TECHNIQUES 9

Design of experiments using Orthogonal Arrays, Data analysis from Orthogonal experiments- Response Graph Method, ANOVA - attribute data analysis- Robust design- noise factors, Signal to noise ratios, Inner/outer OA design - case studies. Introduction to Response Surface Methodology - The method of steepest ascent - Analysis of a second-order Response Surface - Experimental designs for fitting response surfaces.

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 Understand the Basic principle of DOEs and ANOVA
CO2 Understand the various single factor experiments
CO3 Learn full and fraction factorial experiment design
CO4 Understand the special experimental design
CO5 Understand the single and multi-response techniques

TEXT BOOKS:

ME1514	GAS DYNAMICS AND JET PROPULSION	L	T	P	C
		3	0	0	3

OBJECTIVES

- To understand the basic difference between incompressible and compressible flow
- To understand the phenomenon of shock waves and its effect on flow. To gain some basic knowledge about jet propulsion and Rocket Propulsion.
  (Use of Standard Gas Tables permitted)

UNIT - I BASIC CONCEPTS AND ISENTROPIC FLOWS 6

Energy and momentum equations of compressible fluid flows - Stagnation states, Mach waves and Mach cone - Effect of Mach number on compressibility - Isentropic flow through variable ducts - Nozzle and Diffusers.

UNIT - II FLOW THROUGH DUCTS 9

Flows through constant area ducts with heat transfer (Rayleigh flow) and Friction (Fanno flow) - variation of flow properties.

UNIT - III NORMAL AND OBLIQUE SHOCKS 10

Governing equations - Variation of flow parameters across the normal and oblique shocks - Prandtl - Meyer relations - Applications.

UNIT - IV JET PROPULSION 10

Theory of jet propulsion - Thrust equation - Thrust power and propulsive efficiency - Operating principle, cycle analysis and use of stagnation state performance of ram jet, turbojet, turbofan and turbo prop engines.

UNIT - V SPACE PROPULSION 10

Types of rocket engines - Propellants-feeding systems - Ignition and combustion - Theory of rocket propulsion - Performance study - Staging - Terminal and characteristic velocity - Applications - space flights.

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 Understand the concepts of compressible fluid flow in variable area ducts that follows isentropic process

CO2 Study the effects of friction and heat transfer on compressible fluid flow in constant area ducts

CO3 Acquire the knowledge of normal shock and oblique shock waves and its effects on compressible fluid properties in constant area and variable area ducts

CO4 Understand working principle and cycle analysis of jet propulsion engines

CO5 Understand theory of rocket engines and study its performance

ME1515 REFRIGERATION AND AIRCONDITIONING

L	T	P	C
3	0	0	3

OBJECTIVES

- To understand the underlying principles of operations in different Refrigeration & Air conditioning systems and components
- To provide knowledge on design aspects of Refrigeration & Air conditioning system

UNIT - I INTRODUCTION TO REFRIGERATION 6

Introduction to refrigeration - Unit of refrigeration and C.O.P.- Ideal cycles - Refrigerants Desirable properties - Classification - Nomenclature - ODP & GWP.

UNIT - II VAPOUR COMPRESSION REFRIGERATION SYSTEM 10

Vapor compression cycle : p-h and T-s diagrams - deviations from theoretical cycle - subcooling and superheating- effects of condenser and evaporator pressure on COP- multi pressure system - low temperature refrigeration - Cascade systems - problems. Equipments: Type of compressors, condensers, expansion devices, evaporators.

UNIT - III OTHER REFRIGERATION SYSTEMS 9

Working principles of vapour absorption systems and adsorption cooling systems - Steam jet refrigeration - Ejector refrigeration systems - Thermoelectric refrigeration- Air refrigeration – Magnetic - Vortex and Pulse tube refrigeration systems.

UNIT - IV PSYCHROMETRIC PROPERTIES AND PROCESSES 10

Properties of moist Air - Gibbs Dalton law, Specific humidity, Dew point temperature, Degree of saturation, Relative humidity, Enthalpy, Humid specific heat, Wet bulb temperature Thermodynamic wet bulb temperature, Psychrometric chart; Psychrometric of air-conditioning processes, mixing of air streams.

UNIT - V AIR CONDITIONING SYSTEMS AND LOAD ESTIMATION 10

Air conditioning loads: Outside and inside design conditions; Heat transfer through structure, Solar radiation, Electrical appliances, Infiltration and ventilation, internal heat load; Apparatus selection; fresh air load, human comfort & IAQ principles, effective temperature & chart, calculation of summer & winter air conditioning load; Classifications, Layout of plants; Air distribution system; Filters; Air Conditioning Systems with Controls: Temperature, Pressure and Humidity sensors, Actuators & Safety controls.

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Explain the basic concepts of refrigeration
CO2	Explain the vapor compression refrigeration systems and to solve problems
CO3	Discuss the various types of refrigeration systems
CO4	Calculate the psychrometric properties and its use in psychrometric processes
CO5	Explain the concepts of air conditioning and to solve problems

TEXT BOOKS:

ME1516 TURBOMACHINES

L	T	P	C
3	0	0	3

OBJECTIVES

- Explaining the energy transfer in rotor and stator parts of the turbo machines
- Explaining the function of various elements of centrifugal fans and blowers
- Evaluating the working and performance of centrifugal compressor
- Analyzing flow behavior and flow losses in axial flow compressor
- Explaining the types and working of axial and radial flow turbines

UNIT - I WORKING PRINCIPLES 9

Classification of Turbomachines - Energy transfer between fluid and rotor - Euler equation and its interpretation. Velocity triangles - Efficiencies in Compressor and Turbine stages. Degree of reaction. Dimensionless parameters for Turbomachines.

UNIT - II CENTRIFUGAL FANS AND BLOWERS 9

Types - components - working. Flow analysis in impeller blades - volute and diffusers. Velocity triangles - h-s diagram. Stage parameters in fans and blowers. Performance characteristic curves - various losses. Fan - bearings, drives and noise.

UNIT - III CENTRIFUGAL COMPRESSOR **9**

Components - blade types. Velocity triangles - h-s diagram, stage work. Slip factor and Degree of Reaction. Performance characteristics and various losses. Geometry and performance calculation.

UNIT - IV AXIAL FLOW COMPRESSOR **9**

Construction details. Work done factor. Velocity triangles - h-s diagram, stage work. Work done factor. Performance characteristics, efficiency and stage losses - Stalling and Surging. Free and Forced vortex flow.

UNIT - V AXIAL AND RADIAL FLOW TURBINES **9**

Axial flow turbines - Types - Elements - Stage velocity diagrams - h-s diagram, stage work - impulse and reaction stages. Compounding of turbines. Performance coefficients and losses.
Radial flow turbines: Types - Elements - Stage velocity diagrams - h-s diagram, stage work Performance coefficients and losses.

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Explain the energy transfer in rotor and stator parts of the turbo machines
CO2	Explain the function of various elements of centrifugal fans and blowers
CO3	Evaluate the working and performance of centrifugal compressor
CO4	Analyze flow behavior and flow losses in axial flow compressor
CO5	Explain the types and working of axial and radial flow turbines

ME1517 BIOENERGY CONVERSION TECHNOLOGIES

L	T	P	C
3	0	0	3

OBJECTIVES

- To elucidate on biomass, types, availability, and characteristics
- To study the bio-methanation process
- To impart knowledge on combustion of biofuels
- To describe on the significance of equivalence ratio on thermochemical conversion of biomass
- To provide insight to the possibilities of producing liquid fuels from biomass

UNIT – I INTRODUCTION **9**

Biomass: types – advantages and drawbacks – typical characteristics – proximate & ultimate analysis – comparison with coal - Indian scenario - carbon neutrality – biomass assessment studies – typical conversion mechanisms - densification technologies CO1

UNIT – II	**BIOMETHANATION**		**9**
Biomethenation process – influencing parameters – typical feed stocks – Biogas plants: types and design, Biogas appliances – burner, luminaries and power generation systems – Industrial effluent based biogas plants.			CO2
UNIT – III	**BIOMASS COMBUSTION**		**9**
Perfect, complete and incomplete combustion – stoichiometric air requirement for biofuels - equivalence ratio – fixed Bed and fluid Bed combustion			CO3
UNIT – IV	**GASIFICATION, PYROLYSIS AND CARBONISATION**		**9**
Chemistry of gasification - types – comparison – typical application – performance evaluation – economics. Pyrolysis - Classification - process governing parameters – Typical yield rates. Carbonization – merits of carbonized fuels – techniques adopted for carbonisation			CO4
UNIT – V	**LIQUIFIED BIOFUELS**		**9**
Straight Vegetable Oil (SVO) as fuel - Biodiesel production from oil seeds, waste oils and algae - Process and chemistry - Biodiesel Vs. Diesel – comparison on emission and performance fronts. Production of alcoholic fuels (methanol and ethanol) from biomass – engine modifications			CO5
		TOTAL PERIODS:	**45**

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 Estimate the surplus biomass availability of any given area.

CO2 Design a biogas plant for a variety of biofuels.

CO3 Determine and compare the cost of steam generation from biofuels with that of coal and petroleum fuels.

CO4 Analyse the influence of process governing parameters in thermochemical conversion of biomass.

CO5 Synthesize liquid biofuels for power generation from biomass.

TEXT BOOKS:

ME1518	**ENERGY EFFICIENT BUILDINGS**	**L**	**T**	**P**	**C**
		3	**0**	**0**	**3**

OBJECTIVES

- To learn the climate and buildings, building efficiency rating and standards
- Developing energy efficiency in building envelopes through alternate methods
- To study the thermal comfort, passive heating and cooling techniques
- To apply various energy saving concepts in buildings.
- To incorporate Renewable energy systems in buildings

UNIT – I	**INTRODUCTION**	**9**
Climate and Building, Historical perspective, Aspects of Net Zero building design – Sustainable Site, Water, Energy, Materials and IGBC, LEED, GRIHA, IEQ, NBC and ECBC Standards		CO1
UNIT – II	**LANDSCAPE AND BUILDING ENVELOPES**	**9**
Energy efficient landscape design – Micro climates – various methods – Shading, water bodies – Building envelope: Building materials, Envelope heat loss and heat gain and its evaluation, paints, insulation, Design methods and tools		CO2
UNIT – III	**THERMAL COMFORT, PASSIVE HEATING AND COOLING**	**9**
Thermal comfort, Psychrometry, Comfort indices – ASHRAE / ISHRAE Standards on thermal Comfort – Passive heating and cooling systems - HVAC Systems for built environment – Cooling Load Calculations, Heat Pumps, Evaporative Cooling and Radiant Cooling.		CO3
UNIT – IV	**ENERGY CONSERVATION IN BUILDING UTILITIES**	**9**
Energy conservation in Hot water generator – Boiler, Heat Pumps, DG Sets, Motors , Pumps, Compressors, Illumination Systems, Electrical distribution systems, Cooling Towers, Refrigeration and Air Conditioning Systems, Cogeneration Systems, Water and Waste heat recovery systems		CO4
UNIT – V	**RENEWABLE ENERGY IN BUILDINGS**	**9**
Introduction of Renewable sources in buildings, Stand-alone PV systems, BIPV, Solar water heating, Solar Air Conditioning in Buildings, Small wind turbines, Poly-generation systems in Buildings		CO5

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Familiar with climate responsive building design and basic concepts
CO2	Explain the basic terminologies related to buildings
CO3	Discuss the energy efficient air conditioning techniques
CO4	Evaluate the performance of buildings
CO5	Gets acquainted with Renewable energy systems in buildings

5. Jan F. Kreider, Peter S. Curtiss, Ari Rabl, Heating and Cooling of buildings: Design for Efficiency, Revised Second Edition, CRC Press, 28-Dec-2009.

ME1519 ENERGY STORAGE TECHNOLOGIES

L	T	P	C
3	0	0	3

OBJECTIVES

- To study the various types of energy storage devices and technologies and them comparison.
- To learn the techniques of various energy storage devices and their performances.
- To learn the basics of batteries and hybrid systems for EVs and other mobile applications.
- To learn about the renewable energy storage systems and management systems.
- To have an insight into other energy storage devices, hydrogen, and fuel cells.

UNIT - I INTRODUCTION TO ENERGY STORAGE **9**

Need for Energy Storage – Types of Energy Storage – Various forms of Energy Storage – Mechanical– Thermal - Chemical– Electrochemical – Electrical - Other alternative energy storage technologies – Efficiency and Comparison. CO1

UNIT - II ENERGY STORAGE SYSTEMS **9**

Pumped Air Energy Storage – Compressed Air Energy Storage – Flywheel – Sensible and Latent Heat Storage – Storage Materials – Performance Evaluation - Thermochemical systems – Batteries – Types- Charging and Discharging – Battery testing and performance. CO2

UNIT - III MOBILE AND HYBRID ENERGY STORAGE SYSTEMS **9**

Batteries for electric vehicles - Battery specifications for cars, heart pacemakers, computer standby supplies – V2G and G2V technologies – HESS. CO3

UNIT - IV RENEWABLE ENERGY STORAGE AND ENERGY MANAGEMENT **9**

Storage of Renewable Energy Systems –Solar Energy – Wind Energy – Energy Storage in Micro grid– Smart Grid – Energy Conversion Efficiency - Battery Management Systems – EVBMS – Energy Audit and Management CO4

UNIT - V OTHER ENERGY DEVICES **9**

Superconducting Magnetic Energy Storage (SMES), Supercapacitors – MHD Power generation –
Hydrogen Storage Fuel Cells – Basic principle and classifications – PEMFC, AMFC, DMFC, SOFC,MCFC and Biofuel Cells – Biogas Storage. CO5

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 Discuss the need and identify the suitable energy storage devices for applications.

CO2 Explain the working of various energy storage devices and their importance.

CO3 Explain the basic characteristics of batteries for mobile and hybrid systems.

CO4 Discuss the storage of renewable energies and management systems.

CO5 Explain the need for other energy devices and their scope for applications.

TEXT BOOKS:

ME1520	RENEWABLE POWERED OFF HIGHWAY VEHICLES AND EMISSION CONTROL TECHNOLOGY	L	T	P	C
		3	0	0	3

OBJECTIVES

- To study the low and zero carbon fuels suitability and methods of use in off-road vehicles.
- To learn and understand the green energy production methodologies and its use in off-road vehicle categories.
- To learn various fuel cell types and its suitability in off-highway vehicles applications
- To illustrate the impact of in-cylinder technologies on engine out emissions control.
- To study the existing after-treatment technologies used in off-highway vehicle applications.

UNIT - I LOW AND ZERO CARBON FUELS POWERED OFF-HIGHWAY VEHICLES **9**

Ethanol, Methanol, Butanol, Biodiesel, CNG, LNG, DME, Polyoxymethylene Dimethyl Ether (PODE), Ammonia and Hydrogen Fuels suitability, methods, and technologies for powering off-road vehicles. CO1

UNIT - II GREEN ENERGY POWERED OFF-HIGHWAY VEHICLES **9**

Solar Technology for Green Electricity, Green Electricity for Hydrogen Production, Hydrogen Smart Grid Technologies, Hydrogen to ICE powered vehicles, Hydrogen to Fuel Cell Powered Vehicles. CO2

UNIT - III FUEL CELL POWERED OFF-HIGHWAY VEHICLES **9**

Fuel Cell, Types, Applications, Fuel Cell Requirement, Sizing and Design for Off-Highway applications, Merits and Demerits, Pathway to overcome the limitations. Scope of the fuel cell research on Off-road vehicle applications. CO3

UNIT - IV IN-CYLINDER TREATMENT TECHNOLOGIES **9**

Low temperature Combustion Modes - Homogeneous Charge Compression Ignition, Premixed- Charge Compression Ignition, Reactivity Controlled Compression Ignition, Gasoline Direct Injection Compression Ignition, Water Injection Technologies. CO4

UNIT - V AFTER TREATMENT TECHNOLOGIES **9**

Diesel Oxidation Catalyst, Diesel Particulate Filter, Selective Catalytic Reduction, Ammonia slip / clean up catalyst. CO2 absorption techniques, Waste Heat Recovery and Organic Rankine Cycle. CO5

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 Evaluate the availability, suitability, and its role in off-road vehicle categories in reducing the carbon footprint on the environment.

CO2 Gain the knowledge on various green energy production methods and its impact on meeting energy demand of off-road vehicle applications.

CO3 Develop the working of fuel cell, various fuel cell types, and its design for off-road vehicle applications.

CO4 Gain the knowledge on various in-cylinder low temperature combustion technologies and its key role in controlling the engine-out emissions.

CO5 Develop the working of various existing aftertreatment systems in controlling the engine out emissions.

5. The Political Economy of Low Carbon Transformation: Breaking the habits of capitalism (Routledge Studies in Low Carbon Development) by Harold Wilhite | 21 December 2017

ME1621 APPLIED HYDRAULICS AND PNEUMATICS

L	T	P	C
3	0	0	3

OBJECTIVES

- To provide student with knowledge on the application of fluid power in process, construction and manufacturing Industries
- To provide students with an understanding of the fluids and components utilized in modern industrial fluid power system
- To develop a measurable degree of competence in the design, construction and operation of fluid power circuits

UNIT - I FLUID POWER PRINICIPLES AND HYDRAULIC PUMPS 9

Introduction to fluid power - Advantages and applications - Fluid power systems - Types of fluids - Properties of fluids and selection - Basics of hydraulics - Pascal's law - Principles of flow - Friction loss - Work, Power and Torque Problems, Sources of hydraulic power : Pumping theory - Pump classification - Construction, Working, Design, Advantages, Disadvantages, Performance, Selection criteria of linear and rotary - Fixed and variable displacement pumps - Problems.

UNIT - II HYDRAULIC ACTUATORS AND CONTROL COMPONENTS 9

Hydraulic actuators: Cylinders - Types and construction, Application, Hydraulic cushioning - Hydraulic motors - Control components : Direction control, Flow control and pressure control valves - Types, Construction and Operation - Servo and proportional valves - Applications - Accessories : Reservoirs, Pressure switches - Applications - Fluid power ANSI symbols - Problems.

UNIT - III HYDRAULIC CIRCUITS AND SYSTEMS 9

Accumulators, Intensifiers, Industrial hydraulic circuits - Regenerative, Pump unloading, Double-Pump, Pressure intensifier, Air-over oil, Sequence, reciprocation, Synchronization, Fail-safe, Speed control, Hydrostatic transmission, Electro hydraulic circuits, Mechanical hydraulic servo systems.

UNIT - IV PNEUMATIC AND ELECTRO PNEUMATIC SYSTEMS 9

Properties of air - Perfect gas laws - Compressor - Filters, Regulator, Lubricator, Muffler, Air control valves, Quick exhaust valves, Pneumatic actuators, Design of pneumatic circuit - Cascade method - Electro pneumatic system - Elements - Ladder diagram - Problems, Introduction to fluidics and pneumatic logic circuits.

UNIT - V TROUBLE SHOOTING AND APPLICATIONS 9

Installation, Selection, Maintenance, Trouble shooting and Remedies in hydraulic and pneumatic systems, Design of hydraulic circuits for Drilling, Planning, Shaping, Surface grinding, Press and Forklift applications. Design of pneumatic circuits for pick and place applications and tool handling in CNC Machine tools - Low cost Automation - Hydraulic and pneumatic power packs.

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Explain the fluid power and operation of different types of pumps
CO2	Summarize the features and functions of hydraulic motors, actuators and flow control valves
CO3	Explain the different types of hydraulic circuits and systems
CO4	Explain the working of different pneumatic circuits and systems
CO5	Summarize the various trouble shooting methods and applications of hydraulic and pneumatic systems

TEXT BOOKS:

1. Anthony Esposito, “Fluid Power with Applications”, Pearson Education, 9th Edition, 2017.
2. Majumdar S.R., “Oil Hydraulics Systems- Principles and Maintenance”, Tata McGraw-Hill, 2017

REFERENCE BOOKS:

1. Shanmugasundaram. K, “Hydraulic and Pneumatic controls”, Chand & Co, 2014.
2. R. Srinivasan, “Hydraulic and Pneumatic controls”, Tata McGraw-Hill, 2012.
3. Majumdar S.R., “Pneumatic Systems- Principles and Maintenance”, Tata McGraw-Hill, 2017

ME1622 DESIGN OF JIGS, FIXTURES AND PRESS TOOLS

L	T	P	C
3	0	0	3

OBJECTIVES

- To understand the functions and design principles of Jigs, fixtures and press tools
- To gain proficiency in the development of required views of the final design

UNIT - I LOCATING AND CLAMPING PRINCIPLES 9

Objectives of tool design - Function and advantages of jigs and fixtures - Basic elements - principles of location - Locating methods and devices - Redundant Location - Principles of clamping - Mechanical actuation - pneumatic and hydraulic actuation standard parts - Drill bushes and jig buttons - Tolerances and materials used.

UNIT - II JIGS AND FIXTURES 9

Design and development of jigs and fixtures for given component- Types of jigs - Post, turnover, channel, latch, box, pot, angular post jigs - Indexing jigs - General principles of milling, Lathe, boring, broaching and grinding fixtures - Assembly, Inspection and Welding fixtures - Modular fixturing systems- Quick change fixtures.

UNIT - III PRESS WORKING TERMINOLOGIES AND ELEMENTS OF CUTTING DIES 9

Press working terminologies - operations - Types of presses - press accessories - Computation of press capacity - Strip layout - Material utilization - Shearing action - Clearances - Press work materials - Center of pressure- Design of various elements of dies - Die block - Punch holder, Die set, guide plates - Stops - Strippers - Pilots - Selection of standard parts - Design and preparation of four standard views of simple blanking, piercing, compound and progressive dies.

UNIT - IV BENDING AND DRAWING DIES 9

Difference between bending and drawing - Blank development for above operations - Types of Bending dies - Press capacity - Spring back - knockouts - direct and indirect - pressure pads - Ejectors - Variables affecting Metal flow in drawing operations - draw die inserts - draw beads- ironing - Design and development of bending, forming, drawing, reverse redrawing and combination dies - Blank development for axisymmetric, rectangular and elliptic parts - Single and double action dies.

UNIT - V OTHER FORMING TECHNIQUES 9

Bulging, Swaging, Embossing, coining, curling, hole flanging, shaving and sizing, assembly, fine Blanking dies - recent trends in tool design- computer Aids for sheet metal forming Analysis - basic introduction - tooling for numerically controlled machines- setup reduction for work holding - Single minute exchange of dies - Poka Yoke.

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Understand the locating and clamping principles
CO2	Understand the importance of Jigs and Fixture
CO3	Understand the press working terminologies and elements of cutting dies
CO4	Understand the bending and drawing dies
CO5	Understand the other forming techniques

TEXT BOOKS:

1. Joshi, P.H. “Jigs and Fixtures”, Third Edition, Tata McGraw Hill Publishing Co., Ltd., New Delhi, 2010.
2. Joshi P.H “Press tools - Design and Construction”, Fourth Edition, S.Chand, 2010.

REFERENCE BOOKS:

2. Donaldson, Lecain and Goold, “Tool Design”, 4rd Edition, Tata McGraw Hill, 2017.
3. Hoffman, “Jigs and Fixture Design”, Delmar Learning Drafting series, Singapore, 2011.
4. Design Data Hand Book, PSG College of Technology, Coimbatore

ME1623	FLUID POWER AUTOMATION	L	T	P	C
		3	0	0	3

OBJECTIVES

- To make the students learn the basic concepts of hydraulics and pneumatics and their controlling elements in the area of manufacturing process
- To train the students in designing the hydraulic and pneumatic circuits using various design procedures

UNIT - I INTRODUCTION **9**

Need for Automation, Hydraulic & Pneumatic Comparison - ISO symbols for fluid power elements, Hydraulic, pneumatics - Selection criteria.

UNIT - II FLUID POWER GENERATING/UTILIZING ELEMENTS **9**

Hydraulic pumps and motor gears, vane, piston pumps-motors-selection and specification - Drive characteristics - Linear actuator - Types, mounting details, cushioning - power packs - construction. Reservoir capacity, heat dissipation, accumulators - standard circuit symbols, circuit (flow) analysis.

UNIT - III CONTROL AND REGULATION ELEMENTS **9**

Direction flow and pressure control valves - Methods of actuation, types, sizing of ports-pressure and temperature compensation, overlapped and underlapped spool valves-operating characteristics-electro hydraulic servo valves - Different types - characteristics and performance.

UNIT - IV CIRCUIT DESIGN **9**

Typical industrial hydraulic circuits - Design methodology - Ladder diagram-cascade, method - truth table - Karnaugh map method - sequencing circuits-combinational and logic circuit.

UNIT - V ELECTRO PNEUMATICS & ELECTRONIC CONTROL OF HYDRAULIC AND PNEUMATIC CIRCUITS **9**

Electrical control of pneumatic and hydraulic circuits-use of relays, timers, counters, Ladder diagram. Programmable logic control of hydraulics and pneumatics circuits, PLC ladder diagram for various circuits, motion controllers, use of field busses in circuits. Electronic drive circuits for various Motors.

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Understand the basics of hydraulics, Pneumatics and different fluid power symbols
CO2	Familiarize the different power generating elements with types and working
CO3	Acquire the knowledge pressure control and direction control element
CO4	Have a complete idea to design various circuits that suit today's industrial circuit applications
CO5	Enhance the knowledge of electro pneumatic circuits

TEXT BOOKS:

1. Antony Esposito, Fluid Power Systems and control Prentice-Hall, 1988.

ME1624 LOW COST AUTOMATION

L	T	P	C
3	0	0	3

OBJECTIVES

- To give basic knowledge about automation
- To understand the basic hydraulics and pneumatics systems for automation
- To understand the assembly automation

UNIT - I AUTOMATION OF ASSEMBLY LINES 9

Concept of automation - mechanization and automation - concept of automation in industry - mechanization and automation - classification, balancing of assembly line using available algorithms - transfer line-monitoring system (TLMS) using Line Status - line efficiency - Buffer stock Simulation in assembly line.

UNIT - II AUTOMATION USING HYDRAULIC SYSTEMS 9

Design aspects of various elements of hydraulic systems such as pumps, valves, filters, reservoirs, accumulators, actuators, intensifiers etc. - Selection of hydraulic fluid, practical case studied on hydraulic circuit design and performance analysis - servo valves, electro hydraulic valves, proportional valves and their applications.

UNIT - III AUTOMATION USING PNEUMATIC SYSTEMS 9

Pneumatic fundamentals - control elements, position and pressure sensing - logic circuits - switching circuits - fringe conditions modules and these integration - sequential circuits - cascade methods - mapping methods - step counter method - compound circuit design - combination circuit design. Pneumatic equipments - selection of components - design calculations - application - fault finding - hydro pneumatic circuits - use of microprocessors for sequencing - PLC, Low cost automation - Robotic circuits.

UNIT - IV AUTOMATION USING ELECTRONIC SYSTEMS 9

Introduction - various sensors - transducers - signal processing - servo systems - programming of microprocessors using 8085 instruction - programmable logic controllers.

UNIT - V ASSEMBLY AUTOMATION 9

Types and configurations - parts delivery at workstations - various vibratory and non vibratory devices for feeding - hopper feeders, rotary disc feeder, centrifugal and orientation - product design for automated assembly.

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 Know the concept of automation and its assembly lines
CO2 Gain knowledge in usage of hydraulic components in automation
CO3 Use different methods of pneumatic circuits in the automation industry
CO4 Study various sensors and programming of control systems
CO5 Study the types of assembly automation and part delivery systems

ME1625 PRODUCT DESIGN ENGINEERING AND MANAGEMENT **L T P C**

3 0 0 3

OBJECTIVES

- The course aims at providing the basic concepts of innovative and evolutionary product design strategies so that students can have a basic knowledge in new product development methods and development of innovative products and processes for commercially driven markets

UNIT - I NEW PRODUCT DEVELOPMENT 9

New Product development – NPD - Design by Evolution-Design by Innovation - Product development Strategy - Integration of functional skills - Competitor and Customer - Lean Strategy. Understanding customers needs - role of customers in product development and managing requirements - Product Management Strategy - Process management and improvement -Establish product specifications-Engineering and non-engineering.

UNIT - II CONCEPT IDEALIZATION AND SELECTION 9

Goal Oriented Design - Structured approaches - Customer centric approach - Process centric approach - House of Quality - Search externally and internally - explore systematically for feasibility analysis-reflect on the outcomes – solutions - concept selection - methodology - benefits.

UNIT - III SYSTEM LEVEL PRODUCT DESIGN 9

Implications - Conceptual framework for system level design - Design standardization - product performance - manufacturability - product development strategy - product architecture - clustering - geometric layout development - fundamental and incidental interactions - procedure-pattern - framework – related system level design issues - secondary systems - architecture of the chunks - creating detailed interface specifications-interactive system design.

UNIT - IV INDUSTRIAL DESIGN STRATEGIES 9

Integrated product and process design - Cost management - Robust design strategy - Integrating CAE, CAD, CAM tools - Simulation based product performance and manufacturing processes - Need for industrial design - investigation for industrial design - investigation of customer needs - conceptualization - refinement - engineering change management-technology and user driven products -Qualitative index for an industrial design.

UNIT - V DESIGN FOR MANUFACTURING AND PROJECT EXECUTION 9

Definition - Product costing - Manufacturing cost - Types of manufacturing cost - Cost Minimization -Design for light weight materials - Product complexity - Prototype basics - principles of prototyping - planning for prototypes - Project plan and capital expenditure - baseline project planning - accelerating the project - project metrics and evaluation strategies.

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 Understand the integrated product and process development
CO2 Develop product concepts and selection methodologies
CO3 Develop product architecture and product detailing and prototyping
CO4 Develop product development Integrated with CAD/CAM/CAE
CO5 Develop DFXs concepts with emphasis on economic decision making

ME1626 VIBRATION AND NOISE CONTROL TECHNIQUES FOR MACHINES AND AUTOMOBILES

L	T	P	C
3	0	0	3

OBJECTIVES

- The student will be able to understand the sources of vibration and noise in automobiles and make design modifications to reduce the vibration and noise and improve the life of the components

UNIT – I INTRODUCTION TO VIBRATION **9**

Introduction, Types of vibration: free and forced vibration, undamped and damped vibration, linear and non linear vibration, response of damped and undamped systems under harmonic force, analysis of single degree and two degree of freedom systems, torsional vibration, determination of natural frequencies , source of vibration in Automobile, source of vibration in Machines.

UNIT - II INTRODUCTION TO NOISE **9**

Introduction, amplitude, frequency, wavelength and sound pressure level, addition, subtraction and averaging decibel levels, noise dose level, legislation, measurement and analysis of noise, measurement of noise in environment, equipment, frequency analysis, tracking analysis, sound quality analysis, measurement of noise in machine tool.

UNIT - III SOURCES OF NOISE IN AUTOMOBILE **9**

Noise Characteristics of engines systems, engine overall noise levels, assessment of combustion noise, assessment of mechanical noise, engine radiated noise, intake and exhaust noise, engine necessary contributed noise, overall noise levels of automobile, Noise Characteristics of suspension systems , transmission noise, aerodynamic noise, tire noise, brake noise, measurement of noise in automobile.

UNIT - IV VIBRATION CONTROL TECHNIQUES **9**

Vibration isolation in suspension system, Vibration isolation in Machine tools, tuned absorbers, un-tuned viscous dampers, damping treatments, application dynamic forces generated by IC engines, engine isolation, crank shaft damping, modal analysis of the mass elastic model shock absorbers.

UNIT - V NOISE CONTROL TECHNIQUES **9**

Methods for control techniques of engine noise, combustion noise, mechanical noise, predictive analysis, palliative treatments and enclosures, automotive noise control principles, sound in enclosures, sound energy absorption, sound transmission through barriers.

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 Understand the different types of vibrations and basics of Vibration
CO2 Study the different types of noise and basics of Noise
CO3 Understand and analyze the various sources of automotive Noise
CO4 Acquire the knowledge of control techniques for vibration in engine and suspension system
CO5 Aware about the sources and control techniques of automotive noise

TEXT BOOKS:

1. Singiresu S.Rao, “Mechanical Vibrations”, 6th Edition, Pearson Education, 2016, Latest Edition.

3. Bernard Challen and Rodica Baranescu - “Diesel Engine Reference Book”, Second Edition, SAE International, 1999
4. Grover. G.T., “Mechanical Vibrations”, Nem Chand and Bros., 2009

ME1627	DESIGN THINKING	L	T	P	C
		3	0	0	3

OBJECTIVES

- To impart the importance of design in today’s context of global competition.

UNIT - I DESIGN THINKING FOR NEED IDENTIFICATION 9

Introduction to New Product Development (NPD) & Design Thinking – A Framework of Design Thinking– Nine Criteria of an Inspirational Design Brief– Customer Experience Mapping– The Visualize, Empathize, and Ideate Method–Design Heuristics–Prototypes in Design Thinking – Integrating Design into the Fuzzy Front End (FFE) – Four Pillars of Innovation for Enabling Design Thinking. CO1

UNIT - II PRODUCT DEVELOPMENT PROCESS 9

The six phases of generic development–Concept Development–Opportunity Identification Process – Five step process of product planning – Process of Identifying Customer Needs – Process of Product Specifications–Concept generation method–Methods of Concept Selection & Concept Testing. CO2

UNIT - III PRODUCT ARCHITECTURE AND INDUSTRIAL DESIGN FOR ENVIRONMENT 9

Modular Architecture–Types of Modularity–Implications of the Architecture –Establishing the Architecture – Delayed Differentiation – Platform Planning: Differentiation Plan, Commonality Plan– The Industrial Design Process–Assessing the Quality of Industrial Design– Environmental Impacts –The Design for Environment Process. CO3

UNIT - IV ROBUST DESIGN FOR MANUFACTURING AND SUPPLY CHAIN 9

Robust design through the design of experiments (DOE)–Design for X (DFX)–Iteration of DFM method–Failure Mode and Effect Analysis (FMEA)–Quality Function Deployment (QFD)–Partial disassembly, folding, or compression– Delayed final packaging. CO4

UNIT - V DESIGN THINKING IN COST-CUTTING AND INTELLECTUAL PROPERTY 9

Fundamentals of Cost Calculations–Methods for Estimating Costs–Target Costing–Life Cycle costs–“Design” in Intellectual Property–Utility Patents–Design Patents–Copyrightable Designs – Trademark Rights–Legal Overlap, Trade-Offs, and Strategic Considerations. CO5

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 Apply design concepts for manufacturing, assembly and environment.

CO2 Make economically sound decisions.

CO3 Design methodologies on industrial ecology.

CO4 Analyze the design for its manufacturability using modern quality control concepts and Approaches.

CO5 Learn the value of design and how it impacts society, industry, and the environment.

2. Vijay Kumar, "101 Design Methods: A Structured Approach for Driving Innovation in Your Organization", ISBN: 978-1-118-08346-8, October 2012,Wiley Publishers.
3. Tim Brown, "Change by Design: How Design Thinking Transforms Organizations and Inspires Innovation", ISBN: 9780062856623, March 2019, Harper Collins Publishers.

ME1628	NEW PRODUCT DEVELOPMENT	L	T	P	C
		3	0	0	3

OBJECTIVES

- To introduce the fundamental concepts of the new product development
- To develop material specifications, analysis and process.
- To Learn the Feasibility Studies & reporting of new product development.
- To study the New product qualification and Market Survey on similar products of new product development
- To learn Reverse Engineering. Cloud points generation, converting cloud data to 3D model

UNIT - I FUNDAMENTALS OF NPD 9

Introduction – Reading of Drawing – Grid reading, Revisions, ECN (Engg. Change Note), Component material grade, Specifications, customer specific requirements – Basics of monitoring of NPD applying Gantt chart, Critical path analysis – Fundamentals of BOM (Bill of Materials), Engg. BOM & Manufacturing BOM. Basics of MIS software and their application in industries like SAP, MS Dynamics, Oracle ERP Cloud – QFD. CO1

UNIT - II MATERIAL SPECIFICATIONS, ANALYSIS & PROCESS 9

Material specification standards – ISO, DIN, JIS, ASTM, EN, etc. – Awareness on various manufacturing process like Metal castings & Forming, Machining (Conventional, 3 Axis, 4 Axis, 5 Axis,), Fabrications, Welding process. Qualifications of parts mechanical, physical & Chemical properties and their test report preparation and submission. Fundamentals of DFMEA & PFMEA, Fundamentals of FEA, Bend Analysis, Hot Distortion, Metal and Material Flow, Fill and Solidification analysis. CO2

UNIT - III ESSENTIALS OF NPD **9**

RFQ (Request of Quotation) Processing – Feasibility Studies & reporting – CFT (Cross Function Team) discussion on new product and reporting – Concept design, Machine selection for tool making, Machining – Manufacturing Process selection, Machining Planning, cutting tool selection – Various Inspection methods – Manual measuring, CMM – GOM (Geometric Optical Measuring), Lay out marking and Cut section analysis. Tool Design and Detail drawings preparation, release of details to machine shop and CAM programing. Tool assembly and shop floor trials. Initial sample submission with PPAP documents. CO3

UNIT - IV CRITERIONS OF NPD **9**

New product qualification for Dimensions, Mechanical & Physical Properties, Internal Soundness proving through X-Ray, Radiography, Ultrasonic Testing, MPT, etc. Agreement with customer for testing frequencies. Market Survey on similar products, Risk analysis, validating samples with simulation results, Lesson Learned & Horizontal deployment in NPD. CO4

UNIT - V REPORTING & FORWARD-THINKING OF NPD **9**

Detailed study on PPAP with 18 elements reporting, APQP and its 5 Sections, APQP vs PPAP, Importance of SOP (Standard Operating Procedure) – Purpose & documents, deployment in shop floor. Prototyping & RPT - Concepts, Application and its advantages, 3D Printing – resin models, Sand cores for foundries; Reverse Engineering. Cloud points generation, converting cloud data to 3D model – Advantages & Limitation of RE, CE (Concurrent Engineering) – Basics, Application and its advantages in NPD (to reduce development lead time, time to Market, Improve productivity and product cost.) CO5

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Discuss fundamental concepts and customer specific requirements of the new product development
CO2	Discuss the material specification standards, analysis and fabrication, manufacturing process.
CO3	Develop feasibility studies & reporting of new product development
CO4	Analyzing the new product qualification and market survey on similar products of new product development
CO5	Develop reverse engineering, generate cloud points, convert cloud data to 3D model

TEXT BOOKS:

4. Product Development – Sten Jonsson
5. Product Design & Development – Karl T. Ulrich, Maria C. Young, Steven D. Eppinger

REFERENCE BOOKS:

4. Revolutionizing Product Development – Steven C Wheelwright & Kim B. Clark
5. Change by Design
6. Toyota Product Development System – James Morgan & Jeffrey K. Liker
7. Winning at New Products – Robert Brands 3rd Edition
8. Product Design & Value Engineering – Dr. M.A. Bulsara &Dr. H.R. Thakkar

ME1629 PRODUCT LIFE CYCLE MANAGEMENT

L	T	P	C
3	0	0	3

OBJECTIVES

- To study about the history, concepts and terminology in PLM
- To learn the functions and features of PLM/PDM
- To develop different modules offered in commercial PLM/PDM tools
- To demonstrate PLM/PDM approaches for industrial applications
- To use PLM/PDM with legacy data bases, Coax & ERP systems

UNIT – I HISTORY, CONCEPTS AND TERMINOLOGY OF PLM **9**

Introduction to PLM, Need for PLM, opportunities of PLM, Different views of PLM - Engineering Data Management (EDM), Product Data Management (PDM), Collaborative Product Definition Management (cPDm), Collaborative Product Commerce (CPC), Product Lifecycle Management (PLM). PLM/PDM Infrastructure – Network and Communications, Data Management, Heterogeneous data sources and applications CO1

UNIT – II PLM/PDM FUNCTIONS AND FEATURES **9**

User Functions – Data Vault and Document Management, Workflow and Process Management, Product Structure Management, Product Classification and Programme Management. Utility Functions – Communication and Notification, data transport, data translation, image services, system administration and application integration CO2

UNIT – III DETAILS OF MODULES IN A PDM/PLM SOFTWARE **9**

Case studies based on top few commercial PLM/PDM tools – Teamcenter, Windchill, ENOVIA, Aras PLM, SAP PLM, Arena, Oracle Agile PLM and Autodesk Vault.-Architecture of PLM software- selection criterion of software for particular application - Brand name to be removed CO3

UNIT – IV ROLE OF PLM IN INDUSTRIES **9**

Case studies on PLM selection and implementation (like auto, aero, electronic) - other possible sectors, PLM visioning, PLM strategy, PLM feasibility study, change management for PLM, financial justification of PLM, barriers to PLM implementation, ten step approach to PLM, benefits of PLM for–business, organisation, users, product or service, process performance-process compliance and process automation CO4

UNIT – V BASICS ON CUSTOMISATION/INTEGRATION OF PDM/PLM SOFTWARE **9**

PLM Customization, use of EAI technology (Middleware), Integration with legacy data base, CAD, SLM and ERP CO5

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Summarize the history, concepts and terminology of PLM
CO2	Develop the functions and features of PLM/PDM
CO3	Discuss different modules offered in commercial PLM/PDM tools.
CO4	Interpret the implement PLM/PDM approaches for industrial applications.
CO5	Integrate PLM/PDM with legacy data bases, CAx& ERP systems

ME1631	ADDITIVE MANUFACTURING	L	T	P	C
		3	0	0	3

OBJECTIVES

- To know the principle, methods, possibilities and limitations as well as environmental effects of Additive Manufacturing technologies.
- To be familiar with the characteristics of the different materials those are used in Additive Manufacturing technologies.

UNIT - I INTRODUCTION 9

Overview - Need - Development of Additive Manufacturing Technology - Principle - AM Process Chain- Classification - Rapid Prototyping - Rapid Tooling - Rapid Manufacturing – Applications - Benefits - Case studies.

UNIT - II DESIGN FOR ADDITIVE MANUFACTURING 9

Design tools: Data processing - CAD model preparation - Part orientation and support structure generation - Model slicing -Tool path generation- Design for Additive Manufacturing: Concepts and Objectives - AM unique capabilities - DFAM for part quality improvement- Customised design and fabrication for medical applications.

UNIT - III PHOTOPOLYMERIZATION AND POWDER BED FUSION PROCESSES 9

Photo polymerization: SLA-Photo curable materials - Process - Advantages and Applications. Powder Bed Fusion: SLS-Process description - powder fusion mechanism - Process Parameters- Typical Materials and Application. Electron Beam Melting.

UNIT - IV EXTRUSION BASED AND SHEET LAMINATION PROCESSES 9

Extrusion Based System: FDM-Introduction - Basic Principle - Materials - Applications and Limitations - Bioextrusion. Sheet Lamination Process:LOM- Gluing or Adhesive bonding - Thermal bonding.

UNIT - V PRINTING PROCESSES AND BEAM DEPOSITION PROCESSES 9

Droplet formation technologies - Continuous mode - Drop on Demand mode - Three Dimensional Printing - Advantages - Bioplotter - Beam Deposition Process: LENS- Process description - Material delivery - Process parameters - Materials - Benefits - Applications.

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

- CO1 Know the overview of additive manufacturing
- CO2 Understand the design concept of additive manufacturing
- CO3 Understand the working principle of additive manufacturing processes
- CO4 Learn about the construction of additive Manufacturing technologies
- CO5 Understand about modern techniques and mass production in additive manufacturing process

ME1632	NON DESTRUCTIVE TESTING AND EVALUATION	L	T	P	C
		3	0	0	3

OBJECTIVES

- To study and understand the various Non Destructive Evaluation and Testing methods, theory and their industrial applications.

UNIT - I OVERVIEW OF NDT **9**

NDT Versus Mechanical testing, Overview of the Non Destructive Testing Methods for the detection of manufacturing defects as well as material characterisation. Relative merits and limitations, Various physical characteristics of materials and their applications in NDT, Visual inspection - Unaided and aided.

UNIT - II SURFACE NDE METHODS **9**

Liquid Penetrant Testing - Principles, types and properties of liquid penetrants, developers, advantages and limitations of various methods, Testing Procedure, Interpretation of results. Magnetic Particle Testing- Theory of magnetism, inspection materials Magnetisation methods, Interpretation and evaluation of test indications, Principles and methods of demagnetization, Residual magnetism.

UNIT - III THERMOGRAPHY AND EDDY CURRENT TESTING (ET) **9**

Thermography - Principles, Contact and non contact inspection methods, Techniques for applying liquid crystals, Advantages and limitation - infrared radiation and infrared detectors, Instrumentations and methods, applications. Eddy Current Testing-Generation of eddy currents, Properties of eddy currents, Eddy current sensing elements, Probes, Instrumentation, Types of arrangement, Applications, advantages, Limitations, Interpretation/Evaluation.

UNIT - IV ULTRASONIC TESTING (UT) AND ACOUSTIC EMISSION (AE) 9

Ultrasonic Testing - Principle, Transducers, transmission and pulse-echo method, straight beam and angle beam, instrumentation, data representation, A/Scan, B-scan, C-scan. Phased Array Ultra sound, Time of Flight Diffraction. Acoustic Emission Technique - Principle, AE parameters, Applications.

UNIT - V RADIOGRAPHY (RT) 9

Principle, interaction of X-Ray with matter, imaging, film and film less techniques, types and use of filters and screens, geometric factors, Inverse square, law, characteristics of films - graininess, density, speed, contrast, characteristic curves, Penetrameters, Exposure charts, Radiographic equivalence. Fluoroscopy - Xero-Radiography, Computed Radiography, Computed Tomography.

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 Explain the fundamental concepts of NDT
CO2 Gain knowledge of the different methods of NDE
CO3 Explain the concept of thermography and eddy current testing
CO4 Explain the concept of ultrasonic testing and acoustic emission
CO5 Explain the concept of radiography

ME1633 POLYMERS AND COMPOSITES

L	T	P	C
3	0	0	3

OBJECTIVES

- To learn fundamentals of polymer composites.
- To learn the manufacturing methods of polymer composites
- To impart knowledge on testing on composite materials
- To study the need processing of ceramic matrix composites

UNIT - I INTRODUCTION TO POLYMER COMPOSITES 9

Fundamentals of composites, characteristics, applications of composites, Reinforcements - glass fibers, boron fibers, carbon fibers, organic fibers, aramid fibers, ceramic fibers, oxide and non-oxide fibers, Forms of reinforcements - Roving, Woven fabrics, Non-woven, random mats, whiskers, Rule of mixtures, Matrix materials - Polymers - Thermosetting resins, thermoplastic resins.

UNIT - II MANUFACTURING METHODS OF POLYMER COMPOSITES 9

Hand and spray lay - up, injection molding, resin injection, filament winding, pultrusion, centrifugal casting and prepregs. Fiber/Matrix Interface, mechanical. Measurement of interface strength. Characterization of systems; carbon fiber/epoxy, glass fiber/polyester, etc.

UNIT - III TESTING OF COMPOSITES 9

Mechanical testing of polymer composites- tensile testing, compressive testing, intra-laminar shear testing, Impact, Flexural testing, Dynamic testing-DMA-Low velocity impact test, vibrational analysis, Thermal analysis.

UNIT - IV CERAMIC MATRIX COMPOSITES 9

Need for CMCs, Processing of CMCs - cold pressing and sintering, hot pressing, infiltration, chemical vapor deposition and chemical vapor impregnation, sol-gel and polymer pyrolysis, high temperature synthesis properties and applications of CMC.

UNIT - V METAL MATRIX COMPOSITES 9

Characteristics of MMC, various types of metal matrix composites alloy vs. MMC, advantages of MMC limitations of MMC Processing of MMC, liquid metal infiltration, squeeze casting, stir casting, compo casting, solid state route and diffusion bonding, powder metallurgy route slip casting.

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 Identify suitable reinforcement and matrix materials for different applications
CO2 Study the various manufacturing processes of Polymer Matrix Composite
CO3 Gain knowledge in testing of composites
CO4 Understand the procedure processing of CMC
CO5 Understand the procedure for processing of metal matrix composites

ME1634 TESTING AND CHARACTERIZATION OF MATERIALS **L T P C**

3 0 0 3

OBJECTIVES

- To understand the various destructive and non-destructive testing methods of materials and its industrial application.

UNIT - I INTRODUCTION TO MATERIALS & TESTING STANDARDS 9

Overview of materials, properties and application of advanced materials, Purpose of testing, Selection of material, Development of testing, Classification of material testing, Result Analysis, Advantages of testing, Testing organizations and its committee, Testing standards.

UNIT - II MECHANICAL TESTING FOR VARIOUS MATERIALS 9

Introduction to mechanical testing, Hardness test (Vickers, Brinell, Rockwell), Tensile test, Impact test (Izod, Charpy), Drop Weight Impact test - Principles, Techniques, Methods, Advantages and Limitations, Applications. Bend (Flexural) test, Shear test, Creep and Fatigue test - Principles, Techniques, Methods, Advantages and Limitations, Applications.

UNIT - III NON DESTRUCTIVE TESTING FOR VARIOUS MATERIALS 9

Visual inspection, Liquid Penetrate Test, Magnetic particle test, Thermography test - Principles, Techniques, Advantages and Limitations, Applications. Radiographic test, Eddy current test, Ultrasonic test, Acoustic emission- Principles, Techniques, Methods, Advantages and Limitations, Applications.

UNIT - IV MATERIAL CHARACTERIZATION & SURFACE TOPOLOGY 9

Macroscopic and Microscopic observations, Optical and Electron microscopy (SEM and TEM) - Principles, Types, Advantages and Limitations, Applications. Diffraction techniques (XRD), Spectroscopic Techniques (FTIR), Electrical and Magnetic Techniques- Principles, Types, Advantages and Limitations, Applications.

UNIT - V OTHER TESTING 9

Thermal Testing: Differential Scanning Calorimetry, Differential Thermal Analysis. Thermo-mechanical/Thermo Gravimetric Analysis and Dynamic mechanical analysis: Principles, Advantages, Applications. Chemical Testing: X-Ray Fluorescence, Elemental Analysis by Inductively Coupled Plasma-Optical Emission Spectroscopy and Plasma- Mass Spectrometry.

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Study the basics of various materials, different types of material testing, material testing standards and organizations, characterization and techniques
CO2	Study the various mechanical testing and its procedure with application
CO3	Study the various non-destructive testing techniques
CO4	Study and analyze the surface and elemental behavior of various materials using different material characterization techniques
CO5	Study and analyze the thermal, chemical behavior of various materials by special testing techniques

ME1635	UNCONVENTIONAL MACHINING PROCESSES	L	T	P	C
		3	0	0	3

OBJECTIVES

- To learn about various unconventional machining processes, the various process parameters and their influence on performance and their applications.

UNIT - I INTRODUCTION AND MECHANICAL ENERGY BASED PROCESSES **9**

Unconventional machining Process - Need - classification - merits, demerits and applications. Abrasive Jet Machining - Water Jet Machining - Abrasive Water Jet Machining - Ultrasonic Machining. (AJM, WJM, AWJM and USM). Working Principles - equipment used - Process parameters – MRR - Applications. CO1

UNIT - II THERMAL AND ELECTRICAL ENERGY BASED PROCESSES **9**

Electric Discharge Machining (EDM) - Wire cut EDM - Working Principle-equipments-Process Parameters-Surface Finish and MRR- electrode / Tool - Power and control Circuits-Tool Wear - Dielectric - Flushing -- Applications. Laser Beam machining and drilling, (LBM), plasma, Arc machining (PAM) and Electron Beam Machining (EBM). Principles - Equipment - Types - Beam control techniques - Applications. CO2

UNIT - III CHEMICAL AND ELECTRO-CHEMICAL ENERGY BASED PROCESSES **9**

Chemical machining and Electro-Chemical machining (CHM and ECM)- Etchants - Maskant - techniques of applying maskants - Process Parameters - Surface finish and MRR - Applications. Principles of ECM- equipment-Surface Roughness and MRR Electrical circuit-Process Parameters- ECG and ECH - Applications. CO3

UNIT - IV ADVANCED NANO FINISHING PROCESSES **9**

Abrasive flow machining, chemo-mechanical polishing, magnetic abrasive finishing, magneto rheological finishing, magneto rheological abrasive flow finishing, their working principles, equipment, effect of process parameters, applications, advantages and limitations. CO4

UNIT - V RECENT TRENDS IN NON-TRADITIONAL MACHINING PROCESSES **9**

Recent developments in non-traditional machining processes, their working principles, equipment, effect of process parameters, applications, advantages and limitations. Comparison of non-traditional machining processes. CO5

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Explain the need for unconventional machining processes and its classification
CO2	Compare various thermal energy and electrical energy based unconventional machining processes
CO3	Summarize various chemical and electro-chemical energy based unconventional machining processes
CO4	Explain various nano abrasives based on unconventional machining processes
CO5	Distinguish various recent trends based unconventional machining processes

ME1636 WELDING TECHNOLOGY

L	T	P	C
3	0	0	3

OBJECTIVES

- To understand the basics of welding and to know about the various types of welding processes.

UNIT - I GAS AND ARC WELDING PROCESSES **9**

Fundamental principles - Air Acetylene welding, Oxyacetylene welding, Carbon arc welding, Shielded metal arc welding, Submerged arc welding, TIG & MIG welding, Plasma arc welding and Electroslag welding processes - advantages, limitations and applications. CO1

UNIT - II RESISTANCE WELDING PROCESSES **9**

Spot welding, Seam welding, Projection welding, Resistance Butt welding, Flash Butt welding, Percussion welding and High frequency resistance welding processes - advantages, limitations and applications. CO2

UNIT - III SOLID STATE WELDING PROCESSES **9**

Cold welding, Diffusion bonding, Explosive welding, Ultrasonic welding, Friction welding, Forge welding, Roll welding and Hot pressure welding processes - advantages, limitations and applications. CO3

UNIT - IV OTHER WELDING PROCESSES **9**

Thermit welding, Atomic hydrogen welding, Electron beam welding, Laser Beam welding, Friction stir welding, Underwater welding, Welding automation in aerospace, nuclear and surface transport vehicles. CO4

UNIT - V DESIGN OF WELD JOINTS, WELDABILITY AND TESTING OF WELDMENTS **9**

Various weld joint designs - Welding defects - causes and remedies - Weldability of Aluminium, Copper, and Stainless steels. Destructive and non destructive testing of weldments. CO5

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 Understand the construction and working principles of the gas and arc welding process
CO2 Understand the construction and working principles of the resistance welding process
CO3 Understand the construction and working principles of various solid state welding processes
CO4 Understand the construction and working principles of various special welding processes
CO5 Understand the concepts on weld joint design, weldability and testing of weldments

4. Davis A.C., "The Science and Practice of Welding", Cambridge University Press, Cambridge, 1993
5. Tylecote R.F., "The Solid Phase Welding of Metals". Edward Arnold Publishers Ltd. London.

ME1637	GREEN MANUFACTURING DESIGN AND PRACTICES	L	T	P	C
		3	0	0	3

OBJECTIVES

- To introduce the concept of environmental design and industrial ecology.
- To impart knowledge about air pollution and its effects on the environment.
- To enlighten the students with knowledge about noise and its effects on the environment.
- To enlighten the students with knowledge about water pollution and its effects on the environment.
- To introduce the concept of green co-rating and its need.

UNIT - I DESIGN FOR ENVIRONMENT AND LIFE CYCLE ASSESSMENT **9**

Environmental effects of design -selection of natural friendly material - Eco design - Environmental damage Material flow and cycles – Material recycling – Emission less manufacturing- Industrial Ecology – Pollution prevention – Reduction of toxic emission – design for recycle. CO1

UNIT - II AIR POLLUTION SAMPLING AND MEASUREMENT **9**

Primary and Secondary Pollutants, Automobile Pollutants, Industrial Pollution, Ambient air quality Standards, Metrological aspects of air Pollution, Temperature lapse Rates and Stability-wind velocity and turbulence-Pump behavior dispersion of air Pollutants-solution to the atmosphere dispersion equation-the Gaussian Plume Model, Air pollution sampling-collection of gaseous air pollutants-collection of particulate pollutants-stock sampling, analysis of air pollutants-sulfur dioxide-nitrogen dixide, carbon monoxide, oxidants and ozone. CO2

UNIT - III NOISE POLLUTION AND CONTROL		**9**
Frequency and Sound Levels, Units of Noise based power radio, contours of Loudness. Effect of human, Environment and properties, Natural and Anthrogenic Noise Sources, Measuring Instruments for frequency and Noise levels, Masking of sound, Types, Kinetics, Selection of different reactors used for waste treatment, Treatment of noise at source, Path and Reception, Sources of noise, Effects of noise- Occupational Health hazards, thermal Comforts, Heat Island Effects, Radiation Effects.	CO3	
UNIT - IV WATER DEMAND AND WATER QUALITY		**9**
Factors affecting consumption, Variation, Contaminants in water, Nitrates, Fluorides, Detergents, taste and odour, Radio activity in water, Criteria, for different impurities in water for portable and non-portable use, Point and non-point Source of pollution, Major pollutants of Water, Water Quality Requirement for different uses, Global water crisis issues.	CO4	
UNIT - V GREEN CO-RATING		**9**
Ecological Footprint - Need For Green Co-Rating – Green Co-Rating System – Intent – System Approach – Weightage - Assessment Process – Types Of Rating – Green Co-Benefits – Case Studies Of Green Co- Rating	CO5	

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Explain the environmental design and selection of eco-friendly materials.
CO2	Analyse manufacturing processes towards minimization or prevention of air pollution.
CO3	Analyse manufacturing processes towards minimization or prevention of noise pollution.
CO4	Analyse manufacturing processes towards minimization or prevention of water pollution.
CO5	Evaluate green co-rating and its benefits.

TEXT BOOKS:

ME1638 GREEN SUPPLY CHAIN MANAGEMENT

L	T	P	C
3	0	0	3

OBJECTIVES

- To familiar the various standards and legislation of modern electronic manufacturing.
- To know the conventional electronic processing and lead-free electronic manufacturing techniques.
- To recognize the steps involved in assembly process and understand the need of recycle the electronics
- To implement reliability and product life cycle estimation tools in green electronic manufacturing.
- To demonstrate the green electronic manufacturing procedure in applications.

UNIT - I INTRODUCTION TO GREEN ELECTRONICS **9**

Environmental concerns of the modern society- Overview of electronics industry and their relevant regulations in China, European Union and other key countries- global and regional strategy and policy on green electronics industry. Restriction of Hazardous substances (RoHS) - Waste Electrical and electronic equipment (WEEE - Energy using Product (EuP) and Registration - Evaluation, Authorization and Restriction of Chemical substances (REACH). CO1

UNIT - II GREEN ELECTRONICS MATERIALS AND PRODUCTS **9**

Basics of IC manufacturing and its process – Electronics with Lead (Pb) -free solder pastes, conductive adhesives, Introduction to green electronic materials and products - halogen-free substrates and components. Substitution of non-recyclable thermosetting polymer based composites with recyclable materials X-Ray Fluorescence (XRF) for identifying hazardous substances in electronic products. CO2

UNIT – III GREEN ELECTRONICS ASSEMBLY AND RECYCLING **9**

Various processes in assembling electronics components - the life-cycle environmental impacts of the materials used in the processes - substrate interconnects. Components and process equipments - Technology and management on e-waste recycle system construction, global collaboration, and product disassembles technology. CO3

UNIT – IV PRODUCT DESIGN AND SUSTAINABLE ECO-DESIGN **9**

Stages of product development process in green design: Materials- Manufacturing - Packaging and use - End of Life and disposal - Design for recycling - Life Cycle Assessment (LCA), and Eco-design tools - Environmental management systems, and International standards - Eco-design in electronics industry. CO4

UNIT – V CASE STUDIES **9**

Reliability of green electronics systems , Reuse and recycle of End-of-Life(EOL) electrical and electronic equipment for effective waste management – Introduction of Green Supply Chain, and Modeling green products from Supply Chain point of view - A life-cycle assessment for eco-design of Cathode Ray Tube Recycling. CO5

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Get concise awareness of standards and legislation of modern electronic manufacturing for green environment.
CO2	Explain the conventional electronic processing and lead free electronic manufacturing techniques.
CO3	Realize the assembly process and the need of recycle of electronics
CO4	Use reliability and product life cycle estimation tools for electronic manufacturing.
CO5	Validate the green electronic manufacturing procedures in applications.

TEXT BOOKS:

ME1639	INDUSTRY 4.0 FOR MECHANICAL ENGINEERING	L	T	P	C
	(Common for all Branches of B.E. / B. Tech Programmes)	3	0	0	3

OBJECTIVES

- To introduce revolutions in the manufacturing industry
- To introduce technological advancement in modern manufacturing industries
- To introduce concepts of smart manufacturing, emphasizing Industry 4.0 in manufacturing industries

UNIT – I INTRODUCTION TO INDUSTRY 4.0 **9**

Introduction to Industry 4.0 -Need for Industry 4.0 - Framework for Industry 4.0 -Technological pillars in Industrial 4.0 -Applications, challenges and scope for Industry 4.0 - Dissemination of Industry 4.0 and the disciplines contributing to its development, Artificial intelligence, Industrial Internet of Things, Additive manufacturing, Robotization, and automation. Difference between conventional automation and Industry 4.0. CO1

UNIT – II TECHNOLOGICAL DEVELOPMENTS IN INDUSTRY 4.0 **9**

Introduction to Smart Manufacturing - Big Data, Cyber-Physical Systems, Value chains in manufacturing companies - Customization of products -Internet of Things (IoT) - Industrial Internet of Things (IIoT) -Digital Twins - Cloud Computing / Cloud Manufacturing -Artificial Intelligence and Machine Learning - Security issues within Industry 4.0 networks **CO2**

UNIT – III CYBER-PHYSICAL SYSTEMS **9**

Components of I4.0- Cyber-Physical System –Cyber world and Physical world- Concepts of embedded systems, Wireless sensor networks - Mobile networks - Satellite networks - RFID & IoT Enabled Cyber Security Systems. CO3

UNIT – IV SMART MANUFACTURING SYSTEMS **9**

Introduction to Manufacturing Processes and Systems - Industrial revolutions, Background and concept of smart manufacturing- Elements of the Smart Manufacturing Process; Sensing Elements and IoT Technologies; Data-driven models - Precision Manufacturing, Flexible Manufacturing, and Agile Manufacturing - Concept of edge, fog, and cloud computing in Manufacturing - VR, and MR (Mixed Reality) in Manufacturing - Case Studies. CO4

UNIT – V ECOSYSTEM FOR INDUSTRY 4.0 **9**

Economic aspects, opportunities, and skills required for Industry 4.0 - Effects of 4-M-Man, Machine, Material, and Method in Industry 4.0 - The Current State of Industry 4.0 in India. The Strategic Framework for Successful Implementation of Industry 4.0 and beyond. CO5

TOTAL PERIODS: 45

TEXT BOOKS

1. Leong W., (2020), Nine pillars of technologies for Industry 4.0, IET publishers.
2. Klaus Schwab, “The Fourth Industrial Revolution”.
3. Wang L, and Vincent W X, (2019), Cloud Based Cyber-Physical Systems in Manufacturing, Springer

REFERENCE BOOKS

1. V.K. Jain, Data Sciences and Analytics, Khanna Publishing House, New Delhi, 2019. 4.
2. R. Chopra, Machine Learning, Khanna Publishing House, New Delhi, 2020.
3. Jeschke S, Brecher C, Song H, and Rawat D B, (2017), Industrial Internet of Things – Cyber Manufacturing Systems, Springer
4. Alasdair Gilchrist, Industry 4.0: The Industrial Internet of Things 1st ed. Edition, Kindle Edition, 2018
5. Tao F, Zhang M, and Nee A Y C, (2019), Digital Twin Driven Smart Manufacturing, Academic Press.
6. Wang L, and Vincent W X, (2019), Cloud Based Cyber-Physical Systems in Manufacturing, Springer.
7. MIT Online Course on Smart Manufacturing: https://professional.mit.edu/course catalog/smart-manufacturing-moving-static-dynamic-manufacturing-operations/

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Correlate the recent manufacturing trends and technological pillars of Industry 4.0.
CO2	Understand the importance of Cloud Computing, AI, Big data,and IoT in modern industry
CO3	Understand different components of Cyber-Physical systems and their benefits
CO4	Appreciate concepts and basic framework necessary for smart manufacturing
CO5	Compare the ecosystem of the current manufacturing industry and Industry 4.0

ME1640	LEAN MANUFACTURING	L	T	P	C
		3	0	0	3

OBJECTIVES

- To introduce the basics of 6 SIGMA
- To learning about the lean manufacturing tools.
- To study about the deeper understanding methodologies of Lean manufacturing.
- To study the lean concepts and its elements.
- To learn implementation and challenges of lean manufacturing.

UNIT – I BASICS OF 6 SIGMA **9**

Introduction to 6 Sigma, basic tools of six sigma like problem solving approach, standard deviation, normal distribution, various sigma levels with some examples, value for the enterprise, Variation, and sources of variation, Mean and moving the mean, Various quality costs, cost of poor quality. CO1

UNIT – II INTRODUCTION TO LEAN MANUFACTURING TOOLS 9

Process Capability Indices, Cause and Effect diagram, Control Charts, Introduction to FMEA, APQP, PPAP. 3 foundational 6 Sigma methodologies: DMAIC, DMEDI, and Process Management DMEDI for process creation, DMAIC for process improvement and PDCA for sustaining improvements. CO2

UNIT – III DEEPER UNDERSTADING METHODOLOGIES 9

What is a process, Why Process management, Keys to process management, Difference between process management and 6 Sigma, Introduction to Deming cycle, PDCA, DMAIC and continuous improvement, DMEDI for creation process, DMAIC Vs DMEDI with examples, Introduction to Toyota Production System, Six Sigma and Production System integration. CO3

UNIT – IV LEAN ELEMENTS 9

Introduction to Lean Concepts like In-Built Quality, Concept of Right Part at the Right Time, Lead Time reduction, Optimum utilization of Capital, Optimum utilization of People. Understanding the Zero-defect concept and Metrics, Focus on Human Resources, Quality, Delivery, Cost. Building Zero defect capabilities, Cultural and Organizational aspects. CO4

UNIT – V IMPLEMENTATION AND CHALLENGES 9

Implementing Checks and Balances in the process, Robust Information Systems, Dashboard, follow up and robust corrective and preventive mechanism. Concept of Audits, and continuous improvement from gap analysis, risk assessments etc. CO5

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 Discuss the basics of 6 SIGMA

CO2 Elaborate the lean manufacturing tools.

CO3 Illustrate about the deeper understanding methodologies of Lean manufacturing.

CO4 Discuss lean concepts and its elements.

CO5 Describe the implementation and challenges of lean manufacturing.

TEXT BOOKS:

1. Quality Planning and Analysis- JM Juran& FM Gryna. Tata Mc Graw Hill
2. Lean Manufacturing: Principles to Practice by Akhilesh N. Singh, Bibliophile SouthAsia
3. The Toyota Way: 14 Management Principles
4. Gemba Kaizen: A Commonsense Approach to a Continuous Improvement Strategy,Masaki Imai

REFERENCE BOOKS:

1. Quality Council of India https://qcin.org/ & its library. https://qcin.org/nbqp/knowledge_bank/
2. International Society of Six Sigma Professionals: https://isssp.org/about-us/
3. NPTEL / SWAYAM: https://nptel.ac.in/courses/110105123 : Six Sigma, Prof. Jitesh J Thakkar, IIT Kharagpur, Certification course. (Self- Learning).
4. Older / Previous editions of AIAG manuals on APQP, FMEA and PPAP. These are great sources of information on Quality Planning and has basics of Project Management and required skills.
5. Quality Management for Organizations Using Lean Six Sigma Techniques- Erick C Jones

MG1003 APPLIED OPERATIONS RESEARCH

L	T	P	C
3	0	0	3

OBJECTIVES

- To provide the concept and an understanding of basic concepts in Operations Research Techniques for Analysis and Modeling in Computer Applications.
- To understand , develop and solve mathematical model of linear programming problems
- To understand , develop and solve mathematical model of Transport and assignment problems
- To Understand network modeling for planning and scheduling the project activities

UNIT - I LINEAR PROGRAMMING MODELS **12**

Mathematical Formulation - Graphical Solution of linear programming models - Simplex method - Artificial variable techniques. CO1

UNIT - II TRANSPORTATION AND ASSIGNMENT MODELS **8**

Mathematical formulation of transportation problem - Methods for finding initial basic feasible solution - optimum solution - degeneracy -Mathematical formulation of assignment models - Hungarian Algorithm. CO2

UNIT - III INVENTORY MODELS **8**

Inventory Models - Economic order Quantity Models- Quantity Discount Models- Stochastic Inventory Models- Multi Product Model- Inventory Control Models in Practice. CO3

UNIT - IV SCHEDULING FOR PROJECT ACTI VITIES **7**

Network Construction - Critical Path Method - Project Evaluation and Review Technique - Resource Analysis in Network Scheduling. CO4

UNIT - V QUEUEING MODELS **10**

Characteristics of Queuing Models - Single and multi server models
Poisson Queues - (M / M / 1) : (FIFO / ∞ /∞), (M / M / 1) : (FIFO / N / ∞), CO5
(M / M / C) : (FIFO / ∞ / ∞), (M / M / C) : (FIFO / N / ∞) models.

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 Analyze the problems in engineering, management or business environment, focusing on important details.
CO2 Understand the transportation and assignment in logistics and job allocation scenarios.
CO3 Understand the inventory management in manufacturing context.
CO4 Understand the concept of network and project planning
CO5 Understand the applications of queuing theory in real world

TEXT BOOKS:

1. Hillier and Libeberman, “Operations Research”, Holden Day, 2005
2. Taha H.A., “Operations Research”, Sixth Edition, Prentice Hall of India, 2003.

REFERENCE BOOKS:

1. Bazara M.J., Jarvis and Sherali H., “Linear Programming and Network Flows”, John Wiley,2009

4. Shennoy G.V. and Srivastava U.K., “Operation Research for Management”, Wiley Eastern,1994
5. Tulsian and Pasdey V., “Quantitative Techniques”, Pearson Asia, 2002.

ME1741 COMPUTER INTEGRATED MANUFACTURING SYSTEMS AND AUTOMATION **L T P C**

3 0 0 3

OBJECTIVES

- To understand the application of computers in various aspects of Manufacturing viz., Design, Proper planning, Manufacturing cost, Layout & Material Handling system.

UNIT - I INTRODUCTION	**9**	
Brief introduction to CAD and CAM - Manufacturing planning, Manufacturing control-Introduction to CAD/CAM - Concurrent engineering-CIM concepts - Computerised elements of CIM system - Types of production - Manufacturing models and metrics - Mathematical models of production performance - Simple problems - Manufacturing control - Simple problems - Lean production and Just-In-Time Production.	CO1	
UNIT - II PRODUCTION PLANNING AND CONTROL AND COMPUTERISED PROCESS PLANNING	**9**	
Process planning - Computer Aided Process Planning (CAPP) - Logical steps in Computer Aided Process Planning - Aggregate Production Planning and the Master Production Schedule - Material Requirement planning - Capacity planning- Control Systems-Shop floor control-Inventory control-Brief on Manufacturing Resource Planning-II (MRP-II) & Enterprise Resource Planning (ERP) , Computer Integrated Additive Manufacturing(CIAM) - Simple problems.	CO2	
UNIT - III CELLULAR MANUFACTURING	**9**	
Group Technology (GT), Part Families - Parts classification and coding - Simple Problems in Opitz part coding system - Production flow analysis - Cellular manufacturing - Composite part concept - Machine cell design and layout - Quantitative analysis in Cellular manufacturing - Rank order clustering method - Arranging machines in a GT cell - Hollier method - Simple problems.	CO3	
UNIT - IV FLEXIBLE MANUFACTURING SYSTEM (FMS) AND AUTOMATED GUIDED VEHICLE SYSTEM (AGVS)	**9**	
Types of Flexibility - FMS - FMS Components - FMS application & benefits - FMS planning and control - Quantitative analysis in FMS - Simple problems. Smart manufacturing - IoT, Automated Guided Vehicle System (AGVS) - AGV's application - Vehicle guidance technology - Vehicle management & safety.	CO4	
UNIT - V INDUSTRIAL AUTOMATION	**9**	
Basic Elements of an Automated System - Advanced Automation Functions Levels of Automation - Automation and Artificial Intelligence. Industrial Control Systems: Process Industries versus Discrete Manufacturing Industries - Continuous versus Discrete Control - Computer Process Control -Industry 4.0.	CO5	

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Explain the basic concepts of CAD, CAM and computer integrated manufacturing systems
CO2	Summarize the production planning and control and computerized process planning
CO3	Differentiate the different coding systems used in group technology
CO4	Explain the concepts of flexible manufacturing system (FMS) and automated guided vehicle (AGV) system
CO5	Understand the basics of automation and control systems

TEXT BOOKS:

1. Mikell.P.Groover, "Automation, Production Systems and Computer Integrated Manufacturing", Prentice Hall of India, 2016
2. Radhakrishnan P, Subramanyan S.and Raju V., "CAD/CAM/CIM", 2nd Edition, New Age International (P) Ltd, New Delhi, 2008.

REFERENCE BOOKS:

1. Gideon Halevi and Roland Weill, "Principles of Process Planning - A Logical Approach" Chapman & Hall, London,2012
2. Kant Vajpayee S, "Principles of Computer Integrated Manufacturing", Prentice Hall India.1995
3. Rao. P, N Tewari & T.K. Kundra, "Computer Aided Manufacturing", Tata McGraw Hill Publishing Company, 2000.

ME1742	MAINTENANCE ENGINEERING	L	T	P	C
		3	0	0	3

OBJECTIVES

- To enable the student to understand the principles, functions and practices adapted in industry for the successful management of maintenance activities.
- To explain the different maintenance categories like preventive maintenance, condition monitoring and repair of machine elements
- To illustrate some of the simple instruments used for condition monitoring in industry.

UNIT - I PRINCIPLES AND PRACTICES OF MAINTENANCE PLANNING 9

Basic Principles of maintenance planning - Objectives and principles of planned maintenance activity - Importance and benefits of sound Maintenance systems - Reliability and machine availability - MTBF, MTTR and MWT - Factors of availability - Maintenance organization - Maintenance economics. CO1

UNIT - II MAINTENANCE POLICIES - PREVENTIVE MAINTENANCE 9

Maintenance categories - Comparative merits of each category - Preventive maintenance, maintenance schedules, repair cycle - Principles and methods of lubrication - TPM. CO2

UNIT - III CONDITION MONITORING 9

Condition Monitoring - Cost comparison with and without CM - On-load testing and offload testing - Methods and instruments for CM - Temperature sensitive tapes - Pistol thermometers - wear-debris analysis. CO3

UNIT - IV REPAIR METHODS FOR BASIC MACHINE ELEMENTS 9

Repair methods for beds, slide ways, spindles, gears, lead screws and bearings - Failure analysis - Failures and their development - Logical fault location methods - Sequential fault location. CO4

UNIT - V REPAIR METHODS FOR MATERIAL HANDLING EQUIPMENT 9

Repair methods for Material handling equipment - Equipment records -Job order systems -Use of computers in maintenance. CO5

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Explain the principles and practices of maintenance planning
CO2	Explain the maintenance policies and strategies to preventive maintenance
CO3	Summarize the different principles of condition monitoring
CO4	Summarize the repair methods for basic machine elements
CO5	Summarize the repair methods for material handling equipment

TEXT BOOKS:

1. Amiya R Mohanty, “Machinery Condition Monitoring: Principles and Practices”, CRC Press, 2015
2. Terry Wireman, “Benchmarking Best Practices for Maintenance, Reliability and Asset Management”, 3rd Edition, Industrial Press Inc. 2014.
3. Venkataraman .K “Maintenance Engineering and Management”, PHI Learning, Pvt. Ltd., 2007.
4. Heinz P. Bloch and Fred K. Geitner, “Machinery Component Maintenance and Repair”, 3rd Edition, Elsevier, 2005

REFERENCE BOOKS:

1. Bhattacharya S.N., “Installation, Servicing and Maintenance”, S. Chand and Co., 2010
2. Keith Mobley, Lindley Higgins, Darrin Wikoff, “Maintenance Engineering Handbook”, Seventh Edition, Mc-Graw Hill Professional, 2008.

EC1008	MEMS AND NEMS	L	T	P	C
		3	0	0	3

OBJECTIVES

- To introduce the concepts of micro and nano electromechanical devices.
- To know the fabrication process of microsystems
- To know the design concepts of micro sensors and micro actuators.
- To introduce the concepts of quantum mechanics and nano systems

UNIT - I INTRODUCTION TO MEMS AND NEMS **9**

New trends in Engineering and Science: Micro and Nano scale systems. Introduction to Design of MEMS and NEMS, Overview of Nano and Micro electromechanical Systems, Applications of Micro and Nano electromechanical systems, Materials for MEMS and NEMS: Silicon, silicon compounds, polymers, metals. CO1

UNIT - II MEMS FABRICATION TECHNOLOGIES **9**

Photolithography, Ion Implantation, Diffusion, Oxidation, CVD, PECVD, Sputtering, Etching techniques: Dry and wet etching, electrochemical etching, Micromachining: Bulk Micromachining, Surface Micromachining, LIGA. CO2

UNIT - III MICRO SENSORS **9**

MEMS Sensors: Design of Acoustic wave sensors, Vibratory gyroscope, Capacitive Pressure sensors, Case study: Piezoelectric energy harvester. CO3

UNIT - IV MICRO ACTUATORS **9**

Design of Actuators: Actuation using thermal forces, Actuation using shape memory Alloys, Actuation using piezoelectric crystals, Actuation using Electrostatic forces, Case Study: RF Switch. CO4

UNIT - V NANO DEVICES **9**

Atomic Structures and Quantum Mechanics, Shrodinger Equation, ZnO nano rods based NEMS device: Gas sensor. CO5

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Understand the fundamentals and working principles of microsystems and microelectronics
CO2	Understand the both micro fabrication and manufacturing techniques
CO3	Acquire knowledge about micro system design and its various applications
CO4	Study about the basic concepts of nano electronics with various devices and also discusses with its applications
CO5	Realize the various application of NEMS and architecture of MEMS

TEXT BOOKS:

1. Marc Madou, Fundamentals of Microfabrication, CRC press 1997
2. Stephen D. Senturia, Micro system Design , Kluwer Academic Publishers,2001.

REFERENCE BOOKS:

1. Tai Ran Hsu, MEMS and Microsystems Design and Manufacture, Tata Mcraw Hill, 2002.
2. Chang Liu, Foundations of MEMS, Pearson education India limited, 2006.
3. Sergey Edward Lyshevski, MEMS and NEMS: Systems, Devices, and Structures‖ CRC Press, 2002.

ME1743	SAFETY ENGINEERING AND DISASTER MANAGEMENT	L	T	P	C
		3	0	0	3

OBJECTIVES

- Identify unsafe conditions and recognize unsafe alerts.
- Interpret the rules and regulations for safety operations
- Capable of solving problem of accidents.
- Capable of solving the present for criticizing the present for improved safety
- Collaborate and modify processes / procedures for safety

UNIT - I INTRODUCTION **9**

Evolution of modern safety concepts - Fire prevention - Mechanical hazards - Boilers, Pressure vessels, Electrical Exposure. CO1

UNIT - II CHEMICAL HAZARDS **9**

Chemical exposure - Toxic materials - Radiation Ionizing and Non-ionizing Radiation - Industrial Hygiene - Industrial Toxicology. CO2

UNIT - III ENVIRONMENTAL CONTROL **9**

Industrial Health Hazards - Environmental Control - Industrial Noise - Noise measuring instruments, Control of Noise, Vibration, - Personal Protection. CO3

UNIT - IV HAZARD ANALYSIS **9**

System Safety Analysis -Techniques - Fault Tree Analysis (FTA), Failure Modes and Effects Analysis (FMEA), HAZOP analysis and Risk Assessment. CO4

UNIT - V SAFETY REGULATIONS AND DISASTER MANAGEMENT **9**

Explosions - Disaster management - catastrophe control, hazard control, Factories Act, Safety regulations Product safety - case studies. CO5

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Identify and prevent chemical, environmental mechanical, fire hazard
CO2	Collect, analyze and interpret the accidents data based on various safety techniques. CO3: Apply proper safety techniques on safety engineering and management
CO3	Apply proper safety techniques on safety engineering and management
CO4	Perform hazard analysis
CO5	Design the system with environmental consciousness by implementing safety regulation

ME1744	TOTAL QUALITY MANAGEMENT AND RELIABILITY ENGINEERING	L	T	P	C
		3	0	0	3

OBJECTIVES

- To facilitate the understanding of quality management principles and process.
- Impart knowledge in reliability concepts

UNIT - I INTRODUCTION **9**

Introduction - Need for quality - Evolution of quality - Definitions of quality - Dimensions of product and service quality - Basic concepts of TQM - TQM Framework - Contributions of Deming, Juran and Crosby - Barriers to TQM - Customer focus - Customer orientation, Customer satisfaction, Customer complaints, Customer retention, Supplier partnership - Partnering, Supplier selection, Supplier Rating. CO1

UNIT - II TQM PRINCIPLES **9**

Leadership - Quality Statements, Strategic quality planning, Quality Councils, Quality Circles - Employee involvement Motivation, Empowerment, Team and Teamwork, Recognition and Reward, Performance appraisal - Continuous process improvement - PDCA cycle, 5S, Kaizen - TPM - Concepts. CO2

UNIT - III TQM TOOLS AND TECHNIQUES **9**

The seven traditional tools of quality - New management tools - Six sigma: Concepts, Methodology, Applications to manufacturing industry - Bench marking - Reason to bench mark, Bench marking process - FMEA - Stages, Types, Performance measures, Cost of Quality - Quality Function Deployment (QFD) - Taguchi quality loss function. CO3

UNIT - IV RELIABILITY CONCEPTS **9**

Reliability definition - Quality and Reliability- Reliability mathematics - Reliability functions - Hazard rate - Measures of Reliability - Design life -A priori and posteriori probabilities - Mortality of a component - Mortality curve - Useful life. CO4

UNIT - V QUALITY MANAGEMENT SYSTEM **9**

Introduction - Benefits of ISO Registration - ISO 9000 Series of Standards - Sector-Specific Standards - AS 9100, TS16949 and TL 9000 - ISO 9001 Requirements – Implementation – Documentation – Internal Audits - Registration. CO5

ENVIRONMENTAL MANAGEMENT SYSTEM: Introduction - ISO 14000 Series Standards - Concepts of ISO 14001 - Requirements of ISO 14001 - Benefits of EMS.

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Understand the concepts of quality management
CO2	Apply the principles of quality management to manufacturing and services processes
CO3	Apply the traditional tools and techniques of quality management to manufacturing and services processes
CO4	Understand the basic concepts of reliability engineering
CO5	Understand the quality management and environmental management system in manufacturing and services processes

ME1745	DESIGN FOR MANUFACTURING	L	T	P	C
		3	0	0	3

OBJECTIVES

- To introduce economic process selection principles and general design principles for manufacturability in the development and design of products for various engineering applications. Also, apply design consideration principles of casting in the design of cast products.
- To learn design consideration principles of forming in the design of extruded, stamped, and forged products.
- To learn design consideration principles of machining in the design of turned, drilled, milled, planed, shaped, slotted, and ground products.
- To learn design consideration principles of welding in the design of welded products.
- To learn design consideration principles of assembly in the design of assembled products.

UNIT - I INTRODUCTION AND CASTING **9**

Introduction - Economics of process selection - General design principles for manufacturability; Design considerations for: Sand cast – Die cast – Permanent mold cast parts. CO1

UNIT - II FORMING **9**

Design considerations for: Metal extruded parts – Impact/Cold extruded parts – Stamped parts –Forged parts. CO2

UNIT - III MACHINING **9**

Design considerations for: Turned parts – Drilled parts – Milled, planed, shaped and slotted parts– Ground parts. CO3

UNIT - IV WELDING **9**

Arc welding – Design considerations for: Cost reduction – Minimizing distortion – Weld strength – Weldment & heat treatment. Resistance welding – Design considerations for: Spot – Seam – Projection – Flash & Upset weldment CO4

UNIT - V ASSEMBLY **9**

Design for assembly – General assembly recommendations – Minimizing the no. of parts – Design considerations for: Rivets – Screw fasteners – Gasket & Seals – Press fits – Snap fits – Automatic assembly. CO5

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 Discuss the economic process selection principles and general design principles for manufacturability in the development and design of products for various engineering applications. Also, apply design consideration principles of casting in the design of cast products.

CO2 Explain design consideration principles of forming in the design of extruded, stamped, and forged products.

CO3 Explain design consideration principles of machining in the design of turned, drilled, milled, planed, shaped, slotted, and ground products.

CO4 Explain design consideration principles of welding in the design of welded products.

CO5 Explain design consideration principles of assembly in the design of assembled products.

ME1746 DIGITAL MANUFACTURING AND IoT

L	T	P	C
3	0	0	3

OBJECTIVES

- To study the various aspects of digital manufacturing.
- To inculcate the importance of DM in Product Lifecycle Management and Supply chain Management.
- To formulate of smart manufacturing systems in the digital work environment.
- To interpret IoT to support the digital manufacturing.
- To elaborate the significance of digital twin.

UNIT - I INTRODUCTION **9**

Introduction – Need – Overview of Digital Manufacturing and the Past – Aspects of Digital Manufacturing: Product life cycle, Smart factory, and value chain management – Practical Benefits of Digital Manufacturing – The Future of Digital Manufacturing. CO1

UNIT - II	DIGITAL LIFE CYCLE & SUPPLY CHAIN MANAGEMENT	9
	Collaborative Product Development, Mapping Requirements to specifications – Part Numbering, Engineering Vaulting, and Product reuse – Engineering Change Management, Bill of Material and Process Consistency – Digital Mock up and Prototype development – Virtual testing and collateral. Overview of Digital Supply Chain - Scope& Challenges in Digital SC - Effective Digital Transformation - Future Practices in SCM	CO2
UNIT - III	**SMART FACTORY**	**9**
	Smart Factory – Levels of Smart Factories – Benefits – Technologies used in Smart Factory – Smart Factory in IoT- Key Principles of a Smart Factory – Creating a Smart Factory – Smart Factories and Cybersecurity	CO3
UNIT - IV	**INDUSTRY 4.0**	**9**
	Introduction – Industry 4.0 –Internet of Things – Industrial Internet of Things – Framework: Connectivity devices and services – Intelligent networks of manufacturing – Cloud computing – Data analytics –Cyber physical systems –Machine to Machine communication – Case Studies.	CO4
UNIT - V	**STUDY OF DIGITAL TWIN**	**9**
	Basic Concepts – Features and Implementation – Digital Twin: Digital Thread and Digital Shadow- Building Blocks – Types – Characteristics of a Good Digital Twin Platform – Benefits, Impact & Challenges – Future of Digital Twins.	CO5

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Impart knowledge to use various elements in the digital manufacturing.
CO2	Differentiate the concepts involved in digital product development life cycle process and supply chain management in digital environment.
CO3	Select the proper procedure of validating practical work through digital validation in Factories.
CO4	Implementation the concepts of IoT and its role in digital manufacturing.
CO5	Analyse and optimize various practical manufacturing process through digital twin.

3. Alp Ustundag and Emre Cevikcan, “Industry 4.0: Managing The Digital Transformation”, Springer Series in Advanced Manufacturing., Switzerland, 2017
4. Ronald R. Yager and Jordan Pascual Espada, “New Advances in the Internet of Things”, Springer., Switzerland, 2018.
5. Ronald R. Yager and Jordan Pascual Espada, “New Advances in the Internet of Things”, Springer., Switzerland, 2018.

ME1747	PRECISION MANUFACTURING	L T P C
		3 0 0 3

OBJECTIVES

- To study the need, significance and progress of precision manufacturing and the different levels of manufacturing.
- To study the principle and working of different methods of precision machining.
- To study the special construction requirements of precision machine tools.
- To study the errors involved in precision machine tools and calculate the error budgets for a given situation.
- To study the Selecting a suitable measurement solution to measure and characterize precision machined features.

UNIT - I PRECISION ENGINEERING		**9**
Introduction to Precision Engineering, Need for precision manufacturing, Taniguchi diagram, Four Classes of Achievable Machining Accuracy – Normal, Precision, High-precision, Ultra-precision Processes and Nanotechnology.		CO1
UNIT - II PRECISION MACHINING		**9**
Overview of Micro- and Nano-machining, Conventional micro machining techniques - micro-turning, micro-milling, micro-grinding, Ultra-precision diamond turning, Non-conventional micromachining techniques – abrasive jet and water jet micromachining, Ultrasonic micromachining, micro electrical discharge machining, photochemical machining, electro chemical micromachining, laser beam micromachining, Electron beam micromachining, Focused Ion Beam micromachining, etc.		CO2
UNIT - III MACHINE DESIGN FOR PRECISION MANUFACTURING		**9**
Philosophy of precision machine design, Ultra-Precision Machine Elements: Guide- ways, Drive Systems, Friction Drive, Linear Motor Drive, Spindle Drive. Bearings: Principle, construction and application of Rolling, Hydrodynamic and Hydrostatic Bearings, Aerostatic Bearings, Magnetic bearings.		CO3
UNIT - IV MECHANICAL AND THERMAL ERRORS		**9**
Sources of error, Principles of measurement, Errors due to machine elements, bearings, spindles, Kinematic design, Structural compliance. Vibration, Thermal errors – background, thermal effects, Environmental control of precision machinery. Error mapping and error budgets.		CO4
UNIT - V MEASUREMENT AND CHARACTERISATION		**9**
Optical dimensional metrology of precision features – Machine vision, Multi-sensor coordinate metrology, Laser Tracking Systems, Laser scanners, White-Light Interference 3D Microscopes, Focus-Based Optical Metrology- Fringe projection method, Measurement of Typical Nano features. Surface metrology - 3D surface topography - Need, Measurement – Chromatic confocal Microscopy, Interferometry, Non-optical Scanning Microscopy – Scanning electron Microscopes, Scanning probe microscopes, Parameters for characterizing 3D surface topography.		CO5

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Explain the need, significance and progress of precision manufacturing and the different levels of manufacturing.
CO2	Explain the principle and working of different methods of precision machining.
CO3	Explain the special construction requirements of precision machine tools.
CO4	Explain the errors involved in precision machine tools and calculate the error budgets for a given situation.
CO5	Select a suitable measurement solution to measure and characterize precision machined features.

TEXT BOOKS:

1. Jain , V.K., Introduction to micromachining, Narosa publishers, 2018
2. Venktesh V.C., SudinIzman, Precision Engineering, Tata Mc.Graw Hill Publishing Company, New Delhi 2007.

REFERENCE BOOKS:

3. Joseph McGeough, Micromachining of Engineered Materials, Marcel Dekker Inc., 2002.
4. Kevin Harding, "Handbook of Optical Dimensional Metrology, Series: Series in Optics and optoelectronics", Taylor & Francis, 2013.
5. Murty, R.L., Precision Engineering in Manufacturing, New Age publishers, 2005.

ME1748	SURFACE ENGINEERING	L	T	P	C
		3	0	0	3

OBJECTIVES

- To study the fundamentals of surface features and different types of friction associated with metals and non-metals
- To study the different types of wear mechanism and its standard measurement.
- To study the different types of corrosion and its preventive measures
- To study the different types of surface properties and surface modification techniques
- To study the various types of materials used in the friction and wear applications

UNIT - I SURFACES AND FRICTION **9**

Basics of surfaces features – Roughness parameters – surface measurement - Cause of friction- Laws of friction – Static friction – Rolling Friction – Stick-slip Phenomenon - Friction properties of metal and nonmetals – Friction in extreme conditions – Thermal considerations in sliding contact. CO1

UNIT - II WEAR **9**

Laws of Wear - Types of Wear mechanism – wear debris analysis - Theoretical wear models - Wear of metals and nonmetals – International standards in friction and wear measurements CO2

UNIT - III CORROSION **9**

Introduction – Types of corrosion – Factors influencing corrosion – Testing of corrosion – In-service monitoring, Simulated service, Laboratory testing – Prevention of Corrosion – Material selection, Alteration of environment, Design, Cathodic and Anodic Protection, Corrosion inhibitors CO3

UNIT - IV SURFACE TREATMENTS **9**

Surface properties – Hydrophobic – Super hydrophobic – Hydrophilic - surface metallurgy – Surface coating Techniques – PVD – CVD – Physical CVD – Ion implantation – Surface welding – Thermal spraying – Laser surface hardening and alloying - New trends in coating technology – DLC – CNC – Thick coatings – Nano-engineered coatings – Other coatings, Corrosion resistant coatings CO4

UNIT - V ENGINEERING MATERIALS **9**

Introduction – High and low friction materials - Advanced alloys – Super alloys, Titanium alloys, Magnesium alloys, Aluminium alloys, and Nickel based alloys – Ceramics – Polymers – Biomaterials – Bio Tribology - Nano Tribology CO5

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Describe the fundamentals of surface features and different types of friction associated with metals and non-metals
CO2	Analyze the different types of wear mechanism and its standard measurement.
CO3	Analyze the different types of corrosion and its preventive measures
CO4	Analyze the different types of surface properties and surface modification techniques
CO5	Analyze the various types of materials used in the friction and wear applications.

4. Williams J.A., "Engineering Tribology", Oxford University Press, 1994.
5. Joseph R. Davis, Corrosion: Understanding the Basics, ASM International, 2000.

ME1751 ADVANCED INTERNAL COMBUSTION ENGINES

L	T	P	C
3	0	0	3

OBJECTIVES

- To understand the underlying principles of operation of different IC Engines and components.
- To provide knowledge on pollutant formation, control, alternate fuel etc

UNIT - I SPARK IGNITION ENGINES **9**

Mixture requirements - Fuel injection systems - Mono point, Multipoint & Direct injection - Stages of combustion - Normal and Abnormal combustion - Knock - Factors affecting knock - Combustion chambers. CO1

UNIT - II COMPRESSION IGNITION ENGINES **9**

Diesel Fuel Injection Systems - Stages of combustion - Knocking - Factors affecting knock - Direct and Indirect injection systems - Combustion chambers - Fuel Spray behavior - Spray structure and spray penetration - Air motion - Introduction to Turbo-charging. CO2

UNIT - III POLLUTANT FORMATION AND CONTROL **9**

Pollutant - Sources - Formation of Carbon Monoxide, Un burnt hydrocarbon, Oxides of Nitrogen, Smoke and Particulate matter - Methods of controlling Emissions - Catalytic converters, Selective Catalytic Reduction and Particulate Traps - Methods of measurement - Emission norms and Driving cycles. CO3

UNIT - IV ALTERNATIVE FUELS **9**

Alcohol, Hydrogen, Compressed Natural Gas, Liquefied Petroleum Gas and Bio Diesel - Properties, Suitability, Merits and Demerits - Engine Modifications. CO4

UNIT - V RECENT TRENDS **9**

Air assisted Combustion, Homogeneous charge compression ignition engines - Variable Geometry turbochargers - Common Rail Direct Injection Systems - Hybrid Electric Vehicles - NOx Adsorbers - Onboard Diagnostics. CO5

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

- CO1 Understand the performance & characteristics a S.I Engine
- CO2 Understand about various injection systems, Fuel spray behavior, Stages of combustion, Turbo charging, Combustion chambers and Knocking in C.I Engine
- CO3 Understand various pollutants and its formations, method of controlling Emissions, Methods of measurement, Emission norms and Driving cycles
- CO4 Understand various alternative fuels, their suitability and corresponding Engine Modifications
- CO5 Understand about the recent trends in I.C. Engine’s Injection Systems, Combustion, ignition, Hybrid Vehicles and Onboard Diagnostics

TEXT BOOKS:

1. Ramalingam. K.K., "Internal Combustion Engine Fundamentals", Scitech Publications, 2002.
2. Ganesan, "Internal Combustion Engines", II Edition, TMH, 2002.
3. John Heywood, “Internal Combustion Engine Fundamentals”, McGraw Hill Education, 2017

REFERENCE BOOKS:

1. Mathur. R.B. and R.P. Sharma, "Internal Combustion Engines"., Dhanpat Rai & Sons 2007.
2. Duffy Smith, "Auto Fuel Systems", The Good Heart Willcox Company, Inc., 1987.
3. Eric Chowenitz, "Automobile Electronics", SAE Publications, 1995.

ME1752 AUTOMOBILE TECHNOLOGY

L	T	P	C
3	0	0	3

OBJECTIVES

- To understand the construction and working principle of various parts of an automobile.
- To have the practice for assembling and dismantling of engine parts and transmission system

UNIT - I AUTOMOTIVE ENGINE AUXILIARY SYSTEMS **9**

Automotive engines - External combustion engines -Internal combustion engines -classification of engines- SI Engines- CI Engines- two stroke engines - four stroke engines - construction and working principles - IC engine components - functions and materials - valve timing - port timing diagram- Injection system -Common Rail Direct injection system - Unit injector system- Rotary distributor type - Electronically controlled injection system for SI engines - CI engines-Ignition system - Electronic ignition system - Distributor less ignition system - Transistorized ignition system, capacitive discharge ignition system. CO1

UNIT - II VEHICLE STRUCTURE AND STEERING SYSTEM **9**

Vehicle construction and different Chassis layouts -classifications of chassis- types of frames - frameless chassis construction -articulated vehicles - vehicle body - Vehicle aerodynamics - various resistances and its effects - steering system - conventional - sophisticated vehicle- and types of steering gear box-Power Steering - Steering geometry-condition for true rolling motion-Ackermann's - types of stub axle - Types of rear axles. CO2

UNIT - III TRANSMISSION SYSTEMS **9**

Clutch - types and construction, gear boxes- manual and automatic, gear shift mechanisms, Over drive, transfer box, fluid flywheel, torque converter, propeller shaft, slip joints, universal joints - Hotchkiss Drive and Torque Tube Drive - rear axle - Differential-wheels and tyres. CO3

UNIT - IV SUSPENSION AND BRAKES SYSTEMS **9**

Suspension Systems - conventional Suspension Systems - independent Suspension Systems - leaf spring - shock absorber - coil spring - taper - lite - eligo,s spring Types of brakes - Pneumatic and Hydraulic Braking Systems, Antilock Braking System (ABS), electronic brake force distribution (EBD) and Traction Control. Derive the equation of Forces acting while applying a brakes on plain surface. CO4

UNIT - V ALTERNATIVE ENERGY SOURCES **9**

Use of Natural Gas, Liquefied Petroleum Gas, Bio-diesel, Bio-ethanol, Gasohol and Hydrogen in Automobiles - Engine modifications required - Performance, Combustion and Emission Characteristics of SI and CI engines with these alternate fuels - Electric and Hybrid Vehicles, Fuel Cell. Turbo chargers - Engine emission control by three way catalytic converter system. CO5

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 Understand the construction and working of an IC Engine and its auxiliary systems as fuel injection and ignition systems

CO2 Understand the construction and working principle of various parts of an automobile. Especially about the frame structure, layout and about the steering mechanism and components

CO3 Know about the power train, the transmission right from the flywheel, clutch and knowing further about the gear box and till the propeller shaft till the differentials and wheels

CO4 Impart knowledge on the suspension system and vehicle control systems as brake and the recent advancements in the field, the application of electronic control unit in brake and traction control

CO5 Have idea about the alternate energy sources to propel the automobile: such as natural gas, LPG, electric and also to know about hybrid vehicles and the modification needed in the existing vehicles to suit the changes. Also about the treatment on emission. Also to have practice for assembling and dismantling of engine parts and transmission system

TEXT BOOKS:

1. Ganesan V. "Internal Combustion Engines", Third Edition, Tata McGraw Hill, 2012.
2. Jain K. K. and Asthana. R. B, "Automobile Engineering" Tata McGraw Hill Publishers, New Delhi, 2002.
3. Kirpal Singh, "Automobile Engineering", Vol 1 & 2, Seventh Edition, Standard Publishers, New Delhi, 2020

REFERENCE BOOKS:

1. Heinz Heisler, "Advanced Engine Technology," SAE International Publications USA, 1998.
2. Joseph Heitner, "Automotive Mechanics," Second Edition, East- West Press, 2004.
3. Martin W, Stockel and Martin T Stockle, "Automotive Mechanics Fundamentals," The Good heart -Will Cox Company Inc, USA, 2007.
4. Newton ,Steeds and Garet, "Motor Vehicles", Butterworth Publishers, 2001

ME1753 COMPUTATIONAL FLUID DYNAMICS

L	T	P	C
3	0	0	3

OBJECTIVES

- To introduce Governing Equations of viscous fluid flows.
- To introduce numerical modeling and its role in the field of fluid flow and heat transfer
- To enable the students to understand the various discretization methods, solution procedures and turbulence modeling.
- To create confidence to solve complex problems in the field of fluid flow and heat transfer by using high speed computers

UNIT - I GOVERNING EQUATIONS AND BOUNDARY CONDITIONS 9

Basics of computational fluid dynamics - Governing equations of fluid dynamics - Continuity, Momentum and Energy equations - Chemical species transport - Physical boundary conditions - Time-averaged equations for Turbulent Flow - Turbulent-Kinetic Energy Equations - Mathematical behaviour of PDEs on CFD - Elliptic, Parabolic and Hyperbolic equations. CO1

UNIT - II FINITE DIFFERENCE AND FINITE VOLUME METHODS FOR DIFFUSION 9

Derivation of finite difference equations - Simple Methods - General Methods for first and second order accuracy - Finite volume formulation for steady state One, Two and Three -dimensional diffusion problems -Parabolic equations - Explicit and Implicit schemes - Example problems on elliptic and parabolic equations - Use of Finite Difference and Finite Volume methods. CO2

UNIT - III FINITE VOLUME METHOD FOR CONVECTION DIFFUSION 9

Steady one-dimensional convection and diffusion - Central, upwind differencing schemes properties of discretization schemes - Conservativeness, Boundedness, Transportiveness, Hybrid, Power-law, QUICK Schemes. CO3

UNIT - IV FLOW FIELD ANALYSIS 9

Finite volume methods -Representation of the pressure gradient term and continuity equation - Staggered grid - Momentum equations - Pressure and Velocity corrections - Pressure Correction equation, SIMPLE algorithm and its variants - PISO Algorithms. CO4

UNIT - V TURBULENCE MODELS AND MESH GENERATION 9

Turbulence models, mixing length model, Two equation (k-Ɛ) models - High and low Reynolds number models - Structured Grid generation - Unstructured Grid generation - Mesh refinement - Adaptive mesh - Software tools. CO5

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Summarize the Governing equations of fluid dynamics
CO2	Create numerical modeling in finite difference and finite volume methods for diffusion and its role in the field of fluid flow and heat transfer
CO3	Create numerical modeling in finite difference and finite volume methods for convection diffusion and its role in the field of fluid flow and heat transfer
CO4	Understand the flow field in finite volume methods
CO5	Use the various discretization methods, solution procedures and turbulence modeling to solve flow and heat transfer problems

GE1004	FUNDAMENTALS OF NANOSCIENCE	L	T	P	C
		3	0	0	3

OBJECTIVES

- To learn about basis of nano material science, preparation method, types and application.

UNIT - I INTRODUCTION **9**

Nano scale Science and Technology- Implications for Physics, Chemistry, Biology and Engineering- Classifications of nano structured materials- quantum dots, nano wires-ultra-thin films multi layered materials. Length Scales involved and effect on properties: Mechanical, Electronic, Optical, Magnetic and Thermal properties. Introduction to properties and motivation for study (qualitative only). CO1

UNIT - II GENERAL METHODS OF PREPARATION **9**

Bottom-up Synthesis - Top-down Approach: Co-Precipitation, Ultrasonication, Mechanical Milling, Colloidal routes, Self-assembly, Vapour phase deposition, MOCVD, Sputtering, Evaporation, Molecular Beam Epitaxy, Atomic Layer Epitaxy, MOMBE. CO2

UNIT - III NANOMATERIALS **9**

Nanoforms of Carbon - Buckminster fullerene- graphene and carbon nanotube, Single wall carbon Nanotubes (SWCNT) and Multi wall carbon nanotubes (MWCNT)- methods of synthesis(arc-growth, laser ablation, CVD routes, Plasma CVD), structure-property Relationships applications- Nanometal oxides-ZnO, TiO_2,MgO, ZrO_2, NiO, nanoalumina, CaO, $AgTiO_2$, Ferrites, Nanoclays functionalization and applications-Quantum wires, Quantum dots-preparation, properties and applications. CO3

UNIT - IV CHARACTERIZATION TECHNIQUES **9**

X-ray diffraction technique, Scanning Electron Microscopy - environmental techniques, Transmission Electron Microscopy including high-resolution imaging, Surface Analysis techniques- AFM, SPM, STM, SNOM, ESCA, SIMS - Nano indentation. CO4

UNIT - V APPLICATIONS **9**

Nano InfoTech: Information storage- nanocomputer, molecular switch, super chip, nanocrystal, Nano biotechlogy: nanoprobes in medical diagnostics and biotechnology, Nano medicines, Targetted drug delivery, Bioimaging - Micro Electro Mechanical Systems (MEMS), Nano Electro Mechanical Systems (NEMS) - Nanosensors, nano crystalline silver for bacterial inhibition, Nanoparticles for sunbarrier products - In Photostat, printing, solar cell, battery. CO5

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Understand the concept of Nano scale Science and Technology and various types of nano materials.
CO2	Acquire knowledge in general methods of preparation of nano materials.
CO3	Understand the Nano forms of Carbon and methods of synthesis
CO4	Acquire knowledge in characteristic nanomaterial on various technique.
CO5	Gain knowledge on various application of nano materials.

ME1754 MECHANICS OF COMPOSITE MATERIALS

L	T	P	C
3	0	0	3

OBJECTIVES

- To understand the fundamentals of composite material strength and its mechanical behaviour.
- Understanding the analysis of fiber reinforced Laminate design for different combinations of plies with different orientations of the fiber
- Thermo-mechanical behaviour and study of residual stresses in Laminates during processing.
- Implementation of Classical Laminate Theory (CLT) to study and analysis for residual stresses in an isotropic layered structure such as electronic chips

UNIT - I INTRODUCTION, LAMINA CONSTITUTIVE EQUATIONS & MANUFACTURING **9**

Definition - Need - General Characteristics, Applications. Fibers - Glass, Carbon, Ceramic and Aramid fibers. Matrices - Polymer, Graphite, Ceramic and Metal Matrices - Characteristics of fibers and matrices. Lamina Constitutive Equations: Lamina Assumptions - Macroscopic Viewpoint. Generalized Hooke's Law. Reduction to Homogeneous Orthotropic Lamina - Isotropic limit case, Orthotropic Stiffness matrix (Q_{ij}), Typical Commercial material properties, Rule of Mixtures. Generally Orthotropic Lamina - Transformation Matrix, Transformed Stiffness. Manufacturing: Bag Moulding Compression Moulding - Pultrusion - Filament Winding - Other Manufacturing Processes. CO1

UNIT - II FLAT PLATE LAMINATE CONSTITUTE EQUATIONS **9**

Definition of stress and Moment Resultants. Strain Displacement relations. Basic Assumptions of Laminated anisotropic plates. Laminate Constitutive Equations - Coupling Interactions, Balanced Laminates, Symmetric Laminates, Angle Ply Laminates, Cross Ply Laminates. Laminate Structural Moduli. Evaluation of Lamina Properties from Laminate Tests. Quasi-Isotropic Laminates. Determination of Lamina stresses within Laminates. CO2

UNIT - III LAMINA STRENGTH ANALYSIS **9**

Introduction - Maximum Stress and Strain Criteria. Von-Misses Yield criterion for Isotropic Materials. Generalized Hill's Criterion for Anisotropic materials. Tsai-Hill's Failure Criterion for Composites. Tensor Polynomial (Tsai-Wu) Failure criterion. Prediction of laminate Failure. CO3

UNIT - IV THERMAL ANALYSIS		**9**
Assumption of Constant C.T.E's. Modification of Hooke's Law. Modification of Laminate Constitutive Equations. Orthotropic Lamina C.T.E's. C.T.E's for special Laminate Configurations - Unidirectional, Off-axis, Symmetric Balanced Laminates, Zero C.T.E laminates, Thermally Quasi- Isotropic Laminates.	CO4	
UNIT - V ANALYSIS OF LAMINATED FLAT PLATES		**9**
Equilibrium Equations of Motion. Energy Formulations. Static Bending Analysis. Buckling Analysis. Free Vibrations - Natural Frequencies.	CO5	

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Identify the various matrices, reinforcements and their combinations in composite materials
CO2	Understanding the analysis of fiber reinforced Laminate to derive Flat plate Laminate equations
CO3	Analyze Lamina strength of individual plies on the global and local axial, bending and twisting deformation of laminate
CO4	Analyze Thermo-mechanical behaviour and study of residual stresses in Laminates during processing
CO5	Implementation of Classical Laminate Theory (CLT) to analyse Laminate flat plates

MG1001	**PRINCIPLES OF MANAGEMENT**	**L**	**T**	**P**	**C**
		3	**0**	**0**	**3**

OBJECTIVES

- To enable the students to study the evolution of management.
- To study the functions and principles of management
- To learn the application of the principles in an organization.
- To acquire the skills of effective leadership and communication
- To gain the knowledge of tools and techniques for an effective managerial skill

UNIT - I INTRODUCTION TO MANAGEMENT AND ORGANIZATIONS		**9**
Definition of Management - Science or Art - Manager Vs Entrepreneur - types of managers - managerial roles and skills - Evolution of Management - Scientific, human relations , system and contingency approaches - Types of Business organization - Sole proprietorship, partnership, company-public and private sector enterprises - Organization culture and Environment - Current trends and issues in Management.	CO1	

UNIT - II PLANNING		**9**
Nature and purpose of planning - planning process - types of planning - objectives - setting objectives - policies - Planning premises - Strategic Management - Planning Tools and Techniques - Decision making steps and process.	CO2	
UNIT - III ORGANISING		**9**
Nature and purpose - Formal and informal organization - organization chart - organization structure - types - Line and staff authority - departmentalization - delegation of authority - centralization and decentralization - Job Design - Human Resource Management - HR Planning, Recruitment, selection, Training and Development, Performance Management , Career planning and management.	CO3	
UNIT - IV DIRECTING		**9**
Foundations of individual and group behavior - motivation - motivation theories - motivational techniques - job satisfaction - job enrichment - leadership - types and theories of leadership - communication - process of communication - barrier in communication - effective communication -communication and IT.	CO4	
UNIT - V CONTROLLING		**9**
System and process of controlling - budgetary and non-budgetary control techniques - use of computers and IT in Management control - Productivity problems and management - control and performance - direct and preventive control - reporting.	CO5	

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Understand the various terms and definitions related to management and organization
CO2	Acquire the skill of planning and various strategies of management in an organization
CO3	Understand the various hierarchies of management and also get an insight into an HR values in an organization management
CO4	Acquire the skills of leadership and understand the importance of communication to run an organization effectively
CO5	Analyse the risk related to budget and methods to handle the risk with help of technology to manage an organization

TEXT BOOKS:

1. JAF Stoner, Freeman R.E and Daniel R Gilbert “Management”, 6th Edition, Pearson Education, 2004.
2. Stephen P. Robbins & Mary Coulter, “Management”, Prentice Hall (India), Pvt. Ltd., 15th Edition, 2020.

REFERENCE BOOKS:

1. Harold Koontz & Heinz Weihrich, “Essentials of Management”, Tata McGraw Hill, 10th Edition, 2015.
2. Robert Kreitner & Mamata Mohapatra, “Management”, Biztantra, 2008.
3. Stephen A. Robbins & David A. Decenzo & Mary Coulter, “Fundamentals of Management”, 11th Edition, Pearson Education, 2017.
4. Tripathy PC & Reddy PN, “Principles of Management”, Tata Mcgraw Hill, 6th Edition 2017.

ME1755	CARBON FOOTPRINT ESTIMATION AND REDUCTION TECHNIQUES	L	T	P	C
		3	0	0	3

OBJECTIVES

- To introduce climate change and carbon footprint
- To study the principle of product life cycle and Green House Gas emissions accounting
- To study the Methodology for Carbon Footprint Calculation
- To learn emission mitigation and carbon sink
- To study the case study of carbon footprint.

UNIT - I CLIMATE CHANGE AND CARBON FOOTPRINT 9

Green House Effect and Climate Change - Causes and Impacts of Climate Change – Economic implications of Climate Change -IPCC Reports and Projected Climate Change Scenarios – Green House Gas (GHG) Emission – Carbon footprint of Activities, Processes, Products and Services of Organisations – GHG Emission factors and Calculations CO1

UNIT - II PRODUCT LIFE CYCLE AND GHG EMISSIONS 9

Life-cycle GHG Accounting - Principles of Product Life Cycle GHG Accounting and Reporting - Fundamentals of Product Life Cycle GHG Accounting - Establishing the Scope of a Product Inventory- GHG Emission Inventories and Accounting - Collecting Data and Assessing Data Quality- Allocation and Assessing Uncertainty CO2

UNIT - III METHODOLOGICAL ASPECTS OF CARBON FOOTPRINT 9

Methodology for Carbon Footprint Calculation in Crop and Livestock Production, End of Life Scenarios and Carbon Footprint of Wood Cladding, Carbon Footprints and Greenhouse Gas Emission Savings of Alternative Synthetic Biofuels, Making Food Production GHG Efficient, Carbon Footprint of Wood-Based Products and Buildings, Challenges and Merits of Choosing Alternative CO3

UNIT - IV EMISSION MITIGATION AND CARBON SINK 9

Setting GHG Reduction Targets and Tracking Inventory Changes – Non-Fossil Fuel based Energy Systems - Carbon Dioxide capture and Storage Technologies –Mitigation potentials of different Sectors and systems – Innovation, Technology Development and Transfer, - Social aspects of mitigation –Polcies, Institutions and international corporations – Carbon Pricing and Finance –GHG Offsetting and Green marketing. CO4

UNIT - V CASE STUDIES 9

Carbon Footprint Estimation from Building Sector - Urban Carbon Footprint Evaluation - Applications of carbon footprint in urban planning – Mechanical Equipment and Electronic Product Carbon Footprint - Carbon Footprint of Aqua and Agriculture products- GHG Emissions from Municipal Wastewater Treatment and Solid waste management CO5

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 Explain the climate change and carbon footprint
CO2 Discuss the principle of product life cycle and Green House Gas emissions accounting
CO3 Explain the Methodology for Carbon Footprint Calculation
CO4 Discuss emission mitigation and carbon sink
CO5 Explain the case study of carbon footprint.

TEXT BOOKS:

1. Assessment of Carbon Footprint in Different Industrial Sectors, Volume 1, by Subramanian Senthilkannan Muthu, Springer; Softcover reprint of the original 1st ed. 2014 edition (23 August 2016), ISBN-10 : 9811011737
2. Assessment of Carbon Footprint in Different Industrial Sectors, Volume 2, by Subramanian Senthilkannan Muthu, Springer Nature; 2014th edition (30 April 2014), ISBN-10 : 9814585742

REFERENCE BOOKS:

1. Subramanian, Senthil Kannan, Muthu (2016), Carbon Foot Print Handbook, CRC Press
2. Subramanian, Senthil Kannan, Muthu (2016), Environmental Carbon Foot Print Industrial case Studies, Butterworth Heinemann Publishers
3. World Resources Institute, Green House Gas Protocol - Product Life Cycle Accounting and Reporting Standard
4. ISO 14067 -2018, Green House gases and carbon footprint, Requirements and Guidelines for Quantification, International Organisation for Standardisation.
5. IPCC (2022) –Sixth Assessment Reports – Intergovernmental Panel on Climate Change, United Framework convention on Climate Change.

ME1756	INDUSTRIAL SAFETY	L	T	P	C
		3	0	0	3

OBJECTIVES

- To study the fundamental concept and principles of industrial safety
- To study the principles of maintenance engineering.
- To Analyzing the wear and its reduction.
- To study the faults in various tools, equipments and machines.
- To study the periodic maintenance procedures in preventive maintenance.

UNIT - I INDUSTRIAL SAFETY	**9**	
Accident, causes, types, results and control, mechanical and electrical hazards, types, causes and preventive steps/procedure, describe salient points of factories act 1948 for health and safety, wash rooms, drinking water layouts, light, cleanliness, fire, guarding, pressure vessels, etc, Safety color codes. Fire prevention and firefighting, equipment and methods.		CO1
UNIT - II MAINTENANCE ENGINEERING	**9**	
Definition and aim of maintenance engineering, Primary and secondary functions and responsibility of maintenance department, Types of maintenance, Types and applications of tools used for maintenance, Maintenance cost & its relation with replacement economy, Service life of equipment.		CO2
UNIT - III WEAR AND CORROSION AND THEIR PREVENTION	**9**	
Wear- types, causes, effects, wear reduction methods, lubricants-types and applications, Lubrication methods, general sketch, working and applications, i. Screw down grease cup, ii. Pressure grease gun, iii. Splash lubrication, iv. Gravity lubrication, v. Wick feed lubrication vi. Side feed lubrication, vii. Ring lubrication, Definition, principle and factors affecting the corrosion. Types of corrosion, corrosion prevention methods.		CO3
UNIT - IV FAULT TRACING	**9**	
Fault tracing-concept and importance, decision tree concept, need and applications, sequence of fault finding activities, show as decision tree, draw decision tree for problems in machine tools, hydraulic, pneumatic, automotive, thermal and electrical equipment's like, i. Any one machine tool, ii. Pump iii. Air compressor, iv. Internal combustion engine, v. Boiler,vi. Electrical motors, Types of faults in machine tools and their general causes.		CO4
UNIT - V PERIODIC AND PREVENTIVE MAINTENANCE	**9**	
Periodic inspection-concept and need, degreasing, cleaning and repairing schemes, overhauling of mechanical components, overhauling of electrical motor, common troubles and remedies of electric motor, repair complexities and its use, definition, need, steps and advantages of preventive maintenance. Steps/procedure for periodic and preventive maintenance of:i. Machine tools, ii. Pumps, iii. Air compressors, iv. Diesel generating (DG) sets, Program and schedule of preventive maintenance of mechanical and electrical equipment, Advantages of preventive maintenance. Repair cycle concept and importance.		CO5

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Explain the fundamental concept and principles of industrial safety
CO2	Apply the principles of maintenance engineering.
CO3	Analyze the wear and its reduction.
CO4	Evaluate faults in various tools, equipments and machines
CO5	Apply periodic maintenance procedures in preventive maintenance.

TEXT BOOKS:

1. L M Deshmukh, Industrial Safety Management, Tata McGraw-Hill Education, 2005.
2. Charles D. Reese, Occupational Health and Safety Management: A Practical Approach, CRC Press, 2003.

5. W. E. Vesely, F. F. Goldberg, Fault Tree Handbook, Create space Independent Pub, 2014

ME1757	THERMAL MANAGEMENT OF BATTERIES AND FUEL CELLS	L	T	P	C
		3	0	0	3

OBJECTIVES

- To study the working principle of Li-ion batteries and battery packs.
- To learn the thermal management system in battery modules.
- To develop the different case studies in battery thermal management system.
- To learn the working principle of fuel cells cooling methods.
- To learn the inside components of thermal management systems in various famous electric and fuel cell electric vehicles.

UNIT - I ADVANCED BATTERIES **9**

Li-ion Batteries- chemistry, different formats, operating areas, efficiency, aging. Battery Management System- Configuration, Characteristics. Tesla Model S- 18650 Cell specifications, P85 Battery Pack mechanical structure, Texas Instruments BMS. Supercapacitors Vs batteries. Diamond battery concepts. CO1

UNIT - II THERMAL MANAGEMENT IN BATTERIES **9**

Thermal Management Systems- impact, Types- Air, Liquid, Direct refrigerant, Heat pipe, Thermo Electric, Phase Change Material Cooling methods. Solid-liquid PCM Types- Organic, Inorganic, Eutectics. PCM Thermal properties and applications. Tesla Model-S Battery Module- bonding techniques, thermal management. CO2

UNIT - III BATTERY THERMAL MANAGEMENT CASE STUDIES **9**

EV Battery Cooling- challenges and solutions. Heat Exchanger Design and Optimization Model for EV Batteries using PCMs- system set up, selection of PCMs. Chevrolet Volt Model Battery Thermal Management System- Case study. Modelling Liquid Cooling of a Li-Ion Battery Pack with COMSOL Multiphysics- simulation concepts. CO3

UNIT - IV THERMAL MANAGEMENT IN FUEL CELLS **9**

Fuel Cells- operating principle, hydrogen-air fuel cell system characteristics, other fuel cell technologies, polarization curves, applications. Fuel cell thermal management- basic model, energy balance, governing equations, characteristic curve, sizing, cooling methods, advantages, restrictions. CO4

UNIT - V CASE STUDIES ON FUEL CELL AND BATTERIES **9**

Fuel cell system- balance of plant- components required. Fuel cell power plant sizing problems- Fuel Cell Electric Vehicle Fuel economy calculations and case studies - Battery EVs Vs Fuel Cell EVs. FCV- Operating principle, High pressure hydrogen tank, Boost convertor, Hydrogen refuelling, Advanced Battery Case Studies - NiMH Battery. CO5

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Discuss the different Li-ion batteries and fuel cell performances.
CO2	Design a battery pack with appropriate PCM.
CO3	Apply cooling models using Simulation
CO4	Estimate fuel economy.
CO5	Utilize different thermal management system approaches during real world usage.

ME1758	VALUE ENGINEERING	L	T	P	C
		3	0	0	3

OBJECTIVES

- To study the value engineering process and able to identify its functions within the process.
- To determine the appropriate value engineering methodology for a given project and propose appropriate training to centralized and decentralized modes.
- To learn various decision-making processes and cost evaluation models and apply them in appropriately in the product development life-cycle.
- To explore in-depth understanding of various value engineering applications in human resources, manufacturing and marketing.
- To demonstrate to implement value engineering solutions and propose to perfect them.

UNIT - I VALUE ENGINEERING BASICS **9**

Origin of value engineering - Meaning of value engineering - Definition of value engineering and Value analysis- Value Management - Value Analysis Versus Value Engineering - Value Analysis versus Traditional cost reduction techniques - Types of Value function – Basic and Secondary functions - concept of cost and worth - creativity In Value Engineering - uses, applications, advantages and limitations of Value analysis. CO1

UNIT - II VALUE ENGINEERING JOB PLAN AND PROCESS **9**

Seven phases of job plan - FAST Diagramming as Value Engineering Tool - Behavioral and organizational aspects of Value Engineering - Ten principles of Value analysis - Benefits of Value Engineering. CO2

UNIT - III VALUE ENGINEERING TECHNIQUES **9**

Creativity - Brain storming - Gordon technique - Morphological Analysis - ABC Analysis- Probabilistic approach - Make or Buy decisions – Function cost worth analysis (FCWA) - Function Analysis System technique (FAST) - Break Even Analysis - Life cycle cost(LCC) CO3

UNIT - IV WORKSHEETS AND GUIDELINES **9**

Preparation of worksheets - general and information phase - Function Classification, relationship and summary - Meaningful costs - Cost analysis - idea listing and comparison - Feasibility ranking - Investigator phase, study summary - guidelines for writing value engineering proposal - Financial aspects - List cycle cost analysis - Oral presentation - Audit - Case studies and Discussion. CO4

UNIT - V VERSATILITY OF VALUE ENGINEERING **9**

Value engineering operation in maintenance and repair activities - value engineering in non hardware projects - Initiating a value engineering programme Introduction - training plan - career development for value engineering specialties. CO5

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Estimate a product cost based on value engineering principles in terms of its values, functions and worthiness.
CO2	Discuss the product and articulate it in various phases of value engineering
CO3	Discuss and select appropriate methods, standards and apply them on value engineering project and propose appropriate training
CO4	Apply querying theory and FAST to prefect a value engineering project implementation.
CO5	Develop various case studies related to value engineering project implementation.

TEXT BOOKS:

ME1861	ENTREPRENEURSHIP DEVELOPMENT	L	T	P	C
		3	0	0	3

OBJECTIVES

- To develop and strengthen entrepreneurial quality and motivation in students and to impart basic entrepreneurial skills and understanding to run a business efficiently and effectively.

UNIT - I ENTREPRENEURSHIP **9**

Entrepreneur-Meaning and Importance - Types of Entrepreneurs - Difference between Entrepreneur and Intrapreneur Entrepreneurship in Economic Growth, Factors Affecting Entrepreneurial Growth. CO1

UNIT - II MOTIVATION **9**

Major Motives Influencing an Entrepreneur - Achievement Motivation Training, Self Rating, Business Games, Thematic Apperception Test - Stress Management, Entrepreneurship Development Programs - Need, Objectives. CO2

UNIT - III BUSINESS **9**

Small Enterprises - Definition, Classification - Characteristics, Ownership Structures - Project Formulation - Steps involved in setting up a Business - identifying, selecting a Good Business opportunity, Market Survey and Research, Techno Economic Feasibility Assessment - Preparation of Preliminary Project Reports - Project Appraisal - Sources of Information - Classification of Needs and Agencies. CO3

UNIT - IV FINANCING AND ACCOUNTING **9**

Need - Sources of Finance, Term Loans, Capital Structure, Financial Institution, Management of working Capital, Costing, Break Even Analysis, Taxation - Income Tax, Excise Duty - Sales Tax. CO4

UNIT - V SUPPORT TO ENTREPRENEURS **9**

Sickness in small Business - Concept, Magnitude, Causes and Consequences, Corrective Measures - Business Incubators - Government Policy for Small Scale Enterprises - Growth Strategies in small industry - Expansion, Diversification, Joint Venture, Merger and Sub Contracting. CO5

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Know about the importance of entrepreneurship
CO2	Know about the problems faced and to get motivated
CO3	Know about the types of business and feasibility of the business
CO4	Know about the financial need and all about the income tax and excise duty
CO5	Know about the government policies

TEXT BOOKS:

1. Donald F Kuratko, “Entrepreneurship - Theory, Process and Practice”, 9 th Edition, Cengage Learning, 2014.

3. Mathew J Manimala, "Enterprenuership theory at cross roads: paradigms and praxis” 2nd Edition Dream tech, 2005.
4. Rajeev Roy, "Entrepreneurship" 2 nd Edition, Oxford University Press, 2011.

ME1862 INDUSTRIAL TRIBOLOGY

L	T	P	C
3	0	0	3

OBJECTIVES

- To gain knowledge of topography of various engineering material surfaces in the aspect of friction.
- To understand the various types of wear mechanism, lubrication methods and its theory.
- To gain knowledge on surface engineering theory and bearing materials

UNIT - I SURFACES AND FRICTION **9**

Topography of Engineering surfaces- Contact between surfaces - Sources of sliding friction - Adhesion- Energy dissipation mechanisms Friction Characteristics of metals - Friction of non metals. Friction of lamellar solids - friction of Ceramic materials and polymers - Rolling Friction - Source of Rolling Friction - Stick slip motion - Measurement of Friction. CO1

UNIT - II WEAR **9**

Types of wear - Simple theory of Sliding Wear Mechanism of sliding wear of metals - Abrasive wear - Materials for Adhesive and Abrasive wear situations - Corrosive wear - Surface Fatigue wear situations - Brittle Fracture - wear - Wear of Ceramics and Polymers - Wear Measurements. CO2

UNIT - III LUBRICANTS AND LUBRICATION TYPES **9**

Types and properties of Lubricants - Testing methods - Hydrodynamic Lubrication - Elasto-hydrodynamic lubrication- Boundary Lubrication - Solid Lubrication- Hydrostatic Lubrication. CO3

UNIT - IV FILM LUBRICATION THEORY **9**

Fluid film in simple shear - Viscous flow between very close parallel plates - Shear stress variation Reynolds Equation for film Lubrication - High speed unloaded journal bearings - Loaded journal bearings - Reaction torque on the bearings - Virtual Co-efficient of friction - The Sommerfield diagram. CO4

UNIT - V SURFACE ENGINEERING AND MATERIALS FOR BEARINGS		**9**
Surface modifications - Transformation Hardening, surface fusion - Thermo chemical processes - Surface coatings - Plating and anodizing - Fusion Processes - Vapour phase processes - Materials for rolling Element bearings - Materials for fluid film bearings - Materials for marginally lubricated and dry bearings.		CO5

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Understand the topography of various engineering material surfaces in the aspect of friction
CO2	Understand the various types of wear mechanism and its measurements for various engineering material
CO3	Understand the lubricants, lubrication types and it testing methods
CO4	Understand the fluid film lubrication theory
CO5	Understand the surface engineering theory and materials used for bearings

TEXT BOOKS:

1. A.Harnoy, " Bearing Design in Machinery "Marcel Dekker Inc, NewYork,2003.

REFERENCE BOOKS:

2. E.P.Bowden and Tabor.D., "Friction and Lubrication", Heinemann EducationalBooks Ltd., 1974.
3. A.Cameron, "Basic Lubrication theory", Longman, U.K.., 1981.
4. M.J.Neale (Editor), "Tribology Handbook", Newnes. Butter worth, Heinemann, U.K., 1995.

GE1001 INTELLECTUAL PROPERTY RIGHTS

L	T	P	C
3	0	0	3

OBJECTIVES

- To introduce fundamental aspects of Intellectual Property Rights (IPR) and its components.
- To disseminate knowledge on patents, patent regime in India and abroad and registration aspects.
- To disseminate knowledge on copyrights, trademarks and registration aspects
- To disseminate knowledge on design, geographical indication (GI), plant variety and layout design protection and their registration aspects
- To aware about enforcement in IPR and government steps in fostering IPR

UNIT - I INTRODUCTION		**9**
Introduction to IPRs, Basic concepts and need for Intellectual Property - Patents, Copyrights, Geographical Indications, IPR in India and Abroad - Genesis and Development - the way from WTO to WIPO - TRIPS, Nature of Intellectual Property, Industrial Property, technological Research, Inventions and Innovations - Important examples of IPR.		CO1
UNIT - II REGISTRATION OF IPRs		**9**
Meaning and practical aspects of registration of Copyrights, Trademarks, Patents, Geographical Indications, Trade Secrets and Industrial Design registration in India and Abroad.		CO2

UNIT - III AGREEMENTS AND LEGISLATIONS **9**

International Treaties and Conventions on IPRs, TRIPS Agreement, PCT Agreement, Patent Act of India, Patent Amendment Act, Design Act, Trademark Act, Geographical Indication Act. CO3

UNIT - IV DIGITAL PRODUCTS AND LAW **9**

Digital Innovations and Developments as Knowledge Assets - IP Laws, Cyber Law and Digital Content Protection - Unfair Competition - Meaning and Relationship between Unfair Competition and IP Laws - Case Studies. CO4

UNIT - V ENFORCEMENT OF IPRs **9**

Infringement of IPRs, Enforcement Measures, Emerging issues - Case Studies. CO5

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Get an adequate knowledge on patent and copyright for their innovative research works
CO2	Get an idea about the registration process of IPR
CO3	Study various agreements and Acts regarding IPR
CO4	Inculcate the knowledge on innovations, developments and IP laws
CO5	Gain the knowledge on enforcement and current issues

TEXT BOOKS:

1. V. Scople Vinod, Managing Intellectual Property, Prentice Hall of India pvt Ltd,2014.
2. S. V. Satakar, “Intellectual Property Rights and Copy Rights, Ess Ess Publications, New Delhi, 2003.
3. Ahuja, V K, Law relating to Intellectual Property Rights. India, Lexis Nexis, 2017

REFERENCE BOOKS:

2. Prabuddha Ganguli, “Intellectual Property Rights: Unleashing the Knowledge Economy”, McGraw Hill Education,2011.
3. Edited by Derek Bosworth and Elizabeth Webster, The Management of Intellectual Property, Edward Elgar Publishing Ltd., 2013.

ME1863 LEAN SIX SIGMA

L	T	P	C
3	0	0	3

OBJECTIVES

- To gain insights about the importance of lean manufacturing and six sigma practices.

UNIT - I LEAN & SIX SIGMA BACKGROUND AND FUNDAMENTALS **9**

Historical Overview - Definition of quality - What is six sigma -TQM and Six sigma - lean manufacturing and six sigma- six sigma and process tolerance - Six sigma and cultural changes - six sigma capability - six sigma need assessments - implications of quality levels, Cost of Poor Quality (COPQ), Cost of Doing Nothing - assessment questions. CO1

UNIT - II THE SCOPE OF TOOLS AND TECHNIQUES		**9**
Tools for definition - IPO diagram, SIPOC diagram, Flow diagram, CTQ Tree, Project Charter - Tools for measurement - Check sheets, Histograms, Run Charts, Scatter Diagrams, Cause and effect diagram, Pareto charts, Control charts, Flow process charts, Process Capability Measurement, Tools for analysis - Process Mapping, Regression analysis, RU/CS analysis, SWOT, PESTLE, Five Whys, interrelationship diagram, overall equipment effectiveness, TRIZ innovative problem solving - Tools for improvement - Affinity diagram, Normal group technique, SMED, 5S, mistake proofing, Value stream Mapping, forced field analysis - Tools for control - Gantt chart, Activity network diagram, Radar chart, PDCA cycle, Milestone tracker diagram, Earned value management.	CO2	
UNIT - III SIX SIGMA METHODOLOGIES		**9**
Design For Six Sigma (DFSS), Design For Six Sigma Method - Failure Mode Effect Analysis (FMEA), FMEA process - Risk Priority Number (RPN)- Six Sigma and Leadership, committed leadership - Change Acceleration Process (CAP) - Developing communication plan - Stakeholder.	CO3	
UNIT - IV SIX SIGMA IMPLEMENTATION AND CHALLENGES		**9**
Tools for implementation - Supplier Input Process Output Customer (SIPOC) - Quality Function Deployment or House of Quality (QFD) - alternative approach - implementation - leadership training, close communication system, project selection - project management and team - champion training - customer quality index - challenges - program failure, CPQ vs six sigma, structure the deployment of six sigma - cultural challenge - customer/internal metrics.	CO4	
UNIT - V EVALUATION AND CONTINUOUS IMPROVEMENT METHODS		**9**
Evaluation strategy - the economics of six sigma quality, Return on six Sigma (ROSS), ROI, poor project estimates - continuous improvement - lean manufacturing - value, customer focus, Perfection, focus on waste, overproduction - waiting, inventory in process (IIP), processing waste, transportation, motion, making defective products, underutilizing people - Kaizen - 5S.	CO5	
TOTAL PERIODS:		**45**

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Understand the concepts of lean and six sigma
CO2	Apply the tools and techniques of process improvement for manufacturing and services processes
CO3	Understand methodologies of six sigma
CO4	Understand and steps of implementing six sigma
CO5	Understand the method of evaluation and improvement process of manufacturing

TEXT BOOKS:

1. Best Practices in Lean Six Sigma Process Improvement Richard Schonberger John Wiley & Sons, Inc. 2008.
2. Lean Six Sigma Statistics Alastair K. Muir, Ph.D. McGraw-Hill 2006.

ME1864 PRODUCTION PLANNING AND CONTROL

L	T	P	C
3	0	0	3

OBJECTIVES

- To understand the various components and functions of production planning and control such as work study, product planning, process planning, production scheduling, Inventory Control.
- To know the recent trends like manufacturing requirement Planning (MRP II) and Enterprise Resource Planning (ERP).
- To know the logistics and supply chain management

UNIT - I INTRODUCTION **9**

Objectives and benefits of planning and control-Functions of production control - Types of production - job - batch and continuous - Product development and design - Marketing aspect - Functional aspects - Operational aspect - Durability and dependability aspect aesthetic aspect. Profit consideration - Standardization, Simplification & specialization - Break even analysis-Economics of a new design. CO1

UNIT - II WORK STUDY **9**

Method study, basic procedure-Selection-Recording of process - Critical analysis, Development - Implementation - Micro motion and memo motion study - work measurement - Techniques of work measurement - Time study - Production study - Work sampling - Synthesis from standard data - Predetermined motion time standards. CO2

UNIT - III PRODUCT PLANNING AND PROCESS PLANNING **9**

Product planning - Extending the original product information-Value analysis - Problems in lack of product planning - Process planning and routing- Prerequisite information needed for process planning - Steps in process planning - Quantity determination in batch production-Machine capacity, balancing - Analysis of process capabilities in a multi product system. CO3

UNIT - IV PRODUCTION SCHEDULING **9**

Production Control Systems - Loading and scheduling-Master Scheduling-Scheduling rules - Gantt charts - Perpetual loading-Basic scheduling problems - Line of balance - Flow production scheduling- Batch production scheduling - Product sequencing - Production Control systems - Periodic batch control-Material requirement planning Kanban - Two bin system Dispatching - Progress reporting and expediting- Manufacturing lead time - Techniques for aligning completion times and due dates. CO4

UNIT - V INVENTORY CONTROL AND RECENT TRENDS IN PPC **9**

Inventory Control - Purpose of holding stock-Effect of demand on inventories - Ordering procedures. Ordering cycle system - Determination of Economic order uantity and economic lot size - ABC analysis - Fundamentals of MRP II and ERP. Definition of Logistics and SCM: Evolution, Scope, Importance - Supply chain stages and decision phases process view of a supply chain - Supply chain flows. CO5

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Understand production systems and their characteristics
CO2	Evaluate MRP and JIT systems against traditional inventory control systems
CO3	Understand basics of variability and its role in the performance of a production system
CO4	Analyze aggregate planning strategies
CO5	Apply forecasting and scheduling techniques to production systems

GE1003 PROFESSIONAL ETHICS IN ENGINEERING

L	T	P	C
3	0	0	3

OBJECTIVES

- To create awareness on professional ethics and human values.
- To create awareness on engineering ethics providing basic knowledge about engineering ethics, variety of moral issues, inquiry and virtues
- To provide basic familiarity about engineers as responsible experimenters and codes of ethics
- To inculcate knowledge and exposure on safety, risk and rights of an employee
- To have an adequate knowledge about global issues in multi-national companies

UNIT - I HUMAN VALUES **9**

Morals, values and Ethics - Integrity - Work ethic - Service learning - Civic virtue - Respect for others - Living peacefully - Caring - Sharing - Honesty - Courage - Valuing time - Cooperation - Commitment - Empathy - Self confidence - Character - Spirituality - Introduction to Yoga and meditation for professional excellence and stress management. CO1

UNIT - II ENGINEERING ETHICS **9**

Senses of 'Engineering Ethics' - Variety of moral issues - Types of inquiry - Moral dilemmas - Moral Autonomy - Kohlberg's theory - Gilligan's theory - Consensus and Controversy - Models of professional roles - Theories about right action - Self-interest - Customs and Religion - Uses of Ethical Theories. CO2

UNIT - III ENGINEERING AS SOCIAL EXPERIMENTATION **9**

Engineering as Experimentation - Engineers as responsible Experimenters - Codes of Ethics - A Balanced Outlook on Law. CO3

UNIT - IV SAFETY, RESPONSIBILITIES AND RIGHTS **9**

Safety and Risk - Assessment of Safety and Risk - Risk Benefit Analysis and Reducing Risk - Respect for Authority - Collective Bargaining - Confidentiality - Conflicts of Interest - Occupational Crime - Professional Rights - Employee Rights - Intellectual Property Rights (IPR) - Discrimination. CO4

UNIT - V GLOBAL ISSUES **9**

Multinational Corporations - Environmental Ethics - Computer Ethics - Weapons Development - Engineers as Managers - Consulting Engineers - Engineers as Expert Witnesses and Advisors - Moral Leadership -Code of Conduct - Corporate Social Responsibility. CO5

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

- CO1 Define the dimensions or senses of engineering ethics and describe the various theories of moral development
- CO2 Describe the similarities and contrast of engineering experiments Vs scientific experiments and to define the code of ethics of various professional societies
- CO3 Understand significance of safety and risk assessment when developing engineering products
- CO4 Understand the social responsibilities and intellectual property rights of engineers
- CO5 Understand the process of how a multinational company works and to describe about the role of engineers in computer ethics, environment ethics, and weapons development

ME1865 ADVANCED VEHICLE ENGINEERING

L	T	P	C
3	0	0	3

OBJECTIVES

- To introduce the basic concepts of electric vehicle and their characteristics
- To introduce different types of motors and the selection of motor for vehicle applications.
- To acquaint the student with different sensors and systems used in autonomous and connected vehicles.
- To give an overview of networking with sensors and systems.
- To introduce the modern methods of diagnosing on-board the vehicle troubles.

UNIT - I ELECTRIC VEHICLES **9**

EV architectures, advantages and disadvantages, Electrical and mechanical energy storage technologies, battery management. Performance of Electric Vehicles, Tractive effort and Transmission requirement, Vehicle performance, Tractive effort in normal driving. CO1

UNIT - II ELECTRIC VEHICLE MOTORS **9**

Electric Propulsion basics, motor capacity determination, Induction motor, DC motor, Permanent Magnet Motor, Switch Reluctance Motor, Configuration, Characteristics, Performance and control of Drives. CO2

UNIT - III AUTONOMOUS AND CONNECTED VEHICLES **9**

Vehicle-to-Vehicle Technology, Vehicle to Road and Vehicle to Vehicle Infrastructure, Basic Control System, Surroundings Sensing Systems, Role of Wireless Data Networks, Advanced Driver Assistance Systems, Basics of Radar System, Ultrasonic Sonar Systems, Lidar System, Camera Technology, Basics of Wireless Technology, Receiver System. CO3

UNIT - IV AUTOMOTIVE NETWORKING **9**

Bus Systems – Classification, Applications in the vehicle, Coupling of networks, networked vehicles, Buses - CAN Bus, LIN Bus, MOST Bus, Bluetooth, Flex Ray, Diagnostic Interfaces. CO4

UNIT - V ON-BOARD TESTING **9**

Integration of Sensor Data to On-Board Control Systems (OBD), OBD requirements, certification, enforcement, systems, testing, Catalytic converter and Exhaust Gas Recirculation system monitoring, Introduction to Cyber-physical system. CO5

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 Acquire an overview of electric vehicles and their importance in automotive.

CO2 Discuss the characteristics and the selection of traction motor.

CO3 Comprehend the vehicle-to-vehicle and autonomous technology.

CO4 Explain the networking of various modules in automotive systems, communication protocols and diagnostics of the sub systems.

CO5 Be familiar with on-board diagnostics systems.

5. Advanced Motorsport Engineering: Units for Study at Level 3by Andrew Livesey | 1 September 2011

ME1866	DESIGN CODES AND STANDARDS	L	T	P	C
		3	0	0	3

OBJECTIVES

- To study the Codes and Standards and Need for them in the Industry
- To know the different sources and the bodies that publish Codes and Standards
- To familiarize the Government Regulations and its applicability
- To familiarize with different codes used in Different Industry
- To familiarize the Codes and Standards used in Process Industry

UNIT - I INTRODUCTION **9**

Introduction to Codes and Standards. What is code? What is Standard? Need for codes and standards. Objective of Codes and Standards. Codes, Standards and Good Engineering Practices. CO1

UNIT - II CODES **9**

Codes and Standards used in Different Industry. Material, Design, Inspection and Construction Codes. Process Industry Codes. Machinery Design codes. Codes used in Oil and Gas Industry. Welding Codes. Machine Design. Automotive. HVAC. Performance Test Codes. Other Discipline codes CO2

UNIT - III STANDARDS **9**

Sources of Codes and Standards. Who publishes Codes and Standards? International Societies and Professional Bodies. Process of Standardisation and Code publishing in Professional Bodies and Companies. Interdisciplinary Codes. CO3

UNIT - IV REGULATIONS **9**

Government and Federal Regulations. Need for them. Indian and International Regulations. Standards organisations. Weather and Climatic codes. IS, ISO, IBR, OISD. Certification Bodies. Authorities and Engineers to certify. PE, Chartered Engineers CO4

UNIT - V DESIGN CODES **9**

Codes and Standards applicable in Process Industry Equipment Design. Pressure Vessel Design Codes. Heat Exchanger Design Codes. Wind and Seismic Codes. Machinery Codes. Package Equipment Design Codes. Performance Test Codes. ASTM, ASME, API, AWS, ANSI, ISO, ASHRAE. CO5

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 Explain the need for codes and Standards in Industry.
CO2 Discuss the different codes and standards used in different industry.
CO3 Discuss the sources of different codes and standards and the societies that publish them and how these are evolved
CO4 Explain need for Government regulations and Certification authorities and familiar with common regulations in India and International
CO5 Discuss knowledge of codes and standards used in Process equipment design for Oil and Gas Industry.

TEXT BOOKS:

1. Mechanical Engg. Handbook. ASME. ASTM.API
2. Perrys Chemical Engg Handbook

REFERENCE BOOKS:

1. ASME
2. API
3. ISO, IBR, OISD
4. AWS
5. ISHRAE

ME1867 DESIGN OF PRESSURE VESSELS

L	T	P	C
3	0	0	3

OBJECTIVES

- To introduce the Mathematical knowledge to design pressure vessels and piping
- To learn the ability to carry of stress analysis in pressure vessels and piping
- To study the design of vessels and theory of reinforcement.
- To study buckling and fracture analysis in vessels.
- To learn piping layout and flow diagram.

UNIT - I INTRODUCTION **9**

Methods for determining stresses – Terminology and Ligament Efficiency – Applications CO1

UNIT - II STRESSES IN PRESSURE VESSELS **9**

Introduction – Stresses in a circular ring, cylinder –Dilation of pressure vessels, Membrane stress Analysis of Vessel – Cylindrical, spherical and, conical heads – Thermal Stresses – Discontinuity stresses in pressure vessels. CO2

UNIT - III DESIGN OF VESSELS **9**

Design of Tall cylindrical self-supporting process columns – Supports for short vertical vessels – Stress concentration at a variable Thickness transition section in a cylindrical vessel, about a circular hole, elliptical openings. Theory of Reinforcement – Pressure Vessel Design. CO3

UNIT - IV BUCKLING AND FRACTURE ANALYSIS IN VESSELS **9**

Buckling phenomenon – Elastic Buckling of circular ring and cylinders under external pressure – collapse of thick walled cylinders or tubes under external pressure – Effect of supports on Elastic Buckling of Cylinders – Buckling under combined External pressure and axial loading. CO4

UNIT - V PIPING **9**

Introduction – Flow diagram – piping layout and piping stress Analysis. CO5

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Explain Methods for determining stresses Terminology and Ligament Efficiency, Applications
CO2	Analyse stress in pressure vessels
CO3	Design and analysis of pressure vessels.
CO4	Analysis of buckling and fracture analysis in vessels
CO5	Design and analysis piping layout and piping.

TEXT BOOKS:

1. John F. Harvey, "Theory and Design of Pressure Vessels", CBS Publishers and Distributors,1987.
2. Theory And Design Of Pressure Vessels (Pb 2001) by HARVEY J.F. | 1 January 2001

2. Stanley, M. Wales, “Chemical process equipment, selection and Design". Buterworths series in Chemical Engineering, 1988.
3. William. J., Bees, “Approximate Methods in the Design and Analysis of Pressure Vessels and Piping”, Pre ASME Pressure Vessels and Piping Conference, 1997.
4. Sam Kannapan, “Introduction to Pipe Stress Analysis”. John Wiley and Sons, 1985.
5. Theory and design of Pressure Vessels (Pb 2001)by HARVEY J.F. | 1 January 2001

ME1868	POWER GENERATION EQUIPMENT DESIGN	L	T	P	C
		3	0	0	3

OBJECTIVES
- To introduce the power generation equipments types layouts working cycles.
- To learn the fuels, combustion and burning methods of combustion system.
- To study the various boilers and its boilers parts of steam power plant.
- To study the basics of nuclear fuels and reactor classification.
- To study of techno economics and operating cost and safety of power plant.

UNIT - I INTRODUCTION **9**

Introduction to types, layouts and working cycles - Layouts of diesel-electric, hydro-electric, nuclear, gas turbine, steam, cogeneration, MHD and other power plants - Site selection - Reheat and regenerative steam cycles - Binary vapour cycle - Combined cycle - Topping cycle - Power plant instrumentation and control - air flow, furnace pressure, steam temperature control system - Governing system - Steam turbine. CO1

UNIT - II COMBUSTION SYSTEM **9**

Fuels, combustion and burning methods - Fuel classification - Solid, liquid and gaseous - Compositions and heating values - Classification of coal - Combustion process, atmosphere and control - ESP Furnace construction - Stokers - suspension firing - pulverised fuel firing - oil and gas burners and systems - Fuel control - Burner management system - FSSS - Ash handling system. CO2

UNIT - III STEAM POWER PLANT **9**

Steam generators - fire tube, water tube, forced circulation, once through, super charged, super critical, Lamont, Loeffler, Schmide, Hortmen and Velox boilers, Fluidised Bed & Circulated Fluidised Bed boilers - Natural, artificial, balanced and steam jet drafts - Simple problems - Functions of super heaters, economisers, air-heaters, deaerators, feed heaters, air ejectors - Feed pumps - Injectors - Feed water control- Condensers – Jet and surface type - Simple problems - Cooling towers. CO3

UNIT - IV NUCLEAR POWER PLANT **9**

Nuclear power plant - Basics of nuclear fuels - Fission and chain reaction - Reactor classification - Boiling water, pressurised water, homogeneous, gas cooled breeding and metal cooled CO4

UNIT - V TECHNO ECONOMICS OF POWER PLANT **9**

Economics and safety - Actual load curves - Fixed and operating costs - Tariff methods for electrical energy - Peak load and variable load operations - Selection of generation type and general equipment. Introduction to safety aspects in power plants - Environmental impacts - assessment for thermal power plant. CO5

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Discuss the power generation equipments types layouts working cycles.
CO2	Explain the fuels, combustion and burning methods of combustion system.
CO3	Discuss the various boilers and its boilers parts of steam power plant.
CO4	Explain the basics of nuclear fuels and reactor classification.
CO5	Discuss of techno economics and operating cost and safety of power plant.

TEXT BOOKS:

1. Power Plant Engineering - PK Nag
2. A Textbook of Power Plant Engineering - Rajput

REFERENCE BOOKS:

1. Basics of Boiler and HRSG Design - Brad Buecker
2. Steam Plant Operation-Everett B. Woodruff,Herbert B. Lammers,Thomas F. Lammers
3. Nuclear Power Plant Design and Analysis Codes Development Validation and Application 2020 Edition by Jun Wang, Xin Li, Chris Allison, Judy Hohorst , Elsevier
4. A Techno-Economic Analysis of Solar Thermal Power Plant by Malik Monu and Saini R P | 8 November 2012
5. Power Plant Engineering by Dilip Vairagkar | 1 January 2019

OEC103	BASICS OF EMBEDDED SYSTEMS AND IOT	L	T	P	C
		3	0	0	3

OBJECTIVES

- Understand the concepts of embedded system design and analysis
- Learn the architecture and programming of ARM processor
- Be exposed to the basic concepts of embedded programming
- Learn the concepts of IOT

UNIT - I INTRODUCTION TO EMBEDDED SYSTEM DESIGN 9

Complex systems and microprocessors- Embedded system design process - Design methodologies- Design flows - Requirement Analysis - Specifications-System analysis and architecture design - Quality Assurance techniques- Distributed embedded systems - MPSoCs and shared memory multiprocessors -Design example: Model train controller. CO1

UNIT - II ARM ARCHITECTURE AND PERIPHERAL INTERFACING 9

ARM Architecture Versions - ARM Architecture - Instruction Set - Stacks and Subroutines - Features of the LPC 214X Family - Peripherals - The Timer Unit - Pulse Width Modulation Unit - UART - Block Diagram of ARM9 and ARM Cortex M3 MCU CO2

UNIT - III EMBEDDED PROGRAMMING 9

Components for embedded programs- Models of programs - Assembly, linking and loading - compilation techniques - Program level performance analysis - Software performance optimization - Program level energy and power analysis and optimization - Analysis and optimization of program size - Program validation and testing CO3

UNIT - IV INTRODUCTION TO IOT 9

Functional blocks of an IoT system - Basics of Physical and logical design of IoT - IoT enabled domains - Difference between IoT, Embedded Systems and M2M - Industry 4.0 concepts- Passive and active sensors - Different applications of sensors - Multi-sensors - Pre-processing - IoT front-end hardware Case Studies - Smart Parking, Air Pollution Monitoring. CO4

UNIT - V	COMMUNICATION PROTOCOLS FOR EMBEDDED AND IOT	9
Embedded Networking: Introduction-Serial/Parallel Communication - Serial communication protocols- RS485 - Synchronous Serial Protocols - Serial Peripheral Interface (SPI) - Inter Integrated Circuits (I2C). IoT Infrastructure - 6LowPAN - IPv6 - URIs, Communication/ Transport - Wi-Fi, Bluetooth, ZigBee, LPWAN.		CO5

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 Understand the embedded system design process

CO2 Describe the architecture and programming of ARM processor

CO3 Outline the concepts of embedded system programming

CO4 Explain the basic concepts of IOT

CO5 Model Networked systems with basic protocols

TEXT BOOKS:

1. Marilyn Wolf, Computers as Components - Principles of Embedded Computing System Design‖, Third Edition, Morgan Kaufmann Publisher (An imprint from Elsevier), 2012. (UNIT I, II, III, IV)
2. ArshdeepBahga, Vijay Madisetti, “Internet of Things, A Hands-on-Approach”, 1st Edition, Universities press Pvt. Ltd., India, 2015.
3. Daniel Minoli, “Building the Internet of Things with IPv6 and MIPv6, 1st Edition, John Wiley & Sons”, Inc, USA, 2013

REFERENCE BOOKS:

1. Adrian McEwen and Hakim Cassimally, “Designing the Internet of Things”, 1st Edition, John Wiley & Sons Ltd, UK, 2014
2. Peter Waher, “Learning Internet of Things”, 1st Edition, Packt Publishing Ltd, UK, 2015.
3. Charles Bell, “Beginning Sensor Networks with Arduino and Raspberry Pi”, 1st Edition, Apress Publishers, USA, 2013.
4. Raj Kamal, Internet of Things, Architecture and Design Principles, McGraw-Hill, 2017.

OCS102	PROGRAMMING AND DATA STRUCTURES	L	T	P	C
		3	0	2	4

OBJECTIVES

- To learn the basics of C programming
- To learn the advanced features of C programming
- To explore the applications of linear data structures
- To learn about how to represent and implement non-linear data structure
- To learn about the basics of sorting, searching and Hash Table

UNIT - I	C PROGRAMMING BASICS	9
Structure of C program - Data Types - Storage classes – Variables - Constants - Keywords - Operators - Input/Output statements, Assignment statements - Decision making statements - Switch statement - Looping statements - Introduction to Arrays: Declaration, Initialization - One dimensional array - Two dimensional arrays.		CO1
UNIT - II	**FUNCTIONS, POINTERS AND STRUCTURES**	**9**
Introduction to functions: Function prototype, function definition, function call, Recursion - Pointers - Pointer operators - Pointer arithmetic - Array of pointers - Parameter passing: Pass by value, Pass by reference. Structure - Nested structures - Pointer and Structures - Array of structures - Self-referential structures - Dynamic memory allocation.		CO2

UNIT - III LINEAR DATA STRUCTURES **9**

List - Singly Linked lists - Application of List - Polynomial addition - Linked list implementation of Stacks - Applications of Stack - Evaluating arithmetic expressions - Linked list implementation of Queues - Application of Queue. CO3

UNIT - IV NON-LINEAR DATA STRUCTURES **9**

Trees - Binary Trees - Binary tree representation and traversals - Binary Search Trees - Applications of trees. Graph and its representations - Graph Traversals - Topological Sort - Applications of graphs. CO4

UNIT - V SEARCHING, SORTING AND HASH TABLE **9**

Linear Search - Binary Search. Bubble Sort - Insertion sort - Merge sort - Quick sort - Hashing functions - Hash tables - Introduction to Overflow handling. CO5

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 Implement basics of C.
CO2 Implement advanced features of C.
CO3 Apply the different linear data structures to problem solutions.
CO4 Implement Tree and Graph data structure.
CO5 Analyse the various sorting, searching algorithms and hash table.

TEXT BOOKS:

1. Reema Thareja, Data Structures Using C, Second Edition, Oxford University Press, 2014.

REFERENCE BOOKS:

1. Mark Allen Weiss, “Data Structures and Algorithm Analysis in C”, Fourth Edition, Pearson Education, 2013.
2. Ellis Horowitz, Sartaj Sahni, Susan Anderson-Freed, Fundamentals of Data Structures in C, Second Edition, University Press, 2008.

OEE104 ELECTRIC VEHICLE TECHNOLOGY

L	T	P	C
3	0	0	3

OBJECTIVES

- To familiarize about the significance of EV than conventional vehicles.
- To understand the concept of hybrid electric vehicles and its types with their performance.
- To understand the EV transmission and electric propulsion using various drives.
- To understand the various converter topologies for EV vehicle.
- To understand the different strategies related to battery technology and energy storage systems.

UNIT - I INTRODUCTION TO CONVENTIONAL AND ELECTRIC VEHICLES **9**

Conventional Vehicles: Internal combustion Engines-working principle, Engine Operation Characteristics, Emission Control. EV vehicles: EV system -configurations of EVs -Components of EV - Recent EVs and HEVs - EVs advantages - EVs market - Environmental Impact. CO1

UNIT - II HYBRID ELECTRIC VEHICLES **9**

Concept of Hybrid Electric drive, Types of Hybrid, Architectures of Hybrid Electric Drive Trains, Design of HEV, Plug-in Hybrid Electric Vehicles (PHEVs), Fuel Cell Electric Vehicles (FCEVs), Comparison of Different Vehicle Specifications CO2

UNIT - III	**ELECTRIC TRAINS AND PROPULSION**		**9**
EV Transmission configurations, Transmission components, Ideal Gearbox: Steady State Model, EV Motor Sizing. Electric Propulsion: DC motor drives, Configuration and control of DC Motor drives, Configuration and control of Induction Motor drives, Configuration and control of Permanent Magnet Motor drives, Configuration and control of Switch Reluctance Motor drives.			CO3
UNIT - IV	**POWER ELECTRONIC CONVERTER TOPOLOGIES FOR EV/PHEV CHARGING**		**9**
Power converter topology, Grid and Photovoltaic (PV) System for EV/PHEV Charging, Design of DC/DC Converters and DC/AC Inverters for Grid/PV, Integrated converter, With and without Transformer Based Isolated Charger topology.			CO4
UNIT - V	**POWER SOURCES AND ENERGY STORAGE**		**9**
Battery Technologies - Analysis: Lead-Acid Battery, Nickel-Based Batteries, Lithium-Based Batteries - Battery parameters, Fuel cell - types and characteristics, Ultra capacitors based energy storage and its analysis, Ultra-High-Speed Flywheels based energy storage and its analysis, Hybridization of energy storage devices.			CO5
		TOTAL PERIODS:	**45**

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 Understand the significance of electric vehicle compared to conventional vehicles.
CO2 Understand the concept of hybrid electric vehicles architecture with their performance.
CO3 Acquire the knowledge in EV transmission and electric propulsion using various drives train.
CO4 Design the various converter topologies for EV vehicle.
CO5 Analyse different strategies related to battery technology and energy storage systems.

TEXT BOOKS:

1. M. Ehsani, Y. Gao, S. E. Gay and A. Emadi, “Modern Electric, Hybrid Electric, and Fuel Cell Vehicles: Fundamentals, Theory, and Design”, CRC Press, 2004.
2. Iqbal Husain, “Electric and Hybrid vehicles:Design fundamentals”, CRC PRESS, Boca Raton London, New York Washington, D.C,2005.

REFERENCE BOOKS:

OCE103 ENVIRONMENTAL IMPACT ASSESSMENT

L	T	P	C
3	0	0	3

OBJECTIVES

- To impart knowledge on Environmental management and Environmental Impact Assessment.

UNIT - I INTRODUCTION 9

Impact of development projects - EIA Notifications - Urbanization – Meaning - Activities involved - Effects on environment-Environmental Impact Assessment (EIA) - Environmental Impact Statement (EIS). CO1

UNIT - II METHODOLOGIES 9

Methods of EIA – Checklists - Matrices-Networks - Cost-benefit analysis - Analysis of alternatives - Uncertainty in EIA. CO2

UNIT - III PREDICTION AND ASSESSMENT 9

Assessment of Impact on land, water, air, social & cultural activities and on flora& Fauna - Mathematical models - Public participation - SIA Judgment authorities - Rapid EIA. CO3

UNIT - IV ENVIRONMENTAL MANAGEMENT PLAN 9

Plan for mitigation of adverse impact on environment - Options for mitigation of impact on water, air, land and on flora & fauna - Addressing the issues related to the Project Affected People CO4

UNIT - V CASE STUDIES 9

EIA for infrastructure projects – Dams - Highways- Multi-storey Buildings - Water Supply and Drainage Projects - Waste water treatment plants, STP. CO5

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Carry out scoping and screening of developmental projects for environmental and social assessments
CO2	Explain different methodologies for environmental impact prediction and assessment
CO3	Plan environmental impact assessments and environmental management plans
CO4	Evaluate environmental impact assessment reports
CO5	Understand the Membrane Applications.

TEXT BOOKS:

1. Canter,R.L., “Environmental Impact Assessment”, McGraw-Hill Inc., New Delhi,1996.
2. Richard K. Morgan., “Environmental Impact Assessment”, Kluwer Academic Publications, London, 2002.

REFERENCE BOOKS:

3. Judith Petts, “Handbook of Environmental Impact Assessment Vol. I & II”, Blackwell Science, 1999.

OCH101 FUNDAMENTALS OF COMBUSTION

L	T	P	C
3	0	0	3

OBJECTIVES

- To make the student understand the fundamentals of combustion
- To teach them combustion in different regions like basic flame to gas turbine engines to rocket engines and finally how it is done in supersonic speed

UNIT - I INTRODUCTION TO COMBUSTION **9**

Thermo-chemical equations - Heat of formation - Activation energy - Multi-step reactions - Heat of reaction - first order, second order and third order reactions - Calculation of adiabatic flame temperature CO1

UNIT - II BASICS OF CHEMICAL KINETICS AND FLAMES **9**

Premixed flames - Diffusion flames -measurement of burning velocity - various methods - Effect of various parameters on burning velocity - flame stability - Deflagration - Detonation – Rankine - Hugoniot curve - Radiation by flames. CO2

UNIT - III COMBUSTION IN GAS TURBINE ENGINES **9**

Combustion in gas turbine combustion chambers - Recirculation - combustion efficiency, Factors affecting combustion efficiency - Fuels used for gas turbine combustion chambers - combustion stability - Flame holder types. CO3

UNIT - IV COMBUSTION IN ROCKETS **9**

Solid propellant grain types - types of solid propellant burning in rocket combustion chambers - basic mechanism of composite propellant combustion - solid propellant burn rate laws - criterion for stable combustion - combustion in liquid rocket engines - single fuel droplet combustion model - combustion in hybrid rockets. CO4

UNIT - V SUPERSONIC COMBUSTION (Qualitative Treatment only) **9**

Introduction - supersonic combustion controlled by diffusion, mixing and heat convection - Analysis of reactions and mixing processes - supersonic burning with detonation shocks . CO5

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Understand the detailed mechanism of combustion process
CO2	Analyse and impart the chemical kinetics and flames in combustion processes.
CO3	Understand the detailed mechanism of Aerospace Vehicles and Aircraft Engines
CO4	Analyse and impart the combustion processes that occur in Aircraft Engines and Rocket Vehicles.
CO5	Understand the supersonic combustion

OEE108 RENEWABLE ENERGY TECHNOLOGIES

L	T	P	C
3	0	0	3

OBJECTIVES

- At the end of the course, the students are expected to identify new methodologies / technologies for effective utilization of renewable energy sources.

UNIT - I ENERGY SCENARIO AND OCEAN ENERGY **9**

Conventional and non-conventional energy resources - Introduction, availability, classification, relative merits and demerits - Role of energy in economic development and social transformation: Energy &GDP, GNP and its dynamics - Energy Sources and Overall Energy demand and Availability - Energy Consumption in various sectors and its changing pattern. CO1

OTEC, Principles utilization, setting of OTEC plants, thermodynamic cycles. Tidal and wave energy: Potential and conversion techniques, mini-hydel power plants, and their economics.

UNIT - II BIO-ENERGY **9**

Biomass resources and their classification - Biomass conversion processes - Thermo chemical conversion - direct combustion - biomass gasification - pyrolysis and liquefaction - biochemical conversion - anaerobic digestion - types of biogas Plants - applications - alcohol production from biomass - bio diesel production - Urban waste to energy conversion - Biomass energy programme in India. CO2

UNIT - III GEOTHERMAL ENERGY AND MHD **9**

Geothermal Energy: Resources, types of wells, methods of harnessing the energy, potential in India. Thermodynamics of geo-thermal energy conversion-electrical conversion, non-electrical conversion, environmental considerations.

Magneto-hydrodynamics (MHD): Principle of working of MHD Power plant, performance, and limitations. Cells: Principle of working of various types of fuel cells and their working, performance, and limitations. CO3

UNIT - IV SOLAR AND WIND ENERGY **9**

Solar thermal electric power plant - principle of photovoltaic conversion of solar energy, types of solar cells - Photovoltaic applications: battery charger, domestic lighting, street lighting, water pumping etc - solar PV power plant - Net metering concept

Wind energy conversion devices - classification, characteristics, applications - offshore wind energy - Hybrid systems - safety and environmental aspects - wind energy potential and installation in India, horizontal and vertical axis windmills, performance characteristics, Betz criteria. CO4

UNIT - V ENERGY FORECASTING MODEL **9**

Forecasting Techniques - Regression Analysis - Double Moving Average - Double Experimental Smoothing - Triple Exponential Smoothing - ARIMA model - Validation techniques - Qualitative forecasting - Delphi technique - Concept of Neural Net Works. Applications of IoT, AI and Machine learning for energy resources assessment. CO5

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Understand the energy scenario and ocean energy.
CO2	Acquire knowledge of biomass energy conversion techniques.
CO3	Understand geothermal energy recovery and principles of MHD, fuel cell.
CO4	Acquire knowledge of solar and wind energy conversion systems.
CO5	Carry out forecasting to predict energy demand

TEXT BOOKS:

1. Rai G.D. , "Non-Conventional Energy Sources", Khanna Publishers, 2011.
2. Twidell& Wier, "Renewable Energy Resources", CRC Press (Taylor & Francis), 2011.

OCS105 DATA ANALYTICS WITH R PROGRAMMING

L	T	P	C
3	0	0	3

OBJECTIVES

- Students will learn R. Programming language, data analytics, data visualization and statistical model for data analytics
- By completion of this course, students will be able to become data analyst

UNIT - I INTRODUCTION TO DATA ANALYSIS		**9**
Overview of Data Analytics, Need of Data Analytics, Nature of Data, Classification of Data: Structured, Semi-Structured, Unstructured, Characteristics of Data, Applications of Data Analytics	CO1	
UNIT - II R PROGRAMMING BASICS		**9**
Overview of R programming, Environment setup with R Studio, R Commands,Variables and Data Types, Control Structures, Array, Matrix, Vectors, Factors, Functions, R packages	CO2	
UNIT - III DATA VISUALIZATION USING R		**9**
Reading and getting data into R (External Data): Using CSV files, XML files, Web Data, JSON files, Databases, Excel files. Working with R Charts and Graphs: Histograms, Box plots, Bar Charts, Line Graphs, Scatter plots, Pie Charts	CO3	
UNIT - IV STATISTICS WITH R		**9**
Random Forest, Decision Tree, Normal and Binomial distributions, Time Series Analysis, Linear and Multiple Regression, Logistic Regression	CO4	
UNIT - V PRESCRIPTIVE ANALYTICS		**9**
Creating data for analytics through designed experiments, Creating data for analytics through active learning, Creating data for analytics through reinforcement learning	CO5	

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Understand the basics of data analytics
CO2	Understand and apply the R-Programming concepts
CO3	Apply R-Programming for data visualization
CO4	Implement various classification techniques using R
CO5	Apply R programming to perform perspective analytics on data

TEXT BOOKS:

1. An Introduction to R, Notes on R: A Programming Environment for Data Analysis and Graphics. W.N.Venables, D.M.Smith and the R Development Core Team.

OEI104	INTERNET OF THINGS	L	T	P	C
		3	0	0	3

OBJECTIVES

- To Understand general concepts of Internet of Things (IoT) (Understand)
- To Recognize various devices, sensors and applications (Knowledge)
- Analyze and Apply design concept to IoT solutions (Apply)
- Evaluate design issues in IoT applications (Evaluate)
- Create IoT solutions using sensors, actuators and Devices (Create)

UNIT - I INTRODUCTION TO IoT	**9**
Internet of Things – Physical Design – Logical Design – IoT Enabling Technologies - IoT Levels & Deployment Templates – Domain Specific IoTs – IoT and M2M – IoT System Management with NETCONF-YANG - IoT Platforms Design Methodology	CO1
UNIT - II IoT ARCHITECTURE	**9**
M2M high-level ETSI architecture – IETF architecture for IoT- OGC architecture - IoT reference model – Domain model – information model – functional model - Communication model – IoT reference architecture	CO2
UNIT - III IoT PROTOCOLS	**9**
Protocol Standardization for IoT – Efforts – M2M and WSN Protocols – SCADA and RFID Protocols – Unified Data Standards – Protocols – IEEE 802.15.4– BAC Net Protocol – Modbus – Zigbee Architecture – Network layer – 6 Low PAN –CoAP – Security	CO3
UNIT - IV BUILDING IoT WITH RASPBERRY PI & ARDUINO	**9**
Building IOT with RASPERRY PI – IoT Systems – Logical Design using Python – IoT Physical Devices & Endpoints - IoT Device - Building blocks - Raspberry Pi -Board - Linux on Raspberry Pi – Raspberry Pi Interfaces – Programming Raspberry Pi with Python - Other IoT Platforms - Arduino.	CO4

UNIT - V CASESTUDIES AND REAL WORLD APPLICATIONS		**9**
Real world design constraints – Applications – Asset management, Industrial automation, smart grid, Commercial building automation, Smart cities - participatory sensing - Data Analytics for IoT – Software & Management Tools for IoT Cloud Storage Models & Communication APIs–Cloud for IoT – Amazon Web Services for IoT.	CO5	

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Analyze various protocols for IoT
CO2	Develop web services to access/control IoT devices.
CO3	Design a portable IoT using Rasperry Pi
CO4	Deploy an IoT application and connect to the cloud.
CO5	Analyze applications of IoT in real time scenario statistics

TEXT BOOKS:

OCS108	INTRODUCTION TO PYTHON PROGRAMMING	L	T	P	C
		3	0	0	3

OBJECTIVES

- To learn the fundamentals of python programming.
- To learn control structures in python.
- To decompose programs in Python into functions and use Strings.
- To construct programs in Collection classes.
- To develop python programs using files and exception handling.

UNIT – I INTRODUCTION TO PYTHON PROGRAMMING		**9**
Introduction to Python, Demo of Interactive and script mode, Tokens in Python – Variables, Keywords, Comments, Literals, Data types, Indentation, Operators and its precedence, Expressions, Input and Print functions, Type Casting.	CO1	
UNIT – II CONTROL STRUCTURES		**9**
Control Structures: Selective statements – if, if-else, nested if, if – elif ladder statements; Iterative statements - while, for, range functions, nested loops, else in loops, break, continue and pass statements.	CO2	

UNIT – III FUNCTIONS AND STRINGS **9**

Functions: function definition, function call, flow of execution, parameters and arguments, return values, local and global scope, recursion and Lambda functions. CO3
Strings: string slices, immutability, string functions and methods, string module. Regular expression: Matching the patterns, Search and replace.

UNIT – IV COLLECTIONS **9**

Lists: list operations, list slices, list methods, list loop, mutability, aliasing, cloning lists, list parameters, nested lists, list comprehension; Tuples: tuple assignment, tuple as return value, tuple operations. Dictionary: Create, add, and replace values, operations on dictionaries. Sets: Create and operations on set. CO4

UNIT – V FILES AND EXCEPTION HANDLING **9**

Files: Open, Read, Write, Append and Close. Tell and seek methods. Illustrative programs: word count, copy file. CO5
Command line arguments, Errors and Exceptions: Syntax Errors, Exceptions, Handling Exceptions, Raising Exceptions, Exception Chaining, User-defined Exceptions, Defining Clean-Up actions.

TOTAL PERIODS: 45

TEXT BOOKS

2. Guido van Rossum and Fred L. Drake Jr,――An Introduction to Python ―Revised and updated for Python 3.2, Network Theory Ltd., 2011.
3. Reema Thareja, Python Programming: Using Problem Solving Approach, Oxford University Press, 2019.

REFERENCE BOOKS

1. John V Guttag, **I**ntroduction to Computation and Programming Using Python‗, Revised and expanded Edition, MIT Press, 2013
2. Robert Sedgewick, Kevin Wayne, Robert Dondero, Introduction to Programming in Python: An Inter-disciplinary Approach, Pearson India Education Services Pvt. Ltd., 2016.
3. Timothy A. Budd, Exploring Python, Mc-Graw Hill Education (India) Private Ltd., 2015.
4. Kenneth A. Lambert, Fundamentals of Python: First Programs, CENGAGE Learning, 2012.
5. Charles Dierbach, Introduction to Computer Science using Python: A Computational Problem – Solving Focus,Wiley India Edition, 2013.
6. Paul Gries, Jennifer Campbell and Jason Montojo, Practical Programming: An Introduction.

COURSEOUTCOMES

Upon completion of the course, students will be able to

CO1 Develop simple console application in python.
CO2 Develop and execute simple Python programs using conditionals and loops for solving problems.
CO3 Express proficiency in the handling of strings and functions
CO4 Represent compound data using python lists, tuples and dictionaries.
CO5 Read and write data from/to files in Python.

OCE101	AIR POLLUTION AND CONTROL	L	T	P	C
		3	0	0	3

OBJECTIVES

- To impart knowledge on the principle and design of particulate/gaseous air pollutant and its emerging trends.
- To acquaint the students with the basics of selection of control equipment.
- To learn about indoor air quality control.

UNIT - I AIR QUALITY MONITORING		**9**
Structure and composition of Atmosphere - Definition, Scope and Scales of Air Pollution - Sources and classification of air pollutants and their effect on human health, vegetation, animals, property, aesthetic value and visibility - Ambient Air Quality and Emission standards - Composition of Particulate and Gaseous Pollutants.		CO1
UNIT - II EFFECT OF ATMOSPHERIC DISPERSION		**9**
Effects of meteorology on Air Pollution - Fundamentals, Atmospheric stability, Inversion, Wind profiles and stack plume patterns - Atmospheric Diffusion Theories - Dispersion models, Plume rise		CO2
UNIT - III PARTICULATE CONTAMINANTS		**9**
Gas Particle Interaction - Working principle, Gravity Separators, Centrifugal separators Fabric filters, Particulate Scrubbers, Electrostatic Precipitators - Operational Considerations - Factors affecting Selection of Control Equipment.		CO3
UNIT - IV GASEOUS CONTAMINANTS		**9**
Working principle, Adsorption, condensation, Incineration, Bio scrubbers, Bio filters - Process control and Monitoring - Operational Considerations - Factors affecting Selection of Control Equipment -CO2 capturing.		CO4
UNIT - V INDOOR AIR QUALITY MONITORING		**9**
Sources, types and control of indoor air pollutants, sick building syndrome types - Sources and Effects of Noise Pollution- Standards - Control and Preventive measures.		CO5
	TOTAL PERIODS:	**45**

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Understand the chemistry of the atmosphere, characterize the air pollutants, know the effects of air pollution, identify the criteria air pollutants, and know about NAAQS
CO2	Apply the knowledge of mathematics and science fundamentals to understand the concept of meteorology, air pollution dispersion and the Gaussian plume dispersion model
CO3	Select a suitable method and design the particulate pollutant control equipment
CO4	Select appropriate method for control of gaseous pollutant by due consideration of sources of emission
CO5	Understand the source of indoor air pollution, effects and control methods as well as to identify the source of noise, and select suitable method for control of noise pollution

TEXT BOOKS:

1. Lawrence K. Wang, Norman C. Pareira, Yung Tse Hung, Air Pollution Control Engineering, Tokyo, 2004.

1. David H.F. Liu, Bela G. Liptak, "Air Pollution", Lweis Publishers, 2000.
2. Arthur C.Stern, "Air Pollution (Vol.I - Vol. VIII)" , Academic Press, 2006.
3. Wayne T.Davis, "Air Pollution Engineering Manual", John Wiley & Sons, Inc., 2000.

OCS104 FUNDAMENTALS OF DATABASE DESIGN

L	T	P	C
3	0	0	3

OBJECTIVES

- To learn the fundamentals of data models and to represent a database system using ER diagrams.
- To study the database design and SQL
- To make the students to understand the fundamentals of transaction processing and concurrency
- To have an basic knowledge about the storage implementation and query processing
- To understand database security concepts and database programming

UNIT - I INTRODUCTION **10**

Purpose of Database System - Views of data - Data Models - Database System Architecture - Introduction to relational databases - Relational Model - Keys - Relational Algebra - SQL fundamentals - DDL-DML-DCL-TCL- Advanced SQL features - Embedded SQL – Static Vs Dynamic SQL CO1

UNIT - II DATABASE DESIGN **10**

Entity-Relationship model - E-R Diagrams - Enhanced-ER Model - ER-to-Relational Mapping - Functional Dependencies - Non-loss Decomposition - First, Second, Third Normal Forms, Dependency Preservation - Boyce/Codd Normal Form - Multi-valued Dependencies and Fourth Normal Form - Join Dependencies and Fifth Normal Form CO2

UNIT - III TRANSACTION CONCEPTS AND CONCURRENCY CONTROL **7**

Introduction-Properties of Transaction - Serializability- Concurrency Control - Locking Mechanisms- Two Phase Locking - Two Phase Commit Protocol - Dead lock - SQL Facilities for Concurrency and Recovery CO3

UNIT - IV IMPLEMENTATION TECHNIQUES **9**

RAID - File Organization - Organization of Records in Files - Indexing and Hashing -Ordered Indices - B+ tree Index Files - B tree Index Files - Static Hashing - Dynamic Hashing - Query Processing Overview - Query optimization using Heuristics and Cost Estimation. CO4

UNIT - V ADVANCED TOPICS AND DATABASE PROGRAMMING **9**

security issues - Discretionary access control - role based access - Encryption and public key infrastructures - challenges. Information Retrieval: IR Concepts, Retrieval Models, Queries in IR systems. Implementing functions, views, and triggers in MySQL/Oracle. ODBC/JDBC connectivity with front end tools CO5

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 Understand relational data model, evolve conceptual model of a given problem and SQL

CO2 Understand relational model and normalization to perform database design effectively

CO3 Apply and relate the concept of transaction, concurrency control and recovery in database

CO4 Understand the implementation technique and query processing

CO5 Understand the concepts of database security and database programming

TEXT BOOKS:

1. Ramez Elmasri, Shamkant B. Navathe, "Fundamentals of Database Systems", Sixth Edition , Pearson.
2. Abraham Silberschatz, Henry F. Korth, S. Sudharshan, "Database System Concepts", Sixth Edition, Tata McGraw Hill.

REFERENCE BOOKS:

1. C.J.Date, A.Kannan, S.Swamynathan, "An Introduction to Database Systems", Eighth Edition, Pearson Education.
2. Raghu Ramakrishnan, Database Management Systems‖, Fourth Edition, McGraw-Hill College Publications.

OCS103	INTRODUCTION TO CLOUD COMPUTING	L	T	P	C
		3	0	0	3

OBJECTIVES

- To have the fundamental ideas behind Cloud Computing, the evolution of the paradigm, its applicability; benefits, as well as current and future challenges;
- To have knowledge on the various virtualization techniques that serve in computation. and storage services on the cloud.
- To understand the technologies, architecture and applications of cloud computing
- To understand the key security and compliance challenges of cloud computing

UNIT - I INTRODUCTION **9**

Introduction to Cloud Computing - Roots of Cloud Computing- Parallel and Distributed Computing, Mainframe and Grid Computing, Desired Features and benefits of Cloud Computing - Challenges and Risks of Cloud Computing CO1

UNIT - II VIRTUALIZATION **9**

Introduction to Virtualization Technology - Load Balancing and Virtualization - Understanding Hypervisor and its types, Types of Virtualizations - Hardware, OS, Memory, Application Virtualization, Levels of Virtualization CO2

UNIT - III CLOUD ARCHITECTURE, SERVICES AND STORAGE **9**

NIST Cloud Computing Reference Architecture, Layered Cloud Architecture, Architectural Design Challenges - Deployment models of cloud, Services of cloud - Cloud Storage. CO3

UNIT - IV RESOURCE MANAGEMENT AND SECURITY IN CLOUD **9**

Inter Cloud Resource Management - Resource Provisioning Methods - Security Overview - Cloud Security Architecture-Cloud Security Challenges - Data Security - Application Security - Virtual Machine Security. CO4

UNIT - V CASE STUDIES **9**

Google App Engine (GAE) - GAE Architecture - Functional Modules of GAE - Amazon Web Services (AWS) - GAE Applications - Cloud Software Environments - Bio-data Platform & Bio Cloud CO5

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Articulate the main concepts, key technologies, strengths, and limitations of cloud computing and the possible applications for state-of-the-art cloud computing
CO2	Understanding of fundamentals and technological aspects of virtualization along with various terminologies used in Cloud Computing
CO3	Identify the architecture and infrastructure of cloud computing, including SaaS, PaaS, IaaS, public cloud, private cloud, hybrid cloud, etc.
CO4	Enlighten the core issues of cloud computing such as security, privacy, and interoperability.
CO5	Be familiarization with areas of cloud technologies and working experience in several of them

TEXT BOOKS:

3. Buyya R., Broberg J., Goscinski A., “Cloud Computing: Principles and Paradigm”, First Edition, John Wiley & Sons, 2011.
4. Kai Hwang, Geoffrey C. Fox, Jack G. Dongarra, "Distributed and Cloud Computing, From Parallel Processing to the Internet of Things", Morgan Kaufmann Publishers, 2012.
5. Rittinghouse, John W., and James F. Ransome, “Cloud Computing: Implementation, Management, And Security”, CRC Press, 2017.

REFERENCE BOOKS:

6. Rajkumar Buyya, Christian Vecchiola, S. ThamaraiSelvi, “Mastering Cloud Computing”, Tata Mcgraw Hill, 2013.
7. Toby Velte, Anthony Velte, Robert Elsenpeter, "Cloud Computing - A Practical Approach”, Tata Mcgraw Hill, 2009.
8. George Reese, "Cloud Application Architectures: Building Applications and Infrastructure in the Cloud: Transactional Systems for EC2 and Beyond (Theory in Practice)”, O'Reilly, 2009.

OEI102	ROBOTICS	L	T	P	C
		3	0	0	3

OBJECTIVES

- To understand the functions of the basic components of a Robot
- To study the use of various drive systems and types of End Effectors
- To gain knowledge on the types of sensors and machine vision
- To impart knowledge in Robot Kinematics and Programming
- To learn Robot safety issues and economics

UNIT - I FUNDAMENTALS OF ROBOT **9**

Robot - Definition - Robot Anatomy - Coordinate Systems, Work Envelope Types and Classification - Specifications - Pitch, Yaw, Roll, Joint Notations, Speed of Motion, Payload - Robot Parts and their Functions - Need for Robots - Different Applications CO1

UNIT - II ROBOT DRIVE SYSTEMS AND END EFFECTORS **9**

Pneumatic Drives - Hydraulic Drives - Mechanical Drives - Electrical Drives - D.C. Servo Motors, Stepper Motors, A.C. Servo Motors - Salient Features, Applications and Comparison of all these Drives, End Effectors-Grippers-Mechanical Grippers, Two Fingered and Three Fingered Grippers; Internal Grippers and External Grippers Pneumatic and Hydraulic Grippers, Magnetic Grippers, Vacuum Grippers; Selection and Design Considerations CO2

UNIT - III SENSORS AND MACHINE VISION **9**

Requirements of a sensor, Principles and Applications of the following types of sensors - Position sensors - Piezoelectric Sensor, LVDT, Resolvers, Optical Encoders, pneumatic Position Sensors, Range Sensors Triangulations Principles, Structured, Lighting Approach, CO3

Time of Flight, Range Finders, Laser Range Meters, Touch Sensors ,binary Sensors, Analog Sensors, Wrist Sensors, Compliance Sensors, Slip Sensors, Camera, Frame Grabber, Sensing and Digitizing Image Data - Signal Conversion, Image Storage, Lighting Techniques, Image Processing and Analysis - Data Reduction, Segmentation, Feature Extraction, Object recognition, Other Algorithms, Applications- Inspection, Identification, Visual Serving and Navigation.

UNIT - IV ROBOT KINEMATICS AND ROBOT PROGRAMMING 9

Forward Kinematics, Inverse Kinematics and Difference; Forward Kinematics and Reverse Kinematics of manipulators with Two, Three Degrees of Freedom (in 2 Dimension), Four Degrees of freedom (in 3 Dimension) Jacobians, Velocity and Forces-Manipulator Dynamics, Trajectory Generator, Manipulator Mechanism Design-Derivations and problems. Lead through Programming, Robot programming Languages - VAL Programming - Motion Commands, Sensor Commands, End Effector commands and simple Programs. CO4

UNIT - V IMPLEMENTATION AND ROBOT ECONOMICS 9

RGV, AGV; Implementation of Robots in Industries-Various Steps; Safety Considerations for Robot Operations - Economic Analysis of Robots. CO5

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 Understand the functions of the basic components of a Robot.

CO2 Study the different types of drive system and various types of End Effectors

CO3 Understand the working of sensors and machine vision system

CO4 Familiarize with the kinematics motions of robots and to develop robotic programs for different tasks.

CO5 Examine the implementation of robots in various industrial sectors and economic analysis of Robots

TEXT BOOKS:

1. Groover M.P., Industrial Robotics -Technology, Programming and Applications‖, McGraw Hill Education, 2017.
2. Klafter R.D., Chmielewski T.A and Negin M., Robotic Engineering - An Integrated Approach‖, Prentice Hall, 2003.

REFERENCE BOOKS:

2. Ray Asfahl. C., Robots and Manufacturing Automation‖, John Wiley & Sons Inc., 1985.
3. Janakiraman P.A., Robotics and Image Processing‖, Tata McGraw Hill, 1995.

OEI101 SENSORS AND TRANSDUCERS

L	T	P	C
3	0	0	3

OBJECTIVES

- To understand the concepts of measurement technology.
- To learn the various sensors used to measure various physical parameters.
- To learn the fundamentals of signal conditioning, data acquisition and communication systems used in mechatronics system development

UNIT - I INTRODUCTION **9**

Basics of Measurement - Classification of errors - Error analysis - Static and dynamic characteristics of transducers - Performance measures of sensors - Classification of sensors - Sensor calibration techniques - Sensor Output Signal Types CO1

UNIT - II MOTION, PROXIMITY AND RANGING SENSORS **9**

Motion Sensors - Potentiometers, Resolver, Encoders - Optical, Magnetic, Inductive, Capacitive, LVDT - RVDT - Synchro - Microsyn, Accelerometer - GPS, Bluetooth, Range Sensors - RF beacons, Ultrasonic Ranging, Reflective beacons, Laser Range Sensor (LIDAR). CO2

UNIT - III FORCE, MAGNETIC AND HEADING SENSORS **9**

Strain Gage, Load Cell, Magnetic Sensors - types, principle, requirement and advantages: Magneto resistive - Hall Effect - Current sensor Heading Sensors - Compass, Gyroscope, Inclinometers. CO3

UNIT - IV OPTICAL, PRESSURE AND TEMPERATURE SENSORS **9**

Photo conductive cell, photo voltaic, Photo resistive, LDR - Fiber optic sensors - Pressure - Diaphragm, Bellows, Piezoelectric - Tactile sensors, Temperature - IC, Thermistor, RTD, Thermocouple. Acoustic Sensors - flow and level measurement, Radiation Sensors - Smart Sensors - Film sensor, MEMS & Nano Sensors, LASER sensors. CO4

UNIT – V SIGNAL CONDITIONING AND DAQ SYSTEMS **9**

Amplification - Filtering - Sample and Hold circuits - Data Acquisition: Single channel and multi channel data acquisition - Data logging - applications - Automobile, Aerospace, Home appliances, Manufacturing, Environmental monitoring. CO5

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 Expertise in various calibration techniques and signal types for sensors.

CO2 Apply the proximity and ranging sensors in the automotive and mechatronics applications.

CO3 Understand the principles of various magnetic and heading sensors.

CO4 Understand the functioning of optical, pressure, temperature and smart sensors.

CO5 Implement the DAQ systems with different sensors for real time applications.

TEXT BOOKS:

1. Ernest O Doebelin, “Measurement Systems - Applications and Design”, Tata McGraw-Hill, 2009.
2. Sawhney A K and Puneet Sawhney, “A Course in Mechanical Measurements and Instrumentation and Control”, 12th edition, Dhanpat Rai & Co, New Delhi, 2013.

REFERENCE BOOKS:

1. Patranabis D, “Sensors and Transducers”, 2nd Edition, PHI, New Delhi, 2010.
2. John Turner and Martyn Hill, “Instrumentation for Engineers and Scientists”, Oxford Science Publications, 1999.
3. Richard Zurawski, “Industrial Communication Technology Handbook” 2nd edition, CRC Press, 2015.

OEE107	SOLAR AND WIND ENERGY SYSTEMS	L	T	P	C
		3	0	0	3

OBJECTIVES

- To understand types and applications of various form of energy sources and its environmental impacts
- To attain a broad comprehension of solar photovoltaic systems used for various applications.
- To understand and estimate performance of wind turbine

UNIT - I INTRODUCTION OF SOLAR ENERGY	**9**	
Solar radiation at the earth's surface - solar radiation measurements - estimation of average solar radiation - solar thermal flat plate collectors - concentrating collectors - solar thermal applications - heating, cooling, desalination, drying, cooking, etc - solar thermal electric power plant - principle of photovoltaic conversion of solar energy, types of solar cells	CO1	
UNIT - II SOLAR PHOTOVOLTAIC TECHNOLOGY	**9**	
Photovoltaic basics - structure and working of solar cells - types, electrical properties and behaviour of solar cells - cell properties and design, stand alone PV systems - schematics, components, batteries, charge conditioners, grid connected PV systems - schematics, components, charge conditioners, interface components, hybrid systems - solar, biomass, wind, diesel hybrid systems, design of PV systems - radiation and load data, simple case studies.	CO2	
UNIT - III PHOTOVOLTAIC APPLICATIONS	**9**	
Battery charger, domestic lighting, street lighting, water pumping etc - Solar PV power plant - Net metering concept. National / International PV Power Programmes - Photovoltaic Power Systems - System Integration - Energy Storage - Power Electronics - Stand-Alone Systems - Grid-Connected Systems - Concentrating Photovoltaics (CPV) - Electrical Performance. Applications of IoT and Machine learning for SPV applications.	CO3	
UNIT - IV WIND ENERGY	**9**	
Nature of the wind - power in the wind - factors influencing wind - wind data and energy estimation - wind speed monitoring - wind resource assessment - Betz limit - site selection - wind energy conversion devices - classification, characteristics, applications - offshore wind energy - Hybrid systems - safety and environmental aspects - wind energy potential and installation in India - Repowering concept.	CO4	
UNIT - V AERODYNAMICS AND PERFORMANCE OF WIND TURBINE	**9**	
Horizontal Axis Wind Turbine (HAWT) & Vertical Axis Wind Turbine (VAWT), Power Developed, Maximum power coefficient (Betz Limit), Thrust, Efficiency, Rotor selection Rotor design considerations, Diameter of the Rotor. Aerodynamic design principles, Blade Profile, Blade Element Theory, Choice of the number of blades, Choice of the Pitch angle, Tip speed ratio, Power speed characteristics, Torque speed characteristics, Solidity. Applications of IoT and Machine learning for wind turbines performance assessment.	CO5	

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Understand the basics of solar energy and its measurements applications
CO2	Understand the fundamentals of solar photovoltaic technology and design different SPV systems
CO3	Understand the application of solar photovoltaic technologies
CO4	Understand the wind resource assessment and conversion systems
CO5	Analyse wind turbine performance with regard to aerodynamics

OEE102	DRONE TECHNOLOGIES	L	T	P	C
		3	0	0	3

OBJECTIVES

- To understand the basics of drone concepts
- To learn and understand the fundaments of design, fabrication and programming of drone
- To impart the knowledge of an flying and operation of drone
- To know about the various applications of drone
- To understand the safety risks and guidelines of fly safely

UNIT - I INTRODUCTION TO DRONE TECHNOLOGY **9**

Drone Concept - Vocabulary Terminology- History of drone - Types of current generation of drones based on their method of propulsion- Drone technology impact on the businesses- Drone business through entrepreneurship- Opportunities/applications for entrepreneurship and employability CO1

UNIT - II DRONE DESIGN, FABRICATION AND PROGRAMMING **9**

Classifications of the UAV -Overview of the main drone parts- Technical characteristics of the parts -Function of the component parts -Assembling a drone- The energy sources- Level of autonomy- Drones configurations -The methods of programming drone- Download program - Install program on computer- Running Programs- Multi rotor stabilization- Flight modes -Wi-Fi connection. CO2

UNIT - III DRONE FLYING AND OPERATION **9**

Concept of operation for drone -Flight modes- Operate a small drone in a controlled environment- Drone controls Flight operations –management tool –Sensors-Onboard storage capacity - Removable storage devices- Linked mobile devices and applications CO3

UNIT - IV DRONE COMMERCIAL APPLICATIONS **9**

Choosing a drone based on the application -Drones in the insurance sector- Drones in delivering mail, parcels and other cargo- Drones in agriculture- Drones in inspection of transmission lines and power distribution -Drones in filming and panoramic picturing CO4

UNIT - V FUTURE DRONES AND SAFETY **9**

The safety risks- Guidelines to fly safely -Specific aviation regulation and standardization- Drone license- Miniaturization of drones- Increasing autonomy of drones -The use of drones in swarms CO5

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Know about a various type of drone technology, drone fabrication and programming.
CO2	Execute the suitable operating procedures for functioning a drone
CO3	Select appropriate sensors and actuators for Drones
CO4	Develop a drone mechanism for specific applications
CO5	Create the programs for various drones

TEXT BOOKS:

1. Daniel Tal and John Altschuld, "Drone Technology in Architecture, Engineering and Construction: A Strategic Guide to Unmanned Aerial Vehicle Operation and Implementation", 2021 John Wiley & Sons, Inc.
2. Terry Kilby and Belinda Kilby, "Make:Getting Started with Drones ",Maker Media, Inc, 2016

REFERENCE BOOKS:

1. John Baichtal, "Building Your Own Drones: A Beginners' Guide to Drones, UAVs, and ROVs", Que Publishing, 2016
2. Zavrsnik, "Drones and Unmanned Aerial Systems: Legal and Social Implications for Security and Surveillance", Springer, 2018.

OCS107	MACHINE LEARNING FOR INTELLIGENT SYSTEMS	L	T	P	C
		3	0	0	3

OBJECTIVES

- To introduce basic machine learning techniques such as regression, classification
- To learn about introduction of clustering, types and segmentation methods
- To learn about fuzzy logic, fuzzification and defuzzification
- To learn about basics of neural networks and neuro fuzzy networks.
- To learn about Recurrent neural networks and Reinforcement learning.

UNIT - I INTRODUCTION TO MACHINE LEARNING **9**

Philosophy of learning in computers, Overview of different forms of learning, Classifications vs. Regression, Evaluation metrics and loss functions in Classification, Evaluation metrics and loss functions in Regression, Applications of AI in Robotics. CO1

UNIT - II CLUSTERING AND SEGMENTATION METHODS **9**

Introduction to clustering, Types of Clustering, Agglomerative clustering, K-means clustering, Mean Shift clustering, K-means clustering application study, Introduction to recognition, K-nearest neighbor algorithm, KNN Application case study, Principal component analysis (PCA), PCA Application case study in Feature Selection for Robot Guidance. CO2

UNIT - III FUZZY LOGIC **9**

Introduction to Fuzzy Sets, Classical and Fuzzy Sets, Overview of Classical Sets, Membership Function, Fuzzy rule generation, Fuzzy rule generation, Operations on Fuzzy Sets, Numerical examples, Fuzzy Arithmetic, Numerical examples, Fuzzy Logic, Fuzzification, Fuzzy Sets, Defuzzification, Application Case Study of Fuzzy Logic for Robotics Application CO3

UNIT - IV NEURAL NETWORKS **9**

Mathematical Models of Neurons, ANN architecture, Learning rules, Multi-layer Perceptrons, Back propagation, Introduction of Neuro-Fuzzy Systems, Architecture of Neuro Fuzzy Networks, Application Case Study of Neural Networks in Robotics CO4

UNIT - V RNN AND REINFORCEMENT LEARNING **9**

Unfolding Computational Graphs, Recurrent neural networks, Application Case Study of recurrent networks in Robotics, Reinforcement learning, Examples for reinforcement learning, Markov decision process, Major components of RL, Q-learning. Application Case Study of reinforcement learning in Robotics CO5

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Understand basic machine learning techniques such as regression, classification
CO2	Understand about clustering and segmentation
CO3	Model a fuzzy logic system with fuzzification and defuzzification
CO4	Understand the concepts of neural networks and neuro fuzzy networks.
CO5	Gain knowledge on Reinforcement learning.

TEXT BOOKS:

1. Micheal Negnevitsky, Artificial Intelligence: A Guide to Intelligent Systems, 3rd Edition, Addision Wesley, England, 2011

REFERENCE BOOKS:

1. Bruno Siciliano, Oussama Khatib, "Handbook of Robotics", 2016 2nd Edition, Springer
2. Simon Haykin, "Neural Networks and Learning Machines: A Comprehensive Foundation", Third Edition, Pearson, delhi 2016.
3. Timothy J Ross, "Fuzzy Logic with Engineering Applications", 4th Edition, Chichester, 2011, Sussex Wiley.

AD1001 CONSTITUTION OF INDIA

L	T	P	C
2	0	0	0

OBJECTIVES

- Teach history and philosophy of Indian Constitution.
- Describe the premises informing the twin themes of liberty and freedom from a civil rights perspective.
- Summarize powers and functions of Indian government.
- Explain emergency rule.
- Explain structure and functions of local administration.

UNIT - I INTRODUCTION **9**

History of Making of the Indian Constitution - Drafting Committee - (Composition & Working) - Philosophy of the Indian Constitution-Preamble-Salient Features CO1

UNIT - II CONTOURS OF CONSTITUTIONAL RIGHTS & DUTIES **9**

Fundamental Rights - Right to Equality - Right to Freedom - Right against Exploitation Right to Freedom of Religion - Cultural and Educational Rights - Right to Constitutional Remedies Directive Principles of State Policy - Fundamental Duties CO2

UNIT - III ORGANS OF GOVERNANCE **9**

Parliament – Composition - Qualifications and Disqualifications - Powers and Functions - Executive President – Governor - Council of Ministers - Judiciary, Appointment and Transfer of Judges, Qualifications Powers and Functions CO3

UNIT - IV EMERGENCY PROVISIONS **9**

Emergency Provisions - National Emergency, President Rule, Financial Emergency CO4

UNIT - V LOCAL ADMINISTRATION **9**

District's Administration head - Role and Importance – Municipalities – Introduction - Mayor and role of Elected Representative - CEO of Municipal Corporation - Pachayati raj - Introduction - PRI - Zila Pachayat-Elected officials and their roles - CEO Zila Pachayat - Position and role-Block leve - lOrganizational Hierarchy (Different departments) - Village level - Role of Elected and Appointed officials - Importance of grass root democracy CO5

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 Understand history and philosophy of Indian Constitution.

CO2 Understand the premises informing the twin themes of liberty and freedom from a civil rights perspective.

CO3 Understand powers and functions of Indian government.

CO4 Understand emergency rule.

CO5 Understand structure and functions of local administration.

TEXT BOOKS:

1. Basu D D, Introduction to the Constitution of India, Lexis Nexis, 2015.
2. Busi S N, Ambedkar B R framing of Indian Constitution, 1st Edition, 2015.
3. Jain M P, Indian Constitution Law, 7th Edn., Lexis Nexis, 2014.
4. The Constitution of India (Bare Act), Government Publication,1950

AD1002	VALUE EDUCATION	L	T	P	C
		2	0	0	0

OBJECTIVES

- Develop knowledge of self-development
- Explain the importance of Human values
- Develop the overall personality through value education
- Overcome the self-destructive habits with value education
- Interpret social empowerment with value education

UNIT - I INTRODUCTION TO VALUE EDUCATION **9**

Values and self-development –Social values and individual attitudes, Work ethics, Indian vision of humanism, Moral and non-moral valuation, Standards and principles, Value judgments CO1

UNIT - II IMPORTANCE OF VALUES **9**

Importance of cultivation of values, Sense of duty, Devotion, Self-reliance, Confidence, Concentration, Truthfulness, Cleanliness. Honesty, Humanity, Power of faith, National Unity, Patriotism, Love for nature, Discipline CO2

UNIT - III INFLUENCE OF VALUE EDUCATION **9**

Personality and Behaviour development - Soul and Scientific attitude. Positive Thinking, Integrity and discipline, Punctuality, Love and Kindness, Avoid fault Thinking, Free from anger, Dignity of labour, Universal brotherhood and religious tolerance, True friendship Happiness Vs suffering, love for truth. CO3

UNIT - IV REINCARNATION THROUGH VALUE EDUCATION **9**

Aware of self-destructive habits, Association and Cooperation, Doing best for saving nature Character and Competence - Holy books vs Blind faith, Self-management and Good health, Science of reincarnation CO4

UNIT - V VALUE EDUCATION IN SOCIAL EMPOWERMENT **9**

Equality, Nonviolence, Humility, Role of Women, All religions and same message, Mind your Mind, Self-control, Honesty, Studying effectively CO5

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Gain knowledge of self-development
CO2	Learn the importance of Human values
CO3	Develop the overall personality through value education
CO4	Overcome the self-destructive habits with value education
CO5	Interpret social empowerment with value education

TEXT BOOKS:

1. Chakroborty , S.K. “Values and Ethics for Organizations Theory and Practice”, Oxford University Press, New Delhi

AD1003 PEDAGOGY STUDIES

L	T	P	C
2	0	0	0

OBJECTIVES

- Understand the methodology of pedagogy.
- Compare pedagogical practices used by teachers in formal and informal classrooms in developing countries.
- Infer how can teacher education (curriculum and practicum) and the school curriculum and guidance materials best support effective pedagogy.
- Illustrate the factors necessary for professional development.
- Identify the Research gaps in pedagogy.

UNIT - I INTRODUCTION AND METHODOLOGY **9**

Aims and rationale, Policy background, Conceptual framework and terminology - Theories of learning, Curriculum, Teacher education - Conceptual framework, Research questions - Overview of methodology and searching. CO1

UNIT - II THEMATIC OVERVIEW **9**

Pedagogical practices are being used by teachers in formal and informal classrooms in developing countries - Curriculum, Teacher education. CO2

UNIT - III EVIDENCE ON THE EFFECTIVENESS OF PEDAGOGICAL PRACTICES **9**

Methodology for the in-depth stage: quality assessment of included studies - How can teacher education (curriculum and practicum) and the school curriculum and guidance materials best support effective pedagogy? - Theory of change - Strength and nature of the body of evidence for effective pedagogical practices - Pedagogic theory and pedagogical approaches - Teachers’ attitudes and beliefs and Pedagogic strategies. CO3

UNIT - IV PROFESSIONAL DEVELOPMENT **9**

Professional development: alignment with classroom practices and follow up support - Peersupport - Support from the head teacher and the community - Curriculum and assessment – Barriers to learning: limited resources and large class sizes CO4

UNIT - V RESEARCH GAPS AND FUTURE DIRECTIONS **9**

Research design – Contexts – Pedagogy - Teacher education - Curriculum and assessment - Dissemination and research impact. CO5

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 Understand the methodology of pedagogy

CO2 Understand Pedagogical practices used by teachers in formal and informal classrooms in developing countries.

CO3 Find how can teacher education (curriculum and practicum) and the school curriculum and guidance materials best support effective pedagogy.

CO4 Know the factors necessary for professional development.

CO5 Identify the Research gaps in pedagogy.

TEXT BOOKS:

1. Ackers J, Hardman F (2001) Classroom interaction in Kenyan primary schools, Compare, 31 (2): 245-261.
2. Agrawal M (2004) Curricular reform in schools: The importance of evaluation, Journal of Curriculum Studies, 36 (3): 361-379.

4. Akyeampong K, Lussier K, Pryor J, Westbrook J (2013) Improving teaching and learning of basic maths and reading in Africa: Does teacher preparation count? International Journal Educational Development, 33 (3): 272–282.
5. Alexander RJ (2001) Culture and pedagogy: International comparisons in primary education. Oxford and Boston: Blackwell.

AD1004	STRESS MANAGEMENT BY YOGA	L	T	P	C
		2	0	0	0

OBJECTIVES

- Develop healthy mind in a healthy body thus improving social health also improve efficiency
- Invent Do’s and Don’t’s in life through Yam
- Categorize Do’s and Don’t’s in life through Niyam
- Develop a healthy mind and body through Yog Asans
- Invent breathing techniques through Pranayam

UNIT - I INTRODUCTION TO YOGA **9**

Definitions of Eight parts of yog.(Ashtanga) CO1

UNIT - II YAM **9**

Do`s and Don’ts in life. Shaucha, santosh, tapa, swadhyay, ishwarpranidhan CO2

UNIT - III NIYAM **9**

Do `s and Don'ts in life. Ahinsa, satya, astheya, bramhacharya and aparigraha CO3

UNIT - IV ASAN **9**

Various yog poses and their benefits for mind & body CO4

UNIT - V PRANAYAM **9**

Regularization of breathing techniques and its effects-Types of pranayam CO5

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 Develop healthy mind in a healthy body thus improving social health also improve efficiency

CO2 Learn Do's and Don't's in life through Yam

CO3 Learn Do's and Don't's in life through Niyam

CO4 Develop a healthy mind and body through Yog Asans

CO5 Learn breathing techniques through Pranayam

TEXT BOOKS:

1. "Rajayoga or conquering the Internal Nature" by Swami Vivekananda, Advaita Ashrama (Publication Department), Kolkata
2. 'Yogic Asanas for Group Tarining-Part-I" : Janardan Swami Yogabhyasi Mandal, Nagpur

AD1005	PERSONALITY DEVELOPMENT THROUGH LIFE ENLIGHTENMENT SKILLS	L	T	P	C
		2	0	0	0

OBJECTIVES

- Develop basic personality skills holistically
- Develop deep personality skills holistically to achieve happy goals
- Rewrite the responsibilities
- Reframe a person with stable mind

UNIT - I NEETISATAKAM-HOLISTIC DEVELOPMENT OF PERSONALITY - I **9**

Verses - 19,20,21,22 (wisdom) – Verses - 29,31,32 (pride & heroism) – Verses - 26,28,63,65 (virtue) CO1

UNIT - II NEETISATAKAM-HOLISTIC DEVELOPMENT OF PERSONALITY – II **9**

Verses- 52,53,59 (dont's) - Verses- 71,73,75,78 (do's) CO2

UNIT - III ORGANS OF GOVERNANCE **9**

Shrimad Bhagwad Geeta: Chapter 2-Verses 41, 47,48 - Chapter 3-Verses 13, 21, 27, 35 Chapter6-Verses 5,13,17,23, 35 - Chapter 18-Verses 45, 46, 48 CO3

UNIT - IV EMERGENCY PROVISIONS **9**

Statements of basic knowledge - Shrimad Bhagwad Geeta: Chapter2-Verses 56, 62, 68 Chapter12 -Verses 13, 14, 15, 16,17, 18 CO4

UNIT - V LOCAL ADMINISTRATION **9**

Chapter 2 - Verses 17, Chapter 3 - Verses 36, 37, 42 - Chapter 4 - Verses 18, 38, 39 Chapter18 - Verses 37, 38, 63 CO5

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 Develop basic personality skills holistically

CO2 Develop deep personality skills holistically to achieve happy goals

CO3 Rewrite the responsibilities

CO4 Reframe a person with stable mind, pleasing personality and determination

CO5 Awaken wisdom in students

TEXTBOOKS:

1. Gopinath, Rashtriya Sanskrit Sansthanam P, Bhartrihari's Three Satakam, Niti-sringarvairagya, New Delhi, 2010
2. Swami Swarupananda, Srimad Bhagavad Gita, Advaita Ashram, Publication Department, Kolkata, 2016.

AD1006 UNNAT BHARAT ABHIYAN

L	T	P	C
2	0	0	0

OBJECTIVES

- To engage the students in understanding rural realities
- To identify and select existing innovative technologies, enable customization of technologies, or devise implementation method for innovative solutions, as per the local needs.
- To leverage the knowledge base of the institutions to devise processes for effective implementation of various government programmes
- To understand causes for rural distress and poverty and explore solutions for the same
- To apply classroom knowledge of courses to field realities and thereby improve quality of learning

UNIT - I QUALITY OF RURAL LIFE IN VILLAGES AND UNNAT BHARAT ABHIYAN **9**

Introduction to Unnat Bharat Abhiyan - concept, scope and objectives, rural life, rural society, cast and gender relations, rural values with respect to community, nature and resources, elaboration of "Soul of India lies in villages" – (Gandhi Ji), Rural infrastructure, problems in rural area.
Assignment: Prepare a map (Physical , visual and digital) of the village you visited and write an essay about inter-family relation in that village. CO1

UNIT - II RURAL ECONOMY AND LIVELIHOOD **9**

Agriculture, farming, land ownership pattern, water management, animal husbandry, non-farm livelihoods and artisans, rural entrepreneurs, rural market .
Assignment**:** Describe your analysis of rural household economy, it's challenges and possible pathways to address them. Group discussion in class- (4) Field visit 3. CO2

UNIT - III RURAL INSTITUTIONS **9**

History of Rural Development, Traditional rural organizations, Self Help Groups, Gram Swaraj and 3- Tier Panchayat Raj Institutions (Gram Sabha, Gram Panchayat, Standing Committee), local civil society, local administration. Introduction to Constitution, Constitutional Amendments in Panchayati Raj – Fundamental Rights and Directive Principles. CO3

Assignment: Panchayati Raj institutions in villages? What would you suggest to improve their effectiveness? Present a case study (written or audio-visual). Field Visit – 4.

UNIT - IV RURAL DEVELOPMENT PROGRAMMES **9**

National programmes - Sarva Shiksha Abhiyan, Beti Bachao, Beti Padhao, Ayushman Bharat, Swatchh Bharat, PM Awass Yojana, Skill India, Gram Panchayat Decentralised Planning, NRLM, MNREGA, etc.

Written Assignment: Describe the benefits received and challenges faced in the delivery of one of these programmes in the rural community, give suggestions about improving implementation of the programme for the rural poor. CO4

UNIT - V FIELD WORK **9**

Each student selects one programme for field visit Field based practical activities:

- Interaction with SHG women members, and study of their functions and challenges; planning for their skill building and livelihood activities
- Visit MGNREGS project sites, interact with beneficiaries and interview functionaries at the work site
- Field visit to Swachh Bharat project sites, conduct analysis and initiate problem solving measures
- Conduct Mission Antyodaya surveys to support under Gram Panchayat Development Plan(GPDP)
- Interactive community exercise with local leaders, panchayat functionaries, grass-root officials and local institutions regarding village development plan preparation and resource mobilization
- Visit Rural Schools I mid-day meal centres, study academic and infrastructural resources and gaps
- Participate in Gram Sabha meetings, and study community participation CO5
- Associate with Social audit exercises at the Gram Panchayat level, and interact with programme beneficiaries
- Attend Parent Teacher Association meetings, and interview school drop outs
- Visit local Anganwadi Centre and observe the services being provided
- Visit local NGOs, civil society organisations and interact with their staff and beneficiaries.
- Organize awareness programmes, health camps, Disability camps and cleanliness camps
- Conduct soil health test, drinking water analysis, energy use and fuel efficiency surveys
- Raise understanding of people's impacts of climate change, building up community's disaster preparedness
- Organise orientation programmes for farmers regarding organic cultivation, rational use of irrigation and fertilizers and promotion of traditional species of crops and plants
- Formation of committees for common property resource management, village pond maintenance and fishing.

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Able to understand of rural life, culture and social realities
CO2	Able to understand the concept of measurement by comparison or balance of parameters.
CO3	Able to develop a sense of empathy and bonds of mutuality with local community
CO4	Able to appreciate significant contributions of local communities to Indian society and economy
CO5	Learn to value the local knowledge and wisdom of the community

TEXT BOOKS:

1. Singh, Katar, Rural Development Principles, Policies and Management, Sage Publications, New Delhi, 2015
2. A Hand book on Village Panchayat Administration, Rajiv Gandhi Chair for Panchayati Raj Studies, 2002
3. United Nations, Sustainable Development Goals, 2015 un.org/sdgs

REFERENCE BOOKS:

2. Unnat Bharat Abhiyan Website : www.unnatbharatabhiyan.gov.in

AD1007	ESSENCE OF INDIAN KNOWLEDGE TRADITION	L	T	P	C
		2	0	0	0

OBJECTIVES

The course will introduce the students to

- Get a knowledge about Indian Culture
- Know Indian Languages and Literature religion and philosophy and the fine arts in India
- Explore the Science and Scientists of Ancient, Medieval and Modern India
- Understand education systems in India

UNIT - I INTRODUCTION TO CULTURE	**9**	
Culture, civilization, culture and heritage, general characteristics of culture, importance of culture in human literature, Indian Culture, Ancient India, Medieval India, Modern India		CO1
UNIT - II INDIAN LANGUAGES AND LITERATURE	**9**	
Indian Languages and Literature – I: Languages and Literature of South India, – Indian Languages and Literature – II: Northern Indian Languages & Literature		CO2
UNIT - III RELIGION AND PHILOSOPHY	**9**	
Major religions practiced in India and Understanding their Philosophy – religious movements in Modern India (Selected movements only)		CO3
UNIT - IV FINE ARTS IN INDIA (ART, TECHNOLOGY& ENGINEERING)	**9**	
Indian Painting, Indian handicrafts, Music, divisions of Indian classic music, modern Indian music, Dance and Drama, Indian Architecture (ancient, medieval and modern), Science and Technology in India, development of science in ancient, medieval and modern India		CO4
UNIT - V EDUCATION SYSTEM IN INDIA	**9**	
Education in ancient, medieval and modern India, aims of education, subjects, languages, Scienceand Scientists of Ancient India, Science and Scientists of Medieval India, Scientists of Modern India		CO5

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 Understand philosophy of Indian culture.

CO2 Distinguish the Indian languages and literature.

CO3 Learn the philosophy of ancient, medieval and modern India.

CO4 Acquire the information about the fine arts in India.

CO5 Know the contribution of scientists of different eras.

TEXT BOOKS:

1. Kapil Kapoor, “Text and Interpretation: The India Tradition”,ISBN: 81246033375, 2005
2. “Science in Samskrit”, Samskrita Bharti Publisher, ISBN 13: 978-8187276333, 2007
3. NCERT, “Position paper on Arts, Music, Dance and Theatre”, ISBN 81-7450 494-X, 200
4. Narain, “Examinations in ancient India”, Arya Book Depot, 1993
5. Satya Prakash, “Founders of Sciences in Ancient India”, Vijay Kumar Publisher, 1989
6. M. Hiriyanna, “Essentials of Indian Philosophy”, Motilal Banarsidass Publishers, ISBN 13: 978-8120810990, 2014.

AD1008 SANGA TAMIL LITERATURE APPRECIATION

L	T	P	C
2	0	0	0

OBJECTIVES

The main learning objective of this course is to make the students an appreciation for:

- Introduction to Sanga Tamil Literature.
- ‘Agathinai’ and‘Purathinai’ in Sanga Tamil Literature.
- ‘Attruppadai’ in Sanga Tamil Literature.
- ‘Puranaanuru’ in Sanga Tamil Literature.
- ‘Pathitrupaththu’ in Sanga Tamil Literature.

UNIT - I SANGA TAMIL LITERATURE – AN INTRODUCTION **9**

Introduction to Tamil Sangam - History of Tamil Three Sangams - Introduction to Tamil Sangam Literature - Special Branches in Tamil Sangam Literature- Tamil Sangam Literature’s Grammar Tamil Sangam Literature’s parables. CO1

UNIT - II ‘AGATHINAI’AND‘PURATHINAI’ **9**

Tholkappiyar’s Meaningful Verses - Three literature materials - Agathinai’s message - History of culture from Agathinai – Purathinai - Classification - Message to Society from Purathinai. CO2

UNIT - III ‘ATTRUPPADAI’ **9**

Attruppadai Literature – Attruppadaiin ‘Puranaanuru’ – Attruppadaiin ‘Pathitrupaththu’ - Attruppadaiin ‘Paththupaattu’. CO3

UNIT - IV ‘PURANAANURU’ **9**

Puranaanuru on Good Administration, Ruler and Subjects - Emotion & its Effect in Puranaanuru. CO4

UNIT - V ‘PATHITRUPATHTHU’ **9**

Pathitrupaththuin ‘Ettuthogai’ - Pathitrupaththu’s Parables - Tamildynasty: Valor, Administration, Charity in Pathitrupaththu - Mesaage to Society from Pathitrupaththu. CO5

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 Appreciate and apply the messages in Sanga Tamil Literature in their life.
CO2 Differentiate ‘Agathinai’ and ‘Purathinai’in their personal and societal life.
CO3 Appreciate and apply the messages in‘ Attruppadai’ in their personal and societal life.
CO4 Appreciate and apply the messages in‘ Puranaanuru’ in their personal and societal life.
CO5 Appreciate and apply the messages in‘ Pathitrupaththu’ in their personal and societal life.

TEXT BOOKS:

1. Sivaraja Pillai, The Chronology of the Early Tamils, Sagwan Press, 2018.
2. Hank Heifetz and George L. Hart, The Purananuru, Penguin Books, 2002.
3. Kamil Zvelebil, The Smile of Murugan: OnTamil Literature of South India, Brill Academic Pub,1997.
4. George L. Hart, Poets of the Tamil Anthologies: Ancient Poems of Love and War, Princeton University Press, 2015.
5. Xavier S. Thani Nayagam, Landscape and poetry: A Study of Nature in Classical Tamil Poetry, Asia Pub. House, 1967.

MV0001	3D PRINTING	L	T	P	C
		1	0	2	2

OBJECTIVES

- To broaden and deepen the principle methods, capabilities in analytical and experimental research methods in rapid prototyping and its applications.
- To be familiar with characteristics of different materials used in additive manufacturing.

UNIT - I INTRODUCTION 5

Need for the compression in product development, history of RP systems, survey of applications, growth of RP industry, classification of RP systems, Materials for Additive Manufacturing Technology, Data Processing for additive manufacturing technology: CAD model preparation – Part orientation and support generation – Model Slicing – Tool path Generation – Software for Additive Manufacturing Technology: MIMICS, MAGICS – Benefits.

UNIT - II LIQUID BASED AND SOLID BASED RAPID PROTOTYPING SYSTEMS 10

Stereolithography Apparatus, Fused deposition modeling, Laminated object manufacturing: Working principles, details of processes, products, materials, advantages, limitations and applications – Case studies

UNIT - III POWDER BASED RAPID PROTOTYPING SYSTEMS 10

Selective Laser Sintering, Laser Engineered Net Shaping, Selective Laser Melting, Electron Beam Melting: Processes, materials, products, advantages, applications and limitations – Case Studies.

UNIT - IV RAPID MANUFACTURING PROCESS OPTIMIZATION 10

Factors influencing accuracy, data preparation errors, part building errors, errors in finishing, influence of part build orientation.

UNIT - V MEDICAL AND BIO – ADDITIVE MANUFACTURING 10

Customized implants and prosthesis: Design and production, Bio-Additive Manufacturing – Computer Aided Tissue Engineering (CATE) – Case studies.

TOTAL PERIODS: 45

COURSE OUTCOME

Upon completion of the course, students will be able to

Understand the principle methods, area of usage, possibilities and limitations as well as environmental effects of the Rapid Prototyping Technologies

REFERENCE BOOKS

1. Pham D T and Dimov S S, "Rapid MANUFACTURING", Verlag, 2001.
2. Rapid Prototyping and Engineering applications: A tool box for prototype development, Lioy W. Liou, Frank W. Liou, CRC Press, 2007.
3. Rapid Prototyping: Theory and Practice, Ali K. Kamrani, Emad Abouel Nasr, Springer, 2006.
4. Chua C.K., Leong K.F., and Lim C.S., "Rapid prototyping: Principles and applications", Third Edition, World Scientific Publishers, 2010.

MV0002	ENTREPRENEURSHIP IN SOLAR PV TECHNOLOGY	L	T	P	C
		1	0	2	2

OBJECTIVES

- Understanding the design and installation of solar PV systems for residential, industrial, commercial, and agricultural locations.
- To comprehend the design of on-grid, off-grid, and hybrid solar PV systems
- Government regulations and procedures for startups to comply with the Ministry of Corporate Affairs in the Solar PV sector.

UNIT - I SOLAR PV DESIGN AND INSTALLATION COMPONENTS 9

Renewable and Non-Renewable Energy Sources, Electricity Fundamentals, Overview of Solar Photovoltaic Cells- Building Blocks -Types-Modules- and Array Configuration-Imaging Objects-Tracking Device, Invertors-On Grid- Off Grid-Single Phase-Three Phase and Balance of Components

UNIT - II SOLAR PV SYSTEM DESIGN TECHNIQUES 9

Solar PV system Design Software for Solar system design, Irradiance, PV design and Orientation, Performance, Simulation, Tilting, Tracking, Shadow Effects, Load Calculation and Analysis. TNEB tariff calculation-Introduction to concentrated PV Cell

UNIT - III SOLAR PANEL MOUNTING STRUCTURE 9

Essential of Structures, Structure Materials- Aluminum –MS, GI, SS. Module Mounting Structures and Types for Different Roof, Ground-mounted and Vehicle-mounted PV Systems. Safety Measures, Types of Solar Batteries and Inverters, Grid Tie Connection Procedures in Tamil Nadu.

UNIT - IV APPLICATIONS OF SOLAR PV SYSTEM 9

Design and Development of Charge Controller, DC to AC converter, Solar Study Lamp, Arduino based Sun Tracking PV System, Design of Solar powered Mobile Charger, Solar Water Pumping System, Solar Street Light, Solar PV Plant Design for Industry, Simulation of Solar PV cell.

UNIT - V DESIGN OF SOLAR PV PLANT FOR INDUSTRIAL APPLICATIONS 9

Concept, Functions and Importance, Educational Impact, Entrepreneurship Schemes for Students and Startups, Startup India, How to Start a Company, Funding Schemes, Business Opportunity: Identification, Evaluation and Selection.

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

- Design and development of fundamental solar PV components
- Design techniques for solar PV technology
- Design and development of solar panel mounting structures
- Categorical application of solar PV technology
- Design and development of solar PV technology for industrial applications

TEXT BOOKS

1. Handbook for Solar Photovoltaic (PV) Systems, "Installation, Operation & Maintenance of Solar PV Microgrid Systems", A Handbook for Trainers.
2. Photovoltaic Systems Analysis and Design", A.K. Mukherjee and Nivedita Thakur

REFERENCE BOOKS

1. Solar Photovoltaic Technology and Systems: A Manual for Technicians, Trainers and Engineers Kindle Edition by Chetan Singh Solanki
2. Design and Installation of a Grid-Connected PV System" John Christer Sivertsen Petter Soyland

MV0003 ELECTRICAL HARNESS AND ROUTING DESIGN FOR ELECTRIC VEHICLES

L	T	P	C
1	0	2	2

OBJECTIVES

- Create and modify aerodynamic surfaces
- Create electrical parts and layout design
- Proficiency in electrical harness installation and flattening.

UNIT - I 3D MODELLING FUNDAMENTAL FOR ELECTRICAL HARNESS DESIGN 9

Sketcher Mode and Orientation, Sketch workbench Tool bars are Profile, Operation, Constraint. Pad, Pocket, Shaft, Groove, Hole, Chamfer, Round, Stiffener, Shell, Mirror, Pattern, Rib, slot, Multi Section Solid, Removed Multi Section Solid, Point, Line and Plane.

UNIT - II ASSEMBLY & DRAFTING FUNDAMENTAL FOR ELEC HARNESS DESIGN 9

Insert Component, Manipulation, Snapping, checking degree of freedom, Fix Constraints, Coincidence, Contact, Offset, Angular, Fix Together, Quick Constraint, Change Constraint, Reuse Pattern, Replace Component, Fast Multi Instant, Define Multi Instant, New Part Creation and New Product Creation, Introduction to Drafting, New Sheet Creation, Sheet Properties, View Creation, Dimension creation, Dimension Properties, Text Creation, Table Creation and Balloon Creation

UNIT - III WIREFRAME AND SURFACE DESIGNFUNDAMENTALS 9

Extrude, Revolve, Sphere, Cylinder, Offset, Multi Section Surface, Sweep, Blend, Join, Healing, Untrim, Disassemble, Split, Trim, Boundary, Extract, Extrapolate, Project, intersect, Circle, and Spline.

UNIT - IV CONVERSION - MECHANICAL PARTS TO ELECTRICAL COMPONENTS 9

Electrical Device Definition Define Mounting equipment, Define Equipment, Define shell, Define Connector, Define Contact, Define Back Shell, Define Filler Plug Define Support Part, and Define protection part. Electrical Device Connection Point Definition Define Cavity, Define Termination, Define Connector Connection Point, Define Bundle Connection Point, Define Connector Connection Point, Define Back Shell Connection Point, Define Shell Connection Point and Define Cavity Connection point, Connect Electrical Device and Disconnect Electrical Device.

UNIT - V ELECTRICAL LAYOUT DESIGN (INSTALLATION & FLATTENING) 9

Geometrical Bundle, Multibranchable Document, Local Slack, and Protective Covering. Management Link, Unlink, Add Support, Remove Support, Add Branch Point, Remove Branch Point, and Delete Special—introduction to electrical harness flattening Flatten Harness Flattening Parameters, Extract and Flatten. Manipulator Arrange Junction Umbrella Like, arrange junction Equal Angle, Rotate, Bend, Quick Roll, Roll, Scale, and Straighten

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, students will be able to

- Proficiency in 3D modeling design and development for wire harness design
- Proficiency in assembly and drafting modules for wire harness design
- Proficiency in wireframe and surface modeling design for wire harness design
- Assemblage of mechanical and electrical components for wire harness design
- Design and development of electrical layout design for wire harness design

TEXT BOOKS

1. CATIA V5 for Designers by Sham Tickoo
2. Mastering Automotive Wiring Harness in CATIA V5 - Abdellatif M. Sadeq Qatar Naval Academy

PROGRESS THROUGH KNOWLEDGE

FACULTY OF MANAGEMENT SCIENCES

MASTER OF BUSINESS ADMINISTRATION (INTEGRATED) -5 YEARS

CHOICE BASED CREDIT SYSTEM

PROGRAMME EDUCATIONAL OBJECTIVES (PEOs):

I. To display competencies and knowledge in key business functional areas including finance, marketing, operations and human resource.
II. To prepare for a successful career with effective communication skills, teamwork skills and work with values that meet the diversified needs of industry.
III. To provide management tool to identify, analyze, and create business opportunities and also solve business problems.
IV. To develop an understanding of the diverse and rapidly changing global business environment.
V. To inspire and make them practice ethical standards in business.

PROGRAMME OUTCOMES (POs):

1. Ability to apply management theories, concepts and models to make sound and effective business decisions.
2. Ability to identify, analyse and solve complex managerial issues by using quantitative methods, statistical analyses and information technology.
3. Ability to communicate and negotiate effectively, to achieve organizational and individual goals.
4. Ability to upgrade their professional and managerial skills in their workplace.
5. Ability to develop a systematic understanding of environmental factors and its impact on business.
6. Ability to apply analytical skills to address the changing dynamics of business.
7. Ability to understand one's individual competencies to set achievable targets and complete them.
8. Ability to engage in continuing professional development and life-long learning.
9. Ability to take-up challenging assignments.
10. Ability to enhance financial literacy.
11. Ability to act with an informed awareness of social issues and contribute towards the societal benefit.
12. Ability to develop an understanding of ethical responsibility.

PROGRAMME SPECIFIC OUTCOMES (PSOs)

1. Ability to gain knowledge, expertise and frame of mind to become a successful manager.
2. Ability to deliver socially acceptable solutions to managerial problems with the application of

contemporary techniques for sustainable development.
3. Ability to apply the knowledge of ethical principles required to work in a team as well as to lead a team.

Summer internship – minimum of 4 weeks of internship

The report along with the company certificate should be submitted within the two weeks of the reopening date of 9th semester. The report should be around 40 pages.

Creativity and Innovation:

Students will undergo the entire programme similar to a Seminar. It is activity based course. Students will undergo the programme with both theoretical and practical content. Each student will be required to come out with innovative products or services. This will be evaluated by the faculty member(s) handling the course and the consolidated marks can be taken as the final mark. No end semester examination is required for this course

1	PCC	Professional Core Course
2	PEC	Professional Elective Course
3	EEC	Employability Enhancement Course
4	VAC	Value added Course

SEMESTER I

MI1101	FOUNDATION OF MANAGEMENT	L	T	P	C
		3	0	0	3

COURSE OBJECTIVES

- To expose the students to the basic concepts of management.
- To enable the students to understand the management functions of organization.

UNIT I INTRODUCTION **9**

Nature and process of management, basic managerial roles and skills, nature of managerial work; Management vs. Administration, Management as a Science or an art, Management as a Profession, Professional Management in India; Development of Management thought: Henri Fayol, F W Taylor, Elton Mayo and Maslow; System and contingency approach. **CO1**

UNIT II PLANNING AND DECISION MAKING **9**

Planning and decision making – concept, purpose and process of planning, kinds of plans, strategies, policies and planning, premises, goal setting, MBO. Decision making – nature and process, types of managerial decisions, decision making conditions, forms of group decision making in organization. **CO2**

UNIT III ORGANIZING **9**

Organizing–Concept, Steps and elements of organizing function, basis of departmentation, distribution of authority, Types of organization structure, Delegation and Decentralization. **CO3**

UNIT IV DIRECTION **9**

Leadership – nature and significance, leading and managing, leadership styles, leadership theories. **CO4**

UNIT V CONTROL **9**

Management Control; nature, purpose and process of controlling, kinds of control system, prerequisites of effective control system, resistance to control. **CO5**

TOTAL : 45 PERIODS

TEXT BOOKS

1. Koontz & Ramachandra, Essentials of Management, Tata McGrawHill.
2. Stoner, Freeman and Gilbert, Jr. Management, Pearson Education, New Delhi

REFERENCE BOOKS

1. Weihrich, Heinz and Harold Koontz, Management: A Global Perspective, Tata Mc GrawHill
2. Dinhar Pagan, Chopra, Principles of Management.

COURSE OUTCOMES:

Upon completion of the course, students will be able to

CO1 To Understand basic terminology and concepts for Management theory.

CO2 To proficient in case study analysis and writing for Management applications.

CO3 To demonstrate the ability to apply selected Management frameworks to real world business situations for problem-solving purposes.

CO4	To demonstrate business caliber online communications and netiquette skills via proficient participation in group discussion forums.
CO5	To apply the concepts to provide business solution

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAMME OUTCOMES (POs)												PROGRAMME SPECIFIC OUTCOMES (PSOs)		
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2	PSO 3
CO1	3	3	1	-	-	-	-	-	-	-	-	-	2	3	3
CO2	3	2	2	-	-	-	-	-	-	-	-	-	2	3	3
CO3	3	3	3	-	-	-	-	-	-	-	-	-	2	3	3
CO4	3	3	3	-	-	-	-	-	-	-	-	-	2	3	3

MI1102	**MANAGERIAL ECONOMICS - I**	**L**	**T**	**P**	**C**
		3	0	0	3

COURSE OBJECTIVES

- To expose the basic principles of microeconomic theory.
- To illustrate how microeconomic concepts can be applied to analyze real-life situations.

UNIT I INTRODUCTION **9**

Meaning, Nature, Scope and Limitations of Business Economics – Micro & Macro Economics. – Productive efficiency Vs. economic efficiency – Economic growth & stability. **CO1**

UNIT II DEMAND AND SUPPLY **9**

Concept of Demand- Elasticity of Demand - Types and Determinants - Concepts of Supply –Elasticity of Supply - Types and Determinants. **CO2**

UNIT III PRODUCTION **9**

Introduction to production process, Short run production function: law of variable Proportions- long run production. CO3

UNIT IV COST AND REVENUE **9**

Cost Analysis: Fixed, Variable and Total Cost, Curves, Average and Marginal Costs, Long Run Cost Analysis: Economies and Diseconomies of Scale and Long Run Average and Marginal Cost Curves. Revenue Concepts – Total Revenue, Marginal Revenue, Average Revenue and their relationship. **CO4**

UNIT V MARKET STRUCTURE **9**

Price and output decisions under different market structures: Price and output decisions under perfect competition, monopoly and monopolistic competition - pricing under oligopoly – kinked demand curve, Factor Market. **CO5**

TOTAL : 45 PERIODS

TEXT BOOKS

1. H.L. Ahuja Principles of Economics -, Sultan Chand, Nov. 2007.
2. Yogesh Maheswari, Managerial Economics, 3rd Edition, Phi Learning, NewDelhi, 2012

REFERENCE BOOKS

1. Richard Lipsey and Alec Charystal, Economics, 12th edition, Oxford, University Press, New Delhi, 2011.
2. Karl E. Case and Ray C. fair, Principles of Economics, 8th edition, Pearson, Education Asia, New Delhi, 2002.
3. Diwedi. D.N. Managerial Economics, 7th Edition, Vikas Publishing House Pvt. Ltd., 2009

COURSE OUTCOMES:

Upon completion of the course, students will be able to

CO1 To understand the fundamental concept of Business Economics.

CO2 To understand the concept and determinant of demand and supply.

CO3 To understand production process and to analyses the short run and long run production function

CO4 To understand cost and revenue concepts & economies and diseconomies of Scale.

CO5 To analyse the price output determination under different market structures & demand for and supply of different types of factor market.

CO5	2	2	1	-	3	2	-	-	-	-	-	-	-	-	-

MI1103 PRINCIPLES OF ACCOUNTING

L	T	P	C
3	0	0	3

COURSE OBJECTIVES:

- To understand the basic accounting concepts.

UNIT I INTRODUCTION **9**

Introduction to Financial, Cost and Management Accounting- Objectives of Financial Accounting– Accounting Principles ,Concepts and Conventions–Book keeping and Accounting–Accounting System–Preparation of Journal, ledger, Cash Book and Trial Balance–Errors disclose and not disclosed by trial Balance. **CO1**

UNIT II FINAL ACCOUNTS **9**

Preparation of Final Accounts of Sole Trading Firms–with adjustments (Simple adjustments only). **CO2**

UNIT III RECTIFICATION OF ERRORS &DEPRECIATION **9**

Rectification of Errors including preparation of Suspense Account– Depreciation–Meaning and Types Methods of Charging and Providing depreciation Straight Line and Written Down Value methods (Change in method excluded). **CO3**

UNIT IV BANK RECONCILIATION STATEMENT **9**

Bank Reconciliation Statement (simple problems only)–Insurance Claim–Average Clause (Loss of profit excluded). **CO4**

UNIT V ACCOUNTING FOR NON PROFIT ORGANIZATION **9**

Non-profit organization, Income and expenditure account and balance sheet (Simple problems) - Accounting for non-profit organization – Receipts & Payments accounts. **CO5**

TOTAL :45 PERIODS

TEXT BOOKS

1. Reddy and Murthy, Financial Accounting by Margham Publications, 2015,
2. Gupta R.L., Gupta VK, Principles & Practice of Accounting, Sultan Chand & Sons, 2013

REFERENCE BOOKS

1. Stice & Stice, Financial Accouning Reporting and Analysis, 8th edition, Cengage Learning, 2015

COURSE OUTCOMES:

Upon completion of the course, students will be able to

CO1 To understand the concepts of basic financial accounting.
CO2 To understand about trading accounts, profit and loss account and balance sheet of the company.
CO3 To understand about the various depreciations methods used in accounting
CO4 To understand the reconciliation and insurance claims.
CO5 To understand about the account of nonprofit organizations.

MI1104	BASIC PSYCHOLOGY	L	T	P	C
		3	0	0	3

COURSE OBJECTIVES

- Develop a strong background and understanding of the scientific foundation of psychology
- Develop a knowledge base of human behavior across the broad areas of psychology.
- Aware of the applications of psychology in the professions associated withpsychology.

UNIT I INTRODUCTION **9**

Nature, scope and methods, Major perspectives of modern psychology, Subfields of psychology, Psychology and diversity, Evolutionary psychology - exportation of psychology; Biological Bases of Behavior: Neurons, nervous system – basic structure and function, The brain **CO1**

UNIT II SENSATION AND PERCEPTION **9**

Sensation: Sensory Thresholds – Role of Psychophysical Procedures, Sensory Adaptation, Vision: The Eye, Light, Basic Functions of the Visual System, Color Vision, Vision and the Brain, Hearing: The Ear, Sound, Pitch Perception, Sound and Localization, Touch and other Skin Senses, Smell and Taste: How They Operate, Some Interesting Facts, Kinesthesia and Vestibular Sense, Perception: Organising Principles, Constancies and Illusions: When Perception Succeeds and Fails, The Plasticity of Perception: Innate VS Learned, Extrasensory perception: Perception without Sensation **CO2**

UNIT III MEMORY **9**

Human memory: The Atkinson and Shiffrin Model, Neural networks models, Forgetting – Memory Distortion and memory construction – Memory in everyday life – Memory and the brain: Evidence from memory impairments **CO3**

UNIT IV COGNITION AND INTELLIGENCE **9**

Cognition: Thinking, Making decisions, Problem solving, Language; Intelligence: Unitary or Multifaceted, Measuring intelligence, Human intelligence: The Role of Heredity and the Role ofEnvironment, Grouping differences in intelligence test scores, Emotional intelligence, Creativity **CO4**

UNIT V HUMAN DEVELOPMENT **9**

Human Development: The Childhood years – Physical growth and development, Perceptual development, Cognitive development, Moral development, Social and emotional development,Gender identity and sex-category constancy; Adolescence, Adulthood and Aging: Death and bereavement **CO5**

TOTAL : 45 PERIODS

TEXT BOOKS

1. Robert A. Baron - Psychology (5th edition), Pearson Education
2. S.K. Mangal: An Introduction to Psychology

REFERENCE BOOKS

1. Daniel L. Schacter, Daniel T. Gilbert & Daniel M. Wegner – Psychology (2nd edition)
2. James W. Kalat - Introduction to Psychology (10th edition)

3. Lahey, B. B. (1998). Psychology: An Introduction, Tata Mc Graw Hill
4. M.R. Murthy: Foundation of Psychology
5. Morgan & King - Introduction to Psychology.

COURSE OUTCOMES:

Upon completion of the course, students will be able to

CO1 To understand the basic psychology & Biological Bases of Behavior
CO2 To understand the Concept of sense organs & Sensation
CO3 To understand the concept of Human Memory
CO4 To understand the Cognition & Intelligence
CO5 To understand the Human Development, Death & Bereavement

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAMME OUTCOMES (POs)												PROGRAMME SPECIFIC OUTCOMES (PSOs)		
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2	PSO 3

MA1172 BUSINESS MATHEMATICS

L	T	P	C
3	0	0	3

COURSE OBJECTIVES

- The objective of this course is to teach the mathematical concepts and principles of calculus, vector,etc. so that students will be able to apply their mathematical skills to various business problems.

UNIT I SEQUENCE AND SERIES **9**

Progressions: Arithmetic, Geometric and Harmonic progressions - Means of two positive real numbers - Relation between A.M., G.M., and H.M. - Sequences in general - Specifying a sequence by a rule and by a recursive relation - Binomial expansion - Compound interest - Normal rate and effective rate. **CO1**

UNIT II VECTORS, MATRICES AND DETERMINANTS **9**

Vectors: Operations on vectors - Matrices: Types of matrices - Matrices operations: Addition, Subtraction and Product of matrices, Multiplication of a matrix by a scalar - Determinants: Evaluation of determinants of order two and three - Properties of determinants - Singular and nonsingular matrices - Product of two determinants - Rank of the matrix. **CO2**

UNIT III SETS AND FUNCTIONS **9**

Sets: Set and sub-sets, Venn diagram and its applications - Operations on sets: Cartesian product of sets, Application - Functions: Algebraic functions (polynomial - linear, quadratic andrational), transcendental functions (exponential, log and trigonometric functions with identities) and inverse functions - The laws of logarithms and their uses. **CO3**

UNIT IV DIFFERENTIAL CALCULUS 9

Limit of functions - Continuity of functions and properties - Graphical interpretation - Differentiation: Geometrical interpretation - Differentiation using first principles - Rules of differential - Chain rule - Logarithmic differentiation of implicit function - Parametric functions -Second order derivatives - Application of derivatives: Maxima and Minima. **CO4**

UNIT V INTEGRAL CALCULUS 9

Standard Integration - Method of integrations: Integration of rational functions - Integration using algebraic substitution - Trigonometric integrals -Trigonometric substitution - Integration by parts - Definite integral - Properties of definite integrals. **CO5**

TOTAL: 45 PERIODS

TEXT BOOKS

1. John Bird "Higher Engineering Mathematics" Newnes (An Imprint of Elsevier), 4th Edition, 2006, Indian Edition, Noida.
2. James Stewart "Calculus with Early Transcendal Functions", CENGAGE Learning 2008, Indian Edition, New Delhi.

REFERENCE BOOKS

1 H. Anton, I. Bivens and S. Davis 'Calculus', John Widely India Pvt. Ltd. 7th Edition, 2014, New Delhi.
2 B.M. Aggarwal, 'Business Mathematics and Statistics" Ane Book Pvt. Ltd., 2015, Chennai.
3 M. Raghavachari, 'A First Course in Mathematics for Management'. McGraw-Hill Education (India) Pvt. Ltd., 2015, New Delhi.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 Students will be able to determine whether a sequence has a pattern, whether a sequence can be generalized to find a formula for the general term in the sequence. To calculate the sum of certain infinite geometric series. To determine whether or not a sequence converges to the general term as n gets infinitely large.

CO2 Students will be able to learn the basics of matrix and determinants so as to find the rank of the matrix. Characterize a linear system in terms of the number of leading entries, free variables, pivots, pivot columns, pivot positions.

CO3 Students will understand the concepts of sets and perform operations and algebra on sets. To determine properties of relations, sketch relations and identify functions and determine their properties

CO4 Students will be able to deal derivative of a given function. Apply differentiation to solve maxima and minima problems, which are related to real world problems.

CO5 Students will be able to understand the concept of integration. Also acquire skills to evaluate the integrals using the techniques of substitution, partial fraction and integration by parts

MAPPING OF COs WITH POs AND PSOs

HS1171	**ENGLISH**	**L**	**T**	**P**	**C**
		3	0	0	3

COURSE OBJECTIVES

- Develop basic skills to deal with people in business situations
- Increase their knowledge of key business concepts worldwide
- Write and read basic business reports, faxes, and memos
- Expand vocabulary related to general business situations
- Evaluate their skills so that they can build their strengths and improve their weaknesses
- Be able to apply their improved problem solving and communication skills to their daily workimmediately

UNIT I SHARING INFORMATION RELATED TO ONESELF/FAMILY / FRIENDS &BUSINESS TALKS **9**

LISTENING: listening to pep talks to boost the confidence level. SPEAKING- Introducing oneself, the characteristics of business speaking which is needed to prosper in management. READING –Reading read short stories which can be knowledge gaining. WRITING – About oneself and prose in clear organized manner and also reading Comprehension, developing reading skills. WRITING- About oneself and prose in clear organized manner, summarizing, and Taking notes - Grammar – Parts of speech, Vocabulary – Synonyms, Antonyms, Degreesof Comparison. **CO1**

UNIT II INSTENSIVE LISTENING AND FORMAL WRITING **9**

LISTENING –listening to TED Talks, listening for information – SPEAKING- to assert one's ideas in conversation, READING – strategies, skimming and scanning; predicting, guessing, inferring; reading critically, Hints to be developed into a readable passage – WRITING – Letter writing both formal letters and informal letters, Emails, - Grammar – Tenses, Vocabulary – Prefixes, Suffixes, Single word Substitution. **CO2**

UNIT III READING AND LANGUAGE DEVELOPMENT **9**

LISTENING – Telephonic Conversations and understanding them– SPEAKING Exchanging information, Conversational Skills, Speaking about past events - READING – understanding the emoji in mails, Brochures, Emails - WRITING – Business Letters – Quotation, Complaints, Essays –analytical and argumentative, Dialogue writing, Grammar – Determiners, Relative Clauses, Vocabulary – synonyms, antonyms. **CO3**

UNIT IV SPEAKING AND LANGUAGE DEVELOPMENT **9**

LISTENING – Dialogues, Interviews, famous entrepreneur SPEAKING- Participating in informal discussions, Brief Presentations - READING –Product Review - WRITING – Jumbled sentences, Instruction writing, , Notice writing, Grammar – Expressing causes and results, Direct and indirect speech, Gerunds, Vocabulary – Sequencing Words, Linkers. **CO 4**

UNIT V EXTENDED WRITING **9**

LISTENING –Narratives, Conversations SPEAKING- Neutral and Gender-sensitive language, Interview, role plays- READING – Newspaper WRITING-Recommendations, Short Reports, Proposal writing, Grammar – Reported Speech, Idioms, Vocabulary –phrasal verbs. **CO 5**

TOTAL : 45 PERIODS

TEXT BOOKS

1. Board of Editors. Using English A Course book for Undergraduate Engineers and Technologists. Orient Black Swan Limited, Hyderabad: 2020
2. English in Mind, Second Edition-Student's Book, Herbert Puchta and Jeff Stranks, Cambridge University Press, 2010.

REFERENCE BOOKS

1. Study Skills in English Wallace, Michael J. Cambridge University Press, Cambridge, 1980.
2. A Course in Communication Skills, P. Kiranmai Dutt, Geetha Rajeevan, and C.L.N. Prakash, Foundation Books, New Delhi, India, 2008.
3. John Eastwood et al: Be Grammar Ready: The Ultimate Guide to English Grammar, Oxford University Press: 2020.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 Speak grammatically correct sentences in English needed in business line.

CO2 Introduce the students to written skills, to define, classify, and understand the methods ofwritten language

CO3 Listen thoughtfully and respectfully to other's ideas. Prepare, organize and deliver engaging oral presentations

CO4 Write in a variety of genres as a process of intellectual inquiry, creative expression and ultimately to become more effective thinkers and communicators in the society.

CO5 Read and develop the skills of analytical and interpretive arguments and to become careful and critical readers.

MI1105 **ENGLISH LANGUAGE LABORATORY** **L T P C**

0 0 4 2

COURSE OBJECTIVES

- To enable learners develop their communicative competence.
- To facilitate the process of acquiring and developing soft skills among the learners in a professional background.
- To enhance the employability skills of students to improve their prospects of placements.

MODULES

1 Listening to academic and professional lectures and presentations.
2 Participating in group discussions – understanding group dynamics – brainstorming - expressing opinions, initiating and turn taking. Using appropriate body language in professional contexts – gestures, facial.
3 Making presentations – introducing oneself – introducing a topic – answering questions –individual presentation practice-
4 Creating effective PPTs – presenting the visuals effectively - designing slides.
5 Reading reports in the newspaper, making a summary and presenting it.
6 Understanding graphical data – summarizing and interpreting it.
7 Writing job applications - writing covering letters and résumé - Applying for jobs online - email etiquette.
8 Writing for publications –conference papers, research reports
9 Drafting memos in business context – writing for blogs.
10 Interview skills– dress code – body language – mock interview

TOTAL: 60 PERIODS

TEXT BOOKS

1. Effective Communication. John Adair, Pan Publishing
2. Effective English Communication. Krishna Mohan and Meenakshi Raman. 3rd Edition, TataMcGraw Hill, New Delhi, 2003.
3. Professional Communication Skills. Alok Jain, Pravin S., R.Bhatia, A.M. Sheikh, 3rd Edition, SChand and Company, New Delhi, 2005.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 Speak confidently and professionally in business contexts
CO2 Comprehend models of business communication in real time contexts
CO3 To learn Writing for publications –conference papers, research reports
CO4 To get knowledge about Writing job applications - writing covering letters and resume
CO5 Participate in discussions and interviews in a self-assured manner.

SEMESTER II

MI1201	**COST ACCOUNTING**	**L**	**T**	**P**	**C**
		3	**0**	**0**	**3**

COURSE OBJECTIVES

- To provide the students, knowledge of the nuances involved in costing techniques followed in the corporate world

UNIT I INTRODUCTION **9**

Nature, Scope and Importance of Cost Accounting–Relationship between Cost, Financial and Management Accounting– Installation of Cost Accounting System– Cost and Profit Centers–Classification of Costs-Cost Sheets, Tenders and Quotations. **CO1**

UNIT II MATERIAL COST **9**

Material Cost-Material Control–Purchase Control– Inventory Control, Meaning and Techniques–Different methods of Pricing Material Issues. **CO2**

UNIT III LABOUR COST **9**

Labor Cost–Computation and treatment of Labor cost - Methods of Remuneration–Time and Piece Rate System –Labor Turnover and its measurement. **CO3**

UNIT IV OVER HEADS **9**

Overheads–Classification, Allocation, Apportionment–Primary and Secondary–Methods of Absorption of Overhead–Under and Over Absorption–Machine Hour Rate. **CO4**

UNIT V PROCESS COSTING **9**

Process Costing – Normal and Abnormal Loss (Equivalent Production and Inter Process Profit excluded)–Job Costing –Contract Costing. **CO5**

TOTAL : 45 PERIODS

TEXTBOOKS :

1. Cost Accounting, S.P.Jain and K.L.Narang, Kalyani Publications,2014.
2. Cost Accounting, M.Y.Khan,P.K.Jain, JBA Publishers,2015.
3. Cost and Management Accounting, Drury C. Cengage Learning India, 2013.

REFERENCES :

1. Cost Accounting, David Russel, G.J. Wilkinson-Riddle, Ashok Patel, Pearson India, 2013.
2. Cost Accounting,T.S. Reddy.Y. Hari Prasad Reddy, Margham Publications,2015.
3. Cost Accounting, M.C.Shukla, T.S.Grewal,M.P.Gupta,S.Chand,2014

COURSE OUTCOMES:

Upon completion of the course, students will be able to

CO1 To familiarize the concept of cost accounting, relationship between cost, financial and management accounting, to find out the cost and profit centers and to analyze the classification of costs, cost sheet, tenders and quotations.

CO2 To analyze material cost, material control, purchase control, inventory control and pricing material issues.

CO3 To compute the Labor cost

CO4 To understand the methods of absorption of overhead and calculate the Machine Hour Rate.

CO5 To analyze the Process costing, Job costing and Contract costing.

MI1202	**BUSINESS ORGANIZATION**	**L**	**T**	**P**	**C**
		3	**0**	**0**	**3**

COURSE OBJECTIVES

- The purpose of this paper is to impart to the students an understanding of the basic conceptsin commerce, trade and industry and various forms of business organization.
- Prepare them to face emerging challenge of managing business.

UNIT I INTRODUCTION 9

Meaning and definition of business, essentials & scope of business, business as a system.

Business and profession. Classification of Business Activities, distinction between business, commerce and trade. Meaning, Definition, Characteristics and objectives of Business Organization, Evolution of Business Organization. Business and its Environment - Social Responsibility of a business firm. **CO1**

UNIT II LOCATION OF INDUSTRY **9**

Location of industry- Factors influencing location- Size and scale of operation- Optimum firms –Advantages &- Disadvantages of large scale operations - small scale operations- Industrial Estates and District Industries Centre. **CO2**

UNIT III FORMS OF BUSINESS ORGANIZATION **9**

Forms of Business Organization • Sole proprietorship - meaning, characteristics, advantages and limitations, suitability of sole proprietorship form of business organization. • Partnership - meaning, characteristics, advantages and limitations, types of partners, suitability of partnership form of business organization. • Joint Hindu family firm • Cooperative Society - meaning, characteristics, advantages and limitations, types of cooperative societies, suitability of cooperative form of business organization. **CO3**

UNIT IV JOINT STOCK COMPANY **9**

Joint Stock Company - meaning, characteristics, advantages and limitations, suitability of company form of business organization. Types of Joint Stock Company - Public Limited Companies, Private Limited Companies, Government Companies, Multinational Companies -Public Utilities and Public Enterprises. **CO4**

UNIT V BUSINESS COMBINATIONS **9**

Business Combination- Meaning, Causes, Objectives, Types and Forms. Advantages and disadvantages. Mergers, Takeovers and Acquisitions- Trade associations and chamber of commerce. **CO5**

TOTAL: 45 PERIODS

TEXT BOOKS

1. Fundamentals of Business Organisation and Management by Y.K. Bhushan, Sultan Chand & Sons, 2013.
2. Tulsian, P.C.; Business Organisation & Management, Pearson Education, New Delhi 2002.

REFERENCE BOOKS

1. R.C Bhatia, Business Organisation & Management, ANE Books 2000.
2. C.D.Balaji and G.Prasad - Business Organization, 2012, Margham Publications.
3. R.C.Bhatia,Business Organisation & Management,2012,Tax Mann Publications Pvt Ltd

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 To understand the basic concepts of business and the various environmental factors effectingthe business functions

CO2 To understand the location of industry and the factors to be considered during the selection ofindustry location.

CO3 To understand the different forms of business organization and its merits and demerits.

CO4 To understand the characteristics of joint stock company and the difference between private and public limited companies.

CO5 To understand the concepts of merger, acquisition and takeover

MI1203	FUNDAMENTALS OF SOCIOLOGY	L	T	P	C
		3	0	0	3

COURSE OBJECTIVES

- To understand the basic concepts and the major concerns of sociology.
- To understand the relationship between culture, personality, and society.
- To identify the nature and characteristics of social processes.

UNIT I INTRODUCTION **9**

Origin, Nature, Scope, and importance of Sociology; Methods of Sociology; Relationship with other social sciences **CO1**

UNIT II BASIC CONCEPTS **9**

Society, community, Institution, Social structure, Social System, Social Groups, Social organization, Relationship between Individual and Society, Societal culture. **CO2**

UNIT III SOCIALIZATION **9**

Meaning of Socialization, Socialization as a Process of Learning, Stages, and Agencies of Socialization; Social Norms: Conformity, Deviance, Needs of Social Control. **CO3**

UNIT IV SOCIAL PROCESS **9**

Social Process in Social Institution: Meaning, Causes, and Remedies; Social Stratification in Marriage, Family, Peer group- Religion and Kinship **CO4**

UNIT V APPLIED SOCIOLOGY **9**

Indian social problems- race, class, gender inequalities- Ecology and Environment: Pollution, Global warming, and the Greenhouse effect. Impact of Industrialization and Urbanization on Environment- Issues in sustainability **CO5**

TOTAL: 45 PERIODS

TEXTBOOKS

1. Sankar Rao, C.N.: Sociology, Sultan Chand and Sons, 2007
2. H.K.Rawat: Sociology basic concepts, Rawat publications, New Delhi, 2001

3. M.L. Anderrson& H.F. Taylor: Sociology: Understanding a diverse society, Wadsworth, USA, 2008, 4th edition

REFERENCE BOOKS

1 Bhusan, Vidya: Sociology, Kitab Mahal, New Delhi, 2005
2. J.Stockard: Sociology: Discovering society, Wadsworth, USA, 1996, 1st edition
3. Johnson, Harry M: Sociology, Allied Publications Pvt., Ltd. New Delhi, 2003
4. James M. Henslin: Essential of Sociology, 4th edition
5. Joan Ferrante: Sociology, the United States in a global community.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 Ability to understand the nature and scope of sociology
CO2 Ability to understand Society, community, Institution, Social structure, Social System, Social Groups, and Social organization
CO3 Acquiring knowledge about socialization, stages, and agencies of socialization
CO4 Ability to analyze and evaluate the social process and social stratification
CO5 Ability to understand the application of sociology principles in Indian society.

MI1204	**BUSINESS COMMUNICATION**	**L**	**T**	**P**	**C**
		3	**0**	**0**	**3**

COURSE OBJECTIVES

- To familiarize tertiary level grammatical usage in language
- To apply LSRW skills in a professional context
- To acquaint students with evolving trends in professional communication.

UNIT I FUNDAMENTALS OF BUSINESS COMMUNICATION 9

Formal and Informal Communication Listening to Conversations, Interviews, Introducing a Product or Service. Small Talk. SWOT Analysis - Telling a story effectively, Reading Reports, Comprehending passages in Business and Economy-related Newspapers – Basics of Business Correspondence - Formal Letters, Letters calling Quotations, Follow Up and Complaints Letters. **CO1**

UNIT II PRESENTATION AND GROUP DISCUSSION SKILLS **9**

LISTENING –SPEAKING: Seminars, Conferences, Preparing PowerPoint - READING – Profiles of Companies, Interpreting Data, Case Studies WRITING –Reports – Survey, Feasibility **CO2**

UNIT III DOCUMENTING SKILLS **9**

Press Meets SPEAKING: Group Discussion, Dynamics of a Group Culture, - READING – Critical Thinking, Problem Definition and Solving WRITING – Company Profiles, minutes of Meetings, Case Studies Job Application, Email, Cover letter Formats. **CO3**

UNIT IV NON-VERBAL COMMUNICATION **9**

Grooming, Body Language, Tone and Pitch, Intercultural and Cross-Cultural Communication SPEAKING: Presentations - READING – Meeting and their procedures WRITING – Project. **CO4**

UNIT V TELEPHONE AND EMAIL ETIQUETTE **9**

Listening to and executing formal telephone conversations, conversational tactics, seeking information LISTENING – Sales Meeting, Panel Discussion, Accents SPEAKING: Negotiation Proposals, Mini Projects, Seeking Funding , Drafting Tenders, CircularsSkills, Life Skills, Elevator Pitch, Leadership Behavior - READING –WRITING – Requisition Letters – for Reference and Recommendation, Statements of Purposes, Persuasive language Emails, Portfolios. **CO5**

TOTAL: 45 PERIODS

TEXT BOOKS

1. Business Advantage, Almut Koester, Angela Pitt, Michael Hanford and Martin Lisboa, Student's Book, Intermediate, Cambridge University Press, 2012.

REFERENCE BOOKS

1. Business Communication. Harvard Business Essentials Series, HBS
2. Excellence in Business communications, John V. Thill and Courtland L. Bovee, Pearson, 2015.
3. Business Communication, Menakshi Raman, Prakash Singh, Oxford University Press.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 Develop good managerial communication skills
CO2 Develop good presentation skills and group discussion skills
CO3 Ability to excel in different forms of written communication required in a business context
CO4 Ability to prepare Business reports
CO5 In-depth understanding of telephone and E-mail etiquette

MI1205	**FUNDAMENTALS OF COMPUTERS**	**L**	**T**	**P**	**C**
		3	**0**	**0**	**3**

COURSE OBJECTIVES

- The course is aimed at imparting a basic level of computer knowledge and the application of computer skills for analyzing the data, creating the presentations and preparing the reports.

UNIT I INTRODUCTION TO COMPUTERS **9**

Computer and its applications: Computers in our world, Computers for individual users, Computers for organizations, Computers in society, Why are computers so important. Components of a computer system – Hardware and Software - CPU, Memory, Input and output devices, Storage devices, System software, Application software. **CO1**

Input and output devices: Input Devices - The keyboard and Mouse. Inputting data in other ways: Devices for hand, Optical input devices, Audio-visual input devices. Output Devices - Monitors, Data projectors, Sound Systems, Printers, and Plotters.

UNIT II DATA PROCESSING AND DATA STORAGE **9**

Transforming data into information: The difference between data and information, How computers represent data, How computers process data - CPU , Machine cycles, Memory, Factors effecting processing speed, The computer's internal clock, The Bus, Cache memory. **CO2**

Types of storage devices: Primary and Secondary Storage devices, How data is stored on a disk, How the operating system finds data on a disk, Removable storages, Smart cards.

UNIT III OPERATING SYSTEM **9**

Operating systems basics**:** The purpose of operating systems, Types of operating systems, Providing a user interface, Running programs, Managing hardware, Enhancing an OS utility software, Proprietary and Open source operating systems. **CO3**

Basics of popular GUI based operation system: User interface, Task Bar, Icons, Menus, Running an Application. Operating System Simple Setting – changing system Date andTime, Changing Display Properties, Changing Mouse Properties, Adding and removing printers. File and Directory Management – Creating and renaming of files and directories. Common Utilities.

UNIT IV THE INTERNET AND ITS SERVICES **9**

Introduction to internet and world wide web (www): Basics of Computer Networks, common types of networks – Local Area Network (LAN), Wide Area Network (WAN) and Internet. The Internet's history, the Internet's major services, Understanding the world wideweb, Using your browser and the world wide web, navigating the web, closing your browser, getting help with your browser, searching the web, search results and web sites. **CO4**

E-mail and other internet services**:** Overview: communicating through the Internet, Using Email, Using an E-mail program, Stomping out spam, using web-based e-mail services, more Features of the Internet.

UNIT V INTRODUCTION TO WORD PROCESSORS, SPREAD SHEETS & PRESENTATIONS **9**

Introduction to word processors: Managing document – Creating a new document, Opening pre-existing document, create/edit/insert/copy/paste text in the document, Formatting Text and Documents, Headers and Footers, Tables and Graphics - Creating a tableusing the table menu, Entering and editing text in a table, adding/inserting/deleting rows and columns, changing row heights and column width. Inserting picture in the document and formatting the picture in the document. **CO5**

Introduction to spreadsheets: Working with spreadsheets – Creating the new spreadsheet, modifying the pre-existing spreadsheet. Entering data in cell and creating data series. Formatting Cell & Rearranging worksheets- Moving cells, copying cells, sorting celldata, inserting rows, inserting columns, inserting cells. Functions & Formulas –application of popular functions like sum, average and count. Saving and Printing Spreadsheet.

Introduction to presentations: Creating Presentations - Using auto content wizard, Using blank presentation option, Using design template option, Adding slides, Deleting a slide, Importing Images from the outside world, drawing in presentation, Transition and build effects, deleting a slide, numbering a slide, saving presentation, closing presentation, printing presentation

TOTAL: 45 PERIODS

TEXT BOOKS

1. Peter Norton, Introduction to computers, 6th edition: Tata McGraw Hill , 2007.
2. Ran Mansfield, working in MIcrosoft Office: Tata McGraw Hill , 2008.

REFERENCE BOOKS

1. Reema Thareja, Fundamentals of Computers, First Edition: Oxford University Press, 2014.
2. Rajaraman V and Adabala N, Fundamentals of Computers,6th Edition :PHI, 2014.
3. Faithe Wempen, Computing Fundamentals: Introduction to Computers: Wiley, 2014.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 Ability to identify computer hardware and peripheral devices

CO2 To be familiar with software applications and Understand file management

CO3 To understand operating system concepts & the use of graphical user interface

CO4 To explore the Web and to gain experience working with email

CO5 Ability to use spreadsheets, word processors and presentations

MA1271 BUSINESS STATISTICS - I

L	T	P	C
3	0	0	3

COURSE OBJECTIVES

- To Provide with a working knowledge of how to apply statistics to business situation.
- To describe data and make evidence based decisions using inferential statistics thatare based on well - reasoned statistical arguments.

UNIT I FUNDAMENTALS OF STATISTICS AND GRAPHICAL DISPLAYS 9

Fundamentals of statistics: What is statistics - Need for statistics in business - Data and information - Population and sample - Sampling - Sampling methods - data types - Frequency - relative frequency - frequency tables - Cross tabulation - Graphical representation of frequency distribution: histogram, frequency polygon, ogive pie-chart. **CO1**

UNIT II DESCRIPTIVE AND INFERENTIAL STATISTICS 9

Descriptive statistics: descriptive and inferential statistics - grouped and ungrouped data - measures of central tendency, variability, dispersion: arithmetic mean, median, mode, quartiles, percentiles, deciles, interquartile, range, standard deviation, variance - Application in business scenario. **CO2**

UNIT III PROBABILITY 9

Probability : Basic concepts - axiomatic approach - classical definition - basic theorems - complements, union and intersection - venn diagrams - conditional probability, multiplicative law, independence event - total probability - Baye's theorem. **CO3**

UNIT IV PROBABILITY DISTRIBUTION FOR DISCRETE RANDOM VARIABLES 9

Discrete random variable - Probability distribution for discrete random variable - Cumulative distribution function - Moments and variation - special distributions: Binomial, Poisson and Hypergeometric distributions. **CO4**

UNIT V PROBABILITY DISTRIBUTION FOR CONTINUOUS RANDOM VARIABLES 9

Continuous random variable - Probability density function for continuous random variable - Cumulative distribution function - moments and variation - Special distribution: Exponential, uniform and normal distribution **CO5**

TOTAL: 45 PERIODS

TEXT BOOKS

1. S.C. Gupta and V.K. Kapoor, 'Elements of Mathematical Statistics', 3rd Edition, Sultan Chand& Sons, 2014, Chennai.
2. W. Mendenhall, R. Beaver and B.M. Beaver, 'Introduction to Probability and Statistics',Cengage Learning India Pvt. Ltd., 2016, New Delhi.
3. B.M. Aggarwal, 'Essential of Business Statistics', Ane Book Pvt. Ltd., 2016, Chennai.

REFERENCE BOOKS

1. Prem S. Mann, 'Introductory Statistics' Wiley Publications, 8th Edition, 2013, Singapore.
2. David M . Levine, 'Business Statistics - A first course' Person Publication, 7th Edition, 2015,Greater Noida.
3. Navai Bajpai, 'Business Statistics' Pearson Education, 2009, Greater Noida.
4. Sanjiv Jaggia and Alison Kelly, 'Business Statistics' - Communicating with numbers, TataMcGraw Hill, 2nd Edition, 2016, New Delhi.
5. L.J. Kazmier, Business Statistics, Schaum's Outlines, 4th edition, Tata McGraw Hill Publishing Company LiMIted, 2004, New Delhi.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 Understand the concepts of data and fundamentals of statistics. To know the best graphical representation for types of data. To gain data presentation skills and confidencE

CO2 Demonstrate an understanding of descriptive statistics by Designing and formulating sources ofbusiness decision making data. To evaluate and analyze methods for examining central tendencies

CO3 Compute basic probabilities as used in statistical applications by comparing the concepts of probability. To demonstrate the elementary rules of probability and uses for Bayes' Theorem

CO4 Prove an understanding of discrete probability distributions by assembling a discrete probability distribution. Also acquire skills to solve binomial, Poisson, Geometric distribution problems

CO5 Apply continuous random variables by analyzing data that require uniform distributions. Toconstruct problems requiring the application of normal distributions

MI1206	**COMPUTER SKILLS-I**	**L**	**T**	**P**	**C**
		0	**0**	**4**	**2**

COURSE OBJECTIVES:

- The course is designed to aim at imparting a basic computer skill for Word Processing, Presentations and Spreadsheets

UNIT I MICROSOFT EXCEL **12**

Getting Started - Spreadsheet Formatting – Functions - Charts & Graphics - Pivot Table & Pivot Charts - Creating Daily and Monthly Sales Reports - Creating Cash Flow Statement - Creating Balance Sheet. **CO1**

UNIT II MICROSOFT WORD **12**

Getting Started - Formatting Text and Documents - Tables & Graphics - Creating Resume- Creating Business Letters - Creating Project Report. **CO2**

UNIT III MICROSOFT PRESENTATION **12**

Getting Started - Graphics & Visual Effects - Creating Company Profile Presentation - Creating Product Presentation - Creating Project Presentation. **CO3**

UNIT IV PRACTICALS OF INTERNET SERVICES **12**

WWW and Web Browser - Printing Web Pages. **CO4**

UNIT V EMAIL **12**

Basics of E-mail - Sorting and Searching emails - Mailbox: Inbox and Outbox. **CO5**

TOTAL :60 PERIODS

TEXT BOOKS

1. Taxali R.K., PC Software for Windows made simple

REFERENCE BOOKS

1. . MS Office 2013, Vishnu P. Singh, Computech Publications, 2012.

COURSE OUTCOMES:

Upon completion of the course, students will be able to

CO1 To understand the concepts of Microsoft excel.
CO2 To understand the concepts of word processors and preparing reports.
CO3 To understand about the power point presentation
CO4 To understand world wide web and browser
CO5 To understand about emails and related to emails.

SEMESTER III

MI1301	MANAGERIAL ECONOMICS - II	L	T	P	C
		3	0	0	3

COURSE OBJECTIVES

- To introduce the students to the basic concepts of macroeconomics.

UNIT I NATIONAL INCOME **9**

Introduction to National Income –Circular flow of income, concept of National Income, Measurement, and determination of National Income. **CO1**

UNIT II INFLATION **9**

Inflation: meaning, types of inflation, Demand and cost push, Stagflation, effects of inflation in economy and Philip's Curve. Unemployment, Okun's Law, Business cycle. **CO2**

UNIT III THEORY OF INVESTMENT **9**

Meaning of investment, Types of investment, Determinants of investment. Multiplier: investment multiplier; static and dynamic, tax multiplier, foreign trade multiplier, balanced budget multiplier, leakages from multiplier, importance, and limitations. **CO3**

UNIT IV MONEY **9**

Definition of money, Functions of money, Concepts of money supply and money Demand. Money market equilibrium, monetary policy. **CO4**

UNIT V INTERNATIONAL TRADE **9**

International Trade -Importance, Advantages and Disadvantages – Trade Balance. Fiscal Policy. **CO5**

TOTAL : 45 PERIODS

TEXT BOOKS

1. Maheshwari Y, Managerial Economics, Third Edition, Prentice Hall India Learning, New Delhi, 2012.
2. Paul A. Samuelson, William D. Nordhaus, Sudip Chaudhuri, Anindya Sen, Economics, McGraw-Hill, Twentieth Edition, 2019.

REFERENCE BOOKS

1. Richard Lipsey and Alec Charystal, Economics, 12th edition, Oxford, University Press, New Delhi, 2011.
2. Karl E. Case and Ray C. fair, Principles of Economics, 8th edition, Pearson, Education Asia, New Delhi, 2002.
3. Diwedi. D.N. Managerial Economics, 7th Edition, Vikas Publishing House Pvt. Ltd., 2009.
4. L. Peterson and Jain,Managerial Economics, 4th edition, Pearson Education.
5. Keat Paul, K Young Philip), Erfle Steve, College Dickinson, Banerjee Sreejatha, Managerial Economics, Pearson Education, Seventh Edition, 2017.
6. Karl E. Case, Ray C. Fair, Sharon E. Oster, Principles of Macroeconomics, Pearson Education, Twelfth Edition, 2019.
7. Froyen, Macroeconomics: Theories and Policies, Pearson Education India, 10th Edition, 2013.

COURSE OUTCOMES:

Upon completion of the course, students will be able to

CO1	To understand the fundamental concept of Macro Economics and the concept of national income with the circular flow of income.

CO2	To understand the concept of inflation and unemployment.
CO3	To know the concept of investment and multiplier effects.
CO4	To understand the concept of money and monetary policies created by RBI
CO5	To explain the concept of international trade and fiscal policy.

MI1302 MANAGEMENT INFORMATION SYSTEM L T P C

3 0 0 3

COURSE OBJECTIVES

- To understand the fundamental concepts of system, information.
- To study the importance of decision making
- To impart the knowledge of development of MIS
- To know the security issues of MIS

UNIT I CONCEPTUAL FOUNDATIONS 9

Introduction to Systems and Basic Systems Concepts, Elements of System, Characteristics of System, Types of Systems, System Approach to Problem Solving.
Information Systems: Definition & Characteristics, Types of Information, Role of Information in Decision Making. **CO1**

UNIT II MANAGEMENT DECISION MAKING 9

Simon's Model of Decision Making. Concepts of Management Organization and Hierarchy of Management Activity, Structured Vs. Unstructured Decisions, Formal Vs. Informal Systems, Levels of Management.
Introduction to different kinds of Information Systems and Concept, Characteristics and Components: ESS, EIS, DSS, MIS, KWS, TPS, OAS and EDP- GDSS **CO2**

UNIT III AN OVERVIEW OF MANAGEMENT INFORMATION SYSTEM 9

Definition & Characteristics, History of MIS Components of MIS, Frame Work for Understanding MIS, Types of Computers Used by Organizations in Setting up MIS, Hardware support for MIS, The Structure of Management Information System. **CO3**

UNIT IV DEVELOPING INFORMATION SYSTEMS **9**

Analysis & Design of Information Systems: Implementation & Evaluation. Pitfalls in MIS Development. Functional MIS: A Study of Marketing, Personnel, Financial and Production MIS. **CO4**

UNIT V SECURITY AND ETHICAL ISSUES **9**

Introduction, Control Issues in Management Information Systems, Security Hazards, Ethical Issues, Technical solutions for Privacy Protection. **CO5**

TOTAL : 45 PERIODS

TEXT BOOKS

1. Management Information system, Bidgoli, Chattopadhyay, Cengage learning original edition 2012 reprint 2016.
2. "Management Information Systems", Davis, Gordan B. & Olson, M.H, Second Edition, 2008.

REFERENCE BOOKS

1. Management Information Systems: Managing the Digital Firm (14th Edition) by Kenneth C. Laudon and Jane P. Laudon 2015.
2. Management Information Systems, Goyal, D.P., Fourth Edition, Macmillan. 2014
3. "Management Information Systems", Kanter, J.,Third Edition, PHI.
4. Information Systems for Modern Management, Murdick, Robert G., & Ross, Joel E., & Claggett, James R., Third Edition, PHI. 1985.
5. Analysis, Design & Implementation of Information System, Lucas, Fourth Edition,1992.

COURSE OUTCOMES:

Upon completion of the course, students will be able to

CO1 Understand the systems basics and information systems, role of information in decision making.
CO2 Know different types of decisions and information systems.
CO3 Understand well about the requirements and implementation of MIS
CO4 Analyze and design the IS, Different types of functional information systems.
CO5 Understand the security and ethical issues in MIS.

MI1303 MANAGEMENT ACCOUNTING

	L	T	P	C
	3	0	0	3

COURSE OBJECTIVES

- Acquire fundamental knowledge in Management Accounting.

UNIT I INTRODUCTION **9**

Management Accounting – Meaning, Scope, Importance and Limitations – Management Accounting Vs. Financial Accounting – Analysis of Financial Statements – Meaning, Tools and Methods – Comparative, Common Size Statements, Trend Analysis. **CO1**

UNIT II RATIO ANALYSIS **9**

Ratio Analysis – Meaning, Merits and Demerits – Classification of Ratios –Liquidity, Profitability, Turnover, Capital structure and Leverage ratios (simple problems only). **CO2**

UNIT III FUND FLOW AND CASH FLOW STATEMENTS **9**

Preparation of Fund Flow and Cash Flow (as per AS3) Statements (simple problems only). **CO3**

UNIT IV BUDGETARY CONTROL **9**

Budgetary Control – Meaning, steps involved – Merits and Demerits – Types of Budgets – Production, Sales, Cash – Fixed and Flexible Budgets. **CO4**

UNIT V MARGINAL COSTING **9**

Marginal Costing (excluding decision making) – BEP, Break Even Charts, Limiting Factors. **CO5**

TOTAL: 45 PERIODS

TEXT BOOKS:

1. Reddy and Hari Prasad Reddy, Management Accounting by Margham Publications, 2015, Chennai.
2. S.N.Maheswari, Management Accounting, Sultan Chand & Sons, 2014, New Delhi
3. Sharma and Shashi Gupta, Management Accounting, Kalyani Publishers, 2014, New Delhi.

REFERENCE BOOKS :

1. Horngren, Surdem, Stratton, Burgstahler, Schatzberg, Introduction to Management Accounting, PHI Learning, 2015
2. Charles T. Horngren and Gary N. Sundem, Introduction to Management Accounting, Prentice Hall.
3. Chadwick, Essence of Management Accounting, 2014, Prentice Hall of India, Pvt. Ltd.

COURSE OUTCOMES:

Upon completion of the course, students will be able to

CO1	To understand the basics of management accounting and work out problems is basic financial analysis tools

CO2	To analyse the relationship between various items in the financial statement and measure the solvency, profitability, activity and leverage.
CO3	To analyse the actual flow of fund and cash from the financial statements.
CO4	To understand concept of budgeting and budgeting control and create the various type of Budgets.
CO5	To evaluate the marginal costing involved in the production process.

MI1304	MARKETING MANAGEMENT - I	L	T	P	C
		3	0	0	3

COURSE OBJECTIVES

- The objective of this course is to provide basic knowledge of concepts, principles, tools and techniques of marketing.
- To provide an exposure to the students pertaining to the nature and Scope of marketing, which they are expected to possess when they enter the industry as practitioners.
- To give the man understanding of the basic philosophies and tools of marketing management.

UNIT I INTRODUCTION TO MARKETING MANAGEMENT **9**

Introduction-Market and Marketing-the Exchange Process -Core Concepts of Marketing-Functions of Marketing-Importance of Marketing-Marketing Orientations-Marketing Mix-The Traditional 4Ps-The Modern Components of the Mix- The Additional 3Ps – Developing an Effective Marketing Mix. **CO1**

UNIT II MARKETING ENVIRONMENT **9**

Introduction-Environmental Scanning-Analyzing the Organization's Micro Environment-Company's Macro Environment, Differences between Micro and Macro Environment-Techniques of Environment Scanning-Marketing organization-Marketing Research and the Marketing Information System, Types and Components. **CO2**

UNIT III CONSUMER AND BUSINESS BUYER BEHAVIOR **9**

Introduction —Characteristics-Types of Buying Decision Behavior-ConsumerBuyingDecision Process—Buying Motives-Buyer Behavior Models-Characteristics of Business Markets-Differences between Consumer and Business Buyer Behavior-Buying Situations in Industrial/Business Market-Buying Roles in Industrial Marketing-Factors that Influence Business Buyers-Steps in Business Buying Process.	**CO3**
UNIT IV SEGMENTATION, TARGETING AND POSITIONING	**9**
Introduction-Concept of Market Segmentation- Benefits of Market Segmentation-Requisites of Effective Market Segmentation-The Process of Market Segmentation —Bases for Segmenting Consumer Markets – Targeting (T)-Market Positioning (P).	**CO4**
UNIT V INTERNATIONAL MARKETING MANAGEMENT	**9**
Introduction-Nature of International Marketing-International Marketing Concept–International Market Entry Strategies- Approaches to International Marketing- International Product Policy	**CO5**

TOTAL: 45 PERIODS

TEXT BOOKS

1. Sherlekar S.A, Marketing Management, Himalaya PublishingHouse,2016.
2. Philip Kortler and Kevin Lane Keller,MarketingManagement,PHI15thEdition,2015

REFERENCE BOOKS

1. V.S.Ramaswamy S.Namakumari, Marketing Management Global Perspective, Indian Context, Macmillan PublishersIndia,5thedition,2015
2. S.H.H. Kazmi,Marketing Management,2013,Excel BooksIndia.
3. Dr.C.B.Gupta&Dr.N.RajanNair,MarketingManagement-textandCases,17thedition2016.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 To gain Knowledge of basic understanding in solving marketing related problems.
CO2 To understand marketing management process, and the marketing mix elements.
CO3 To analyze the nature of Consumer and Industrial buying behavior.
CO4 To understand Segmenting, Targeting and Positioning
CO5 To understand the basic concepts of International marketing, entry strategies and international policy.

MI1305	BUSINESS LAW-I	L	P	T	C
		3	0	0	3

COURSE OBJECTIVES

- To understand the basic legal terms and concepts used in law pertaining to business

UNIT I THE INDIAN CONTRACT ACT 1872 **9**

Definition of contract, essential elements, types, and characteristics of a contract, Formation of a contract, performance of contracts, breach of contract and its remedies, Quasi-contracts - Contract of Agency: Nature of agency, Creation, and types of agents, Authority and liability of Agent and principal: Rights and duties of principal and agents, termination of agency. **CO1**

UNIT II SALE OF GOODS ACT, 1930 **9**

Definition of Sales, essentials for the contract of sale, Documents of title, risk of loss, Guarantees and Warranties, the performance sale of contracts, conditional sales, and rights of an unpaid seller **CO2**

UNIT III NEGOTIABLE INSTRUMENTS ACT, 1881 **9**

Negotiable Instruments Act 1881: Definitions, Nature, and requisites of negotiable instruments. Types of negotiable instruments, the liability of parties, holder in due course, special rules for Cheque and drafts, discharge of negotiable instruments. **CO3**

UNIT IV COMPANY LAW **9**

Definitions - Nature of a company, characteristics of a company, Types of companies, Formation of Company – Memorandum and articles of association, Prospectus, Power, duties and liabilities of Directors, winding up of companies, Corporate Governance **CO4**

UNIT V THE COMPETITION ACT, 2002 **9**

Objectives of Competition Act, the features of Competition Act, components of Competition Act, Competition Commission of India, Appellate Tribunal, offenses and penalties under the Act. **CO5**

TOTAL: 45 PERIODS

TEXT BOOKS

1. Maheshwari, S.N. and S.K. Maheshwari; *A Manual of Business Law*, 6th Edition, Himalaya Publishing House, 2015.
2. Kuchhal M.C., Modern Indian Company Law, 20th edition 2015,Shree Mahavir Book Depot.
3. Kapoor, N. D.; *Elements of Mercantile Law*, 30th edition, Sultan Chand & Sons, New Delhi, 2015

MA1371 BUSINESS STATISTICS - II **L T P C**
3 0 0 3

CAREER OBJECTIVES

- To introduce some of the ideas of statistics, emphasizing the applications of these methods inthe business scenario
- To provide basic knowledge to do estimation of population, test hypothesis
- To provide knowledge about the various parametric and non-parametric tests

UNIT I SAMPLING DISTRIBUTION AND ESTIMATION **9**

Sampling- sampling methods - sampling distribution - sampling and non-sampling errors - mean and standard deviation of sampling distribution-Estimation- Introduction- Estimators and properties - Point and Interval estimate - introduction to t-distribution- interval estimation of population mean: large and small samples- Interval estimation of population mean - finite and infinite population- Interval estimation for population proportion- large and small samples. **CO1**

UNIT II HYPOTHESIS TESTS I **9**

Introduction to hypotheses and testing hypotheses - significance level- one tail and two tail tests - region of rejection - hypothesis test about mean: large and small samples - hypothesis test about mean: known and unknown population standard deviation - Hypothesis test about mean : finite and infinite population - Hypothesis test about proportions; large and small samples. **CO2**

UNIT III HYPOTHESIS TESTS II **9**

Hypothesis tests about difference between two sample means : large and small case- hypothesis tests about difference between two sample means for paired samples - hypothesis tests about difference between two sample proportions -large and small case- F-test for two sample standard deviations. ANOVA one and two way. **CO 3**

UNIT IV PARAMETRIC TESTS **9**

Chi-square tests for independence of attributes and goodness of fit. Sign test for paired data- Rank sum test- Kolmogorov-Smirnov : test for goodness of fit, comparing two populations- Mann – Whitney U test and Kruskal Wallis test- One sample run test. **CO4**

UNIT V CORRELATION AND REGRESSION **9**

Correlation – Coefficient of Determination – Rank Correlation – Regression – Estimation of Regression line – Method of Least Squares – Standard Error of estimate **CO5**

TEXT BOOKS

1. Statistics for Management, Richard I. Levin, David S. Rubin, Sanjay Rastogi Masood Husain Siddiqui, Pearson Education, 7th Edition, 2016.
2. Introductory Statistics Prem.S.Mann, , 7th Edition, Wiley India, 2016.

REFERENCE BOOKS

1. Complete Business Statistics, Aczel A.D. and Sounderpandian J 6th edition, Tata McGraw Hill Publishing Company Ltd., New Delhi, 2012.
2. Business Statistics using Excel - Glyn Davis and Branko Pecar, Oxford University Press.

COURSE OUTCOMES:

Upon completion of the course, students will be able to

CO1 To apply the different sampling methods for designing and selecting a sample from a population. To understand the basic principles underlying survey design and estimation

CO2 To formulate null and alternative hypothesis and apply small, large sample in real life problems. To obtain confidence interval of a parameter and its relation with testing of hypothesis problem.

CO3 To explore small and large datasets to create testable hypotheses and identify appropriate Statistical tests. ANOVA statistical significance result is independent of constant bias and scaling errors as well as the units used in expressing observations.

CO4 To learn the types of parametric and non-parametric tests for testing the hypothesis and make decisions.

CO5 To calculate and interpret the correlation between two variables. To calculate the simple linear regression equation for a set of data. To employee the principles of linear regression and correlation, including least square method, predicting a particular value

MI1306	**COMPUTER SKILLS - II**	**L**	**T**	**P**	**C**
		0	**0**	**4**	**2**

EXPERIMENTS:

Practicals on Spreadsheet:

Exercise 1: Look up and Reference
- VLOOKUP
- HLOOKUP
- INDEX
- MATCH
- OFFSET
- TRANSPOSE

Exercise 2: Conditional statements
- If-else statement
- AND
- OR
- NOT
- TRUE
- Nested If-else

Exercise 3: Conditional formatting
- Conditional formatting with multiple cell rules
- Color scales and icon sets in conditional formatting
- New rules and managing existing rules

Practicals on Word Processors:

Exercise 1: Tools for editing a document
- Auto-text
- Autocorrect
- Spelling & Grammar tool
- Document Dictionary
- Page formatting

- Bookmark

Exercise 2: Mail Merge
Exercise 3: Macros
Exercise 4: Styles
Exercise 5: Linking and embedding objects
Exercise 6: Templates

Practicals on Presentations:
Exercise 1: Create a presentation with animation effects
Exercise 2: Create a looping introduction
Exercise 3: Loop a motion path animation
Exercise 4: Master slide
Exercise 5: Sound effects
Exercise 6: Videos
Exercise 7: Macros

TOTAL : 60 PERIODS

REFERENCE BOOKS

1. Taxali R.K., PC Software for Windows made simple,2nd edition , McGraw Hill Education,2001
2. Microsoft Excel 2016 Step by Step, Frye Curtis, PHI, 2016.
3. MS Office 2013, Vishnu P. Singh, Computech Publications, 2012.

COURSE OUTCOMES:
Upon completion of the course, students will be able to

CO1 To understand the advanced concepts of spread sheets and it applications
CO2 To understand the purpose and functions of logical conditioning functions in spread sheets
CO3 To understand the conditional formatting in spreadsheets
CO4 To understand the formatting conditions in word processors
CO5 To understand the purpose and importance of presentation tools in management concepts

SEMESTER IV

MI1401	INDIAN ECONOMY	L T P C
		3 0 0 3

COURSE OBJECTIVES

1. To understand the various aspects of Indian Economy.
2. To develop a perspective on the different problems and approaches to economic planning and development in India.

UNIT I MEANING AND CHARACTERISTICS **9**

Economy – definition - Classification of economy – developing and developed economy. Indian economy – structure of the economy – agricultural, industrial and service sectors. Sectoral contribution to the national income of Indian economy. Characteristics of Indian economy in terms of demographic, economic and social indicators. Major development issues in India. **CO1**

UNIT II INDIAN DEMOGRAPHY **9**

Population – size and growth of population. Features of Indian population –sex ratio, rural and urban distribution, age distribution, density of population, occupational distribution. Causes for population growth – natural growth rate of population. Problems of higher population – poverty: definitions of poverty – measures to eradicate poverty. **CO2**

UNIT III ECONOMIC PLANNING AND AGRICULTURAL SECTOR **9**

Planning in India – five year planning. Evolution of Indian planning. Major achievements and failures of Indian planning since first five year planning. Objectives of 12th five year plan. Allocation of resources for agricultural, industrial and service sectors of the economy. Agricultural growth during the post reform period- achievements and failures **CO3**

UNIT IV INDUSTRIAL SECTOR **9**

Industrial policy, 1991 - Liberalization, privatization and globalization of Industrial sector - Industrial growth since economic reform. Growth and problems of SMEs. **CO4**

UNIT V FOREIGN TRADE **9**

India's balance of trade and payment since 2007. Exports and Imports – pattern of trade. Trade policy of India, 1991. BOT and exchange rate. Government of India's measures to manage exchange rate fluctuations. **CO5**

TOTAL : 45 PERIODS

TEXT BOOKS

1. Datt Ruddar and KPM Sundaram, Indian Economy, 67th Edition S. Chand & Company Ltd., New Delhi, 2013.
2. Gaurav Datta Ashwani Mahajan, Indian Economy. 68 th Edition S. Chand & Company Ltd., New Delhi, 2013.

REFERENCE BOOKS

1. Misra S.K. & V. K. Puri, Indian Economy, 32nd Edition, Himalaya Publication house, Mumbai.2014.
2. Gopal Ji,Suman Bhakri & Anisha Bhakri, Indian Economy -Performance and Policies, 2 nd Edition, Vikas Publishing, New Delhi,2015.

COURSE OUTCOMES:

Upon completion of the course, students will be able to

CO1 To understand the economic issues in range of economic activities in the Indian Economy.
CO2 To apply the demographic features of Indian Economy to solve economic issues.
CO3 To understand the features of Indian economy and known the five year plan.
CO4 To identify the economic factors contributing to industrial growth.

CO5 To analyze the role of Indian Economy in global context and how different factors affect them.

MI1402 DATA MANAGEMENT

L	T	P	C
3	0	0	3

OBJECTIVES

- To understand the fundamentals of database systems
- To learn widely used Relational Database Management Systems (RDBMS) and its related concepts
- To understand emerging database technologies like NoSQL

UNIT I DATABASE MANAGEMENT SYSTEMS **9**

Data, Database, Database Management Systems, Types of Database Management Systems – Relational, Hierarchical, Network, and Object oriented database management systems, Entity Relationship Model (E-R Model) **CO1**

UNIT II RELATIONAL DATABASE MANAGEMENT SYSTEMS (RDBMS) **9**

Relational Model -Relations, Tuples, domains and type of keys, Boyce–Codd Normal Form, normalization of databases– The first and second normal form of databases. **CO2**

UNIT III INTRODUCTION TO SQL **9**

Data Definition Language (DDL), Data Manipulation Language (DML), Data Control Language, Cartesian Product and Joins, Use of Union, Intersection, Minus, SQL operators and functions, SQL select statement and type of queries, In, Exists, Group by Having and Like clause in SQL. **CO3**

UNIT IV XML **9**

Structure of XML Data, XML Document Schema, Querying and Transformation, Storage ofXML Data, XML Data and World Wide Web. **CO4**

UNIT V EMERGING DATABASE TECHNOLOGIES - NOSQL **9**

Why NoSQL? Overview of NoSQL, Brief Introduction to various NoSQL Data Models– Key-Value, Document, Column-Family Stores and Graph and Limitations of NoSQL **CO5**

TOTAL : 45 PERIODS

TEXT BOOKS

1. Abraham Silberschatz, Henry F. Korth and S. Sudarshan, Database System Concepts,

SixthEdition, Tata McGraw-Hill,2013
2. Ramez Elmasri and Shamkant B. Navathe; Fundamentals of Database Systems, Pearson,Seventh Edition, Global Edition,2010

REFERENCE BOOKS

1. C. J. Date, "An Introduction to Database Systems", Eighth Edition, Pearson Education,2004.
2. Pramod J. Sadalage and Martin Fowler, NoSQL Distilled: A Brief Guide to the Emerging World of Polyglot Persistence 1st Edition, Addison-Wesley Professional,2012.
3. Guy Harrison, Next Generation Databases: NoSQL, NewSQL, and Big Data, Apress,2015.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 To understand the importance of database and the different types used in Organizations.

CO2 To understand the importance of Relational Database Management Systems and the steps indesigning it for the organization.

CO3 To understand the importance of SQL and its functions in accessing he data from an database.

CO4 To understand the use of XML in analyzing, designing and implementing data access on awireless networks.

CO5 To understand the recent developments in database technologies and its impact in businessprocess.

MI1403	CORPORATE ACCOUNTING	L	T	P	C
		3	0	0	3

COURSE OBJECTIVES

- Understand the nuances involved in accounting procedures and standards followed in Corporate Houses

UNIT I SHARES 9

Shares – Definition – Types of shares – Accounting treatment for various modes of issue of Shares – Full consideration, instalment, Bonus shares, Rights issue, Employee Stock Option, Sweat Equity, Private Placement, Buy Back of Shares – Forfeiture and Re-issue of Shares. **CO1**

UNIT II DEBENTURES **9**

Definition – Classification - Accounting treatment for issue of Debentures – for cash and non-cash consideration - Accounting treatment for Redemption of Debentures – in lump sum, in instalments,by conversion, Insurance Policy and Sinking Fund methods. **CO2**

UNIT III PREFERENCE SHARES **9**

Redemption of Preference Shares – Meaning and relevant provisions of Companies Act – Accounting treatment for redemption of Preference Shares – out of profit, fresh issue of shares, by conversion – Minimum fresh issue of shares – Profit Prior to Incorporation – Meaning – Method and procedure for ascertaining and accounting treatment of Profit or Loss Prior to Incorporation. **CO3**

UNIT IV UNDERWRITING **9**

Underwriting of Shares and Debentures – Meaning, need and importance – Types of underwriting – Factors affecting valuation of Goodwill and Shares – Methods of valuing Goodwill– Average Profit, Super Profit, Capitalization methods – Methods of valuation of shares – NetAsset, Yield and Fair Value methods. **CO4**

UNIT V FINAL ACCOUNTS **9**

Form of Statement of Profit and Loss and Account and Balance Sheet - Preparation of Company Final Accounts with adjustments - Basics (theory only) of Human Resource Accounting, Inflation Accounting, Accounting Standards, Social Responsibility Accounting **CO5**

TOTAL : 45 PERIODS

TEXT BOOKS:

1.Corporate Accounting, S.N.Maheswari and S.K.Maheswari, Vikas Publishing, 2015
2.Corporate Accounting, V.K.Goyal, Printice Hall India Learning Pvt. Ltd.2012

REFERENCE BOOKS:

1. Corporate Accounting ,V.Rajasekaran, R.Lalitha, Pearson India, 2013.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 To familiarize the concept of Shares
CO2 To understand the concept of Debentures,
CO3 To familiarize the concept of Redemption of preference shares & Profit prior to incorporation.
CO4 To familiarize the concept of Underwriting of shares & Debentures and valuing Good will.
CO5 To familiarize the concept of statement of Profit & Loss Account & Balancesheet.

MI1404	**QUALITY MANAGEMENT**	**L**	**T**	**P**	**C**
		3	**0**	**0**	**3**

COURSE OBJECTIVE:

- To learn the various principles and practices of Quality Management

UNIT I INTRODUCTION 9

Introduction - Need for quality - Evolution of quality - Definition of quality – different perspectives. Introduction to total Quality - Concept of total Quality - Design, inputs, process and output - Cost of quality - Attitude and involvement of top management - TQM culture, TQM framework, benefits, awareness and obstacles. **CO1**

UNIT II QUALITY GURUS 9

Contributions of Crosby, Deming, Masaaki Imai, Feigenbaum, Ishikawa, Juran, Oakland, Shigeo Shingo, and Taguchi. **CO2**

UNIT III QUALITY PRINCIPLES 9

Leadership – Strategic quality planning, - Employee involvement – Motivation, Empowerment, Team and Teamwork, Recognition and Reward, Performance appraisal - Continuous process improvement – PDSA cycle, 5s, Kaizen - Supplier partnership – Partnering, Supplier selection, Supplier Rating. **CO3**

UNIT IV QUALITY TOOLS 9

Overview of Quality Tools - The seven traditional tools of quality – New management tools – Six- sigma– Benchmarking – FMEA – Quality circles – Quality Function Deployment (QFD) – Taguchi quality loss function – TPM. **CO4**

UNIT V QUALITY MANAGEMENT SYSTEMS 9

Introduction Quality management systems – IS/ISO 9004:2000 – Quality System – Elements, Documentation guidelines for performance improvements. Quality Audits - QS 9000 – ISO 14000 – Concepts. **CO5**

TOTAL : 45 PERIODS

TEXT BOOKS

1. Shridhara Bhat K, Total Quality Management – Text and Cases, Himalaya Publishing House, First Edition 2010
2. Poornima M. Charantimath, Total Quality Management, Pearson Education, Second Edition, 2011.

REFERENCE BOOKS

1. Suganthi, L and Anand Samuel, “Total Quality Management”, Prentice Hall (India) Pvt. Ltd. (2006)
2. Indian standard – quality management systems – Guidelines for performance improvement (Fifth Revision), Bureau of Indian standards, New Delhi.

COURSE OUTCOMES:

Upon completion of the course, students will be able to

CO1 To Understand the evolution of Quality management
CO2 To Understand quality philosophies and practices
CO3 To Apply statistical process control to enhance quality
CO4 To Apply quality tools to enhance organization's quality performance
CO5 To Bring awareness of quality management systems.

MI1405 BUSINESS LAW – II

L	T	P	C
3	0	0	3

COURSE OBJECTIVES

- To provide the student with knowledge of the legal environment in which a consumer and businesses operates.
- To acquire problem solving techniques and to be able to present coherent, concise legal argument.

UNIT I TAXATION 9

Constitutional frame work of taxation, direct and indirect tax. Elementary knowledge of central sales tax. Goods and Service Tax – Concepts, Scope, Methods of GST Calculation, Practical Implications of GST. **CO1**

UNIT II THE CONSUMER PROTECTION ACT, 1986 9

Definition – consumer – complainant – goods – service – complaint – unfair trade practices – restrictive trade practices – rights and remedies for consumers - consumer protection council – consumer disputes redressal agencies. **CO2**

UNIT III THE INFORMATION TECHNOLOGY ACT, 2000 9

Definitions, Cyber Laws in India, Rationale and need of information technology act-Objectives of Information Technology ACT- Changes in Information Technology Act. Electronic records and governance. Cybercrimes – offences and penalties under IT Act, 2000. **CO3**

UNIT IV DIGITAL SIGNATURE 9

Definitions, Legal recognition of Digital signature, Regulation of certifying authorities, Appointment of certifying authorities to issue digital signature certificates, Procedure, Duties of subscribers, Cyber regulations appellate tribunal, Computer crimes. **CO4**

UNIT V INTELLECTUAL PROPERTY RIGHTS 9

Meaning of IPR, objectives and types of IPR. Copy rights: Meaning and purpose of copyright, procedure for Registration of Copyrights, Right of owner of copyrights. Patent Act: Meaning and Advantages of patent, Procedure for Registration of patents **CO 5**

TOTAL : 45 PERIODS

TEXT BOOKS

1. Maheshwari, S.N. and S.K. Maheshwari; A Manual of Business Law, 6th Edition, Himalaya Publishing House, 2015.

MI1406	**APPLIED OPERATIONS RESEARCH - I**	**L**	**T**	**P**	**C**
		3	**0**	**0**	**3**

COURSE OBJECTIVES

- To learn the fundamentals of operations research applied in business decision making.
- To apply the techniques constructively to make effective business decisions

UNIT I INTRODUCTION TO LINEAR PROGRAMMING	**9**
Introduction to applications of operations research in functional areas of management. Linear Programming-formulation, solution by graphical and simplex methods (Primal - Penalty, Two Phase)	**CO1**
UNIT II TRANSPORTATION MODELS	**9**
Transportation Models (Minimising and Maximising Problems) – Balanced and unbalanced Problems – Initial Basic feasible solution by N-W Corner Rule, Least cost and Vogel's approximation methods. Check for optimality. Solution by MODI / Stepping Stone method. Case of Degeneracy. Transhipment Models.	**CO2**
UNIT III ASSIGNMENT PROBLEMS	**9**
Assignment Models (Minimising and Maximising Problems) – Balanced and Unbalanced Problems. Solution by Hungarian and Branch and Bound Algorithms. Travelling Salesman problem. Crew Assignment Models.	**CO3**
UNIT IV INVENTORY MODELS	**9**

Inventory Models – EOQ and EBQ Models (With and without shortages), Quantity Discount Models. **CO4**

UNIT V GAME THEORY **9**

Game Theory-Two person Zero sum games-Saddle point, Dominance Rule, Methods of matrices, graphical and LP solutions. **CO5**

TOTAL : 45 PERIODS

TEXT BOOKS

1. Gupta P.K, Hira D.S, Problem in Operations Research, S. Chand and Co, 2007.
2. Paneerselvam R., Operations Research, Prentice Hall of India, Fourth Print, 2008.

REFERENCE BOOKS

1. Hamdy A Taha, Introduction to Operations Research, Prentice Hall India, Seventh Edition, Third Indian Reprint 2004.
2. Frederick & Mark Hillier, Introduction to Management Science – A Modeling and case studies approach with spreadsheets, Tata Mcgraw Hill, 2005.
3. G. Srinivasan, Operations Research – Principles and Applications, PHI, 2007.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 Ability to understand and analyse managerial problems in industry so that resources are used more effectively.
CO2 To solve specialized linear programming problems like transportation models.
CO3 To solve specialized linear programming problems like assignment models.
CO4 To understand the concepts of inventory control for better decision making.
CO5 Understand the concepts of game theory and analysing in an interactive situation.

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAMME OUTCOMES (POs)												PROGRAMME SPECIFIC OUTCOMES (PSOs)		
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2	PSO 3
CO1	-	3	-	-	-	2	-	-	-	-	-	-	3	1	1
CO2	-	3	-	-	-	2	-	-	-	-	-	-	3	1	1
CO3	-	3	-	-	-	2	-	-	-	-	-	-	3	1	1

CO5	-	3	-	-	-	2	-	-	-	-	-	-	3	1	1

MI1407 **ACCOUNTING SOFTWARE**

L	T	P	C
0	0	4	2

COURSE OBJECTIVES

- Understand the techniques of using accounting software package for recording accounts.

Details of Experiments

S. No	Exp. No.	Name	Duration
1	1	Company creation and management	4
2	2	Accounting Groups and Ledger creation and management	4
3	3	Cash and Bank transactions	4
4	4	Accounting Voucher creation – Sales, Purchase, Receipt and Payment vouchers	4
5	5	Contra, Journal vouchers, Debit Notes, Credit Notes	4
6	-	Extended experiment - 1	4
7	6	Trial Balance, Final Accounts without adjustments	4
8	7	Final Accounts with adjustments,	4
9	8	Report generation	4
10	-	Extended experiment - 2	4
11	9	Inventory management –Creating Stock Groups, Stock Categories, Godown/Location, Unit of Measure, Stock items, Inventory Masters	4
12	10	Inventory Voucher creation – Purchase Order, Sales Order, Rejections, Stock Journal, Delivery Notes, Receipt Voucher	4
13	11	Preparation of Bank Reconciliation Statement	4
14	12	Export and Import of Data, Data Security, Printing of Reports	4
15	-	Extended experiment - 3	4

TOTAL : 60 PERIODS

REFERENCE BOOKS:

1. Mastering Tally ERP 9, Ashok K. Nadhani, BPB Publications, 2016.
2. Accounting with Tally 9, Dinesh Maidasani, Laxmi Publications, 2014.
3. Tally ERP 9, Kogent Learning Solutions Inc., Dreamtech Press, 2013.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 To understand the basics of Computer based accounting procedures.
CO2 To understand the concepts and steps involved in Computer based accounting process.
CO3 To understand the procedures of data entry and access of data.
CO4 To understand the retrieval of data and generating different types of reports.
CO5 To understand the concepts of data transfer to different users.

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAMME OUTCOMES (POs)	PROGRAMME SPECIFIC OUTCOMES (PSOs)

		L	T	P	C
MI1408	**SEMINAR I**	**L**	**T**	**P**	**C**
		0	**0**	**2**	**1**

COURSE OBJECTIVE

- To expose the students to the basics of business etiquette.

Students are expected to prepare and present on topics suggested below:

1. Business Communication Etiquette
2. Professional Image
3. Body language and Gestures
4. Impression management
5. Networking
6. Restaurant Etiquette
7. Business travel planning
8. Hosting and attending Events
9. Business meetings
10. Time Management

TOTAL : 30 PERIODS

REFERENCE BOOKS:

1. Barbara Pachter , The Essentials of Business Etiquette: How to Greet, Eat, and Tweet Your Way to Success, McGraw - Hill Professional, 2013
2. Shital Kakkar Mehra Business Etiquette: A Guide for The Indian Professional Paperback, HarperCollins, 2012
3. Cyrus M. Gonda, Master of Business Etiquette Paperback, Embassy Books; First Edition, 2017

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 To understand the importance of Business Communication Etiquette and Professional Image.
CO2 To understand various Body language and Gestures and Impression management.
CO3 To Learn and apply networking and restaurant Etiquette..
CO4 To Learn Business travel planning and hosting and attending Events.
CO5 To Learn the importance of Business meetings and Time Management.

SEMESTER V

MI1501 APPLIED OPERATIONS RESEARCH - II **L T P C**

3 3 0 0

COURSE OBJECTIVES

- To impart knowledge in concepts and models used in Operations Research
- To apply the techniques constructively to make effective business decisions.

UNIT I ADVANCED LINEAR PROGRAMMING - I **9**

Introduction to principles of Duality, Solution by Dual Simplex method and Revised Simplex method. Sensitivity of optimal LP solutions. **CO1**

UNIT II ADVANCED LINEAR PROGRAMMING - II **9**

Integer Programming – Branch and Bound (Graphical method), Gomory's cutting plane method - Pure and Mixed IPP. **CO2**

UNIT III DECISION THEORY **9**

Decision making under uncertainty – Criterion of optimism – Criterion of pessimism – Savage criterion – Criterion of realism – Criterion of rationality, Decision making under risk – Expected Monetary value – Expected Opportunity Loss – Expected Value of Perfect Information, Decision tree analysis. **CO3**

UNIT IV QUEUING MODELS **9**

Queuing Models - Single (M/M/1): (α/FIFO), (M/M/1): (N/FIFO) and multi-Channel Models (M/M/C): (α/FIFO). **CO4**

UNIT V REPLACEMENT MODELS **9**

Replacement of items that deteriorate gradually, Replacement of items that fail suddenly - Individual and group replacement of items. **CO5**

TOTAL : 45 PERIODS

TEXT BOOKS

1. Gupta P.K, Hira D.S, Problem in Operations Research, S. Chand and Co, 2007.
2. Paneerselvam R., Operations Research, Prentice Hall of India, Fourth Print, 2008.

REFERENCE BOOKS

1. Hamdy A Taha, Introduction to Operations Research, Prentice Hall India, Seventh Edition, Third Indian Reprint 2004.
2. Frederick & Mark Hillier, Introduction to Management Science – A Modeling and case studies approach with spreadsheets, Tata Mcgraw Hill, 2005.
3. G. Srinivasan, Operations Research – Principles and Applications, PHI, 2007.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 To understand the alternative courses of action and their effect on values of the objective function.

CO2 To construct linear integer programming models and discuss the solution techniques

CO3 To propose the best strategy using decision making methods under risk and uncertainty

CO4 To understand different queuing situations and find the optimal solutions using models for different situations.

CO5 To understand and formulate a replacement policy to determine the time at which replacement of equipment is economical

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAMME OUTCOMES (POs)												PROGRAMME SPECIFIC OUTCOMES (PSOs)		
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2	PSO 3

MI1502 ENVIRONMENTAL SCIENCE AND MANAGEMENT

L	T	P	C
3	3	0	0

COURSE OBJECTIVES

- To study the nature and facts about environment.
- To study the interrelationship between living organism and environment.
- To appreciate the importance of environment by assessing its impact on the human world; envision the surrounding environment, its functions and its value.
- To study the integrated themes and biodiversity, natural resources, pollution control and waste management.

UNIT I ENVIRONMENT AND ECOSYSTEMS 9

Definition, scope and importance of environment – need for public awareness - concept of an ecosystem – structure and function of an ecosystem – producers, consumers and decomposers – energy flow in the ecosystem – ecological succession – food chains, food webs and ecological pyramids. **CO1**

UNIT II BIODIVERSITY 9

Introduction to biodiversity definition: genetic, species and ecosystem diversity – biogeographical classification of India – value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values –threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts – endangered and endemic species of India – conservation of biodiversity. **CO2**

UNIT III ENVIRONMENTAL POLLUTION 9

Definition – causes, effects and control measures of: (a) Air pollution (b) Water pollution (c) Soil pollution (d) Marine pollution (e) Noise pollution (f) Thermal pollution (g) Nuclear hazards – soil waste management: causes, effects and control measures of municipal solid wastes, climate change, acid rain, disaster management: floods, earthquake, cyclone and landslides. **CO3**

UNIT IV NATURAL RESOURCES 9

Forest resources, Water resources, Mineral resources, Food resources, Energy resources, Land resources, equitable use of resources, resource conservation, Sustainable development. **CO4**

UNIT V SOCIAL ISSUES AND THE ENVIRONMENT 9

Urban problems related to energy –water conservation, rain water harvesting, watershed management– resettlement and rehabilitation of people, Environment protection act – Air(Prevention and Control of Pollution) act – Water (Prevention and control of Pollution) act. **CO5**

TOTAL : 45 PERIODS

TEXT BOOKS

1. Trivedi.R.K., "Handbook of Environmental Laws, Rules, Guidelines, Compliances and Standards", Vol. I and II, Enviro Media, 3rd edition, BPB publications, 2010.
2. Christopher Sheldon and Mark Yoxon, "Installing Environmental management Systems – a step by step guide" Earthscan Publications Ltd, London, 1999.

REFERENCE BOOKS

1. ISO 19011: 2002, "Guidelines for quality and/or Environmental Management System auditing, Bureau of Indian Standards, New Delhi, 2002
2. Paul L Bishop „Pollution Prevention: Fundamentals and Practice‟, McGraw- Hill International, Boston, 2000.
3. Dharmendra S. Sengar, 'Environmental law', Prentice hall of IndiaPvt,New Delhi,2009

COURSE OUTCOMES:

Upon completion of the course, students will be able to

CO1 Will become aware of the ecosystem, bio system, the natural resources and the environment.

CO2	Will work towards protecting the environment as well as be aware of the Acts.
CO3	Resource conservation will help individuals to appreciate the utility value of the resources.
CO4	Will understand the various resources available across the globe.
CO5	Will learn the environmental issues and to protect the natural resources.

MI1503	FINANCIAL MANAGEMENT - I	L	T	P	C
		3	0	0	3

COURSE OBJECTIVES

- Acquaint the students with the basic concepts of Financial Management and its pivotal role in the corporate world.
- Encourage students to think critically about issues in corporate financial management.
- Understand some of the approaches used by a Finance Manager with respect to financial analysis, profit planning, control and management of current resources.

UNIT I OVERVIEW OF FINANCIAL MANAGEMENT **9**

Financial Management – Meaning, Scope and Functions – Objectives of Financial Management – Profit maximization Vs. wealth maximization-Agency Problems-Managers Vs. Shareholders. Role of finance manager-current issues of finance manager-financial ethics and corporate social Responsibility. **CO1**

UNIT II SOURCES OF FINANCE **9**

Long term finance- Shares, Debentures, Preference stock and term loans- Features, Rights, Advantages and Disadvantages- Short Term Sources-Trade credit, Commercial paper, Certificate of deposit and Bank Finance. **CO2**

UNIT III FINANCING DECISION **9**

Leverages- Operating, Financial and Combined Leverages – Measurement of leverages. EBIT-EPS Analysis- Indifference point. Capital structure - Factors influencing Capital structure - Optimal capital structure. **CO3**

UNIT IV DIVIDEND DECISION **9**

Objectives of Dividend Policies-Types- Determinants of dividend policy - forms of dividend- Bonus shares- Share split- Reverse Split-Buy back of shares. **CO4**

UNIT V WORKING CAPITAL MANAGEMENT **9**

Meaning, Types and Sources of Working Capital – Factors affecting Working Capital – Computation of Working Capital - Management of Cash, Receivables and Inventory – Concept, Need and Techniques. **CO5**

TOTAL : 45 PERIODS

TEXT BOOKS

1. M.Y.Khan and P.K.Jain, Financial Management: Text, Problems and Cases, 7th Edition, McGraw-Hill Education (INDIA) Pvt. Ltd., New Delhi. Year 2017.
2. Prasanna Chandra, Financial Management: theory and practice, 9th Edition, McGraw-Hill Education (INDIA) Pvt. Ltd. Company Ltd., New Delhi. Year 2015.

REFERENCE BOOKS

1. I.M.Pandey, Financial Management, 11th Edition, Vikas Publishing House Pvt. Ltd., New Delhi. Year 2015.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 To understand the basic concepts related to financial management.

CO2 To understand the various source of long-term and short-term sources of funds.

CO3 To analyze and evaluate the financial decisions of an organization.

CO4 To analyze and evaluate the dividend decisions of an organization.

CO5 To understand various aspects of working capital.

MI1504 **INFORMATION MANAGEMENT**

L	T	P	C
3	0	0	3

COURSE OBJECTIVES

- To understand the importance of information in business.
- To know the technologies and methods used for effective decision making in an organization

UNIT I INTRODUCTION **10**

Data, Information, information as resource, Intelligence, decision making with MIS- tactical, operational and strategic decisions, ethical and social issues. **CO1**

UNIT II ENTERPRISE INFORMATION SYSTEM **10**

Business process integration, Motivation for Enterprise systems-ERP system-Finance and accounting module, HR management Module, Manufacturing and operations Module, Sales and Marketing module, CRM. **CO2**

UNIT III MANAGING DATA RESOURCES **8**

Need for data management, Challenge for data management-data independence, consistency, data access, data administration, concurrency, security, recovery, data base design, data warehouses - uses. **CO3**

UNIT IV DATA MINING AND BUSINESS INTELLIGENCE **8**

Data Mining-virtuous cycle of data mining, data mining application for effecting decision making, Business Intelligence-framework of business intelligence, BI implementation and integration. **CO4**

UNIT V RECENT TRENDS IN INFORMATION SYSTEMS **9**

Introduction to E-commerce/E-business-B2B, B2C, C2C, portal E-governance; Cloud computing, Internet of Things (IoT). **CO5**

TOTAL : 45 PERIODS

TEXT BOOKS

1. Robert Schultheis and Mary Summer, Management Information Systems – The Managers View, Tata McGraw Hill, 2008.
2. Kenneth C. Laudon and Jane Price Laudon, Management Information Systems – Managing the digital firm, PHI Learning / Pearson Education, PHI, Asia, 2012.
3. Gordon Davis, Management Information System: Conceptual Foundations, Structure and Development, Tata McGraw Hill, 21st Reprint 2008.

REFERENCE BOOKS

1. Rahul de, Managing Information systems in business government and society, Wiley, 2016.
2. EfraimTurban,Ramesh Shardam,DursunDelen and David King ,Business Intelligence- A managerial Approach , second edition, Pearson 2012
3. Michael J.A.Berry and Gordon S.Linoff, Data mining Techniques, Second edition, Wiley 2004.

4. Haag, Cummings and Mc Cubbrey, Management Information Systems for the Information Age, McGraw Hill, 2005. 9th edition, 2013.

5. Raplh Stair and George Reynolds, Information Systems, Cengage Learning, 10th Edition, 2012.

6. Frederick Gallegor, Sandra Senft, Daniel P. Manson and Carol Gonzales, Information Technology Control and Audit, Auerbach Publications, 4th Edition, 2013.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 To understand the concept of MIS and how in helps in decision making.
CO2 To understand the importance and uses of different applications / Modules.
CO3 To handle the data efficiently and effectively.
CO4 To learn data mining for better decision making and learn to frame business intelligence.
CO5 To know the recent trends in Information Systems.

MI1505	MARKETING MANAGEMENT - II	L	T	P	C
		3	0	0	3

COURSE OBJECTIVES

- To understand the changing business environment.
- To identify the indicators of marketing management principles and practices.
- To understand fundamental premise underlying market driven strategies.

UNIT I PRODUCT MANAGEMENT 9

Product- Meaning, Classification of Products, Levels of Products - Product Hierarchy - New Product Development Strategies and Product Life Cycle (PLC) - Product Line Strategies - Product Mix Strategies - Packaging –Labeling- Branding **CO1**

UNIT II PRICING 9

Introduction - Factors Affecting Price Decisions - Cost Based Pricing - Value Based and Competition Based Pricing - Product Mix Pricing Strategies - Adjusting the Price of the Product - Initiating and Responding to the Price Changes - Global and International Pricing. **CO2**

UNIT III DISTRIBUTION MANAGEMENT 9

Introduction - Need for Marketing Channels - Decisions Involved in Setting up the Channel - Channel Management Strategies - Introduction to Logistics Management - Reverse Logistics - Backward and Forward Integration - Introduction to Retailing and Wholesaling.	**CO3**

UNIT IV PROMOTION MANAGEMENT **9**

Non-personal and personal communication channels: Introduction - Integrated Marketing Communications (IMC) - Communication Development Process - Budget Allocation Decisions in Marketing Communications - Introduction to Advertising, Fundamentals of Sales Promotion - Basics of Public Relations and Publicity- Personal Selling - Direct Marketing.	**CO4**

UNIT V CUSTOMER RELATIONSHIP MANAGEMENT **9**

Introduction - Relationship Marketing Vs. Relationship Management - Definitions of Customer Relationship Management (CRM) - Types of CRM - Significance of Customer Relationship Management - Managing Customer Loyalty and Development - Reasons Behind Losing Customers by Organizations - Social Actions Affecting Buyer-Seller Relationships.	**CO5**

TOTAL : 45 PERIODS

TEXT BOOKS

1. Marketing Management- An Indian perspective, Vijay Prakash Anand, Biztantra, Second edition, 2016.
2. Marketing Management Global Perspective, Indian Context, V.S.Ramaswamy & S.Namakumari, Macmillan Publishers India,5th edition, 2015.

REFERENCE BOOKS

1. Marketing Management, S.H.H. Kazmi, 2013, Excel Books India.
2. Marketing Management- text and Cases, Dr. C.B.Gupta & Dr. N.Rajan Nair, 17th edition, 2016.
3. Marketing Management, Sherlekar S.A, Himalaya Publishing House, 2016.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	To understand product, new product development and product line strategies and branding.
CO2	To understand the various pricing strategies and about the global and international pricing.
CO3	To understand the various marketing channels and strategies and Retailing & Wholesaling.
CO4	To understand the concept communication channels, Advertising, Sales promotion, PR and Sales management process.
CO5	To examine the fundamentals of Customer Relationship Management and customer loyalty.

MI1506 ORGANIZATIONAL BEHAVIOUR L T P C

3 0 0 3

COURSE OBJECTIVES

- Understand the implications of individual and group behavior in organizational context.
- Understand the concept of organizational behavior, the social organization and the diverse environment alongside with the management of groups and teams.

UNIT I INTRODUCTION TO ORGANIZATIONAL BEHAVIOUR - I 9

Definition, need and importance of organizational behaviour – Nature and scope – Frame work – Organizational behaviour models- Diversity in work place- Organization structure – Formation - Types. **CO1**

UNIT II INDIVIDUAL PROCESSES I 9

Personality – Types – Factors Affecting Personality –Theories– Emotional Intelligence- Learning – Types of learners – The learning process –- Types of Learning Styles . **CO2**

UNIT III INDIVIDUAL PROCESSES II 9

Perceptions – Importance – Factors influencing perception. Attitudes – Characteristics – Components – Motivation – Importance – Types – Theories - Effects on work behavior- Work Stress - Causes-Managing stress. **CO3**

UNIT IV GROUP DYNAMICS 9

Groups in organizations – types- Group dynamics –Team and team building – Developing high performance teams - Communication in teams and organizations – Control. Leader Vs Managers- Power and influence in work place- Organizational Politics. **CO4**

UNIT V ORGANIZATIONAL PROCESSES 9

Organizational culture and climate – Factors affecting organizational climate – Organizational change – Importance – the change process – Resistance to change – Managing change- Conflict-Conflict resolution. **CO5**

TOTAL : 45 PERIODS

TEXT BOOKS

1. L.M.Prasad, -Organisational Behaviour,-Sultan Chand & Sons
2. Fred Luthans-Organisational Behaviour- McGraw Hill Book Co

REFERENCE BOOKS

1.Bhattacharya-Organization Behavior-Oxford University Press, 2013.
2.Mc Shane, Steven L, Mary Von Glinow and Radha R. Sharma, - Organizational Behavior, Tata McGraw Hill, New Delhi

COURSE OUTCOMES:
Upon completion of the course, students will be able to

CO1 To understand the fundamentals of organizational behavior.

CO2 To understand the different types of personality.

CO3 To understand the fundamentals of motivation.

CO4 To understand group dynamics, various ways to resolve conflicts.

CO5 To study the different styles of leadership, power and politics.

MI1507 DATA ANALYSIS LABORATORY - I

L	T	P	C
0	0	2	1

COURSE OBJECTIVES

- The objective is to provide a hands-on knowledge of how to apply statistics to business situation using spreadsheets.

Exercise 1 : Random number generation
Exercise 2 : Rank and percentile
Exercise 3 : Simple Random sampling and Systematic Random sampling
CO1

Exercise 4 : Descriptive Statistics
CO2

Exercise 5 : t-test
Exercise 6 : z-test
Exercise 7 : F-Test
Exercise 8: ANOVA
Exercise 9: Chi-square test
CO3

Exercise 10: Mann- Whitney U test
Exercise 11 : Kruskal-Wallis test **CO4**
Exercise 12: Correlation and Regression
Exercise 13: One sample Run test
Exercise 14: Moving average and Exponential Smoothing **CO5**
Exercise 15: Trend analysis

TOTAL : 60 PERIODS

COURSE OUTCOMES:

Upon completion of the course, students will be able to

CO1	To understand the sampling techniques
CO2	To apply the Descriptive Statistics
CO3	To apply the Parametric analysis
CO4	To apply the Nonparametric analysis
CO5	To make forecast

MI1508	SEMINAR II	L	T	P	C
		0	0	2	1

COURSE OBJECTIVES

- To enable the learners in understanding of the basic concept economics.
- To enable the learners to have exposure on international monetary fund, world trade organisation and the Nobel Memorial Prize in Economic Sciences

UNIT I CAPITALISM AND COMMUNISM **6**

Capitalism – Varieties, History, Pros & Cons, Socialism; Industrial Revolution; Communism- History, Theory, concepts, and types. **CO1**

UNIT II PROTECTIONISM AND GLOBALIZATION **6**

Protectionism- Policies, history, and growth and current world trend. Globalization- Cultural, political, dimensions, and criticism. **CO2**

UNIT III ECONOMICS AND POVERTY **6**

Economic growth, development of research, global indicators, impact evaluation, elements, inequality, and Poverty. **CO3**

UNIT IV IMF and WTO **6**

International Monetary fund – Functions, history, member countries, voting power; criticism. **CO4**
World Trade Organization-Functions, Principles, Organizational structure, decision making, membership, disputes, agreements, budget, and criticism.

UNIT V BEHAVIORAL ECONOMICS AND THE NOBEL MEMORIAL PRIZE IN ECONOMIC SCIENCES **6**

Behavioral Economics-History, Prospect Theory, Concept, honors, awards, and The Nobel Memorial Prize in Economic Sciences. **CO5**

TOTAL : 30 PERIODS

COURSE OUTCOMES:

Upon completion of the course, students will be able to

CO1 The learners are able to apply the basic concepts of capitalism and communism.
CO2 The learners can learn about Protectionism and Globalization.
CO3 The learner can understand the economics and reason for poverty.
CO4 The learner get familiar with IMF and WTO.
CO5 The learner is provided exposure on the behavioral Economics and The Nobel Memorial Prize in Economic Sciences

SEMESTER - VI

MI1601	BANKING THEORY AND PRACTICES	L	T	P	C
		3	0	0	3

COURSE OBJECTIVES

The course aims at imparting knowledge about the Banking Operations among the students

- Students will get exposure for banking operations
- Students will be exposed to various dimensions of day to day operations.

UNIT I BANKING AN OVERVIEW **9**

Origin and development of banking in India- Functions of Banks-Credit creation-Techniques of Credit creation and its limitations –Commercial banks – role in the Indian money market -Reserve bank of India- Functions-Monetary policy-Instrument of Credit control operation–relation to cooperative banks and credit institutions. **CO1**

UNIT II OPERATIONS OF BANK ACCOUNTS **9**

Types of Bank Accounts – fixed deposits – Fixed deposit receipts and its implications, savings deposit accounts – current Accounts – recurring deposit Accounts – new deposit savings schemes introduced by banks – super savings package – cash certificate, annuity deposit – reinvestment plans – perennial premium plan – Non-resident (external) accounts scheme-Demat account. **CO2**

UNIT III BANKER AND CUSTOMER RELATIONSHIP **9**

Definition of Banker-Customer-General relationship-Bankers lien-Secrecy of customer Account, banker as borrowers-Opening, conducting and closing of accounts of special types of customer-Minor- Lunatic-Drunkard-Married Woman-Trustee-Partnership-Joint stock companies. **CO3**

UNIT IV METHODS OF PAYMENT AND COLLECTION **9**

Cheque - Requisites of cheque - crossing of cheque- types of crossing-Different kinds of crossing and their significance. -Duties and responsibilities of the paying banker-Endorsement-Kinds of endorsement-Statutory protection to the banker and paying banker-Payment in due course. Collection of cheque- Duties and responsibilities of collecting banker- precautions, statutory protection to the collecting banker-Pass book- Effect of entries in the pass book. Loans and advances- Forms of advance, Cash credit-Over draft- Principles of lending-Modes of creating charge, Lien, Pledge, Hypothecation, Mortgage. **CO4**

UNIT V ELECTRONIC BANKING AND ELECTRONIC FUND TRANSFER **9**

E-banking-internet banking services-mobile banking-ATM-Credit cards and debit cards- MICR cheques- Features, benefits and challenges. Electronic fund transfer-RBI guidelines-Benefits of electronic clearing systems-Interbank transfer- Real time gross settlement (RTGS)-National Electronic fund transfer (NEFT)-Immediate payment service (IMPS). **CO5**

TOTAL : 45 PERIODS

TEXT BOOKS

1. Banking Theory, Law & Practice – Sundaram and Varshney, Sultan Chand Company, New Delhi.
2. Banking Law, Theory and Practice- S.N. Maheswari, Kalyani Publications, 2009.

REFERENCE BOOKS

1. Banking Law and Practice, (Fourth Revised Edition) K.P. Kandasami, R.Parameswaran, S. Natarajan, Sultan Chand Company, New Delhi, 2013.
2. Banking Theory and Practice, 21/e, K C Shekhar & Lekshmy Shekhar, Vikas Publishing

COURSE OUTCOMES:

Upon completion of the course, students will be able to

CO1 To help them gather knowledge on banking and financial system in India

CO2	To provide knowledge about commercial banks and its products
CO3	To enable them to understand better customer relationship
CO4	To make them understand various methods of payment and collection
CO5	To create awareness about modern banking services like e-banking, m-banking and internet banking

MI1603	**ENTERPRISE RESOURCE PLANNING**	**L**	**T**	**P**	**C**
		3	**0**	**0**	**3**

COURSE OBJECTIVES

- To understand the various enterprise business process.
- To understand the emerging trends in ERP developments.
- To obtain knowledge on the various ERP software products available in Market.
- Role of ERP in business transformation.

UNIT I ERP - INTRODUCTION **9**

Enterprise – An Overview, Business Process, Introduction to ERP, Basic ERP Concepts, Justifying ERP Investments, Risks of ERP, Benefits of ERP. **CO1**

UNIT II ERP AND TECHNOLOGY **9**

ERP and Related Technologies, Business Intelligence (BI) and Business Analytics (BA), E-Commerce and E-Business, Business Process Reengineering (BPR), Data Warehousing and Data Mining, On-line Analytical Processing (OLAP), Product Life Cycle Management (PLM), Supply Chain Management (SCM), Customer Relationship Management (CRM), Geographic Information System (GIS), Advanced Technology and ERP Security. **CO2**

UNIT III ERP IMPLEMENTATION **9**

Implementation Challenges, ERP Implementation Strategies, ERP Implementation Life Cycle, Pre-Implementation Tasks, Implementation Methodologies, ERP Deployment Methods, ERP Project Teams, Vendors and Consultants, Employees and Employee Resistance, Contracts with Vendors, Consultants and Employees, Training and Education, Data Migration, Project Management and Monitoring, Post-Implementation Activities, Success and Failure Factors of an ERP Implementation.	**CO3**
UNIT IV BUSINESS MODULES	**9**
Business Modules of an ERP Package, Financials, Manufacturing, Human Resource Management, Plant Maintenance, Materials Management, Quality Management, Marketing, Sales, Distribution and Service.	**CO4**
UNIT V ERP - PRESENT AND FUTURE	**9**
Turbo Charge the ERP System, Enterprise Application Integration (EAI), ERP and E-Business, ERP and Total Quality Management, Future Directions and Trends in ERP.	**CO5**

TOTAL : 45 PERIODS

TEXT BOOKS

1. Alexis Leon, ERP demystified, Third Edition Tata McGraw-Hill, 2014.
2. Enterprise Resource Planning Concepts And Practices By Vinod Kumar Garg & N Venkatakrishna, 2nd Edition, PHI, 2012.

REFERENCE BOOKS

MI1605	OPERATIONS MANAGEMENT – I	L	T	P	C
		3	0	0	3

COURSE OBJECTIVES

- To make learners understand about the basic concepts related to operations management.
- To apply statistical and mathematical tools and techniques to issues in operations management.

UNIT I INTRODUCTION TO OPERATIONS MANAGEMENT **9**

Operations Management – Nature, Importance, historical development, transformation processes, differences between services and goods, a system perspective, functions, challenges, current priorities, recent trends; Operations Strategy – Strategic fit and framework. **CO1**

UNIT II FORECASTING AND CAPACITY PLANNING **9**

Demand Forecasting – Need, Types, Objectives and Steps. Overview of Qualitative and Quantitative methods. Capacity Planning – Long range, Types, Developing capacity alternatives. **CO2**

UNIT III DESIGN OF PRODUCT, PROCESS AND WORK SYSTEMS **9**

Product Design – Influencing factors, Approaches, Legal, Ethical and Environmental issues. Process – Planning, Selection, Strategy, Major Decisions. Work and Method Study **CO3**

UNIT IV MATERIALS MANAGEMENT **9**

Materials Management – Objectives, Planning, Budgeting and Control. Purchasing – Objectives, Functions, Policies, Vendor Management Inventory, Vendor rating and Value Analysis. **CO4**

UNIT V SCHEDULING AND PROJECT MANAGEMENT

Project Management – Scheduling Techniques, PERT, CPM; Scheduling - work centers – nature, importance; Priority rules and techniques, Shop floor control. **CO5**

TOTAL: 45 PERIODS

SEMESTER – VII

MI1701 **FINANCIAL MANAGEMENT-II**

L	T	P	C
3	0	0	3

COURSE OBJECTIVES

- To Understand the operational nuances of a Finance Manager.
- To Comprehend the technique of making decisions related to finance functions.

UNIT I FUNDAMENTAL VALUATION CONCEPTS 9

Time value of money – compounding and discounting techniques-valuation of Annuity – Multi period compounding – Valuation of securities – valuation of shares and bonds - Concept of risk and return – single asset and portfolio.	**CO1**
UNIT II INVESTMENT DECISIONS – CAPITAL BUDGETING	**9**
Capital budgeting: Principles and techniques – Nature of capital budgeting – identifying relevant cash flows – Evaluation Techniques: Payback, Accounting rate of return, Net Present Value, Internal Rate of Return, Profitability Index – Comparison of DCF techniques.	**CO2**
UNIT III INVESTMET DCISIONS – COST OF CAPITAL	**9**
Cost of Capital – Meaning, Features and Importance – Classification of Cost of Capital – Computation of Cost of Capital – Debt, Preference and Equity Shares and Retained Earnings – Weighted Average Cost of Capital.	**CO3**
UNIT IV CAPITAL STRUCTURE AND DIVIDEND THEORIES	**9**
Capital Structure Theories – Definition and Assumptions – NI, NOI, MM and Traditional Approaches – Capital structure planning in practice – Dividend Theory and Policy – Meaning – Water, Gordan, MM Models – Rights evaluation and Effect of Bonus issue.	**CO4**
UNIT V FINANCIAL MARKETS	**9**
Financial Markets – Capital Market – New Issues market – Secondary Market, Money Market and Government Securities Market – Asset based financing – Lease, Hire Purchase, Venture Capital Financing.	**CO5**

TOTAL : 45 PERIODS

TEXT BOOKS

1. I M. Pandey Financial Management, Vikas Publishing House Pvt. Ltd., 11th edition, 2018
2. M.Y. Khan and P.K.Jain Financial management, Text, Problems and cases Tata McGraw Hill, 8th edition, 2017

REFERENCE BOOKS

1. Srivatsava, Mishra, Financial Management, Oxford University Press, 2012.
2. Prasanna Chandra, Financial Management, 9th edition, Tata McGraw Hill, 2017.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	To understand the basic concepts related to the time value of money and to evaluate risk and return.
CO2	To analyze the cash inflow and outflow and evaluate the capital budgeting decision.
CO3	To understand the concepts related to the cost of capital and analyze the various source of capital.
CO4	To understand the theories of capital structure and to create the capital structure for an organization.
CO5	To understand various aspects of the Financial Market.

MI1702 **INCOME TAX** **L T P C**

3 0 0 3

COURSE OBJECTIVES

- To prepare students for a professional qualification in taxation

UNIT I CONCEPTS AND DEFINITION **9**

Basic concepts – Income Tax Act, 1961 – definition – previous year – assessment year – person – assesse, income, total income – casual income, capital and revenue – residential status and incidence of tax, incomes exempt under section 10 – Heads of Income. **CO1**

UNIT II INCOME FROM SALARY AND HOUSE PROPERTY **9**

Salary Income – basis of charge – different forms of salary, allowances, perquisites and their valuation –deduction from salary – computation of taxable salary. House Property – basis of charge – determination of annual value – GAV, NAV – Income from let – out – property – self occupied property – deductions – computation of taxable income. (Simple problems only) **CO2**

UNIT III INCOME FROM BUSINESS/ PROFESSION **9**

Profits and gains from business and profession – basis of charge – methods of accounting – deductions – disallowances, computation of taxable income. **CO3**

UNIT IV INCOME FROM CAPITAL GAINS **9**

Capital gains – basis of charge – short term and long-term capital gains – indexed cost of acquisition and improvement – exemptions – chargeability of short and long term capital gains – deduction under section 80C – introduction to direct taxes code. **CO4**

UNIT V COMPUTATION OF INCOME FOR INDIVIDUALS AND FILING RETURNS **9**

Preparation of return of income for individuals – PAN – Signing and Filing of Returns – Online Filings – Tax Planning – Relevant case problems. Income tax administration-penalties-when an assessee becomes liable for penalty and prosecution-Appeals-Appellate authorities-revisionary powers of commission- appeals to high court and supreme court – income tax authorities. **CO5**

TOTAL: 45 PERIODS

TEXT BOOKS

1.Gaur & Narang, "Income Tax Law & Practice', DP Kalyani Publishers, Latest Edition, New Delhi.

REFERENCE BOOKS

1.Bhagavati Prasad, ' Income Tax', Wishwa Prakashan, New Delhi.

COURSE OUTCOMES:

Upon completion of the course, students will be able to

CO1	Describe about basic concepts, terminologies and residential status of an assessee
CO2	Compute income from salary and house property by applying the provisions of income tax Act.
CO3	To analyse the income from business and Profession
CO4	Make use of Income tax act to assess the taxable income from capital gain
CO5	Explain the powers and responsibility of income tax authorities and assess the role of PAN and importance of assessment procedures and methods of filling of return.

MI1703 OPERATIONS MANAGEMENT - II L T P C

3 0 0 3

COURSE OBJECTIVES

- To explain the concepts, strategies , tools and techniques for managing the critical decision areas in operations management.

UNIT I PROCESS STRATEGY 9

Process Structure - manufacturing, services; Process strategy decisions - customer involvement, resource flexibility, capital intensity; Strategic fit; strategies for changes - reengineering, improvement, process analysis and documentation. **CO1**

UNIT II CONSTRAINT MANAGEMENT 9

Theory of constraints - managing bottlenecks and capacity constrained resources - Drum- buffer-rope systems - Line balancing - synchronous manufacturing. **CO2**

UNIT III OPERATIONS PLANNING 9

Operations planning - Framework - Aggregate Planning – Approaches, costs, relationship to Master Production schedule. Materials requirement planning - MRP, MRP II and ERP. **CO3**

UNIT IV INVENTORY MANAGEMENT 9

Inventory – objectives, costs and control techniques - Fixed order quantity and fixed time period models; Just-in-time and lean systems; Stores Management. **CO4**

UNIT V FACILTY LOCATION AND LAYOUT 9

Location decisions – Need - Nature, factors affecting, Theories, Steps in Selection, Location Models ; Facility Layout – Principles, Types, Planning tools and techniques. **CO5**

TOTAL : 45 PERIODS

TEXT BOOKS

1.K.Aswathappa, K.Shridhara Bhat, Production and Operations Management, Himalayas Publishing House.

REFERENCE BOOKS

1. Richard B. Chase, Ravi Shankar, F. Robert Jacobs, Operations and Supply Chain Management, McGraw Hill Education (India) Pvt. Ltd, 14th Edition, 2014.
2. Krajewski, Lee J., Larry P. Ritzman, and Manoj K. Malhotra. Operations management: processes and supply chains. Upper Saddle River, NewJersey: Pearson, 2010.
3. Mahadevan B, Operations management: Theory and practice. Pearson Education India; 2015.

4. William J Stevenson, Operations Management, Tata McGrawHill, 9th Edition, 2009.

6. Cecil C. Bozarth, Robert B. Handfield, Introduction to Operations and Supply Chain Management, Pearson, 4th Edition, 2016.

COURSE OUTCOMES:

Upon completion of the course, students will be able to

CO1	To understand the process strategy decision, the strategic fit and strategies for changes.
CO2	To understand theory of constraints and line balancing.
CO3	To understand medium term operations planning.
CO4	To understand and evaluate the different inventory control techniques. To understand stores management.
CO5	To evaluate and apply plant location and layout decisions.

MI1704	**RESEARCH METHODOLOGY**	**L**	**T**	**P**	**C**
		3	**0**	**0**	**3**

COURSE OBJECTIVES

- To familiarize students with basic of research and the research process.
- To help students in conducting research work and making research reports.

UNIT I INTRODUCTION **9**

Business Research – Definition and Significance – the research process – Types of Research – Exploratory and causal Research – Theoretical and empirical Research – Cross –Sectional and time – series Research – Research questions / Problems – Research objectives – Research hypotheses – characteristics – Research in an evolutionary perspective – the role of theory in research. **CO1**

UNIT II RESEARCH DESIGN AND MEASUREMENT **9**

Research design – Definition – types of research design – exploratory and causal research design – Descriptive and experimental design – different types of experimental design –Variables in Research – Measurement and scaling – Different scales – Construction of instrument – Validity and Reliability of instrument. **CO2**

UNIT III DATA COLLECTION **9**

Types of data – Primary Vs Secondary data – Methods of primary data collection – Survey Vs Observation – Experiments – Construction of questionnaire and instrument – Sampling plan – Sample size – determinants optimal sample size – sampling techniques – Sampling methods.	**CO3**
UNIT IV DATA PREPARATION AND ANALYSIS	**9**
Data Preparation – editing – Coding –Data entry – Validity of data – Qualitative Vs Quantitative data analyses – Applications of Bivariate and Multivariate statistical techniques, Factor analysis, Discriminant analysis, Cluster analysis, Multiple regression and Correlation – Application of statistical software for data analysis.	**CO4**
UNIT V REPORT DESIGN, WRITING AND ETHICS IN BUSINESS RESEARCH	**9**
Research report –Types – Contents of report – need for executive summary – chapterization – contents of chapter – report writing – the role of audience – readability – comprehension – tone – final proof – report format – title of the report – ethics in research – Ethics in research – Subjectivity and Objectivity in research.	**CO5**

TOTAL: 45 PERIODS

TEXT BOOKS

1. Donald R. Cooper, Pamela S. Schindler and J K Sharma, Business Research methods, 12th Edition, Tata Mc Graw Hill, New Delhi, 2018.
2. Alan Bryman and Emma Bell, Business Research methods, 5th Edition, Oxford University Press, New Delhi, 2018.

REFERENCE BOOKS

1. William G Zikmund, Barry J Babin, Jon C. Carr, Atanu Adhikari, Mitch Griffin, Business Research methods, A South Asian Perspective, 8th Edition, Cengage Learning, New Delhi,2016.
2. V K Ahuja, Law Relating to Intellectual Property Rights 3rd edition 2017, Publisher: LexisNexis, Universal bookstores, India.
3. Anil Kumar H S, Ramakrishna B, Fundamentals of Intellectual Property Rights, 2017 Notion press

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 To understand the concept of research methods and apply in problem solving.
CO2 To apply the research design.
CO3 To understand the guidelines for sampling design.
CO4 To understand and acquire the knowledge on data analysis and report writing.
CO5 To understand and acquire the knowledge on Intellectual Property Rights.

MI1705 **RETAIL MANAGEMENT** **L T P C**

3 0 0 3

COURSE OBJECTIVES

- To understand the concepts of effective retailing

UNIT I INTRODUCTION **9**

An overview of Global Retailing – Challenges and opportunities – Retail trends in India – Socio economic and technological Influences on retail management – Government of India policy implications on retails. **CO1**

UNIT II RETAIL FORMATS **9**

Organized and unorganized formats – Different organized retail formats – Characteristics of each format – Emerging trends in retail formats – MNC's role in organized retail formats. **CO2**

UNIT III RETAILING DECISIONS **9**

Choice of retail locations - internal and external atmospherics – Positioning of retail shops – Building retail store Image - Retail service quality management – Retail Supply Chain Management – Retail Pricing Decisions. Merchandizing and category management – buying. **CO3**

UNIT IV RETAIL SHOP MANAGEMENT **9**

Visual Merchandise Management – Space Management – Retail Inventory Management – Retail accounting and audits - Retail store brands – Retail advertising and promotions – Retail Management Information Systems - Online retail – Emerging trends . **CO4**

UNIT V RETAIL SHOPPER BEHAVIOR **9**

Understanding of Retail shopper behavior – Shopper Profile Analysis – Shopping Decision Process - Factors influencing retail shopper behavior – Complaints Management - Retail sales force Management – Challenges in Retailing in India. **CO5**

TOTAL : 45 PERIODS

REFERENCE BOOKS

MI1706	STRATEGIC MANAGEMENT	L	T	P	C
		3	0	0	3

COURSE OBJECTIVES

- To learn the major initiatives taken by a company' stop management on behalf of corporate, involving resources and performance in external environments. It entails specifying the organization's mission, vision and objectives, and to equip with skills required to manage business and non-business organizations at senior levels.
- The course adopts functional approach to management developing policies and plan to understand the analysis and implementation of strategic management in strategic business units.

UNIT I STRATEGY AND PROCESS **9**

Conceptual framework for strategic management, the Concept of Strategy and the Strategy Formation Process – Stakeholders in business – Vision, Mission and Purpose – Business definition, Objectives and Goals - Corporate Governance and Social responsibility-case study. **CO1**

UNIT II COMPETITIVE ADVANTAGE **9**

External Environment - Porter's Five Forces Model-Strategic Groups Competitive Changes during Industry Evolution- Globalisation and Industry Structure - National Context and Competitive advantage Resources- Capabilities and competencies–core competencies-Low cost and differentiation Generic Building Blocks of Competitive Advantage- Distinctive Competencies- Resources and Capabilities durability of competitive Advantage- Avoiding failures and sustaining competitive advantage-Case study. **CO2**

UNIT III STRATEGIES **10**

The generic strategic alternatives – Stability, Expansion, Retrenchment and Combination strategies - Business level strategy- Strategy in the Global Environment-Corporate Strategy- Vertical Integration-Diversification and Strategic Alliances- Building and Restructuring the corporation- Strategic analysis and choice - Environmental Threat and Opportunity Profile (ETOP) - Organizational Capability Profile - Strategic Advantage Profile - Corporate Portfolio Analysis - SWOT Analysis - GAP Analysis - Mc Kinsey's 7s Framework - GE 9 Cell Model - Distinctive competitiveness - Selection of matrix - Balance Score Card-case study. **CO3**

UNIT IV STRATEGY IMPLEMENTATION & EVALUATION **9**

The implementation process, Resource allocation, Designing organizational structure-Designing Strategic Control Systems- Matching structure and control to strategy-Implementing Strategic change-Politics-Power and Conflict-Techniques of strategic evaluation & control-case study	**CO4**

UNIT V OTHER STRATEGIC ISSUES **8**

Managing Technology and Innovation-Strategic issues for Non Profit organizations. New Business Models and strategies for Internet Economy-case study	**CO5**

TOTAL : 45 PERIODS

TEXT BOOKS

1. Azhar Kazmi, Strategic Management and Business Policy, 3rd Edition, Tata McGraw Hill, 2008.
2. Hill. Strategic Management: An Integrated approach, 2009 Edition Wiley (2012).

MI1707	DATA ANALYSIS LABORATORY - II	L	T	P	C
		0	0	4	2

COURSE OBJECTIVES

- The objective is to provide a hands-on knowledge of how to apply statistics to business situation in management functional areas using spreadsheets.

EXERCISES

Exercise 1: Portfolio selection
Exercise 2: Exercise1 - Extension
Exercise 3: Risk Analysis

Exercise 4: Sensitivity Analysis using Monte Carlo simulation
Exercise 5: Exercise4 - Extension
Exercise 6: Financial performance Analysis Using What if Analysis
Exercise 7: Transportation problem
Exercise 8: Exercise7 - Extension
Exercise 9: Assignment problem
Exercise 10: Exercise9 - Extension
Exercise 11: Shortest path Problem
Exercise 12: Maximum Flow Problem
Exercise 13: Critical path Method
Exercise 14: Queuing Model
Exercise 15: Economic Ordering Quantity(EOQ)

TOTAL : 60 PERIODS

MI1708 **SEMINAR IV** **L T P C**
0 0 2 1

COURSE OBJECTIVES

- To introduce the students to research practices and tools in Management.

Students are expected to prepare and present on Topics suggested below:

1. Types of Data collection and challenges
2. Exploratory research
3. Regression analysis
4. Sampling techniques and its limitations
5. Cross sectional vs longitudinal research
6. Experimental design
7. Validation techniques
8. Design of questionnaire
9. Visualization techniques
10. Descriptive statistics

SEMESTER – VIII

MI1801	BUSINESS ANALYTICS	L	T	P	C
		3	0	0	3

COURSE OBJECTIVES

- Use business analytics for decision making
- To apply the appropriate analytics and generate solutions
- Model and analyse the business situation using analytics.

UNIT I INTRODUCTION TO BUSINESS ANALYTICS (BA)	**9**
Business Analytics - Terminologies, Process, Importance, Relationship with Organizational Decision Making, BA for Competitive Advantage.	**CO1**
UNIT II MANAGING RESOURCES FOR BUSINESS ANALYTICS	**9**
Managing BA Personnel, Data and Technology. Organizational Structures aligning BA. Managing Information policy, data quality and change in BA.	**CO2**
UNIT III DESCRIPTIVE ANALYTICS	**9**
Introduction to Descriptive analytics - Visualising and Exploring Data - Descriptive Statistics - Sampling and Estimation - Probability Distribution for Descriptive Analytics - Analysis of Descriptive analytics	**CO3**
UNIT IV PREDICTIVE ANALYTICS	**9**
Introduction to Predictive analytics - Logic and Data Driven Models - Predictive Analysis Modeling and procedure - Data Mining for Predictive analytics, Analysis of Predictive analytics.	**CO4**
UNIT V PRESCRIPTIVE ANALYTICS	**9**
Introduction to Prescriptive analytics - Prescriptive Modeling - Non Linear Optimisation - Demonstrating Business Performance Improvement.	**CO5**

TOTAL : 45 PERIODS

TEXT BOOKS

1. Robert Schultheis and Mary Summer, Management Information Systems – The Managers View, Tata McGraw Hill, 2008.

MI1802 BUSINESS ETHICS AND CORPORATE GOVERNANCE

L	T	P	C
3	0	0	3

COURSE OBJECTIVES

- To provide an understanding on ethical practices in business.
- To study the business ethical behavior of an individual in the organization.
- To learn the corporate governance in the business.

UNIT I INTRODUCTION **9**

Definition & nature Business ethics, Characteristics, Ethical theories; Causes of unethical behavior; Ethical abuses; Work ethics; Code of conduct; Public good. **CO1**

UNIT II ETHICS THEORY AND BEYOND **9**

Management of Ethics - Ethics analysis [Hosmer model]; Ethical dilemma; Ethics in practice - ethics for managers; Role and function of ethical managers- Code of ethics; Business and ecological / environmental issues in the Indian context and case studies. **CO2**

UNIT III LEGAL ASPECTS OF ETHICS **9**

Political – legal environment; Provisions of the Indian constitution pertaining to Business; Political setup – major characteristics and their implications for business; Prominent features of MRTP &FERA. Social – cultural environment and their impact on business operations, **CO3**

UNIT IV CORPORATE GOVERNANCE **9**

COURSE OBJECTIVES:

- To learn the need and importance of logistics in product flow.

UNIT I INTRODUCTION 9

Definition and Scope of Logistics – Functions & Objectives – Customer Value Chain – Service Phases and attributes – Value added logistics services – Role of logistics in Competitive strategy – Customer Service. **CO1**

UNIT II DISTRIBUTION CHANNELS AND OUTSOURCING LOGISTICS 9

Distribution channel structure - channel members, channel strategy, role of logistics and support in distribution channels. Logistics requirements of channel members; Logistics outsourcing – catalysts, benefits, value proposition, . 3PL, 4PL, 5PL, 6PL. **CO2**

UNIT III TRANSPORTATION AND PACKAGING 9

Transportation System – Evolution, Infrastructure and Networks. Freight Management – Vehicle Routing – Containerization; Modal Characteristics - Inter-Modal Operators and Transport Economies; International Logistics -objectives, importance in global economy, **CO3**

Characteristics of global supply chains, Incoterms. Selection of service provider; Packaging-Design considerations, Material and Cost. Packaging as Unitisation. Consumer and Industrial Packaging.

UNIT IV PERFORMANCE MEASUREMENT AND COSTS **9**

Performance Measurement–Need, System, Levels and Dimensions. Internal and External Performance Measurement. Logistics Audit. Total Logistics Cost – Concept, Accounting Methods: Cost – Identification, Time Frame and Formatting. **CO4**

UNIT V CURRENT TRENDS **9**

Logistics Information Systems – Need, Characteristics and Design. E-Logistics –Structure and Operation. Logistics Resource Management eLRM. Automatic Identification Technologies; Reverse Logistics – Scope, design and as a competitive tool. Global Logistics –Operational and Strategic Issues, ocean and air transportation. Strategic logistics planning; Green Logistics. **CO5**

TOTAL : 45 PERIODS

TEXT BOOKS

1. Bowersox Donald J, Logistics Management – The Integrated Supply Chain Process, Tata McGraw Hill, 2010
2. Ronald H. Ballou, Business Logistics and Supply Chain Management, Pearson Education, 5 th Edition, 2007

REFERENCE BOOKS

1. Sople Vinod V, Logistics Management: The Supply Chain Imperative, Pearson Education, 3 rd Edition, 2012.
2. Coy leetal, The Management of Business Logistics, Thomson Learning, 7th Edition, 2004.
3. Ailawadi C Sathish & Rakesh Singh,Logistics Management,PHI,2005.
4. Bloomberg David Jetal., Logistics, Prentice Hall India, 2005.
5. Pierre David, International Logistics, Biztantra, 2003.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	To understand the basics of logistics, customer value chain and the importance of logistics in strategy formulation.
CO2	To understand distribution channels, its structure and functions and how logistics function can be outsourced.
CO3	To evaluate the influencing characteristics for efficient transportation and packaging.
CO4	To analyse and evaluate the performance measurement and cost of logistics.
CO5	To understand and evaluate the current trends in logistics management

MAPPING OF COs WITH POs AND PSOs

COs	**PROGRAMME OUTCOMES (POs)**												**PROGRAMME SPECIFIC OUTCOMES (PSOs)**		
	PO 1	**PO 2**	**PO 3**	**PO 4**	**PO 5**	**PO 6**	**PO 7**	**PO 8**	**PO 9**	**PO 10**	**PO 11**	**PO 12**	**PSO1**	**PS O2**	**PSO 3**

MI1O002 MATERIALS MANAGEMENT

L	T	P	C
3	0	0	3

COURSE OBJECTIVES

1. To understand why materials management should be considered for profit in operations.
2. To realize the importance of materials both in product and service.

UNIT I INTRODUCTION 9

Operating environment-aggregate planning-role, need, strategies, costs techniques, approaches -master scheduling - manufacturing planning and control system - manufacturing resource planning enterprise resource planning-making the production plan. **CO1**

UNIT II MATERIALS PLANNING 9

Materials requirements planning-bill of materials-resource requirement planning-manufacturing resource planning-capacity management-scheduling orders-production activity control-codification. **CO2**

UNIT III INVENTORY MANAGEMENT 9

Policy Decisions–objectives-control -Retail Discounting Model, News vendor Model; EOQ and EBQ models for uniform and variable demand with and without shortages -Quantity discount models. Probabilistic inventory models. **CO3**

UNIT IV PURCHASING MANAGEMENT 9

Establishing specifications-selecting suppliers - price determination-forward buying-mixed buying strategy-price forecasting-buying seasonal commodities-purchasing under uncertainty-demand management - price forecasting-purchasing under uncertainty-purchasing of capital equipment international purchasing. **CO4**

UNIT V WAREHOUSE MANAGEMENT 9

Warehousing functions – types - Stores management-stores systems and procedures-incoming materials control-stores accounting and stock verification - Obsolete, surplus and scrap-value analysis-material handling-transportation and traffic management -operational efficiency-productivity -cost effectiveness. **CO5**

TOTAL : 45 PERIODS

TEXT BOOKS

1. J.R.Tony Arnold, Stephen N. Chapman, Lloyd M. Clive, Materials Management, Pearson, 2012.
1. 2. P. Gopalakrishnan, Purchasing and Materials Management, Tata McGraw Hill, 2012

REFERENCE BOOKS

1. A.K.Chitale and R.C.Gupta, Materials Management, Text and Cases, PHI Learning, 2nd Edition, 2006
2. A.K.Datla, Materials Management, Procedure, Text and Cases, PHI Learning, 2nd Edition, 2006
2. 3. Ajay K Garg, Production and Operations Management, Tata McGraw Hill , 2012

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	To Understand the planning horizons and activities of scheduling.
CO2	To understand materials planning with respect to the available capacity.
CO3	To understand and evaluate inventory models.
CO4	To understand and evaluate the planning for the purchasing function in an organization.
CO5	To understand and evaluate the warehouse requirement and analyze the efficiency.

MI1O003	PROJECT MANAGEMENT	L	T	P	C
		3	0	0	3

COURSE OBJECTIVES

- To learn the fundamental principles and practices of managing projects.
- To create and execute an integrated project plan

UNIT I INTRODUCTION TO PROJECT MANAGEMENT **9**

Project Management – Definition –Goal - Lifecycles. Project Environments. Project Manager – Roles- Responsibilities and Selection - Project Teams. **CO1**

UNIT II PLANNING, BUDGETING AND RISK MANAGEMENT **9**

The Planning Process – Work Break down Structure. Cost Estimating and Budgeting - Process, Summaries, schedules and forecasts. Managing risks - concepts, identification, assessment and response planning. **CO2**

UNIT III SCHEDULING & RESOURCE ALLOCATION **9**

PERT & CPM Networks - Project durations and floats - Crashing – Resource loading and leveling. Simulation for resource allocation. Goldratt's Critical Chain. **CO3**

UNIT IV PROJECT ORGANIZATION & CONFLICT MANAGEMENT **9**

Formal Organization Structure – Organization Design – Types of project organizations. Conflict – Origin & Consequences - Managing conflict – Team methods for resolving conflict. **CO4**

UNIT V CONTROL AND COMPLETION **9**

Project Control – Process, Monitoring, Internal and External control, Performance analysis, Performance Index Monitoring. Project Evaluation, Reporting and Termination. Project success and failure - Lessons. **CO5**

TOTAL : 45 PERIODS

TEXT BOOKS

1. John M. Nicholas, Project Management for Business and Technology - Principles and Practice, Second Edition, Pearson Education, 2006.

1. Clifford Gray and Erik Larson, Project Management, Tata McGraw Hill Edition, 2005.

REFERENCE BOOKS

1. Gido and Clements, Successful Project Management, Second Edition, Thomson Learning, 2003.
2. Samuel J.M., Jack R.M., Scott M.S., Margaret M.S., and Gopalan M.R., Project Management, First Indian edition, Wiley-India, 2006.
2. Harvey Maylor, Project Management, Third Edition, Pearson Education, 2006.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Ability to understand and analyze process of project management and project teams effectively
CO2	To plan for the effective use of resources and to estimate budgets for the implementation
CO3	Understand and analyze the ways of completing projects on time and scheduling resources effectively
CO4	To understand the organization structure & critically analyse conflicts and ways of resolving conflicts
CO5	To understand reporting and control methods

MI1O004	SERVICES OPERATIONS MANAGEMENT	L	T	P	C
		3	0	0	3

COURSE OBJECTIVES

- To help understand how service performance can be improved by studying services operations management

UNIT I INTRODUCTION **9**

Services – Importance, role in economy, service sector – nature, growth. Nature of services - distinctive characteristics, Service Package, Service classification, service - dominant logic, open-systems view. Service Strategy –Strategic service vision, competitive environment, generic strategies, winning customers; Role of information technology; stages in service firm competitiveness. **CO1**

UNIT II SERVICE DESIGN **9**

New Service Development – Design elements – Service Blue-printing - process structure – generic approaches. Service Encounter – triad, creating service orientation, service profit **CO2** chain; Front-office Back-office Interface– service decoupling. Technology in services – self-service, automation, ecommerce, e-business, technology innovations.

UNIT III SERVICE QUALITY **9**

Service Quality- Dimensions, Service Quality Gap Model; Measuring Service Quality – SERVQUAL, Walk-through Audit, Quality service by design, Service Recovery, Service Guarantees. Process Improvement –productivity improvement - DEA, quality tools, benchmarking, Quality improvement programs. **CO3**

UNIT IV SERVICE FACILITY **9**

Supporting facility – Services capes, Facility design – nature, objectives, process analysis, Service facility layout. Service Facility Location – considerations, facility location techniques – metropolitan metric, Euclidean, centre of gravity, retail outlet location, location set covering problem. Vehicle routing and Scheduling. **CO4**

UNIT V MANAGING CAPACITY AND DEMAND **9**

Managing Demand – strategies; Managing capacity – basic strategies, supply management tactics, operations planning and control; Yield management; Inventor y Management in Services – Retail Discounting Model, Newsvendor Model; Managing Waiting Lines – Queuing systems, psychology of waiting; Managing for growth- expansion strategies, franchising , globalization. **CO5**

TOTAL :45 PERIODS

TEXT BOOKS

3. James A. Fitzsimmons, Mona J, Fitzsimmons, Sanjeev Bordoloi, Service Management – Operations, Strategy, Information Technology, McGraw-Hill Education – 8th Edition 2018.

REFERENCE BOOKS

4. Richard D. Metters, Successful Service Operations Management, Cengage Learning, 2nd Edition, 2012.
5. CengizHaksever, Barry Render, Service Management, Pearson Education, 2013.
6. Robert Johnston, Graham Clark, Service Operations Management, Pearson Education, 2ndEdition, 2005.
7. Bill Hollins and Sadie Shinkins, Managing Service Operations, Sage, 2006

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	To familiarize the concept of Services and its role in economy. To understand the service strategies, Service vision, Generic strategy and its competitive environment. To understand the role of Information Technology in Service firm competitiveness.
CO2	To understand the concept of new service development. To explain the retail design strategies and value to customer. To analyse the network configuration and key dimensions in service. To Study the concept of vehicle routing.
CO3	To explain the different dimension of service quality and service quality gap. To understand the concept of SERVQUAL and Walk- through. To familiarize the concept of quality service by design and service encounter.
CO4	To Understand the concept of Servicescape framework and its environmental dimensions. . To explain the process analysis and its steps. To familiarize the concept of Service facility Location and its techniques.
CO5	To explain the concept of strategies of managing demand and capacity. To analyze the concept of yield management. To understand the role of inventory management in services. To study the concept of Queuing system.

MI1O005	SUPPLY CHAIN ANALYTICS	L	T	P	C
		3	0	0	3

COURSE OBJECTIVES

- To understand the subject in depth by emphasizing on the advanced quantitative models and methods in logistics and supply chain management and its practical aspects and the latest developments in the field.

UNIT I	INTRODUCTION	9
Introduction to analytics – Importance of supply chain analytics – descriptive, predictive and prescriptive analytics, Data Driven Supply Chains – Basics, transforming supply chains, Barriers to implementation, Road Map.		CO1
UNIT II	**FOUNDATION OF BUSINESS ANALYTICS**	**9**
Mathematical Programming Models - P-Median Methods - Guided LP Approach - Balmer – Wolfe Method, Greedy Drop Heuristics, Dynamic Location Models, Space Determination and Layout Methods		CO2
UNIT III	**INVENTORY MANAGEMENT**	**9**
Inventory aggregation Models, Dynamic Lot sizing Methods, Multi-Echelon Inventory models, Aggregate Inventory system and LIMIT, Risk Analysis in Supply Chain - Measuring transit risks, supply risks, delivering risks, Risk pooling strategies.		CO3
UNIT IV	**TRANSPORTATION AND NETWORK MODELS**	**10**
Notion of Graphs, Minimal Spanning Tree, Shortest Path Algorithms, Maximal Flow Problems, Multistage Transshipment and Transportation Problems, Set covering and Set Partitioning Problems, Traveling Salesman Algorithms, Advanced Vehicle Routing Problem Heuristics, Scheduling Algorithms-Deficit function Approach and Linking Algorithms.		CO4
UNIT V	**MCDM MODELS**	**8**
Analytic Hierarchy Process(AHP), Data Envelopment Analysis (DEA), Fuzzy Logic and Techniques, the analytical network process (ANP), TOPSIS-Application in SCM.		CO5

TOTAL : 45 PERIODS

TEXT BOOKS

1. Nada R. Sanders, Big data driven supply chain management: A framework for implementing analytics and turning information into intelligence, Pearson Education, 2014.
2. Michael Watson, Sara Lewis, Peter Cacioppi, Jay Jayaraman, Supply Chain Network Design: Applying Optimization and Analytics to the Global Supply Chain, Pearson Education, 2013.

REFERENCE BOOKS

1. Anna Nagurney, Min Yu, Amir H. Masoumi, Ladimer S. Nagurney, Networks against Time: Supply Chain Analytics for Perishable Products, Springer, 2013.
2. Muthu Mathirajan, Chandrasekharan Rajendran, Sowmya Narayanan Sadagopan, Arunachalam Ravindran, Parasuram Balasubramanian, Analytics in Operations/Supply Chain Management, I.K. International Publishing House Pvt. Ltd., 2016.

COURSE OUTCOMES
Upon completion of the course, students will be able to

CO1	Understand the basics of analytics and its application in supply chain management
CO2	Understand the different business analytical models
CO3	Understand the management of inventory
CO4	Understand the analytical models for transportation and distribution network
CO5	Understand the different Multi-Criteria Decision Making Models

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAMME OUTCOMES (POs)												PROGRAMME SPECIFIC OUTCOMES (PSOs)

MI1O006	**SUPPLY CHAIN MANAGEMENT**	**L**	**T**	**P**	**C**
		3	**0**	**0**	**3**

COURSE OBJECTIVE:
- To help understand the importance of and major decisions in supply chain management for gaining competitive advantage.

UNIT I	**INTRODUCTION**	**9**
Supply Chain – Fundamentals, Evolution, Supply chain processes and decisions, Enablers & Drivers of Supply Chain Performance; Supply chain strategy; Supply Chain Performance Measures.		**CO1**
UNIT II	**STRATEGIC SOURCING**	**9**
Outsourcing – Make or buy decisions – Strategic Outsourcing – Vendor assessment tools – Supplier selection - Supply chain Contract and Negotiations. Creating a world class supply base- Supplier Development - World Wide Sourcing.		**CO2**
UNIT III	**DISTRIBUTION NETWORK DESIGN**	**9**
Distribution Network Design – Role in supply chain, influencing factors, e-business and distribution network, Distribution Strategies, Models for facility location and capacity allocation; Models for network optimization, Impact of uncertainty on network design.		**CO3**
UNIT IV	**INVENTORY AND WAREHOUSING**	**9**
Managing supply chain cycle inventory and safety inventory, Bullwhip Effect, Managing inventory for short life-cycle products, Warehouse operations and management, Vendor Managed Inventory.		**CO4**
UNIT V	**SUPPLY CHAIN INNOVATIONS**	**9**

IT in Supply Chain; Agile Supply Chains, Green Supply Chain, Reverse Supply chain; Supply chain technology trends – AI, Predictive analytics and SC Intelligence, Internet of Things, Block chain.	**CO5**
TOTAL : 45 PERIODS	

TEXT BOOKS

1. Sunil Chopra, Peter Meindl and Dharam Vir Kalra, Supply Chain Management-Strategy Planning and Operation, Pearson Education, Sixth Edition, 2016.
2. Ballou Ronald H, Business Logistics and Supply Chain Management, Pearson Education, 5thEdition, 2007.

REFERENCE BOOKS

1. Janat Shah, Supply Chain Management – Text and Cases, Pearson Education, 2009
2. David Simchi-Levi, Philip Kaminsky, Edith Simchi-Levi, Designing and Managing the SupplyChain: Concepts, Strategies, and Cases, Tata McGraw-Hill, 2005.
3. Pierre David, International Logistics, Biztantra, 2011.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Understand the fundamentals of supply chain
CO2	Understand the importance of outsourcing
CO3	Ability to design supply chain networks to enhance supply chain performance
CO4	Understand inventory and warehousing for supply chain
CO5	Awareness of innovations for sustainable supply chains

BUSINESS ANALYTICS ELECTIVES

MI1B001 **CLOUD COMPUTING** **L T P C**

3 0 0 3

COURSE OBJECTIVES

- To know how to derive meaning form huge volume of data and information
- To understand how knowledge discovering process is used in business decision making.

UNIT I INTRODUCTION **9**

History of Centralized and Distributed Computing - Overview of Distributed Computing, Cluster computing, Grid computing. Technologies for Network based systems- System models for Distributed and cloud computing- Software environments for distributed systems and clouds. **CO1**

UNIT II	**INTRODUCTION TO CLOUD COMPUTING**	**9**
	Introduction to Cloud Computing- Cloud issues and challenges - Properties - Characteristics - Service models, Deployment models. Cloud resources: Network and API - Virtual and Physical computational resources - Data-storage. Virtualization concepts - Types of Virtualization- Introduction to Various Hypervisors - High Availability (HA)/Disaster Recovery (DR) using Virtualization, Moving VMs .	**CO2**
UNIT III	**CLOUD COMPUTING APPLICATIONS**	**9**
	Cloud Programming and Software Environments – Parallel and Distributed Programming paradigms – Overview on Amazon AWS and Microsoft Azure – Overview on Google App Engine – Emerging Cloud software Environment.	**CO3**
UNIT IV	**CLOUD SECURITY**	**9**
	Cloud Access: authentication, authorization and accounting - Cloud Provenance and meta-data - Cloud Reliability and fault-tolerance - Cloud Security, privacy, policy and compliance- Cloud federation, interoperability and standards.	**CO4**
UNIT V	**GOVERNANCE AND THE FUTURE OF CLOUD**	**9**
	Organizational Readiness and Change Management in the Cloud Age, Legal Issues in Cloud Computing, Achieving Production Readiness for Cloud Services, How Cloud Will Change Operating Systems, Future of Cloud TV & Cloud-Based Smart Devices, Cloud and Mobile, Home-Based Cloud Computing.	**CO5**

TOTAL : 45 PERIODS

REFERENCE BOOKS

1. Kai Hwang, Geoffrey C. Fox and Jack J. Dongarra, Distributed and cloud computing from Parallel Processing to the Internet of Things, Morgan Kaufmann, Elsevier, 2012
2. RajkumarBuyya, James Broberg and Andrzej Goscinski, Cloud Computing – Principles and Paradigms, John Wiley & Sons, 2011
3. Kris Jamsa, Cloud Computing, Jones & Bartlett Learning, 2013
4. Kumar Saurahb, Cloud Computing – Insights into new era infrastructure, Wiley India, 2nd Edition, 2012
5. Barrie Sosinsky, " Cloud Computing Bible" John Wiley & Sons, 2011
6. Tim Mather, Subra Kumaraswamy, and Shahed Latif, Cloud Security and Privacy An Enterprise Perspective on Risks and Compliance, O'Reilly 2009

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Students will get to know the history of cloud computing.
CO2	Identify the architecture and infrastructure of cloud computing, including SaaS, PaaS, IaaS, public cloud, private cloud, hybrid cloud, etc.
CO3	Provide the appropriate cloud computing solutions and recommendations according to the applications used.
CO4	Understand the core issues of cloud computing such as security, privacy.
CO5	Students will get the idea about the future of cloud computing.

MAPPING OF COs WITH POs AND PSOs

MI1B002	**DATA MINING FOR BUSINESS INTELLIGENCE**	**L**	**T**	**P**	**C**
		3	**0**	**0**	**3**

COURSE OBJECTIVES

- To know how to derive meaning form huge volume of data and information
- To understand how knowledge discovering process is used in business decision making.

UNIT I INTRODUCTION **9**

Data mining, Text mining, Web mining, Spatial mining, Process mining, Data ware house and datamarts. **CO1**

UNIT II DATA MINING PROCESS **9**

Data mining process – KDD, CRISP-DM, SEMMA and Domain-Specific, Classification and Prediction performance measures -RSME, MAD, MAP, MAPE, Confusion matrix, Receiver Operating Characteristic curve & AUC; Validation Techniques - hold-out, k-fold cross-validation, LOOCV, random subsampling, and bootstrapping. **CO2**

UNIT III PREDICTION TECHNIQUES **9**

Data visualization, Time series – ARIMA, Winter Holts, Vector Autoregressive analysis, Multivariate regression analysis. **CO3**

UNIT IV CLASSIFICATION AND CLUSTERING TECHNIQUES **9**

Classification- Decision trees, k nearest neighbour, Logistic regression, Discriminant analysis; Clustering; Market basket analysis; **CO4**

UNIT V MACHINE LEARNING AND AI **9**

Genetic algorithms, Neural network, Fuzzy logic, Support Vector Machine, Optimization techniques – Ant Colony, Particle Swarm, DEA. **CO5**

TOTAL : 45 PERIODS

REFERENCE BOOKS

1. Jaiwei Ham and Micheline Kamber, Data Mining concepts and techniques, Kauffmann Publishers 2006

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Learn to apply various data mining techniques into various areas of different domains.
CO2	Be able to interact competently on the topic of data mining for business intelligence.
CO3	Know the basics of data mining processes, algorithms, & systems well enough to interact with CTOs, expert data miners, consultants, etc.
CO4	Apply various prediction techniques.
CO5	Learn about supervised and unsupervised learning techniques.

MI1B003	**DEEP LEARNING AND ARTIFICIAL INTELLIGENCE**	**L**	**T**	**P**	**C**
		3	**0**	**0**	**3**

COURSE OBJECTIVES

- To expose various algorithms related to Deep Learning and Artificial Intelligence.
- To prepare students to apply suitable algorithm for the specified applications.

UNIT I DEEP NETWORKS **9**

Deep Networks: Modern Practices: Deep Forward Networks: Example: Learning XOR - Gradient-Based Learning - Hidden Units - Architecture Design - Regularization for Deep Learning. **CO1**

UNIT II MODELS **9**

Optimization for Training Deep Models: How Learning Differs from Pure Optimization - Challenges in Neural Network Optimization - Basic Algorithms - Parameter Initialization Strategies - Algorithms with Adaptive Learning Rates - Approximate Second-Order Methods - Optimization Strategies and Meta Algorithms. **CO2**

UNIT III INTELLIGENT SYSTEMS **9**

Introduction to Artificial Intelligence: Intelligent Systems - Foundations of AI - Applications - Tic-Tac-Toe Game Playing - Problem Solving: State-Space Search and Control Strategies: Introduction - General Problem Solving - Exhaustive Searches - Heuristic Search Techniques. **CO3**

UNIT IV KNOWLEDGE REPRESENTATION **9**

Advanced Problem-Solving Paradigm: Planning: Introduction - Types of Planning Systems - Knowledge Representation: Introduction - Approaches to Knowledge Representation - Knowledge Representation using Semantic Network - Knowledge Representation using Frames. **CO4**

UNIT V APPLICATIONS **9**

Expert Systems and Applications: Blackboard Systems - Truth Maintenance Systems - Applications of Expert Systems - Machine-Learning Paradigms: Machine-Learning Systems - Supervised and Unsupervised Learnings. **CO5**

TOTAL : 45 PERIODS

REFERENCE BOOKS

1. Jared P.L., R for Everyone - Advanced Analytics and Graphics, Addison Wesley Data and Analytics series, 2015.
2. SandipRakshit, R Programming for Beginners, McGraw Hill Education, 2017

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Learn the modern practices on deep forward networks, Architecture designs and regularization for deep learning.
CO2	Build models to optimize and solve challenges in Neural network optimization, Approximate Second order models and meta algorithms.
CO3	Learn about the foundations of the AI applications, Tic-tac-toe Game playing, Problem solving: state-space search, Exhaustive searches and heuristic search techniques.
CO4	Learn about advanced problem solving paradigm, types of planning systems, knowledge representation using semantic network and frames.
CO5	Learn about expert systems and applications like Blackboard systems, machine learning paradigms, supervised and unsupervised learnings.

MI1B004	e - BUSINESS	L	T	P	C
		3	0	0	3

COURSE OBJECTIVES

- To understand the practices and technology to start an online business.

UNIT I INTRODUCTION TO E-BUSINESS	**9**	
E-business, e-business vs e-commerce, Economic forces – advantages – myths – e-business models, design, develop and manage e-business, Web 2.0 and Social Networking, Mobile Commerce, S-commerce	**CO1**	
UNIT II BUSINESS APPLICATIONS	**9**	
Internet and World Wide Web, internet protocols - FTP, intranet and extranet, information publishing technology- basics of web server hardware and software.	**CO2**	
UNIT III BUSINESS APPLICATIONS	**9**	
Consumer oriented e-business – e-tailing and models - Marketing on web – advertising, e-mail marketing, affiliated programs - e-CRM; online services, Business oriented e-business, e-governance, EDI on the internet, Delivery management system, Web Auctions, Virtual communities and Web portals – social media marketing	**CO3**	
UNIT IV e-BUSINESS PAYMENTS AND SECURITY	**9**	
E-payments - Characteristics of payment of systems, protocols, e-cash, e-cheque and Micro payment systems- internet security – cryptography – security protocols – network security.	**CO4**	
UNIT V LEGAL AND PRIVACY ISSUES	**9**	
Legal, Ethics and privacy issues – Protection needs and methodology – consumer protection, cyber laws, contracts and warranties, Taxation and encryption policies.	**CO5**	

TOTAL : 45 PERIODS

TEXT BOOKS

1. Harvey M.Deitel, Paul J.Deitel, Kate Steinbuhler, e-business and e-commerce for managers, Pearson, 2011.
1. Efraim Turban, Jae K. Lee, David King, Ting Peng Liang, Deborrah Turban, Electronic Commerce –A managerial perspective, Pearson Education Asia, 2010.

REFERENCE BOOKS

1. Parag Kulkarni, Sunita Jahirabadkao, Pradeep Chande, e business, Oxford University Press, 2012.
2. Bharat Bhasker, Electronic Commerce – Frame work technologies and Applications, 3rd Edition. Tata McGrawHill Publications, 2009
3. Kamlesh K.Bajaj and Debjani Nag, Ecommerce- the cutting edge of Business, Tata McGrawHill Publications, 7th reprint, 2009.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 To understand basic concepts of e-Business
CO2 To understand the tools and applications of e-Business with the tools and techniques
CO3 To understand the business process used in e-Business
CO4 To understand the different payment systems used in e-Business
CO5 To understand the legal formalities attached with the e-Business

MI1B005	**R PROGRAMMING**	**L**	**T**	**P**	**C**
		3	**0**	**0**	**3**

COURSE OBJECTIVES

- To study the fundamentals of R programming to apply in quantitative analysis.

UNIT I	**GETTING STARTED WITH R**	**9**
Installing R - The R environment - R packages - Basics of R - Data Structures - Reading data into R - Graphics in R		**CO1**
UNIT II	**FUNCTIONS AND STATEMENTS**	**9**
Writing R functions - Control Statements (if and else, switch, ifelse, compound tests) - Loops in R (for, while, controlling loops) - Applications using the functions and loops.		**CO2**
UNIT III	**DATA MANIPULATION AND ANALYSIS**	**9**
Group manipulation - Data Reshaping - Manipulating Strings - Basic Statistics using R (Summaries, Correlation, t-tests, ANOVA)		**CO3**
UNIT IV	**LINEAR MODELS USING R**	**9**
Linear Models - Simple and Multiple regression, GLM - Logit Regression, Model diagnostics - Residuals, Cross validation, Boot strapping.		**CO4**
UNIT V	**NON-LINEAR MODELS, TIME SERIES AND CLUSTERING USING R**	**9**
Nonlinear Models - Non-Linear least square, Splines, Generalized Additive Models, Decision trees, Random forests. Time Series - Autoregressive moving average, VAR, GARCH. Clustering - K means, PAM and Hierarchical Clustering.		**CO5**

TOTAL : 45 PERIODS

REFERENCE BOOKS

1. Jared P.L., R for Everyone - Advanced Analytics and Graphics, Addison Wesley Data and Analytics series, 2015.
2. Sandip Rakshit, R Programming for Beginners, McGraw Hill Education, 2017

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 Explore R language fundamentals, including basic syntax, variables, and types.
CO2 How to create functions and use control flow.
CO3 Work with data in R.
CO4 Understand the liner models using R.
CO5 The student will learn to use R programming to solve decision models.

MI1B006 SOCIAL MEDIA AND WEB ANALYTICS

L	T	P	C
3	0	0	3

COURSE OBJECTIVES

- To understand the practices and technology involved in web marketing in real time business environment.

UNIT I INTRODUCTION TO WEB AND SOCIAL MEDIA **9**

Introduction - Web and social media - Website, Web apps - Social Media, Usability - User friendliness - Customer Experience - Web marketing, Competitive analysis - Web analytics framework - Analytics and outcomes, Competitive analysis. **CO1**

UNIT II BUSINESS ENVIRONMENT **9**

Data - Types of Data, primary data, secondary, Big Data - Data Analysis - tools used for analysis - descriptive statistics, comparing means, correlations, nonparametric tests **CO2**

UNIT III MEASURING USER EXPERIENCE **9**

Usability metrics - performance metrics, issues-based metrics, self-reported metrics - Planning and performing a usability study - study goals, user goals, metrics and evaluation methods, participants, data collection, data analysis, comparing alternative designs, comparing with competition, completing a task or transaction **CO3**

UNIT IV WEB ANALYSIS AND METRICS **9**

PULSE metrics on business and technical issues - Page views, Uptime, Latency, Seven-day active users HEART metrics - Happiness, Engagement, Adoption, Retention, and Task success on user behavior issues - On-site web analytics, off-site web analytics, the goal-signal-metric process **CO4**

UNIT V SOCIAL MEDIA ANALYTICS **9**

Social media analytics - Reasons for the growth - Social media KPIs - reach and engagement, Performing social media analytics - Business goal, KPIs, data gathering, analysis, measure and feedback **CO5**

TOTAL :45 PERIODS

TEXT BOOKS

1. Avinash Kaushik, Web Analytics 2.0: The Art of Online Accountability and Science of Customer Centricity, John Wiley & Sons
2. Tom Tullis, Bill Albert, Measuring the User Experience: Collecting, Analyzing, and Presenting Usability Metrics, Morgan Kaufmann
3.

REFERENCE BOOKS

1. Jim Sterne, Social Media Metrics: How to Measure and Optimize Your Marketing Investment, John Wiley & Sons.
2. Brian Clifton, Advanced Web Metrics with Google Analytics, John Wiley & Sons; 3rd Edition edition
3.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 To understand the introduction and its impact in business process
CO2 To understand the tools and applications of data analysis
CO3 To understand the impact of data analysis and measuring in business process
CO4 To understand the different analysis metrics used to measure business process
CO5 To understand the various KPI to analyze the use and to achieve business goals

St. Joseph's Group of Institutions

Jeppiaar Educational Trust

OMR, Chennai - 119.

FACULTY OF MANAGEMENT SCIENCES
MASTER OF BUSINESS ADMINISTRATION (2YEARS)
CHOICE BASED CREDIT SYSTEM

PROGRAMME EDUCATIONAL OBJECTIVES (PEOs)

MBA programme curriculum is designed to prepare the post graduate students

I. To have a thorough understanding of the core aspects of the business.

II. To provide the learners with the management tools to identify, analyze and create business opportunities as well as solve business problems.

III. To prepare them to have a holistic approach towards management functions.

IV. To motivate them for continuous learning.

V. To inspire and make them practice ethical standards in business.

PROGRAMME OUTCOMES (POs)

On successful completion of the program,

1. Ability to understand the principles and concepts in management.
2. Ability to apply knowledge of management theories and practices.
3. Ability to understand the situations, analyze and solve business problems.
4. Ability to communicate and negotiate effectively, to achieve organizational and individual goals.
5. Ability to work in teams to meet organizational goals.
6. Ability to exhibit leadership skills appropriate for managerial roles in organizations.
7. Ability to analyse global, economic, and ethical aspects of business.
8. Ability to pursue lifelong learning.

PROGRAMME SPECIFIC OUTCOMES (PSOs)

1. Ability to gain knowledge, skills and attitudes to become an effective manager.
2. Ability to provide socially acceptable technical solutions to complex managerial problems with the application of modern and appropriate techniques for sustainable development relevant to professional managerial practice.
3. Ability to apply the knowledge of ethical and management principles required to work in a team as well as to lead a team.

MA1171 **STATISTICS FOR MANAGEMENT** **L T P C**
3 0 0 3

OBJECTIVES

- To learn the applications of statistics in business decision making.

UNIT I **PROBABILITY**		**9**
Basic definitions and rules for probability, conditional probability independence of events, Baye's theorem, and random variables, Probability distributions: Binomial, Poisson, Uniform and Normal distributions.		**CO1**
UNIT II **SAMPLING DISTRIBUTION AND ESTIMATION**		**9**
Introduction to sampling distributions, sampling distribution of mean and proportion, application of central limit theorem, sampling techniques. Estimation: Point and Interval estimates for population parameters of large sample and small samples, determining the sample size.		**CO2**
UNIT III **TESTING OF HYPOTHESIS - PARAMETIRC TESTS**		**9**
Hypothesis testing: one sample and two sample tests for means and proportions of large samples(z-test), one sample and two sample tests for means of small samples (t-test), F- test for two sample standard deviations. ANOVA one and two way.		**CO3**
UNIT IV **NON-PARAMETRIC TESTS**		**9**
Chi-square tests for independence of attributes and goodness of fit. Sign test for paired data. Rank sum test. Kolmogorov-Smirnov – test for goodness of fit, comparing two populations. Mann –Whitney U test and Kruskal Wallis test. One sample run test.		**CO4**
UNIT V **CORRELATION, REGRESSION AND TIME SERIES ANALYSIS**		**9**
Correlation analysis, estimation of regression line. Time series analysis: Variation in time series, trend analysis, cyclical variations, seasonal variations and irregular variations.		**CO5**

TOTAL: 45 PERIODS

TEXT BOOKS

1. Richard I. Levin, David S. Rubin, Masood H. Siddiqui, Sanjay Rastogi, Statistics for Management, Pearson Education, 8th Edition,2017.
2. Prem S. Mann, Introductory Statistics, Wiley Publications, 9th Edition, 2015.
3. T N Srivastava and Shailaja Rego, Statistics for Management, Tata McGraw Hill, 3rd Edition 2017.

REFERENCE BOOKS

1. Ken Black, Applied Business Statistics, 7th Edition, Wiley India Edition, 2012.
2. David R. Anderson, Dennis J. Sweeney, Thomas A. Williams, Jeffrey D. Camm, James J. Cochran, Statistics for business and economics, 13th edition, Thomson (South – Western) Asia, Singapore,2016.
3. N. D. Vohra, Business Statistics, Tata McGraw Hill, 2017.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	To understand and apply the concepts of probability distributions
CO2	To apply and analyse sampling techniques for research
CO3	To apply and analyse various parametric tests for hypothesis testing
CO4	To apply and analyse various non-parametric tests for hypothesis testing
CO5	To apply and analyse correlation, regression techniques

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAMME OUTCOMES (POs)								PROGRAMME SPECIFIC OUTCOMES (PSOs)

MB1101	MANAGEMENT CONCEPTS AND ORGANIZATIONAL BEHAVIOR	L	T	P	C
		3	0	0	3

OBJECTIVES

- To familiarize the students to the basic concepts of management in order to aid in understanding how an organization functions, and in understanding the complexity and wide variety of issues managers face in today's business firms.
- To acquaint the students with the fundamentals of managing business and to understand individual and group behaviour at workplace so as to improve the effectiveness of an organization. The course will use and focus on Indian experiences, approaches and cases.

UNIT I NATURE AND THEORIES OF MANAGEMENT **9**

Evolution of management Thought - Classical, Behavioral and Management Science Approaches Management - meaning, levels, management as an art or science, Managerial functions and Roles, Evolution of Management Theory - Classical era - Contribution of F. W. Taylor, Henri Fayol, Neo – Classical - Mayo & Hawthorne Experiments. Modern era – system & contingency approach Managerial Skills. **CO1**

UNIT II PLANNING AND ORGANISING **9**

Planning - Steps in Planning Process - Scope and Limitations - Forecasting and types of Planning - Characteristics of a sound Plan - Management by Objectives (MBO) - Policies and Strategies -Scope and Formulation - Decision Making - Types, Techniques and Processes. Organisation Structure and Design - Authority and Responsibility Relationships - Delegation of Authority and Decentralisation – Interdepartmental Coordination – Impact of Technology on Organisational design – Mechanistic vs Adoptive Structures -Formal and Informal Organisation. Control: meaning, function, Process and types of Control. **CO2**

UNIT III INDIVIDUAL BEHAVIOUR **9**

Meaning of Organizational behavior, contributing disciplines, importance of organizational behavior, Perception and Learning - Personality and Individual Differences - Motivation theories and Job Performance - Values, Attitudes and Beliefs – Communication Types - Process – Barriers – Making Communication Effective. **CO3**

UNIT IV GROUP BEHAVIOUR **9**

Groups and Teams: Definition, Difference between groups and teams, Stages of Group Development, Group Cohesiveness, Types of teams, Group Dynamics - Leadership – Styles -Approaches – Power and Politics – Organisational Structure – Organisational Climate and Culture, Conflict: concept, sources, Types, Stages of conflict, Management of conflict Organisational Change and Development. **CO4**

UNIT V EMERGING ASPECTS OF ORGANIZATIONAL BEHAVIOUR 9

Comparative Management Styles and approaches - Japanese Management Practices Organisational Creativity and Innovation – Organizational behavior across cultures - Conditions affecting cross cultural organizational operations, Managing International Workforce, Productivity and cultural contingencies, Cross cultural communication, Management of Diversity. **CO5**

TOTAL: 45 PERIODS

TEXT BOOKS

1. Stephen P. Robbins, David De Cenzo and Mary Coulter, Fundamentals of Management, Prentice Hall of India, 9th edition 2016.
2. Andrew J. Dubrin, Essentials of Management, Thomson Southwestern, 10th edition, 2016.
3. Samuel C. Certoand S. Trevis Certo, Modern Management: Concepts and Skills, Pearson education, 15th edition, 2018.
4. Charles W. L Hill and Steven L Mc Shane, Principles of Management, McGraw Hill Education, Special Indian Edition, 2017.

REFERENCE BOOKS

1. Harold Koontz and Heinz Weihrich, Essentials of Management: An International, Innovation, And Leadership Perspective, 10th edition, Tata McGraw – Hill Education, 2015.
2. Stephen P. Robbins, Timothy A. Judge, Organisational Behavior, PHIL earning / Pearson Education, 16th edition, 2014.
3. Fred Luthans, Organisational Behavior, McGraw Hill, 12th Edition, 2013.
4. Don Hellriegel, Susan E. Jackson and John W, Jr Slocum, Management: A competency – Based Approach, Thompson South Western, 11th edition, 2008.
5. Heinz Weihrich, Mark V Cannice and Harold Koontz, Management – Aglobal entrepreneurial perspective, Tata McGraw Hill, 12th edition, 2008

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 To understanding various management concepts and skills required in the business world
CO2 To apply knowledge of various functions of management in areal time management context
CO3 To understand the complexities associated with management of individual behavior in the organizations
CO4 To apply the skill set to manage group behaviour in Organizations
CO5 To evaluate the current trends in managing organizational behavior

MAPPING OF COs WITH POs AND PSOs

MB1102 MANAGERIAL ECONOMICS

	L	T	P	C
	3	0	0	3

OBJECTIVES

- To introduce the concepts of scarcity and efficiency; to explain principles of micro economics relevant to managing an organization; to describe principles of macroeconomics to have the understanding of economic environment of business.

UNIT I INTRODUCTION **9**

The themes of economics – scarcity and efficiency – three fundamental economic problems – society's capability – Production possibility frontiers (PPF) – Productive efficiency Vs economic efficiency – economic growth & stability – Microeconomics and Macroeconomics – the role of markets and government – Positive Vs negative externalities. **CO1**

UNIT II CONSUMER AND PRODUCER BEHAVIOUR **9**

Market – Demand and Supply – Determinants – Market equilibrium – elasticity of demand and supply – consumer behaviour – consumer equilibrium – Approaches to consumer behaviour – Production – Short-run and long-run Production Function – Returns to scale – economies Vs diseconomies of scale – Analysis of cost – Short-run and long-run cost function – Relation between Production and cost function. **CO2**

UNIT III PRODUCT AND FACTOR MARKET **9**

Product market – perfect and imperfect market – different market structures – Firm's equilibrium and supply – Market efficiency – Economic costs of imperfect competition –factor market – Land, Labour and capital – Demand and supply – determination of factor price – Interaction of product and factor market – General equilibrium and efficiency of competitive markets. **CO3**

UNIT IV PERFORMANCE OF AN ECONOMY – MACRO ECONOMICS **9**

Macro – economic aggregates – circular flow of macroeconomic activity –National income determination – Aggregate demand and supply – Macroeconomic equilibrium – Components of aggregate demand and national income – multiplier effect – Demand side management – Fiscal policy in theory. **CO4**

UNIT V AGGREGATE SUPPLY AND THE ROLE OF MONEY **9**

Short – run and Long – run supply curve – Unemployment and its impact – Okun's law – Inflation and the impact – reasons for inflation – Demand Vs Supply factors –Inflation Vs Unemployment tradeoff – Phillips's curve – short-run and long-run – Supply side Policy and management - Money market - Demand and supply of money – money - market equilibrium and national income – the role of monetary policy. **CO5**

TOTAL: 45 PERIODS

TEXT BOOKS

1. Paul A. Samuelson, William D. Nordhaus, Sudip Chaudhuri and Anindya Sen, Economics, 19thedition, Tata McGraw Hill, New Delhi, 2011
2. N. Gregory Mankiw, Principles of Economics, 8th edition, Thomson learning, New Delhi, 2017.

REFERENCE BOOKS

1. William Boyes and Michael Melvin, Textbook of economics, Biztantra, 7th edition 2008.
2. Richard Lipsey and Ale Chrystal, Economics, 13th edition, Oxford, University Press, New Delhi, 2015.
3. Karl E. Case and Ray C. Fair, Principles of Economics, 12th edition, Pearson, Education Asia, New Delhi, 2017.
4. Panneer selvam. R, Engineering Economics, 2nd Edition, PHIL earning, 2014.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 To understand the utility concepts of Micro and Macro Economics

CO2 To analyse the consumer and producer behaviours; production function and cost analysis
CO3 To apply, how factors of production can be used optimally to produce product and service and; to analyze market structure.
CO4 To evaluate the performance of an macro-economic activity and macro-economic environment
CO5 To understand economic policies that regulate economic veriables

MB1103 ACCOUNTING FOR MANAGEMENT **L T P C**
3 0 0 3

OBJECTIVES

- Acquire a reasonable knowledge in accounts analysis and evaluate financial statements

UNIT I FINANCIAL ACCOUNTING **9**

Introduction to Financial, Cost and Management Accounting – Generally accepted accounting principles – Double Entry System – Preparation of Journal, Ledger and Trial Balance Preparation of Final Accounts: Trading, Profit and Loss Account and Balance Sheet – Reading the financial statements. **CO1**

UNIT II ANALYSIS OF FINANCIAL STATEMENTS **9**

Financial ratio analysis, Interpretation of ratio for financial decisions – DuPont Ratios – Comparative statements – common size statements. Cash flow (as per Accounting Standard 3) and Fund's flow statement analysis –Trend Analysis. **CO2**

UNIT III COST ACCOUNTING **9**

Cost Accounts – Classification of costs – Job cost sheet – Job order costing – Process costing (excluding Interdepartmental Transfers and equivalent production) – Joint and By Product Costing – Activity Based Costing, Target Costing. **CO3**

UNIT IV MARGINAL COSTING **9**

Marginal Costing and profit planning – Cost, Volume, Profit Analysis – Break Even Analysis – Decision making problems -Make or Buy decisions -Determination of sales mix - Exploring new markets - Add or drop products -Expand or contract. **CO4**

UNIT V BUDGETING AND VARIANCE ANALYSIS **9**

Budgetary Control – Sales, Production, Cash flow, fixed and flexible budget – Standard costing and Variance Analysis – (excluding overhead costing) - Accounting standards and accounting disclosure practices in India. **CO5**

TOTAL: 45 PERIODS

TEXT BOOKS

1. M. Y. Khan & P. K. Jain, Management Accounting, Tata McGraw Hill, 8th edition, 2018.
2. T. S. Reddy & A. Murthy, Financial Accounting, Margham Publications, 2014

3. M. Y. Khan & P. K. Jain, Management Accounting, Tata McGraw Hill, 8th edition, 2018.

REFERENCE BOOKS

1. Jan Williams, Susan Haka, Mark Sbettner, Joseph V Carcello, Financial and Managerial Accounting The basis for business Decisions, 18th edition, Tata McGraw Hill Publishers, 2017
2. Charles T. Horngren, Gary L. Sundem, David Burgstahler, Jeff Schatzberg, Introduction to Management Accounting, PHIL earning, 2014, 16th edition.
3. Earl K. Stice & James D. Stice, Financial Accounting, Reporting and Analysis, 8th edition, Cengage Learning, 2015.
4. N. M. Singhvi, Ruzbeh J. Bodhanwala, Management Accounting–Text and cases, 3rd edition PHIL earning, 2018
5. Ashish K. Battacharya, Introduction to Financial Statement Analysis, Elsiever, 2012.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 Ability to remember and understand the financial accounting concepts.

CO2 Ability to understand the financial statement analysis.

CO3 To apply and analyse the cost accounting techniques

CO4 To apply the marginal costing and profit planning techniques.

CO5 To analyse and evaluate the cost and management accounting techniques like budgeting, standard costing and variance analysis.

MB1104 LEGAL ASPECTS OF BUSINESS

L	T	P	C
3	0	0	3

OBJECTIVES

- The objective of this course is to familiarize the students with various laws that will help them to refine their understanding of how law affects the different aspects of business.

UNIT I COMMERCIAL LAW **9**

THE INDIAN CONTRACT ACT1872: Definition of contract, essentials elements and types of a contract, Formation of a contract, performance of contracts, breach of contract and its remedies, Quasi contracts – Contract of Agency: Nature of agency, Creation and types of agents, Authority and liability of Agent and principal: Rights and duties of principal and agents, termination of agency. **CO1**

THE SALE OF GOODS ACT 1930: Nature of Sales contract, Documents of title, risk of loss, Guarantees and Warranties, performance of sales contracts, conditional sales and rights of an unpaid seller-

NEGOTIABLE INSTRUMENTS ACT 1881: Nature and requisites of negotiable instruments. Types of negotiable instruments, liability of parties, holder in due course, special rules for Cheque and drafts, discharge of negotiable instruments.

UNIT II	**COMPANY LAW**	**9**
COMPANY ACT 1956&2013 Major principles – Nature and types of companies, Formation, Memorandum and Articles of Association, Prospectus, Power, duties and liabilities of Directors, winding up of companies, Corporate Governance.		**CO2**
UNIT III	**INDUSTRIAL LAW**	**9**
An Overview of Factories Act – Payment of Wages Act – Payment of Bonus Act – Industrial Disputes Act.		**CO3**
UNIT IV	**CORPORATE TAX & GST**	**9**
Corporate Tax Planning, Corporate Taxes and Overview of Latest Developments in Indirect tax Laws relating to GST: An introduction including constitutional aspects, Levy and collection of CGST & IGST, Basic concept of time and value of supply, Input tax credit, Computation of GST Liability, Registration, Tax Invoice, Credit & Debit Notes, Electronic Way bill, Returns, Payment of taxes including Reverse Charge.		**CO4**
UNIT V	**CONSUMER PROTECTION ACT AND INTRODUCTION OF CYBER LAWS**	**9**
Consumer Protection Act – Consumer rights, Procedures for Consumer grievances redressal, Types of consumer Redressal Machineries and Forums - Cyber-crimes, IT Act 2000 and 2002, Cyber Laws.		**CO5**

TOTAL: 45 PERIODS

TEXT BOOKS

1. N. D. Kapoor, Elements of Mercantile Law, Sultan Chand and Company, India, 2017.
2. P. K. Goel, Business Law for Managers, Biztantatara Publishers, India, 2017.
3. Akhileshwar Pathak, Legal Aspects of Business, Tata McGraw Hill, 6th Edition, 2018.

REFERENCE BOOKS

1. Ravinder Kumar, Legal Aspects of Business, New Delhi: Cengage Learning, 4th edition, 2016.
2. Sinha P. K, Dr. Vinod Singhania, Text Book of Indirect Tax, Taxman Publication, New Delhi.
3. Taxmann, GST Manual with GST Law Guide & Digest of Landmark Rulings, 11th Edition, 2019
4. P. P. S. Gogna, Mercantile Law, S. Chand &Co. Ltd., India, Fourth Edition, 2015.
5. Richard Stim, Intellectual Property - Copy Rights, Trade Marks, and Patents, Cengage Learning,15th edition 2017.
6. Daniel Albuquerque, Legal Aspect of Business, Oxford, 2nd edition, 2017
7. Ravinder Kumar, Legal Aspect of Business, Cengage Learning, 4th Edition 2016.
8. V. S. Datey, GST Ready Reckoner, 9th edition, 2019

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	To understand the provisions of the law of contract, sale of goods act and negotiable instruments act
CO2	To remember the various forms of companies' origin and winding up procedures with the elements of corporate governance.
CO3	To understand the various provisions of labor law and industrial environment
CO4	Ability to understand the fundamental concepts of corporate tax and GST
CO5	To analyze the various forms of consumer complaints, and cybercrimes and use the legal provisions for redressal and avoid it.

MAPPING OF COs WITH POs AND PSOs

CO5	3	1	2	2	-	-	1	3	3	2	1

MB1105 INFORMATION MANAGEMENT

L	T	P	C
3	0	0	3

OBJECTIVES

- To understand the importance of information in business
- To know about the recent information systems and technologies.

UNIT I INTRODUCTION **9**

Data, Information, Information System, evolution, types based on functions and hierarchy, Enterprise and functional information systems. **CO1**

UNIT II SYSTEM ANALYSIS AND DESIGN **10**

System development methodologies, Systems Analysis and Design, Data flow Diagram (DFD), Decision table, Entity Relationship (ER), Object Oriented Analysis and Design (OOAD), UML diagram. **CO2**

UNIT III INTRODUCTION TO DATA BASE MANAGEMENT SYSTEMS **8**

DBMS – types and evolution, RDBMS, OODBMS, RODBMS, Data warehousing, Data Mart, Data mining. **CO3**

UNIT IV INTEGRATED SYSTEMS, SECURITY AND CONTROL **9**

Knowledge based decision support systems, integrating social media and mobile technologies in Information system, Security, IS Vulnerability, Disaster Management, Computer Crimes, Securing the Web. **CO4**

UNIT V NEW IT INITIATIVES **9**

Introduction to Deep learning, Big data, Pervasive Computing, Cloud computing, Advancements in AI, IoT, Block chain, Crypto currency, Quantum computing. **CO5**

TOTAL: 45 PERIODS

TEXT BOOKS

1. Rahul de, MIS in Business, Government and Society, Wiley India Pvt Ltd, 2012
2. Gordon Davis, Management Information System : Conceptual Foundations, Structure and Development, Tata McGraw Hill, 21st Reprint 2008.
3. Haag, Cummings and Mc Cubbrey, Management Information Systems for the Information Age, McGraw Hill, 2005. 9th edition, 2013.

REFERENCE BOOKS

1. Robert Schultheis and Mary Sumner, Management Information Systems –The Manager's View, Tata McGraw Hill, 2008.
2. Kenneth C. Laudon and Jane P Laudon, Management Information Systems –Managing the Digital Firm, 15th edition, 2018.
3. R Database Management Systems, 3rd Edition, PHI Learning, 2018

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 To understand the basics of data and information system.
CO2 To apply the system development methodologies.
CO3 To analyse how database management system and its types helps to the information management.
CO4 To evaluate the various technologies in information system and its security.
CO5 To gain knowledge on effective applications of information systems in business.

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAMME OUTCOMES (POs)								PROGRAMME SPECIFIC OUTCOMES (PSOs)

CO1	3	1	2	2	1	1	1	3	3	3	1
CO2	3	1	2	2	1	1	1	3	3	3	1
CO3	3	1	2	2	1	1	1	3	3	3	1
CO4	3	1	2	2	1	1	1	3	3	3	1
CO5	3	1	2	2	1	1	1	3	3	3	1

MB1106 RESEARCH METHODOLOGY AND IPR **L T P C**
3 0 0 3

OBJECTIVES

- To make the students understand the principles of scientific methodology in research enquiry, develop analytical skills of research, to prepare scientific reports and help them to get patent and copy right of their research work.

UNIT I INTRODUCTION **9**

Business Research – Definition and Significance – the research process – Types of Research – Exploratory and causal Research – Theoretical and empirical Research – Cross –Sectional and time – series Research – Research questions / Problems – Research objectives – Research hypotheses – characteristics – Research in an evolutionary perspective – the role of theory in research. **CO1**

UNIT II RESEARCH DESIGN AND MEASUREMENT **9**

Research design – Definition – types of research design – exploratory and causal research design – Descriptive and experimental design – different types of experimental design – Validity of findings – internal and external validity – Variables in Research – Measurement and scaling – Different scales – Construction of instrument – Validity and Reliability of instrument. **CO2**

UNIT III DATA COLLECTION AND SAMPLING DESIGN **9**

Types of data – Primary Vs Secondary data – Methods of primary data collection – Survey Vs Observation – Experiments – Construction of questionnaire and instrument – Validation of questionnaire – Sampling plan – Sample size – determinants optimal sample size – sampling techniques – Probability Vs Non–probability sampling methods. **CO3**

UNIT IV DATA ANALYSIS AND REPORT WRITING **9**

Data Preparation – editing – coding –data entry – data analyses – parametric and non-parametric techniques - applications of bivariate and multivariate statistical techniques. Research report – contents of report – executive summary – types of report - ethics in research. **CO4**

UNIT V INTELLECTUAL PROPERTY RIGHTS ACT **9**

IPR – meaning - objectives - types of IPR – Patent, Copy right, Trademark – Procedure for registration – offence & penalties. **CO5**

TOTAL: 45 PERIODS

TEXT BOOKS

1. Donald R. Cooper, Pamela S. Schindler and J K Sharma, Business Research methods, 12th Edition, Tata Mc Graw Hill, New Delhi, 2018.
2. Alan Bryman and Emma Bell, Business Research methods, 5th Edition, Oxford University Press, New Delhi, 2018.
3. William G Zikmund, Barry J Babin, Jon C. Carr, Atanu Adhikari, Mitch Griffin, Business Research methods, A South Asian Perspective, 8th Edition, Cengage Learning, New Delhi, 2016.
4. V K Ahuja, Law Relating to Intellectual Property Rights 3rd edition 2017, Publisher: LexisNexis, Universal bookstores, India.
5. Anil Kumar H S, Ramakrishna B, Fundamentals of Intellectual Property Rights, 2017 Notion press

REFERENCE BOOKS

1. Wilson, J (2013), Essential of Research Methods, SAGE Publication.
2. Lee, Nick & Lings, Ian (2009), Doing Business Research, Sage South Asia.
3. Mark Saunders, Lewis, P. & Thornhill, A. (2015), Research Methods for Business Students, Pearson Education,
4. Nithyananda, K V. (2019). Intellectual Property Rights: Protection and Management. India, IN: Cengage Learning India Private Limited.
5. Neeraj, P., & Khusdeep, D. (2014). Intellectual Property Rights. India, IN: PHI learning Private Limited.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 To understand the types and process of research and to create the research objectives and hypothesis.

CO2 To apply the types of research design, measurement and scaling; to create the instrument and evaluate the validity and reliability of instrument.

CO3 To determine the types of data, sample size; applying the probability vs non–probability sampling techniques

CO4 To analyse data using parametric and non-parametric techniques; prepare the research reports.

CO5 To understand IPR and to get patent and copy right for research work

SEMINAR - 1

MB1107 INDIAN ETHOS AND BUSINESS ETHICS

L	T	P	C
0	0	4	2

OBJECTIVES

- To enable the learners in understanding of the basic concepts of Indian Ethos and familiarize about ethical behaviour and value systems at work.
- To enable the learners to have exposure on business ethics and ethical business perspectives.

NOTE:

- The following is the list of topics suggested for preparation and presentation by students twice during the semester.
- This will be evaluated by the faculty member(s) handling the course and the final marks are consolidated at the end of the semester. No end semester examination is required for this course.

1. Indian Ethos and Personality Development
2. Work ethos and values for Professional Managers
3. Indian Values, Value Systems and Wisdom for modern managers
4. Management Lessons from the Vedas, Puranas, Indian religions
5. Spirituality in Business Management
6. Individual Culture and Ethics
7. Ethical codes of conduct and value Systems
8. Loyalty and Ethical Behaviour
9. Ethical business issues and solutions
10. Social Responsibilities of Business

TOTAL: 60 PERIODS

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 To understand the basic concepts of Indian Ethos

CO2 To apply work ethos and values based on cultural differences

CO3 To determine the basic sources of Indian ethos and values

CO4 The apply the Indian Systems of learning in work place

CO5 The understand the Indian Heritage and its application in CSR

MB1108	BUSINESS COMMUNICATION (LABORATORY)	L	T	P	C
		0	0	4	2

OBJECTIVES

- To help the students to acquire some of the necessary skills to handle day-to-day managerial responsibilities, such as - making speeches, controlling one-to-one communication, enriching group activities and processes, giving effective presentations, writing letters, memos, minutes, reports

UNIT I INTRODUCTION AND TYPES OF BUSINESS COMMUNICATION

Introduction to Business Communication: Principles of effective communication, Target group profile, Barriers of Communication, Reading Skills, Listening, Feedback - Principles of Nonverbal Communication: Professional dressing and body language. Role Playing, Debates and Quiz. Types of managerial speeches - Presentations and Extempore - speech of introduction, speech of thanks, occasional speech, theme speech - Group communication: Meetings, group discussions – Other Aspects of Communication: Cross Cultural Dimensions of Business Communication Technology and Communication, Ethical & Legal Issues in Business Communication. **CO1 9**

UNIT II BUSINESS COMMUNICATION WRITING MODELS AND TOOLS

Business letters, Routine letters, Bad news and persuasion letters, sales letters, collection letters, Maintaining a Diary, Resume / CV, job application letters, proposals. Internal communication through - notices, circulars, memos, agenda and minutes, reports. Case Studies. Exercises on Corporate Writing, Executive Summary of Documents, Creative Writing, Poster Making, Framing Advertisements, Slogans, Captions, Preparing Press Release and Press Notes. **CO2 9**

UNIT III EFFECTIVE PRESENTATIONS **CO3**

Principles of Effective Presentations, Principles governing the use of audio-visual media. **9**

UNIT IV INTERVIEW SKILLS

Mastering the art of giving interview sin-selection or placement interviews, discipline interviews, appraisal interviews, exit interviews, web / video conferencing, tele-meeting. **CO4 9**

UNIT V REPORT WRITING

Objectives of report, types of report, Report Planning, Types of Reports, developing an outline, Nature of Headings, Ordering of Points, Logical Sequencing, Graphs, Charts, Executive Summary, List of Illustration, Report Writing. **CO5 9**

TOTAL: 60 PERIODS

Note: The emphasis of the entire subject should be on practical aspects.

Practical: Module 1-This module introduces both written and spoken communication skills to students to build their confidence in delivering clear and logical messages to their audience. They will develop written communication skills through crafting business messages such as business letters, emails, and meeting minutes. In addition, students will work through presentations and simulated meetings to refine their spoken communication skills, discussion techniques and people skills.

Practical-Module2-This module builds on the foundation of Business Communication and creates opportunities for students to strengthen their oral and written communication. Students will be required to enhance their presentation skills through impromptu speeches. Students will also learn how to prepare a formal business report. Job hunting and employment skills will be introduced to prepare students for a positive start to their careers. Students will be taught to write application letters and resumes. Additionally, students will learn job interview techniques through role-plays and simulations

Practical - Module 3 - This practical module aims to help students be persuasive in the business world. Students will learn listening and data gathering skills to better understand their target audience's needs and requirements and persuasive skills to convince the audience to accept a new policy / suggestion / product through role-playing a boardroom presentation. Students will also be taught business networking skills including conversation techniques, dining etiquette and personal branding through role-plays and simulations.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 To apply managerial communication skills
CO2 Ability to excel in different forms of written communication required in a business context
CO3 Develop good presentation skills
CO4 In-depth understanding of interview skills
CO5 To prepare Business reports

MB1201 QUANTITATIVE TECHNIQUES FOR DECISION MAKING

	L	P	T	C
	3	0	0	3

OBJECTIVES

- To learn the fundamentals of Quantitative techniques in decision making
- To understand the application of Linear Programming Extensions
- To understand the fundamentals of decision and Game Theories
- To understand the role of inventory and Job Sequencing Models
- To get knowledge about the machine translation

UNIT I INTRODUCTION TO LINEAR PROGRAMMING (LP)	**9**	
Relevance of quantitative techniques in management decision making. Linear Programming - formulation, solution by graphical and simplex methods (Primal - Penalty, Two Phase), Special cases. Sensitivity Analysis.		**CO1**
UNIT II LINEAR PROGRAMMING EXTENSIONS	**9**	
Transportation Models (Minimising and Maximising Problems) – Balanced and unbalanced Problems – Initial Basic feasible solution by N - W Corner Rule, Least cost and Vogel's approximation methods. Check for optimality. Solution by MODI / Stepping Stone method. Case of Degeneracy. Transshipment Models. Assignment Models (Minimising and Maximising Problems) – Balanced and Unbalanced Problems. Solution by Hungarian and Branch and Bound Algorithms. Travelling Salesman problem. Crew Assignment Models.		**CO2**
UNIT III DECISION AND GAME THEORIES	**9**	
Decision making under risk – Decision trees – Decision making under uncertainty. Game Theory – Two-person Zero sum games - Saddle point, Dominance Rule, Convex Linear Combination (Averages), methods of matrices, graphical and LP solutions.		**CO3**
UNIT IV INVENTORY AND JOB SEQUENCING MODELS	**9**	
Inventory Models –EOQ and EBQ Models (With and without shortages), Quantity Discount Models. Job Sequencing algorithm (Johnson') - n jobs thro' 2 machines, n jobs thro' 3 machines and n jobs thro' m machines.		**CO4**
UNIT V QUEUING THEORY AND REPLACEMENT MODELS	**9**	
Queuing Theory – single and Multi – channel models –infinite number of customers and infinite calling source. Replacement Models – Individuals replacement Models (With and without time value of money) – Group Replacement Models.		**CO5**

TOTAL : 45 PERIODS

TEXT BOOKS

1. N. D Vohra, Quantitative Techniques in Management, Tata Mcgraw Hill, 2010.
2. Paneerselvam R., Operations Research, Prentice Hall of India, Fourth Print, 2008.
3. Hamdy A Taha, Introduction to Operations Research, Prentice Hall India, Tenth Edition, Third Indian Reprint 2019.

REFERENCE BOOKS

1. Bernard W. Taylor III, Introduction to Management Science, 9th Edition, Pearson Ed.
2. Frederick & Mark Hillier, Introduction to Management Science– A Modeling and case studies approach with spread sheets, Tata Mcgraw Hill,2010.
3. Nagraj B, Barry Rand Ralph M. S Jr., Managerial Decision Modelling with Spreads sheets, Second Edition, 2007, Pearson Education

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	To understand the fundamentals of linear programming and applying in real world situations for decision making

CO2	To apply the transportation and assignment models and to analyze the optimal allocation for Minimization of Cost
CO3	To apply the strategies in competitive real-world phenomena using concepts from game theory.
CO4	To analyze the efficiency of job sequencing models to minimize production time and costs
CO5	To apply and analyze the appropriate queuing models and optimal replacement period/policy for a given item/equipment/machine.

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAMME OUTCOMES (POs)								PROGRAMME SPECIFIC OUTCOMES (PSOs)		
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PSO1	PSO2	PSO3

MB1202	FINANCIAL MANAGEMENT	L	P	T	C
		3	0	0	3

OBJECTIVES

- To learn the fundamentals of Finance
- To understand the importance of Investment Decisions
- To understand the fundamentals of Financing and Dividend Decision
- To understand the role of working capital management
- To understand the long-term sources of finance

UNIT I FOUNDATIONS OF FINANCE 9

Introduction to finance – Financial Management – Nature, scope and functions of Finance, organization of financial functions, objectives of Financial management, Major financial decisions – Time value of money – features and valuation of shares and bonds – Concept of risk and return – single asset and of a portfolio. **CO1**

UNIT II INVESTMENT DECISIONS 9

Capital Budgeting: Principles and techniques – Nature of capital budgeting – Identifying relevant cash flows - Evaluation Techniques: Payback, Accounting rate of return, Net Present Value, Internal Rate of Return, Profitability Index - Comparison of DCF techniques -Concept and measurement of cost of capital – Specific cost and overall cost of capital. **CO2**

UNIT III FINANCING AND DIVIDEND DECISION 9

Leverages – Operating and Financial leverage – measurement of leverages – degree of Operating & Financial leverage – Combined leverage, EBIT– EPS Analysis – Indifference point. Capital structure – Theories – Net Income Approach, Net Operating Income Approach, MM Approach – Determinants of Capital structure. Dividend decision – Issues in dividend decisions, Importance, Relevance & Irrelevance theories - Walter's – Model, Gordon's model and MM model – Factors determining dividend policy – Types of dividend policies– forms of dividend. **CO3**

UNIT IV WORKING CAPITAL MANAGEMENT 9

Principles of working capital: Concepts, Needs, Determinants, issues and estimation of working **CO4** capital – Receivables Management - Inventory management – Cash management – Working capital finance: Commercial paper, Company deposit, Trade credit, Bank finance.

UNIT V LONG TERM SOURCES OF FINANCE 9

Indian capital market – New issues market – Secondary market – Long-term finance: Shares, debentures and term loans, lease, hire purchase, venture capital financing, Private Equity. **CO5**

TOTAL: 45 PERIODS

TEXT BOOKS

1. IM. Pandey Financial Management, Vikas Publishing House Pvt. Ltd., 11th edition, 2018
2. M.Y. Khan and P.K. Jain Financial management, Text, Problems and cases Tata McGraw Hill, 8th edition, 2017.
3. Aswath Damodaran, Corporate Finance Theory and practice, John Wiley & Sons, 2011.

REFERENCE BOOKS

1. James C. Vanhorne –Fundamentals of Financial Management – PHI Learning, 13th Edition, 2014.
2. Brigham, Ehrhardt, Financial Management Theory and Practice, 14th edition, Cengage Learning 2015.
3. Prasanna Chandra, Financial Management, 9th edition, Tata McGraw Hill, 2017.
4. Srivatsava, Mishra, Financial Management, Oxford University Press, 2012.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 To remember the basic concepts of financial management such as decisions and functions of financial management

CO2 To understand the long term investment techniques like payback period, accounting rate of return, net present value.

CO3 To apply the concepts of dividend and examine impact of dividend policy of a firm.

CO4 To analyse the different forms components of working capital such as receivables, payables, inventory etc.

CO5 To evaluate getting exposure of long term sources of fund namely debenture, term loans, private equity, venture capital etc.

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAMME OUTCOMES (POs)								PROGRAMME SPECIFIC OUTCOMES (PSOs)		
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PSO1	PSO2	PSO3

MB1203 **HUMAN RESOURCE MANAGEMENT**

	L	P	T	C
	3	0	0	3

OBJECTIVES

- To learn the basic concepts of Human Resource Management
- To understand the importance of Human Resource Planning and Recruitment
- To understand the fundamentals and importance of Training and Development
- To understand the intricacies in Employee Engagement
- To understand the importance of Performance Evaluation and Control

UNIT I PERSPECTIVES IN HUMAN RESOURCE MANAGEMENT **9**

Evolution of human resource management – The importance of the human capital – Role of human resource manager – Challenges for human resource managers - trends in Human resource policies – Computer applications in human resource management – Human resource accounting and audit. **CO1**

UNIT II HUMAN RESOURCE PLANNING AND RECRUITMENT **9**

Importance of Human Resource Planning – Forecasting human resource requirement – matching supply and demand – Internal and External sources – Organizational Attraction - Recruitment, Selection, Induction and Socialization - Theories, Methods and Process. **CO2**

UNIT III TRAINING AND DEVELOPMENT **9**

Types of training methods – purpose – benefits - resistance. Executive development programme – Common practices – Benefits – Self-development – Knowledge management. **CO3**

UNIT IV EMPLOYEE ENGAGEMENT **9**

Compensation plan – Reward – Motivation – Application of theories of motivation – Career management – Mentoring - Development of mentor – Protégé relationships- Job Satisfaction, Employee Engagement, Organizational Citizenship Behavior: Theories, Models. **CO4**

UNIT V PERFORMANCE EVALUATION AND CONTROL **9**

Method of performance evaluation – Feedback – Industry practices. Promotion, Demotion, Transfer and Separation – Implication of job change. The control process – Importance – Methods – Requirement of effective control systems grievances –Causes – Implications – Redressal methods. **CO5**

TOTAL : 45 PERIODS

TEXT BOOKS

1. Gary Dessler and Biju Varkkey, Human Resource Management,14th Edition, Pearson Education Limited, 2015.
2. David A. Decenzo, Stephen. P. Robbins, and Susan L. Verhulst, Human Resource Management, Wiley, International Student Edition, 11th Edition, 2014.
3. Luis R. Gomez - Mejia, David B. Balkin, Robert L Cardy. Managing Human Resource. PHI Learning. 2012

REFERENCE BOOKS

1. Bernadin, Human Resource Management, Tata McGraw Hill, 8th edition 2012.
2. Wayne Cascio, Managing Human Resource, McGraw Hill, 2015.
3. Ivancevich, Human Resource Management, McGraw Hill 2012.
4. Uday Kumar Haldar, Juthika Sarkar. Human Resource management. Oxford. 2012

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 To understand the various aspects of HR

CO2 To analyse the human resource requirements and; to evaluate and create recruitment, selection, induction and socialization process.

CO3 To analyse, evaluate and create training and executive development programmes

CO4 To analyse mentoring, protégé relationships, job satisfaction, organizational citizenship behavior and; to create compensation plan, career management and employee engagement

CO5 To create a good performance appraisal system and grievance redressal methods

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAMME OUTCOMES (POs)								PROGRAMME SPECIFIC OUTCOMES (PSOs)		
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PSO1	PSO2	PSO3
CO1	3	3	2	-	-	-	1	3	3	1	1

MB1204	**OPERATIONS MANAGEMENT**	**L**	**P**	**T**	**C**
		3	0	0	3

OBJECTIVES

- To learn the basic concepts of Operations Management
- To understand the importance of Operations and the value chain
- To understand concepts of Designing Operations
- To understand the importance of Planning and Control
- To understand the importance of Quality Management

UNIT I INTRODUCTION TO OPERATIONS MANAGEMENT **9**

Operations Management – Nature, Importance, historical development, transformation processes, differences between services and goods, a system perspective, functions, challenges, current priorities, recent trends. Operations Strategy – Strategic fit, framework. Productivity; World-class manufacturing practices **CO1**

UNIT II OPERATIONS AND THE VALUE CHAIN **9**

Capacity Planning – Long range, Types, Developing capacity alternatives, tools for capacity planning. Facility Location–Theories, Steps in Selection, Location Models. Sourcing and procurement-Strategic sourcing, make or buy decision, procurement process, managing vendors **CO2**

UNIT III DESIGNING OPERATIONS **9**

Product Design-Criteria, Approaches. Product development process-stage-gate approach tools for efficient development Process- design, strategy, types, analysis. Facility Layout–Principles, Types, Planning tools and techniques. **CO3**

UNIT IV PLANNING AND CONTROL OF OPERATIONS **9**

Demand Forecasting–Need, Types, Objectives and Steps- Overview of Qualitative and Quantitative methods. Operations planning-Resource planning-Inventory Planning and Control. Operations Scheduling- Theory of constraints-bottle necks, capacity constrained resources, synchronous **CO4**

UNIT V QUALITY MANAGEMENT **9**

Definitions of quality, The Quality revolution, quality gurus; TQM philosophies; Quality management tools, certification and awards. Lean Management - philosophy, elements of JIT **CO5** manufacturing, continuous improvement. Six sigma's.

TOTAL : 45 PERIODS

TEXT BOOKS

1. Richard B. Chase, Ravi Shankar, F. Robert Jacobs, Operations and Supply Chain Management, McGraw Hill Education (India) Pvt. Ltd,14th Edition, 2014.
2. Mahadevan B, Operations management: Theory and practice. Pearson Education India; 2015

3. Management, Pearson, 4th Edition, 2016.
4. Panneerselvam. R, Production and Operations Management, 3rd Edition, PHI Learning, 2012

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 To understand the basic concepts of operations management, its evolution, recent trends and challenges, and apply the techniques to improve productivity and ensure world class manufacturing.

CO2 To understand the issues involved in various level of operations planning and analyse the elements involved in product, process and services that add value to customers.

CO3 To understand the elements to be addressed in designing product, process, services and facilities and create the best of them.

CO4 To analyse the demand for product and services using quantitative and qualitative techniques and evaluate and find the requirement of inventory level and creating suitable inventory plan.

CO5 To remember and understand the various quality tools and techniques to create best product and services.

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAMME OUTCOMES (POs)								PROGRAMME SPECIFIC OUTCOMES (PSOs)

MB1205 MARKETING MANAGEMENT

L	P	T	C
3	0	0	3

OBJECTIVES

- To learn the fundamentals of Marketing Management
- To understand the strategy followed in marketing
- To understand the fundamentals of marketing mix decisions

- To understand the role of buyer behaviour
- To understand the concepts of Marketing research & recent trends in marketing

UNIT I INTRODUCTION **9**

Defining Marketing – Core concepts in Marketing – Evolution of Marketing – Marketing Planning Process – Scanning Business environment: Internal and External – Value chain – Core Competencies – PESTEL − SWOT Analysis − Marketing interface with other functional areas– Production, Finance, Human Relations Management, Information System – Marketing in global environment – International Marketing – Rural Marketing−Prospects and Challenges. **CO1**

UNIT II MARKETING STRATEGY **9**

Marketing strategy formulations – Key Drivers of Marketing Strategies - Strategies for Industrial Marketing – Consumer Marketing − Services marketing – Competition Analysis − Analysis of consumer and industrial markets – Influence of Economic and Behavioral Factors−Strategic Marketing Mix components. **CO2**

UNIT III MARKETING MIX DECISIONS **9**

Product planning and development – Product life cycle – New product Development and Management – Defining Market Segmentation – Targeting and Positioning − Brand Positioning and Differentiation – Channel Management – Managing Integrated Marketing Channels – Managing Retailing, Wholesaling and Logistics − Advertising and Sales Promotions – Pricing Objectives, Policies and Methods **CO3**

UNIT IV BUYER BEHAVIOUR **9**

Understanding Industrial and Consumer Buyer Behavior−Influencing factors – Buyer Behaviour Models – Online buyer behavior – Building and measuring customer satisfaction – Customer relationships management – Customer acquisition, Retaining, Defection – Creating Long Term Loyalty Relationships. **CO4**

UNIT V MARKETING RESEARCH & TRENDS IN MARKETING **9**

Marketing Information System–Marketing Research Process–Concepts and applications: Product – Advertising – Promotion – Consumer Behaviour – Retail research –Customer driven organizations - Cause related marketing − Ethics in marketing – Online marketing trends – social media and digital marketing **CO5**

TOTAL : 45 PERIODS

TEXT BOOKS

MB1206 **BUSINESS ANALYTICS** **L P T C**
3 0 0 3

OBJECTIVES

- To learn the fundamentals of Business Analytics
- To understand the importance of Resource Management in business Analytics
- To understand the fundamentals of Descriptive Analysis
- To understand the role of Predictive Analysis
- To understand the concepts of Prescriptive Analysis

UNIT I INTRODUCTION TO BUSINESS ANALYTICS (BA) **9**

Business Analytics- Terminologies, Process, Importance, Relationship with Organisational Decision Making, BA for Competitive Advantage. **CO1**

UNIT II MANAGING RESOURCES FOR BUSINESS ANALYTICS **9**

Managing BA Personnel, Data and Technology. Organisational Structures aligning BA. Managing Information policy, data quality and change in BA. **CO2**

UNIT III DESCRIPTIVE ANALYTICS **9**

Introduction to Descriptive analytics - Visualizing and Exploring Data - Descriptive Statistics – Sampling and Estimation – Probability Distribution for Descriptive Analytics – Analysis of Descriptive analytics **CO3**

UNIT IV PREDICTIVE ANALYTICS **9**

Introduction to Predictive analytics – Logic and Data Driven Models – Predictive Analysis Modeling and procedure – Data Mining for Predictive analytics. Analysis of Predictive analytics **CO4**

UNIT V PRESCRIPTIVE ANALYTICS **9**

Introduction to Prescriptive analytics – Prescriptive Modeling – Non Linear Optimisation – Demonstrating Business Performance Improvement. **CO5**

TOTAL : 45 PERIODS

TEXT BOOKS

1. Marc J. Schniederjans, Dara G. Schniederjans and Christopher M. Starkey, "Business Analytics Principles, Concepts, and Applications-What, Why, and How", Pearson,2014
2. Christian Albright Sand Wayne L. Winston, "Business Analytics-Data Analysis and Decision Making", Fifth edition, Cengage Learning, 2015.

REFERENCE BOOKS

2. Newbold, Carlson, Thorne – Statistics for Business and Economics, 6th ed., Pearson
3. S. C.Gupta – Fundamentals of Statistics, Himalaya Publishing
4. Walpole – Probability and Statistics for Scientists and Engineers, 8th ed., Pearson

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 To understand the fundamentals of Business Analytics
CO2 To evaluate and manage resources for business Analytics
CO3 To apply descriptive analysis
CO4 To apply Predictive Analysis
CO5 To analyse and evaluate the applications of Prescriptive Analytics

MB1207	PRO-SOCIAL BEHAVIOUR	L	P	T	C
		0	0	4	2

OBJECTIVES

To introduce the students to the organization behaviour topics.

Exercises

1. Pygmalion Effect
2. Transaction analysis
3. Strokes
4. Life Positions
5. Self-efficacy/Confidence
6. Positive Psychology
7. Psychological Capital
8. Happiness/Subjective well-being
9. Emotional Labour
10. Creating Rapport

TOTAL : 30 PERIODS

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 To understand and analyse one self and others behaviour in organizations.
CO2 To analyse and improve self-confidence level.
CO3 To analyse and create good interpersonal relationship.
CO4 To create self-awareness.
CO5 To improve quality of life

MB1208 DATA ANALYSIS AND BUSINESS MODELING

L	P	T	C
0	0	4	2

OBJECTIVES

- To understand the importance of data analysis for business modelling.

Exercises

1. Descriptive Statistics
2. Parametric Tests
3. Non-parametric Tests
4. Correlation & Regression
5. Forecasting
   Extended experiment–1
6. Portfolio Selection
7. Risk Analysis & Sensitivity Analysis
8. Revenue Management
   Extended experiment–2
9. Transportation & Assignment
10. Networking Models
11. Queuing Theory
12. Inventory Models
    Extended experiments–3

TOTAL : 60 PERIODS

TEXT BOOKS

1. David R. Anderson, et.al, "An Introduction to Management Sciences: Quantitative approaches to Decision Making", (13th edition) South-Western College Pub, 2011.

2. William J. Stevenson, Ceyhun Ozgur,"Introduction to Management Science with Spread sheet", Tata McGraw Hill, 2009.
3. Hansa Lysander Manohar," Data Analysis and Business Modelling using Microsoft Excel" PHI, 2017.

REFERENCE BOOKS

1. David M. Levine etal, "Statistics for Managers using MS - Excel" (6th Edition) Pearson, 2010.
2. Minnick, C. Web Kit for Dummies. John Wiley & Sons,(2012).

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 To analyze data and test hypothesis using parametric test
CO2 To analyze data and test hypothesis using nonparametric test
CO3 To forecast business using analytical tools
CO4 To apply risk and sensitivity analysis and portfolio selection based on business data
CO5 To apply analytical tools related to networking, inventory models and queuing theory

MB1309 CREATIVITY AND INNOVATION LABORATORY

L	P	T	C
0	0	4	2

OBJECTIVES

- To learn the fundamentals of creativity and Innovation
- To understand the mechanism of thinking and Visualization
- To understand various strategy in creativity
- To understand the problem solving in creativity
- To understand the issues in Innovation

UNIT I	**INTRODUCTION**	**12**	
Need for Creative and innovative thinking for quality – Essential theory about directed creativity, Components of Creativity, Methodologies and approaches, individual and group creativity, Organizational role in creativity, types of innovation, barriers to innovation, innovation process, establishing criterion for assessment of creativity & innovation			**CO1**
UNIT II	**MECHANISM OF THINKING AND VISUALIZATION**	**12**	
Definitions and theory of mechanisms of mind heuristics and models: attitudes, Approaches and Actions that support creative thinking-Advanced study of visual elements and principles - line, plane, shape, form, pattern, texture gradation, color symmetry. Spatial relationships and compositions in 2 and 3 dimensional space - procedure for genuine graphical computer animation –Animation aerodynamics – virtual environments in scientific Visualization–Unifying principle of data management for scientific visualization–Visualization bench marking			**CO2**
UNIT III	**CREATIVITY**	**12**	
Nature of Creativity: Person, Process, Product and Environment, Methods and tools for Directed Creativity – Basic Principles – Tools that prepare the mind for creative thought – stimulation – Development and Actions – Processes in creativity ICEDIP–Inspiration, Clarification, Distillation, Perspiration, Evaluation and Incubation – Creativity and Motivation The Bridge between man creativity and there wards of innovativeness – Applying Directed Creativity.			**CO3**
UNIT IV	**CREATIVITY IN PROBLEM SOLVING**	**12**	
Generating and acquiring new ideas, product design, service design – case studies and hands –on exercises, stimulation tools and approaches, six thinking hats, lateral thinking – Individual activity, group activity, contextual influences. Assessing Your Personal Creativity and Ability to Innovate, Enhancing Your Creative and Innovative Abilities			**CO4**
UNIT V	**INNOVATION**	**12**	
Innovation- radical vs evolutionary,–Introduction to TRIZ methodology of Inventive Problem Solving – the essential factors – Innovator's solution – creating and sustaining successful growth –Disruptive Innovation model – Segmentive Models – New market disruption – Managing the Strategy Development Process – The Role of Senior Executive in Leading New Growth – Passing the Baton, Entrepreneurial Tools for Creativity and Innovation			**CO5**

MB1041	MARKETING ANALYTICS	L	T	P	C
		3	0	0	3

OBJECTIVES

- This course will provide you with an introduction to marketing analytics. We will study various tools for generating marketing insights from empirical data in such areas as segmentation, targeting and positioning, satisfaction management, customer life time analysis, customer choice, and product and price decisions using conjoint analysis

UNIT I INTRODUCTION TO MARKETING ANALYTICS **9**

Evolution and Scope of Analytics. Data for Marketing Analytics. Decision Models– Descriptive, Predictive and Prescriptive Models. Problem Solving and Decision making process. **CO1**

UNIT II DATA MANAGEMENT **9**

Exploring Data; Frequencies; Descriptive Statistics Cross tabulations; Independent Samples t-Test; One-Way ANOVA, Simple Regression and Correlation, Multiple Regression to Forecast sales, Modelling Trend and Seasonality, Ratio to Moving Average Method **CO2**

UNIT III CUSTOMER SEGMENTATION AND VALUATION **9**

Analytics for Segmentation– Introduction to Cluster analysis multivariate method. Estimation, Model performance and validation of assumptions for Cluster analysis. Customer Value Analysis, Customer Life time Value- Conjoint Analysis **CO3**

UNIT IV METRICS AND MEASUREMENT ANALYTICS 9

Product and Price analytics- Conjoint Analysis -Pricing -Estimating Demand Curves and optimize Price Retailing Analytics- Allocating Retail Space and Sales Resources- Market Basket Analysis. Advertising and Promotion Analytics-Promotion Analytics-Measuring the effectiveness of Advertising **CO4**

UNIT V WEB ANALYTICS 9

Search Engine Optimisation- Tracking the success of SEO. Web metrics - Google Ad words, Advertising & Analytics. **CO5**

TOTAL : 45 PERIODS

TEXT BOOKS

1. Evans, J.R. (2012). Business analytics methods, models and decisions. New Jersey: Pearson, Upper Saddle River.
2. Sorger, Stephan. ― Marketing Analytics: Strategic Models and Metrics. Admiral Press/Create Space, 2013

MB1012 FINANCIAL MODELLING L T P C
3 0 0 3

OBJECTIVES

- Making students to build financial models by including various fields of study viz financial Management and Derivatives.

UNIT I INTRODUCTION TO FINANCIAL MODELLING & BUILT INFUNCTIONS USING SPREAD SHEETS **9**

Introduction to Financial Modeling- Need for Financial Modeling- Steps for effective financial modeling-Introduction to Time value of money &Look up array functions FV,PV,PMT,RATE, NPER, V lookup, H lookup,if, count if etc - Time value of Money Models: EMI with Single& Two Interest rates–Loan amortization modeling-Debenture redemption modeling. **CO1**

UNIT II BOND& EQUITY SHARE VALUATION MODELLING **9**

Bond valuation – Yield to Maturity (YTM): Rate method Vs IRR method-Flexi Bond and Strip Bond YTM Modeling-Bond redemption modeling -Equity share valuation: Multiple growth rate valuation modeling with and without growth rates. **CO2**

UNIT III FINANCIAL MODELLING **9**

AltMan Z score Bankruptcy Modeling-Indifference point model in Financial Break-even modeling -Corporate valuation modeling (Two stage growth)- Business Modeling for capital budgeting evaluation: Payback period, NPV, IRR and MIRR. **CO3**

UNIT IV PORTFOLIO MODELLING **9**

Ris , Beta and Annualized Return –Security Market Line Modeling –Portfolio risk calculation (Equal Proportions)- Portfolio risk optimization(varying proportions)- Portfolio construction modeling. **CO4**

UNIT V DERIVATIVE MODELLING **9**

Option pay off modeling: Long and Short Call & Put options -Option pricing modeling (B-SModel)- Optimal Hedge Contract modeling. **CO5**

TOTAL : 45 PERIODS

MB1016 INDUSTRIAL RELATIONS AND LABOUR WELFARE

L	T	P	C
3	0	0	3

OBJECTIVES

To explore Contemporary knowledge and gain a conceptual understanding of industrial relations.

UNIT I INDUSTRIAL RELATIONS **7**

Concepts – Importance – Industrial Relations problems in the Public Sector– Growth of Trade Unions– Codes of conduct. **CO1**

UNIT II INDUSTRIAL CONFLICTS **12**

Disputes– Impact – Causes– Strikes– Prevention – Industrial Peace – Government Machinery– Conciliation – Arbitration – Adjudication. **CO2**

UNIT III LABOUR WELFARE **8**

Concept– Objectives– Scope– Need– Voluntary Welfare Measures– Statutory Welfare Measures– Labour– Welfare Funds– Education and Training Schemes. **CO3**

UNIT IV INDUSTRIAL SAFETY **9**

Causes of Accidents– Prevention–Safety Provisions– Industrial Health and Hygiene–Importance– Problems–Occupational Hazards– Diseases–Psychological problems– Counseling– Statutory Provisions. **CO4**

UNIT V WELFARE OF SPECIAL CATEGORIESOF LABOUR **9**

Child Labour–Female Labour – Contract Labour– Construction labour–Agricultural Labour - Differently abled Labour –BPO & KPO Labour – Social Assistance –Social Security Implications. **CO5**

TOTAL : 45 PERIODS

TEXT BOOKS

1. Labour and Industrial Law, H K Saharay ISBN **:** 9788131252673, edition **:** 7th**:** 2017
2. MamoriaC.B.,Sathish Mamoria, Gankar, Dynamics of Industrial Relations, Himalaya Publishing House, New Delhi, 2012.

REFERENCE BOOKS

1. Arun Monappa, Ranjeet Nambudiri, Patturaja Selvaraj. Industrial relations & Labour Laws. Tata McGraw Hill. 2012.
2. Ratna Sen, Industrial Relations in India, Shifting Paradigms, Macmillan India Ltd., NewDelhi, 2007.
3. C.S.Venkata Ratnam, Globalisation and Labour Management Relations, Response Books, 2007.
4. Srivastava, Industrial Relations and Labour laws, Vikas, 2007.
5. P.N.Singh, Neeraj Kumar. Employee relations Management. Pearson.2011.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 To understand the concept of Industry relations , Analysis of industrial relation problem , evaluate Government rules and implication on code of conduct

CO2 To Remember the various disputes and evaluate the causes and impact of distputes and analyse the various methods to overcome this

CO3 To Analyse the various welfare measures, and evaluate the training schemes

CO4 To understand and analyze the causes of accidents and safety provisions

CO5 To Analyse the different types of labours and understand the ways to handle them

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAMME OUTCOMES (POs)								PROGRAMME SPECIFIC OUTCOMES (PSOs)		
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PSO1	PSO2	PSO3

MB1017 SOCIAL PSYCHOLOGY

L	T	P	C
3	0	0	3

OBJECTIVES

To study how people view themselves and others, how people interact, influence and act when they are a part of a group.

UNIT I INTRODUCTION TO SOCIAL PSYCHOLOGY **6**

Social Psychology– Origin and development– Social behavior and social thought–Applications in society and business. **CO1**

UNIT II PERCEIVING AND UNDERSTANDING OTHERS **9**

Social perception – Nonverbal communication – Attribution – Impression formation and impression management **CO2**

UNIT III COGNITIONIN THE SOCIAL WORLD **10**

Self, Self Esteem & Social Comparison, self-efficacy, narcissism, Social cognition– Schemas–Heuristics – Errors – Attitudes & Behaviour –Persuasion –Cognitive dissonance **CO3**

UNIT IV INTERPERSONAL RELATIONS **10**

Social identity – Prejudice – Discrimination – Aggression – Interpersonal attraction and Relationships **CO4**

UNIT V APPLIED SOCIAL PSYCHOLOGY **10**

Social Influence – Conformity – Compliance – Social Influence - Prosocial behaviour – Groups–Social issues, Stress, personal beliefs and health. **CO5**

TOTAL : 45 PERIODS

TEXT BOOKS

1. Social Psychology Robert A Baron, Nyla R Branscombe 13th Edition – PEARSON: 2017
2. Rohallet al. Social Psychology. PHI Learning. 2nd edition
3. Attitudes, Personality and Behaviour. Ajzer. Tata Mc Graw Hill

REFERENCE BOOKS

1. Baron, Byrne and Brascombe, Social Psychology, 13th Edition, Pearson, 2014.
2. David G. Myers, Social Psychology, Tata Mc Graw Hill, 11th Edition,.
3. Baron and Byrne, Social Psychology, 8th Edition, PHI, 2006.
4. Howitt. Social Psychology. Tata Mc Graw Hill

COURSE OUTCOMES

Upon completion of the course, students will be able to learn about

CO1 To remember and understand social behavior and social thought.
CO2 To understand social perception and impression formation and impression management
CO3 To apply schemas–to reduce errors in cognitive dissonance
CO4 To analyse social identity , prejudice and discrimination in interpersonal attraction and relationships
CO5 To evaluate social issues - stress, personal beliefs and health

MB1018 ORGANIZATIONAL DESIGN, CHANGE AND DEVELOPMENT **L T P C**

3 0 0 3

OBJECTIVES

1. To help the students to gain knowledge about the concepts of change management and to acquire the skills required to manage any change effectively
2. To understand the concept and techniques of OD and to enable the skills for the application of OD in organizations

UNIT I ORGANIZATIONAL DESIGN		**9**
Organizational Design– Determinants– Components–Basic Challenges of design– Differentiation, Integration, Centralization, Decentralization, Standardization, Mutual adjustment -Mechanistic and Organic Structures- Technological and Environmental Impacts on Design-Importance of Design – Success and Failures in design.		**CO1**
UNIT II ORGANIZATIONAL CHANGE		**9**
Meaning, Nature, Forces for change- change agents- Change process-Types and forms of change –Models of change –Resistance to change –individual factors–organizational factors–techniques to overcome change-Change programs–job redesign.		**CO2**
UNIT III ORGANIZATIONAL DEVELOPMENT		**9**
Introduction- evolution- basic values and assumptions- foundations of OD- Process of OD- managing the phases of OD – Organizational diagnosis -Process- stages- Techniques- Questionnaire, interview, workshop, task-force - collecting, analyzing – feedback of diagnostic information.		**CO3**
UNIT IV OD INTERVENTION		**9**
Human process interventions-Individual, group and inter-group human relations- structure and technological interventions- strategy interventions–sensitivity training–survey feedback, process consultation–team building – inter-group development		**CO4**
UNIT V ORGANIZATIONAL EVOLUTION AND SUSTENANCE		**9**
Organizational life cycle – Models of transformation – Models of Organizational Decision making – Organizational Learning – Innovation, Intrapreneurship and Creativity-HR implications.		**CO5**

TOTAL : 45 PERIODS

TEXT BOOKS

1. Wendell L. French, Cecil H. Bell, Jr, Veena Vohra - Organization Development : Behavioral Science Interventions for Organizational Improvement, Sixth Edition2017
2. S. Ramnarayan, T. Venkateswara Rao, Kuldeep Singh: Organization Development: Interventions And Strategies, Sage Publications 2015

REFERENCE BOOKS

1. French & Bell: Organisational Development, McGraw-Hill, 2005
2. Rajiv Shaw: Surviving Tomorrow: Turnaround Strategies in Organisational Design and Development, Vikas Publishing House.
3. Thomas G. Cummings, Christopher G. Worley: Organisation Development and Change, Thomson Learning.
4. Change & Knowledge Management-R.L. Nandeshwar, Bala Krishna Jayasimha, Excel Books, 1st Ed.
5. Management of Organizational Change – K Harigopal – Response BOOKS, 2^{nd} editon,2006
6. Organizational, Design, and Change-Gareth R. Jones, 5th Edition, PearsonEducation

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	To understand the fundamental components of organizational structure and design
CO2	To analyze the various dimensions of organizational change and techniques to overcome it

CO3 To remember the concepts of organizational development and apply it techniques
CO4 To apply the OD intervention techniques
CO5 To understand the evolution and reason the sustenance of the organization

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAMME OUTCOMES (POs)								PROGRAMME SPECIFIC OUTCOMES (PSOs)		
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PSO1	PSO2	PSO3

MB1019	**MANAGERIAL BEHAVIOR AND EFFECTIVENESS**	**L**	**T**	**P**	**C**
		3	0	0	3

OBJECTIVES

- To examine managerial styles in terms of concern for production and concern for people.
- To assess different systems of management and relate these systems to organizational characteristics.

UNIT I DEFINING THE MANAGERIAL JOB **9**

Descriptive Dimensions of Managerial Jobs – Methods – Model – Time Dimensions in Managerial Jobs – Effective and Ineffective Job behavior – Functional and level differences in Managerial Job behavior. **CO1**

UNIT II DESIGNING THE MANAGERIAL JOB **9**

Identifying Managerial Talent – Selection and Recruitment – Managerial Skills Development – Pay and Rewards – Managerial Motivation – Effective Management Criteria – Performance Appraisal Measures – Balanced Scorecard - Feedback – Career Management – Current Practices. **CO2**

UNIT III THE CONCEPT OF MANAGERIAL EFFECTIVENESS **9**

Definition – The person, process, product approaches – Bridging the Gap – Measuring Managerial Effectiveness – Current Industrial and Government practices in the Management of Managerial Effectiveness- the Effective Manager as an Optimizer. **CO3**

UNIT IV ENVIRONMENTAL ISSUES IN MANAGERIAL EFFECTIVENESS **9**

Organizational Processes – Organizational Climate – Leader – Group Influences – Job Challenge – Competition – Managerial Styles. **CO4**

UNIT V DEVELOPING THE WINNING EDGE **9**

Organizational and Managerial Efforts – Self Development – Negotiation Skills – Development of the Competitive Spirit – Knowledge Management – Fostering Creativity and innovation . **CO5**

TOTAL : 45 PERIODS

TEXT BOOKS

1. Managerial behavior and effectiveness ,Alejandro Serralde 2020 Kindle edition

REFERENCE BOOKS

1. Milkovich and Newman, Compensation, McGraw-Hill International, 2005.
2. Blanchard and Thacker, Effective Training Systems, Strategies and Practices

Pearson 2006.
3. Dubrin, Leadership, Research Findings, Practices & Skills, Biztantra, 2008.
4. Joe Tidd , John Bessant, Keith Pavitt , Managing Innovation ,Wiley 3rdedition,2006.
5. T.V.Rao, Appraising and Developing Managerial Performance, ExcelBooks,2002.
6. R.M.Omkar, Personality Development and Career Management, S.Chand,1^{sr} edition, 2008.
7. Richard L.Daft, Leadership, Cengage, 1st Indian Reprint2008.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 To understand appropriate style of managerial behavior
CO2 To design and evaluate the managerial job.
CO3 To understand the managerial effectiveness
CO4 The analyse and solve environmental issues in managerial effectiveness
CO5 The design and develop a winning edge in creativity and innovation.

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAMME OUTCOMES (POs)								PROGRAMME SPECIFIC OUTCOMES (PSOs)

CO5	3	3	3	1	1	1	1	3	3	3	1

MB1020 PERSONAL EFFECTIVENESS **L T P C**
3 0 0 3

OBJECTIVES

1. To enhance one's own self-awareness and understand others.
2. To explore one's own feelings and behavior.

UNIT I SELF AWARENESS AND MANAGEMENT **9**

Personal Effectiveness- Definition -Emotional Intelligence - Understanding oneself Importance self-knowledge - Stress and EI- Competence and Personal Competency - Personal Competency Models- Learning- Importance of Ongoing Learning- Learning and Unlearning- Personal Change- Impression Formation and Impression Management. **CO1**

UNIT II BUILDING TEAMS **9**

Team Building methods and strategies - Leadership and Team Building - Nature of Power Creating Effective work teams- Impact of Motivation and Delegation on Team Building - Participative Decision Making **CO2**

UNIT III COMMUNICATION **9**

Interpersonal Communication - Strategies and Issues - Culture, Diversity and Communication - Communicating Within Teams, Organizations -Communicating Outside Organizations - Assertiveness - Persuasion - Strategies. **CO3**

UNIT IV INFLUENCING OTHERS **9**

Influence- Objectives - Methods of Influence - Individual responses to Influence – Exerting Influence- Common Influencing Problems and Solutions- Aggression - Coping with **CO4**

Aggression- Negotiations- Convincing People - Developing and Using Contacts.

UNIT V TRANSCATIONAL ANALYSIS AND NLP **9**

Concept of Self- Feeling Self- Thinking Self- Believing Self- Transactions- Transactional Analysis - Structural Analysis -TA and Self Awareness- Concept of strokes- Making Sense of Life- Therapeutic Enquiry- Assessing suitability and Implementation of TA as therapy- NLP Basics - Managing Self with the power of NLP: Life Planning, Personal Vision and Mission. **CO5**

.

TOTAL : 45 PERIODS

TEXT BOOKS

1. Brilliant Personal Effectiveness. Douglas Miller, 2015, Pearson Education.
2. The Seven Habits of highly effective people- Steven Covey, 2013, 25th Anniversary Edition, The Bath Press.

REFERENCE BOOKS

1. Personal Effectiveness. 3rd Edition- CMI- Alexander Murdock and Carol N. Scutt, Routledge Publishing, 2011
2. An Introduction to Transactional Analysis: Helping People to Change, Phil Lapworth and Charlotte Sills, 2011, Sage Publications.
3. NLP: The Essential Guide to Neuro-Linguistic Programming, Tom Hoobyar, Tom Dotz, Susan Sanders, Harper Collins Publishers. 2013

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 To remember and understand personal competency and importance of ongoing learning

CO2 To understand the impact of motivation and delegation on team building

CO3 To apply the interpersonal Communication Strategies and analyse the issues

CO4 To analyse the Individual responses to Influence others

CO5 To evaluate the suitability and Implementation of Transaction Analysis

CO5	3	3	3	1	-	-	1	3	3	3	1

MB1042 HUMAN RESOURCE ANALYTICS **L T P C**
3 0 0 3

OBJECTIVES

- To develop the ability of the learners to define and implement HR metrics that Sare aligned with the overall business strategy
- To know the different types of HR metrics and understand their respective impact and application
- To understand the impact and use of HR metrics and their connection with HR analytics
- To understand common workforce issues and resolving them using people analytics.

UNIT I INTRODUCTION TO HR ANALYTICS **9**

HR analytics - People Analytics: Definition- context -stages of maturity - Human Capital in the Value Chain: impact on business. HR Analytics vs HR Metrics –HR metrics and KPIs. **CO1**

UNIT II HR ANALYTICS I: RECRUITMENT **9**

Recruitment Metrics : Fill-up ratio - Time to hire - Cost per hire - Early turnover -Employee referral hires - Agency hires - Lateral hires - Fulfillment ratio- Quality of hire- Recruitment to HR cost-Recruitment analysis. **CO2**

UNIT III HR ANALYTICS II: TRAINING AND DEVELOPMENT **9**

Training & Development Metrics: Percentage of employee trained- Internally and externally trained -Training hours and cost per employee - ROI - Optimising the ROI of HR Programs - Training and Development analysis. **CO3**

UNIT IV HRANALYTICS III: EMPLOYEE ENGAGEMENT AND CAREER PROGRESSION **9**

Employee Engagement Metrics: Talent Retention- Retention index- Voluntary and involuntary turnover-Turnover by department, grades, performance, and service tenure- Internal hired index-Engagement Survey Analysis. Career Progression Metrics: Promotion index- Rotation index-Career path index- Level wise succession readiness index. **CO4**

UNIT V HR ANALYTICS IV: WORKFORCE DIVERSITY AND DEVELOPMENT **9**

Workforce Diversity and Development Metrics : Employees per manager - Workforce age profiling -Workforce service profiling – Churn over index - Work force diversity index -Gender **CO5** mix - Differently abled index- Revenue per employee - Operating cost per employee - PBT per employee - HR cost per employee- HR budget variance -Compensation to HR cost.

TOTAL : 45 PERIODS

TEXT BOOKS

1. Dipak Kumar Bhattacharyya, HR Analytics, Understanding Theories and Applications, SAGE Publications India, 2017.
2. Sesil, J. C., Applying advanced analytics to HR management decisions: Methods for selection, developing incentives, and improving collaboration. Upper Saddle River, New Jersey: Pearson Education, 2014.
3. Pease, G., & Beresford, B, Developing Human Capital: Using Analytics to Plan and Optimize Your Learning and Development Investments. Wiley, 2014.

REFERENCE BOOKS

1. JacFitzenz, The new HR Analytics, AMACOM, 2010.
2. Edwards M. R., & Edwards K, Predictive HR Analytics: Mastering the HR Metric. London: Kogan Page.2016.
3. Human Resources kit for Dummies–3rd edition–Max Messmer,2012
4. Phillips, J.,& Phillips, P.P, Making Human Capital Analytics Work: Measuring the ROI of Human Capital Processes and Outcomes.McGraw-Hill,2014.
5. HR Score card and Metrices, HBR, 2001.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 To remember the basic concepts of HR Analytics

CO2 To understand , apply and analyse how the HR Analytics apply in Recruitment

CO3 To apply, and analyse how the HR Analytics apply in Training and Development

CO4 To apply and analyse how the HR analytics help in Employee engagement and Career progression

CO5 To evaluate the HR Analytics in Work force diversity and Development

BUSINESS ANALYTICS ELECTIVES

MB1022 DATA MINING FOR BUSINESS INTELLIGENCE

L	T	P	C
3	0	0	3

OBJECTIVES

- To know how to derive meaning form huge volume of data and information
- To understand how knowledge discovering process is used in business decision making.

UNIT I INTRODUCTION **9**

Data mining, Text mining, Web mining, Spatial mining, Process mining, Data warehouse and data marts. **CO1**

UNIT II DATA MINING PROCESS **9**

Data mining process–KDD,CRISP- DM, SEMMA and Domain-Specific, Classification and Prediction performance measures- RSME, MAD, MAP, MAPE, Confusion matrix, Receiver Operating Characteristic curve & AUC; Validation Techniques - hold-out, k-fold cross-validation, LOOCV, random sub sampling, and bootstrapping. **CO2**

UNIT III PREDICTION TECHNIQUES **9**

Data visualization, Time series– ARIMA, Winter Holts, Vector Autoregressive analysis, Multivariate regression analysis. **CO3**

UNIT IV CLASSIFICATION AND CLUSTERING TECHNIQUES **9**

Classification - Decision trees, k nearest neighbor, Logistic regression, Discriminant analysis; Clustering; Market basket analysis; **CO4**

UNIT V MACHINE LEARNING AND AI **9**

Genetic algorithms, Neural network, Fuzzy logic, Support Vector Machine, Optimization techniques– Ant Colony, Particle Swarm, DEA **CO5**

TOTAL : 45 PERIODS

TEXT BOOKS

1. Jaiwei Ham and Micheline Kamber, Data Mining concepts and techniques, Kauffmann Publishers 2006
2. Efraim Turban, Ramesh Sharda, Jay E.Aronson and David King, Business Intelligence, Prentice Hall, 2008.
3. W.H.Inmon, Building the Data Warehouse, fourth edition Wiley Indiapvt.Ltd.2005.
4. Ralph Kimball and Richard Merz, The data warehouse toolkit, John Wiley, 3rd edition, 2013.
5. Michel Berry and Gordon Linoff, Mastering Data mining, John Wiley and Sons Inc, 2nd Edition,2011

REFERENCE BOOKS

1. Michel Berry and Gordon Linoff, Data mining techniques for Marketing, Sales and Customer support, John Wiley, 2011
2. G.K.Gupta, Introduction to Data mining with Case Studies, Prentice hall of India,2011
3. Giudici, Applied Data mining – Statistical Methods for Business and Industry, John Wiley.2009
4. Elizabeth Vitt, Michael Luckevich Stacia Misner ,Business Intelligence,Microsoft,2011
5. 1MichalewiczZ.,SchmidtM.MichalewiczMandChiriacC, Adaptive Business Intelligence, Springer –Verlag, 2007
6. Galit Shmueli, Nitin R. Patel and Peter C. Bruce, Data Mining for Business Intelligence – Concepts, Techniques and Applications Wiley, India, 2010.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 To remember and understand the various data mining techniques used in different domains.

CO2 To understand how data mining process is used in business decision making.

CO3 To apply and analyze the various prediction techniques
CO4 To evaluate the kinds of patterns that can be discovered by association rule mining, classification and clustering.
CO5 To create and evaluate a basic trainable neural network (or) a fuzzy logic system to design and manufacturing.

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAMME OUTCOMES (POs)								PROGRAMME SPECIFIC OUTCOMES (PSOs)

MB1023	BIG DATA ANALYTICS	L	T	P	C
		3	0	0	3

OBJECTIVES

- To understand the computational approaches to big data analytics
- To understand the various search methods and visualization techniques
- To learn to use various techniques for mining data stream
- To understand the applications using Map Reduce Concepts.

UNIT I INTRODUCTION TO BIG DATA **9**

Introduction to Big Data Platform– Challenges of Conventional Systems- Intelligent data analysis –Nature of Data- Analytic Processes and Tools - Analysis vs Reporting.. **CO1**

UNIT II MINING DATA STREAMS **9**

Introduction To Streams Concepts– Stream Data Model and Architecture- Stream Computing - Sampling Data in a Stream – Filtering Streams – Counting Distinct Elements in a Stream – Estimating Moments – Counting Oneness in a Window – Decaying Window - Real Time Analytics Platform (RTAP) Applications - Case Studies - Real Time Sentiment Analysis- Stock Market Predictions. **CO2**

UNIT III HADOOP **9**

History of Hadoop- the Hadoop Distributed File System – Components of Hadoop Analysing the Data with Hadoop- Scaling Out- Hadoop Streaming- Design of HDFS-Java interfaces to HDFS Basics- Developing a Map Reduce Application-How Map Reduce Works-Anatomy of a Map Reduce Job run-Failures-Job Scheduling-Shuffle and Sort – Task execution - Map Reduce Types and Formats-Map Reduce Features Hadoop environment. **CO3**

UNIT IV FRAMEWORKS **9**

Applications on Big Data Using Pig and Hive – Data processing operators in Pig – Hive services –Hive QL – Querying Data in Hive - fundamentals of HBase and Zoo Keeper - IBM Info Sphere Big Insights and Streams. **CO4**

UNIT V VISUALIZATION TECHNIQUES **9**

Predictive Analytics- Simple linear regression- Multiple linear regression -Interpretations of regression coefficients. Visualizations - Visual data analysis techniques- interaction techniques - Systems and applications. **CO5**

TOTAL : 45 PERIODS

6. Jiawei Han, Micheline Kamber "Data Mining Concepts and Techniques", Elsevier, Third Edition, 2011.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 To Understand the computational software's and techniques for handling big data and to analyze the various report formats.

CO2 To Remember the concepts, data model and architecture of streams and apply with various stream computing techniques

CO3 To Understand core technical concepts related to Business Intelligence, Big Data Analytics along with Hadoop Architecture and Analyze to data for analytics

CO4 To Understand and create the various application in Big Data

CO5 To Understand the visualization Techniques and analysis with various charts

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAMME OUTCOMES (POs)								PROGRAMME SPECIFIC OUTCOMES (PSOs)

CO5	2	2	3	2	-	-	1	3	2	3	-

MB1024 **CLOUD COMPUTING**

L	T	P	C
3	0	0	3

COURSE OBJECTIVES

- To know how to derive meaning form huge volume of data and information
- To understand how knowledge discovering process is used in business decision making.

UNIT I INTRODUCTION		**9**
History of Centralized and Distributed Computing - Overview of Distributed Computing, Cluster computing, Grid computing. Technologies for Network based systems- System models for Distributed and cloud computing- Software environments for distributed systems and clouds.		**CO1**
UNIT II INTRODUCTION TO CLOUD COMPUTING		**9**
Introduction to Cloud Computing- Cloud issues and challenges - Properties - Characteristics - Service models, Deployment models. Cloud resources: Network and API - Virtual and Physical computational resources - Data-storage. Virtualization concepts - Types of Virtualization- Introduction to Various Hypervisors - High Availability (HA)/Disaster Recovery (DR) using Virtualization, Moving VMs .		**CO2**
UNIT III CLOUD COMPUTING APPLICATIONS		**9**
Cloud Programming and Software Environments – Parallel and Distributed Programming paradigms – Overview on Amazon AWS and Microsoft Azure – Overview on Google App Engine – Emerging Cloud software Environment.		**CO3**
UNIT IV CLOUD SECURITY		**9**
Cloud Access: authentication, authorization and accounting - Cloud Provenance and meta-data - Cloud Reliability and fault-tolerance - Cloud Security, privacy, policy and compliance- Cloud federation, interoperability and standards.		**CO4**
UNIT V GOVERNANCE AND THE FUTURE OF CLOUD		**9**
Organizational Readiness and Change Management in the Cloud Age, Legal Issues in Cloud Computing, Achieving Production Readiness for Cloud Services, How Cloud Will Change Operating Systems, Future of Cloud TV & Cloud-Based Smart Devices, Cloud and Mobile, Home-Based Cloud Computing.		**CO5**

TOTAL : 45 PERIODS

REFERENCE BOOKS

1. Kai Hwang, Geoffrey C. Fox and Jack J. Dongarra, Distributed and cloud computing from Parallel Processing to the Internet of Things, Morgan Kaufmann, Elsevier, 2012
2. RajkumarBuyya, James Broberg and Andrzej Goscinski, Cloud Computing – Principles and Paradigms, John Wiley & Sons, 2011
3. Kris Jamsa, Cloud Computing, Jones & Bartlett Learning, 2013
4. Kumar Saurahb, Cloud Computing – Insights into new era infrastructure, Wiley India, 2nd Edition, 2012
5. Barrie Sosinsky, " Cloud Computing Bible" John Wiley & Sons, 2011
6. Tim Mather, Subra Kumaraswamy, and Shahed Latif, Cloud Security and Privacy An Enterprise Perspective on Risks and Compliance, O'Reilly 2009

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 To understand the basic concepts of cloud computing.
CO2 To analyse the cloud issues and challenges.
CO3 To apply the appropriate cloud computing solutions.
CO4 To understand the core issues of cloud computing such as security, privacy.
CO5 To develop the cloud services and to apply the idea about the future of cloud computing.

MAPPING OF COs WITH POs AND PSOs

CO5	2	2	3	2	-	-	1	3	2	3	-

MB1025	DEEP LEARNING AND ARTIFICIAL INTELLIGENCE	L	T	P	C
		3	0	0	3

COURSE OBJECTIVES

- To expose various algorithms related to Deep Learning and Artificial Intelligence.
- To prepare students to apply suitable algorithm for the specified applications.

UNIT I DEEP NETWORKS **9**

Deep Networks: Modern Practices: Deep Forward Networks: Example: Learning XOR - Gradient-Based Learning - Hidden Units - Architecture Design - Regularization for Deep Learning. **CO1**

UNIT II MODELS **9**

Optimization for Training Deep Models: How Learning Differs from Pure Optimization - Challenges in Neural Network Optimization - Basic Algorithms - Parameter Initialization Strategies - Algorithms with Adaptive Learning Rates - Approximate Second-Order Methods - Optimization Strategies and Meta Algorithms. **CO2**

UNIT III INTELLIGENT SYSTEMS **9**

Introduction to Artificial Intelligence: Intelligent Systems - Foundations of AI - Applications - Tic-Tac-Toe Game Playing - Problem Solving: State-Space Search and Control Strategies: Introduction - General Problem Solving - Exhaustive Searches - Heuristic Search Techniques. **CO3**

UNIT IV KNOWLEDGE REPRESENTATION **9**

Advanced Problem-Solving Paradigm: Planning: Introduction - Types of Planning Systems - Knowledge Representation: Introduction - Approaches to Knowledge Representation - Knowledge Representation using Semantic Network - Knowledge Representation using Frames. **CO4**

UNIT V APPLICATIONS **9**

Expert Systems and Applications: Blackboard Systems - Truth Maintenance Systems - Applications of Expert Systems - Machine-Learning Paradigms: Machine-Learning Systems - Supervised and Unsupervised Learnings. **CO5**

TOTAL : 45 PERIODS

REFERENCE BOOKS

1. Jared P.L., R for Everyone - Advanced Analytics and Graphics, Addison Wesley Data and Analytics series, 2015.
2. Sandip Rakshit, R Programming for Beginners, McGraw Hill Education, 2017

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 To understand the modern practices on deep forward networks, Architecture designs and analyse

	the regularization for deep learning.
CO2	To create the models to optimize and analyse the challenges in neural network optimization, approximate Second order models and Meta algorithms.
CO3	To understand the foundations of the AI applications, Tic-tac-toe Game playing, Problem solving: state-space search, Exhaustive searches and to apply the heuristic search techniques.
CO4	To understand the advanced problem solving paradigm, types of planning systems, knowledge representation using semantic network and frames.
CO5	To apply the expert systems and applications like Blackboard systems, machine learning Paradigms and to Understand the supervised and unsupervised learnings.

MAPPING OF COs WITH POs AND PSOs

COs	**PROGRAMME OUTCOMES (POs)**								**PROGRAMME SPECIFIC OUTCOMES (PSOs)**		
	PO 1	**PO 2**	**PO 3**	**PO 4**	**PO 5**	**PO 6**	**PO 7**	**PO 8**	**PSO1**	**PSO2**	**PSO3**
CO1	2	2	3	2	-	-	1	3	2	3	-
CO2	2	2	3	2	-	-	1	3	2	3	-

CO5	2	2	3	2	-	-	1	3	2	3	-

MB1026 R PROGRAMMING L T P C

OBJECTIVES

- To study the fundamentals of R programming to apply in quantitative analysis.

UNIT I GETTING STARTED WITH R **9**

Installing R - The R environment - R packages - Basics of R - Data Structures - Reading data into R- Graphics in R **CO1**

UNIT II FUNCTIONS AND STATEMENTS **9**

Writing R functions - Control Statements (if and else, switch, if else, compound tests) -Loops in R (for, while, controlling loops) -Applications using the functions and loops **CO2**

UNIT III DATA MANIPULATION AND ANALYSIS **9**

Group manipulation - Data Reshaping - Manipulating Strings - Basic Statistics using R (Summaries, Correlation, t-tests, ANOVA) **CO3**

UNIT IV LINEAR MODELS USING R **9**

Linear Models - Simple and Multiple regression, GLM - Logit Regression, Model diagnostics- Residuals, Cross validation, Bootstrapping. **CO4**

UNIT V NON-LINEAR MODELS, TIME SERIES AND CLUSTERING USING R **9**

Nonlinear Models - Non-Linear least square, Splines, Generalised Additive Models, Decision trees, Random forests. Time Series - Autoregressive moving average, VAR, GARCH. Clustering –K means, PAM and Hierarchical Clustering **CO5**

TOTAL : 45 PERIODS

TEXT BOOKS

1. Jared P.L., R for Everyone - Advanced Analytics and Graphics, Addison Wesley Data and Analytics series, 2015.

REFERENCE BOOKS

1. Sandip Rakshit, R Programming for Beginners, McGraw Hill Education,2017

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 To install and understand the basics in R, data structures and graphics in R.

CO2 To apply the R functions, statements and loops in analyses.

CO3 To evaluate the basic statistical analytics like summary correlation, t-tests and ANOVA.

CO4 To create the linear models using R in solving the business programs.

CO5 To enhance the knowledge on Non-linear models in applying them to solve the organizational problems.

MB1027 MULTIVARIATE DATA ANALYSIS L T P C

OBJECTIVES

- To know various multivariate data analysis techniques for business research.

UNIT I INTRODUCTION **9**

Introduction – Basic concepts – Uni-variate, Bi-variate and Multi-variate techniques– Types of multivariate techniques– Classification of multivariate techniques– Guidelines for multivariate analysis and interpretation –Approaches to multivariate model building **CO1**

UNIT II PREPARING FOR MULTIVARIATE ANALYSIS **9**

Introduction– Conceptualization of research problem– Identification of technique- Examination of variables and data – Measurement of variables and collection of data –Measurement of errors – Statistical significance of errors. Missing data – Approaches for dealing with missing data– Testing the assumptions of multivariate analysis–Incorporating non-metric data with dummy variables. **CO2**

UNIT III MULTIPLE LINEAR REGRESSION ANALYSIS, FACTOR ANALYSIS **9**

Multiple Linear Regression Analysis – Introduction – Basic concepts – Multiple linear regression model – Least square estimation – Inferences from the estimated regression function– Validation of the model. Factor Analysis: Definition– OBJECTIVE– Approaches to factor analysis – methods of estimation – Factor rotation – Factor scores -Sum of variance explained– interpretation of results **CO3**

UNIT IV LATENT VARIABLE TECHNIQUES **9**

Confirmatory Factor Analysis, Structural Equation modeling, Mediation models, Moderation models, Conditional processes, longitudinal studies, latent growth model, Bayesian inference **CO4**

UNIT V ADVANCED MULTIVARIATE TECHNIQUES **9**

Multiple Discriminant Analysis, Logistic Regression, Cluster Analysis, Conjoint Analysis, multidimensional scaling. **CO5**

TOTAL : 45 PERIODS

TEXT BOOKS

1. Joseph F Hair, Rolph E Anderson, Ronald L. Tatham & William C. Black, Multivariate Data Analysis, Pearson Education, New Delhi, 2005.
2. Barbara G. Tabachnick, Linda S. Fidell, Using Multivariate Statistics, 6th Edition, Pearson, 2012.

REFERENCE BOOKS

1. Richard A Johnson and Dean W. Wichern, Applied Multivariate Statistical Analysis, Prentice Hall, New Delhi, 2005.
2. David R Anderson, Dennis J Seveency, and Thomas A Williams, Statistics for Business and Economics, Thompson, Singapore, 2002

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 To understand the basic concepts and creating multivariate models using different models.
CO2 To collect data for variables by creating survey instruments and evaluating the relationships between variables.
CO3 To apply different multivariate analysis tools and techniques.
CO4 To select and apply the latent variable techniques at the requiered places.
CO5 To apply the advanced analyse techniques in organizational decision making

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAMME OUTCOMES (POs)								PROGRAMME SPECIFIC OUTCOMES (PSOs)		
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PSO1	PSO2	PSO3
CO1	2	2	3	2	-	-	1	3	2	3	-

CO5	2	2	3	2	-	-	1	3	2	3	-

MB1040	SOCIAL MEDIA AND WEB ANALYTICS	L	T	P	C
		3	0	0	3

COURSE OBJECTIVES

- To understand the practices and technology involved in web marketing in real time business environment.

UNIT I INTRODUCTION TO WEB AND SOCIAL MEDIA **9**

Introduction - Web and social media - Website, Web apps - Social Media, Usability - User friendliness - Customer Experience - Web marketing, Competitive analysis - Web analytics framework - Analytics and outcomes, Competitive analysis. **CO1**

UNIT II BUSINESS ENVIRONMENT **9**

Data - Types of Data, primary data, secondary, Big Data - Data Analysis - tools used for analysis - descriptive statistics, comparing means, correlations, nonparametric tests **CO2**

UNIT III MEASURING USER EXPERIENCE **9**

Usability metrics - performance metrics, issues-based metrics, self-reported metrics - Planning and performing a usability study - study goals, user goals, metrics and evaluation methods, participants, data collection, data analysis, comparing alternative designs, comparing with competition, completing a task or transaction	**CO3**
UNIT IV WEB ANALYSIS AND METRICS	**9**
PULSE metrics on business and technical issues - Page views, Uptime, Latency, Seven-day active users HEART metrics - Happiness, Engagement, Adoption, Retention, and Task success on user behaviour issues - On-site web analytics, off-site web analytics, the goal-signal-metric process.	**CO4**
UNIT V SOCIAL MEDIA ANALYTICS	**9**
Social media analytics - Reasons for the growth - Social media KPIs - reach and engagement, Performing social media analytics - Business goal, KPIs, data gathering, analysis, measure and feedback	**CO5**

TOTAL :45 PERIODS

TEXT BOOKS

1. Avinash Kaushik, Web Analytics 2.0: The Art of Online Accountability and Science of Customer Centricity, John Wiley & Sons
2. Tom Tullis, Bill Albert, Measuring the User Experience: Collecting, Analyzing, and Presenting Usability Metrics, Morgan Kaufmann

REFERENCE BOOKS

1. Jim Sterne, Social Media Metrics: How to Measure and Optimize Your Marketing Investment, John Wiley & Sons.
2. Brian Clifton, Advanced Web Metrics with Google Analytics, John Wiley & Sons; 3rd Edition edition

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 To understand the web and social media and analyse.
CO2 To apply the analytical tools.
CO3 To analyse and evaluate the performance metrics.
CO4 To apply and analyse the issues of web analytics.
CO5 To create the KPI.

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAMME OUTCOMES (POs)								PROGRAMME SPECIFIC OUTCOMES (PSOs)

CO5	2	2	3	2	-	-	1	3	2	3	-

OPERATIONS MANAGEMENT ELECTIVES

MB1028	LOGISTICS MANAGEMENT	L	T	P	C
		3	0	0	3

OBJECTIVES

- To learn the need and importance of logistics in product flow.

UNIT I Introduction **9**

Definition and Scope of Logistics – Functions & Objectives – Customer Value Chain–Service Phases and attributes – Value added logistics services – Role of logistics in Competitive strategy– Customer Service. **CO1**

UNIT II DISTRIBUTION CHANNELSAND OUTSOURCINGLOGISTICS **9**

Distribution channel structure - channel members, channel strategy, role of logistics and support in distribution channels. Logistics requirements of channel members; Logistics outsourcing– catalysts, benefits, value proposition, 3PL, 4PL, 5PL, 6PL. **CO2**

UNIT III TRANSPORTATION AND PACKAGING **9**

Transportation System – Evolution, Infrastructure and Networks. Freight Management –Vehicle Routing – Containerization; Modal Characteristics - Inter-modal Operators and Transport Economies; International Logistics-objectives, importance in global economy, Characteristics of global supply chains, Incoterms. Selection of service provider; Packaging - Design considerations, Material and Cost. Packaging as Unitisation. Consumer and Industrial Packaging. **CO3**

UNIT IV PERFORMANCE MEASUREMENT AND COSTS **9**

Performance Measurement – Need, System, Levels and Dimensions. Internal and External Performance Measurement. Logistics Audit. Total Logistics Cost – Concept, Accounting Methods: Cost – Identification, Time Frame and Formatting. **CO4**

UNIT V CURRENT TRENDS **9**

Logistics Information Systems – Need, Characteristics and Design. E-Logistics – Structure and Operation. Logistics Resource Management eLRM. Automatic Identification Technologies; Reverse Logistics – Scope, design and as a competitive tool. Global Logistics –Operational and Strategic Issues, ocean and air transportation. Strategic logistics planning; Green Logistics. **CO5**

TOTAL : 45 PERIODS

TEXT BOOKS

1. Bowersox Donald J, Logistics Management – The Integrated Supply Chain Process, Tata Mc GrawHill, 2010
2. RonaldH.Ballou,BusinessLogisticsandSupplyChainManagement,PearsonEducation,5th Edition, 2007

REFERENCE BOOKS

1. Sople Vinod V, Logistics Management: The Supply Chain Imperative, Pearson Education, 3rd Edition, 2012.
2. Coyleetal, The Management of Business Logistics, Thomson Learning, 7th Edition, 2004.
3. Ailawadi C Sathish & Rakesh Singh, Logistics Management,PHI,2005.
4. Bloomberg David Jetal., Logistics, Prentice Hall India, 2005.
5. Pierre David, International Logistics, Biztantra, 2003.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 Understand the concepts of logistics

CO2 Develop the skills in managing the distribution network and logistics partners to improve the supply chain practices

CO3 Analyse the impact of transportation on logistics operations including carrier selection, route optimization freight consolidation and understanding the role of packaging in efficient logistics management

CO4 Understanding the importance of performance management and cost management in logistics including the role of performance metrics and cost analysis in improving the supply chain efficiency

CO5 Evaluate the impact of new technologies or market trends on logistics management practices

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAMME OUTCOMES (POs)								PROGRAMME SPECIFIC OUTCOMES (PSOs)		
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PSO1	PSO2	PSO3
CO1	3	2	3	2	2	-	1	3	3	2	1
CO2	3	2	3	2	2	-	1	3	3	2	1
CO3	3	2	3	2	2	-	1	3	3	2	1
CO4	3	2	3	2	2	-	1	3	3	2	1
CO5	3	2	3	2	2	-	1	3	3	2	1

MB1029 MATERIALS MANAGEMENT **L T P C**
3 0 0 3

OBJECTIVES

- To understand why materials management should be considered for profit in operations

UNIT I INTRODUCTION **9**

Operating environment-aggregate planning-role, need, strategies, costs techniques, approaches master scheduling-manufacturing planning and control system-manufacturing resource planning enterprise resource planning-making the production plan. **CO1**

UNIT II MATERIALS PLANNING **9**

Materials requirements planning-bill of materials-resource requirement planning-manufacturing resource planning-capacity management-scheduling orders-production activity control-codification. **CO2**

UNIT III INVENTORY MANAGEMENT **9**

Policy Decisions–objectives-control -Retail Discounting Model, Newsvendor Model; EOQ and EBQ models for uniform and variable demand with and without shortages -Quantity discount models. Probabilistic inventory models **CO3**

UNIT IV PURCHASING MANAGEMENT **9**

Establishing specifications-selecting suppliers-price determination-forward buying-mixed buying strategy-price forecasting- buying seasonal commodities- purchasing under uncertainty-demand management-price forecasting- purchasing under uncertainty-purchasing of capital equipment international purchasing. **CO4**

UNIT V WAREHOUSE MANAGEMENT **9**

Warehousing functions – types - Stores management-stores systems and procedures-incoming materials control-stores accounting and stock verification-Obsolete, surplus and scrap-value analysis-material handling-transportation and traffic management -operational efficiency productivity- cost effectiveness-performance measurement **CO5**

TOTAL : 45 PERIODS

TEXT BOOKS

1. S. N. Chary, Production and Operations Management, Tata McGraw Hill , 2012
2. J.R.Tony Arnold, Stephen N. Chapman, Lloyd M. Clive, Materials Management, Pearson, 2012.
3.

REFERENCE BOOKS

1. P. Gopalakrishnan, Purchasing and Materials Management, Tata McGraw Hill, 2012
2. A.K. Chitale and R.C. Gupta, Materials Management, Text and Cases, PHI Learning, 2nd Edition, 2006.
3. A.K. Datla, Materials Management, Procedure, Text and Cases, PHI Learning, 2nd Edition, 2006
4. Ajay K Garg, Production and Operations Management, Tata McGraw Hill , 2012
5. Ronald H. Ballou and Samir K. Srivastava, Business Logistics and Supply Chain Management, Pearson education, Fifth Edition.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	To understand the concepts and techniques in materials management
CO2	To understand the concept of materials planning and apply it for optimized ordering of materials
CO3	To understand and apply inventory management models for optimization of inventory
CO4	To understand and analyse purchase decisions during certainty and uncertainty scenarios
CO5	To remember and understand warehousing function and apply the concepts for efficient warehousing

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAMME OUTCOMES (POs)								PROGRAMME SPECIFIC OUTCOMES (PSOs)		
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PSO1	PSO2	PSO3

CO2	3	2	3	2	-	-	1	3	3	2	1
CO3	3	2	3	2	-	-	1	3	3	2	1
CO4	3	2	3	2	-	-	1	3	3	2	1
CO5	3	2	3	2	-	-	1	3	3	2	1

MB1030	**PRODUCT DESIGN**	**L**	**T**	**P**	**C**
		3	0	0	3

OBJECTIVES

- To understand the application of structured methods to develop a product.

UNIT I PRODUCT DESIGN & DEVELOPMENT **9**

Product design & development - characteristics, duration and cost, challenges; Development Process - Generic Process, Concept development, Adapting to product types; Product Planning - Process, Understanding customer need, Product Specification; Concept Generation Evaluation - decay curve, cost expenditure curve; Technology Life Cycle; Disruptive Technologies. **CO1**

UNIT II PRODUCT CONCEPT **9**

Concept Selection – Importance, Methodology, concept Screening, Concept Scoring, Concept **CO2**

Testing; Product Architecture - Definition, Modularity, implication, Establishment, Delayed Differentiation, Platform Planning.

UNIT III PRODUCT DATA MANAGEMENT **9**

PDM - concept and benefits, functions, Product data and workflow, Product reliability, CIM data, Architecture of PDM systems, Product data interchange, Portal integration, PDM acquisition and implementation; Product Life Cycle management - strategy, Change management for PLM. **CO3**

UNIT IV DESIGN TOOLS **9**

Design Approaches - Industrial Design, Design for Manufacturing, Value Engineering, Ergonomics, Robust Design, Design for Excellence; Collaborative Product development-Prototyping, failure rate curve, product use testing-Product development economics, scoring model, financial analysis. **CO4**

UNIT V PATENTS **9**

Intellectual Property and Patents -Definitions, Patent Searches, Application, Patent Ownership and Transfer, Patent Infringement, New Developments and International Patents. **CO5**

TOTAL : 45 PERIODS

TEXT BOOKS

1. Karl T. Ulrich, Steven D. Eppinger, Anita Goyal Product Design and Development, Tata McGraw – Hill, Fourth Edition, reprint 2009.

REFERENCE BOOKS

1. Kenneth B. Kahn, New Product Planning, Sage, 2010.
2. A.K. Chitale and R.C. Gupta, Product Design and Manufacturing, PHI, 2008.
3. Deborah E. Bouchoux, Intellectual Property Rights, Delmar, Cengage Learning, 2005.
4. Michael Grieves, Product Life Cycle Management, Tata McGraw Hill, 2006.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 To understand the needs of the customers and thereby develop characteristics of product to be designed

CO2 To understand and analyze the methodology in the selection of product concept

CO3 To analyze and evaluate the product data management and its implementation

CO4 To apply the various tools available for design of product

CO5 To understand the concept of patenting for new products and its procedure

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAMME OUTCOMES (POs)								PROGRAMME SPECIFIC OUTCOMES (PSOs)		
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PSO1	PSO2	PSO3

CO4	3	2	3	2	2	2	1	3	3	2	1
CO5	3	2	3	2	2	2	1	3	3	2	1

MB1031 **PROJECT MANAGEMENT** **L T P C**

3 0 0 3

OBJECTIVES

- To learn the fundamental principles and practices of managing projects.

UNIT I INTRODUCTION TO PROJECT MANAGEMENT **9**

Project Management – Definition –Goal - Lifecycles. Project Environments. Project Manager – Roles- Responsibilities and Selection. **CO1**

UNIT II PLANNING, BUDGETING AND RISK MANAGEMENT **9**

The Planning Process – Work Break down Structure. Cost Estimating and Budgeting - Process, Summaries, schedules and forecasts. Managing risks - concepts, identification, assessment and response planning. **CO2**

UNIT III SCHEDULING & RESOURCE ALLOCATION **9**

PERT & CPM Networks - Project durations and floats - Crashing – Resource loading and leveling. Simulation for resource allocation. Goldratt's Critical Chain **CO3**

UNIT IV PROJECT ORGANISATION & CONFLICT MANAGEMENT **9**

Formal Organization Structure – Organization Design – Types of project organizations. Conflict – Origin & Consequences. Project Teams. Managing conflict – Team methods for resolving conflict. **CO4**

UNIT V CONTROL AND COMPLETION **9**

Project Control – Process, Monitoring, Internal and External control, Performance analysis, Performance Index Monitoring. Project Evaluation, Reporting and Termination. Project success and failure - Lessons. **CO5**

TOTAL : 45 PERIODS

TEXT BOOKS

1. Clifford Gray and Erik Larson, Project Management, Tata McGraw Hill Edition, 2005.

REFERENCE BOOKS

1. John M. Nicholas, Project Management for Business and Technology - Principles and Practice, Second Edition, Pearson Education, 2006.
2. Gido and Clements, Successful Project Management, Second Edition, Thomson Learning, 2003.
3. Samuel J.M., Jack R.M., Scott M.S., Margaret M.S., and Gopalan M.R., Project Management, First Indian edition, Wiley-India, 2006.
4. Harvey Maylor, Project Management, Third Edition, Pearson Education, 2006.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 To understand the characteristics of project and teams and various stages of a project.

CO2 To create the work breakdown structure and understand the fundamentals of cost and budget estimation methods

CO3 To analyze the ways of completing projects on time and scheduling resources effectively

CO4 To understand the organization structure & critically analyze conflicts and ways of resolving conflicts

CO5 To understand reporting and control methods

MAPPING OF COs WITH POs AND PSOs

MB1032 SERVICE OPERATIONS MANAGEMENT **L T P C**
3 0 0 3

OBJECTIVES

- To help understand how service performance can be improved by studying services operations management.

UNIT I INTRODUCTION **9**

Services – Importance, role in economy, service sector – nature, growth. Nature of services - distinctive characteristics, Service Package, Service classification, service-dominant logic, open systems view. Service Strategy –Strategic service vision, competitive environment, generic strategies, winning customers; Role of information technology; stages in service firm competitiveness. **CO1**

UNIT II SERVICE DESIGN **9**

New Service Development – Design elements – Service Blue-printing - process structure – generic approaches. Service Encounter – triad, creating service orientation, service profit chain; Front office Back-office Interface– service decoupling. Technology in services – self-service, automation, e-commerce, e-business, technology innovations. **CO2**

UNIT III SERVICE QUALITY **9**

Service Quality- Dimensions, Service Quality Gap Model; Measuring Service Quality – SERVQUAL, Walk-through Audit, Quality service by design , Service Recovery, Service Guarantees. Process Improvement –productivity improvement - DEA, quality tools, benchmarking, Quality improvement programs. **CO3**

UNIT IV SERVICE FACILITY **9**

Supporting facility -Service scape, Facility design – nature, objectives, process analysis, service facility layout. Service Facility Location – considerations, facility location techniques – metropolitan metric, Euclidean, centre of gravity, retail outlet location, location set covering problem. Vehicle routing and Scheduling. **CO4**

UNIT V MANAGING CAPACITY AND DEMAND **9**

Managing Demand – strategies; Managing capacity – basic strategies, supply management tactics, operations planning and control; Yield management; Inventory Management in Services– Retail Discounting Model, Newsvendor Model; Managing Waiting Lines –Queuing systems, psychology of waiting; Managing for growth- expansion strategies, franchising , globalization. **CO5**

TOTAL : 45 PERIODS

TEXT BOOKS

1. James A. Fitzsimmons, Mona J, Fitzsimmons, Sanjeev Bordoloi, Service Management – Operations, Strategy, Information Technology, McGraw-Hill Education – 8th Edition 2018.

REFERENCE BOOKS

1. Richard D. Metters, Successful Service Operations Management, Cengage Learning, 2nd Edition, 2012.
2. Cengiz Haksever, Barry Render, Service Management, Pearson Education, 2013.
3. Robert Johnston, Graham Clark, Service Operations Management, Pearson Education, 2ndEdition, 2005.
4. Bill Hollins and Sadie Shinkins, Managing Service Operations, Sage, 2006.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 To understand the various concepts Services and apply the classification , strategy and role of information technology

CO2 To analyze the role of technological innovations with regards to business

CO3 To create service quality using models like SERVQUAL and analyze the process improvement and quality tools with respect to business standards

CO4 To apply and analyse various facility design , routing and scheduling

CO5 To analyse the real world applications and create automated models to be on par with the industry standards.

CO5	3	3	3	2	2	2	-	3	3	3	-

MB1033 SUPPLY CHAIN MANAGEMENT

L	T	P	C
3	0	0	3

OBJECTIVES

- To help understand the importance of and major decisions in supply chain management for gaining competitive advantage.

UNIT I INTRODUCTION **9**

Supply Chain – Fundamentals –Evolution- Role in Economy - Importance - Decision Phases - Supplier- Manufacturer-Customer chain. - Enablers/ Drivers of Supply Chain Performance; Supply chain strategy - Supply Chain Performance Measures. **CO1**

UNIT II STRATEGIC SOURCING **9**

Outsourcing – Make Vs buy - Identifying core processes - Market Vs Hierarchy - Make Vs buy continuum -Sourcing strategy - Supplier Selection and Contract Negotiation. Creating a world class supply base- Supplier Development - World Wide Sourcing. **CO2**

UNIT III SUPPLY CHAIN NETWORK **9**

Distribution Network Design – Role - Factors Influencing Options, Value Addition – Distribution Strategies - Models for Facility Location and Capacity allocation. Distribution Center Location Models - Supply Chain Network optimization models; Impact of uncertainty on Network Design - Network Design decisions using Decision trees. **CO3**

UNIT IV PLANNING DEMAND, INVENTORY AND SUPPLY **9**

Managing supply chain cycle inventory. Uncertainty in the supply chain –- Analyzing impact of supply chain redesign on the inventory - Risk Pooling - Managing inventory for short life – cycle products - multiple item -multiple location inventory management. Pricing and Revenue Management **CO4**

UNIT V CURRENT TRENDS **9**

Supply Chain Integration, SC process restructuring, IT in Supply Chain; Agile Supply Chains, Leagile supply chain, Green Supply Chain, Reverse Supply chain; Supply chain **CO5** technology trends – AI, Advanced analytics, Internet of Things, Intelligent things, conversational systems, robotic process automation, immersive technologies, Blockchain.

TOTAL : 45 PERIODS

TEXT BOOKS

2. Sunil Chopra, Peter Meindl and Dharam VirKalra, Supply Chain Management-Strategy Planning and Operation, Pearson Education, Sixth Edition, 2016.
3. Ballou Ronald H, Business Logistics and Supply Chain Management, Pearson Education, 5thEdition, 2007.

REFERENCE BOOKS

2. Janat Shah, Supply Chain Management – Text and Cases, Pearson Education, 2009
3. David Simchi-Levi, Philip Kaminsky, Edith Simchi-Levi, Designing and Managing the Supply Chain: Concepts, Strategies, and Cases, Tata McGraw-Hill, 2005.
4. Pierre David, International Logistics, Biztantra, 2003.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 To understand and remember the concepts of Supply Chain and strategy formulation

CO2 To analyse the sourcing strategy for better decision making

CO3 To understand the different supply chain network models and evaluate the distribution network design using these optimization models

CO4 To analyse inventory decisions in supply chain

CO5 To understand the application of latest trends for better supply chain management practices

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAMME OUTCOMES (POs)								PROGRAMME SPECIFIC OUTCOMES (PSOs)		
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PSO1	PSO2	PSO3
CO1	3	3	3	2	2	-	1	3	3	3	1

MB1034	**QUALITY MANAGEMENT**	**L**	**T**	**P**	**C**
		3	0	0	3

OBJECTIVES

- To learn the quality philosophies and tools in the managerial perspective.

UNIT I INTRODUCTION **9**

Quality – vision, mission and policy statements. Customer Focus – customer perception of quality, Translating needs into requirements, customer retention. Dimensions of product and service quality. Cost of quality. **CO1**

UNIT II PRINCIPLES AND PHILOSOPHIES OF QUALITY MANAGEMENT **9**

Overview of the contributions of Deming, Juran Crosby, Masaaki Imai, Feigenbaum, Ishikawa, Taguchi techniques – introduction, loss function, parameter and tolerance design, signal to noise ratio. Concepts of Quality circle, Japanese 5S principles and 8D methodology. **CO2**

UNIT III STATISTICAL PROCESS CONTROL **9**

Meaning and significance of statistical process control (SPC) – construction of control charts for variables and attributed. Process capability – meaning, significance and measurement – Six sigma - concepts of process capability. Reliability concepts – definitions, reliability in series and parallel, product life characteristics curve. Total productive maintenance (TMP), Terotechnology. Business process Improvement (BPI) – principles, applications, reengineering process, benefits and limitations. **CO3**

UNIT IV TOOLS AND TECHNIQUES FOR QUALITY MANAGEMENT 9

Quality functions development (QFD) – Benefits, Voice of customer, information organization, House of quality (HOQ), building a HOQ, QFD process. Failure mode effect analysis (FMEA) – requirements of reliability, failure rate, FMEA stages, design, process and documentation. Seven Tools (old & new). Bench marking and POKA YOKE. **CO4**

UNIT V QUALITY SYSTEMS ORGANIZING AND IMPLEMENTATION 9

Introduction to IS/ISO 9004:2000 – quality management systems – guidelines for performance improvements. Quality Audits. TQM culture, Leadership – quality council, employee involvement, motivation, empowerment, recognition and reward - TQM framework, benefits, awareness and obstacles. **CO5**

TOTAL : 45 PERIODS

TEXT BOOKS

1. Dale H.Besterfield, Carol Besterfield – Michna, Glen H. Besterfield, Mary Besterfield – Sacre, Hermant – Urdhwareshe, Rashmi Urdhwareshe, Total Quality Management, Revised Third edition, Pearson Education, 2011
2. Shridhara Bhat K, Total Quality Management – Text and Cases, Himalaya Publishing House, II Edition 2010

REFERENCE BOOKS

1. Douglas C. Montgomory, Introduction to Statistical Quality Control, Wiley Student Edition, 4th Edition, Wiley India Pvt. Limited, 2008.
2. James R. Evans and William M. Lindsay, The Management and Control of Quality,Sixth Edition, Thomson, 2005.
3. Poornima M.Charantimath, Total Quality Management, Pearson Education, Second Edition , 2011
4. Indian standard – quality management systems – Guidelines for performance improvement (Fifth Revision), Bureau of Indian standards, New Delhi.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 To understand the need for quality, evaluate the dimensions of quality and create quality products and services that delights the customers.

CO2 To understand the principles and philosophies contributed by quality gurus and apply in practice.

CO3 To evaluate the quality of process product and service using TQM tools and statisticals methods.

CO4 To analyse customer needs and create quality products and services that delights the customers by applying TQM tools.

CO5 To apply quality standards.

MAPPING OF COs WITH POs AND PSOs

SYSTEMS MANAGEMENT ELECTIVES

MB1035 **e–BUSINESS** **L T P C**
3 0 0 3

OBJECTIVES

- To understand the practices and technology to start an online business.

UNIT I INTRODUCTION TO e-BUSINESS **8**

e-business, e-business Vs e-commerce, Economic forces - advantages - myths - e-business models, design, develop and manage business, Web2.0 and Social Networking, Mobile Commerce, S-commerce **CO1**

UNIT II TECHNOLOGY INFRASTRUCTURE **10**

Internet and World Wide Web, internet protocols - FTP, intranet and extranet, Information publishing technology - basics of web server hardware and software **CO2**

UNIT III BUSINESS APPLICATIONS **10**

Consumer oriented e-business - e-tailing and models - Marketing on web - advertising - e-mail marketing, affiliated programs - e-CRM; online services, Business oriented e-business, governance, EDI on the internet, Delivery management system, Web Auctions, Virtual communities and Web portals - Social media marketing **CO3**

UNIT IV e-BUSINESS PAYMENTS AND SECURITY **9**

E-payments - Characteristics of payment of systems, protocols, e-cash, e cheque and Micro payment systems - internet security - cryptography - security protocols - network security **CO4**

UNIT V LEGAL AND PRIVACY ISSUES **8**

Legal, Ethics and privacy issues - Protection needs and methodology - consumer protection, cyberlaws, contract sand warranties, Taxation and encryption policies. **CO5**

TOTAL: 45 PERIODS

TEXT BOOKS

1. Harvey M.Deitel, Paul J.Deitel, Kate Steinbuhler, e – business and e – commerce for managers, Pearson, 2011.
2. Efraim Turban, Jae K.Lee, David King, Ting Peng Liang, Deborrah Turban, Electronic Commerce– A managerial perspective, Pearson Education Asia, 2010.
3. Parag Kulkarni, Sunita Jahirabadkao, Pradeep Chande, ebusiness, Oxford University Press,2012.

REFERENCE BOOKS

1. Hentry Channel, E-Commerce – fundamentals and Applications, Wiley India Pvt Ltd, 2007.
2. Gary P.Schneider, Electronic commerce, Thomson course technology, Fourth annual edition, 2007
3. Bharat Bhasker, Electronic Commerce Frame work technologies and Applications, 3rdEdition. Tata McGraw Hill Publications, 2009
4. Kamlesh K.Bajaj and Debjani Nag, Ecommerce - the cutting edge of Business,Tata McGraw Hill Publications, 7th reprint, 2009.
5. Kalakotaetal, Frontiers of Electronic Commerce, Addison Wesley, 2004
6. Micheal Papaloelon and Peter Robert, e-business, WileyIndia, 2006.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 To understand the various concepts of E-business and to create the designs and business models

CO2 To create different technology infrastructure and analyze basics of web server, hardware and software

CO3 To analyze various business applications and understand virtual communities and web portals

CO4 To analyze the tools for e-business and create cryptography and network security for payment systems

CO5 To analyse the legal and privacy issues and understand the cyber laws with regards to taxation and encryption policies.

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAMME OUTCOMES (POs)								PROGRAMME SPECIFIC OUTCOMES (PSOs)		
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PSO1	PSO2	PSO3
CO1	2	2	2	1	1	-	-	1	2	2	-
CO2	2	2	2	1	1	-	-	1	2	2	-

MB1036 ENTERPRISE RESOURCE PLANNING

L	T	P	C
3	0	0	3

OBJECTIVES

- To exhibit the theoretical aspects of Enterprise Resource Planning.
- To provide practical implication on ERP Suite implementation.

UNIT I INTRODUCTION **8**

Overview of enterprise systems – Evolution – Risks and benefits – Fundamental technology – warehouse management. **CO1**

UNIT II ERP SOLUTIONS AND FUNCTIONAL MODULES **10**

Overview of ERP software solutions, BPR, Project management, Functional Modules - Organisational data, master data and document flow. **CO2**

UNIT III ERP IMPLEMENTATION **10**

Planning Evaluation and selection of ERP systems – Implementation lifecycle-ERP implementation, Methodology and Framework – Training – Data Migration. People Organization in implementation - Consultants, Vendors and Employees. **CO3**

UNIT IV POST IMPLEMENTATION **8**

Maintenance of ERP - Organizational and Industrial impact; Success and Failure factors of ERP Implementation. **CO4**

UNIT V EMERGING TRENDS ON ERP **9**

Extended ERP systems and ERP add-ons - CRM, SCM, Business analytics – Future trends in ERP systems – web enabled, Wireless technologies, cloud computing and Augmented reality. **CO5**

TOTAL: 45 PERIODS

TEXT BOOKS

1. Alexis Leon, ERP demystified, second Edition Tata McGraw - Hill, 2008.
2. Simha R.Magal, JeffreyWord, Integrated Business processes with ERP systems, John Wiley & Sons, 2012.
3. Jagan Nathan Vaman, ERP in Practice, Tata McGraw - Hill, 2008

REFERENCE BOOKS

1. Alexis Leon, Enterprise Resource Planning, second edition, Tata McGraw-Hill, 2008.
2. Mahadeo Jaiswal and Ganesh Vanapalli, ERP Macmillan India, 2009
3. Vinod Kumar Grag and N.K.Venkitakrishnan, ERP-Concepts and Practice, Prentice Hall of India, 2006.
4. Summer, ERP, Pearson Education, 2008.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 To understand risk and benefits associated with Enterprise Resource Planning.
CO2 To design and develop ERP solutions and functional modules
CO3 To analyse and implement ERP
CO4 To analyse and evaluate the post implementation of ERP.
CO5 To have knowledge of emerging trends on ERP

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAMME OUTCOMES (POs)								PROGRAMME SPECIFIC OUTCOMES (PSOs)		
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PSO1	PSO2	PSO3

CO5	2	2	2	1	1	-	-	1	2	2	-

MB1037 SOFTWARE PROJECT AND QUALITY MANAGEMENT

L	T	P	C
3	0	0	3

OBJECTIVES

- To create and understanding on methodologies, tools, techniques, metrics, quality and risk issues in software project management.
- To provide the knowledge and necessary skills for taking up quality related task in Software projects.

UNIT I SPM CONCEPTS **9**

Definition – components of SPM – challenges and opportunities – tools and techniques – managing human resource and technical resource – costing and pricing of projects – training and development–project management techniques. **CO1**

UNIT II SOFTWARE MEASUREMENTS **9**

Monitoring & measurement of SW development – cost, size and time metrics – methods and tools for metrics – issues of metrics in multiple projects. **CO2**

UNIT III SOFTWARE QUALITY AND RISK ISSUES **9**

Quality in SW development – quality assurance – quality standards and certifications. The risk issues in SW development and implementation – identification of risks – resolving and avoiding risks – tools and methods for identifying risk management. **CO3**

UNIT IV QUALITY PLANNING **9**

Planning Concepts - Integrating Business and Quality Planning - Prerequisites to Quality Planning **CO4**

-The Planning Process. Define, Build, Implement and Improve Processes: Process Management Concepts - Process Management Processes.

UNIT V QUALITY CONTROL PRACTICES **9**

Testing Concepts – Developing Testing Methodologies – Verification and Validation Methods - Software Change Control – Defect Management. Metrics and Measurement: Measurement Concepts - Measurement in Software - Variation and Process Capability - Risk Management - Implementing a Measurement Program. **CO5**

TOTAL: 45 PERIODS

TEXT BOOKS

1. Roger S. Pressman, Software Engineering A Practioners Approach, McGraw Hill International Edition, New Delhi, 7thEdition, 2010
2. Richard H. Thayer(Edited), Software Engineering Project Management, IEEE, John Wiley & Sons, 2nd edition, 2000

REFERENCE BOOKS

1. Bob Hughes, Mike Cotterell and Rajib Mall, Software Project Management, McGraw Hill Publishing Company, 6th Edition, 2017
2. Alan Gillies, Software Quality – Theory and Management, Thomson Learning, 3rd edition, 2011.
3. Stephen Kan, Metrics and Models in Software Quality Engineering, Pearson Education Asia, 8th Impression 2009.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 Understand and apply the project management concepts & techniques.
CO2 To analyse & evaluate the software development process.
CO3 Understand the risk issues in software development.
CO4 Apply the concepts in preparing the quality plan & documents.
CO5 Analyse and evaluate the quality of software product.

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAMME OUTCOMES (POs)								PROGRAMME SPECIFIC OUTCOMES (PSOs)		
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PSO1	PSO2	PSO3

CO3	2	2	2	1	1	-	-	1	2	2	-
CO4	2	2	2	1	1	-	-	1	2	2	-
CO5	2	2	2	1	1	-	-	1	2	2	-

MB1038 INTERNET OF THINGS **L T P C**
3 0 0 3

OBJECTIVES

- To experiment the technical aspects of Internet of Things.
- To expose the application of Internet of Things.

UNIT I INTRODUCTION **9**

Introduction to Internet of Things - Physical Design of IoT - Logical Design of IoT - IoT Enabling Technologies - IoT Levels and Deployment Templates - Domain Specific to IoTs. **CO1**

UNIT II IoT ARCHITECTURE **9**

ETSI, IETF, OGC architectures - IoT reference model - Domain model - information model - functional model – communication model - IoT reference architecture **CO2**

UNIT III BUILDING IoT **9**

IoT Systems - Logical Design using Python - IoT Physical Devices and Endpoints: What is an IoT Device - Basic building blocks of an IoT device - Exemplary Device: Raspberry Pi - Programming Rash berry Pi with Python - Other IoT Devices **CO3**

UNIT IV IoT DATA PLATFORM **9**

Data Analytics for IoT: Introduction - Apache Hadoop - Using Hadoop Map Reduce for Batch Data Analysis – Apache Oozie – Apache Spark – Tools for IoT- Introduction - Chef: Setting up Chef. **CO4**

UNIT V CASE STUDIES AND REAL-WORLD APPLICATIONS **9**

IoT Physical Servers & Cloud Offerings - Case Studies Illustrating IoT Design: Introduction - Home Automation – Smart Cities – Environment – Agriculture – Productivity Applications. **CO5**

TOTAL: 45 PERIODS

TEXT BOOKS

1. Arshdeep Bahga, Vijay Madisetti, - Internet of Things – A hands - on approach, University Press, 2015
2. Dieter Uckelmann, Mark Harrison, Michahelles, Florian (Eds), - Architecting the Internet of Things‖, Springer, 2011.
3. Honbo Zhou, ―The Internet of Things in the Cloud: A Middleware Perspective‖, CRC Press, 2012.

REFERENCE BOOKS

1. Jan Holler, Vlasios Tsiatsis, Catherine Mulligan, Stamatis, Karnouskos, Stefa Aves and David Boyle, "From Machine-to-Machine to the Internet of Things - Introduction to a New Age of Intelligence", Elsevier, 2014.
2. Olivier Hersent, David Boswarthick, Omar Elloumi, - The Internet of Things –Key applications and Protocols‖, Wiley, 2012
3. Adrian McEwen and Hakim Cassimally, “Designing the Internet of Things”, John Wiley & Sons, 2013.
4. Cuno Pfister, “Getting Started with the Internet of Things: Connecting Sensors and Micro controllers to the Cloud”, Maker Media, 2011.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 To understand the various concepts of IOT used in different organisations and to provide the designs of IOT for various purposes.
CO2 To Create different IOT Models and analyse the business problems and give solution
CO3 To create Logical design using Python and building blocks of an IOT device
CO4 To analyze the tools for IOT and apply various data analytics tools for batch data analysis
CO5 To analyse the real world applications and create automated design to be on par with the industry standards.

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAMME OUTCOMES (POs)								PROGRAMME SPECIFIC OUTCOMES (PSOs)

CO5	2	2	2	1	1	-	-	1	2	2	-

MB1039 ADVANCED DATABASE MANAGEMENT SYSTEM **L T P C**
3 0 0 3

OBJECTIVES

- To understand the various advanced databases used in the organization
- To be aware of recent trends in database management.

UNIT I SPM CONCEPTS **9**

DBMS Models - Multimedia Databases, Parallel Databases, embedded, web, spatial, temporal databases, Virtualization, Active Databases - Embedded databases - Web databases. **CO1**

UNIT II SOFTWARE MEASUREMENTS **9**

Query Processing basics and optimization – Heuristic Optimization – Transactions Models – Concurrency Control – Recovery – Security and Authorization – Storage – Indexing and Hashing – ISAM – B-Trees –Kd Trees –X Trees – Dynamic Hashing. **CO2**

UNIT III DISTRIBUTED DATABASES **9**

Distributed Databases – Queries – Optimization Access Strategies – Distributed Transactions Management – Concurrency Control – Reliability **CO3**

UNIT IV OBJECT ORIENTED DATABASES **9**

Object Oriented Concepts – Data Object Models – Object Oriented Databases – Issues in OODBMS – Object Oriented Relational Databases – Object Definition Languages – Object Query Languages **CO4**

UNIT V EMERGING TRENDS **9**

Data Mining – Data warehousing – Star, Snowflake, Fact Constellation; open source database systems, Scripting Language, JDBC, ODBC **CO5**

TOTAL: 45 PERIODS

TEXT BOOKS

1. Peter Rob, Carlos Coronel, Database System and Design, Implementation and Management, 8th edition, Cengage,
2. Ramez Elmasri and Shamkant B. Navethe, Fundamentals of Database Systems,7th edition, Pearson Education, 2015.
3. Jeffrey A Hofferetal, Modern Database Management,12th Edition, PearsonEducation,2016,
4. Abraham Silberchatz, Henry F. Korth and S.Sudarsan, Database System Concepts, 6th Edition, McGraw-Hill, 2015.

REFERENCE BOOKS

1. Thomas M. Connolly and Carolyn E. Begg, Database Systems – A Practical Approach to Design, Implementation and Management, 6th edition, Pearson Education, 2015.
2. Jefrey D. Ullman and Jenifer Widom, A First Course in Database Systems, 3rd edition, Pearson Education Asia, 2013.
3. Stefano Ceri and Giuseppe Pelagatti, Distributed Databases Principles and Systems, McGraw-Hill International Editions, 2008.
4. Rajesh Narang, Object Oriented Interfaces and Databases, 1st edition, Prentice Hall of India ,2004.
5. Mark L.Gillenson & el, Introduction to database management, 2ndedition, Wiley India Pvt. Ltd,2012

6. Charkrabarti, Advanced Database Management Systems, WileyIndiaPvtLtd,2011

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 To apply different databases for various purposes.

CO2 To apply the steps in database query processing with the objective of accessing the data from the database.

CO3 To analyze the concepts of databases used in different locations with the intricacies of data access and providing data security in various networks.

CO4 To analyze the insights in Object Oriented Database structure with different models to store and retrieve the data from different models in an organisation.

CO5 To evaluate the data mining and data ware housing.

MAPPING OF COs WITH POs AND PSOs

NON – FUNCTIONAL ELECTIVES

MB1211 ENTREPRENEURSHIP DEVELOPMENT

L	T	P	C
3	0	0	3

OBJECTIVES

- To equip and develop the learners' entrepreneurial skills and qualities essential to undertake business.
- To impart the learners' entrepreneurial competencies needed for managing business efficiently and effectively.

UNIT I ENTREPRENEURAL COMPETENCE **9**

Entrepreneurship concept–Entrepreneurship as a Career–Entrepreneurial Personality-Characteristics of Successful Entrepreneurs–Knowledge and Skills of an Entrepreneur. **CO1**

UNIT II ENTREPRENEURAL ENVIRONMENT **9**

Business Environment-Role of Family and Society-Entrepreneurship Development Training and Other Support Organisational Services-Central and State Government Industrial Policies and Regulations. **CO2**

UNIT III BUSINESS PLAN PREPARATION **9**

Sources of Product for Business-Prefeasibility Study-Criteria for Selection of Product-Ownership-Capital Budgeting- Project Profile Preparation-Matching Entrepreneur with the Project-Feasibility Report Preparation and Evaluation Criteria. **CO3**

UNIT IV LAUNCHING OF SMALL BUSINESS **9**

Finance and Human Resource Mobilisation - Operations Planning - Market and Channel **CO4**

Selection-Growth Strategies -Product Launching–Incubation, Venture capital, Start-ups.

UNIT V MANAGEMENT OF SMALL BUSINESS **9**

Monitoring and Evaluation of Business - Business Sickness - Prevention and Rehabilitation of Business Units -Effective Management of small Business-Case Studies. **CO5**

TOTAL: 45 PERIODS

TEXT BOOKS

1. S.S.Khanka, Entrepreneurial Development, S.Chand and Company Limited, New Delhi, 2016.
2. R.D. Hisrich, Entrepreneurship, Tata Mc Graw Hill, NewDelhi, 2018.
3. Rajeev Roy, Entrepreneurship, OxfordUniversityPress, 2nd Edition,2011.
4. Donald F Kuratko, T.V Rao. Entrepreneurship: A South Asian perspective. Cengage Learning, 2012.

REFERENCE BOOKS

1. Dr. Vasant Desai, "Small Scale Industries and Entrepreneurship", HPH, 2006.
2. Arya Kumar. Entrepreneurship, Pearson, 2012.
3. Prasanna Chandra, Projects Planning, Analysis, Selection, Implementation and Reviews, Tata McGraw-Hill, 8th edition, 2017.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1 To understand the concepts of entrepreneurial competence to run the business efficiently.

CO2 To apply the various entrepreneurial policies and regulations based on the entrepreneurial environment.

CO3 To analyse the capable of preparing business plan and undertake feasible projects.

CO4 To create and develop their business ventures successfully.

CO5 To evaluate and monitor the business effectively towards growth and development.

MB1212 BUSINESS ETHICS AND CORPORATE GOVERNANCE **L T P C**
3 0 0 3

OBJECTIVES

- To have grounding on theory through the understanding of real-life situations and cases.

UNIT I INTRODUCTION **9**

Definition & nature Business ethics, Characteristics, Ethical theories; Causes of unethical behavior; Ethical abuses; Work ethics; Code of conduct; Public good. **CO1**

UNIT II ETHICS THEORY AND BEYOND		**9**
Management of Ethics - Ethics analysis [Hosmer model]; Ethical dilemma; Ethics in practice - ethics for managers; Role and function of ethical managers- Comparative ethical behaviour of managers; Code of ethics; Competitiveness, organizational size, profitability and ethics; Cost of ethics in Corporate ethics evaluation. Business and ecological / environmental issues in the Indian context and case studies.		**CO2**
UNIT III LEGAL ASPECTS OF ETHICS		**9**
Political – legal environment; Provisions of the Indian constitution pertaining to Business; Political setup – major characteristics and their implications for business. Social – cultural environment and their impact on business operations, Salient features of Indian culture and values.		**CO3**
UNIT IV ENVIRONMENTAL ETHICS		**9**
Economic Environment; Philosophy of economic grow and its implications for business, Main features of Economic Planning with respect to business; Industrial policy and framework of government contract over Business; Role of chamber of commerce and confederation of Indian Industries.		**CO4**
UNIT V CORPORATE SOCIAL RESPONSIBILITY AND GOVERNANCE		**9**
Definition- Evolution- Need for CSR; Theoretical perspectives; Corporate citizenship; Business practices; Strategies for CSR; Challenges and implementation; Evolution of corporate governance; Governance practices and regulation; Structure and development of boards; Role of capital market and government; Governance ratings; Future of governance- innovative practices; Case studies with lessons learnt.		**CO5**

TOTAL : 45 PERIODS

TEXT BOOKS

AUDIT COURSES

AX1001 ENGLISH FOR RESEARCH PAPER WRITING

L	T	P	C
2	0	0	0

OBJECTIVES

- Teach how to improve writing skills and level of reading ability
- Tell about what to write in each section
- Summarise the skills needed when writing a Title
- Infer the skills needed when writing the Conclusion
- Ensure the quality of paper at very first-time submission

UNIT I INTRODUCTIONTORESEARCHPAPERWRITING		**6**
Planning and Preparation, Word Order, Breaking up long sentences, Structuring Paragraphs and Sentences, Being Concise and Removing Redundancy, Avoiding Ambiguity and Vagueness		**CO1**
UNIT II PRESENTATIONSKILLS		**6**
Clarifying Who Did What, Highlighting Your Findings, Hedging and Criticizing, Paraphrasing and Plagiarism, Sections of a Paper, Abstracts, Introduction		**CO2**
UNIT III TITLE WRITING SKILLS		**6**
Key skills are needed when writing a Title, key skills are needed when writing an Abstract, key skills are needed when writing an Introduction, skills needed when writing a Review of the Literature, Methods, Results, Discussion, Conclusions, The Final Check		**CO3**
UNIT IV RESULT WRITINGSKILLS		**6**
Skills are needed when writing the Methods, skills needed when writing the Results, skills are needed when writing the Discussion, skills are needed when writing the Conclusions		**CO4**
UNIT V VERIFICATIONSKILLS		**6**
Useful phrases, checking Plagiarism, how to ensure paper is as good as it could possibly be the first-time submission		**CO5**

TOTAL : 30 PERIODS

TEXT BOOKS

AX1002 DISASTER MANAGEMENT

L	P	T	C
2	0	0	0

OBJECTIVES

- Summarize basics of disaster
- Explain a critical understanding of key concepts in disaster risk reduction and humanitarian response.
- Illustrate disaster risk reduction and humanitarian response policy and practice from multiple perspectives.
- Describe an understanding of standards of humanitarian response and practical relevance in specific types of disasters and conflict situations.
- Develop the strengths and weaknesses of disaster management approaches

UNIT I INTRODUCTION **6**

Disaster: Definition, Factors and Significance; Difference between Hazard And Disaster; Natural and Manmade Disasters: Difference, Nature, Types and Magnitude **CO1**

UNIT II REPERCUSSIONS OF DISASTERS AND HAZARDS **6**

Economic Damage, Loss of Human and Animal Life, Destruction Of Ecosystem. Natural Disasters: Earthquakes, Volcanisms, Cyclones, Tsunamis, Floods, Droughts And Famines, Landslides And Avalanches, Man-made disaster: Nuclear Reactor Meltdown, Industrial Accidents, Oil Slicks And Spills, Outbreaks Of Disease And Epidemics, War And Conflicts. **CO2**

UNIT III DISASTER PRONE AREAS IN INDIA **6**

Study of Seismic Zones; Areas Prone To Floods and Droughts, Landslides And Avalanches; Areas Prone To Cyclonic and Coastal Hazards with Special Reference To Tsunami; Post-Disaster Diseases and Epidemics **CO3**

UNIT IV DISASTER PREPAREDNESS AND MANAGEMENT **6**

Preparedness: Monitoring Of Phenomena Triggering a Disaster or Hazard; Evaluation of Risk: Application of Remote Sensing, Data from Meteorological And Other Agencies, Media Reports: Governmental and Community Preparedness. **CO4**

UNIT V RISK ASSESSMENT **6**

Disaster Risk: Concept and Elements, Disaster Risk Reduction, Global and National Disaster Risk Situation. Techniques of Risk Assessment, Global Co-Operation in Risk Assessment and Warning, People's Participation in Risk Assessment. Strategies for Survival **CO5**

OMB102	LOGISTICS AND SUPPLY CHAIN MANAGEMENT	L	T	P	C
		3	2	0	4

OBJECTIVES:

- To provide an insight on the fundamentals of supply chain networks, tools and techniques.

UNIT I: INTRODUCTION **9**

Role of Logistics and Supply chain Management: Scope and Importance- Evolution of Supply Chain - Decision Phases in Supply Chain - Supply chain and competitive Strategies – Drivers of Supply Chain Performance and Obstacles. **CO1**

UNIT II: SOURCING AND NETWORK DESIGN **9**

Role of sourcing supply chain - Outsourcing – Make Vs buy -Sourcing strategy - Supplier Selection and Contract Negotiation. Building strategic partnerships and trust within a supply chain - Role of Distribution in Supply Chain – Factors influencing Distribution network design – Design options for Distribution Network Distribution Network in Practice-Role of network Design in Supply Chain – Framework for network Decisions. **CO2**

UNIT III: LOGISTICS IN SUPPLY CHAIN **9**

Introduction to logistics – Role of logistics in Competitive strategy– Value added logistics services – Role of transportation in supply chain – factors affecting transportations decision – Design option for transportation network – Tailored transportation – Routing and scheduling in transportation **CO3**

UNIT IV: TRANSPORTATON AND PACKAGING

Transportation System – Evolution, Infrastructure and Networks. Freight Management– Containerization; Modal Characteristics - Inter-modal Operators and Transport Economies; International Logistics-objectives, importance in global economy, Characteristics of global supply chains; Packaging - Design considerations – Logistics outsourcing.	**CO4**

UNIT V: IT IN SUPPLY CHAIN **9**

The role IT in supply chain- Supply Chain Integration – Agile Supply chain – Green Supply chain – Reverse Supply chain – E-logistics – future of IT in supply chain – E-Business in supply chain – Supply chain analytics - Blockchain	**CO5**

TOTAL PERIODS: 45

TEXT BOOKS:

1. Sunil Chopra, Peter Meindl and Kalra, "Supply Chain Management, Strategy, Planning, and Operation", Pearson Education, 2010.

		3	0	0	3

Objectives

- Summarize the costing concepts and their role in decision making
- Infer the project management concepts and their various aspects in selection
- Interpret costing concepts with project execution
- Develop knowledge of costing techniques in service sector and various budgetary control techniques
- Illustrate with quantitative techniques in cost management

UNIT – I INTRODUCTION TO COSTING CONCEPTS **9**

Objectives of a Costing System; Cost concepts in decision–making; Relevant cost, Differential cost, Incremental cost and Opportunity cost; Creation of a Database for operational control. CO1

UNIT – II INTRODUCTION TO PROJECT MANAGEMENT **9**

Project: meaning, Different types, why to manage, cost overruns centres, various stages of project execution: conception to commissioning. Project execution as conglomeration of technical and nontechnical activities, Detailed Engineering activities, Pre project execution main clearances and documents, Project team: Role of each member, Importance Project site: Data required with significance, Project contracts. CO2

UNIT – III PROJECT EXECUTION AND COSTING CONCEPTS **9**

Project execution Project cost control, Bar charts and Network diagram, Project commissioning: mechanical and process, Cost Behavior and Profit Planning Marginal Costing; Distinction between Marginal Costing and Absorption Costing; Break–even Analysis, Cost–Volume–Profit Analysis, Various decision–making problems, Pricing strategies: Pareto Analysis, Target costing, Life Cycle Costing. CO3

UNIT – IV COSTING OF SERVICE SECTOR AND BUDGETERY CONTROL **9**

Just–in–time approach, Material Requirement Planning, Enterprise Resource Planning, Activity– Based Cost Management, Bench Marking; Balanced Score Card and Value–Chain Analysis, Budgetary Control: Flexible Budgets; Performance budgets; Zero–based budgets. CO4

UNIT – V QUANTITATIVE TECHNIQUES FOR COST MANAGEMENT **9**

Linear Programming, PERT/CPM, Transportation problems, Assignment problems, Learning Curve Theory. CO5

Total Periods: 45

Reference Books:

1. Ashish K. Bhattacharya, ‘Principles & Practices of Cost Accounting’ A. H. Wheeler publisher, 1991.
2. Charles T. Horngren and George Foster, ‘Advanced Management Accounting’, Pearson Prentice Hall, 1988.
3. Charles T. Horngren et. Al. ‘Cost Accounting A Managerial Emphasis’, Prentice Hall of India, New Delhi, 2011.
4. Robert S Kaplan and Anthony A. Alkinson, ‘Management & Cost Accounting’, Pearson Prentice Hall, 2003.
5. N. D. Vohra, ‘Quantitative Techniques in Management’, Tata McGraw Hill Book Co. Ltd, 2007.

Course Outcomes (CO)

CO1 Understand the costing concepts and their role in decision making
CO2 Understand the project management concepts and their various aspects in selection
CO3 Interpret costing concepts with project execution
CO4 Gain knowledge of costing techniques in service sector and various budgetary control techniques
CO5 Become familiar with quantitative techniques in cost management

PROFESSIONAL ELECTIVES
(Offered to Other Departments)

MG1001	PRINCIPLES OF MANAGEMENT	L	T	P	C
		3	0	0	3

Objectives

- To enable the students to study the evolution of Management.
- To study the functions and principles of management.
- To learn the application of the principles in an organization.
- To acquire the skills of effective leadership and communication.
- To gain the knowledge of tools and techniques for an effective managerial skill.

UNIT – I INTRODUCTION TO MANAGEMENT AND ORGANIZATIONS 9

Definition of Management – Science or Art – Manager Vs Entrepreneur – Types of managers – managerial roles and skills – Evolution of Management – Scientific, human relations, system and contingency approaches – Types of Business organization – Sole proprietorship, partnership, company – Public and private sector enterprises – Organization culture and Environment – Current trends and issues in Management. CO1

UNIT – II PLANNING 9

Nature and purpose of planning – Planning process – Types of planning – Objectives – Setting objectives – Policies – Planning premises – Strategic Management – Planning Tools and Techniques – Decision making steps and process. CO2

UNIT – III ORGANISING 9

Nature and purpose – Formal and informal organization – Organization chart – Organization structure – Types – Line and staff authority – Departmentalization – CO3

Delegation of authority – Centralization and decentralization – Job Design – Human Resource Management – HR Planning, Recruitment, selection, Training and Development, Performance Management, Career planning and management.

UNIT – IV DIRECTING **9**

Foundations of individual and group behaviour – Motivation – Motivation theories – Motivational techniques – Job satisfaction – Job enrichment – Leadership – Types and theories of leadership – Communication – Process of communication – Barrier in communication – Effective communication – Communication and IT. CO4

UNIT – V CONTROLLING **9**

System and process of controlling – Budgetary and non–budgetary control techniques – Use of computers and IT in Management control – Productivity problems and management – Control and performance – Direct and preventive control – Reporting. CO5

Total Periods: 45

Text Books:

1. JAF Stoner, Freeman R.E and Daniel R Gilbert "Management", 6th Edition, Pearson Education, 2004.
2. Stephen P. Robbins & Mary Coulter, "Management", Prentice Hall (India), Pvt. Ltd., 15th Edition, 2020.

Reference Books:

1. Harold Koontz & Heinz Weihrich, "Essentials of Management", Tata McGraw Hill, 10th Edition, 2015.
2. Robert Kreitner & Mamata Mohapatra, "Management", Biztantra, 2008.
3. Stephen A. Robbins & David A. Decenzo & Mary Coulter, "Fundamentals of Management", 11th Edition, Pearson Education, 2017.
4. Tripathy PC & Reddy PN, "Principles of Management", Tata Mcgraw Hill, 6th Edition 2017.

Course Outcomes (CO)

CO1 Ability to understand the various terms and definitions related to management and organization.

CO2 Ability to acquire the skill of planning and various strategies of management in an organization.

CO3 Ability to understand the types of organization and also get an insight into HR planning, recruitment, selection and career planning and management.

CO4 Ability to acquire the skills of leadership and understand the importance of communication to run an organization effectively.

CO5 Ability to understand the concept of budget and budgetary control and acquire the skill of controlling technique.

MAPPING OF COs WITH POs AND PSOs

MG1002 OPERATIONS RESEARCH **L T P C**
3 0 0 3

Objectives

- To classify and formulate real-life problem for modelling, solving and applying for decision making.
- To study the formulation and various methods of solutions for linear programming, transportation, assignment , CPM and PERT problems
- To solve problems using dynamic programming method

UNIT – I LINEAR MODELS **9**

Introduction to operations research-Linear programming problems (LPP)-Graphical method-Simplex method-Big M Method-Dual simplex method-Primal Dual problems - Dual theory and Sensitivity analysis CO1

UNIT – II TRANSPORTATION MODELS **9**

Transportation and assignment problems-Applications (Emphasis should be more on problems than theory) CO2

UNIT – III NETWORK MODELS **9**

Shortest path problem: Dijkstra's algorithms, Floyd's algorithm, systematic method – CPM / PERT–Network diagram-Events and activities-Project Planning-Reducing critical events and activities-Critical path calculations-example-Sequencing problems. CO3

UNIT – IV DECISION MODELS AND INVENTORY MODELS **9**

Replacement problems-Capital equipment-Discounting costs-Group replacement. Inventory models-various costs- Deterministic inventory models-Economic lot size-Stochastic inventory models-Single period inventory models with shortage cost. CO4

UNIT – V QUEUING MODELS **9**

Characteristics of Queuing Models – Single and multi server models -Poisson Queues - (M / M / 1) : (FIFO / ∞ /∞), (M / M / 1) : (FIFO / N / ∞), (M / M / C) : (FIFO / ∞ / ∞), (M / M / C) : (FIFO / N / ∞) models. CO5

Total Periods: 45

Text Books:

1. H. A. Taha, operational research-An introduction, Macmillan, 1976
2. F. S. Hiller and G. J. Liebermann, Introduction to operational research (7^{th} edition)
3. B. E. Gillet, Introduction to operational research-A computer oriented algorithmic approach, McGraw Hill, 1989
4. H. M. Wagner, Principles of operational research with applications to managerial decisions, PH, Inc, 1975

Reference Books:

1. Bazara M.J., Jarvis and Sherali H., "Linear Programming and Network Flows", John Wiley,

2009.
2. Budnick F.S., "Principles of Operations Research for Management", Richard D Irwin, 1990.
3. Philip D.T. and Ravindran A., "Operations Research", John Wiley, 1992.
4. Shennoy G.V. and Srivastava U.K., "Operation Research for Management", Wiley Eastern, 1994.
5. Tulsian and Pasdey V., "Quantitative Techniques", Pearson Asia, 2002.
6. J. C. Pant, 'Introduction to Optimisation: Operations Research', Jain Brothers, Delhi, 2008.
7. Pannerselvam, 'Operations Research', Prentice Hall of India 2010.

Course Outcomes (CO)

CO1 To analyze the problems in engineering, management or business environment, focusing on important details

CO2 To formulate real problems in terms of input-output parameters relationships and identify the solution procedure

CO3 To understand the concept of network and project planning

CO4 To understand the inventory management in manufacturing context

CO5 To understand the application of queuing theory in real world

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAMME OUTCOMES (POs)								PROGRAMME SPECIFIC OUTCOMES (PSOs)

		L	T	P	C
MG 1003	**APPLIED OPERATIONS RESEARCH**	**3**	**0**	**0**	**3**

OBJECTIVES:

- To provide the concept and an understanding of basic concepts in Operations Research Techniques for Analysis and Modeling in Computer Applications.
- To understand , develop and solve mathematical model of linear programming problems
- To understand , develop and solve mathematical model of Transport and assignment problems
- To Understand network modeling for planning and scheduling the project activities**.**

UNIT I LINEAR PROGRAMMING MODELS 9

Mathematical Formulation - Graphical Solution of linear programming models – Simplex method – Artificial variable Techniques.

UNIT II TRANSPORTATION AND ASSIGNMENT MODELS 9

Mathematical formulation of transportation problem- Methods for finding initial basic feasible solution – optimum solution - degeneracy –Mathematical formulation of assignment models – Hungarian Algorithm.

UNIT III INVENTORY MODELS 9

Inventory Models – Economic order Quantity Models- Quantity Discount Models- Stochastic Inventory Models- Multi Product Model- Inventory Control Models in Practice

UNIT IV SCHEDULING FOR PROJECT ACTIVITIES 9

Network Construction – Critical Path Method – Project Evaluation and Review Technique – Resource Analysis in Network Scheduling

UNIT V QUEUEING MODELS 9

Characteristics of Queuing Models – Single and multi server models
Poisson Queues - (M / M / 1) : (FIFO / ∞ /∞), (M / M / 1) : (FIFO / N / ∞),
(M / M / C) : (FIFO / ∞ / ∞), (M / M / C) : (FIFO / N / ∞) models.

TOTAL : 45 PERIODS

Text Books:

1. H. A. Taha, operational research-An introduction, Macmillan, 1976
2. F. S. Hiller and G. J. Liebermann, Introduction to operational research (7^{th} edition)
3. B. E. Gillet, Introduction to operational research-A computer oriented algorithmic approach, McGraw Hill, 1989
4. H. M. Wagner, Principles of operational research with applications to managerial decisions, PH, Inc, 1975

Reference Books:

DEPARTMENT OF MECHANICAL ENGINEERING

M.E. MANUFACTURING ENGINEERING

REGULATIONS – 2021
(CHOICE BASED CREDIT SYSTEM)

PROPOSED CURRICULA AND SYLLABI

1. PROGRAMME EDUCATIONAL OBJECTIVES

Engineering graduates will be able to:

PEO1: Profession –Practice manufacturing engineering in a broad range of industries both core engineering and non-engineering fields such as medicine, space, law or business.

PEO2: Continuing Education–Pursue advanced education, research and development, and other creative and innovative efforts in science, engineering, and technology, as well as other professional careers.

PEO3: Technophile– Conduct them in a responsible, professional, and ethical manner and attain professional maturity with deep understanding of the impact of the technological solutions in a societal and global context and a need for sustainable development.

PEO4: Service–Participate as leaders in their fields of expertise and in activities that support service and economic development nationally and throughout the world.

2. PROGRAMME OUTCOMES

Engineering graduates will be able to:

1. **Engineering Knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
2. **Problem analysis:** Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
3. **Design/development of solutions:** Design solution for complex engineering problems and design systems components or process that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
4. **Conduct investigations of complex problems:** Use research- based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
5. **Modern tool usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

6. **The engineer and society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
7. **Environmental and sustainability:** Understand the impact of the professional engineering solutions in societal and environmental contexts and demonstrate the knowledge of, and need for sustainable development.
8. **Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
9. **Individual and team work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
10. **Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
11. **Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one’s own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
12. **Life-Long learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

3. PROGRAMME SPECIFIC OUTCOMES

PSO 1: The students graduating in Manufacturing Engineering will have profound foundation in mathematical, scientific and engineering domains necessary to achieve professional and productive excellence in technical and non-technical problem solving and analyzing engineering problems.

PSO 2: The students graduating in Manufacturing Engineering will have the ability to synthesize the engineering data and apply scientific principles for applications involving manufacturing engineering using high end CAD/CAM/CAE computational packages such as CATIA, ANSYS and MATLAB.

PSO 3: The students graduating in Manufacturing Engineering will have the ability to pursue advanced careers and discharge his/her duties entrusted with high degree of commitment to address professional and ethical responsibilities, including a respect for diversity and provide cost effective engineering solutions.

FOUNDATION COURSES (FC)

MA1154	APPLIED PROBABILITY AND STATISTICS TECHNIQUES	L	T	P	C
		4	0	0	4

OBJECTIVES

- This course aims at providing the required skill to apply the statistical tools in engineering problems.
- To introduce the basic concepts of probability and random variables.
- To introduce the basic concepts of two dimensional random variables.
- It is framed to address the issues and the principles of estimation theory, testing of hypothesis and multivariate analysis.

COURSE OUTCOMES (CO)

CO1 The course gives exposure to random variables and well-founded knowledge of standard distributions which can describe real life phenomena.

CO2 The course paves ideas to handle situations involving more than one random variable and functions of random variables.

CO3 Students will gain fundamentals of estimation theory and regression

CO4 Students will gain the knowledge on testing of hypotheses on data. These concepts are very useful in biological, economical and social experiments and all kinds of generalizations based on information about a smaller sample and larger samples. Apply the appropriate test in the problems related with sampling.

CO5 Perform exploratory analysis of multivariate data, such as multivariate normal density, calculating descriptive statistics, testing for multivariate normality.

UNIT - I PROBABILITY AND RANDOM VARIABLES 12

Probability – Axioms of probability – Conditional probability – Baye’s theorem - Random variables - Probability function – Moments – Moment generating functions and their properties – Binomial, Poisson, Geometric, Uniform, Exponential, Gamma and Normal distributions – Function of a random variable.

UNIT - II TWO - DIMENSIONAL RANDOM VARIABLES 12

Joint distributions – Marginal and conditional distributions – Functions of two dimensional random variables – Regression curve – Correlation.

UNIT - III ESTIMATION THEORY 12

Unbiased estimators – Method of moments – Maximum likelihood estimation - Curve fitting by principle of least squares – Regression lines.

UNIT - IV TESTING OF HYPOTHESIS 12

Sampling distributions – Type I and Type II errors – Small and large samples – Tests based on Normal, t, Chi square and F distributions for testing of mean, variance and proportions – Tests for independence of attributes and goodness of fit.

UNIT - V MULTIVARIATE ANALYSIS 12

Random vectors and matrices – Mean vectors and covariance matrices – Multivariate normal density and its properties – Principal components - Population principal components – Principal components from standardized variables

TOTAL PERIODS: 60

PROFESSIONAL CORE COURSES (PCC)

MF1101	ADVANCED IN MANUFACTURING TECHNOLOGY	L	T	P	C
		3	0	0	3

OBJECTIVES

- To introduce to fundamentals of special machining processes.
- To understand unconventional machining processes.
- To introduce the micro machining process.
- To learn the nano fabrication processes and rapid prototyping

COURSE OUTCOMES (CO)

CO1 Discuss on fundamentals of unconventional machining processes
CO2 To produce useful research output in machining of various materials
CO3 Use this knowledge to develop hybrid machining techniques
CO4 Application of this knowledge to manage shop floor problems
CO5 To design of nano fabrication and rapid prototyping

UNIT – I UNCONVENTIONAL MACHINING 10

Introduction-Bulk processes - surface processes- Plasma Arc Machining- Laser Beam Machining-Electron Beam Machining-Electrical Discharge Machining – Electro chemical Machining-Ultrasonic Machining- Water Jet Machining-Electro Gel Machining-Anisotropic machining-Isotropic machining-Elastic Emission machining – Ion Beam Machining.

UNIT – II PRECISION MACHINING 10

Ultra-Precision turning and grinding: Chemical Mechanical Polishing (CMP) - ELID process – Partial ductile mode grinding-Ultra precision grinding- Binderless wheel – Free form optics. Aspherical surface generation Grinding wheel- Design and selection of grinding wheel-High-speed grinding-High-speed milling- Diamond turning.

UNIT – III ADVANCES IN METAL FORMING 7

Orbital forging, Isothermal forging, Warm forging, Overview of Powder Metal techniques –Hot and Cold isostatic pressing - high speed extrusion, rubber pad forming, Hydroforming, Superplastic forming, Peen forming-micro blanking –Powder rolling – Tooling and process parameters.

UNIT – IV MICRO MACHINING AND NANO FABRICATION 10

Theory of micromachining-Chip formation-size effect in micromachining-microturning, micromilling, microdrilling- Micromachining tool design-Micro EDM-Microwire EDM-Nano fabrication:LIGA, Ion beam etching, Molecular manufacturing techniques –Atomic machining- Nano machining techniques – Top/Bottom up Nano fabrication techniques - Sub micron lithographic technique, conventional film growth technique, Chemical etching, Quantum dot fabrication techniques – MOCVD – Epitaxy techniques.

UNIT – V RAPID PROTOTYPING AND SURFACE MODIFICATION TECHNIQUES 10

Introduction – Classification – Principle advantages limitations and applications- Stereo lithography – Selective laser sintering –FDM, SGC, LOM, 3D Printing-Surface modification Techniques: Sputtering-CVD-PVD-Diamond like carbon coating-Plasma Spraying Technique.-Diffusion coatings-Pulsed layer deposition.

		L	T	P	C
MF1102	**COMPUTER INTEGRATED MANUFACTURING SYSTEMS**	**3**	**0**	**0**	**3**

OBJECTIVES

- To gain knowledge about the basic fundamental of CAD.
- To gain knowledge on how computers are integrated at various levels of planning and manufacturing understand computer aided planning and control and computer monitoring.

COURSE OUTCOMES (CO)

CO1 The students will be able to explain about various components of computer aided design and the fundamentals of parametric curves, surfaces and Solids.

CO2 The students will be able to explain about various components of computer integrated manufacturing and its applications.

CO3 The students will be able to explain about the features of group technology and computer aided process planning.

CO4 The students will be able to explain about the features of shop floor control and flexible manufacturing systems.

CO5 The students will be able to explain about various components of computer aided planning and control and computer monitoring.

UNIT - I COMPUTER AIDED DESIGN 9

Product cycle- Sequential and concurrent engineering- CAD system architecture- Computer graphics – Co-ordinate systems- 2D and 3D transformations - Line drawing -Clipping- viewing transformation, wire frame modeling, surface modeling and solid modeling (concepts only) in relation to popular CAD packages.

UNIT - II COMPONENTS OF CIM 9

CIM as a concept and a technology, CASA/SME model of CIM, CIM II, benefits of CIM, communication matrix in CIM, fundamentals of computer communication in CIM – CIM data transmission methods – serial, parallel, asynchronous, synchronous, modulation, demodulation, simplex and duplex. Types of communication in CIM – point to point (PTP), star and multiplexing. Computer networking in CIM – the seven layer OSI model, LAN model, MAP model, network topologies – star, ring and bus, advantages of networks in CIM.

UNIT - III GROUP TECHNOLOGY AND COMPUTER AIDED PROCESS PLANNING 9

History Of Group Technology – role of G.T in CAD/CAM Integration – part families- classification and coding – DCLASS and MCLASS and OPTIZ coding systems – facility design using G.T – benefits of G.T – cellular manufacturing. Process planning - role of process planning in CAD/CAM Integration – approaches to computer aided process planning – variant approach and generative approaches – CAPP and CMPP systems.

UNIT - IV SHOP FLOOR CONTROL AND INTRODUCTION TO FMS 9

Shop floor control – phases – factory data collection system – automatic identification methods – Bar code technology – automated data collection system.
FMS – components of FMS – types – FMS workstation – material handling and storage system –FMS layout- computer control systems – applications and benefits.

UNIT - V COMPUTER AIDED PLANNING AND CONTROL AND COMPUTER MONITORING 9

Production planning and control – cost planning and control – inventory management – material requirements planning (MRP) – shop floor control. Lean and Agile Manufacturing. Types of production monitoring systems – structure model of manufacturing – process control and strategies – direct digital control.

MF1103	ADVANCES IN MATERIALS TECHNOLOGY	L	T	P	C
		4	0	0	4

OBJECTIVES

- To understand the elastic and plastic behaviour of materials.
- To impart knowledge on fracture analysis.
- To familiarize on modern metallic materials.

- To review on polymeric and ceramics materials and their applications.
- To enable student to select material for specific applications.

COURSE OUTCOMES (CO)

CO1 Get knowledge of mechanism of failure of materials and methods.
CO2 Fully appreciate modification of material property to suit the specific requirements.
CO3 Express and appreciate the existing materials and development of upcoming new materials.
CO4 Have the knowledge to select the various non-metallic materials to suit required applications
CO5 Identify and select suitable material for relevant application.

UNIT - I ELASTIC AND PLASTIC BEHAVIOR 10

Elasticity in metals and polymers Anelastic and visco-elastic behaviour – Mechanism of plastic deformation shear strength of perfect and real crystals – Strengthening mechanisms, work hardening, solid solutioning, grain boundary strengthening, poly phase mixture, precipitation, particle, fibre, dispersion and texture strengthening. Effect of temperature, strain and strain rate on plastic behaviour – Super plasticity – Deformation of polymeric, ceramic and non-crystalline materials.

UNIT - II FRACTURE BEHAVIOUR 10

Griffith‘s theory, stress intensity factor, J-Integral and fracture toughness – Toughening mechanisms – Ductile, brittle transition in steel – High temperature fracture, creep – Larson Miller parameter – Deformation and fracture mechanism maps – Fatigue, low and high cycle fatigue test, crack initiation and propagation mechanisms and Paris law. Effect of surface and metallurgical parameters on fatigue – Fracture in ceramics and polymers – Failure analysis, sources of failure, procedure of failure analysis.

UNIT - III MODERN METALLIC MATERIALS 8

Dual phase steels, High strength low alloy (HSLA) steel, Transformation induced plasticity (TRIP) Steel, Maraging steel, Nitrogen steel, Super alloys –Intermetallics, Ni and Ti aluminides – smart materials, shape memory alloys – Metallic glass and nano crystalline materials.

UNIT - IV NON METALLIC MATERIALS 7

Polymeric materials – Formation of polymer structure – Production techniques of fibres, foams, adhesives and coating – structure, properties and applications of Commodity and engineering polymers – Advanced structural ceramics, WC, TIC, TaC, Al2O3, SiC, Si3N4 CBN and diamond – properties, applications as abrasives and cutting tool- Properties and applications of CNT – Graphene based Material

UNIT - V SELECTION OF MATERIALS 10

Selection for mechanical properties, strength, toughness, fatigue and creep – Selection for Atmospheric, water, Soil and chemical, corrosion Selection for adhesive and abrasive wear resistance – Relationship between materials selection and processing – Case studies in materials selection with relevance to aero, auto, marine, machinery, chemical and nuclear applications.

TOTAL PERIODS: 45

MF1111	CAD/CAM LABORATORY	L	T	P	C
		0	0	4	2

OBJECTIVES:

 To teach the students about the drafting of 3D components and analyzing the same using various CAD packages and programming of CNC machines

 To train them to use the various sensors

CAM LABORATORY

1. Exercise on CNC Lathe: Plain Turning, Step turning, Taper turning, Threading, Grooving canned cycle
2. Exercise on CNC Milling Machine: Profile Milling, Mirroring, Scaling & canned cycle. Study of Sensors, Transducers & PLC: Hall-effect sensor, Pressure sensors, Strain gauge, PLC, LVDT, Load cell, Angular potentiometer, Torque, Temperature & Optical Transducers.

CAD LABORATORY

2D modeling and 3D modeling of components such as

1. Bearing
2. Couplings
3. Gears
4. Sheet metal components
5. Jigs, Fixtures and Die assemblies.

TOTAL: 60 PERIODS

OUTCOMES:

At the end of this course the students are expected to

CO1 Draw complex geometries of machine components in sketcher mode.

CO2 Ability to Develop 2D and 3D Part Models using Modeling Software.

CO3 Create complex engineering assemblies using appropriate assembly constraints.

CO4 Ability to Understand the CNC Control in Modern Manufacturing System.

CO5 Ability to Prepare CNC Part Programming and Perform Manufacturing.

LIST OF EQUIPMENTS

S.NO	EQUIPMENT	QUANTITY
1.	Computer Server	1
2.	Computer nodes or systems (High end CPU with atleast 1 GB main memory) networked to the server	30
3.	A3 size plotter	1
4.	Laser Printer	1
5.	CNC Lathe	1
6.	CNC milling machine	1
	SOFTWARE	
7.	Any High end integrated modeling and manufacturing CAD / CAM software	15 licenses
8.	CAM Software for machining centre and turning centre (CNC Programming and tool path simulation for FANUC / Sinumeric and Heidenhain controller)	15 licenses
9.	Licensed operating system	adequate
10.	Support for CAPP	adequate

MF1201 OPTIMIZATION TECHNIQUES

L	T	P	C
3	1	0	4

OBJECTIVES

- To introduce the various optimization techniques and their advancements.
- To make use of the above techniques while modeling and solving the engineering problems of different fields

COURSE OUTCOMES (CO)

CO1 The student has the basic knowledge about historical development of optimization problems, formulation of the problem, classification and application to various engineering domain.

CO2 Ability to approach and solve the linear equations of operational research problems which relates to the real engineering business problem.

CO3 Ability to approach and solve the Non-linear equations of operational research problems which relates to the real engineering business problem.

CO4 Ability to use the various optimization techniques for solving the various experimental studies to obtain the optimum objective function value.

CO5 The student has the knowledge about various simulation techniques and knows to relate these techniques to various experimental studies to obtain the optimum objective function value.

UNIT - I INTRODUCTION 5

Optimization – Historical Development – Engineering applications of optimization – Statement of an Optimization problem – classification of optimization problems

UNIT - II CLASSIC OPTIMIZATION TECHNIQUES 10

Linear programming - Graphical method – simplex method – dual simplex method – revised simplex method – duality in LP – Parametric Linear programming – Goal Programming.

UNIT - III NON-LINEAR PROGRAMMING 9

Introduction – Lagrangeon Method – Kuhn-Tucker conditions – Quadratic programming – Separable programming – Stochastic programming – Geometric programming

UNIT - IV INTEGER PROGRAMMING AND DYNAMIC PROGRAMMING AND NETWORK TECHNIQUES 12

Integer programming - Cutting plane algorithm, Branch and bound technique, Zero-one implicit enumeration – Dynamic Programming – Formulation, Various applications using Dynamic Programming. Network Techniques – Shortest Path Model – Minimum Spanning Tree Problem – Maximal flow problem

UNIT - V ADVANCES IN SIMULATION 9

Genetic algorithms – simulated annealing – Neural Network and Fuzzy systems

TOTAL PERIODS: 60

TEXT BOOKS:

1. Singiresu S. Rao , "Engineering Optimization: Theory and Practice", Fourth Edition ,John Wiley & Sons, Inc., 2009
2. R. Panneerselvam, "Operations Research", Prentice Hall of India Private Limited, New Delhi 1 – 2005

REFERENCE BOOKS:

MF1202	ADVANCES IN METROLOGY AND INSPECTION	L	T	P	C
		3	0	0	3

OBJECTIVES

- To teach the students basic concepts in various methods of engineering measurement techniques and applications, understand the importance of measurement and inspection in manufacturing industries.
- To make the students capable of learning to operate and use advanced metrological devices with ease in industrial environments.

COURSE OUTCOMES (CO)

C111.1 Ability to understand the concepts of metrology and errors in measurement
C111.2 Ability to understand the applications of measurement of surface roughness
C111.3 Ability to understand the basic study of interferometry and its importance
C111.4 Ability to understand measuring machines and laser metrology .
C111.5 Ability to apply image processing for metrology

UNIT - I CONCEPTS OF METROLOGY 8

Terminologies – Standards of measurement – Errors in measurement – Interchangeability and Selective assembly – Accuracy and Precision – Calibration of instruments – Basics of Dimensional metrology and Form metrology

UNIT - II MEASUREMENT OF SURFACE ROUGHNESS 9

Definitions – Types of Surface Texture: Surface Roughness Measurement Methods- Comparison, Contact and Non Contact type roughness measuring devices, 3D Surface Roughness Measurement, Nano Level Surface Roughness Measurement – Instruments

UNIT - III INTERFEROMETRY 8

Introduction, Principles of light interference – Interferometers – Measurement and Calibration – Laser Interferometry.

UNIT - IV MEASURING MACHINES AND LASER METROLOGY 10

Tool Makers Microscope – Microhite – Coordinate Measuring Machines – Applications – Laser Micrometer, Laser Scanning gauge, Computer Aided Inspection techniques - In-process inspection, Machine Vision system-Applications.

UNIT - V IMAGE PROCESSING FOR METROLOGY 10

Overview, Computer imaging systems, Image Analysis, Preprocessing, Human vision system, Image model, Image enhancement, gray scale models, histogram models, Image Transforms - Examples.

TOTAL PERIODS: 45

TEXT BOOKS:

1.Jain ,R.K.,“Engineering Metrology”, Khanna Publishers, 2008.

7. Whitehouse,D.J., "Surface and their measurement", Hermes Penton Ltd, 2004.

MF1203	TOOLING FOR MANUFACTURING	L	T	P	C
		4	0	0	4

OBJECTIVES

- To study the various design considerations for tooling.
- Develop knowledge in tooling and work holding devices.

COURSE OUTCOMES (CO)

CO1	Explain the fundamental concepts of tooling, tool engineering procedures, control and maintenance.
CO2	Discuss the mechanism in metal removal, tooling of automats, tooling in Non-traditional material removal processes
CO3	Explain the concept of tooling in metal forming processes.
CO4	Explain the concept of tooling in metal casting and metal joining processes
CO5	Explain the concept of inspection and gauging

UNIT - I INTRODUCTION 12

Manufacturing Processes-objectives of manufacturing processes-classification of manufacturing process-Objectives of Tool design-tool design process-Nature and scope of Tool engineering-principles of economy for tooling-problems of economy in tooling-planning and tooling for economy-Manufacturing principles applicable to process and tool planning-tool control-tool maintenance-tool materials and its selection

UNIT - II TOOLING FOR METAL REMOVAL PROCESSES 12

Traditional machining processes -work and tool holding devices-tool nomenclatures-Mechanism of machining-force temperature and tool life of single point tool-multipoint tools -tool design-tool wear-special processes-capstan and turret lathe-tooling layout of automats-tooling in NC and CNC machines-tooling for machining centres-CAD in tool design-Jigs and fixtures-design-Non-traditional material removal processes-mechanical, electrical thermal and chemical energy processes-principles-operation-equipment-tooling parameters and limitations.

UNIT - III TOOLING FOR METAL FORMING PROCESSES 12

Classification of Forming Processes-Types of presses-design of -blanking and piercing dies-simple, compound, combination and progressive dies-Drawing Dies-Bending dies-forging dies-plastic moulding dies

UNIT - IV TOOLING FOR METAL CASTING AND METAL JOINING PROCESSES 12

Tools and Equipment for moulding-patterns –pattern allowances – pattern construction-die casting tools- mechanization of foundries. Tooling for Physical joining processes Design of welding fixtures – Arc welding, Gas welding, Resistance welding, laser welding fixtures-Tooling for Soldering and Brazing Tooling for Mechanical joining processes

UNIT - V TOOLING FOR INSPECTION AND GAUGING 12

Survey of linear and angular measurements-standards of measurement-design and manufacturing of gauges- measurement of form-Inspection bench centre-co-ordinate measuring machine-tooling in CMM.

TOTAL PERIODS: 60

REFERENCE BOOKS:

1. Cyril Donaldson Tool Design, Tata McGraw Hill, 1976
2. Hoffman E.G Fundamentals of tool design SME 1984.
3. Kalpak Jian S., Manufacturing Engineering and Technology Addison Wesley 1995.
4. L E Doyle Tool Engineering Prentice Hall 1950
5. Wellar, J Non-Traditional Machining Processes, SME, 1984

MF1211	MODELLING AND SIMULATION LABORATORY	L	T	P	C
		0	0	4	2

OBJECTIVES

- To study the fundamentals of finite element analysis from classical method to nodal approximation method in various fields of manufacturing applications.
- To make the students to design an element by Finite element analysis.
- To develop the knowledge related to modelling and simulation in field of manufacturing.

LIST OF EXERCISES

1. One Dimensional FEA Problem like beam, Truss etc.
2. Two Dimensional FEA Problems like plane stress, plane strain, axisymmetric and vibration.
3. Three Dimensional FEA Problems like shell and contact.
4. FEA Application in metal forming like superplastic forming, deep drawing etc
5. FEA Application in Metal cutting

6. FEA Application in Casting process
7. 3D Modelling and Assemble of Engine
8. Modelling of Crack Shaft
9. Modelling of Connecting Rod
10. Modelling of Cotter Joint
11. Modelling of Plummer Block and Coupling

(Any 10 for Conduct of end semester examination)

COURSE OUTCOMES (CO)

Students will be able to

CO1 : Apply the principles of Finite Element Analysis to solve problems in the field of production engineering.

CO2 : design and analyse various problems in field of manufacturing

CO3 : identify the problems and simulate using Finite element analysis

CO4 : Relate to Finite element analysis in various manufacturing applications.

CO5 : Develop skills in field of design and simulation using FEA.

MF1212	AUTOMATION & METAL FORMING LABORATORY	L	T	P	C
		0	0	4	2

OBJECTIVES

- To train the students to have an hands on having the basic concepts of metal forming processes and to determine some metal forming parameters for a given shape

COURSE OUTCOMES (CO)

CO1 Ability to Design pneumatic circuits with trainer kits and execute

CO2 Ability to understand the metal forming techniques and evaluate the related parameters.

CO3 Ability to design and execute pnuemo-hydraulic circuits using hydro-pneumatic Software.(case studies)

CO4 Ability to understand the strain hardening of material and evaluate.

CO5 Ability to understand the formability of sheet metal and forming methods.

EXPERIMENTS

1. Determination of strain hardening exponent
2. Determination of strain rate sensitivity index
3. Construction of formability limit diagram
4. Determination of efficiency in water hammer forming
5. Determination of interface friction factor
6. Determination of extrusion load
7. Study on two high rolling process

AUTOMATION LAB

1. Simulation of single and double acting cylinder circuits
2. Simulation of Hydraulic circuits
3. Simulation of electro pneumatic circuits
4. Simulation of electro hydraulic circuits
5. Simulation of PLC circuits
6. Software simulation of fluid power circuits using Automation studio

TOTAL PERIODS: 60

LIST OF EQUIPMENT FOR A BATCH OF 30 STUDENTS

1. Universal testing machine.
2. Hydraulic press.
3. Pipe surge and Water hammer apparatus.
4. Extrusion machine.
5. Two high mill roll apparatus.
6. Force sensor and motion sensor.

EMPLOYABILITY ENHANCEMENT COURSES (EEC)

		L	T	P	C
MF1213	**MINI PROJECT WITH SEMINAR**	0	0	2	1

OBJECTIVES

- To prepare students to identify a problem for study.
- To do literature review of a problem.
- To enable to comprehend information in form of presentation both written and oral, to develop technical communication skills.
- To carry out modelling/ conduct experiments beyond regular laboratory exercises in developing solution to the identified problem.
- To cultivate spirit of team work in working as a group.

COURSE OUTCOMES (CO)

CO1 To critically observe the world around and identify a problem that can be solved.
CO2 To develop skills of read and comprehensively analysing the facts.
CO3 To exhibit skill of presentation both orally and in written form.
CO4 To get hands on experience to doing experimental/ theoretical analysis in synthesis of solution to the problem
CO5 Able to appreciate the importance of team work

TOTAL PERIODS: 30

		L	T	P	C
MF1311	**PROJECT WORK PHASE-I**	0	0	12	6

OBJECTIVES

- To enable students to select and define a problem/need for analysis in the field of manufacturing engineering.
- To review and analyse literature/ data of selected problem for study and propose objective and scope of dissertation work.
- To develop hypothesis and identify methodology based on ethical, scientific and systematic application of knowledge in the field of problem
- To design, model and experiment/develop optimal solution for problem being investigated
- To analysis and interpretation of data, and synthesis of the information to provide valid conclusions and submit dissertation.

COURSE OUTCOMES (CO)

CO1 Identify a topic in advanced areas of Manufacturing Engineering. Identify methods and materials to carry out experiments
CO2 Review literature to identify gaps and define objectives & scope of the work

CO3	Generate and implement innovative ideas for social benefit
CO4	Analyze and discuss the results to draw valid conclusions
CO5	Reorganize the procedures with a concern for society, environment and ethics

EVALUATION

- The progress of the project is evaluated based on a minimum of three reviews.
- The review committee may be constituted by the Head of the Department.
- A project report is required at the end of the semester. The project work is evaluated jointly by external and internal examiners constituted by the Head of the Department based on oral presentation and the project report
- Project work evaluation is based on the Regulations of the Credit system for Post graduate programmes.

OUTCOMES

- The students' would apply the knowledge gained from theoretical and practical courses in solving problems, so as to give confidence to the students to be creative, well planned, organized, coordinated project outcome of the aimed work.

TOTAL PERIODS: 24

MF1411	PROJECT WORK PHASE-II	L	T	P	C
		0	0	24	12

OBJECTIVES

- Based on practical experience in project work phase I, the students will be able to propose and define a problem/need for analysis in the field of manufacturing engineering.
- To comprehensively review and analyse literature/ data to develop hypothesis and identify methodology based on ethical, scientific and systematic application of knowledge in the field of problem
- To design experiments, develop model and conduct experiments/ simulations for development of sustainable and economical solution for problem being investigated
- To analyse and interpret data, and synthesize of the factual information's to arrive at valid conclusions
- To enable students to communicate technical information in form of oral presentation and technical report in form of dissertation.

COURSE OUTCOMES (CO)

CO1	Identify a topic in advanced areas of Manufacturing Engineering.Identify methods and materials to carry out experiments
CO2	Review literature to identify gaps and define objectives & scope of the work
CO3	Reorganize the procedures with a concern for society, environment and ethics
CO4	Generate and implement innovative ideas for social benefit
CO5	Analyze and discuss the results to draw valid conclusions

EVALUATION

- The progress of the project is evaluated based on a minimum of three reviews.
- The review committee may be constituted by the Head of the Department.
- A project report is required at the end of the semester. The project work is evaluated jointly by external and internal examiners constituted by the Head of the Department based on oral presentation and the project report
- Project work evaluation is based on the Regulations of the Credit system for Post graduate

programmes.

OUTCOMES

- The students' would apply the knowledge gained from theoretical and practical courses in solving problems, so as to give confidence to the students to be creative, well planned, organized, coordinated project outcome of the aimed work.

TOTAL PERIODS: 24

PROFESSIONAL ELECTIVE COURSES (PEC)

SEMESTER I

PROFESSIONAL ELECTIVE COURSES – I

		L	T	P	C
MF1001	**DESIGN OF MANUFACTURING TOOLS, JIGS AND FIXTURES**	3	0	0	3

OBJECTIVES

- To introduce to fundamentals of Jigs and Fixtures and tool materials.
- To understand geometrical features and design of cutting tools.
- To introduce the design steps of tools for metal forming operation.
- To learn the design process of clamping, locator and fixtures
- To familiarize the design process of Jigs and tool guides

COURSE OUTCOMES (CO)

CO1 Discuss on fundamentals Jigs and Fixtures and tool materials
CO2 Brief on geometrical features and design of cutting tools.
CO3 Understand the design steps of tools for metal forming operation.
CO4 Carryout design process for clamping, locator and fixtures.
CO5 To design of Jigs and tool guides

UNIT - I INTRODUCTION 9

Introduction, The design procedure, Drafting and design techniques in tooling drawing. Tooling Materials and Heat Treatment: Introduction, Properties of materials, Ferrous tooling materials, Non-ferrous tooling materials, Non-metallic tooling materials, Heat treatment and tool design. Introduction to Jigs and Fixtures: Definition, Differences between Jigs and Fixtures, principles of Jigs and Fixtures.

UNIT - II DESIGN OF CUTTING AND METROLOGY TOOLS 9

Introduction to metal cutting process and tools, Revision of metal cutting tools-Single point cutting tools, Milling cutters, Drills and Drilling, Reamers, Taps. Selection of carbide tools, determining the insert thickness for carbide tools. Introduction to Design of Tools for Inspection and Gauging, Geometrical Dimensioning and Tolerance, Work piece quality criteria, Principles of gauging, Types of gages and their applications, Amplification and magnification of error, Gage Tolerances, Indicating gages, Automatic gages, Gauging positional tolerance parts, problems.

UNIT - III DESIGN OF PRESS TOOLS 9

Design of Press-working Tools: Power presses, Cutting operations, Types of die-cutting operations - and their design, Evolution of blanking and progressive blanking. Design of Sheet Metal Bending, Forming and Drawing Dies: Introduction, Bending dies, Forming dies, and Drawing dies. Evolution of a draw die, Progressive dies. Strip development for progressive dies, Examples of progressive dies. Extrusion dies, Drop forging dies and auxiliary tools

UNIT - IV DESIGN OF CLAMPS LOCATING METHODS AND FIXTURES 9

Locating and Clamping Methods: Introduction, Basic principle of location, Locating methods and devices, Basic principle of clamping. Principles of Location: Six degrees of freedom, Duty of the location system, Choice of location system, redundant location, 3-2-1 Location, Types and methods of location. Principles of Clamping: Requirements of the clamping system, Position of the clamps, Design of clamps, Types of clamps: Cam clamp, Toggle clamp. General Principles Of Milling, Lathe, Boring, Broaching And Grinding Fixtures – Assembly, Inspection And Welding Fixtures – Modular Fixturing Systems- Quick Change Fixtures.

UNIT - V DESIGN OF JIGS AND TOOL GUIDES 9

Types Of Jigs –plate Jig, Box Jig, Leaf Jig, Channel Jig, Post, Turnover, Channel, Latch, Pot, Angular Post Jigs – Indexing Jigs – Design of Drill Jigs: Introduction, Types of drill jigs, General considerations in the design of drill jigs, Drill bushings, Methods of construction. Guiding Elements: Introduction, Guiding the tools, Types of drill bushes.

TOTAL PERIODS: 45

TEXT BOOKS:

1. Cyril Donaldson, Lecain, G.H. and Goold, V.C. Tool Design , 4th editions, TMH Publishing Co Ltd., New Delhi, 2012.
2. Donaldson, Lecain And Goold “Tool Design”, 3rdEdition, Tata McGraw Hill, 2000.
3. Hoffman “Jigs And Fixture Design”, Thomson Delmar Learning, Singapore, 2004.
4. Joshi, P.H. “Jigs And Fixtures”, 2ndEdition, Tata McGraw Hill Publishing Co., Ltd., New Delhi, 2004.

REFERENCE BOOKS:

1. Kempster, “Jigs And Fixture Design”, 3rd Edition, Hoddes And Stoughton, 1974.
2. Nagpal, G.R., “Tool Engineering and Design”, 6th edition, Khanna Publishers, , 2009.
3. Venkataraman. K., “Design Of Jigs Fixtures and Press Tools”, Tata McGraw Hill, New Delhi, 2005

MF1002	NON-DESTRUCTIVE TESTING AND EVALUATION	L	T	P	C
		3	0	0	3

OBJECTIVES

- To stress the importance of NDT in engineering.

COURSE OUTCOMES (CO)

CO1	To introduce the basic principles, techniques, equipment, applications and limitations of NDT methods such as Visual inspection and liquid penetrant testing.
CO2	To learn the eddy current testing and acoustic emission NDT methods.
CO3	To know the magnetic particle and thermography testing methods.
CO4	To identify the defects by ultrasonic testing methods.
CO5	To make aware the developments and future trends in Radiography.

UNIT - I NON-DESTRUCTIVE TESTING: AN INTRODUCTION, VISUAL INSPECTION & LIQUID PENETRANT TESTING 6

Introduction to various non-destructive methods, Comparison of Destructive and Non-destructive Tests, Visual Inspection, Optical aids used for visual inspection, Applications. Physical principles, procedure for penetrant testing, Penetrant testing materials, Penetrant testing methods-water washable, Post – Emulsification methods, Applications.

UNIT - II EDDY CURRENT TESTING & ACOUSTIC EMISSION 10

Principles, Instrumentation for ECT, Absolute, differential probes, Techniques – High sensitivity techniques, Multi frequency, Phased array ECT, Applications.
Principle of AET, Instrumentation, Applications - testing of metal pressure vessels, Fatigue crack detection in aerospace structures.

UNIT - III MAGNETIC PARTICLE TESTING & THERMOGRAPHY 10

Principle of MPT, procedure used for testing a component, Equipment used for MPT, Magnetizing techniques, Applications.
Principle of Thermography, Infrared Radiometry, Active thermography measurements, Applications – Imaging entrapped water under an epoxy coating, Detection of carbon fiber contaminants.

UNIT - IV ULTRASONIC TESTING 10

Principle, Ultrasonic transducers, Ultrasonic Flaw detection Equipment, Modes of display A- scan, B-Scan, C- Scan, Applications, Inspection Methods - Normal Incident Pulse-Echo Inspection, Normal Incident Through-transmission Testing, Angle Beam Pulse-Echo testing, TOFD Technique, Applications of Normal Beam Inspection in detecting fatigue cracks, Inclusions, Slag, Porosity and Intergranular cracks - Codes, standards, specification and procedures and case studies in ultrasonics test.

UNIT - V RADIOGRAPHY 9

Principle of Radiography, x-ray and gamma ray sources- safety procedures and standards, Effect of radiation on Film, Radiographic imaging, Inspection Techniques – Single wall single image, Double wall Penetration, Multiwall Penetration technique, Real Time Radiography - Codes, standards, specification and procedures and case studies in Radiography test.
Case studies on defects in cast, rolled, extruded, welded and heat treated components - Comparison and selection of various NDT techniques.

TOTAL PERIODS: 45

TEXT BOOKS:

1. Baldev Raj, Jeyakumar,T., Thavasimuthu,M., “Practical Non Destructive Testing” Narosa publishing house, New Delhi, 2002.
2. Krautkramer. J., “Ultra Sonic Testing of Materials”, 1st Edition, Springer – Verlag Publication, New York, 1996.

REFERENCE BOOKS:

1. Peter J. Shull “Non Destructive Evaluation: Theory, Techniques and Application” Marcel Dekker, Inc., New York, 2002.
2. www.ndt.net.

MF1003	METAL CUTTING THEORY AND PRACTICE	L	T	P	C
		3	0	0	3

OBJECTIVES

To make the students familiar with the various principles of metal cutting, cutting tool materials and its wear mechanisms during the machining operation.
To find the tool life in various machining operations by different machining condition.

COURSE OUTCOMES (CO)

CO1	To study the basic mechanism of chip formation, types of chips and other theories proposed by different scientists.
CO2	Have the detailed knowledge of single and multipoint cutting tool nomenclature.
CO3	Have the complete idea of heat distribution in cutting tool, influence of cutting fluid on tool.
CO4	To study the tool life calculation, machinability index.
CO5	To have the concept of tool wear mechanism, types of chatter and its mechanism.

UNIT – I INTRODUCTION 12

Need for rational approach to the problem of cutting materials-observation made in the cutting of metals-basic mechanism of chip formation-thin and thick zone modes-types of chips-chip breaker-orthogonal Vs oblique cutting-force velocity relationship for shear plane angle in orthogonal cutting-energy consideration in machining-review of Merchant, Lee and Shafter theories-critical comparison.

UNIT - II SYSTEM OF TOOL NOMENCLATURE 12

Nomenclature of single point cutting tool-System of tool nomenclature and conversion of rake angles-nomenclature of multi point tools like drills, milling-conventional Vs climb milling, mean cross sectional area of chip in milling-specific cutting pressure.

UNIT - III THERMAL ASPECTS OF MACHINING 12

Heat distribution in machining-effects of various parameters on temperature-methods of temperature measurement in machining-hot machining-cutting fluids

UNIT - IV TOOL MATERIALS, TOOL LIFE AND TOOL WEAR 12

Essential requirements of tool materials-development in tool materials-ISO specification for inserts and tool holders-tool life-conventional and accelerated tool life tests-concept of mach inability index-economics of machining.

UNIT - V WEAR MECHANISMS AND CHATTER IN MACHINING 12

Processing and Machining – Measuring Techniques – Reasons for failure of cutting tools and forms of wear-mechanisms of wear-chatter in machining-factors effecting chatter in machining-types of chatter-mechanism of chatter

TOTAL PERIODS: 60

TEXT BOOKS:

1. Bhattacharya.A., Metal Cutting Theory and practice, Central Book Publishers, India, 1984.

REFERENCE BOOKS:

1. Boothroid D.G. & Knight W.A., Fundamentals of machining and machine tools, Marcel Dekker, Newyork, 1989.
2. Shaw.M.C.Metal cutting principles, oxford Clare don press, 1984

MF1004	OPERATIONS MANAGEMENT	L	T	P	C
		3	0	0	0

OBJECTIVES

- To familiarize with various forecasting models.
- To impress upon the importance of sequencing problem in industries.
- To design and develop inventory control models for a given industry.
- To familiarize with project management techniques such as CPM and PERT.
- To train on plant engineering techniques such as plant location, plant layout, materials

handling and work study

COURSE OUTCOMES (CO)

CO1 Select an appropriate forecasting method for a given industry.
CO2 Obtain optimal solutions for sequencing problem in industry.
CO3 Design a suitable inventory system for any particular industry.
CO4 Use the project management techniques to minimize the project time.
CO5 Design plant layout and materials handling systems and can make use of the concepts of work study for work design.

UNIT - I FORECASTING 9

Forecasts-Types-Purpose- opinion and judgmental method-Time series methods – moving average - weighted moving average – method of least squares – Exponential smoothing method- Regression and correlation methods – simple and multiple regression – Linear and Nonlinear regression

UNIT - II SCHEDULING AND SEQUENCING 9

Scheduling – Single Criterion rules –Sequencing –n job 2 machine problem – Johnson's algorithm – 3 machine problem – M machine problem – Graphical method for 2 jobs M machine problems – Heuristic methods.

UNIT - III INVENTORY 9

Inventory – purpose of inventory – Basic EOQ Model –Quantity discount model – Reorder level – Fixed order quantity inventory system – Periodic review system – ABC analysis – Materials requirement planning – EOQ models under constraints – Purchasing management – Stores management – Just In Time inventory system – Vendor evaluation - Inventory pricing –Supply chain Management – Aggregate planning.

UNIT - IV PROJECT MANAGEMENT 9

Project network analysis – Activities – Events- critical path method – Method based on time estimates – Programme Evaluation Review Technique –Optimistic, pessimistic time, most likely time - Probability of completion of projects – Time crashing of Projects –Optimum duration and cost

UNIT - V PLANT ENGINEERING AND WORK STUD 9

Plant location – Factors affecting plant location – Break even analysis- Factors weighted rating method – Plant layout- Types- Selection – Plant layout Techniques – Travel chart method – Line balancing method– Work study – method study – Principles of Motion economy – steps in methods study - Charts – Micromotion study-memo motion study – multiple activity charts- therbligs – work measurement – stop watch time study – Production studies – PMTS – Work sampling – Materials handling – Principles – Selection

TOTAL PERIODS: 45

TEXT BOOKS:

1. Chary S.N Production and Operations Management, Tata McGraw Hill, 3rd Edition 2012.
2. Kanishka Bedi, Production and Operations Management, Oxford University Press,3rdEdition 2016.
3. Norma Gaither and Gregory Frazier, Operations Management, Cengage Learning, 9thEdition,2016.

REFERENCE BOOKS:

1. Pannerselvam R, Production and Operations Management, Prentice Hall of India, 2ndEdition, 2008.
2. Richard B. Chase, Ravi Shankar, F. Robert Jacobs, Nicholas J. Aquilano, Operations and Supply Management, McGraw Hill,14th edition, 2017.
3. William J Stevenson, Operations Management, McGraw Hill, 11th edition, 2012

SEMESTER II

PROFESSIONAL ELECTIVE COURSES – II

MF1005	**ADVANCES IN CASTING AND WELDING**	**L**	**T**	**P**	**C**
		3	0	0	3

OBJECTIVES

- To study the metallurgical concepts and applications of casting and welding process.
- To acquire knowledge in CAD of casting and automation of welding process.

COURSE OUTCOMES (CO)

CO1 Ability to understand the concepts of casting design and casting principles

CO2 Ability to understand the concepts of casting metallurgy, casting effects and Castability

CO3 Ability to understand the basic study of foundry and the different technologies involved in casting

CO4 Ability to understand welding technique and technological aspects over welding design.

CO5 Ability to understand the unique characteristics of welding

UNIT - I CASTING DESIGN 8

Heat transfer between metal and mould –– Design considerations in casting – Designing for directional solidification and minimum stresses - principles and design of gating and risering

UNIT - II CASTING METALLURGY 8

Solidification of pure metal and alloys – shrinkage in cast metals – progressive and directional solidification –– Degasification of the melt-casting defects – Castability of steel , Cast Iron, Al alloys, Babbit alloy and Cu alloy.

UNIT - III RECENT TRENDS IN CASTING AND FOUNDRY LAYOUT 8

Shell moulding, precision investment casting, CO2 moulding, centrifugal casting, Die casting, Continuous casting, Counter gravity low pressure casting, Squeeze casting and semisolid processes. Layout of mechanized foundry – sand reclamation – material handling in foundry pollution control in foundry –– Computer aided design of casting.

UNIT - IV WELDING METALLURGY AND DESIGN 10

Heat affected Zone and its characteristics – Weldability of steels, cast iron, stainless steel, aluminum, Mg , Cu , Zirconium and titanium alloys – Carbon Equivalent of Plain and alloy steels Hydrogen embrittlement – Lamellar tearing – Residual stress – Distortion and its control . Heat transfer and solidification - Analysis of stresses in welded structures – pre and post welding heat treatments – weld joint design – welding defects – Testing of weldment

UNIT - V RECENT TRENDS IN WELDING 11

Friction welding, friction stir welding – explosive welding – diffusion bonding – high frequency induction welding – ultrasonic welding – electron beam welding – Laser beam welding –Plasma welding – Electroslag welding- narrow gap, hybrid twin wire active TIG – Tandem MIG- modern brazing and soldering techniques – induction, dip resistance, diffusion processes – Hot gas, wave and vapour phase soldering. Overview of automation of welding in aerospace, nuclear, surface transport vehicles and under water

TOTAL PERIODS: 45

MF1006	FINITE ELEMENT METHODS FOR MANUFACTURING ENGINEERING	L	T	P	C
		3	0	0	3

OBJECTIVES

- To study the fundamentals of one dimensional and two dimensional problems, higher order elements using FEA in manufacturing.
- Finite element methods and its application in manufacturing.

COURSE OUTCOMES (CO)

CO1 To understand the fundamentals of FEA and functional approximation method used to find the solution of engineering problems

CO2 To study the fundamentals of one dimensional problems using FEA in manufacturing.

CO3 To study the shape function of 1D, 2D finite elements and concepts of higher order elements which are useful for FEA in manufacturing.

CO4 To be familiar in utilization of analysis software and to get solution for manufacturing process

CO5 To understand and interpret the solutions obtained by software with respect to different types of manufacturing areas.

UNIT - I INTRODUCTION 6

Fundamentals – Initial, boundary and eigen value problems – weighted residual, Galerkin and Rayleigh Ritz methods - Integration by parts – Basics of variational formulation – Polynomial and Nodal approximation.

UNIT - II ONE DIMENSIONAL ANALYSIS 10

Steps in FEM – Discretization. Interpolation, derivation of elements characteristic matrix, shape function, assembly and imposition of boundary conditions-solution and post processing – One dimensional analysis in solid mechanics and heat transfer.

UNIT - III SHAPE FUNCTIONS AND HIGHER ORDER FORMULATIONS 10

Shape functions for one and two dimensional elements- Three noded triangular and four nodded quadrilateral element Global and natural co-ordinates—Non linear analysis – Isoparametric elements

– Jacobian matrices and transformations – Basics of two dimensional, plane stress, plane strain and axisymmetric analysis.

UNIT - IV COMPUTER IMPLEMENTATION 9

Pre Processing, mesh generation, elements connecting, boundary conditions, input of material and processing characteristics – Solution and post processing – Overview of application packages – Development of code for one dimensional analysis and validation

UNIT - V ANALYSIS OF PRODUCTION PROCESSES 10

FE analysis of metal casting – special considerations, latent heat incorporation, gap element – Time stepping procedures – Crank – Nicholson algorithm – Prediction of grain structure – Basic concepts of plasticity and fracture – Solid and flow formulation – small incremental deformation formulation – Fracture criteria – FE analysis of metal cutting, chip separation criteria, incorporation of strain rate dependency – FE analysis of welding.

TOTAL PERIODS: 45

MF1007	MANUFACTURING OF AUTOMOTIVE COMPONENTS	L	T	P	C
		3	0	0	3

OBJECTIVES

- To introduce the students about the requirement of materials for automobile components
- To familiarize students on typical materials used in manufacturing of automobile components
- To impart knowledge on material and manufacturing techniques of piston, valves and battery parts
- To impart knowledge on material and manufacturing techniques of engine blocks, cables and locks in automobile.
- To impart knowledge on material and manufacturing techniques of general transmission parts of automobile

COURSE OUTCOMES (CO)

CO1 Have the knowledge about material requirements, its recycling and life cycle aspects.
CO2 Gain an insight over the latest materials adopted in automobile manufacture.
CO3 Have the knowledge of methods adopted in manufacture of piston, valves and battery parts.
CO4 Know the methods of manufacturing engine block, cables and locks in automobile.
CO5 Have the idea of various manufacturing methods of automobile structure, transmission parts.

UNIT - I MATERIAL NEEDS IN AUTOMOBILE 9

Requirements of materials in automotive tests – recycling and life cycle consideration. Current materials in use and their future. Advanced in manufacturing and joining techniques. Technical problems and solutions for use of magnesium alloys in automotive industry. Most commonly used composite moulding processes. Renewable materials, barriers and incentives in use of bio-composites - composite materials and their automotive applications.

UNIT - II MATERIALS AND TECHNOLOGIES FOR AUTOMOBILE 8

Introduction – steel sheets – high strength steel sheet – "Nano-Hilen" – "BHT" – high strength galvannealed steel sheets – development of inorganic type high lubrication galvannealed steel sheets – organic solid lubricant technology – uses of aluminium in automobiles – uses of plastics in automobiles.

UNIT – III MANUFACTURING OF PISTON, VALVES AND BATTERY PARTS 10

Introduction – manufacturing of auto piston – manufacturing of pins for automobiles – manufacturing of piston rings – manufacturing of lead storage battery. Manufacturing of valve and valve set – manufacturing of automobile silencer.

UNIT - IV MANUFACTURING OF ENGINE BLOCK, CABLES AND LOCKS 8

Manufacturing of automobile chain – manufacturing of cylindrical block. Manufacturing of cylinder liner – manufacturing of automobile control cable – manufacturing of engine moulding pad – manufacturing of auto locks.

UNIT - V MANUFACTURING OF TRANSMISSION PARTS 10

Manufacturing of automobile chassis and other technologies. Manufacturing of automobile body – Manufacturing of disc brake – Manufacturing of brake drum – Manufacturing of gear blank – Manufacturing of gear – casting method – forming method – powder metallurgy – Manufacturing of gear box housing – Manufacturing process of leaf spring – Manufacturing process of automotive tyres – Manufacturing of auto tubes and flaps. Heat treatment of automobile components – forging technologies of automobile parts – Manufacturing of Torque Converters- painting technology of automobiles - Role of Nanotechnology in Automotive Industries.

TOTAL PERIODS: 45

TEXT BOOKS:

1. Gupta K.M, Automobile Engineering Vol.I and II, Umesh Publishers, 2000.
2. Kirpal Singh, Automobile Engineering, Vol.I and II, Standard Publishers, New Delhi, 1997.
3. Ramalingam K K, Automobile Engineering: Theory and Practice, 2nd Edition, Scitech Publications (India), 2001.

REFERENCE BOOKS:

1. Joao Paulo Carmo, New Advances in Vehicular Technology and Automotive Engineering, JanezaTrdine publisher, 2012.
2. Ahmed Elmarkkbi, Advanced Composite Materials for Automotive Applications, Wiley publications, 2014.
3. Brian Cartor, Patric Grant, Automotive Engineering Light Weight, Functional and Novel materials, Taylor and Francis, CRC Press, 2008.

MF1008 COMPUTER AIDED PRODUCT DESIGN

	L	T	P	C
	3	0	0	3

OBJECTIVES:

- To review the basics of Computer aided design
- To familiarize students on use of modelling tools of CAD software.
- To apply the various design concepts and design tools and techniques while designing a product.
- To understand the product modelling method and its relationship with computer graphics.
- To create awareness on product life cycle management.

COURSE OUTCOMES(CO):

Students will be able to

1. Understand the design phases and various design hardware and software.
2. Relating basics of various geometrical feature creation.
3. Systematically work on each stages in the development of a new product and its management.
4. Predicting on various factors for various design applications.
5. Mixing the techniques in the design of new product.

UNIT I INTRODUCTION 8

Introduction to Engineering Design – Various phases of systematic design – sequential engineering and concurrent engineering – CAD/CAM hardware and Softwares – software packages for design and drafting.

UNIT II COMPUTER GRAPHICS FUNDAMENTALS AND GEOMETRIC 8

Computer graphics – applications – principals of interactive computer graphics – 2D 3D transformations – projections – curves - Geometric Modelling – types – Wire frame surface and solid modelling – Boundary Representation, constructive solid geometry – Graphics standards – assembly modelling – use of software packages

UNIT III PRODUCT DESIGN CONCEPTS AND PRODUCT DATA MANAGEMENT 10

Understanding customer needs – Product function modelling – Function trees and function structures – Product tear down methods – Bench marking – Product portfolio – concept generation and selection – Product Data Management – concepts – Collaborative product design– manufacturing planning factor – Customization factor – Product life cycle management.

UNIT IV PRODUCT DESIGN TOOLS AND TECHNIQUES 10

Product modelling – types of product models; product development process tools – TRIZ – Altshuller‘s inventive principles – Modelling of product metrics – Design for reliability – design for manufacturability – machining, casting, and metal forming – design for assembly and disassembly - Design for environment

UNIT V PRODUCT DESIGN TECHNIQUES 9

FMEA – QFD – Poka Yoke - DOE – Taguchi method of DOE – Quality loss functions – Design for product life cycle.

PROFESSIONAL ELECTIVE COURSES – III

		L	T	P	C
MF1009	**ROBOTICS AND INDUSTRIAL AUTOMATION**	**L**	**T**	**P**	**C**
		3	0	0	3

OBJECTIVES:

To make the student to be familiar with
- Classification and construction of robots
- Serial and parallel Manipulators
- Programming method of robots
- Understand various control systems

COURSE OUTCOMES (CO):

Students will be able to
CO1 Understand the basics of robotics.
CO2 Relating basics of robot arm kinematics and dynamics.
CO3 Understand the basics of robot programming methods.
CO4 Understanding the basics of sensing elements.
CO5 Understand the control system and components.

Unit I INTRODUCTION TO ROBOTICS 9

Introduction to Robotics: Definitions, historical development, classification, work volume, Control systems and dynamic performance. – Grippers

Unit II ROBOT ARM KINEMATICS AND DYNAMICS 9

Robot Arm Kinematics and Dynamics: Frame transformation, D-H parameters, Forward kinematics, Inverse kinematics, - Rotation matrix - Homogeneous coordinates and transformation matrix

Unit III ROBOT PROGRAMMING METHODS 9

Robot Programming Methods: Manual teaching, Lead-through teaching, VAL programming. – Introduction to trajectory Planning - Introduction to Automation.

Unit IV SENSING 9

Sensing: Range sensing, proximity sensing, touch sensors, force and torque sensing, Robot Vision: System: Sensing & Digitizing, Image processing & Analysis, Application.

Unit VCONTROL SYSTEM AND COMPONENTS 9

Control system and components: Control system concepts and models, controllers, Control system analysis, Robot Activation and Feedback componens – position control - velocity control – Actuation.

TOTALPERIODS: 45

MF1010	THEORY OF METAL FORMING	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To study the basic concepts of metal forming techniques and to develop force calculation in metal forming process.
- To study the thermo mechanical regimes and its requirements of metal forming

COURSE OUTCOMES (CO):

Students will be able to
CO1 Understand the basics of theory of plasticity.
CO2 Relate the theory and practicing methods of Bulk Forming Processes
CO3 Understand the basics of sheet metal forming.
CO4 Understanding the basics of powder metallurgy and special forming processes.
CO5 Understand the surface treatment and metal forming applications.

UNIT I THEORY OF PLASTICITY 9

Theory of plastic deformation – Yield criteria – Tresca and Von-mises – Distortion energy – Stress-strain relation – Mohr’s circle representation of a state of stress – cylindrical and spherical co-ordinate system – upper and lower bound solution methods – Overview of FEM applications in Metal Forming analysis.

UNIT II THEORY AND PRACTICE OF BULK FORMING PROCESSES 8

Analysis of plastic deformation in Forging, Rolling, Extrusion, rod/wire drawing and tube drawing – Effect of friction – calculation of forces, work done – Process parameters, equipment used – Defects – applications – Recent advances in Forging, Rolling, Extrusion and Drawing processes – Design consideration in forming.

UNIT III SHEET METAL FORMING 8

Formability studies – Conventional processes – H E R F techniques – Superplastic forming techniques – Hydro forming – Stretch forming – Water hammer forming – Principles and process parameters – Advantage, Limitations and application

UNIT IV POWDER METALLURGY AND SPECIAL FORMING PROCESSES 9

Overview of P/M technique – Advantages – applications – Powder preform forging – powder rolling – Tooling, process parameters and applications. - Orbital forging – Isothermal forging – Hot and cold isostatic pressing – High speed extrusion – Rubber pad forming – Fine blanking – LASER beam forming

UNIT V SURFACE TREATMENT AND METAL FORMING APPLICATIONS 9

Experiment techniques of evaluation of friction in metal forming selection – influence of temperature and gliding velocity – Friction heat generation – Friction between metallic layers – Lubrication carrier layer – Surface treatment for drawing, sheet metal forming, Extrusion, hot and cold forging. Processing of thin Al tapes – Cladding of Al alloys – Duplex and triplex steel rolling – Thermo mechanical regimes of Ti and Al alloys during deformation – Formability of welded blank sheet – Laser structured steel sheet - Formability of laminated sheet.

MF1011	LEAN AND AGILE MANUFACTURING	L	T	P	C
		3	0	0	0

OBJECTIVES

- To provide basic understanding on the concepts of Lean and Agile Manufacturing.

COURSE OUTCOMES (CO)

CO1	The student will be able to practice the principles of lean manufacturing
CO2	The student will be able to practice the principles of lean manufacturing like customer focus, reduction of MUDA.
CO3	The student will be able to practice the principles of lean manufacturing and lean tools,
CO4	The students will obtain knowledge to try the relevant technique for manufacturing.
CO5	The student will be able to practice the principles of new organisation culture.

UNIT - I INTRODUCTION 9

Origins and objectives of lean manufacturing-Lean process,3M concept, key principles and implications of lean manufacturing-traditional vs lean manufacturing characteristics–roadmap for lean implementation and lean benefits. Study of Ford and Toyota production system, JIT manufacturing, Lean building blocks.

UNIT - II LEAN TOOLS I 9

Value creation and waste elimination – seven types of waste- pull production - different models of pull production -The Kanban system - continuous flow-The continuous improvement process / Kaizen, Worker involvement. Design of Kanban quantities, levelled production, tools for continuous improvement.

UNIT - III LEAN TOOLS II 9

The value stream – benefits, mapping process. The current state map–mapping icons, mapping steps. VSM exercises, Takt time calculations Standardized work – standard work sequence, timing and working progress. Quality at source - Automation/Jidoka, Visual management system, Mistake proofing/Poka-Yoke. 5S technique – Elements and waste elimination thro 5S, advantages and benefits, 5S audit. Visual control aids for improvement, Flexible work force

UNIT - IV AGILE PRODUCTION SYSTEM AND PRACTICES 9

Agile production system – the task aligned organization – agile manufacturing production system – production planning and control, quality assurance, purchasing, maintenance, overview of production support, business operation, engineering, human resource, finance and accounting. Agile practices – Agile practice for product development – manufacturing agile practice – understanding the value of investing in people, removing inappropriate fear from the shop floor – not scarifying agility for perfectionism

UNIT - V MANAGEMENT IN THE AGILE ORGANIZATION 9

Old management styles, role of manager in an agile organization – vision champion, team leader, coach, business analyzer, supporting the new culture – performance appraisal systems, selection systems, reward and recognition systems, organizational measurement, organizational learning processes

TOTAL PERIODS: 45

MF1012	SURFACE ENGINEERED MATERIALS TECHNOLOGY	L	T	P	C
		3	0	0	3

OBJECTIVES

- To teach students the basic concepts of surface engineering and its development
- To provide students the knowledge of coatings and the formation of technological surface layers
- To enable the students, understand the basic principles of Laser Technology and Plasma Coating Technology

COURSE OUTCOMES (CO)

CO1 Able to understand the basic concepts in surface coating, wear and corrosion

CO2 Explain the concepts of coating in metallic and non- metallic materials. Measurement of roughness

CO3 Explain the concepts on formation of Surface Layers in coating techniques

CO4 Ability to understand the laser techniques and tribological properties

CO5 Explain the concept of coating by using Plasma coating technology

UNIT - I DEVELOPMENT OF SURFACE ENGINEERING 12

Development of surface Engineering – Solid surface – Geometrical and mechanical concepts- Wear-Abrasive wear- Erosion wear – Erosion – Corrosion- Surface roughness-Metallographic structure – Need for surface coatings- Enhancement of wear and prevention of corrosion.

UNIT - II CONCEPTS OF COATING 12

Coatings- Concepts of coatings – Metallic and non- metallic coatings- Galvanizing – Spray and cladded coatings- Principles parameters of coatings – Thickness measurement – Physico and chemical parameters of coatings – Surface characterization – GIXRD - microstructure - SIMS – Roughness measurement – Profilometer.

UNIT - III FORMATION OF TECHNOLOGICAL SURFACE LAYERS 12

Formation of technological surface layers – Techniques – Physical vapor deposition –Chemical vapor deposition - electron beam technology – Principles underlying the electron beam impingement – Acceleration of electrons – Electron guns – Interaction of electron beam with treated material – Applications of electron beam coating in surface engineering

UNIT - IV LASER TECHNOLOGY 12

Laser technology – CO2 and Nd: YAG lasers - processing parameters – Continuos and pulsed operations – Properties of laser – Temperature distribution in laser treated material – Depth of penetration of photons – Hard coatings – Applications of laser in surface engineering - Ion implantation techniques – Physical principal of ion beam implantation – Pulsed and continuos ion beam implantation – Tribological properties of ion implanted materials – Strength –Hardness and adhesion of implanted materials- Advantages and disadvantages

UNIT - V PLASMA COATING TECHNOLOGY 12

Plasma coating technology – Processing parameters- Plasma nitriding – Oxy nitriding – Nitro carburizing - boriding- Characterization of Cr –N coatings – Plasma nitrided steels and titanium alloys – Corrosion and wear behavior – Super hard biocompatible coating for medical implants – Carbon like diamond coating- -Nano surface coatings- Comparative study of various coating process in industry

TOTAL PERIODS: 60

TEXT BOOKS:

1. Plasma surface engineering, (2004), Proceedings of DAE-BRNS workshop

REFERENCE BOOKS:

SEMESTER III

PROFESSIONAL ELECTIVE COURSES – IV

		L	T	P	C
MF1013	**INDUSTRIAL DESIGN AND ERGONOMICS**	3	0	0	3

OBJECTIVES

- To introduce to industrial design based on ergonomics.
- To consider ergonomics concept in manufacturing
- To apply ergonomics in design of controls and display.
- To apply environmental factors in ergonomics design
- To understand aesthetics applicable to manufacturing and product

COURSE OUTCOMES (CO)

CO1 Appreciate ergonomics need in the industrial design.
CO2 Apply ergonomics in creation of manufacturing system
CO3 Discuss on design of controls and display.
CO4 Consider environmental factors in ergonomics design.
CO5 Report on importance of aesthetics to manufacturing system and product

UNIT - I INTRODUCTION 9

An approach to industrial design, Elements of design structure for industrial design in engineering application in modern manufacturing systems- Ergonomics and Industrial Design: Introduction to Ergonomics, Communication system, general approach to the man-machine relationship, Human component of work system, Machine component of work system, Local environment-light, Heat, Sound.

UNIT - II ERGONOMICS AND PRODUCTION 9

Introduction, Anthropometric data and its applications in ergonomic, working postures, Body Movements, Work Station Design, Chair Design. Visual Effects of Line and Form: The mechanics of seeing, Psychology of seeing, Figure on ground effect, Gestalt's perceptions - Simplicity, Regularity, Proximity, Wholeness. Optical illusions, Influences of line and form.

UNIT - III DESIGN PRINCIPLES FOR DISPLAY AND CONTROLS 9

Displays: Design Principles of visual Displays, Classification, Quantitative displays, Qualitative displays, check readings, Situational awareness, Representative displays, Design of pointers, Signal and warning lights, colour coding of displays, Design of multiple displays Controls: Design considerations, Controls with little efforts – Push button, Switches, rotating Knobs. Controls with muscular effort – Hand wheel, Crank, Heavy lever, Pedals. Design of controls in automobiles, Machine Tools

UNIT - IV ENVIRONMENTAL FACTORS 9

Colour: Colourand light, Colour and objects, Colour and the eye – after Image, Colour blindness, Colour constancy, Colour terms – Colour circles, Munsel colour notation,reactions to colour and colour combination – colour on engineering equipments, Colour coding, Psychological effects, colour and machine form, colour and style

UNIT - V AESTHETIC CONCEPTS 9

Concept of unity, Concept of order with variety, Concept of purpose, Style and environment, Aesthetic expressions - Symmetry, Balance, Contrast, Continuity, Proportion. Style - The components of style, House style, Style in capital good. Introduction to Ergonomic and plant layout softwares

TOTAL PERIODS: 45

TEXT BOOKS:

1. Benjamin W.Niebel, Motion and Time Study, Richard, D. Irwin Inc., 7thEdition, 2002
2. Bridger, R.C., Introduction to Ergonomics, 2ndEdition, 2003, McGraw Hill Publications.

REFERENCE BOOKS:

1. Brain Shakel,"Applied Ergonomics Hand Book", Butterworth Scientific London 1988
2. Mayall W.H. "Industrial design for Engineers", London Hiffee books Ltd., 1988.

MF1014	MEMS AND NANOTECHNOLOGY	L	T	P	C
		3	0	0	3

OBJECTIVES

- To inspire the students to expect to the trends in manufacturing of micro components and measuring systems to nano scale.

COURSE OUTCOMES (CO)

CO1 Understand MEMS and Microsystems working principle and applications
CO2 Understand MEMS manufacturing and micro system packaging
CO3 Ability to select and use micro devices in various applications.
CO4 Understand the science and synthesis of Nano materials
CO5 Ability to characterize nano materials

UNIT - I OVER VIEW OF MEMS AND MICROSYSTEMS 6

Definition – historical development – properties, design and fabrication micro-system, microelectronics, working principle, applications and advantages of micro system. Substrates and wafers, silicon as substrate material, mechanical properties of Si, Silicon Compounds - silicon piezo resistors, Galium arsenide, quartz, polymers for MEMS, conductive polymers.

UNIT - II FABRICATION PROCESSES AND MICRO SYSTEM PACKAGING 10

Photolithography, photo resist applications, light sources, ion implantation, diffusion–Oxidation - thermal oxidation, silicon dioxide, chemical vapour deposition, sputtering - deposition by epitaxy – etching – bulk and surface machining – LIGA process – LASER, Electron beam ,Ion beam processes – Mask less lithography. Micro system packaging –packaging design– levels of micro system packaging -die level, device level and system level – interfaces in packaging – packaging technologies- Assembly of Microsystems

UNIT - III MICRO DEVICES 8

Sensors – classification – signal conversion ideal characterization of sensors micro actuators, mechanical sensors – measurands - displacement sensors, pressure sensor, flow sensors, Accelerometer , chemical and bio sensor - sensitivity, reliability and response of micro-sensor - micro actuators – applications.

UNIT - IV SCIENCE AND SYNTHESIS OF NANO MATERIALS 10

Classification of nano structures – Effects of nano scale dimensions on various properties – structural, thermal, chemical, magnetic, optical and electronic properties fluid dynamics –Effect of nano scale dimensions on mechanical properties - vibration, bending, fracture Nanoparticles, Sol-Gel Synthesis, Inert Gas Condensation, High energy Ball Milling, Plasma Synthesis, Electro deposition and other techniques. Synthesis of Carbon nanotubes – Solid carbon source based production techniques – Gaseous carbon source based production techniques – Diamond like carbon coating. Top down and bottom up processes.

UNIT - V CHARACTERIZATION OF NANO MATERIALS 11

Nano-processing systems – Nano measuring systems – characterization – analytical imaging techniques – microscopy techniques, electron microscopy scanning electron microscopy, confocal LASER scanning microscopy - transmission electron microscopy, transmission electron microscopy, scanning tunnelling microscopy, atomic force microscopy, diffraction techniques – spectroscopy techniques – Raman spectroscopy, 3D surface analysis – Mechanical, Magnetic and thermal properties – Nano positioning systems.

TOTAL PERIODS: 45

MF1015	MATERIAL TESTING AND CHARACTERIZATION	L	T	P	C
		3	0	0	3

OBJECTIVES

- To provide understanding of techniques of microstructure and crystal structure evaluation of materials.
- To introduce tools for analysis of microstructure and surface topography of materials.
- To understand the techniques of chemical and thermal analysis of materials.
- To gain knowledge in various static mechanical testing methods.
- To gain knowledge in various dynamic mechanical testing methods.

COURSE OUTCOMES (CO)

CO1 To characterize the engineering materials.
CO2 Know the fundamental principle of Top-notch characterization tools.
CO3 Choose appropriate mechanical static testing methods.
CO4 Choose appropriate mechanical dynamic testing methods.
CO5 Identify the crystal structure and analysis can be made.

UNIT - I MICRO AND CRYSTAL STRUCTURE ANALYSIS 9

Principles of Optical Microscopy – Specimen Preparation Techniques – Polishing and Etching – Polarization Techniques – Quantitative Metallography – Estimation of grain size – ASTM grain size numbers – Microstructure of Engineering Materials - Elements of Crystallography – X- ray Diffraction – Bragg‘s law – Techniques of X-ray Crystallography – Debye – Scherer camera – Geiger Diffractometer – analysis of Diffraction patterns – Inter planer spacing – Identification of Crystal Structure, Elements of Electron Diffraction – Estimation of residual stress and grain size.

UNIT - II ELECTRON MICROSCOPY 9

Interaction of Electron Beam with Materials – Transmission Electron Microscopy – Specimen Preparation – Imaging Techniques – BF and DF – SAD – Electron Probe Microanalysis – Scanning Electron Microscopy – Construction and working of SEM and FESEM Back scattered and Secondary Electron Imaging Techniques – Applications- Atomic Force Microscopy- Construction and working of AFM - Contact and Non-Contact modes Applications.

UNIT - III CHEMICAL AND THERMAL ANALYSIS 9

Basic Principles, Practice and Applications of X-Ray Spectrometry, Energy dispersive and Wave Dispersive X-Ray Spectrometry, Auger Spectroscopy, Secondary Ion Mass Spectroscopy, Fourier Transform Infra-Red Spectroscopy (FTIR)- Proton Induced X-Ray Emission Spectroscopy, Differential Thermal Analysis, Differential Scanning Calorimetry (DSC) And Thermo Gravity metric Analysis (TGA) - Dynamic Mechanical Analysis (DMA).

UNIT - IV MECHANICAL TESTING – STATIC TESTS 9

Hardness – Brinell, Vickers, Rockwell and Micro Hardness Test, Rebound hardness and Indendation – Tensile Test – Stress – Strain plot – Proof Stress – Torsion Test - Ductility Measurement – Impact Test – Charpy and Izod – DWTT - Fracture Toughness Test, Codes and standards for testing metallic and composite materials.

UNIT - V MECHANICAL TESTING – DYNAMIC TESTS 9

Fatigue – Low and High Cycle Fatigues – Rotating Beam and Plate Bending HCF tests – S-N curve – LCF tests – Crack Growth studies – Creep Tests – LM parameters – AE Tests-modal analysis - Applications of Dynamic Tests – Fatigue life estimation.

TOTAL PERIODS: 45

MF1016	MECHATRONICS IN MANUFACTURING	L	T	P	C
		3	0	0	3

OBJECTIVES

•To provide overview of various electrical and electronic control techniques used in modern manufacturing systems.

• To know the basic working principle of sensors and transducers of use for manufacturing systems

• To know the basic working principle of drives and actuators of use for manufacturing systems

• To know the features, modules and interfaces of microcontrollers and microprocessors

• To gain the knowledge of integration of mechatronic systems in automation of modern manufacturing systems

COURSE OUTCOMES (CO)

CO1 Imply the knowledge to study the mechatronics in modern manufacturing systems.

CO2 Identify and select the sensors and transducers based on the application.

CO3 Identify the principles and functions of drives and actuators.

CO4 Get knowledge of microprocessor and microcontrollers and its functions.

CO5 Apply the knowledge about integration of mechatronic systems in manufacturing.

UNIT - I INTRODUCTION TO MECHATRONICS IN MODERN MANUFACTURING 12

Introduction to Process Parameters in Conventional Manufacturing – Assembly – Inspection – Transportation - Introduction to Systems - Subsystems of Mechatronics - Identification of Mechatronics' Entities in Modern Manufacturing - Mechanical, Fluid, Thermal, Electrical, Electronics, Communication, Control systems and Software Integration for Manufacturing - Classification of Manufacturing based on Mechatronics – CNC based Subtractive Manufacturing – Rapid Prototyping based Additive Manufacturing- Automated Assembly Stations – Modern Quality Inspection and Transportation Systems.

UNIT - II SENSORS AND TRANSDUCERS 8

Introduction – Performance Terminology – Resistive Transducers – Inductive Transducers - Capacitance Transducers – Optical Sensors – Contact and Non-Contact Temperature Sensors – Eddy Current Sensor – Hall Effect Sensor – Piezo Electric Sensor - Ultrasonic Sensors – Proximity Sensors – Chemical and Gas Sensors - Signal Conditioning - Condition Monitoring

UNIT - III DRIVES AND ACTUATORS 8

Role of Linear and Rotary Actuators - Electrical Actuators- Servo Concepts and Stepper Motors - Fluid Power – Piezo Actuators – Solenoids - Function of Drives - Mechanical Switching Devices – Solid State drives for various actuators.

UNIT - IV MICROPROCESSORS AND MICROCONTROLLERS 8

Requirement for Processor – Comparison of 8085 Microprocessor and 8051 Microcontrollers– 8051 Microcontrollers Architecture -Assembly Language Programming- Instruction Set, Addressing Modes, Basic Programming – Interfacing - Sensors, Keyboard, LED, LCD, A/D and D/A Converters, Actuators – Embedded Systems.

UNIT - V RADIOGRAPHY(RT) 9

Design Process - Stages of Design Process – Skeletal Structure and Block Diagram of CNC Based - Vertical Machining Centre, turning centre, Water Jet Machine, Electrical Discharge Machine, Serial Manipulator, hydraulic press, 3 D printers– Coordinate Measuring Machine –Automated conveyors - Extended Transportation System – Total Integration of Manufacturing Systems for Production Automation

TOTAL PERIODS: 45

PROFESSIONAL ELECTIVE COURSES – V

MF1017	MICRO MANUFACTURING	L	T	P	C
		3	0	0	3

OBJECTIVE:

 The objective of the course is to acquaint the students with the principles, basic machine tools, and developments in the micro manufacturing process and research trends in the area of micro manufacturing process.

COURSE OUTCOMES (CO)

CO1 Understanding the various aspects of mechanical, ultrasonic, abrasive, chemical and electrical micromachining.
CO2 Understanding the various advanced methods in micromachining and grinding.
CO3 Understanding the basic principles of nano polishing and its techniques.
CO4 Understanding the basics of micro forming and welding.
CO5 Understanding the various applications of micro machining.

UNIT I MICRO MACHINING I 10

Mechanical Micro machining – Ultra Sonic Micro Machining – Abrasive Jet Micro Machining – Water Jet Micro Machining – Abrasive Water Jet Micro Machining – Micro turning – Chemical and Electro Chemical Micro Machining – Electric discharge micro machining.

UNIT II MICRO MACHINING II 10

Beam Energy based micro machining – Electron Beam Micro Machining – Laser Beam Micro Machining – Electric Discharge Micro Machining – Ion Beam Micro Machining –Plasma Beam Micro Machining – Hybrid Micro machining – Electro Discharge Grinding – Electro Chemical spark micro machining – Electrolytic in process Dressing.

UNIT III NANO POLISHING 9

Abrasive Flow finishing – Magnetic Abrasive Finishing – Magneto rheological finishing – Magneto Rheological abrasive flow finishing - Magnetic Float polishing – Elastic Emission Machining – chemo-mechanical Polishining.

UNIT IV MICRO FORMING AND WELDING 9

Micro extrusion – Micro and Nano structured surface development by Nano plastic forming and Roller Imprinting – Micro bending with LASER – LASER micro welding – Electron beam for micro welding.

UNIT V RECENT TRENDS AND APPLICATIONS 7

Metrology for micro machined components – Ductile regime machining– AE based tool wear compensation– Machining of Micro gear, micro nozzle, micro pins – Applications

TOTALPERIODS: 45

MF1018	ADDITIVE MANUFACTURING	L	T	P	C
		3	0	0	3

OBJECTIVES

- To educate students with fundamental and advanced knowledge in the field of Additive manufacturing technology and the associated Aerospace, Architecture, Art, Medical and industrial applications.

COURSE OUTCOMES (CO)

CO1 The students will be able to know about the evolution, classification of various techniques in additive manufacturing.
CO2 The students will be able to know about the reverse engineering and cad modeling techniques in additive manufacturing.
CO3 The students will be able to know about liquid based and solid based additive manufacturing systems.
CO4 The students will be able to know about the powder based additive manufacturing systems.
CO5 The students will be able to know about the recent research techniques in additive manufactured systems.

UNIT - I INTRODUCTION 8

Need - Development of AM systems – AM process chain - Impact of AM on Product Development - Virtual Prototyping- Rapid Tooling – RP to AM -Classification of AM processes-Benefits-Applications.

UNIT - II REVERSE ENGINEERING AND CAD MODELING 10

Basic concept- Digitization techniques – Model reconstruction – Data Processing for Rapid Prototyping: CAD model preparation, Data requirements – Geometric modeling techniques: Wire frame, surface and solid modeling – data formats - Data interfacing, Part orientation and support generation, Support structure design, Model Slicing, Tool path generation-Software for AM- Case studies.

UNIT - III LIQUID BASED AND SOLID BASED ADDITIVE MANUFACTURING SYSTEMS 10

Stereolithography Apparatus (SLA): Principle, pre-build process, part-building and post-build processes, photo polymerization of SL resins, part quality and process planning, recoating issues, materials, advantages, limitations and applications.
Solid Ground Curing (SGC): working principle, process, strengths, weaknesses and applications. Fused deposition Modeling (FDM): Principle, details of processes, process variables, types, products, materials and applications. Laminated Object Manufacturing (LOM): Working Principles, details of processes, products, materials, advantages, limitations and applications - Case studies.

UNIT - IV POWDER BASED ADDITIVE MANUFACTURING SYSTEMS 10

Selective Laser Sintering (SLS): Principle, process, Indirect and direct SLS- powder structures, materials, post processing, surface deviation and accuracy, Applications. Laser Engineered Net Shaping (LENS): Processes, materials, products, advantages, limitations and applications– Case

Studies.

UNIT - V OTHER ADDITIVE MANUFACTURING SYSTEMS 7

Three dimensional Printing (3DP): Principle, basic process, Physics of 3DP, types of printing, process capabilities, material system. Solid based, Liquid based and powder based 3DP systems, strength and weakness, Applications and case studies. Shape Deposition Manufacturing (SDM), Ballastic Particle Manufacturing (BPM), Selective Laser Melting, Electron Beam Melting.

MF1019	DESIGN AND ANALYSIS OF EXPERIMENTS	L	T	P	C
		3	0	0	3

OBJECTIVES

The objective of this course is to introduce experimental design techniques and familiarize with all of the best design techniques and study the objectives, similarities, differences, advantages, and disadvantages of each.

COURSE OUTCOMES (CO)

CO1 Ability to understand the Basic principle of DOEs and ANOVA.
CO2 Ability to understand the various Single Factor Experiments.
CO3 Ability to Learn Full and Fraction Factorial Experiment Design.
CO4 Ability to understand the Robust Design.
CO5 Ability to understand the Orthogonal Experiments.

UNIT - I INTRODUCTION 9

Basic principle of DOEs, Guide lines for Designing Experiments, Terminology, ANOVA, Computation of sum of squares and Basics of quality by design, Experiments with single factor, Model Adegnacy checking, Test on means.

UNIT - II SINGLE FACTOR EXPERIMENTS 9

Randomized complete block design, Latin square design, Graeco-Latin square design, Balanced Incomplete block design.

UNIT - III FACTORIAL DESIGN 9

Two-Factor factorial design, General factorial design, 2k Factorial design, 3k Factorial design, Blocking and confounding, Fractional replication and Factors with mixed levels.

UNIT - IV ROBUST DESIGN PROCESS 9

Comparison of classical and Taguchi's approach, variability due to noise factors, principle or robustization, classification of quality characteristics and parameters, objective functions in robust design, S/N ratios.

UNIT - V ORTHOGONAL EXPERIMENTS 9

Selection and application of orthogonal arrays for design, Conduct of experiments, collection of data and analysis of simple experiments, Modifying orthogonal arrays, Inner and outer OA experiments, Optimization using S/N ratios, attribute data analysis, a critique of robust design.

TOTAL PERIODS: 45

TEXT BOOKS:

1. K. Krishnaiah, P. Shahabudeen. "Applied Design of Experiments and Taguchi Methods" PHI (11 March 2012).
2. R. Panneerselvam, "Design and Analysis of Experiments" PHI Learning, 2012.

MF1020	PRODUCT DESIGN AND LIFE CYCLE MANAGEMENT	L	T	P	C
		3	0	0	3

OBJECTIVES

- The new product management process
- Product lifecycle management stages
- The DFx concepts from the conception to recovery or disposal
- Applying analytic methods for all stages of product planning, development and control.

COURSE OUTCOMES (CO)

CO1	Understanding the concept of product design and development
CO2	Understanding & Analysing the model based study on costing and Accounting of the manufactured product.
CO3	Understanding the best practise followed for design and evaluation of prototype building and performing the decision analysis on new product development
CO4	The DFx concepts from the conception to recovery or disposal with standards and Failure mode effective analysis.
CO5	Assessing and improving product development and management performance in the context of a case study.

UNIT – I INTRODUCTION 9

Product development – Trends affecting product development – Best practices for product development – Product development process and organizations – Collaborative product development – concurrent engineering – risk management - Stages of Product development

UNIT – II PRODUCT DEVELOPMENT LIFE CYCLE – I 9

Early design – Requirement Definition and Conceptual design - Trade-off Analysis – Optimization using cost and utility metrics – Trade-off analysis models and parameters- design to cost – Design to

Life cycle cost – Design for warranties.

UNIT – III PRODUCT DEVELOPMENT LIFE CYCLE – II 9

Detailed design – Analysis and modeling – Best practices for detailed design – Design analyses – Prototypes in detailed design – Test and Evaluation – Design review, prototyping – simulation and testing – Manufacturing – Strategies – planning and methodologies.

UNIT – IV PRODUCT DEVELOPMENT LIFE CYCLE – III 9

Supply chain – Logistics, packaging, supply chain and the environment – ISO 14000/210 – Design for people – Ergonomics, Repairability, maintainability, safety and product liability – Task analysis and failure mode analysis.

UNIT – V PRODUCIBILITY AND RELIABILITY 9

Reducibility – strategies in design for manufacturing – requirements for optimizing design and manufacturing decisions – Simplification – commonality and preferred methods – Modularity and scalability – part reduction – functional analysis and value engineering – Reliability – Strategies and practices – Testability – Design for test and inspection.

TOTAL PERIODS: 45

TEXT BOOKS:

1. Karl T. Ulrich, Ateven D. Eppinger "Product Design and Development" Tata McGraw-Hill, 2003.

OPEN ELECTIVECOURSES (OEC)

SEMESTER III

OCP 101	BUSINESS DATA ANALYTICS	L	T	P	C
		3	0	0	3

OBJECTIVES

- To understand the basics of business analytics and its life cycle.
- To gain knowledge about fundamental business analytics.
- To learn modeling for uncertainty and statistical inference.
- To understand analytics using Hadoop and Map Reduce frameworks.
- To acquire insight on other analytical frameworks

COURSE OUTCOMES (CO)

CO1 Identify the real world business problems and model with analytical solutions.

CO2 Solve analytical problem with relevant mathematics background knowledge.

CO3 Convert any real world decision making problem to hypothesis and apply suitable statistical testing.

CO4 Write and Demonstrate simple applications involving analytics using Hadoop and MapReduce

CO5 Use open source frameworks for modeling and storing data and apply suitable visualization technique using R for visualizing voluminous data.

UNIT - I OVERVIEW OF BUSINESS ANALYTICS 9

Introduction – Drivers for Business Analytics – Applications of Business Analytics: Marketing and Sales, Human Resource, Healthcare, Product Design, Service Design, Customer Service and Support – Skills Required for a Business Analyst – Framework for Business Analytics Life Cycle for Business Analytics Process.

UNIT - II ESSENTIALS OF BUSINESS ANALYTICS 9

Descriptive Statistics – Using Data – Types of Data – Data Distribution Metrics: Frequency, Mean, Median, Mode, Range, Variance, Standard Deviation, Percentile, Quartile, z-Score, Covariance, Correlation – Data Visualization: Tables, Charts, Line Charts, Bar and Column Chart, Bubble Chart, Heat Map – Data Dashboards.

UNIT - III MODELING UNCERTAINTY AND STATISTICAL INFERENCE 9

Modeling Uncertainty: Events and Probabilities – Conditional Probability – Random Variables – Discrete Probability Distributions – Continuous Probability Distribution – Statistical Inference: Data Sampling – Selecting a Sample – Point Estimation – Sampling Distributions – Interval Estimation – Hypothesis Testing.

UNIT - IV ANALYTICS USING HADOOP AND MAPREDUCE FRAMEWORK 9

Introducing Hadoop– RDBMS versus Hadoop–Hadoop Overview – HDFS (Hadoop Distributed File System) – Processing Data with Hadoop– Introduction to MapReduce – Features of MapReduce – Algorithms Using Map-Reduce: Matrix-Vector Multiplication, Relational Algebra Operations, Grouping and Aggregation – Extensions to MapReduce.

UNIT - V OTHER DATA ANALYTICAL FRAMEWORKS 9

Overview of Application development Languages for Hadoop – PigLatin – Hive – Hive Query Language (HQL) – Introduction to Pentaho, JAQL – Introduction to Apache: Sqoop, Drill and Spark, Cloudera Impala – Introduction to NoSQL Databases – Hbase and MongoDB.

TOTAL PERIODS: 45

OMF 101	INDUSTRIAL SAFETY	L	T	P	C
		3	0	0	0

OBJECTIVES

- Summarize basics of industrial safety
- Describe fundamentals of maintenance engineering
- Explain wear and corrosion

- Illustrate fault tracing
- Identify preventive and periodic maintenance

COURSE OUTCOMES (CO)

CO1 Ability to summarize basics of industrial safety
CO2 Ability to describe fundamentals of maintenance engineering
CO3 Ability to explain wear and corrosion
CO4 Ability to illustrate fault tracing
CO5 Ability to identify preventive and periodic maintenance

UNIT - I INTRODUCTION 9

Accident, causes, types, results and control, mechanical and electrical hazards, types, causes and preventive steps/procedure, describe salient points of factories act 1948 for health and safety, wash rooms, drinking water layouts, light, cleanliness, fire, guarding, pressure vessels, etc, Safety color codes. Fire prevention and firefighting, equipment and methods.

UNIT - II FUNDAMENTALS OF MAINTENANCE ENGINEERING 9

Definition and aim of maintenance engineering, Primary and secondary functions and responsibility of maintenance department, Types of maintenance, Types and applications of tools used for maintenance, Maintenance cost & its relation with replacement economy, Service life of equipment

UNIT - III WEAR AND CORROSION AND THEIR PREVENTION 9

Wear- types, causes, effects, wear reduction methods, lubricants-types and applications, Lubrication methods, general sketch, working and applications, i. Screw down grease cup, ii. Pressure grease gun, iii. Splash lubrication, iv. Gravity lubrication, v. Wick feed lubrication vi. Side feed lubrication, vii. Ring lubrication, Definition, principle and factors affecting the corrosion. Types of corrosion, corrosion prevention methods.

UNIT - IV FAULT TRACING 9

Fault tracing-concept and importance, decision tree concept, need and applications, sequence of fault finding activities, show as decision tree, draw decision tree for problems in machine tools, hydraulic, pneumatic, automotive, thermal and electrical equipment’s like, I. Any one machine tool, ii. Pump iii. Air compressor, iv. Internal combustion engine, v. Boiler, vi. Electrical motors, Types of faults in machine tools and their general causes.

UNIT - V PERIODIC AND PREVENTIVE MAINTENANCE 9

Periodic inspection-concept and need, degreasing, cleaning and repairing schemes, overhauling of mechanical components, overhauling of electrical motor, common troubles and remedies of electric motor, repair complexities and its use, definition, need, steps and advantages of preventive maintenance. Steps/procedure for periodic and preventive maintenance of: I. Machine tools, ii. Pumps, iii. Air compressors, iv. Diesel generating (DG) sets, Program and schedule of preventive maintenance of mechanical and electrical equipment, advantages of preventive maintenance. Repair cycle concept and importance

TOTAL PERIODS: 45

REFERENCE BOOKS:

OPE101 RENEWABLE SOURCES OF ELECTRICAL ENERGY

L	T	P	C
3	0	0	3

OBJECTIVES

- ❖ To understand the energy scenario and various energy sources.
- ❖ To learn the solar photovoltaic and solar thermal systems.
- ❖ To impart knowledge on wind energy and bio-mass energy conversion systems.
- ❖ To provide knowledge about the Geothermal and Ocean energy conversion system.
- ❖ To design and implement hybrid energy conversion system.

COURSE OUTCOMES (CO)

CO1 Understand the energy scenario and the various sources of non-conventional energy sources.

CO2 Learn the physics of solar energy and to understand the solar photovoltaic, solar-thermal energy conversion system.

CO3 Acquire knowledge in wind and bio-mass energy conversion system.

CO4 Acquire knowledge in Geothermal and Ocean energy conversion system.

CO5 Design and implement hybrid energy systems.

UNIT I INTRODUCTION **9**

Renewable energy sources and its energy scenario - global and Indian; Environmental aspects and impacts of renewable energy generation on environment; Types of Renewable energy sources: solar - wind - Biomass - Ocean - Tidal - Geothermal and Fuel cell.

UNIT II SOLAR ENERGY SYSTEMS **9**

Solar radiation at the earth's surface - solar radiation measurements - estimation of average solar radiation - Introduction to Solar photo-voltaic (PV) system and Solar - thermal system; Equivalent circuit of a solar cell, solar array and its sizing. Solar thermal collectors: flat plate collectors - concentrating collectors; solar thermal applications - heating, cooling, desalination, drying, cooking - solar thermal electric power plant.

UNIT III WIND ENERGY AND BIO-MASS ENERGY **9**

Wind Sources: horizontal and vertical axis wind turbine - performance characteristics - types of wind turbine generators - Betz criteria; Bio-mass: Principles of Bio-Conversion - Anaerobic/aerobic digestion - types of Bio-gas digesters - gas yield - combustion characteristics of bio-gas - utilization for cooking.

UNIT IV GEOTHERMAL AND OCEAN ENERGY **9**

Geothermal: Resources - types of wells - methods of harnessing the energy. Ocean Energy: OTEC- Principles, utilization - setting of OTEC plants - thermodynamic cycles. Tidal and wave energy: Potential and conversion techniques - mini-hydro power plants and their economics.

UNIT V HYBRID RENEWABLE ENERGY SYSTEMS **9**

Need for Hybrid Systems - Types of Hybrid systems - Case studies of solar and Wind.

`TOTAL PERIODS : 45

TEXT BOOKS

OMB 103	**COST MANAGEMENT OF ENGINEERING PROJECTS**	**L**	**T**	**P**	**C**
		3	**0**	**0**	**3**

OBJECTIVES

- Summarize the costing concepts and their role in decision making
- Infer the project management concepts and their various aspects in selection
- Interpret costing concepts with project execution
- Develop knowledge of costing techniques in service sector and various budgetary control techniques
- Illustrate with quantitative techniques in cost management

COURSE OUTCOMES (CO)

CO1 Understand the costing concepts and their role in decision making
CO2 Understand the project management concepts and their various aspects in selection
CO3 Interpret costing concepts with project execution
CO4 Gain knowledge of costing techniques in service sector and various budgetary control techniques
CO5 Become familiar with quantitative techniques in cost management

UNIT - I INTRODUCTION TO COSTING CONCEPTS 9

Objectives of a Costing System; Cost concepts in decision-making; Relevant cost, Differential cost, Incremental cost and Opportunity cost; Creation of a Database for operational control.

UNIT - II INTRODUCTION TO PROJECT MANAGEMENT 9

Project: meaning, Different types, why to manage, cost overruns centres, various stages of project execution: conception to commissioning. Project execution as conglomeration of technical and nontechnical activities, Detailed Engineering activities, Pre project execution main clearances and documents, Project team: Role of each member,Importance Project site: Data required with significance, Project contracts.

UNIT - III PROJECT EXECUTION AND COSTING CONCEPTS 9

Project execution Project cost control, Bar charts and Network diagram, Project commissioning: mechanical and process, Cost Behavior and Profit Planning Marginal Costing; Distinction between Marginal Costing and Absorption Costing; Break-even Analysis, Cost-Volume-Profit Analysis, Various decision-making problems, Pricing strategies: Pareto Analysis, Target costing, Life Cycle

Costing.

UNIT - IV COSTING OF SERVICE SECTOR AND BUDGETERY CONTROL 9

Just-in-time approach, Material Requirement Planning, Enterprise Resource Planning, Activity- Based Cost Management, Bench Marking; Balanced Score Card and Value-Chain Analysis, Budgetary Control: Flexible Budgets; Performance budgets; Zero-based budgets.

UNIT - V QUANTITATIVE TECHNIQUES FOR COST MANAGEMENT 9

Linear Programming, PERT/CPM, Transportation problems, Assignment problems, Learning Curve Theory.

TOTAL PERIODS: 45

REFERENCE BOOKS:

1. Ashish K. Bhattacharya, Principles & Practices of Cost Accounting A. H. Wheeler publisher, 1991
2. Charles T. Horngren and George Foster, Advanced Management Accounting, 1988
3. Charles T. Horngren et al Cost Accounting A Managerial Emphasis, Prentice Hall of India, New Delhi, 2011

OMF 102	COMPOSITE MATERIALS	L	T	P	C
		3	0	0	3

OBJECTIVES

- Summarize the characteristics of composite materials and effect of reinforcement in composite materials.
- Identify the various reinforcements used in composite materials.
- Compare the manufacturing process of metal matrix composites.
- Understand the manufacturing processes of polymer matrix composites.
- Analyze the strength of composite materials.

COURSE OUTCOMES (CO)

CO1 Know the characteristics of composite materials and effect of reinforcement in composite materials.
CO2 Know the various reinforcements used in composite materials.
CO3 Understand the manufacturing processes of metal matrix composites.
CO4 Understand the manufacturing processes of polymer matrix composites.
CO5 Analyze the strength of composite materials.

UNIT - I INTRODUCTION 9

Definition – Classification and characteristics of Composite materials - Advantages and application of composites - Functional requirements of reinforcement and matrix - Effect of reinforcement (size, shape, distribution, volume fraction) on overall composite performance.

UNIT - II REINFORCEMENTS 9

Preparation-layup, curing, properties and applications of glass fibers, carbon fibers, Kevlar fibers and Boron fibers - Properties and applications of whiskers, particle reinforcements - Mechanical Behavior of composites: Rule of mixtures, Inverse rule of mixtures - Isostrain and Isostress conditions.

UNIT - III MANUFACTURING OF METAL MATRIX COMPOSITES 9

Casting – Solid State diffusion technique - Cladding – Hot isostatic pressing - Properties and applications. Manufacturing of Ceramic Matrix Composites: Liquid Metal Infiltration – Liquid phase sintering. Manufacturing of Carbon – Carbon composites: Knitting, Braiding, Weaving - Properties and applications.

UNIT - IV MANUFACTURING OF POLYMER MATRIX COMPOSITES 9

Preparation of Moulding compounds and prepregs – hand layup method – Autoclave method – Filament winding method – Compression moulding – Reaction injection moulding - Properties and applications.

UNIT – V STRENGTH 9

Laminar Failure Criteria-strength ratio, maximum stress criteria, maximum strain criteria, interacting failure criteria, hygrothermal failure. Laminate first play failure-insight strength; Laminate strength-ply discount truncated maximum strain criterion; strength design using caplet plots; stress concentrations.

TOTAL PERIODS: 45

Text Books:

1. Chawla K.K., 'Composite Materials' Science and Engineering, Springer Publications,Second Edition, 2013.

Reference Books:

1. Cahn R.W. - Material Science and Technology – Vol 13 – Composites, VCH, West Germany.
2. Callister, W.D Jr., Adapted by Balasubramaniam R, Materials Science and Engineering, An introduction, John Wiley & Sons, NY, Indian edition, 2007.
3. Lubin.G, Hand Book of Composite Materials, 2013.

OCH 105	**WASTE TO ENERGY**	**L**	**T**	**P**	**C**
		3	0	0	3

OBJECTIVES

- Interpret the various types of wastes from which energy can be generated
- Develop knowledge on biomass pyrolysis process and its applications
- Develop knowledge on various types of biomass gasifiers and their operations
- Invent knowledge on biomass combustors and its applications on generating energy
- Summarize the principles of bio-energy systems and their features

COURSE OUTCOMES (CO)

CO1 To understand the various types of wastes from which energy can be generated
CO2 To Gain knowledge on biomass pyrolysis process and its applications
CO3 To develop knowledge on various types of biomass gasifiers and their operations
CO4 To gain knowledge on biomass combustors and its applications on generating energy
CO5 To understand the principles of bio-energy systems and their features

UNIT - I INTRODUCTION TO EXTRACTION OF ENERGY FROM WASTE 9

Classification of waste as fuel – Agro based, Forest residue, Industrial waste - MSW – Conversion devices – Incinerators, gasifiers, digestors.

UNIT - II BIOMASS PYROLYSIS 9

Pyrolysis – Types, slow fast – Manufacture of charcoal – Methods - Yields and application – Manufacture of pyrolytic oils and gases, yields and applications.

UNIT - III BIOMASS GASIFICATION 9

Gasifiers – Fixed bed system – Downdraft and updraft gasifiers – Fluidized bed gasifiers – Design, construction and operation – Gasifier burner arrangement for thermal heating – Gasifier engine arrangement and electrical power – Equilibrium and kinetic consideration in gasifier operation.

UNIT - IV BIOMASS COMBUSTION 9

Biomass stoves – Improved chullahs, types, some exotic designs, Fixed bed combustors, Types, inclined grate combustors, Fluidized bed combustors, Design, construction and operation - Operation of all the above biomass combustors.

UNIT - V BIO ENERGY 9

Properties of biogas (Calorific value and composition), Biogas plant technology and status - Bio energy system - Design and constructional features - Biomass resources and their classification - Biomass conversion processes - Thermo chemical conversion - Direct combustion - biomass gasification - pyrolysis and liquefaction - biochemical conversion - anaerobic digestion - Types of biogas Plants – Applications - Alcohol production from biomass - Bio diesel production -Urban waste to energy conversion - Biomass energy programme in India.

TOTAL PERIODS: 45

TEXT BOOKS:

1. Biogas Technology - A Practical Hand Book - Khandelwal, K. C. and Mahdi, S. S., Vol. I & II, Tata McGraw Hill Publishing Co. Ltd., 1983.
2. Biomass Conversion and Technology, C. Y. WereKo-Brobby and E. B. Hagan, John Wiley & Sons, 1996.

REFERENCE BOOKS:

1. Food, Feed and Fuel from Biomass, Challal, D. S., IBH Publishing Co. Pvt. Ltd., 1991.
2. Non-Conventional Energy, Desai, Ashok V., Wiley Eastern Ltd., 1990.

RESEARCH METHODOLOGY AND IPR COURSES (RMC)

SEMESTER I

RM 1101	RESEARCH METHODOLOGY AND IPR	L	T	P	C
		2	0	0	2

OBJECTIVES

To impart knowledge and skills required for research and IPR

- Problem formulation, analysis and solutions.
- Technical paper writing / presentation without violating professional ethics
- Patent drafting and filing patents.

COURSE OUTCOMES (CO)

CO1	Ability to formulate research problem
CO2	Ability to carry out research analysis
CO3	Ability to follow research ethics
CO4	Ability to understand that today's world is controlled by Computer, Information Technology, but tomorrow world will be ruled by ideas, concept, and creativity
CO5	Ability to understand about IPR and filing patents in R & D

UNIT - I RESEARCH PROBLEM FORMULATION 6

Meaning of research problem- Sources of research problem, criteria characteristics of a good research problem, errors in selecting a research problem, scope and objectives of research problem. Approaches of investigation of solutions for research problem, data collection, analysis, interpretation, necessary instrumentations

UNIT - II LITERATURE REVIEW 6

Effective literature studies approaches, analysis, plagiarism, and research ethics.

UNIT - III TECHNICALWRITING /PRESENTATION 6

Effective technical writing, how to write report, paper, developing a research proposal, format of research proposal, a presentation and assessment by a review committee.

UNIT - IV INTRODUCTION TO INTELLECTUAL PROPERTY RIGHTS (IPR) 6

Nature of Intellectual Property: Patents, Designs, Trade and Copyright. Process of Patenting and Development: technological research, innovation, patenting, development. International Scenario: International cooperation on Intellectual Property. Procedure for grants of patents, Patenting under PCT.

UNIT - V INTELLECTUAL PROPERTY RIGHTS (IPR) 6

Patent Rights: Scope of Patent Rights. Licensing and transfer of technology. Patent information and databases. Geographical Indications. New Developments in IPR: Administration of Patent System, IPR of Biological Systems, Computer Software etc. Traditional knowledge Case Studies, IPR and IITs.

TOTAL PERIODS: 30

REFERENCE BOOKS:

1. Asimov, “Introduction to Design”, Prentice Hall, 1962.
2. Halbert, “Resisting Intellectual Property”, Taylor & Francis Ltd ,2007.
3. Mayall, “Industrial Design”, McGraw Hill, 1992.
4. Niebel, “Product Design”, McGraw Hill, 1974.
5. Ranjit Kumar, 2nd Edition, “Research Methodology: A Step by Step Guide for beginners” 2010

AUDIT COURSES (AC)

SEMESTER I

AX 1001	ENGLISH FOR RESEARCH PAPER WRITING	L	T	P	C
		3	0	0	0

OBJECTIVES

- Teach how to improve writing skills and level of readability
- Tell about what to write in each section
- Summarize the skills needed when writing a Title
- Infer the skills needed when writing the Conclusion
- Ensure the quality of paper at very first-time submission

COURSE OUTCOMES (CO)

CO1 Understand that how to improve your writing skills and level of readability
CO2 Learn about what to write in each section
CO3 Understand the skills needed when writing a Title

CO4 Understand the skills needed when writing the Conclusion
CO5 Ensure the good quality of paper at very first-time submission

UNIT - I INTRODUCTION TO RESEARCH PAPER WRITING 6
Planning and Preparation, Word Order, Breaking up long sentences, Structuring Paragraphs and Sentences, Being Concise and Removing Redundancy, Avoiding Ambiguity and Vagueness

UNIT - II PRESENTATION SKILLS 6
Clarifying Who Did What, Highlighting Your Findings, Hedging and Criticizing, Paraphrasing and Plagiarism, Sections of a Paper, Abstracts, Introduction

UNIT - III TITLE WRITING SKILLS 6
Key skills are needed when writing a Title, key skills are needed when writing an Abstract, key skills are needed when writing an Introduction, skills needed when writing a Review of the Literature, Methods, Results, Discussion, Conclusions, The Final Check

UNIT - IV RESULT WRITING SKILLS 6
Skills are needed when writing the Methods, skills needed when writing the Results, skills are needed when writing the Discussion, skills are needed when writing the Conclusions

UNIT - V VERIFICATION SKILLS 6
Useful phrases, checking Plagiarism, how to ensure paper is as good as it could possibly be the first-time submission

TOTAL PERIODS: 30

REFERENCE BOOKS:

1. Adrian Wallwork , English for Writing Research Papers, Springer New York Dordrecht Heidelberg London, 2011
2. Day R How to Write and Publish a Scientific Paper, Cambridge University Press 2006
3. Goldbort R Writing for Science, Yale University Press (available on Google Books) 2006
4. Highman N, Handbook of Writing for the Mathematical Sciences, SIAM. Highman’s book 1998.

AX 1002	DISASTER MANAGEMENT	L	T	P	C
		2	0	0	0

OBJECTIVES

- Summarize basics of disaster
- Explain a critical understanding of key concepts in disaster risk reduction and humanitarian response.
- Illustrate disaster risk reduction and humanitarian response policy and practice from multiple perspectives.
- Describe an understanding of standards of humanitarian response and practical relevance in specific types of disasters and conflict situations.
- Develop the strengths and weaknesses of disaster management approaches

COURSE OUTCOMES (CO)

CO1 Ability to summarize basics of disaster
CO2 Ability to explain a critical understanding of key concepts in disaster risk reduction and humanitarian response.
CO3 Ability to illustrate disaster risk reduction and humanitarian response policy and practice

from multiple perspectives.

CO4 Ability to describe an understanding of standards of humanitarian response and practical relevance in specific types of disasters and conflict situations.

CO5 Ability to develop the strengths and weaknesses of disaster management approaches

UNIT - I INTRODUCTION 6

Disaster: Definition, Factors and Significance; Difference between Hazard And Disaster; Natural and Manmade Disasters: Difference, Nature, Types and Magnitude.

UNIT - II REPERCUSSIONS OF DISASTERS AND HAZARDS 6

Economic Damage, Loss of Human and Animal Life, Destruction Of Ecosystem. Natural Disasters: Earthquakes, Volcanisms, Cyclones, Tsunamis, Floods, Droughts And Famines, Landslides And Avalanches, Man-made disaster: Nuclear Reactor Meltdown, Industrial Accidents, Oil Slicks And Spills, Outbreaks Of Disease And Epidemics, War And Conflicts.

UNIT - III DISASTER PRONE AREAS IN INDIA 6

Study of Seismic Zones; Areas Prone To Floods and Droughts, Landslides And Avalanches; Areas Prone To Cyclonic and Coastal Hazards with Special Reference To Tsunami; Post-Disaster Diseases and Epidemics

UNIT - IV DISASTER PREPAREDNESS AND MANAGEMENT 6

Preparedness: Monitoring Of Phenomena Triggering a Disaster or Hazard; Evaluation of Risk: Application of Remote Sensing, Data from Meteorological And Other Agencies, Media Reports: Governmental and Community Preparedness

UNIT - V RISK ASSESSMENT 6

Disaster Risk: Concept and Elements, Disaster Risk Reduction, Global and National Disaster Risk Situation. Techniques of Risk Assessment, Global Co-Operation in Risk Assessment and Warning, People’s Participation in Risk Assessment. Strategies for Survival

TOTAL PERIODS: 30

REFERENCE BOOKS:

1. Goel S. L., Disaster Administration And Management Text And Case Studies”,Deep & Deep Publication Pvt. Ltd., New Delhi,2009.
2. NishithaRai, Singh AK, “Disaster Management in India: Perspectives, issues and strategies “’NewRoyal book Company,2007.
3. Sahni, Pardeep et. al.,” Disaster Mitigation Experiences And Reflections”, Prentice Hall OfIndia, New Delhi,2001.

AX 1003	**SANSKRIT FOR TECHNICAL KNOWLEDGE**	**L**	**T**	**P**	**C**
		2	0	0	0

OBJECTIVES

- Illustrate the basic sanskrit language.
- Recognize sanskrit, the scientific language in the world.
- Appraise learning of sanskrit to improve brain functioning.
- Relate sanskrit to develop the logic in mathematics, science & other subjects enhancing the memory power.
- Extract huge knowledge from ancient literature.

COURSE OUTCOMES (CO)

CO1 Understanding basic Sanskrit language.
CO2 Write sentences.
CO3 Know the order and roots of Sanskrit.
CO4 Know about technical information about Sanskrit literature.
CO5 Understand the technical concepts of Engineering

UNIT - I ALPHABETS **6**
Alphabets in Sanskrit

UNIT - II TENSES AND SENTENCES **6**
Past/Present/Future Tense - Simple Sentences

UNIT - III ORDER AND ROOTS **6**
Order - Introduction of roots

UNIT - IV SANSKRIT LITERATURE **6**
Technical information about Sanskrit Literature

UNIT - V TECHNICAL CONCEPTS OF ENGINEERING **6**
Technical concepts of Engineering-Electrical, Mechanical, Architecture, Mathematics

TOTAL PERIODS: 30

REFERENCE BOOKS:

1. “Abhyaspustakam” – Dr. Vishwas, Samskrita-Bharti Publication, New Delhi
2. “Teach Yourself Sanskrit” Prathama Deeksha-Vempati Kutumbshastri, Rashtriya Sanskrit Sansthanam, New Delhi Publication
3. “India’s Glorious Scientific Tradition” Suresh Soni, Ocean books (P) Ltd., New Delhi, 2017.

AX 1004	VALUE EDUCATION	L	T	P	C
		3	0	0	0

OBJECTIVES

- Understand value of education and self-development
- Imbibe good values in students
- Let the should know about the importance of character

COURSE OUTCOMES (CO)

CO1 Knowledge of self-development.
CO2 Learn the importance of Human values.
CO3 Developing the overall personality

UNIT - I **6**
Values and self-development–Social values and individual attitudes. Work ethics, Indian vision of humanism. Moral and non-moral valuation. Standards and principles. Value judgements

UNIT - II **6**
Importance of cultivation of values. Sense of duty. Devotion, Self-reliance. Confidence, Concentration. Truthfulness, Cleanliness. Honesty, Humanity. Power of faith, National Unity. Patriotism. Love for nature, Discipline

UNIT - III **6**
Personality and Behavior Development-Soul and Scientific attitude. Positive Thinking. Integrity and

discipline. Punctuality, Love and Kindness. Avoid fault Thinking. Free from anger, Dignity of labour. Universal brother hood and religious tolerance. True friendship. Happiness Vs suffering, love for truth. Aware of self-destructive habits. Association and Cooperation. Doing best for saving nature

UNIT - IV **6**

Character and Competence–Holy books vs Blind faith. Self-management and Good health. Science of reincarnation. Equality, Nonviolence, Humility, Role of Women. All religions and same message. Mind your Mind, Self-control. Honesty, Studying effectively.

TOTAL PERIODS: 24

SUGGESTED READING

1. Chakroborty, S.K."Values and Ethics for organizations Theory and practice", Oxford University Press, New Delhi

AX 1005 **CONSTITUTION OF INDIA**

L	T	P	C
2	0	0	0

OBJECTIVES

Students will be able to:

- Understand the premises informing the twin themes of liberty and freedom from a civil rights perspective.
- To address the growth of Indian opinion regarding modern Indian intellectuals' constitutional
- Role and entitlement to civil and economic rights as well as the emergence nation hood in the early years of Indian nationalism.
- To address the role of socialism in India after the commencement of the Bolshevik Revolutionin1917and its impact on the initial drafting of the Indian Constitution.

COURSE OUTCOMES (CO)

C107E.1 To understand the history of making and philosophy of the Indian constitution
C107E.2 To understand the constitutional rights and duties
C107E.3 To understand the organs of governance
C107E.4 To understand the Local administration concepts
C107E.5 To understand the role and function election commission

UNIT - I HISTORY OF MAKING OF THE INDIAN CONSTITUTION & PHILOSOPHY OF THE INDIAN CONSTITUTION **10**

History, Drafting Committee, (Composition & Working), Preamble, Salient Features

UNIT – II CONTOURS OF CONSTITUTIONAL RIGHTS AND DUTIES **5**

Fundamental Rights, Right to Equality, Right to Freedom, Right against Exploitation, Right to Freedom of Religion, Cultural and Educational Rights, Right to Constitutional Remedies, Directive Principles of State Policy, Fundamental Duties.

UNIT – III ORGANS OF GOVERNANCE **5**

Parliament, Composition, Qualifications and Disqualifications, Powers and Functions, Executive, President, Governor, Council of Ministers, Judiciary, Appointment and Transfer of Judges, Qualifications, Powers and Functions.

UNIT - IV LOCAL ADMINISTRATION **5**

District's Administration head: Role and Importance Municipalities: Introduction, Mayor and role of Elected Representative, CEO, Municipal Corporation. Pachayati raj: Introduction, PRI: Zila Pachayat. Elected officials and their roles, CEO Zila Pachayat: Position and role. Block level: Organizational

Hierarchy (Different departments), Village level: Role of Elected and Appointed officials, Importance of grass root democracy.

UNIT - V ELECTION COMMISSION 5

Election Commission: Role and Functioning. Chief Election Commissioner and Election Commissioners - Institute and Bodies for the welfare of SC/ST/OBC and women.

TOTAL PERIODS: 30

TEXT BOOKS:

1. The Constitution of India,1950 (Bare Act), Government Publication.
2. Dr.S.N.Busi, Dr.B. R.Ambedkar framing of Indian Constitution,1st Edition, 2015.

REFERENCE BOOKS:

1. M.P. Jain, Indian Constitution Law, 7th Edn., Lexis Nexis,2014.
2. D.D. Basu, Introduction to the Constitution of India, Lexis Nexis, 2015.

AX 1006	PEDAGOGY STUDIES	L	T	P	C
		2	0	0	0

OBJECTIVES

- Review existing evidence on their view topic to inform programme design and policy
- Making under taken by the DfID, other agencies and researchers.

COURSE OUTCOMES (CO)

CO1 What pedagogical practices are being used by teachers informal and informal classrooms in developing countries?

CO2 What is the evidence on the effectiveness of these pedagogical practices, in what conditions, and with what population of learners?

CO3 How can teacher education (curriculum and practicum) and the school curriculum and guidance materials best support effective pedagogy?

CO4 To Review existing evidence on their view topic to inform programme design and policy.

CO5 To Identify critical evidence gaps to guide the development.

UNIT - I INTRODUCTION AND METHODOLOGY: 6

Aims and rationale, Policy background, Conceptual framework and terminology - Theories of learning, Curriculum, Teacher education - Conceptual framework, Research questions - Overview of methodology and Searching.

UNIT - II THEMATIC OVERVIEW 6

Pedagogical practices are being used by teachers in formal and informal classrooms in developing countries - Curriculum, Teacher education.

UNIT - III EVIDENCE ON THE EFFECTIVENESS OF PEDAGOGICAL PRACTICES 6

Methodology for the in depth stage: quality assessment of included studies - How can teacher education (curriculum and practicum) and the school curriculum and guidance materials best support effective pedagogy? - Theory of change - Strength and nature of the body of evidence for effective pedagogical practices - Pedagogic theory and pedagogical approaches - Teachers’ attitudes and beliefs and Pedagogic strategies.

UNIT - IV PROFESSIONAL DEVELOPMENT 6

Professional development: alignment with classroom practices and follow up support - Peer support - Support from the head teacher and the community - Curriculum and assessment - Barriers to learning: limited resources and large class sizes

UNIT - V RESEARCH GAPS AND FUTURE DIRECTIONS 6

Research design – Contexts – Pedagogy - Teacher education - Curriculum and assessment - Dissemination and research impact.

TOTAL PERIODS: 30

REFERENCE BOOKS:

AX 1007	STRESS MANAGEMENT BY YOGA	L	T	P	C
		3	0	0	0

OBJECTIVES

- To achieve overall health of body and mind
- To overcome stress

COURSE OUTCOMES (CO)

CO1 Develop healthy mind in a healthy body thus improving social health also
CO2 Improve efficiency

UNIT - I 10

Definitions of Eight parts of yoga.(Ashtanga)

UNIT - II 10

Yam and Niyam - Do`s and Don't's in life - i) Ahinsa, satya, astheya, bramhacharya and aparigraha, ii) Ahinsa, satya, astheya, bramhacharya and aparigraha.

UNIT - III 10

Asan and Pranayam - Various yog poses and their benefits for mind & body - Regularization of breathing techniques and its effects-Types of pranayam

TOTAL PERIODS: 30

SUGGESTED READING

1. Yogic Asanas for Group Training-Part-I":Janardan Swami Yoga bhyasi Mandal, Nagpur

2. “Rajayoga or conquering the Internal Nature” by Swami Vivekananda, Advaita Ashrama (Publication Department), Kolkata

AX 1008	PERSONALITY DEVELOPMENT THROUGH LIFE ENLIGHTENMENT SKILLS	L	T	P	C
		2	0	0	0

OBJECTIVES

- To learn to achieve the highest goal happily
- To become a person with stable mind, pleasing personality and determination
- To awaken wisdom in students

COURSE OUTCOMES (CO)

CO1 To understand the holistic development of personality – I
CO2 To understand the holistic development of personality – II
CO3 To understand the day-to-day work and duties in Shrimad Bhagwad Geeta
CO4 To understand the statements of basic knowledge in Shrimad Bhagwad Geeta
CO5 To understand the personality of role model in Shrimad Bhagwad Geeta

UNIT - I HOLISTIC DEVELOPMENT OF PERSONALITY - I 6
Neetisatakam - holistic development of personality - Verses- 19,20,21,22 (wisdom) - Verses- 29,31,32 (pride & heroism)

UNIT - II HOLISTIC DEVELOPMENT OF PERSONALITY - II 6
Neetisatakam-holistic development of personality – Verses- 26,28,63,65 (virtue) - Verses- 52,53,59 (dont’s) - Verses- 71,73,75,78 (do’s)

UNIT - III DAY-TO-DAY WORK AND DUTIES 6
Approach to day-to-day work and duties - Shrimad Bhagwad Geeta: Chapter 2-Verses 41, 47,48 - Chapter 3-Verses 13, 21, 27, 35 Chapter 6-Verses 5,13,17,23, 35

UNIT - IV STATEMENTS OF BASIC KNOWLEDGE 6
Statements of basic knowledge - Shrimad Bhagwad Geeta: Chapter 2-Verses 56, 62, 68 Chapter 12 - Verses 13, 14, 15, 16,17, 18 - Chapter 18-Verses 45, 46, 48.

UNIT - V PERSONALITY OF ROLE MODEL 6
Personality of role model - shrimad bhagwad geeta – Chapter 2-Verses 17, Chapter 3-Verses 36,37,42 - Chapter 4-Verses 18, 38,39 Chapter18 – Verses 37,38,63

TOTAL PERIODS: 30

TEXT BOOKS:

1. Gopinath, Rashtriya Sanskrit Sansthanam P, Bhartrihari’s Three Satakam, Niti-sringar-vairagya, New Delhi,2010

B.TECH INFORMATION TECHNOLOGY

REGULATION – 2021

CHOICE BASED CREDIT SYSTEM

I - VIII SEMESTERS CURRICULA AND SYLLABI

B.Tech INFORMATION TECHNOLOGY

REGULATION 2021

CHOICE BASED CREDIT SYSTEM

I TO VIII SEMESTERS CURRICULAM AND SYLLABUS

For the candidate Admitted in the Academic Year 2021-2025

PROGRAM EDUCATIONAL OBJECTIVES (PEOs):

PEO1: Intellectual progress
To ensure graduates will be proficient in utilizing the fundamental knowledge of basic sciences, mathematics and Information Technology for the applications relevant to various streams of Engineering and Technology.

PEO2: Skill augmentation
To enrich graduates with the core competencies necessary for applying knowledge of computers and telecommunications equipment to store, retrieve, transmit, manipulate and analyze data in the context of business enterprise.

PEO3: Continuing education
To enable graduates to think logically, pursue lifelong learning and will have the capacity to understand technical issues related to computing systems and to design optimal solutions.

PEO4: Nurture Technocrat
To enable graduates to develop hardware and software systems by understanding the importance of social, business and environmental needs in the human context.

PEO5: Career development
To enable graduates to gain employment in organizations and establish themselves as professionals by applying their technical skills to solve real world problems and meet the diversified needs of industry, academia and research.

PROGRAM OUTCOMES POs:

Engineering Graduates will be able to:

1. **Engineering knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals and an engineering specialization to the solution of complex engineering problems.
2. **Problem analysis:** Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
3. **Design/development of solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

4. **Conduct investigations of complex problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
5. **Modern tool usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.
6. **The engineer and society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
7. **Environment and sustainability:** Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
8. **Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
9. **Individual and team work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
10. **Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
11. **Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one‘s own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
12. **Life-long learning:** Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PROGRAM SPECIFIC OBJECTIVES (PSOs):

PSO1: To analyse and design an efficient information management system which uses the concepts of Information technology to deliver technological solutions and to analyse its impact in the societal and human context.

PSO2: To identify the resources needed for building complex IT projects with an understanding of risk management processes, operational and policy implications considering human, financial and ecological factors.

PSO3: To develop and test software projects by applying IT tools and techniques for the development of computational systems to serve the needs of the community at large.

MAPPING OF PROGRAMME EDUCATIONAL OBJECTIVES WITH PROGRAMME OUTCOMES

Abroad relation between the Programme objective and the outcomes is given in the following table

PROGRAMME EDUCATIONAL OBJECTIVES	PROGRAMMEOUTCOMES											
	A	B	C	D	E	F	G	H	I	J	K	L
1	3	3										
2	2		2	1	3							
3												3
4						2	3	3	2		1	
5			2	2	2	1				2	1	

MAPPING OF PROGRAM SPECIFIC OBJECTIVES WITH PROGRAMME OUTCOMES

Abroad relation between the Program Specific Objectives and the outcomes is given in the following table

PROGRAM SPECIFIC OBJECTIVES	PROGRAMME OUTCOMES											
	A	B	C	D	E	F	G	H	I	J	K	L
1	3	2			3				2	2		
2				3			3	3			3	
3	1		2		3	2						

Contribution 1: Reasonable **2: Significant** **3: Strong**

MAPPING OF COURSE OUTCOMES WITH PROGRAM OUTCOMES

A broad relation between the Course Outcomes and Program Outcomes (POs) and Program Specific Outcomes (PSOs) are given in the following table

Sem	Course Title	Program Outcomes (POs)												PSOs		
		1	2	3	4	5	6	7	8	9	10	11	12	1	2	3
I	Communicative English		√		√					√	√		√	√	√	√

REGULATION – 2021
CHOICE BASED CREDIT SYSTEM
I - VIII SEMESTERS SYLLABUS
SEMESTER I

HS1101	COMMUNICATIVE ENGLISH	L	T	P	C
	(Common for all Branches of B.E. /B. Tech Programmes)	3	0	0	3

OBJECTIVES

- To develop the basic reading and writing skills of first year engineering and technology students.
- To help learners develop their listening skills, which will, enable them listen to lectures and comprehend them by asking questions; seeking clarifications.
- To help learners develop their speaking skills and speak fluently in real contexts.
- To help learners develop vocabulary of a general kind by developing their reading skills.

UNIT I	**SHARING INFORMATION RELATED TO ONESELF/FAMILY& FRIENDS**	**9**
Reading – critical reading – finding key information in a given text – shifting facts from opinions - Writing - autobiographical writing - developing hints. Listening- short texts- short formal and informal conversations. Speaking- basics in speaking - introducing oneself - exchanging personal information- speaking on given topics & situations Language development– voices- Wh- Questions- asking and answering-yes or no questions– parts of speech. Vocabulary development-- prefixes- suffixes- articles - Polite Expressions.		**CO1**
UNIT II	**GENERAL READING AND FREE WRITING**	**9**
Reading: Short narratives and descriptions from newspapers (including dialogues and conversations ; Reading Comprehension Texts with varied question types - Writing – paragraph writing- topic sentence- main ideas- free writing, short narrative descriptions using some suggested vocabulary and structures –. Listening - long texts - TED talks - extensive speech on current affairs and discussions Speaking – describing a simple process – asking and answering questions - Language development – prepositions, clauses. Vocabulary development- guessing meanings of words in context – use of sequence words.		**CO2**
UNIT III	**GRAMMAR AND LANGUAGE DEVELOPMENT**	**9**
Reading- short texts and longer passages (close reading) & making a critical analysis of the given text Writing – types of paragraph and writing essays – rearrangement of jumbled sentences. Listening: Listening to ted talks and long speeches for comprehension. Speaking- role plays - asking about routine actions and expressing opinions. Language development- degrees of comparison- pronouns- Direct vs. Indirect Questions. Vocabulary development – idioms and phrases- cause & effect expressions, adverbs.		**CO3**
UNIT IV	**READING AND LANGUAGE DEVELOPMENT**	**9**
Reading- comprehension-reading longer texts- reading different types of texts- magazines. Writing- letter writing, informal or personal letters-e-mails-conventions of personal email- Listening: Listening comprehension (IELTS, TOEFL and others). Speaking -Speaking about friends/places/hobbies - Language development- Tenses- simple present-simple past- present continuous and past continuous- conditionals – if, unless, in case, when and others Vocabulary development- synonyms-antonyms- Single word substitutes- Collocations.		**CO4**

UNIT V	EXTENDED WRITING	9
Reading: Reading for comparisons and contrast and other deeper levels of meaning –Writing-brainstorming -writing short essays – developing an outline- identifying main and subordinate ideas- dialogue writing- Listening - popular speeches and presentations - Speaking - impromptu speeches & debates Language development-modal verbs- present/ past perfect tense - Vocabulary development-Phrasal verbs- fixed and semi-fixed expressions.		CO5

TOTAL : 45 PERIODS

4. Comfort, Jeremy, et al. Speaking Effectively: Developing Speaking Skills for Business English. Cambridge University Press, Cambridge: Reprint 2011
5. Dutt P. Kiranmai and Rajeevan Geeta Basic Communication Skills, Foundation Books: 2013
6. John Eastwood et al : Be Grammar Ready: The Ultimate Guide to English Grammar, Oxford University Press: 2020. .

COURSE OUTCOMES
Upon completion of the course, students will be able to

CO1	Speak clearly, confidently, comprehensibly, and communicate with one or many listeners using appropriate communicative strategies.
CO2	Write cohesively and coherently and flawlessly avoiding grammatical errors, using a wide vocabulary range, organizing their ideas logically on a topic.
CO3	Read different genres of texts adopting various reading strategies.
CO4	Listen/view and comprehend different spoken discourses/excerpts in different accents
CO5	Identify topics and formulate questions for productive inquiry

MA1102	ENGINEERING MATHEMATICS –I	L	T	P	C
	(Common for all branches of B.E. /B. Tech Programmes)	3	1	0	4

OBJECTIVES

- The goal of this course is to achieve conceptual understanding and to retain the best traditions of traditional calculus.
- The syllabus is designed to provide the basic tools of calculus mainly for the purpose of modeling the engineering problems mathematically and obtaining solutions.
- Matrix Algebra is one of the powerful tools to handle practical problems arising in the field of engineering.
- This is a foundation course of Single Variable and multivariable calculus plays an important role in the understanding of science, engineering, economics and computer science, among other disciplines.

UNIT I	MATRICES	12
Eigenvalues and Eigenvectors of a real matrix – Characteristic equation – Properties of Eigenvalues and Eigenvectors – Cayley-Hamilton theorem – Diagonalization of matrices – Reduction of a quadratic form to canonical form by orthogonal transformation – Nature of quadratic forms		**CO1**
UNIT II	**CALCULUS OF ONE VARIABLE**	**12**
Limit of a function - Continuity - Derivatives - Differentiation rules – Interval of increasing and decreasing functions – Maxima and Minima - Intervals of concavity and convexity.		**CO2**
UNIT III	**CALCULUS OF SEVERAL VARIABLES**	**12**
Partial differentiation – Homogeneous functions and Euler's theorem – Total derivative – Change of variables – Jacobians – Partial differentiation of implicit functions – Taylor's series for functions of two variables – Maxima and minima of functions of two variables – Lagrange's method of undetermined multipliers.		**CO3**
UNIT IV	**INTEGRAL CALCULUS**	**12**
Definite and Indefinite integrals - Substitution rule - Techniques of Integration - Integration by parts, Trigonometric integrals, Trigonometric substitutions, Integration of rational functions by partial fraction, Integration of irrational functions - Improper integrals.		**CO4**
UNIT V	**MULTIPLE INTEGRALS**	**12**
Double integrals – Change of order of integration – Double integrals in polar coordinates – Area enclosed by plane curves – Change of variables from Cartesian to polar in double integrals-Triple integrals – Volume of solids		**CO5**
		TOTAL : 60 PERIODS

TEXT BOOKS

1. Grewal B.S., Higher Engineering Mathematics‖, Khanna Publishers, New Delhi, 43rd Edition, 2014.
2. James Stewart, "Calculus: Early Transcendental", Cengage Learning, 7th Edition, New Delhi, 2015. [For Units I & III - Sections 2.2, 2.3, 2.5, 2.7(Tangents problems only), 2.8, 3.1 to 3.6, 3.11, 4.1, 4.3, 5.1(Area problems only), 5.2, 5.3, 5.4 (excluding net change theorem), 5.5, 7.2 - 7.4 and 7.8].

REFERENCE BOOKS

1. Anton, H, Bivens, I and Davis, S, "Calculus", Wiley, 10th Edition, 2016.
2. Jain R.K. and Iyengar S.R.K., —Advanced Engineering Mathematics‖, Narosa Publications, New Delhi, 3rd Edition, 2007.
3. Narayanan, S. and Manicavachagom Pillai, T. K., —Calculus" Volume I and II, S. Viswanathan Publishers Pvt. Ltd., Chennai, 2007.
4. Srimantha Pal and Bhunia, S.C, "Engineering Mathematics" Oxford University Press, 2015.
5. T. Veerarajan. Engineering Mathematics – I, McGraw Hill Education; First edition 2017.

COURSE OUTCOMES
Upon completion of the course, students will be able to

CO1	Have a clear idea of matrix algebra pertaining Eigenvalues and Eigenvectors in addition dealing with quadratic forms.
CO2	Understand the concept of limit of a function and apply the same to deal with continuity and derivative of a given function. Apply differentiation to solve maxima and minima problems, which are related to real world problems.
CO3	Have the idea of extension of a function of one variable to several variables. Multivariable functions of real variables are inevitable in engineering.
CO4	Understand the concept of integration through fundamental theorem of calculus. Also acquire skills to evaluate the integrals using the techniques of substitution, partial fraction and integration by parts along with the knowledge of improper integrals.
CO5	Do double and triple integration so that they can handle integrals of higher order which are applied in engineering field.

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

PH1103	ENGINEERING PHYSICS	L	P	T	C
(Common for all branches of B.E. /B. Tech Programmes)		3	0	0	3

OBJECTIVES

To make the students conversant with

- Elastic properties of materials and various moduli of elasticity.
- Principles of laser and fiber optics and its various technological applications.
- Thermal conduction in solids, heat exchangers and its applications in various devices.
- Quantum concepts to explain black body radiation, Compton effect and matter waves.
- Various crystal structures, Miller indices and crystal growth techniques.

UNIT I	PROPERTIES OF MATTER	9
Elasticity – Stress-strain diagram and its uses - factors affecting elastic modulus and tensile strength – torsional stress and deformations – twisting couple - torsion pendulum: theory and experiment - bending of beams - bending moment – cantilever: theory and experiment – uniform and non-uniform bending: theory and experiment – Practical applications of modulus of elasticity- I shaped girders - stress due to bending in beams.		**CO1**
UNIT II	**LASER AND FIBER OPTICS**	**9**
Lasers : population of energy levels, Einstein's A and B coefficients derivation – resonant cavity, optical amplification (qualitative) – Nd-YAG Laser-Semiconductor lasers: homojunction and heterojunction – Industrial and medical applications of Laser– Fiber optics: principle, numerical aperture and acceptance angle - types of optical fibres (material, refractive index, mode) – losses associated with optical fibers – Fabrication of Optical fiber-Double crucible method-fibre optic sensors: pressure and displacement-Industrial and medical applications of optical fiber-Endoscopy-Fiber optic communication system.		**CO2**
UNIT III	**THERMAL PHYSICS**	**9**
Transfer of heat energy – thermal expansion of solids and liquids – expansion joints - bimetallic strips - thermal conduction, convection and radiation – heat conductions in solids – thermal conductivity –Rectilinear flow of heat- conduction through compound media (series and parallel)- Lee's disc method: theory and experiment - Radial flow of heat– thermal insulation – applications: heat exchangers, refrigerators, oven, Induction furnace and solar water heaters.		**CO3**
UNIT IV	**QUANTUM PHYSICS**	**9**
Black body radiation – Planck's theory (derivation) – Compton effect: theory and experimental verification – wave particle duality – electron diffraction – concept of wave function and its physical significance – Schrödinger's wave equation – time independent and time dependent equations – particle in a one-dimensional rigid box – Electron microscope- tunnelling (qualitative) - scanning tunnelling microscope-Applications of electron microscopy.		**CO4**
UNIT V	**CRYSTAL PHYSICS**	**9**
Single crystalline, polycrystalline and amorphous materials – single crystals: unit cell, crystal		

systems, Bravais lattices, directions and planes in a crystal, Miller indices – inter-planar distances coordination number and packing factor for SC, BCC, FCC, HCP and diamond structures – Graphite structure-crystal imperfections: point defects, line defects – Burger vectors, stacking faults – growth of single crystals: solution and melt growth techniques-Epitaxial growth-Applications of Single crystal (Qualitative).	**CO5**

TOTAL : 45 PERIODS

TEXT BOOKS

1. Bhattacharya, D.K. & Poonam, T. “Engineering Physics”. Oxford University Press, 2017.
2. Gaur, R.K. & Gupta, S.L. “Engineering Physics”. Dhanpat Rai Publishers, 2012.
3. Pandey, B.K. & Chaturvedi, S. “Engineering Physics”. Cengage Learning India, 2013.

REFERENCE BOOKS

2. Serway, R.A. & Jewett, J.W. “Physics for Scientists and Engineers”. Cengage Learning, 2019.
3. Tipler, P.A. & Mosca, G. “Physics for Scientists and Engineers with Modern Physics’. W.H.Freeman, 2014.

COURSE OUTCOMES

Upon completion of the course, the students will gain knowledge on

CO1	The elastic property and stress strain diagram, determination of rigidity modulus by torsional pendulum and Young’s modulus by various methods.
CO2	Principle of laser, Einstein’s coefficients of laser action, semiconductor laser and its applications, optical fibers and their applications in sensors and communication system.
CO3	The heat transfer through solids and the determination of thermal conductivity in a bad conductor by Lee’s disc method and radial flow of heat.
CO4	The quantum concepts and its use to explain black body radiation, Compton effect and wave equation for matter waves, tunnelling electron microscopy and its applications.
CO5	The importance of various crystal structures, Miller indices and various growth techniques.

MAPPING OF COs WITH POs AND PSOs

CY1104	ENGINEERING CHEMISTRY	L	P	T	C
	(Common for all branches of B.E. /B. Tech Programmes)	3	0	0	3

OBJECTIVES

To make the student conversant with the

- Principles of water characterization and treatment for industrial purposes.
- Principles and applications of surface chemistry and catalysis.
- Phase rule and various types of alloys
- Various types of fuels, applications and combustion
- Conventional and non–conventional energy sources and energy storage device

UNIT I	WATER AND ITS TREATMENT	9
Hardness of water – Types – Expression of hardness – Units – Estimation of hardness by EDTA method – Numerical problems on EDTA method – Boiler troubles (scale and sludge, caustic embrittlement , boiler corrosion, priming and foaming) – Treatment of boiler feed water – Internal treatment (carbonate, phosphate, colloidal, sodium aluminate and calgon conditioning) – External treatment – Ion exchange process, Zeolite process – Desalination of brackish water by reverse Osmosis.		**CO1**
UNIT II	**SURFACE CHEMISTRY AND CATALYSIS**	**9**
Surface chemistry : Types of adsorption – Adsorption of gases on solids – Adsorption of solute from solutions – Adsorption isotherms – Freundlich's adsorption isotherm – Langmuir's adsorption isotherm – Kinetics of uni-molecular surface reactions – Adsorption in chromatography – Applications of adsorption in pollution abatement using PAC. **Catalysis**: Catalyst – Types of catalysis – Criteria – Contact theory – Catalytic poisoning and catalytic promoters – Industrial applications of catalysts – Catalytic convertor – Auto catalysis – Enzyme catalysis – Michaelis-Menten equation.		**CO2**
UNIT III	**PHASE RULE AND ALLOYS**	**9**
Phase rule: Introduction – Definition of terms with examples – One component system – Water system – Reduced phase rule – Thermal analysis and cooling curves – Two component systems – Lead-silver system – Pattinson process. **Alloys**: Introduction – Definition – Properties of alloys – Significance of alloying – Functions and effect of alloying elements – Nichrome, Alnico, Stainless steel (18/8) – Heat treatment of steel – Non-ferrous alloys – Brass and bronze.		CO3
UNIT IV	**FUELS AND COMBUSTION**	**9**
Fuels: Introduction – classification of fuels – Comparison of solid, liquid, gaseous fuels – Coal – Analysis of coal (proximate and ultimate) – Carbonization – Manufacture of metallurgical coke (Otto Hoffmann method) – Petroleum – Cracking – Manufacture of synthetic petrol (Bergius process, Fischer Tropsch Process) – Knocking – Octane number – Diesel oil – Cetane number – Compressed natural gas (CNG) – Liquefied petroleum gases (LPG) – Power alcohol and biodiesel. **Combustion of fuels**: Introduction – Calorific value – Higher and lower calorific values – Theoretical calculation of calorific value – Ignition temperature – Spontaneous ignition temperature – Explosive range – Flue gas analysis by Orsat Method.		CO4
UNIT V	**NON–CONVENTIONAL ENERGY SOURCES AND STORAGE DEVICES**	**9**
Nuclear energy – Fission and fusion reactions – Differences – Chain reactions – Nuclear reactors – Classification of reactors – Light water nuclear reactor for power generation – Breeder reactor – Solar energy conversion – Solar cells – Wind energy – Fuel cells – Hydrogen-oxygen fuel cell .Batteries – Types of batteries - Alkaline batteries – Lead-acid, Nickel-cadmium and Lithium batteries.		CO5
		TOTAL : 45 PERIODS

TEXT BOOKS

1. P.C.Jain, Monica Jain, "Engineering Chemistry" 17th Ed., Dhanpat Rai Pub. Co., New Delhi, (2015).
2. S.S. Dara, S.S. Umare, "A text book of Engineering Chemistry" S.Chand & Co.Ltd., New Delhi (2020).
3. S. Vairam, P. Kalyani and Suba Ramesh, "Engineering Chemistry", Wiley India (P) Ltd. New Delhi, (2018).
4. P. Kannan, A. Ravikrishnan, "Engineering Chemistry", Sri Krishna Hi-tech Publishing Company (P) Ltd., Chennai, (2009).

REFERENCE BOOKS

1. B.K.Sharma "Engineering Chemistry" Krishna Prakasan Media (P) Ltd., Meerut (2001).
2. B. Sivasankar "Engineering Chemistry" Tata McGraw–Hill Pub.Co.Ltd, New Delhi (2008).
3. Prasanta Rath, "Engineering Chemistry", Cengage Learning India (P) Ltd., Delhi, (2015).
4. Shikha Agarwal, "Engineering Chemistry–Fundamentals and Applications", Cambridge University Press, Delhi, (2015).
5. A. Pahari, B. Chauhan, "Engineering Chemistry", Firewall Media, New Delhi., (2010).
6. A. Sheik Mideen, Engineering Chemistry, Airwalk Publications, Chennai (2018)

COURSE OUTCOMES

Upon completion of the course, the students should be

CO1	Able to understand impurities in industrial water, boiler troubles, internal and external treatment methods of purifying water.
CO2	Able to understand concepts of absorption, adsorption, adsorption isotherms, application of adsorption for pollution abatement, catalysis and enzyme kinetics.
CO3	Able to recognize significance of alloying, functions of alloying elements and types of alloys, uses of alloys, phase rule, reduced phase and its applications in alloying.
CO4	Able to identify various types of fuels, properties, uses and analysis of fuels. They should be able to understand combustion of fuels, method of preparation of bio-diesel, synthetic petrol.
CO5	Able to understand conventional, non-conventional energy sources, nuclear fission and fusion, power generation by nuclear reactor, wind, solar energy and preparation, uses of various batteries.

MAPPING OF COs WITH POs AND PSOs

GE1105	PROBLEM SOLVING AND PYTHON PROGRAMMING	L	T	P	C
	(Common for all branches of B.E. /B. Tech Programmes)	3	0	0	3

OBJECTIVES

- To know the basics of algorithmic problem solving
- To write simple python programs
- To develop python program by using control structures and functions
- To use python predefined data structures
- To write file based program

UNIT I	ALGORITHMIC PROBLEM SOLVING	9
Algorithms, building blocks of algorithms (statements, state, control flow, functions), notation (pseudo code, flow chart, programming language), algorithmic problem solving, Basic algorithms, flowcharts and pseudocode for sequential, decision processing and iterative processing strategies, Illustrative problems: find minimum in a list, insert a card in a list of sorted cards, guess an integer number in a range, Towers of Hanoi.		**CO1**
UNIT II	**INTRODUCTION TO PYTHON**	**9**
Python Introduction, Technical Strength of Python, Python interpreter and interactive mode; Introduction to colab, pycharm and jupyter idle(s) ,values and types: int, float, boolean, string, and list; Built-in data types, variables, Literals, Constants, statements, Operators; Assignment, Arithmetic, Relational, Logical, Bitwise operators and their precedence, , expressions, tuple assignment; Accepting input from Console, printing statements, Simple 'Python' programs.		**CO2**
UNIT III	**CONTROL FLOW, FUNCTIONS AND STRINGS**	**9**
Conditionals: Boolean values and operators, conditional (if), alternative (if-else), chained conditional (if-elif-else); Iteration: while, for; Loop manipulation using pass, break, continue, and else; Modules and Functions, function definition and use, flow of execution, parameters and arguments; local and global scope, return values, function composition, recursion; Strings: string slices, immutability, string functions and methods, string module; Illustrative programs: square root, gcd, exponentiation, sum an array of numbers, linear search, binary search.		**CO3**
UNIT IV	**LISTS, TUPLES, DICTIONARIES**	**9**
Lists: Defining list and list slicing, list operations, list slices, list methods, list loop, List Manipulation, mutability, aliasing, cloning lists, list parameters; Lists as arrays, Tuples: tuple assignment, tuple as return value, Tuple Manipulation; Dictionaries: operations and methods; advanced list processing – list comprehension; Illustrative programs: selection sort, insertion sort, mergesort, histogram.		**CO4**

UNIT V	FILES, MODULES, PACKAGES	9
Files and exception: Concept of Files, Text Files; File opening in various modes and closing of a file, Format Operators, Reading from a file, Writing onto a file, File functions-open(), close(), read(), readline(), readlines(),write(), writelines(),tell(),seek(), Command Line arguments. Errors and exceptions, handling exceptions, modules, packages; introduction to numpy, matplotlib. Illustrative programs: word count, copy file.		**CO5**

TOTAL : 45 PERIODS

6. Paul Gries, Jennifer Campbell and Jason Montojo, —Practical Programming: An Introduction.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Develop algorithmic solutions to simple computational problems
CO2	Develop simple console application in python
CO3	Develop python program by applying control structure and decompose program into functions.
CO4	Represent compound data using python lists, tuples, and dictionaries.
CO5	Read and write data from/to files in Python.

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	3	3	3	-	2	-	-	2	3	2	-	2	2	1	1
CO2	3	3	3	-	2	-	-	2	3	2	-	2	2	1	1
CO3	3	3	3	-	2	-	-	2	3	2	-	2	1	2	2
CO4	3	3	3	-	2	-	-	2	3	2	-	2	1	2	2
CO5	3	3	3	-	2	-	-	2	3	2	-	2	1	2	1

GE1106	ENGINEERING GRAPHICS	L	T	P	C
	(Common for all branches of B.E. /B. Tech Programmes)	2	0	4	4

OBJECTIVES

- To develop in students, graphic skills for communication of concepts, ideas and design of Engineering products
- To expose them to existing national standards related to technical drawings.

CONCEPTS AND CONVENTIONS (Not for Examination)		**1**
Importance of graphics in engineering applications – Use of drafting instruments – BIS conventions and specifications – Size, layout and folding of drawing sheets – Lettering and dimensioning.		
UNIT I	**PLANE CURVES AND FREEHAND SKETCHING**	**7+12**
Basic Geometrical constructions, Curves used in engineering practices: Conics – Construction of ellipse, parabola and hyperbola by eccentricity method – Construction of cycloid – construction of involutes of square and circle – Drawing of tangents and normal to the above curves. Visualization concepts and Free Hand sketching: Visualization principles –Representation of Three-Dimensional objects – Layout of views- Freehand sketching of multiple views from pictorial views of objects		**CO1**
UNIT II	**PROJECTION OF POINTS, LINES AND PLANE SURFACE**	**6+12**
Orthographic projection- principles-Principal planes-First angle projection-projection of points. Projection of straight lines (only First angle projections) inclined to both the principal planes - Determination of true lengths and true inclinations by rotating line method and traces Projection of planes (polygonal and circular surfaces) inclined to both the principal planes by rotating object method.		**CO2**
UNIT III	**PROJECTION OF SOLIDS**	**5+12**
Projection of simple solids like prisms, pyramids, cylinder, cone and truncated solids when the axis is inclined to one of the principal planes by rotating object method.		**CO3**
UNIT IV	**PROJECTION OF SECTIONED SOLIDS AND DEVELOPMENT OFSURFACES**	**6+12**
Sectioning of above solids in simple vertical position when the cutting plane is inclined to the one of the principal planes and perpendicular to the other – obtaining true shape of section. Development of lateral surfaces of simple and sectioned solids – Prisms, pyramids cylinders and cones.		**CO4**
UNIT V	**ISOMETRIC AND PERSPECTIVE PROJECTIONS**	**6+12**
Principles of isometric projection – isometric scale –Isometric projections of simple solids and truncated solids - Prisms, pyramids, cylinders, cones- combination of two solid objects in simple vertical positions - Perspective projection of simple solids-Prisms, pyramids and cylinders by visual ray method.		**CO5**
		TOTAL : 90 PERIODS

TEXT BOOKS

1. Natarajan K.V., “A text book of Engineering Graphics”, Dhanalakshmi Publishers, Chennai, Twenty Ninth Edition 2016
2. Venugopal K. and Prabhu Raja V., “Engineering Graphics”, New Age International (P) Limited, 2011.

REFERENCE BOOKS

1. Bhatt N.D. and Panchal V.M., “Engineering Drawing”, Charotar Publishing House, 53rd Edition, 2019.
2. Basant Agarwal and Agarwal C.M., “Engineering Drawing”, Tata McGraw Hill Publishing Company Limited, New Delhi, 2008.
3. Gopalakrishna K.R., “Engineering Drawing” (Vol. I&II combined), Subhas Stores, Bangalore, 2018.
4. Luzzader, Warren.J. and Duff,John M., “Fundamentals of Engineering Drawing with an introduction to Interactive Comput er Graphics for Design and Production, Eastern Economy Edition, Prentice Hall of India Pvt. Ltd, New Delhi, 2005.
5. N S Parthasarathy and Vela Murali, “Engineering Graphics”, Oxford University, Press, New Delhi, 2015.
6. Shah M.B., and Rana B.C., “Engineering Drawing”, Pearson, 2nd Edition, 2009.

COURSE OUTCOMES
Upon completion of the course, students will be able to

CO1	Understand the fundamentals and standards of Engineering graphics
CO2	Perform freehand sketching of basic geometrical constructions and multiple views of objects
CO3	Understand the concept of orthographic projections of lines and plane surfaces
CO4	Draw the projections of section of solids and development of surfaces
CO5	Visualize and to project isometric and perspective sections of simple solids

GE1107	PYTHON PROGRAMMING LABORATORY	L	T	P	C
	(Common for all branches of B.E. /B. Tech Programmes)	0	0	4	2

OBJECTIVES

- To write, test, and debug simple Python programs.
- To implement Python programs with conditionals and loops.
- Use functions for structuring Python programs.
- Represent compound data using Python lists, tuples, and dictionaries.
- Read and write data from/to files in Python.

LIST OF EXPERIMENTS

Experiment	CO
1. Write an algorithm, draw flowchart illustrating mail merge concept.	CO1
2. Write an algorithm , draw flowchart and write pseudo code for a real life or scientific or technical problems	
3. Scientific problem solving using decision making and looping. • Armstrong number, palindrome of a number, Perfect number.	
4. Simple programming for one dimensional and two dimensional arrays. • Transpose, addition, multiplication, scalar , determinant of a matrix	
5. Program to explore string functions and recursive functions.	CO2
6. Utilizing 'Functions' in Python • Find mean, median, mode for the given set of numbers in a list. • Write a function dups to find all duplicates in the list. • Write a function unique to find all the unique elements of a list. • Write function to compute gcd, lcm of two numbers.	
7. Demonstrate the use of Dictionaries and tuples with sample programs.	
8. Implement Searching Operations: Linear and Binary Search.	
9. To sort the 'n' numbers using: Selection, Merge sort and Insertion Sort.	
10. Find the most frequent words in a text of file using command line arguments.	CO3
11. Demonstrate Exceptions in Python.	
12. Applications**:** Implementing GUI using turtle, pygame.	

TOTAL : 60 PERIODS

LIST OF EQUIPMENT FOR A BATCH OF 30 STUDENTS

Python 3 interpreter for Windows/Linux

1. http://www.edx.org

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Develop simple console applications through python with control structure and functions
CO2	Use python built in data structures like lists, tuples, and dictionaries for representing compound data.
CO3	Read and write data from/to files in Python and applications of python.

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	3	3	3	-	2	-	-	2	3	2	-	2	2	-	-
CO2	3	3	3	-	2	-	-	2	3	2	-	2	2	1	1
CO3	3	3	3	-	2	-	-	2	3	2	-	2	2	-	1

BS1108	PHYSICS AND CHEMISTRY LABORATORY	L	T	P	C
	(Common for all branches of B.E. /B. Tech Programmes)	0	0	4	2

OBJECTIVES

The students will be trained to perform experiments to study the following.

- The Properties of Matter
- The Optical properties , Characteristics of Lasers & Optical Fibre
- Electrical & Thermal properties of Materials
- Enable the students to enhance accuracy in experimental measurements.
- To make the student to acquire practical skills in the determination of water quality parameters through volumetric analysis
- Instrumental method of analysis such as potentiometry, conductometry and pHmetry

LIST OF EXPERIMENTS - PHYSICS

(A minimum of 5 experiments to be performed from the given list)	
1. Determination of Young's modulus of the material of the given beam by Non-uniform bending method.	CO1
2. Determination of rigidity modulus of the material of the given wire using torsion pendulum.	CO1
3. Determination of wavelength of mercury spectra using Spectrometer and grating.	CO2
4. Determination of dispersive power of prism using Spectrometer.	CO2
5. (a) Determination of wavelength and particle size using a laser. (b) Determination of numerical aperture and acceptance angle of an optical fibre. (c) Determination of width of the groove of compact disc using laser.	CO2
6. Determination of Young's modulus of the material of the given beam by uniform bending method.	CO1
7. Determination of energy band gap of the semiconductor.	CO2
8. Determination of coefficient of thermal conductivity of the given bad conductor using Lee's disc.	CO2
DEMONSTRATION EXPERIMENT	
1. Determination of thickness of a thin sheet / wire – Air wedge method	CO1

LIST OF EXPERIMENTS - CHEMISTRY

(A minimum of 6 experiments to be performed from the given list)	
1. Estimation of HCl using Na_2CO_3 as primary standard and determination of alkalinity in water sample.	CO5
2. Determination of total, temporary & permanent hardness of water by EDTA method.	CO5
3. Determination of DO content of water sample by Winkler's method.	CO5
4. Determination of chloride content of water sample by argentometric method.	CO3
5. Estimation of copper content of the given solution by Iodometry.	CO3
6. Determination of strength of given hydrochloric acid using pH meter.	CO3
7. Determination of strength of acids in a mixture of acids using conductivity meter.	CO4
8. Estimation of iron content of the given solution using potentiometer.	CO4
9. Determination of molecular weight of polyvinyl alcohol using Ostwald viscometer.	CO4
10. Conductometric titration of strong acid vs strong base.	CO4
DEMONSTRATION EXPERIMENTS	
1. Estimation of iron content of the water sample using spectrophotometer (1,10- Phenanthroline / thiocyanate method).	CO3
2. Estimation of sodium and potassium present in water using flame	CO5

TOTAL : 60 PERIODS

COURSE OUTCOMES **Upon completion of the course, the students should be**	
CO1	Able to understand the concept about the basic properties of matter like stress, strain and types of moduli. Able to understand the procedure to estimate the amount of dissolved oxygen present in the water.
CO2	Able to understand the concept of optics like reflection, refraction, diffraction by using spectrometer grating. Able to understand the concept about measuring the conductance of strong acid and strong base and mixture of acids by using conductivity meter.
CO3	Able to understand the thermal properties of solids and to calculate thermal conductivity of a bad conductor. Able to understand the principle and procedure involved in the amount of chloride present in the given sample of water.
CO4	Able to understand the concept of microscope and its applications in determining the moduli. Able to understand the concept of determining the emf values by using potentiometer.
CO5	Able to calculate the particle size of poly crystalline solids. Able to understand the concept of determining the pH value and strength of a given acid sample by using pH meter.

SEMESTER II

HS1201	PROFESSIONAL ENGLISH	L	T	P	C
(Common for all branches of B.E. /B. Tech Programmes)		3	0	0	3

OBJECTIVES

- Develop strategies and skills to enhance their ability to read and comprehend engineering and technology texts.
- Foster their ability to write convincing job applications and effective reports.
- Develop their speaking skills to make technical presentations, participate in group discussions.
- Strengthen their listening skill which will help them comprehend lectures and talks in their areas of specialization.

UNIT I	INTRODUCTION TO PROFESSIONAL ENGLISH	9
Listening: Listening to technical talks with comprehension tasks -Speaking– conversationmethodsinreallifeoccurrencesusingexpressions of different emotions and imperative usages- Reading – reading short technical texts from journals- newspapers-Writing- purpose statements – extended definitions – writing instructions – checklists-recommendations- Vocabulary Development- technical vocabulary Language Development –tenses- subject verb agreement - compound words.		**CO1**
UNIT II	**READING AND STUDY SKILLS**	**9**
Listening-Listening Comprehension of a discussion on a technical topic of common interest by three or four participants (real life as well as online videos). -Speaking – describing a process- Reading: Practice in chunking and speed reading - Paragraphing- Writing- interpreting charts, graphs- Vocabulary Development: Important foreign expressions in Use, homonyms, homophones, homographs- easily confused words Language Development- impersonal passive voice, numerical adjectives.		**CO2**
UNIT III	**TECHNICAL WRITING AND GRAMMAR**	**9**
Listening – listening to conversation – effective use of words and their sound aspects, stress, intonation & pronunciation - Speaking – mechanics of presentations -Reading: Reading longer texts for detailed understanding. (GRE/IELTS practice tests); Writing-Describing a process, use of sequence words- Vocabulary Development- sequence words- Informal vocabulary and formal substitutes-Misspelled words. Language Development- embedded sentences and Ellipsis.		**CO3**
UNIT IV	**REPORT WRITING**	**9**
Listening – Model debates & documentaries and making notes. Speaking – expressing agreement/disagreement, assertiveness in expressing opinions-Reading: Technical reports, advertisements and minutes of meeting - Writing- email etiquette- job application – cover letter –Résumé preparation(via email and hard copy)- analytical essays and issue based essays--Vocabulary Development- finding suitable synonyms-paraphrasing- Language Development- clauses- if conditionals.		**CO4**
UNIT V	**GROUP DISCUSSION AND JOB APPLICATIONS**	**9**
Listening: Extensive Listening. (radio plays, rendering of poems, audio books and others) Speaking –participating in a group discussion - Reading: Extensive Reading (short stories, novels, poetry and others)– Writing reports- minutes of a meeting- accident and survey- Writing a letter/ sending an email to the Editor - cause and effect sentences -Vocabulary Development- verbal analogies. Language Development- reported speech.		**CO5**
		TOTAL : 45 PERIODS

6. Caroline Meyer & Bringi dev, Communicating for Results Oxford University Press: 2021.
7. Aruna Koneru, Professional Speaking Skills, Oxford University Press :2015.

COURSE OUTCOMES
Upon completion of the course, students will be able to

CO1	Speak clearly, confidently, comprehensibly, and communicate with one or many listeners using appropriate communicative strategies.
CO2	Write cohesively and coherently and flawlessly avoiding grammatical errors, using a wide vocabulary range, organizing their ideas logically on a topic.
CO3	Read different genres of texts adopting various reading strategies.
CO4	Listen/view and comprehend different spoken discourses/excerpts in different accents
CO5	Identify topics and formulate questions for productive inquiry

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)

MA1202	ENGINEERING MATHEMATICS - II	L	T	P	C
(Common for all branches of B.E. /B. Tech Programmes Except AI-DS & AI-ML)		3	1	0	4

OBJECTIVES

- This course is designed to cover topics such as Differential Equation, Vector Calculus, Complex Analysis and Laplace Transform. Vector calculus can be widely used for modelling the various laws of physics. The various methods of complex analysis and Laplace transforms can be used for efficiently solving the problems that occur in various branches of engineering disciplines

UNIT I	**ORDINARY DIFFERENTIAL EQUATIONS**	**12**
Higher order linear differential equations with constant coefficients - Method of variation of parameters– Homogenous equation of Euler‘s and Legendre‘s type – System of simultaneous linear differential equations with constant coefficients		**CO1**
UNIT II	**VECTOR CALCULUS**	**12**
Gradient and directional derivative – Divergence and curl - Vector identities – Irrotational and Solenoidal vector fields – Line integral over a plane curve – Surface integral - Area of a curved surface - Volume integral - Green‘s, Gauss divergence and Stoke‘s theorems – Verification and application in evaluating line, surface and volume integrals		**CO2**
UNIT III	**COMPLEX VARIABLES**	**12**
Analytic functions – Necessary and sufficient conditions for analyticity in Cartesian and polar coordinates - Properties – Harmonic conjugates – Construction of analytic function – Conformal mapping – Mapping by functions $w = Z + C$, CZ, $1/Z$ - Bilinear transformation		**CO3**
UNIT IV	**COMPLEX INTEGRATION**	**12**
Cauchy‘s integral theorem – Cauchy‘s integral formula – Taylor‘s and Laurent‘s series – Singularities – Residues – Residue theorem – Application of residue theorem for evaluation of real integrals – Use of circular contour and semi-circular contour(excluding poles on the real line)		**CO4**
UNIT V	**LAPLACE TRANSFORMS**	**12**
Existence conditions – Transforms of elementary functions –Basic properties – Transform of unit step function and unit impulse function - Shifting theorems - transforms of derivatives and integrals –– Inverse transforms – Convolution theorem – Transform of periodic functions – Application to solution of linear second order ordinary differential equations with constant coefficients		**CO5**
		TOTAL : 60 PERIODS

5. Wylie, R.C. and Barrett, L.C., ―Advanced Engineering Mathematics ―Tata McGraw Hill Education Pvt. Ltd, 6th Edition, New Delhi, 2012

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Apply various techniques in solving differential equations
CO2	Gradient, divergence and curl of a vector point function and related identities
CO3	Evaluation of line, surface and volume integrals using Gauss, Stokes and Green's theorems and their verification
CO4	Analytic functions, conformal mapping and complex integration
CO5	Laplace transform and inverse transform of simple functions, properties, various related theorems and application to differential equations with constant coefficients

MAPPING OF COs WITH POs AND PSOs

PH1252	PHYSICS FOR INFORMATION SCIENCE	L	P	T	C
(Common to CSE, IT, AI-DS & AI-ML)		3	0	0	3

OBJECTIVES

To make the student

- To acquire knowledge on the electron transport properties
- To understand the essential principles of semiconductor device
- To have the necessary understanding in optical properties of materials.
- To grasp the principles of magnetic materials and its applications.
- To understand the basics of Nano-electronic devices.

UNIT I	ELECTRICAL PROPERTIES OF MATERIALS	9
Classical free electron theory - Expression for electrical conductivity - Thermal conductivity, expression - Wiedemann-Franz law - Success and failures - electrons in metals - Particle in a three dimensional box - degenerate states - Fermi- Dirac statistics - Density of energy states - Electron in periodic potential - Energy bands in solids - Electron effective mass - concept of hole - Applications of low resistive and high resistive materials.		**CO1**
UNIT II	**SEMICONDUCTOR PHYSICS**	**9**
Intrinsic semiconductors - Energy band diagram - direct and indirect band gap semiconductors - carrier concentration in intrinsic semiconductors - extrinsic semiconductors - carrier concentration in n-type & p-type semiconductors - variation of carrier concentration with temperature - variation of Fermi level with temperature and impurity concentration - carrier transport in semiconductors - Hall effect and devices - Ohmic contacts – Schottky diode - Semiconducting polymers.		**CO2**
UNIT III	**MAGNETIC PROPERTIES OF MATERIALS**	**9**
Magnetism in materials - magnetic dipole moment - magnetic permeability and susceptibility - Microscopic classification of magnetic materials : diamagnetism - paramagnetism - ferromagnetism - antiferromagnetism - ferrimagnetism - Curie temperature - Domain Theory - M versus H behaviour - Hard and soft magnetic materials - examples and uses - Magnetic principle in computer data storage - Magnetic hard disc - Spintronics - GMR Sensor (Giant Magnetoresistance) - TMR (Tunnel Magnetoresistance)		**CO3**
UNIT IV	**OPTICAL PROPERTIES OF MATERIALS**	**9**
Classification of optical materials - carrier generation and recombination processes - Absorption emission and scattering of light in metals, insulators and semiconductors (concepts only) - photo current in a P-N diode - solar cell - LED - Organic LED - p-i-n Photodiodes - Avalanche Photodiodes -Optical data storage techniques- Holography - applications.		**CO4**

UNIT V	NANO DEVICES	9
Electron density in bulk material - Size dependence of Fermi energy - Quantum confinement - Quantum structures - Density of states in quantum well, quantum wire and quantum dot structure - Band gap of nanomaterials - Tunneling: single electron phenomena and single electron transistor - Quantum dot laser - Ballistic transport - Carbon nanotubes: properties and applications - Material Processing by chemical vapour deposition and Laser ablation method - Graphene: properties and applications		**CO5**

TOTAL : 45 PERIODS

TEXT BOOKS

COURSE OUTCOMES

Upon completion of the course, the students will be able to

CO1	Gain knowledge on classical and quantum electron theories and energy band structures.
CO2	Acquire knowledge on basics of semiconductor physics and its applications in various devices.
CO3	Get knowledge on magnetic properties of materials and their applications in data storage.
CO4	Have the necessary understanding on the functioning of optical materials for Optoelectronics.
CO5	Understand the basics of quantum structures and their applications in nano electronic devices.

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUCOMES

GE1204	ENVIRONMENTAL SCIENCE AND ENGINEERING	L	P	T	C
(Common for all branches of B.E. /B. Tech Programmes)		3	0	0	3

OBJECTIVES

- To study the inter relationship between living organisms and environment.
- To appreciate the importance of environment by assessing its impact on the human world; envision the surrounding environment, its functions and its value.
- To find and implement scientific, technological, economic and political solutions to environmental problems.
- To study the integrated themes and biodiversity, natural resources, pollution control and waste management.
- To study the dynamic processes and understand the features of the earth's interior and surface.

UNIT I	ENVIRONMENT, ECOSYSTEM AND BIODIVERSITY	11
Definition, scope and importance of environment – Need for public awareness – Role of Individual in Environmental protection – Concept of an ecosystem – Structure and function of an ecosystem – Producers, consumers and decomposers – Energy flow in the ecosystem – Food chains, food webs and ecological pyramids – Ecological succession – Types, characteristic features, structure and function of forest, grass land, desert and aquatic (ponds, lakes, rivers, oceans, estuaries) ecosystem. Biodiversity – Definition – Genetic, species and ecosystem diversity – Value of biodiversity – Consumptive use, productive use, social, ethical, aesthetic and option values – Biodiversity at global, national and local levels – India as a mega diversity nation – Hot spots of biodiversity – Threats to biodiversity– Habitat loss, poaching of wild life, human-wildlife conflicts – Wildlife protection act and forest conservation act – Endangered and endemic species – Conservation of biodiversity – In-situ and ex-situ conservation of biodiversity.		**CO1**
UNIT II	**ENVIRONMENTAL POLLUTION**	**9**
Definition – Causes, effects and control measures of: (a) Air pollution (b) Water pollution (c) Soil pollution (d) Marine pollution (e) Noise pollution (f) Thermal pollution (g) Nuclear hazards – Solid waste management: causes, effects and control measures of municipal solid wastes – Problems of e-waste – Role of an individual in prevention of pollution – Pollution case studies – Disaster management – Floods, earthquake, cyclone, tsunami and landslides – Field study of local polluted site – Urban / Rural / Industrial / Agricultural.		**CO2**
UNIT III	**NATURAL RESOURCES**	**9**
Forest resources: Uses and over-exploitation – Deforestation – Case studies – Timber extraction, mining, dams and their effects on forests and tribal people – Water resources – Use and overutilization of surface and ground water, floods, drought, conflicts over water – Dams: benefits and problems – Mineral resources: Uses and exploitation – Environmental effects of extracting and using mineral resources – Case studies – Food resources: World food problems – Changes caused by agriculture and overgrazing – Effects of modern agriculture: fertilizer–pesticide problems, water logging, salinity – Case studies – Energy resources: Growing energy needs – Renewable and non renewable energy sources – Use of alternate energy sources – Case studies – Land resources: Land as a resource – Land degradation, man induced landslides, soil erosion and desertification – Role of an individual in conservation of natural resources – Equitable use of resources for sustainable lifestyles – Field study of local area to document environmental assets – River / Forest / Grassland / Hill / Mountain.		**CO3**
UNIT IV	**SOCIAL ISSUES AND THE ENVIRONMENT**	**8**
From unsustainable to sustainable development – Urban problems related to energy – Water conservation, rain water harvesting, watershed management – Resettlement and rehabilitation of people; its problems and concerns, case studies – Role of non-governmental organization – Environmental ethics – Issues and possible solutions – Climate change – Global warming – Acid rain, Ozone layer depletion –Nuclear accidents and holocaust – Case studies – Wasteland		**CO4**

reclamation – Consumerism and waste products – Principles of Green Chemistry – Environment protection act – Air (Prevention and Control of Pollution) Act – Water (Prevention and control of Pollution) Act – Wildlife protection Act – Forest conservation Act – Enforcement machinery involved in environmental legislation– Central and state pollution control boards– National Green Tribunal – Public awareness.

UNIT V	HUMAN POPULATION AND THE ENVIRONMENT	8
Population growth – Variation among nations – Population explosion – Family welfare programme – Environment and human health – Human rights – Value education – HIV / AIDS – COVID 19 – Women and child welfare – Role of information technology in environment and human health – Case studies		CO5

TOTAL : 45 PERIODS

TEXT BOOKS

1. Benny Joseph, 'Environmental Science and Engineering', Tata McGraw-Hill, New Delhi, (2014).
2. Gilbert M. Masters, 'Introduction to Environmental Engineering and Science', 2nd edition, Pearson Education, (2004).
3. Dr. A. Sheik Mideen and S.Izzat Fathima, "Environmental Science and Engineering", Airwalk Publications, Chennai, (2018).

REFERENCE BOOKS

1. Dharmendra S. Sengar, 'Environmental law', Prentice hall of India Pvt Ltd, New Delhi, (2007).
2. Erach Bharucha, "Textbook of Environmental Studies", Universities Press (I) Pvt, Ltd, Hyderabad, (2015).
3. G. Tyler Miller, Scott E. Spoolman, "Environmental Science", Cengage Learning India Pvt. Ltd, Delhi, (2014).
4. R. Rajagopalan, 'Environmental Studies - From Crisis to Cure', Oxford University Press, (2005).
5. Anubha Kaushik , C.P. Kaushik, "Perspectives in Environmental Studies", New Age International Pvt. Ltd, New Delhi, (2004).
6. Frank R. Spellman, "Handbook of Environmental Engineering", CRC Press, (2015).

COURSE OUTCOMES
Upon completion of the course, the students should be able

CO1	To obtain knowledge about environment, ecosystems and biodiversity.
CO2	To take measures to control environmental pollution.
CO3	To gain knowledge about natural resources and energy sources.
CO4	To find and implement scientific, technological, economic and political solutions to the environmental problems.
CO5	To understand the impact of environment on human population and human health.

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUCOMES		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	3	2	2	3	3	3	3	3	2	2	2	3	2	1	2
CO2	3	2	3	3	2	3	3	3	3	2	2	3	2	2	2

BE1251	BASIC ELECTRICAL, ELECTRONICS AND MEASUREMENT ENGINEERING	L	T	P	C
(Common to CSE, IT, AI-DS & AI-ML)		3	0	0	3

OBJECTIVES

- To learn the fundamental laws, network theorems and analyse the electric circuits.
- To study the basic principles of electrical machines and their performance.
- To study the fundamentals of power systems.
- To learn the characteristics of various electron devices and Op Amp integrated circuit.
- To understand the principle and operation of measuring instruments and transducers.

UNIT I	**ELECTRIC CIRCUITS ANALYSIS**	**9**
Ohms Law, Kirchhoff's Law-Instantaneous power - Series and parallel circuit: analysis of resistive, capacitive and inductive network, star delta conversion, Nodal analysis and mesh analysis. Network theorems: Thevenin's theorem, Norton's theorem, superposition theorem and maximum power transfer theorem. Three phase ac supply –Instantaneous power, Reactive power and apparent power.		**CO1**
UNIT II	**ELECTRICAL MACHINES**	**9**
DC and AC ROTATING MACHINES: Types, Construction, principle, EMF and torque equation, application, Speed Control. Basics of Stepper Motor and Brushless DC motors. Transformers-Introduction, types and construction, working principle of Ideal transformer, EMF equation, All day efficiency calculation.		**CO2**
UNIT III	**FUNDAMENTALS OF POWER SYSTEM**	**9**
Structure of power system. Sources of electrical energy – Non-renewable, Renewable- Storage systems: Batteries-Ni-Cd, Pb -Acid and Li-ion, SOC (State of Charge), DOD (Depth of Discharge)Characteristics. Utilization of electrical power - DC and AC load applications. - Electric circuit Protection-need for earthing, fuses and circuit breakers.		**CO3**
UNIT IV	**ELECTRON DEVICES AND INTEGRATED CIRCUITS**	**9**
PN Junction-VI Characteristics of Diode, Zener diode, Rectifiers, Zener voltage regulator. Transistor configurations – CE amplifier - RC and LC oscillators. Op Amps – Basic characteristics and its applications.		**CO4**
UNIT V	**MEASURING INSTRUMENTS AND TRANSDUCERS**	**9**
Characteristic of measurement-errors in measurement – Principle and working of indicting instrument- Moving Coil meter, Moving Iron meter, Energy meter and watt meter, Cathode Ray Oscilloscope –- Transducers, thermo-electric, RTD, Strain gauge, LVDT, LDR, and piezoelectric transducer.		**CO5**
		TOTAL : 45 PERIODS

TEXT BOOKS

1. D.P. Kotharti and I.J Nagarath, Basic Electrical and Electronics Engineering, Mc Graw Hill, fourth Edition, 2019
2. M.S. Sukhija and T.K. Nagsarkar, Basic Electrical and Electronic Engineering, Oxford, 2016.

REFERENCE BOOKS

1. S.B. Lal Seksena and Kaustuv Dasgupta, Fundaments of Electrical Engineering, Cambridge, 2016
2. B.L Theraja, Fundamentals of Electrical Engineering and Electronics. S.Chand & Co, 2008.
3. S.K.Sahdev, Basic of Electrical Engineering, Pearson, 2015
4. John Bird, ―Electrical and Electronic Principles and Technology‖, Fourth Edition, Elsevier, sixth edition,2017.
5. Mittle,Mittal, Basic Electrical Engineering‖, 2nd Edition, Tata McGraw-Hill Edition, 2016.
6. C.L.Wadhwa, ―Generation, Distribution and Utilisation of Electrical Energy‖, New Age international pvt.ltd.,2003

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Ability to learn the fundamental laws, theorems of electrical circuits and to analyze them
CO2	Ability to understand the basic construction and operating principle of dc and ac machines.
CO3	Ability to understand the electrical power generation, energy storage and utilization of electric power.
CO4	Ability to understand the characteristics of various electronic devices and Op Amp integrated circuit
CO5	Ability to understand the principles and operation of measuring instruments and transducers.

MAPPING OF COs WITH POs AND PSOs

CS1206	PROGRAMMING IN C	L	T	P	C
(Common to CSE, IT, AI-DS & AI-ML)		3	0	0	3

OBJECTIVES

- To develop C Programs using basic programming constructs
- To develop C programs using arrays, strings and functions
- To develop applications in C using pointers
- To develop applications in C using structures and union
- To develop applications using sequential and random-access file processing.

UNIT I	**BASICS OF C PROGRAMMING**	**9**
An overview of C: History of C; Compiler Vs. Interpreter, Structure of a C Program, Library and Linking, Compiling a C Program; Basic data types , Modifying the basic data types, Variables: Type qualifiers, Storage class specifiers; Constants: Enumeration Constants; Keywords; Operators: Precedence and Associativity; Expressions: Order of evaluation, Type conversion in expression, Casts; Input/Output statements; Assignment statements, Selection statements; Iteration statements; Jump statements; Expression statements; Pre-processor directives: Compilation process		**CO1**
UNIT II	**ARRAYS, STRINGS AND FUNCTIONS**	**9**
Introduction to Arrays: Declaration, Initialization, Single dimensional array, Two dimensional arrays, Array Manipulations; String operations: length, compare, concatenate, copy; Functions: General form of a function, Function Arguments, Built-in functions, return statement, Recursion		**CO2**
UNIT III	**POINTERS**	**9**
Pointers: Declaring and defining pointers, Pointer operators, Pointer expression; Pointer Assignment, Pointer Conversions, Pointer arithmetic, Pointer Comparisons; Pointers and Arrays: Array of pointers; Multiple Indirection; Pointers to function; Problems with Pointers; Parameter passing: Pass by value, Pass by reference.		**CO3**
UNIT IV	**STRUCTURES AND UNIONS**	**9**
Structure: Accessing Structure members, Structure Assignments; Nested structures; Pointer and Structures; Array of structures; Passing Structures to Functions: Passing structure member to function, Passing entire structure to functions; Arrays in Structures; Self-referential structures; Dynamic memory allocation; typedef statement, Union and Enumeration.		**CO4**
UNIT V	**FILE PROCESSING**	**9**
File System Basics: File Pointer, Opening and Closing a File; Reading and Writing Character; Working with String: fputs() and fgets(); rewind(); ferror(); fread() and fwrite(); Erasing files; Types of file processing: Sequential access; Random access: fprintf() and fscanf(), fseek() and ftell(); Command line arguments.		**CO5**
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Herbert Schildt, C The Complete Reference, Fourth Edition, McGraw-Hill.
2. Reema Thareja, "Programming in C", Oxford University Press, Second Edition, 2016.
3. Kernighan, B.W and Ritchie,D.M, -The C Programming language‖, Second Edition, Pearson Education, 2006.

REFERENCE BOOKS

1. Paul Deitel and Harvey Deitel, -C How to Program‖, Seventh edition, Pearson Publication
2. Juneja, B. L and Anita Seth, -Programming in C‖, CENGAGE Learning India pvt. Ltd., 2011.
3. Pradip Dey, Manas Ghosh, -Fundamentals of Computing and Programming in C, First Edition, Oxford University Press, 2009.
4. Anita Goel and Ajay Mittal, -Computer Fundamentals and Programming in C, Dorling Kindersley (India) Pvt. Ltd., Pearson Education in South Asia, 2011.
5. Byron S. Gottfried, "Schaum's Outline of Theory and Problems of Programming with C",McGraw-Hill Education, 1996.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Develop simple applications in C using basic constructs.
CO2	Design and implement applications using arrays, strings and functions.
CO3	Develop and implement applications in C using pointers.
CO4	Develop applications in C using structures and union.
CO5	Design applications using sequential and random-access file processing.

GE1207	ENGINEERING PRACTICES LAB	L	T	P	C
	(Common for all branches of B.E. /B. Tech Programmes)	0	0	4	2

OBJECTIVES:

- To provide exposure to the students with hands on experience on various basic engineering practices in Civil, Mechanical, Electrical and Electronics Engineering

LIST OF EXPERIMENTS

GROUP A (CIVIL & MECHANICAL)

I CIVIL ENGINEERING PRACTICE **13** **CO1**

Buildings:

(a) Study of plumbing and carpentry components of residential and industrial buildings. Safety aspects.

Plumbing Works:

(a) Study of pipeline joints, its location and functions: valves, taps, couplings, unions, reducers, elbows in household fittings.

(b) Study of pipe connections requirements for pumps and turbines.

(c) Preparation of plumbing line sketches for water supply and sewage works.

(d) **Hands-on-exercise:**
Basic pipe connections – Mixed pipe material connection – Pipe connections with different joining components.

(e) Demonstration of plumbing requirements of high-rise buildings.

Carpentry using Power Tools only:

(a) Study of the joints in roofs, doors, windows and furniture.

(b) Hands-on-exercise:
Wood work, joints by sawing, planing and cutting.

II MECHANICAL ENGINEERING PRACTICE **18** **CO2**

Welding:

(a) Preparation of butt joints, lap joints and T- joints by Shielded metal arc welding.

(b) Gas welding practice

Basic Machining:

(a) Simple Turning and Taper turning

(b) Drilling Practice

Sheet Metal Work:

(a) Forming & Bending:

(b) Model making – Trays and funnels.

(c) Different type of joints.

Machine assembly practice:

(a) Study of centrifugal pump

(b) Study of air conditioner

Demonstration on:

(a) Smithy operations, upsetting, swaging, setting down and bending. Example –Exercise – Production of hexagonal headed bolt.

(b) Foundry operations like mould preparation for gear and step cone pulley.

(c) Fitting – Exercises – Preparation of square fitting and V – fitting models.

GROUP B (ELECTRICAL & ELECTRONICS)	
III ELECTRICAL ENGINEERING PRACTICE 13 1. Residential house wiring using switches, fuse, indicator, lamp and energy meter. 2. Fluorescent lamp wiring. 3. Stair case wiring 4. Measurement of electrical quantities – voltage, current, power & power factor in RLC circuit.	**CO3**
5. Measurement of energy using single phase energy meter. 6. Measurement of resistance to earth of an electrical equipment.	**CO4**
IV ELECTRONICS ENGINEERING PRACTICE 16 1. Study of electronic components and equipments – Resistor, colour coding measurement of AC signal parameter (peak-peak, rms period, frequency) using CR. 2. Study of logic gates AND, OR, EX-OR and NOT. 3. Generation of Clock Signal. 4. Soldering practice – Components Devices and Circuits – Using general purpose PCB. Measurement of ripple factor of HWR and FWR.	**CO5**
TOTAL : 60 PERIODS	

LIST OF EQUIPMENT FOR A BATCH OF 30 STUDENTS

Sl.No.	Description of Equipment	Quantity required
	CIVIL	
1.	Assorted components for plumbing consisting of metallic pipes, plastic pipes, flexible pipes, couplings, unions, elbows, plugs and other fittings.	**15 sets**
2.	Carpentry vice (fitted to work bench)	**15 Nos**
3.	Standard woodworking tools 15 Sets.	**15 Sets.**
4.	Models of industrial trusses, door joints, furniture joints	**5 each**
5.	**Power Tools:** (a) Rotary Hammer (b) Demolition Hammer (c) Circular Saw (d) Planer (e) Hand Drilling Machine (f) Jigsaw	**2 Nos**
	MECHANICAL	
1.	Arc welding transformer with cables and holders.	**5 Nos**
2.	Welding booth with exhaust facility.	**5 Nos**
3.	Welding accessories like welding shield, chipping hammer, wire brush, etc.	**5 Sets**
4.	Oxygen and acetylene gas cylinders, blow pipe and other welding outfit.	**2 Nos**
5.	Centre lathe.	**2 Nos**
6.	Hearth furnace, anvil and smithy tools.	**2 Sets**
7.	Moulding table, foundry tools.	**2 Sets**
8.	Power Tool: Angle Grinder.	**2 Nos**
9.	**Study-purpose items:** centrifugal pump, air-conditioner.	**1 each**

ELECTRICAL		
1.	Assorted electrical components for house wiring.	**15 Sets**
2.	Electrical measuring instruments.	**10 Sets**
3.	**Study purpose items:** Iron box, fan and regulator, emergency lamp.	**1 each**
4.	Megger (250V/500V).	**1 No.**
5.	**Power Tools:** (a) Range Finder (b) Digital Live-wire detector	**2 Nos**
ELECTRONICS		
1.	Soldering guns 10 Nos.	**10 Nos.**
2.	Assorted electronic components for making circuits 50 Nos.	**50 Nos.**
3.	Small PCBs.	**10 Nos.**
4.	Multimeters	**10 Nos.**
5.	**Study purpose items:** Telephone, FM radio, low-voltage power supply	**1 each**

COURSE OUTCOMES
Upon completion of the course, students will be able to

CO1	Fabricate carpentry components and pipe connections including plumbing works. Use welding equipments to join the structures.
CO2	Carry out the basic machining operations Make the models using sheet metal works
CO3	Carry out basic home electrical works and appliances.
CO4	Measure the electrical quantities
CO5	Elaborate on the components, gates, soldering practices

MAPPING OF COs WITH POs AND PSOs

CS1208	PROGRAMMING IN C LAB	L	T	P	C
	(Common to CSE, IT, AI-DS & AI-ML)	0	0	4	2

OBJECTIVES

- To develop programs in C using basic constructs.
- To develop applications in C using strings, pointers, functions, structures.
- To develop applications in C using file processing

LIST OF EXPERIMENTS

1. C programming using simple statements and expressions.	CO1
2. Scientific problem-solving using decision making and looping.	
3. Generating different patterns using multiple control statements.	
4. Problems solving using one dimensional array.	
5. Mathematical problem solving using two dimensional arrays.	
6. Solving problems using string functions.	CO2
7. Solving problems with user defined functions.	
8. Solving problems using recursive function.	
9. Solving problems with dynamic memory allocation.	
10. Realtime application using structures and unions.	
11. Realtime problem solving using sequential and random-access file.	CO3
12. Solving problems with command line argument.	

TOTAL : 60 PERIODS

LIST OF EQUIPMENT FOR A BATCH OF 30 STUDENTS

Standalone desktops with C compiler 30 Nos.

(or)

Server with C compiler supporting 30 terminals or more.

REFERENCE BOOKS

1. Problem Solving and Program Design in C, 4th edition, by jeri R. Hanly and Elli B.Koffman.
2. Reema Thareja, “Programming in C”, Oxford University Press, Second Edition, 2016.
3. Programming in C by Pradip Dey, Manas Ghosh 2nd edition Oxford University Press. E.Balaguruswamy, Programming in ANSI C 5th Edition McGraw-Hill.
4. A first book of ANSI C by Gray J.Brosin 3rd edition Cengagedelmer Learning India P.Ltd.
5. AL Kelly, Iraphol,Programming in C,4th edition Addison-Wesley – Professional.
6. Brain W.Kernighan & Dennis Ritchie, C Programming Language, 2nd edition, PHI.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Develop C programs for simple applications making use of basic constructs.
CO2	Develop C programs involving string, functions, recursion, pointers, and structures.
CO3	Design applications using sequential and random-access file processing.

MAPPING OF COs WITH POs AND PSOs

SEMESTER III

MA1351	PROBABILITY AND STATISTICS	L	T	P	C
	Common to CSE, IT, AI-DS	3	1	0	4

OBJECTIVES

- To understand the basic concepts of probability, one and two dimensional random variables and to introduce some standard distributions applicable to engineering which can describe real life phenomenon.
- To understand the basic concepts of random processes which are widely used in engineering applications.
- To acquaint the knowledge of testing of hypothesis for small and large samples, which plays an important role in real life problems.
- To introduce the basic concepts of classifications of design of experiments which plays very important roles in the field of agriculture and statistical quality control.

UNIT I	**PROBABILITY AND RANDOM VARIABLES**	**12**
Probability – The axioms of probability – Conditional probability – Baye's theorem - Discrete andcontinuous random variables – Moments – Moment generating functions – Binomial, Poisson, Geometric, Uniform, Exponential and Normal distributions.		**CO1**
UNIT II	**TWO - DIMENSIONAL RANDOM VARIABLES**	**12**
Joint distributions – Marginal and conditional distributions – Covariance – Correlation and linearregression – Central limit theorem (for independent and identically distributed random variables).		**CO2**
UNIT III	**RANDOM PROCESSES**	**12**
Classification – Stationary process – Markov process - Poisson process – Discrete parameter Markov chain – Chapman Kolmogorov equations – Limiting distributions.		**CO3**
UNIT IV	**TESTING OF HYPOTHESIS**	**12**
Sampling distributions - Estimation of parameters - Statistical hypothesis - Large sample tests based on Normal distribution for single mean and difference of means -Tests based on t, Chi-square and F distributions for mean, variance and proportion - Contingency table (test for independent) – Goodness of fit.		**CO4**
UNIT V	**DESIGN OF EXPERIMENTS**	**12**
One way and Two way classifications - Completely randomized design – Randomized block design –Latin square design - 2^2 factorial design.		**CO5**
		TOTAL : 60 PERIODS

TEXT BOOKS

1. Johnson, R.A., Miller, I and Freund J., "Miller and Freund's Probability and Statistics forEngineers", Pearson Education, Asia, 9th Edition, 2017.
2. Ibe, O.C., —Fundamentals of Applied Probability and Random Processes", Elsevier, 2nd Indian Reprint, 2014.

REFERENCE BOOKS

1. Hwei Hsu, "Schaum's Outline of Theory and Problems of Probability, Random Variables and Random Processes", Tata McGraw Hill Edition, New Delhi, 2017.
2. Yates, R.D. and Goodman. D. J., "Probability and Stochastic Processes", 2nd Edition, Wiley India Pvt. Ltd., Bangalore, 2014.
3. Papoulis, A. and Unnikrishnapillai, S., "Probability, Random Variables and Stochastic Processes", McGraw Hill Education India, 4th Edition, New Delhi, 2017.
4. Ross, S.M., "Introduction to Probability and Statistics for Engineers and Scientists", 4thEdition,Elsevier, 2009.
5. Spiegel. M.R., Schiller. J. and Srinivasan, R.A., "Schaum's Outline of Theory and Problems of Probability and Statistics", Tata McGraw Hill Edition, 2008.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Give exposure to random variables and well-founded knowledge of standard distributions which can describe real life phenomena.
CO2	Pave ideas to handle situations involving more than one random variable and functions of random variables.
CO3	Give an understanding and characterizes phenomena which evolve with respect to time in a probabilistic manner and modelling the real life phenomena.
CO4	Gain the knowledge on Large Samples and Samples. These concepts are very useful in biological, economical and social experiments and all kinds of generalizations based on information about a smaller sample and larger samples. Apply the appropriate test in the problems related with sampling.
CO5	Design of experiments, carry them out, and analyze the data.

MAPPING OF COs WITH POs AND PSOs

IT1301	JAVA PROGRAMMING	L	T	P	C
		3	0	0	3

OBJECTIVES

- To understand Object Oriented Programming concepts and fundamentals of Java
- To know the principles of packages, inheritance and interfaces
- To define exceptions and use I/O streams
- To develop a java application with threads and generics classes
- To design and build simple Graphical User Interfaces with database connectivity

UNIT I	INTRODUCTION TO OOP AND JAVA FUNDAMENTALS	9
Object Oriented Programming concepts - Abstraction – objects and classes - Encapsulation- Inheritance –Polymorphism- Characteristics of Java – The Java Environment-. Fundamental Programming Structures in Java – Defining classes in Java – constructors, methods -access specifiers - static members -Comments, Data Types, Variables, Operators, Control Flow, Arrays - JavaDoc comments.		**CO1**
UNIT II	**PACKAGES, INHERITANCE AND INTERFACES**	**9**
Inheritance – Super classes- sub classes – constructors in sub classes- the Object class – abstract classes and methods- final methods and classes – Interfaces – defining an interface, implementing interface - Object cloning -inner classes, Array Lists – Strings, Packages		**CO2**
UNIT III	**EXCEPTION HANDLING AND I/O CONCEPTS**	**9**
Exceptions - exception hierarchy - throwing and catching exceptions – built-in exceptions, creating own exceptions, Stack Trace Elements. Input / Output Basics – Streams – Byte streams and Character streams – Reading and Writing Console – Reading and Writing Files		**CO3**
UNIT IV	**CONCURRENT AND GENERIC PROGRAMMING**	**9**
Multi-threading and multitasking, thread life cycle, creating threads, synchronizing threads, Inter-thread communication, daemon threads, thread groups. Generic Programming – Generic classes – generic methods – Bounded Types		**CO4**
UNIT V	**EVENT DRIVEN PROGRAMMING AND DATABASE CONNECTIVITY**	**9**
Graphics programming - Frame – Components - working with 2D shapes - Using color, fonts, and images - Basics of event handling - event handlers - adapter classes - actions - mouse events – AWT event hierarchy – layout management - Swing Components- JDBC Architecture - Establishing Connectivity – Working with statements - Creating and executing SQL statements - Working with Result Set.-Simple Java Applications		**CO5**
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Cay S. Horstmann, “Core Java SE 9 for the Impatient”, 2nd Edition, Addison-Wesley,2017 .
2. Herbert schildt , “The complete reference”, 11th Edition, Tata Mc Graw Hill, New Delhi. 2018.
3. Judith Bishop, “Java Gently : Programming Principles Explained”, 3rd Edition, 2000.

REFERENCE BOOKS

1. T. Budd, "An Introduction to Object Oriented Programming", 3rd Edition, Pearson Education, 2009.
2. Y. Daniel Liang , "Introduction to Java programming", 7th Edition, Pearson education, 2010.
3. C Xavier , "Java Programming – A Practical Approach", Tata McGraw-Hill Edition, 2011.
4. K. Arnold and J. Gosling, "The Java programming language", 3rd Edition, Pearson Education, 2000.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Understand the fundamental ideas behind the object oriented approach to programming
CO2	Inculcate concepts of inheritance to create new classes from existing one & Design the classes needed given a problem specification
CO3	Build Java applications using exceptions and I/O streams
CO4	A modern coverage of concurrent programming that focuses on high-level synchronization constructs
CO5	Know the concept of event handling used in GUI with Database Connectivity

MAPPING OF COs WITH POs AND PSOs

CS1302	DATA STRUCTURES	L	T	P	C
	Common to CSE, IT, AI-DS, AI-ML & ECE-IV Sem	3	0	0	3

OBJECTIVES

- To understand the concepts of ADTs.
- To learn linear data structures like lists, stacks, and queues.
- To learn Non-linear tree data structures.
- To apply Graph structures
- To understand sorting, searching and hashing algorithms

UNIT I	**LINEAR DATA STRUCTURES – LIST**	**9**
Abstract Data Types (ADTs) – List ADT – array-based implementation – linked list implementation –– singly linked lists- circularly linked lists- doubly-linked lists – applications of lists –Polynomial Manipulation – All operations (Insertion, Deletion, Merge, Traversal).		**CO1**
UNIT II	**LINEAR DATA STRUCTURES – STACKS, QUEUES**	**9**
Stack ADT – Operations – Applications – Evaluating arithmetic expressions- Conversion of Infix to postfix expression – Queue ADT – Operations – Circular Queue – Priority Queue – deQueue – applications of queues.		**CO2**
UNIT III	**NON-LINEAR DATA STRUCTURES – TREES**	**9**
Tree ADT – tree traversals – Binary Tree ADT – expression trees – applications of trees – binary search tree ADT –Threaded Binary Trees- AVL Trees – B-Tree – B+ Tree – Heap – Applications of heap.		**CO3**
UNIT IV	**NON-LINEAR DATA STRUCTURES – GRAPHS**	**9**
Definition – Representation of Graph – Types of graph – Breadth-first traversal – Depth-first traversal – Topological Sort – Bi-connectivity –Graph Algorithms – Shortest Path Algorithms: Dijkstra's Algorithm – All pair shortest Path Algorithms: Floyds warshall Algorithm – Minimum Spanning Tree: Prim's Algorithm – Kruskal's Algorithm – Applications of Graph.		**CO4**
UNIT V	**SEARCHING, SORTING AND HASHING TECHNIQUES**	**9**
Searching- Linear Search – Binary Search. Sorting – Bubble sort – Selection sort – Insertion sort – Shell sort – Radix sort - Merge sort – Quick sort. Hashing- Hash Functions – Separate Chaining – Open Addressing – Rehashing – Extendible Hashing.		**CO5**
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Mark Allen Weiss, —Data Structures and Algorithm Analysis in C‖, 2nd Edition, Pearson Education,1997.
2. Reema Thareja, —Data Structures Using C‖, Second Edition , Oxford University Press, 2011.
3. Michael T. Goodrich, Roberto Tamassia, Michael H. Goldwasser, Data Structures and Algorithms in Python, Wiley,2013.
4. Bradley N. Miller, David L. Ranum, " Problem Solving with Algorithms and Data Structures using Python " , Second Edition, 2013.
5. Rance D. Necaise, Data Structures and Algorithms Using Python, John Wiley & Sons, 2011.

COURSE OUTCOMES **Upon completion of the course, students will be able to**	
CO1	Implement abstract data types for linear data structures.
CO2	Apply the different linear data structures to problem solutions.
CO3	Implement abstract data types for non-linear data structures.
CO4	Apply Graph data structure for the real world problems.
CO5	Critically analyze the various sorting, searching algorithms and hash functions that result in a collision free scenario for data storage and retrieval.

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

CS1304	COMPUTER ARCHITECTURE	L	P	T	C
	Common to CSE, IT & EEE (Elective)	3	0	0	3

OBJECTIVES

- To learn the basic structure and operations of a computer.
- To learn the arithmetic and logic unit and implementation of fixed-point and floating-point arithmetic unit.
- To learn the basics of pipelined execution.
- To understand parallelism and multi-core processors.
- To understand the memory hierarchies and the ways of communication with I/O devices.

UNIT I	**BASIC STRUCTURE OF A COMPUTER SYSTEM**	**9**
Eight ideas-Functional Units – Basic Operational Concepts – Performance – Instructions: Language of the Computer – Operations, Operands – Instruction representation – Logical operations – decision making – MIPS Addressing.		**CO1**
UNIT II	**DATA REPRESENTATION AND ARITHMETIC FOR COMPUTERS**	**9**
Signed number representation, Addition and Subtraction – Multiplication – Division – Fixed- and Floating-Point Representation – Floating Point Operations.		**CO2**
UNIT III	**DATA PATH AND CONTROL UNIT**	**9**
A Basic MIPS implementation – Building a Datapath – Control Implementation Scheme – Pipelining – Pipelined data path and control – Handling Data Hazards & Control Hazards – Exceptions.		**CO3**
UNIT IV	**PARALLELISM**	**9**
Parallel Processing challenges – Flynn‘s classification – SISD, MIMD, SIMD, SPMD, and Vector Architectures - Hardware Multithreading – Multi-core processors and other Shared Memory Multiprocessors - Introduction to Graphics Processing Units, Clusters, Warehouse Scale Computers and other Message-Passing Multiprocessors.		**CO4**
UNIT V	**MEMORY AND PERIPHERAL DEVICES**	**9**
Memory Hierarchy - Memory technologies – Cache memory – Measuring and improving cache performance – virtual memory, TLBs – Accessing I/O Devices – Interrupts – Direct Memory Access – Bus structure – Bus operation – Arbitration – Interface circuits – USB		**CO5**
		TOTAL : 45 PERIODS

TEXT BOOKS

4. Jim Ledin, ―Modern Computer architecture and Organization‖, Packt Publishing,2020.
5. Douglas Comer, ―Essentials of Computer Architecture ‖,Taylor and Francis Group 2020

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Understand the basics structure of computers, operations and instructions.
CO2	Design arithmetic and logic unit.
CO3	Understand pipelined execution and design control unit.
CO4	Understand parallel processing architectures.
CO5	Understand the various memory systems and I/O communication

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUCOMES

CS1305	SOFTWARE ENGINEERING	L	T	P	C
	(Common to CSE & IT)	3	0	0	3

OBJECTIVES

- To understand the phases in a software project
- To understand fundamental concepts of requirements engineering and Analysis Modeling.
- To understand the various software design methodologies
- To learn various testing, SQA and maintenance measures

UNIT I	**SOFTWARE PROCESS AND AGILE DEVELOPMENT**	**9**
Introduction: The Evolving Role of Software, Software Characteristics, Software Process, Perspective and Specialized Process Models –Introduction to Agility-Agile process-Extreme programming-XP Process.		**CO1**
UNIT II	**REQUIREMENTS ANALYSIS AND SPECIFICATION**	**9**
Software Requirements: Functional and Non-Functional, User requirements, System requirements, Software Requirements Document – Requirement Engineering Process: Feasibility Studies, Requirements elicitation and analysis, requirements validation, requirements management-Classical analysis: Structured system Analysis, Petri Nets- Data Dictionary.		**CO2**
UNIT III	**SOFTWARE DESIGN**	**9**
Design process – Design Concepts-Design Model– Design Heuristic – Architectural Design - Architectural styles, Architectural Design, Architectural Mapping using Data Flow- User Interface Design: Interface analysis, Interface Design –Component level Design: Designing Class based components, traditional Components.		**CO3**
UNIT IV	**TESTING AND MAINTENANCE**	**9**
Software testing fundamentals-Internal and external views of Testing-white box testing - basis path testing-control structure testing-black box testing- Regression Testing – Unit Testing – Integration Testing – Validation Testing – System Testing And Debugging –Software Implementation Techniques: Coding practices-Refactoring-Maintenance and Reengineering-BPR model-Reengineering process model-Reverse and Forward Engineering.		**CO4**
UNIT V	**PROJECT MANAGEMENT AND SQA**	**9**
Software Project Management: Estimation – LOC, FP Based Estimation, Make/Buy Decision COCOMO I & II Model – Project Scheduling – Scheduling, Earned Value Analysis Planning – Project Plan, Planning Process, RFP Risk Management – Identification, Projection - Risk Management-Risk Identification-RMMM Plan, SQA-Concepts, Cost of Quality, Software Quality Group (SQA).		**CO5**

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Identify the key activities in managing a software project and process models.
CO2	Concepts of requirements engineering and Analysis Modeling.
CO3	Apply systematic procedure for software design and deployment.
CO4	Compare and contrast the various testing and maintenance.
CO5	Manage project schedule, SQA, estimate project cost and effort required.

MAPPING OF COs WITH POs AND PSOs

COs	**PROGRAM OUTCOMES (POs)**												**PROGRAM SPECIFIC OUTCOMES**

CS1307	DATA STRUCTURES LABORATORY USING C	L	T	P	C
Common to CSE, IT, AI-ML, AI-DS and ECE IV Sem		0	0	4	2

OBJECTIVES

- To introduce the concepts of primitive data structures.
- To understand the process in linear and non-linear data structures.
- To introduce the concepts of sorting, searching and hashing.

LIST OF EXPERIMENTS

Experiment	CO
1. **IMPLIMENTATION OF LIST** Write C programs to a) Array implementation of Stack ADTs. b) Array implementation of Queue ADTs.	CO1
2. **LIST ADT** Array implementation of List ADT.	
3. **IMPLEMENTATION OF STACK AND QUEUE** Write C programs to a) Design and implement Single Linked List. b) Design and implement Stack and its operations using List. c) Design and implement Queue and its operations using List.	
4. **APPLICATIONS OF LINEAR DATA STRUCTURE** Write C programs for the following: a) Design and implement polynomial ADT using list b) Uses Stack operations to convert infix expression into postfix expression. c) Uses Stack operations for evaluating the postfix expression.	CO2
5. **APPLICATIONS OF TREE** a) Write a C program to Design and implement binary tree. b) Traverse the above binary tree recursively in pre-order, post-order & in-order.	
6. **IMPLEMENTATION OF TREE** Write a C program to Design and implement binary search tree.	
7. **IMPLEMENTATION OF ADVANCED TREE** a) Design and Implement AVL tree using Templates. b) Design and Implement heap tree using Templates.	CO3
8. **IMPLEMENTATION OF SHORTEST PATH ALGORITHMS** Write C programs for the following: a) Design and Implement Dijkstra‘s algorithm b) Design and Implement Floyd Warshall algorithm.	
9. **IMPLEMENTATION OF MINIMUM SPANNING TREE** Write C programs for the following: a) Design and Implement Kruskal’s algorithm. b) Design and Implement Prim’s algorithm.	CO3
10. **GRAPH TRAVERSAL & APPLICATIONS** Write C programs to implement the following algorithms: a) Depth first search.	

b) Breadth first search.
c) Toplogical Sorting.

11. **SORTING &SEARCHING AND HASH TABLE IMPLEMENTATION**

a) Write C programs for implementing the following sorting techniques to arrange a list of integers in ascending order.
   i. Insertion sort
   ii. Selection sort
   iii. Quick sort
   iv. Merge sort

b) Write C programs for implement linear search and binary search.

c) Write C programs for implement Hashing – any two collision techniques

TOTAL : 60 PERIODS

IT1308	JAVA PROGRAMMING LABORATORY	L	T	P	C
		0	0	4	2

OBJECTIVES

- To build software development skills using java programming for real-world applications
- Implement Object Oriented programming concept using basic syntaxes of control Structures, strings and function for developing skills of logic building activity.
- Identify classes, objects, members of a class and the relationships among them needed for a finding the solution to specific problem
- Identify and describe common abstract user interface components to design GUI in Java using Swing along with response to events and Database Connectivity using JDBC.

LIST OF EXPERIMENTS

No.	Experiment	CO
1.	Develop a java application to generate electricity bill. Create a class with the following Consumer no., consumer name, previous month reading, current month reading, and type of EB connection (i.e. domestic or commercial) .Compute the bill amount using the following tariff. If the type of the EB connection is domestic. Calculate the amount to be pain follows. First 100 units –Rs.1 per unit 101-200 units –Rs.2.50 per unit 201-500 units –Rs.4 per unit >501 unit –Rs.6 per unit If the type of the EB connection is commercial ,calculate the amount to be paid follows First 100 units –Rs.2 per unit 101-200 units –Rs.4.50 per unit 201-500 units –Rs. 6 per unit >501 units –Rs. 7 per unit	**CO1**
2.	Develop a java application with Employee class with Emp_name, Emp_id, Address,Mail_id,Mobile_no as members. Inherit the classes,Programmer,Assistant Professor, Associate Professor with Professor from employee class. Add basic Pay(BP) as the member of all the inherited classes with 97% of BP as DA,10% of BP as HRA,12% of BP as PF,0.1% of BP for staff club fund. Generate pay slips for the employees with their gross and net salary.	
3.	Write a Java program to make frequency count of words in a given text	
4.	Write a Java Program to create an abstract class named Shape that contains two integers and an empty method named print Area(). Provide three classes named Rectangle, Triangle and Circle such that each one of the classes extends the class Shape. Each one of the classes contains only the method print Area () that prints the area of the given shape.	
5.	Design a Java interface for ADT Stack. Implement this interface using array. Provide necessary exception handling in both the implementation	
6.	Complete the following: 1. Create a package named shape. 2. Create some classes in the package representing some common shapes like Square,Triangle, and Circle. 3. Import and compile these classes in other program.	
7.	Write a Java program to implement user defined exception handling.	**CO2**
8.	Write a java program to find the maximum value from the given type of elements using a generic function.	
9.	Write a program in Java for String handling which performs the following: i) Checks the capacity of StringBuffer objects. ii) Reverses the contents of a string given on console and converts the resultant string in upper case. iii) Reads a string from console and appends it to the resultant string of ii.	
10.	Write a program to perform string operations using ArrayList. Write functions for the following a. Append - add at end b. Insert – add at particular index c. Search	

d. List all string starts with given letter	
11. Write a Java program to read copy content of one file to other by handling all file related exceptions	
12. Write a Java program that creates three threads. First thread displays “Good Morning” everyone second, the second thread displays “Hello” every two seconds and the third thread displays “Welcome” every three seconds.	
13. Write a java Program to create a window when we press a. M or m the window displays Good Morning b. A or a the window displays Good After Noon c. E or e the window displays Good Evening d. N or n the window displays Good Night	**CO3**
14. Create a GUI program in java with the following components. a. A frame with Flow layout. b. Add the following components on to the frame. i. Two Text Field ii. A button with the label display c. Allow the user to enter data into the JTextField d. When the button is clicked paint the frame by displaying the data entered in the JTextField e. Allow the user to properly close the frame	
15. Design and Develop the GUI application with database connectivity of your choice	

TOTAL : 60 PERIODS

LIST OF EQUIPMENT FOR A BATCH OF 30 STUDENTS

Standalone desktops with any JDK IDE (like NetBeans 1.8v) 30 Nos.

(or)

Server with Java Web Server supporting 30 terminals

REFERENCE BOOKS

1. Herbert schildt , The complete reference, 11th edition, Tata Mc Graw Hill, New Delhi. 2018.

HS1310	PROFESSIONAL SKILLS LABORATORY	L	T	P	C
Common to IT & AI-ML		0	0	2	1

OBJECTIVES

- Enhance the Employability and Career Skills of students
- Orient the students towards grooming as a professional
- Make them Employable Graduates
- Develop their confidence and help them attend interviews successfully.

LIST OF EXPERIMENTS	
UNIT I	**6**
Introduction to Soft Skills- Hard skills & soft skills - employability and career Skills—Grooming as a professional with values—Making an Oral Presentation–Planning and preparing a model presentation; Organizing the presentation to suit the audience and context; Connecting with the audience during presentation; Projecting a positive image while speaking; Emphasis on effective body language-General awareness of Current Affairs.	**CO1**
UNIT II	**6**
Self-Introduction-organizing the material - Introducing oneself to the audience ─ introducing the topic — answering questions — individual presentation practice—— Making a Power Point Presentation -- Structure and format; Covering elements of an effective presentation; Body language dynamics. Making an Oral Presentation–Planning and preparing a model presentation; Organizing the presentation to suit the audience and context; Connecting with the audience during presentation; Projecting a positive image while speaking; Emphasis on effective body language	**CO2**
UNIT III	**6**
Introduction to Group Discussion— Participating in group discussions – understanding group dynamics - brainstorming the topic -─ questioning and clarifying –GD strategies- Structure and dynamics of a GD; Techniques of effective participation in group discussion; Preparing for group discussion; Accepting others‘ views / ideas; Arguing against others‘ views or ideas, etc	**CO3**
UNIT IV	**6**
Basics of public speaking; Preparing for a speech; Features of a good speech; Speaking with a microphone. (Famous speeches may be played as model speeches for learning the art of public speaking). Interview etiquette ─ dress code ─ body language ─ attending job interviews– telephone/skype interview -one to one interview &panel interview –Job Interviews: purpose and process; How to prepare for an interview; Language and style to be used in an interview; Types of interview questions and how to answer them	**CO4**
UNIT V	**6**
Recognizing differences between groups and teams- managing time managing stress- networking professionally- respecting social protocols understanding career management- developing a long-term career plan making career changes	**CO5**
TOTAL : 30 PERIODS	

REFERENCE BOOKS

1. Butterfield, Jeff Soft Skills for Everyone. Cengage Learning: New Delhi, 2015
2. E. Suresh Kumar et al. Communication for Professional Success. Orient Blackswan: Hyderabad, 2015
3. Raman, Meenakshi and Sangeeta Sharma. Professional Communication. Oxford University Press: Oxford, 2014
4. S. Hariharanetal. Soft Skills. MJP Publishers: Chennai, 2010
5. Interact English Lab Manual for Undergraduate Students,. OrientBalckSwan: Hyderabad, 2016.

COURSE OUTCOMES
Upon completion of the course, students will be able to

CO1	Make effective presentations
CO2	Participate confidently in Group Discussions
CO3	Attend job interviews and be successful in them.
CO4	Develop adequate Soft Skills required for the workplace
CO5	Develop their speaking skills to enable them speak fluently in real contexts

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	-	-	-	-	-	-	-	1	2	3	-	-	2	1	2
CO2	-	1	-	2	-	-	-	-	-	3	-	-	1	-	2
CO3	-	2	-	3	-	-	-	-	1	2	-	-	-	-	2
CO4	-	-	-	-	1	-	-	-	2	2	-	-	-	-	2
CO5	-	2	1	1	2	-	2	-	-	3	-	-	1	2	2

SEMESTER IV

MA1453	DISCRETE MATHEMATICS	L	T	P	C
(Common to CSE, IT & AI-DS)		3	1	0	4

OBJECTIVES

- To introduce Mathematical Logic, Inference Theory and proof methods.
- To provide fundamental principles on combinatorial counting techniques.
- To introduce graph models, their representation, connectivity and traverse ability.
- To explain the fundamental algebraic structures, groups and their algebraic properties.
- To introduce partial ordering and some functions on a set.

UNIT I	**LOGIC AND PROOFS**	**12**
Propositional Logic – Propositional Equivalences – Normal Forms - Predicates and Quantifiers – Nested Quantifiers – Rules of Inference – Introduction to Proofs – Proof Methods and Strategy.		**CO1**
UNIT II	**COMBINATORICS**	**12**
Mathematical Induction – Strong Induction and Well Ordering – The Basics of Counting - The Pigeonhole Principle – Permutations and Combinations – Recurrence Relations -Generating Functions - Solving Linear Recurrence Relations Using Generating Functions– Inclusion – Exclusion – Principle and Its Applications.		**CO2**
UNIT III	**SETS AND FUNCTIONS**	**12**
Set -Relations on sets – Types of relations and their properties – Partitions – Equivalence relations – Partial ordering – Poset – Hasse diagram. Functions: Characteristic function of a set – Hashing functions – Recursive functions – Permutation functions.		**CO3**
UNIT IV	**GRAPHS**	**12**
Graphs and Graph Models – Graph Terminology and Special Types of Graphs – Matrix Representation of Graphs and Graph Isomorphism – Connectivity – Euler and Hamilton Paths.		**CO4**
UNIT V	**ALGEBRAIC STRUCTURES**	**12**
Groups – Subgroups – Homomorphisms – Isomorphism - Normal Subgroup and Coset – Lagrange's Theorem.		**CO5**
		TOTAL : 60 PERIODS

TEXT BOOKS

1. Kenneth H. Rosen, "Discrete Mathematics and its Applications", Tata McGraw Hill Pub. Co.Ltd., Seventh Edition, Special Indian Edition, New Delhi, 2012.
2. Tremblay J.P. and Manohar R, "Discrete Mathematical Structures with Applications to Computer Science", Tata McGraw Hill Pub. Co. Ltd, Thirtieth Reprint, New Delhi, 2011.

REFERENCE BOOKS

1. Ralph. P. Grimaldi, "Discrete and Combinatorial Mathematics: An Applied Introduction", Pearson Education, Fifth Edition, New Delhi, 2014
2. Seymour Lipschutz and Mark Lipson," Discrete Mathematics", Schaum's Outlines, Tata McGraw Hill Pub. Co. Ltd., Third Edition, New Delhi, 2013.
3. Thomas Koshy," Discrete Mathematics with Applications", Elsevier Publications, Boston, 2004.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Construct proofs by using direct proof, proof by contraposition, proof by contradiction. Construct mathematical arguments using logical connectives and quantifiers and verify the correctness of an argument using propositions. Logic helps in arriving inferences for any problem.
CO2	Solve problems such as permutation and combination and in generating functions. Prove mathematical theorems using mathematical induction. Demonstrate basic counting principles, compute and interpret the meaning in the context of the particular application. Helps to apply the combinatorial techniques in Algorithms and Data structure for analysis and design.
CO3	Understand relations on a set and functions on a set
CO4	Apply the concepts of graph theory in data structures, data mining, image segmentation and in clustering.
CO5	Familiar with algebraic systems, groups, sub groups, Lagrange's theorem and normal subgroups. In Coding algorithms and in theoretical computer science algebraic structures are applied.

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	3	3	2	2	1	1	-	-	-	1	1	2	2	2	1
CO2	3	3	2	2	1	1	-	-	-	1	1	2	2	2	1
CO3	3	3	2	2	1	1	-	-	-	1	1	2	2	2	1
CO4	3	3	2	2	1	1	-	-	-	-	1	2	2	2	1
CO5	3	3	2	2	1	1	-	-	-	-	1	2	2	1	1

CS1401	DESIGN AND ANALYSIS OF ALGORITHMS	L	T	P	C
	Common for CSE, IT, AI-DS and AI-ML	3	0	0	3

OBJECTIVES

- To learn the general framework for analyzing algorithm efficiency
- To be conversant with algorithms for common problems.
- To analyse the algorithms for time/space complexity.
- To write algorithms for a given problem using different design paradigms.
- To understand computational complexity of problems

UNIT I	**INTRODUCTION**	**9**
Algorithm – Fundamentals of Algorithmic Problem Solving – Important Problem Types – The Analysis Framework – Asymptotic Notations and Basic Efficiency Classes – Mathematical Analysis of Nonrecursive and Recursive Algorithms – Empirical Analysis of Algorithms.		**CO1**
UNIT II	**DECREASE AND CONQUER AND DIVIDE-AND-CONQUER**	**9**
Decrease-and-Conquer– Insertion Sort – Binary Search – Computing a Median and the Selection Problem – Divide-and-Conquer – Merge Sort – Quicksort – The Closest –Pair and Convex –Hull Problems by Divide-and-Conquer.		**CO2**
UNIT III	**DYMANIC PROGRAMMING AND GREEDY TECHNIQUE**	**9**
The Knapsack Problem and Memory Functions – Optimal Binary Search Trees – Warshall's Algorithm – Floyd's Algorithm – Greedy Technique – Prim's Algorithm – Kruskal's Algorithm – Dijkstra's Algorithm – Huffman Trees and Codes.		**CO3**
UNIT IV	**ITERATIVE IMPROVEMENT**	**9**
Graphical Method – The Simplex Method – The maximum Flow Problem – Maximum Matching in Bipartite Graphs – The Stable Marriage Problem.		**CO4**
UNIT V	**BACKTRACKING, BRANCH-AND-BOUND AND APPROXIMATION ALGORITHMS**	**9**
P, NP, and NP- Complete Problems – Backtracking – n-Queens Problem – Hamiltonian Circuit Problem – Subset-Sum Problem – Branch-and-Bound – Assignment Problem – Knapsack Problem – Traveling Salesman Problem – Approximation Algorithms for the Traveling Salesman Problem and the Knapsack Problem.		**CO5**
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Anany Levitin, "Introduction to the Design and Analysis of Algorithms", Third Edition, Pearson Education, 2012.
2. Thomas H. Cormen, Charles E. Leiserson, Ronald L. Rivest, Clifford Stein, "Introduction to Algorithms", Third Edition, McGraw Hill, 2009.

REFERENCE BOOKS

1. Steven S. Skiena, “The Algorithm Design Manual”, Second Edition, Springer, 2008.
2. Robert Sedgewick, Kevin Wayne, “Algorithms”, Fourth Edition, Pearson Education, 2011.
3. Donald E. Knuth, “Art of Computer Programming, Volume I - Fundamental Algorithms”, Third Edition, Addison Wesley, 1997.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Ability to investigate an algorithm’s efficiency with respect to running time
CO2	Design and implement problems using algorithmic design techniques such as decrease and conquer and divide and conquer
CO3	Ability to understand the design techniques such as Dynamic programming and Greedy technique
CO4	Ability to understand the iterative design techniques
CO5	Understand the variations among tractable and intractable problems

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

CO2	3	3	3	3	2	-	-	-	3	-	2	3	3	2	2
CO3	3	3	3	3	2	-	-	-	3	-	2	3	3	2	2
CO4	3	3	3	3	2	-	-	-	3	-	2	3	3	2	2
CO5	3	3	3	3	2	-	-	-	3	-	2	3	3	2	2

CS1402	OPERATING SYSTEMS	L	T	P	C
Common to CSE, IT, AI-DS & AI-ML		3	0	0	3

OBJECTIVES

- To understand the basic concepts and functions of operating systems.
- To understand Processes and Threads
- To analyze Scheduling algorithms.
- To understand the concept of Deadlocks.
- To analyze various memory management schemes.
- To understand I/O management and File systems.
- To be familiar with the basics of Linux system and Mobile OS like iOS and Android

UNIT I	OPERATING SYSTEM OVERVIEW	9
Computer System Overview-Basic Elements, Instruction Execution, Interrupts, Memory Hierarchy, Cache Memory, Direct Memory Access, Multiprocessor and Multicore Organization. Operating system overview-objectives and functions, Evolution of Operating System.- Computer System Organization Operating System Structure and Operations- System Calls, System Programs, OS Generation and System Boot.		**CO1**
UNIT II	**PROCESS MANAGEMENT**	**9**
Processes – Process Concept, Process Scheduling, Operations on Processes, Inter-process Communication; CPU Scheduling – Scheduling criteria, Scheduling algorithms, Multiple-processor scheduling; Threads- Overview, Multithreading models, Threading issues; Process Synchronization – The critical-section problem, Semaphores, Classical problems of synchronization, Monitors; Deadlock – System model, Deadlock characterization, Methods for handling deadlocks, Deadlock prevention, Deadlock avoidance, Deadlock detection, Recovery from deadlock.		**CO2**
UNIT III	**STORAGE MANAGEMENT**	**9**
Main Memory – Background, Swapping, Contiguous Memory Allocation, Paging, Segmentation, Segmentation with paging, 32 and 64 bit architecture Examples; Virtual Memory – Background, Demand Paging, Need for Page Replacement, Page Replacement Algorithm, Allocation, Thrashing; Allocating Kernel Memory, OS Examples.		**CO3**
UNIT IV	**FILE SYSTEMS AND I/O SYSTEMS**	**9**
Mass Storage system – Overview of Mass Storage Structure, Disk Structure, Disk Scheduling and Management, swap space management; File-System Interface - File concept, Access methods, Directory Structure, Directory organization, File Sharing and Protection; File System Implementation- File System Structure, Directory implementation, Allocation Methods, Free Space Management, Efficiency and Performance, Recovery; I/O Systems – I/O Hardware, Application I/O interface, Kernel I/O subsystem, Streams, Performance.		**CO4**
UNIT V	**CASE STUDY**	**9**
Linux System - Design Principles, Kernel Modules, Process Management, Scheduling, Memory Management, Input-Output Management, File System, Inter-process Communication; Mobile OS - iOS and Android - Architecture and SDK Framework, Media Layer, Services Layer, Core OS Layer, File System.		**CO5**
		TOTAL : 45 PERIODS
