St. JOSEPH'S COLLEGE OF ENGINEERING

(An Autonomous Institution)

St. JOSEPH'S GROUP OF INSTITUTIONS

OMR, CHENNAI - 119

B.E. COMPUTER SCIENCE AND ENGINEERING

REGULATION – 2021

Batch 2021-25

CHOICE BASED CREDIT SYSTEM

I - VIII SEMESTERS CURRICULA AND SYLLABI

PROGRAM EDUCATIONAL OBJECTIVES (PEOS)

1. **Profession:** Graduates excel in computer technology in order to pursue higher education and research, or have a successful career in industries or as entrepreneurs.
2. **Technophile:** Graduates will have the ability and attitude to adapt emerging technological changes in the field of Computer Science and Engineering.
3. **Team Player:** Possess an ability to collaborate as a team member and team leader to affect technical solutions for computing systems, providing improved function and outcomes.

PROGRAM OUTCOMES (POs)

Engineering Graduates will be able to:

1. **Engineering knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals and an engineering specialization to the solution of complex engineering problems.
2. **Problem analysis:** Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
3. **Design/development of solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
4. **Conduct investigations of complex problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
5. **Modern tool usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
6. **The engineer and society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional

engineering practice.

7. **Environment and sustainability:** Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

8. **Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

9. **Individual and team work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

10. **Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

11. **Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one‘s own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

12. **Life-long learning:** Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PROGRAM SPECIFIC OBJECTIVES (PSOs):

1. **Efficacy:** Ability to apply mathematical methodologies and foundational concepts of Computer Science and Engineering to solve computational tasks, model the real world problem using appropriate data structure and algorithm with suitable programming languages.

2. **Potentiality to design:** Analyze, design and evaluate a computer based system by applying software engineering principles and practices for developing quality software for scientific and business applications.

3. **Technical expertise:** Adapt to modern engineering technologies and thereby build robust, reliable, maintainable, scalable, innovative and efficient computing systems by considering social, environmental, economic, and security constraints

MAPPING OF PROGRAM OUTCOMES (POs) WITH

PROGRAM EDUCATIONAL OBJECTIVES (PEOs) & PROGRAM SPECIFIC OUTCOMES (PSOs)

Program Outcomes (POs)	Program Educational Objectives (PEOs)			Program Specific Outcomes (PSOs)		
	Profession	Technophile	Team Player	Efficacy	Potentiality to design	Technical expertise
Engineering knowledge	3	3	1	3	3	3
Problem analysis	3	3	2	3	3	2
Design/development of solutions	3	3	2	3	3	3
Conduct investigations of complex problems	3	3	3	3	3	2
Modern tool usage	2	3	1	3	3	3
The engineer and society	2	2	2	2	2	3
Environment and sustainability	2	2	2	2	2	3
Ethics	3	2	3	2	2	2
Individual and team work	3	2	3	2	2	2
Communication	3	2	3	2	2	3
Project management and finance	2	2	2	3	3	2
Life-long learning	3	3	2	3	2	3

Correlation Level 1, 2 or 3 as defined below:

1: Slight (Low)

2: Moderate (Medium)

3: Substantial (High)

MAPPING OF COURSE OUTCOMES WITH PROGRAM OUTCOMES (REGULAR COURSES)

A broad relation between the Course Outcomes and Program Outcomes (POs) and Program Specific Outcomes (PSOs) are given in the following table

Sem	Course Title	Program Outcomes (POs)												PSOs		
		1	2	3	4	5	6	7	8	9	10	11	12	1	2	3
I	Communicative English		√	√	√	√		√			√			√		√
	Engineering Mathematics – I	√	√	√	√	√				√	√	√	√	√	√	√
	Engineering Physics	√	√	√	√	√	√	√		√	√		√	√	√	√

HS1101	COMMUNICATIVE ENGLISH	L	T	P	C
(Common to all Branches of B.E. / B. Tech Programmes)		3	0	0	3

OBJECTIVES

- To develop the basic reading and writing skills of first year engineering and technology students.
- To help learners develop their listening skills, which will, enable them listen to lectures and comprehend them by asking questions; seeking clarifications.
- To help learners develop their speaking skills and speak fluently in real contexts.
- To help learners develop vocabulary of a general kind by developing their reading skills.

UNIT I	SHARING INFORMATION RELATED TO ONESELF/FAMILY& FRIENDS	9
Reading – critical reading – finding key information in a given text – shifting facts from opinions - Writing - autobiographical writing - developing hints. Listening- short texts- short formal and informal conversations. Speaking- basics in speaking - introducing oneself - exchanging personal information- speaking on given topics & situations Language development– voices- Wh- Questions- asking and answering-yes or no questions– parts of speech. Vocabulary development-- prefixes- suffixes- articles - Polite Expressions.		CO1
UNIT II	**GENERAL READING AND FREE WRITING**	**9**
Reading: Short narratives and descriptions from newspapers (including dialogues and conversations ; Reading Comprehension Texts with varied question types - Writing – paragraph writing- topic sentence- main ideas- free writing, short narrative descriptions using some suggested vocabulary and structures –. Listening - long texts - TED talks - extensive speech on current affairs and discussions Speaking – describing a simple process – asking and answering questions - Language development – prepositions, clauses. Vocabulary development- guessing meanings of words in context – use of sequence words.		CO2
UNIT III	**GRAMMAR AND LANGUAGE DEVELOPMENT**	**9**
Reading- short texts and longer passages (close reading) & making a critical analysis of the given text Writing – types of paragraph and writing essays – rearrangement of jumbled sentences. Listening: Listening to ted talks and long speeches for comprehension. Speaking- role plays - asking about routine actions and expressing opinions. Language development- degrees of comparison- pronouns- Direct vs. Indirect Questions. Vocabulary development – idioms and phrases- cause & effect expressions, adverbs.		CO3
UNIT IV	**READING AND LANGUAGE DEVELOPMENT**	**9**
Reading- comprehension-reading longer texts- reading different types of texts- magazines. Writing- letter writing, informal or personal letters-e-mails-conventions of personal email- Listening: Listening comprehension (IELTS, TOEFL and others). Speaking -Speaking about friends/places/hobbies - Language development- Tenses- simple present-simple past- present continuous and past continuous- conditionals – if, unless, in case, when and others Vocabulary development- synonyms-antonyms- Single word substitutes- Collocations.		CO4
UNIT V	**EXTENDED WRITING**	**9**
Reading: Reading for comparisons and contrast and other deeper levels of meaning –Writing- brainstorming -writing short essays – developing an outline- identifying main and subordinate ideas- dialogue writing- Listening - popular speeches and presentations - Speaking - impromptu speeches & debates Language development-modal verbs- present/ past perfect tense - Vocabulary development-Phrasal verbs- fixed and semi-fixed expressions.		CO5
		TOTAL : 45 PERIODS

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Speak clearly, confidently, comprehensibly, and communicate with one or many listeners using appropriate communicative strategies.
CO2	Write cohesively and coherently and flawlessly avoiding grammatical errors, using a wide vocabulary range, organizing their ideas logically on a topic.
CO3	Read different genres of texts adopting various reading strategies.
CO4	Listen/view and comprehend different spoken discourses/excerpts in different accents
CO5	Identify topics and formulate questions for productive inquiry

MAPPING OF COs WITH POs AND PSOs

MA1102	ENGINEERING MATHEMATICS – I	L	T	P	C
	(Common to all branches of B.E. / B. Tech Programmes)	3	1	0	4

OBJECTIVES

- The goal of this course is to achieve conceptual understanding and to retain the best traditions of traditional calculus.
- The syllabus is designed to provide the basic tools of calculus mainly for the purpose of modeling the engineering problems mathematically and obtaining solutions.
- Matrix Algebra is one of the powerful tools to handle practical problems arising in the field of engineering.
- This is a foundation course of Single Variable and multivariable calculus plays an important role in the understanding of science, engineering, economics and computer science, among other disciplines.

UNIT I	**MATRICES**	**9+3**
Eigenvalues and Eigenvectors of a real matrix – Characteristic equation – Properties of Eigenvalues and Eigenvectors – Cayley-Hamilton theorem – Diagonalization of matrices – Reduction of a quadratic form to canonical form by orthogonal transformation – Nature of quadratic forms		**CO1**
UNIT II	**CALCULUS OF ONE VARIABLE**	**9+3**
Limit of a function - Continuity - Derivatives - Differentiation rules – Interval of increasing and decreasing functions – Maxima and Minima - Intervals of concavity and convexity.		**CO2**
UNIT III	**CALCULUS OF SEVERAL VARIABLES**	**9+3**
Partial differentiation – Homogeneous functions and Euler's theorem – Total derivative – Change of variables – Jacobians – Partial differentiation of implicit functions – Taylor's series for functions of two variables – Maxima and minima of functions of two variables – Lagrange's method of undetermined multipliers.		**CO3**
UNIT IV	**INTEGRAL CALCULUS**	**9+3**
Definite and Indefinite integrals - Substitution rule - Techniques of Integration - Integration by parts, Trigonometric integrals, Trigonometric substitutions, Integration of rational functions by partial fraction, Integration of irrational functions - Improper integrals.		**CO4**
UNIT V	**MULTIPLE INTEGRALS**	**9+3**
Double integrals – Change of order of integration – Double integrals in polar coordinates – Area enclosed by plane curves – Change of variables from Cartesian to polar in double integrals-Triple integrals – Volume of solids		**CO5**

TOTAL : 60 PERIODS

TEXT BOOKS

1. Grewal B.S., Higher Engineering Mathematics, Khanna Publishers, New Delhi, 43rd Edition, 2014.
2. James Stewart, "Calculus: Early Transcendental", Cengage Learning, 7th Edition, New Delhi,2015. [For Units I & III - Sections 2.2, 2.3, 2.5, 2.7(Tangents problems only), 2.8, 3.1 to 3.6, 3.11, 4.1, 4.3, 5.1(Area problems only), 5.2, 5.3, 5.4 (excluding net change theorem), 5.5, 7.2 - 7.4 and 7.8].

REFERENCE BOOKS

1. Anton, H, Bivens, I and Davis, S, "Calculus", Wiley, 10th Edition, 2016.
2. Jain R.K. and Iyengar S.R.K., ―Advanced Engineering Mathematics‖, Narosa Publications, New Delhi, 3rd Edition, 2007.
3. Narayanan, S. and Manicavachagom Pillai, T. K., ―Calculus" Volume I and II, S. Viswanathan Publishers Pvt. Ltd., Chennai, 2007.
4. Srimantha Pal and Bhunia, S.C, "Engineering Mathematics" Oxford University Press, 2015.
5. T. Veerarajan. Engineering Mathematics – I, McGraw Hill Education; First edition 2017.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Have a clear idea of matrix algebra pertaining Eigenvalues and Eigenvectors in addition dealing with quadratic forms.
CO2	Understand the concept of limit of a function and apply the same to deal with continuity and derivative of a given function. Apply differentiation to solve maxima and minima problems, which are related to real world problems.
CO3	Have the idea of extension of a function of one variable to several variables. Multivariable functions of real variables are inevitable in engineering.
CO4	Understand the concept of integration through fundamental theorem of calculus. Also acquire skills to evaluate the integrals using the techniques of substitution, partial fraction and integration by parts along with the knowledge of improper integrals.
CO5	Do double and triple integration so that they can handle integrals of higher order which are applied in engineering field.

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)

PH1103	ENGINEERING PHYSICS	L	T	P	C
	(Common to all branches of B.E. / B. Tech Programmes)	3	0	0	3

OBJECTIVES

To make the students conversant with

- Elastic properties of materials and various moduli of elasticity
- Principles of laser and fiber optics and its various technological applications
- Thermal conduction in solids, heat exchangers and its applications in various devices
- Quantum concepts to explain black body radiation, Compton effect and matter waves.
- Various crystal structures, Miller indices and crystal growth techniques

UNIT I	PROPERTIES OF MATTER	9
Elasticity – Stress-strain diagram and its uses - factors affecting elastic modulus and tensile strength – torsional stress and deformations – twisting couple - torsion pendulum: theory and experiment - bending of beams - bending moment – cantilever: theory and experiment – uniform and non-uniform bending: theory and experiment – Practical applications of modulus of elasticity- I-shaped girders - stress due to bending in beams.		**CO1**
UNIT II	**LASER AND FIBER OPTICS**	**9**
Lasers : population of energy levels, Einstein's A and B coefficients derivation – resonant cavity, optical amplification (qualitative) – Nd-YAG Laser-Semiconductor lasers: homojunction and heterojunction – Industrial and medical applications of Laser– Fiber optics: principle, numerical aperture and acceptance angle - types of optical fibres (material, refractive index, mode) – losses associated with optical fibers – Fabrication of Optical fiber-Double crucible method-fibre optic sensors: pressure and displacement-Industrial and medical applications of optical fiber-Endoscopy-Fiber optic communication system.		**CO2**
UNIT III	**THERMAL PHYSICS**	**9**
Transfer of heat energy – thermal expansion of solids and liquids – expansion joints - bimetallic strips - thermal conduction, convection and radiation – heat conductions in solids – thermal conductivity –Rectilinear flow of heat- Lee's disc method: theory and experiment - conduction through compound media (series and parallel)-Radial flow of heat– thermal insulation – applications: heat exchangers, refrigerators, oven, Induction furnace and solar water heaters.		**CO3**
UNIT IV	**QUANTUM PHYSICS**	**9**
Black body radiation – Planck's theory (derivation) – Compton effect: theory and experimental verification – wave particle duality – electron diffraction – concept of wave function and its physical significance – Schrödinger's wave equation – time independent and time dependent equations – particle in a one-dimensional rigid box – Electron microscope-tunnelling (qualitative) - scanning tunnelling microscope-Applications of electron microscopy.		**CO4**
UNIT V	**CRYSTAL PHYSICS**	**9**
Single crystalline, polycrystalline and amorphous materials – single crystals: unit cell, crystal systems, Bravais lattices, directions and planes in a crystal, Miller indices – inter-planar distances coordination number and packing factor for SC, BCC, FCC, HCP and diamond structures – Graphite structure-crystal imperfections: point defects, line defects – Burger vectors, stacking faults – growth of single crystals: solution and melt growth techniques-Epitaxial growth-Applications of Single crystal (Qualitative).		**CO5**
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Bhattacharya, D.K. & Poonam, T. "Engineering Physics". Oxford University Press, 2017.
2. Gaur, R.K. & Gupta, S.L. "Engineering Physics". Dhanpat Rai Publishers, 2012.
3. Pandey, B.K. & Chaturvedi, S. "Engineering Physics". Cengage Learning India, 2013.

REFERENCE BOOKS	
1.	Halliday, D., Resnick, R. & Walker, J. “Principles of Physics”. Wiley, 2015.
2.	Serway, R.A. & Jewett, J.W. “Physics for Scientists and Engineers”. Cengage Learning, 2019.
3.	Tipler, P.A. & Mosca, G. “Physics for Scientists and Engineers with Modern Physics’. W.H.Freeman, 2014.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	The elastic property and stress strain diagram, determination of rigidity modulus by torsional pendulum and Young’s modulus by various methods.
CO2	Principle of laser, Einstein’s coefficients of laser action, semiconductor laser and its applications, optical fibers and their applications in sensors and communication system.
CO3	The heat transfer through solids and the determination of thermal conductivity in a bad conductor by Lee’s disc method and radial flow of heat.
CO4	The quantum concepts and its use to explain black body radiation, Compton effect and wave equation for matter waves, tunneling electron microscopy and its applications.
CO5	The importance of various crystal structures, Miller indices and various growth techniques.

CY1104	ENGINEERING CHEMISTRY	L	T	P	C
	(Common to all branches of B.E. / B. Tech Programmes)	3	0	0	3

OBJECTIVES

To make the student conversant with the

- Principles of water characterization and treatment for industrial purposes
- Principles and applications of surface chemistry and catalysis
- Phase rule and various types of alloys
- Various types of fuels, applications and combustion
- Conventional and non–conventional energy sources and energy storage device

UNIT I	**WATER AND ITS TREATMENT**	**9**
Hardness of water – Types – Expression of hardness – Units – Estimation of hardness by EDTA method – Numerical problems on EDTA method – Boiler troubles (scale and sludge, caustic embrittlement , boiler corrosion, priming and foaming) – Treatment of boiler feed water – Internal treatment (carbonate, phosphate, colloidal, sodium aluminate and calgon conditioning) – External treatment – Ion exchange process, Zeolite process – Desalination of brackish water by Reverse Osmosis.		**CO1**
UNIT II	**SURFACE CHEMISTRY AND CATALYSIS**	**9**
Surface chemistry: Types of adsorption – Adsorption of gases on solids – Adsorption of solute from solutions – Adsorption isotherms – Freundlich's adsorption isotherm – Langmuir's adsorption isotherm – Kinetics of uni-molecular surface reactions – Adsorption in chromatography – Applications of adsorption in pollution abatement using PAC. **Catalysis**: Catalyst – Types of catalysis – Criteria – Contact theory – Catalytic poisoning and catalytic promoters – Industrial applications of catalysts – Catalytic convertor – Auto catalysis – Enzyme catalysis – Michaelis-Menten equation.		**CO2**
UNIT III	**PHASE RULE AND ALLOYS**	**9**
Phase rule: Introduction – Definition of terms with examples – One component system – Water system – Reduced phase rule – Thermal analysis and cooling curves – Two component systems – Lead-silver system – Pattinson process. **Alloys**: Introduction – Definition – Properties of alloys – Significance of alloying – Functions and effect of alloying elements – Nichrome, Alnico, Stainless steel (18/8) – Heat treatment of steel – Non-ferrous alloys – Brass and bronze.		**CO3**
UNIT IV	**FUELS AND COMBUSTION**	**9**
Fuels: Introduction – classification of fuels – Comparison of solid, liquid, gaseous fuels – Coal – Analysis of coal (proximate and ultimate). – Carbonization – Manufacture of metallurgical coke (Otto Hoffmann method) – Petroleum – Cracking – Manufacture of synthetic petrol (Bergius process, Fischer Tropsch Process) – Knocking – Octane number – Diesel oil – Cetane number – Compressed natural gas (CNG) – Liquefied petroleum gases (LPG) – Power alcohol and biodiesel. **Combustion of fuels**: Introduction – Calorific value – Higher and lower calorific values – Theoretical calculation of calorific value – Ignition temperature – Spontaneous ignition temperature – Explosive range – Flue gas analysis by Orsat Method.		**CO4**
UNIT V	**NON–CONVENTIONAL ENERGY SOURCES AND STORAGE DEVICES**	**9**
Nuclear energy – Fission and fusion reactions – Differences – Chain reactions – Nuclear reactors – Classification of reactors – Light water nuclear reactor for power generation – Breeder reactor – Solar energy conversion – Solar cells – Wind energy – Fuel cells – Hydrogen-oxygen fuel cell . Batteries – Types of batteries - Alkaline batteries – Lead-acid, Nickel-cadmium and Lithium batteries.		**CO5**
		TOTAL : 45 PERIODS

Shikha Agarwal, "Engineering Chemistry–Fundamentals and Applications", Cambridge University Press, Delhi, (2015). 5. A. Pahari, B. Chauhan, "Engineering Chemistry", Firewall Media., New Delhi., (2010). 6. Sheik Mideen., Engineering Chemistry, Airwalk Publications, Chennai (2018).

COURSE OUTCOMES Upon completion of the course, students will be able to	
CO1	Able to understand impurities in industrial water, boiler troubles, internal and external treatment methods of purifying water.
CO2	Able to understand concepts of absorption, adsorption, adsorption isotherms, application of adsorption for pollution abatement, catalysis and enzyme kinetics.
CO3	Able to recognize significance of alloying, functions of alloying elements and types of alloys, uses of alloys, phase rule, reduced phase and its applications in alloying.
CO4	Able to identify various types of fuels, properties, uses and analysis of fuels. They should be able to understand combustion of fuels, method of preparation of bio-diesel, synthetic petrol.
CO5	Able to understand conventional, non-conventional energy sources, nuclear fission and fusion, power generation by nuclear reactor, wind, solar energy and preparation, uses of various batteries.

GE1105	PROBLEM SOLVING AND PYTHON PROGRAMMING	L	T	P	C
	(Common to all branches of B.E. / B. Tech Programmes)	3	0	0	3

OBJECTIVES

- To know the basics of algorithmic problem solving
- To write simple python programs
- To develop python program by using control structures and functions
- To use python predefined data structures
- To write file-based program

UNIT I	**ALGORITHMIC PROBLEM SOLVING**	**9**
Algorithms, Building blocks of algorithms: statements, state, control flow, functions, Notation: pseudo code, flow chart, programming language, Algorithmic problem solving: Basic algorithms, flowcharts and pseudocode for sequential, decision processing and iterative processing strategies, Illustrative problems: find minimum in a list, insert a card in a list of sorted cards, guess an integer number in a range, Towers of Hanoi.		**CO1**
UNIT II	**INTRODUCTION TO PYTHON**	**9**
Python Introduction, Technical Strength of Python, Python interpreter and interactive mode, Introduction to colab , pycharm and jupyter idle(s) ,Values and types: int, float, boolean, string, and list; Built-in data types, variables, Literals, Constants, statements, Operators: Assignment, Arithmetic, Relational, Logical, Bitwise operators and their precedence, Expressions, tuple assignment, Accepting input from Console, printing statements, Simple Python programs.		**CO2**
UNIT III	**CONTROL FLOW, FUNCTIONS AND STRINGS**	**9**
Conditionals: Boolean values and operators, conditional (if), alternative (if-else), chained conditional (if-elif-else); Iteration: while, for; Loop manipulation using pass, break, continue, and else; Modules and Functions: function definition and use, flow of execution, parameters and arguments, local and global scope, return values, function composition, recursion. Strings: string slices, immutability, string functions and methods, string module; Illustrative programs: square root, gcd, exponentiation, sum an array of numbers, linear search, binary search.		**CO3**
UNIT IV	**LISTS, TUPLES, DICTIONARIES**	**9**
Lists: Defining list and list slicing, list operations, list slices, list methods, list loop, list Manipulation, mutability, aliasing, cloning lists, list parameters, lists as arrays. Tuples: tuple assignment, tuple as return value, tuple Manipulation; Dictionaries: operations and methods; advanced list processing – list comprehension; Illustrative programs: selection sort, insertion sort, merge sort, histogram.		**CO4**
UNIT V	**FILES, MODULES, PACKAGES**	**9**
Files and exception: Concept of Files, Text Files; File opening in various modes and closing of a file, Format Operators, Reading from a file, Writing onto a file, File functions- open(), close(), read(),readline(), readlines(),write(), writelines(),tell(),seek(), Command Line arguments; Errors and exceptions: handling exceptions; modules, packages; introduction to numpy, matplotlib. Illustrative programs: word count, copy a file.		**CO5**
		TOTAL : 45 PERIODS

TEXT BOOKS

Paul Gries, Jennifer Campbell and Jason Montojo, —Practical Programming: An Introduction.

COURSE OUTCOMES
Upon completion of the course, students will be able to

CO1	Develop algorithmic solutions to simple computational problems
CO2	Develop simple console application in python
CO3	Develop python program by applying control structure and decompose program into functions.
CO4	Represent compound data using python lists, tuples, and dictionaries.
CO5	Read and write data from/to files in Python.

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	3	3	3	3	2	-	-	-	-	2	2	2	3	3	2
CO2	3	3	3	3	2	-	-	-	-	2	2	2	3	3	2
CO3	3	3	3	3	2	-	-	-	-	2	2	2	3	3	2
CO4	3	3	3	3	2	-	-	-	-	2	2	2	3	3	2

GE1106	ENGINEERING GRAPHICS	L	T	P	C
	(Common to all branches of B.E. / B. Tech Programmes)	2	0	4	4

OBJECTIVES

- To develop graphic skills for communication of concepts, ideas and design of engineering products.
- To inculcate drawing practice in standardized form whenever technical drawing is needed.
- To expose them to existing national standards related to technical drawings.

CONCEPTS AND CONVENTIONS (Not for Examination)		**1**
Importance of graphics in engineering applications – Use of drafting instruments – BIS conventions and specifications – Size, layout and folding of drawing sheets – Lettering and dimensioning.		
UNIT I	**PLANE CURVES AND FREEHAND SKETCHING**	**7+12**
Basic Geometrical constructions, Curves used in engineering practices: Conics – Construction of ellipse, parabola and hyperbola by eccentricity method – Construction of cycloidal curves – construction of involutes of square and circle – Drawing of tangents and normal to the above curves. Visualization concepts and Free Hand sketching: Visualization principles –Representation of Three-Dimensional objects – Layout of views- Freehand sketching of multiple views from pictorial views of objects (Draw without using drawing instruments)		**CO1**
UNIT II	**PROJECTION OF POINTS, LINES AND PLANE SURFACE**	**6+12**
Orthographic projection- principles-Principal planes-First angle projection-projection of points. Projection of straight lines (only First angle projections) inclined to both the principal planes - Determination of true lengths and true inclinations by rotating line method and traces. Projection of planes (polygonal and circular surfaces) inclined to both the principal planes by rotating object method.		**CO2**
UNIT III	**PROJECTION OF SOLIDS**	**5+12**
Projection of simple solids like prisms, pyramids, cylinder, cone and truncated solids when the axis is inclined to one of the principal planes when the solid is simply suspended by rotating object method.		**CO3**
UNIT IV	**PROJECTION OF SECTIONED SOLIDS AND DEVELOPMENT OFSURFACES**	**6+12**
Sectioning of simple solids like prisms, pyramids, cylinder, and cone in a simple vertical position when the cutting plane is inclined to one of the principal planes and perpendicular to the other – obtaining true shape of section. Development of lateral surfaces of simple and sectioned solids – Prisms, pyramids cylinders and cones - Graphically finding the shortest distance connecting two points.		**CO4**
UNIT V	**ISOMETRIC AND PERSPECTIVE PROJECTIONS**	**6+12**
Principles of isometric projection – isometric scale –Isometric projections and isometric views of simple solids and truncated solids - Prisms, pyramids, cylinders, cones- combination of two solid objects in simple vertical positions. Perspective projection of simple solids-Prisms, pyramids and cylinders by visual ray method		**CO5**

6. Shah M.B., and Rana B.C., "Engineering Drawing", Pearson, 2nd Edition, 2009.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Understand the fundamentals and standards of Engineering graphics
CO2	Perform freehand sketching of basic geometrical constructions and multiple views of objects
CO3	Understand the concept of orthographic projections of lines and plane surfaces
CO4	Draw the projections of section of solids and development of surfaces
CO5	Visualize and to project isometric and perspective sections of simple solids

GE1107	PYTHON PROGRAMMING LABORATORY	L	T	P	C
	(Common to all branches of B.E. / B. Tech Programmes)	0	0	4	2

OBJECTIVES

- To write, test, and debug simple Python programs.
- To implement Python programs with conditionals and loops.
- Use functions for structuring Python programs.
- Represent compound data using Python lists, tuples, and dictionaries.
- Read and write data from/to files in Python.

LIST OF EXPERIMENTS

Experiment	CO
1. Write an algorithm and draw flowchart illustrating mail merge concept.	CO1
2. Write an algorithm, draw flowchart and write pseudo code for a real life or scientific or technical problems	CO1
3. Scientific problem-solving using decision making and looping. • Armstrong number, palindrome of a number, Perfect number.	CO1
4. Simple programming for one dimensional and two-dimensional arrays. • Transpose, addition, multiplication, scalar, determinant of a matrix	CO1
5. Program to explore string functions and recursive functions.	CO2
6. Utilizing 'Functions' in Python • Find mean, median, mode for the given set of numbers in a list. • Write a function dups to find all duplicates in the list. • Write a function unique to find all the unique elements of a list. • Write function to compute gcd, lcm of two numbers.	CO2
7. Demonstrate the use of Dictionaries and tuples with sample programs.	CO2
8. Implement Searching Operations: Linear and Binary Search.	CO2
9. To sort the 'n' numbers using: Selection, Merge sort and Insertion Sort.	CO2
10. Find the most frequent words in a text of file using command line arguments.	CO3
11. Demonstrate Exceptions in Python.	CO3
12. Applications**:** Implementing GUI using turtle, pygame.	CO3

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Develop simple console applications through python with control structure and functions
CO2	Use python built in data structures like lists, tuples, and dictionaries for representing compound data.
CO3	Read and write data from/to files in Python and applications of python.

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)

BS1108	PHYSICS AND CHEMISTRY LABORATORY	L	T	P	C
	(Common to all branches of B.E. / B. Tech Programmes)	0	0	4	2

OBJECTIVES

The students will be trained to perform experiments to study the following.

- The Properties of Matter
- The Optical properties, Characteristics of Lasers & Optical Fibre
- Electrical & Thermal properties of Materials
- Enable the students to enhance accuracy in experimental measurements.
- To make the student to acquire practical skills in the determination of water quality parameters through volumetric analysis
- Instrumental method of analysis such as potentiometry, conductometry and pHmetry

LIST OF EXPERIMENTS – PHYSICS

(A minimum of 5 experiments to be performed from the given list)

1. Determination of Young's modulus of the material of the given beam by Non-uniform bending method.	CO1
2. Determination of Young's modulus of the material of the given beam by uniform bending method.	
3. Determination of rigidity modulus of the material of the given wire using torsion pendulum.	
4. Determination of wavelength of mercury spectra using Spectrometer and grating.	CO2
5. Determination of dispersive power of prism using Spectrometer.	
6. (a) Determination of wavelength and particle size using a laser. (b) Determination of Numerical and acceptance angle of an optical fibre.	
7. Determination of energy band gap of the semiconductor.	
8. Determination of coefficient of thermal conductivity of the given bad conductor using Lee's disc.	

DEMONSTRATION EXPERIMENT

1. Determination of thickness of a thin sheet / wire – Air wedge method	CO1

LIST OF EXPERIMENTS – CHEMISTRY

(A minimum of 6 experiments to be performed from the given list)

1. Determination of chloride content of water sample by argentometric method.	CO3
2. Estimation of copper content of the given solution by Iodometry.	
3. Determination of strength of given hydrochloric acid using pH meter.	
4. Determination of strength of acids in a mixture of acids using conductivity meter.	CO4
5. Estimation of iron content of the given solution using potentiometer.	
6. Determination of molecular weight of polyvinyl alcohol using Ostwald viscometer.	
7. Conductometric titration of strong acid vs strong base.	
8. Estimation of HCl using Na_2CO_3 as primary standard and determination of alkalinity in water sample.	CO5
9. Determination of total, temporary & permanent hardness of water by EDTA method.	
10. Determination of DO content of water sample by Winkler's method.	

DEMONSTRATION EXPERIMENTS	
1. Estimation of iron content of the water sample using spectrophotometer (1,10-Phenanthroline / thiocyanate method).	**CO3**
2. Estimation of sodium and potassium present in water using flame photometer.	**CO5**
	TOTAL: 60 PERIODS

5. S.S. Dara, S.S. Umare, “A text book of Engineering Chemistry” S.Chand & Co.Ltd., New Delhi (2020).

COURSE OUTCOMES
Upon completion of the course, students will be able to

CO1	Able to understand the concept about the basic properties of matter like stress, strain and types of moduli Able to understand the concept of optics like reflection, refraction, diffraction by using spectrometer grating.
CO2	Able to understand the thermal properties of solids, specific heat and some models for specific heat calculation. Able to understand the working principle of laser components and working of different laser system. Able to understand the phenomenon of light, applications of fibre optics.
CO3	Able to understand the concept of determining the pH value by using pH meter. Able to understand the concept about the amount of chloride present in the given sample of water.
CO4	Able to understand the concept of determining the emf values by using potentiometer Able to understand the concept about the measurement of conductance of strong acid and strong base by using conductivity meter.
CO5	Able to understand the amount of dissolved oxygen present in the water. Able to understand the concept of estimation of hardness of water by EDTA method. Able to understand the concept of estimation of alkalinity in water sample.

HS1201	PROFESSIONAL ENGLISH	L	T	P	C
(Common to all branches of B.E. / B. Tech Programmes)		3	0	0	3

OBJECTIVES

- Develop strategies and skills to enhance their ability to read and comprehend engineering and technology texts.
- Foster their ability to write convincing job applications and effective reports.
- Develop their speaking skills to make technical presentations, participate in group discussions.
- Strengthen their listening skill which will help them comprehend lectures and talks in their areas of specialization.

UNIT I	**READING AND STUDY SKILLS**	**9**
Listening-Listening Comprehension of a discussion on a technical topic of common interest by three or four participants (real life as well as online videos). -Speaking – describing a process- Reading: Practice in chunking and speed reading - Paragraphing- Writing- interpreting charts, graphs- Vocabulary Development: Important foreign expressions in Use, homonyms, homophones, homographs- easily confused words Language Development- impersonal passive voice, numerical adjectives.		**CO1**
UNIT II	**READING AND STUDY SKILLS**	**9**
Listening-Listening Comprehension of a discussion on a technical topic of common interest by three or four participants (real life as well as online videos). -Speaking – describing a process- Reading: Practice in chunking and speed reading - Paragraphing- Writing- interpreting charts, graphs- Vocabulary Development: Important foreign expressions in Use, homonyms, homophones, homographs- easily confused words Language Development- impersonal passive voice, numerical adjectives.		**CO2**
UNIT III	**TECHNICAL WRITING AND GRAMMAR**	**9**
Listening – listening to conversation – effective use of words and their sound aspects, stress, intonation & pronunciation - Speaking – mechanics of presentations -Reading: Reading longer texts for detailed understanding. (GRE/IELTS practice tests); Writing-Describing a process, use of sequence words- Vocabulary Development- sequence words- Informal vocabulary and formal substitutes-Misspelled words. Language Development- embedded sentences and Ellipsis.		**CO3**
UNIT IV	**REPORT WRITING**	**9**
Listening – Model debates & documentaries and making notes. Speaking – expressing agreement/disagreement, assertiveness in expressing opinions-Reading: Technical reports, advertisements and minutes of meeting - Writing- email etiquette- job application – cover letter –Résumé preparation(via email and hard copy)- analytical essays and issue based essays-- Vocabulary Development- finding suitable synonyms-paraphrasing- Language Development- clauses- if conditionals.		**CO4**
UNIT V	**GROUP DISCUSSION AND JOB APPLICATIONS**	**9**
Listening: Extensive Listening. (radio plays, rendering of poems, audio books and others) Speaking –participating in a group discussion - Reading: Extensive Reading (short stories, novels, poetry and others)– Writing reports- minutes of a meeting- accident and survey- Writing a letter/ sending an email to the Editor - cause and effect sentences -Vocabulary Development- verbal analogies. Language Development- reported speech.		**CO5**
		TOTAL : 45 PERIODS

COURSE OUTCOMES
Upon completion of the course, students will be able to

CO1	Speak clearly, confidently, comprehensibly, and communicate with one or many listeners using appropriate communicative strategies.
CO2	Write cohesively and coherently and flawlessly avoiding grammatical errors, using a wide vocabulary range, organizing their ideas logically on a topic.
CO3	Read different genres of texts adopting various reading strategies.
CO4	Listen/view and comprehend different spoken discourses/excerpts in different accents
CO5	Identify topics and formulate questions for productive inquiry

MA1202	ENGINEERING MATHEMATICS - II	L	T	P	C
(Common to all branches of B.E. / B. Tech Programmes - Except AI-DS & AI-ML)		3	1	0	4

OBJECTIVES

- This course is designed to cover topics such as Differential Equation, Vector Calculus, Complex Analysis and Laplace Transform.
- The various methods of complex analysis and Laplace transforms can be used for efficiently solving the problems that occur in various branches of engineering disciplines

UNIT I	ORDINARY DIFFERENTIAL EQUATIONS	9+3
Higher order linear differential equations with constant coefficients - Method of variation of parameters– Homogenous equation of Euler‘s and Legendre‘s type – System of simultaneous linear differential equations with constant coefficients		**CO1**
UNIT II	**VECTOR CALCULUS**	**9+3**
Gradient and directional derivative – Divergence and curl - Vector identities – Irrotational and Solenoidal vector fields – Line integral over a plane curve – Surface integral - Area of a curved surface - Volume integral - Green‘s, Gauss divergence and Stoke‘s theorems – Verification and application in evaluating line, surface and volume integrals		**CO2**
UNIT III	**COMPLEX VARIABLES**	**9+3**
Analytic functions – Necessary and sufficient conditions for analyticity in Cartesian and polar coordinates - Properties – Harmonic conjugates – Construction of analytic function – Conformal mapping – Mapping by functions $w = Z + C, CZ, 1/Z$ - Bilinear transformation		**CO3**
UNIT IV	**COMPLEX INTEGRATION**	**9+3**
Cauchy‘s integral theorem – Cauchy‘s integral formula – Taylor‘s and Laurent‘s series – Singularities – Residues – Residue theorem – Application of residue theorem for evaluation of real integrals – Use of circular contour and semi circular contour(excluding poles on the real line)		**CO4**
UNIT V	**LAPLACE TRANSFORMS**	**9+3**
Existence conditions – Transforms of elementary functions –Basic properties – Transform of unit step function and unit impulse function - Shifting theorems - transforms of derivatives and integrals –– Inverse transforms – Convolution theorem – Transform of periodic functions – Application to solution of linear second order ordinary differential equations with constant coefficients		**CO5**

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Apply various techniques in solving differential equations
CO2	Gradient, divergence and curl of a vector point function and related identities
CO3	Evaluation of line, surface and volume integrals using Gauss, Stokes and Green's theorems and their verification
CO4	Analytic functions, conformal mapping and complex integration
CO5	Laplace transform and inverse transform of simple functions, properties, various related theorems and application to differential equations with constant coefficients

PH1252	PHYSICS FOR INFORMATION SCIENCE	L	T	P	C
	(Common to CSE, IT, AI-DS & AI-ML)	3	0	0	3

OBJECTIVES

- To understand the essential principles of physics of semiconductor device and Electron transport properties.
- To have the necessary understanding in optical properties of materials.
- Grasp the principles of magnetic materials and its applications.
- To understand the basics of Nano-electronic devices.

UNIT I	ELECTRICAL PROPERTIES OF MATERIALS	9
Classical free electron theory - Expression for electrical conductivity – Thermal conductivity, expression - Wiedemann-Franz law – Success and failures - electrons in metals – Particle in a three-dimensional box – degenerate states – Fermi- Dirac statistics – Density of energy states – Electron in periodic potential – Energy bands in solids - Electron effective mass – concept of hole- Applications of low resistive and high resistive materials.		**CO1**
UNIT II	**SEMICONDUCTOR PHYSICS**	**9**
Intrinsic Semiconductors – Energy band diagram – direct and indirect band gap semiconductors – Carrier concentration in intrinsic semiconductors – extrinsic semiconductors - Carrier concentration in N-type & P-type semiconductors – Variation of carrier concentration with temperature – variation of Fermi level with temperature and impurity concentration – Carrier transport in Semiconductor– Hall effect and devices – Ohmic contacts – Schottky diode-Semiconducting polymers.		**CO2**
UNIT III	**MAGNETIC PROPERTIES OF MATERIALS**	**9**
Magnetic dipole moment – atomic magnetic moments- magnetic permeability and susceptibility - Magnetic material classification: diamagnetism – paramagnetism – ferromagnetism – antiferromagnetism – ferrimagnetism –Curie temperature – Domain Theory- M versus H behaviour – Hard and soft magnetic materials – examples and uses-– Magnetic principle in computer data storage – Magnetic hard disc – Spintronics - GMR Sensor (Giant Magnetoresistance) – TMR (Tunnel Magnetoresistance)		**CO3**
UNIT IV	**OPTICAL PROPERTIES OF MATERIALS**	**9**
Classification of optical materials – carrier generation and recombination processes - Absorption emission and scattering of light in metals, insulators and semiconductors (concepts only) - photo current in a P-N diode – solar cell - LED – Organic LED – p-i-n Photodiodes - Avalanche Photodiodes -Optical data storage techniques- Holography – applications.		**CO4**
UNIT V	**NANO DEVICES**	**9**
Electron density in bulk material – Size dependence of Fermi energy – Quantum confinement – Quantum structures – Density of states in quantum well, quantum wire and quantum dot structure - Band gap of nanomaterials – Tunneling: single electron phenomena and single electron transistor – Quantum dot laser - Ballistic transport – Carbon nanotubes: Properties and applications - Material Processing by chemical vapour deposition and Laser Ablation method – Graphene: Properties and applications.		**CO5**
		TOTAL : 45 PERIODS

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Gain knowledge on classical and quantum electron theories, and energy band structures.
CO2	Acquire knowledge on basics of semiconductor physics and its applications in various Devices.
CO3	Get knowledge on magnetic properties of materials and their applications in data storage.
CO4	Have the necessary understanding on the functioning of optical materials for Optoelectronics.
CO5	Understand the basics of quantum structures and their applications in carbon electronics.

MAPPING OF COs WITH POs AND PSOs

GE1204	ENVIRONMENTAL SCIENCE AND ENGINEERING	L	T	P	C
(Common to all branches of B.E. / B. Tech Programmes)		3	0	0	3

OBJECTIVES

- To study the inter relationship between living organism and environment.
- To appreciate the importance of environment by assessing its impact on the human world; envision the surrounding environment, its functions and its value.
- To find and implement scientific, technological, economic and political solutions to environmental problems.
- To study the integrated themes and biodiversity, natural resources, pollution control and waste management.
- To study the dynamic processes and understand the features of the earth's interior and surface.

UNIT I	ENVIRONMENT, ECOSYSTEM AND BIODIVERSITY	9
Definition, scope and importance of environment – Need for public awareness – Role of Individual in Environmental protection – Concept of an ecosystem – Structure and function of an ecosystem – Producers, consumers and decomposers – Energy flow in the ecosystem – Food chains, food webs and ecological pyramids – Ecological succession – Types, characteristic features, structure and function of forest, grass land, desert and aquatic (ponds, lakes, rivers, oceans, estuaries) ecosystem. Biodiversity – Definition – Genetic, species and ecosystem diversity – Value of biodiversity – Consumptive use, productive use, social, ethical, aesthetic and option values – Biodiversity at global, national and local levels – India as a mega–diversity nation – Hot spots of biodiversity – Threats to biodiversity– Habitat loss, poaching of wild life, human-wildlife conflicts – Wildlife protection act and forest conservation act –Endangered and endemic species – Conservation of biodiversity – In-situ and ex–situ conservation of biodiversity.		**CO1**
UNIT II	**ENVIRONMENTAL POLLUTION**	**9**
Definition – Causes, effects and control measures of: (a) Air pollution (b) Water pollution (c) Soil pollution (d) Marine pollution (e) Noise pollution (f) Thermal pollution (g) Nuclear hazards – Solid waste management: causes, effects and control measures of municipal solid wastes – Problems of e-waste – Role of an individual in prevention of pollution – Pollution case studies – Disaster management – Floods, earthquake, cyclone, tsunami and landslides – Field study of local polluted site – Urban / Rural / Industrial / Agricultural.		**CO2**
UNIT III	**NATURAL RESOURCES**	**9**
Forest resources: Use and over-exploitation – Deforestation – Case studies – Timber extraction, mining, dams and their effects on forests and tribal people – Water resources – Use and overutilization of surface and ground water, floods, drought, conflicts over water – Dams: benefits and problems – Mineral resources: Use and exploitation – Environmental effects of extracting and using mineral resources – Case studies – Food resources: World food problems – Changes caused by agriculture and overgrazing – Effects of modern agriculture: fertilizer–pesticide problems, water logging, salinity – Case studies – Energy resources: Growing energy needs – Renewable and non renewable energy sources – Use of alternate energy sources – Case studies – Land resources: Land as a resource – Land degradation, man induced landslides, soil erosion and desertification – Role of an individual in conservation of natural resources – Equitable use of resources for sustainable lifestyles – Field study of local area to document environmental assets – River / Forest / Grassland / Hill / Mountain.		**CO3**

UNIT IV	SOCIAL ISSUES AND THE ENVIRONMENT	9
From unsustainable to sustainable development – Urban problems related to energy – Water conservation, rain water harvesting, watershed management – Resettlement and rehabilitation of people; its problems and concerns, case studies – Role of non-governmental organization – Environmental ethics – Issues and possible solutions – Climate change – Global warming – Acid rain, Ozone layer depletion –Nuclear accidents and holocaust – Case studies – Wasteland reclamation – Consumerism and waste products – Principles of Green Chemistry – Environment protection act – Air (Prevention and Control of Pollution) Act – Water (Prevention and control of Pollution) Act – Wildlife protection Act – Forest conservation act – Enforcement machinery involved in environmental legislation– Central and state pollution control boards– National Green Tribunal – Public awareness.		CO4
UNIT V	HUMAN POPULATION AND THE ENVIRONMENT	9
Population growth – Variation among nations – Population explosion – Family welfare programme – Environment and human health – Human rights – Value education – HIV / AIDS – COVID 19 – Women and child welfare – Role of information technology in environment and human health – Case studies.		CO5
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Benny Joseph, 'Environmental Science and Engineering', Tata McGraw-Hill, New Delhi, (2014).
2. Gilbert M.Masters, 'Introduction to Environmental Engineering and Science', 2nd edition, Pearson Education, (2004).
3. Dr. A. Sheik Mideen and S.Izzat Fathima, "Environmental Science and Engineering", Airwalk Publications, Chennai, (2018).

REFERENCE BOOKS

1. Dharmendra S. Sengar, 'Environmental law', Prentice hall of India Pvt Ltd, New Delhi, (2007).
2. Erach Bharucha, "Textbook of Environmental Studies", Universities Press (I) Pvt, Ltd, Hydrabad, (2015).

4. R. Rajagopalan, 'Environmental Studies-From Crisis to Cure', Oxford University Press, (2005).
5. Anubha Kaushik , C.P. Kaushik, "Perspectives in Environmental Studies", New Age International Pvt. Ltd, New Delhi, (2004).
6. Frank R. Spellman, "Handbook of Environmental Engineering", CRC Press, (2015).

COURSE OUTCOMES
Upon completion of the course, students will be able to

CO1	Obtain knowledge about environment, ecosystems and biodiversity.
CO2	Take measures to control environmental pollution.
CO3	Gain knowledge about natural resources and energy sources.
CO4	Find and implement scientific, technological, economic and political solutions to environmental problems.
CO5	Understand the impact of environment on human population.

MAPPING OF COs WITH POs AND PSOs															
COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)

BE1251	BASIC ELECTRICAL, ELECTRONICS AND MEASUREMENT ENGINEERING	L	T	P	C
	Common to CSE, IT, AI-DS & AI-ML	3	0	0	3

OBJECTIVES

- To learn the fundamental laws, network theorems and analyse the electric circuits.
- To study the basic principles of electrical machines and their performance.
- To study the fundamentals of power systems.
- To learn the characteristics of various electron devices and Op Amp integrated circuit.
- To understand the principle and operation of measuring instruments and transducers.

UNIT I	ELECTRIC CIRCUITS ANALYSIS	9
Ohms Law, Kirchhoff's Law-Instantaneous power - Series and parallel circuit: analysis of resistive, capacitive and inductive network, star delta conversion, Nodal analysis and mesh analysis. Network theorems: Thevenin's theorem, Norton's theorem, superposition theorem and maximum power transfer theorem. Three phase ac supply –Instantaneous power, Reactive power and apparent power.		**CO1**
UNIT II	**ELECTRICAL MACHINES**	**9**
DC and AC ROTATING MACHINES: Types, Construction, principle, EMF and torque equation, application, Speed Control. Basics of Stepper Motor and Brushless DC motors. Transformers-Introduction, types and construction, working principle of Ideal transformer, EMF equation, All day efficiency calculation.		**CO2**
UNIT III	**FUNDAMENTALS OF POWER SYSTEM**	**9**
Structure of power system. Sources of electrical energy – Non-renewable, Renewable- Storage systems: Batteries-Ni-Cd, Pb -Acid and Li-ion, SOC (State of Charge), DOD (Depth of Discharge)Characteristics. Utilization of electrical power - DC and AC load applications. - Electric circuit Protection-need for earthing, fuses and circuit breakers.		**CO3**
UNIT IV	**ELECTRON DEVICES AND INTEGRATED CIRCUITS**	**9**
PN Junction-VI Characteristics of Diode, Zener diode, Rectifiers, Zener voltage regulator. Transistor configurations – CE amplifier - RC and LC oscillators. Op Amps – Basic characteristics and its applications.		**CO4**
UNIT V	**MEASURING INSTRUMENTS AND TRANSDUCERS**	**9**
Characteristic of measurement-errors in measurement – Principle and working of indicting instrument- Moving Coil meter, Moving Iron meter, Energy meter and watt meter, Cathode Ray Oscilloscope –- Transducers, thermo-electric, RTD, Strain gauge, LVDT, LDR, and piezoelectric transducer.		**CO5**
		TOTAL : 45 PERIODS

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Develop simple applications in C using basic constructs.
CO2	Design and implement applications using arrays, strings and functions.
CO3	Develop and implement applications in C using pointers.
CO4	Develop applications in C using structures and union.
CO5	Design applications using sequential and random-access file processing.

GE 1207	ENGINEERING PRACTICES LABORATORY	L	P	T	C
(Common to all branches of B.E. / B. Tech Programmes)		0	0	4	2

OBJECTIVES

- To provide exposure to the students with hands on experience on various basic engineering practices in Civil, Mechanical, Electrical and Electronics Engineering

LIST OF EXPERIMENTS

GROUP A (CIVIL & MECHANICAL)

I CIVIL ENGINEERING PRACTICE **13** — **CO1**

Buildings:

a) Study of plumbing and carpentry components of residential and industrial buildings. Safety aspects.

Plumbing Works:

a) Study of pipeline joints, its location and functions: valves, taps, couplings, unions, reducers, elbows in household fittings.
b) Study of pipe connections requirements for pumps and turbines.
c) Preparation of plumbing line sketches for water supply and sewage works.
d) Hands-on-exercise: Basic pipe connections – Mixed pipe material connection – Pipe connections with different joining components.
e) Demonstration of plumbing requirements of high-rise buildings.

Carpentry using Power Tools only:

a) Study of the joints in roofs, doors, windows and furniture.
b) Hands-on-exercise: Wood work, joints by sawing, planing and cutting.

II MECHANICAL ENGINEERING PRACTICE **18** — **CO2**

Welding:

a) Preparation of butt joints, lap joints and T- joints by Shielded metal arc welding.
b) Gas welding practice

Basic Machining:

a) Simple Turning and Taper turning
b) Drilling Practice

Sheet Metal Work:

a) Forming & Bending.
b) Model making – Trays and funnels.
c) Different type of joints.

Machine assembly practice:

a) Study of centrifugal pump
b) Study of air conditioner

Demonstration on:

a) Smithy operations, upsetting, swaging, setting down and bending. Example – Exercise – Production of hexagonal headed bolt.
b) Foundry operations like mould preparation for gear and step cone pulley.
c) Fitting – Exercises – Preparation of square fitting and V – fitting models.

GROUP B (ELECTRICAL & ELECTRONICS)

III **ELECTRICAL ENGINEERING PRACTICE** **13** 1. Residential house wiring using switches, fuse, indicator, lamp and energy meter. 2. Fluorescent lamp wiring. 3. Stair case wiring 4. Measurement of electrical quantities – voltage, current, power & power factor in RLC circuit.		**CO3**
5. Measurement of energy using single phase energy meter. 6. Measurement of resistance to earth of an electrical equipment.		**CO4**
IV **ELECTRONICS ENGINEERING PRACTICE** **16** 1. Study of electronic components and equipment's – Resistor, colour coding measurement of AC signal parameter (peak-peak, rms period, frequency) using CR. 2. Study of logic gates AND, OR, EX-OR and NOT. 3. Generation of Clock Signal. 4. Soldering practice – Components Devices and Circuits – Using general purpose PCB. Measurement of ripple factor of HWR and FWR.		**CO5**
		TOTAL: 60 PERIODS

LIST OF EQUIPMENT FOR A BATCH OF 30 STUDENTS

S.No.	Description of Equipment	Quantity required
	CIVIL	
1.	Assorted components for plumbing consisting of metallic pipes, plastic pipes, flexible pipes, couplings, unions, elbows, plugs and other fittings.	15 sets
2.	Carpentry vice (fitted to work bench)	15 Nos
3.	Standard woodworking tools 15 Sets.	15 Sets.
4.	Models of industrial trusses, door joints, furniture joints	5 each
5.	**Power Tools:** (a) Rotary Hammer (b) Demolition Hammer (c) Circular Saw (d) Planer (e) Hand Drilling Machine (f) Jigsaw	2 Nos
	MECHANICAL	
1.	Arc welding transformer with cables and holders.	5 Nos
2.	Welding booth with exhaust facility.	5 Nos
3.	Welding accessories like welding shield, chipping hammer, wire brush, etc.	5 Sets
4.	Oxygen and acetylene gas cylinders, blow pipe and other welding outfit.	2 Nos
5.	Centre lathe.	2 Nos
6.	Hearth furnace, anvil and smithy tools.	2 Sets
7.	Moulding table, foundry tools.	2 Sets
8.	Power Tool: Angle Grinder.	2 Nos
9.	**Study-purpose items:** centrifugal pump, air-conditioner.	1 each

ELECTRICAL		
1.	Assorted electrical components for house wiring.	15 Sets
2.	Electrical measuring instruments.	10 Sets
3.	**Study purpose items:** Iron box, fan and regulator, emergency lamp.	1 each
4.	Megger (250V/500V).	1 No.
5.	**Power Tools:** (a) Range Finder (b) Digital Live-wire detector	2 Nos
ELECTRONICS		
1.	Soldering guns 10 Nos.	10 Nos.
2.	Assorted electronic components for making circuits 50 Nos.	50 Nos.
3.	Small PCBs.	10 Nos.
4.	Multimeters	10 Nos.
5.	**Study purpose items:** Telephone, FM radio, low-voltage power supply	1 each

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Fabricate carpentry components and pipe connections including plumbing works. Use welding equipment's to join the structures.
CO2	Carry out the basic machining operations Make the models using sheet metal works
CO3	Carry out basic home electrical works and appliances.
CO4	Measure the electrical quantities
CO5	Elaborate on the components, gates, soldering practices

CS1208	PROGRAMMING IN C LABORATORY	L	T	P	C
	Common to CSE, IT, AI-DS & AI-ML	0	0	4	2

OBJECTIVES

- To develop programs in C using basic constructs.
- To develop applications in C using strings, pointers, functions, structures.
- To develop applications in C using file processing

LIST OF EXPERIMENTS

Experiment	CO
1. C programming using simple statements and expressions.	CO1
2. Scientific problem-solving using decision making and looping.	
3. Generating different patterns using multiple control statements.	
4. Problems solving using one dimensional array.	
5. Mathematical problem solving using two dimensional arrays.	
6. Solving problems using string functions.	CO2
7. Solving problems with user defined functions.	
8. Solving problems using recursive function.	
9. Solving problems with dynamic memory allocation.	
10. Realtime application using structures and unions.	
11. Realtime problem solving using sequential and random-access file.	CO3
12. Solving problems with command line argument.	

TOTAL : 60 PERIODS

REFERENCE BOOKS

1. Problem Solving and Program Design in C, 4th edition, by Jeri R. Hanly and Elli B.Koffman.
2. Reema Thareja, “Programming in C”, Oxford University Press, Second Edition, 2016.
3. Programming in C by Pradip Dey, Manas Ghosh 2nd edition Oxford University Press. E.Balaguruswamy, Programming in ANSI C 5th Edition McGraw-Hill.

MA1351	PROBABILITY AND STATISTICS	L	T	P	C
	Common to CSE, IT & AI-DS	3	1	0	4

OBJECTIVES

- To understand the basic concepts of probability, one- and two-dimensional random variables and to introduce some standard distributions applicable to engineering which can describe real life phenomenon.
- To understand the basic concepts of random processes which are widely used in engineering applications.
- To acquaint the knowledge of testing of hypothesis for small and large samples, which plays an important role in real life problems.
- To introduce the basic concepts of classifications of design of experiments which plays very important roles in the field of agriculture and statistical quality control.

UNIT I	**PROBABILITY AND RANDOM VARIABLES**	**9+3**
Probability – The axioms of probability – Conditional probability – Baye's theorem - Discrete and continuous random variables – Moments – Moment generating functions – Binomial, Poisson, Geometric, Uniform, Exponential and Normal distributions.		**CO1**
UNIT II	**TWO - DIMENSIONAL RANDOM VARIABLES**	**9+3**
Joint distributions – Marginal and conditional distributions – Covariance – Correlation and linear regression – Central limit theorem (for independent and identically distributed random variables).		**CO2**
UNIT III	**RANDOM PROCESSES**	**9+3**
Classification – Stationary process – Markov process - Poisson process – Discrete parameter Markov chain – Chapman Kolmogorov equations – Limiting distributions.		**CO3**
UNIT IV	**TESTING OF HYPOTHESIS**	**9+3**
Sampling distributions - Estimation of parameters - Statistical hypothesis - Large sample tests based on Normal distribution for single mean and difference of means -Tests based on t, Chi-square and F distributions for mean, variance and proportion - Contingency table (test for independent) – Goodness of fit.		**CO4**
UNIT V	**DESIGN OF EXPERIMENTS**	**9+3**
One way and Two way classifications - Completely randomized design – Randomized block design –Latin square design - 2^2 factorial design.		**CO5**
		TOTAL : 60 PERIODS

TEXT BOOKS

1. Johnson, R.A., Miller, I and Freund J., "Miller and Freund's Probability and Statistics for Engineers", Pearson Education, Asia, 9th Edition, 2017.
2. Ibe, O.C., —Fundamentals of Applied Probability and Random Processes", Elsevier, 2nd Indian Reprint, 2014.

REFERENCE BOOKS

1. Hwei Hsu, "Schaum's Outline of Theory and Problems of Probability, Random Variables and Random Processes", Tata McGraw Hill Edition, New Delhi, 2017.
2. Yates, R.D. and Goodman. D. J., "Probability and Stochastic Processes", 2nd Edition, Wiley India Pvt. Ltd., Bangalore, 2014.
3. Papoulis, A. and Unnikrishnapillai, S., "Probability, Random Variables and Stochastic Processes", McGraw Hill Education India, 4th Edition, New Delhi, 2017.
4. Ross, S.M., "Introduction to Probability and Statistics for Engineers and Scientists", 4th Edition,Elsevier, 2009.
5. Spiegel. M.R., Schiller. J. and Srinivasan, R.A., "Schaum's Outline of Theory and Problems of Probability and Statistics", Tata McGraw Hill Edition, 2008.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Get exposure to random variables and well-founded knowledge of standard distributions which can describe real life phenomena.
CO2	Get ideas to handle situations involving more than one random variable.
CO3	Gain an understanding and characterizes phenomena which evolve with respect to time in a probabilistic manner and modelling the real-life phenomena.
CO4	Gain the knowledge on Large Samples and Small Samples. These concepts are very useful in biological, economical and social experiments and all kinds of generalizations based on information about a smaller sample and larger samples. Apply the appropriate test in the problems related with sampling.
CO5	Do design of experiments, carry them out, and analyze the data.

MAPPING OF COs WITH POs AND PSOs

3. David A. Patterson, John L. Hennessy, “Computer Organization and Design, The Hardware/Software Interface”, Fifth Edition, Morgan Kaufmann/Elsevier, 2013.

REFERENCE BOOKS

1. Charles H. Roth Jr., “Fundamentals of Logic Design”, Fifth Edition, Jaico Publishing House, 2003.
2. John F. Wakerly, “Digital Design Principles and Practices”, Fourth Edition, Pearson Education, 2007.
3. Donald D. Givone, “Digital Principles and Design”, Tata McGraw Hill, 2003.
4. G. K. Kharate, “Digital Electronics”, Oxford University Press, 2010.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Simplify Boolean functions using KMAP
CO2	Design and Analysis of Combinational Logic Circuits
CO3	Design and Analysis of Synchronous Sequential Logic Circuits
CO4	Design and Analysis of Asynchronous Sequential Logic Circuits
CO5	Implement designs using Programmable Logic Devices

MAPPING OF COs WITH POs AND PSOs

CS1302	DATA STRUCTURES	L	T	P	C
	Common to CSE, IT, AI-DS, AI-ML, ECE Semester IV	3	0	0	3

OBJECTIVES

- To understand the concepts of ADTs.
- To learn linear data structures like lists, stacks, and queues.
- To learn Non-linear tree data structures.
- To apply Graph structures
- To understand sorting, searching and hashing algorithms

UNIT I	**LINEAR DATA STRUCTURES – LIST**	**9**
Abstract Data Types (ADTs) – List ADT – array-based implementation – linked list implementation –– singly linked lists- circularly linked lists- doubly-linked lists – applications of lists –Polynomial Manipulation – All operations (Insertion, Deletion, Merge, Traversal).		**CO1**
UNIT II	**LINEAR DATA STRUCTURES – STACKS, QUEUES**	**9**
Stack ADT – Operations – Applications – Evaluating arithmetic expressions- Conversion of Infix to postfix expression – Queue ADT – Operations – Circular Queue – Priority Queue – deQueue – applications of queues.		**CO2**
UNIT III	**NON-LINEAR DATA STRUCTURES – TREES**	**9**
Tree ADT – tree traversals – Binary Tree ADT – expression trees – applications of trees – binary search tree ADT –Threaded Binary Trees- AVL Trees – B-Tree – B+ Tree – Heap – Applications of heap.		**CO3**
UNIT IV	**NON-LINEAR DATA STRUCTURES – GRAPHS**	**9**
Definition – Representation of Graph – Types of graph – Breadth-first traversal – Depth-first traversal – Topological Sort – Bi-connectivity –Graph Algorithms – Shortest Path Algorithms: Dijkstra's Algorithm – All pair shortest Path Algorithms: Floyds warshall Algorithm – Minimum Spanning Tree: Prim's Algorithm – Kruskal's Algorithm – Applications of Graph.		**CO4**
UNIT V	**SEARCHING, SORTING AND HASHING TECHNIQUES**	**9**
Searching- Linear Search – Binary Search. Sorting – Bubble sort – Selection sort – Insertion sort – Shell sort – Radix sort - Merge sort – Quick sort. Hashing- Hash Functions – Separate Chaining – Open Addressing – Rehashing – Extendible Hashing.		**CO5**
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Mark Allen Weiss, —Data Structures and Algorithm Analysis in C‖, 2nd Edition, Pearson Education,1997.
2. Reema Thareja, —Data Structures Using C‖, Second Edition , Oxford University Press, 2011.
3. Michael T. Goodrich, Roberto Tamassia, Michael H. Goldwasser, Data Structures and Algorithms in Python, Wiley,2013.
4. Bradley N. Miller, David L. Ranum, " Problem Solving with Algorithms and Data Structures using Python " , Second Edition, 2013.
5. Rance D. Necaise, Data Structures and Algorithms Using Python, John Wiley & Sons, 2011.

COURSE OUTCOMES Upon completion of the course, students will be able to	
CO1	Implement abstract data types for linear data structures.
CO2	Apply the different linear data structures to problem solutions.
CO3	Implement abstract data types for non-linear data structures.
CO4	Apply Graph data structure for the real world problems.
CO5	Critically analyze the various sorting, searching algorithms and hash functions that result in a collision free scenario for data storage and retrieval.

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)

CS1303	OBJECT ORIENTED PROGRAMMING	L	T	P	C
	Common to CSE & IT	3	0	0	3

OBJECTIVES

- Analyze the necessity for Object Oriented Programming paradigm over structured programming and become familiar with the fundamental concepts in OOP like encapsulation, Inheritance and Polymorphism
- Design an object-oriented system, GUI components and multithreaded processes as per needs and specifications
- To provide a Strong foundation for advanced programming using Object Oriented Programming Concepts.

UNIT I	JAVA FUNDAMENTALS	9
Programming Language types and paradigms – Object Oriented Programming Concepts- History of Java - Java buzzwords- JVM architecture – Java Source File Structure – Naming Convention – Data Types – Literals in Java- Scope and life time of variables – Operators in Java- Control Statements in Java - Array – String and StringBuffer		CO1
UNIT II	**OBJECT-ORIENTED PROGRAMMING, INTERFACES AND INHERITANCE**	**9**
Working with Objects - Implementing Classes - Object Construction - Static Variables and Methods – Packages - Nested Classes – Abstract Class - Interfaces – Static, Default and Private Methods – Local and Anonymous Classes – Inheritance – Extending a class - Object: The Cosmic Superclass – Wrapper classes.		CO2
UNIT III	**EXCEPTIONS, COLLECTIONS AND STREAMS**	**9**
Exceptions – exception hierarchy – throwing and catching exceptions – built-in exceptions, creating own exceptions, Stack Trace Elements. Input / Output Basics – Streams – Byte streams and Character streams – Reading and Writing Console – Reading and Writing Files.		CO3
UNIT IV	**CONCURRENT PROGRAMMING AND GUI PROGRAMMING**	**9**
Threads – Multithreaded Programming – Thread Creation – Life Cycle – Thread Priorities - Synchronization of Threads - Event Handling: Event Listeners, Delegation event model, handling mouse and keyboard events, Adapter classes. Swing: Introduction, Limitations of AWT, MVC Architecture, Components, Containers, Exploring Swing Components - Handling menus, Layout Manager – Layout Management types – Border, Grid, Flow, Card and Grid Bag.		CO4
UNIT V	**JAVA SERVER TECHNOLOGIES AND NETWORK PROGRAMMING**	**9**
Introduction to Servlet - Servlet Life Cycle - The Servlet API - Developing and Deploying Servlets - Exploring Deployment - Networking Basics – Exploring java.net classes and interfaces, InetAddress, TCP/IP Client and Server Sockets – Cookies and Datagrams.		CO5
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Herbert schildt , “The complete reference”, 11th Edition, Tata Mc Graw Hill, New Delhi. 2018.
2. Cay S. Horstmann, “Core Java SE 9 for the Impatient”, 2nd Edition, Addison-Wesley,2017 .
3. Paul Deitel, Harvey M. Deitel, “Java How to Program”, 11th Edition, Pearson Education, 2018.

REFERENCE BOOKS

1. T. Budd, “An Introduction to Object Oriented Programming”, 3rd Edition, Pearson Education, 2009.
2. Y. Daniel Liang , “Introduction to Java programming”, 7th Edition, Pearson education, 2010.

3. C Xavier , “Java Programming – A Practical Approach”, Tata McGraw-Hill Edition, 2011.
4. K. Arnold and J. Gosling, “The Java programming language”, 3rd Edition, Pearson Education, 2000.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	understand the fundamental ideas behind the object-oriented approach to programming
CO2	To inculcate concepts of inheritance to create new classes from existing one & design the classes needed given a problem specification
CO3	Able to create the good application with proper Exception Handling Mechanisms.
CO4	A modern coverage of concurrent programming that focuses on high-level synchronization constructs and the concept of event handling used in GUI.
CO5	An in-depth exposure to the object-oriented programming paradigm, which builds upon programming experience gained in computer science classes.

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

CS1304	COMPUTER ARCHITECTURE	L	P	T	C
Common to CSE, IT & EEE (Elective)		3	0	0	3

OBJECTIVES

- To learn the basic structure and operations of a computer.
- To learn the arithmetic and logic unit and implementation of fixed-point and floating-point arithmetic unit.
- To learn the basics of pipelined execution.
- To understand parallelism and multi-core processors.
- To understand the memory hierarchies and the ways of communication with I/O devices.

UNIT I	BASIC STRUCTURE OF A COMPUTER SYSTEM	9
Eight ideas-Functional Units – Basic Operational Concepts – Performance – Instructions: Language of the Computer – Operations, Operands – Instruction representation – Logical operations – decision making – MIPS Addressing.		**CO1**
UNIT II	**DATA REPRESENTATION AND ARITHMETIC FOR COMPUTERS**	**9**
Signed number representation, Addition and Subtraction – Multiplication – Division – Fixed- and Floating-Point Representation – Floating Point Operations.		**CO2**
UNIT III	**DATA PATH AND CONTROL UNIT**	**9**
A Basic MIPS implementation – Building a Datapath – Control Implementation Scheme – Pipelining – Pipelined data path and control – Handling Data Hazards & Control Hazards – Exceptions.		**CO3**
UNIT IV	**PARALLELISM**	**9**
Parallel Processing challenges – Flynn's classification – SISD, MIMD, SIMD, SPMD, and Vector Architectures - Hardware multithreading – multi-core processors and other Shared Memory Multiprocessors - Introduction to Graphics Processing Units, Clusters, Warehouse Scale Computers and other Message-Passing Multiprocessors.		**CO4**
UNIT V	**MEMORY AND PERIPHERAL DEVICES**	**9**
Memory Hierarchy - memory technologies – cache memory – measuring and improving cache performance – virtual memory, TLB's – Accessing I/O Devices – Interrupts – Direct Memory Access – Bus structure – Bus operation – Arbitration – Interface circuits – USB		**CO5**
		TOTAL : 45 PERIODS

TEXT BOOKS

1. M. David A. Patterson and John L. Hennessy, Computer Organization and Design: The Hardware/Software Interface, Fifth Edition, Morgan Kaufmann / Elsevier, 2014.
2. Carl Hamacher, ZvonkoVranesic, SafwatZaky and NaraigManjikian, Computer Organization and Embedded Systems, Sixth Edition, Tata McGraw Hill, 2012

REFERENCE BOOKS

1. William Stallings, “Computer Organization and Architecture – Designing for Performance”, Tenth Edition, Pearson Education, 2016.
2. John L. Hennessey and David A. Patterson, Computer Architecture – A Quantitative Approach, Morgan Kaufmann / Elsevier Publishers, Fifth Edition, 2012.
3. John P. Hayes, Computer Architecture and Organization, Third Edition, Tata McGraw Hill, 2012.
4. Jim Ledin, “Modern Computer architecture and Organization”, Packt Publishing,2020.
5. Douglas Comer, “Essentials of Computer Architecture”,Taylor and Francis Group 2020

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Understand the basics structure of computers, operations and instructions.
CO2	Design arithmetic and logic unit.
CO3	Understand pipelined execution and design control unit.
CO4	Understand parallel processing architectures.
CO5	Understand the various memory systems and I/O communication

MAPPING OF COs WITH POs AND PSOs

CS1305	SOFTWARE ENGINEERING	L	T	P	C
	Common to CSE & IT	3	0	0	3

OBJECTIVES

- To understand the phases in a software project.
- To understand fundamental concepts of requirements engineering and Analysis Modeling.
- To understand the various software design methodologies.
- To learn various testing, SQA and maintenance measures.

UNIT I	**SOFTWARE PROCESS AND AGILE DEVELOPMENT**	**9**
Introduction: The Evolving Role of Software, Software Characteristics, Software Process, Perspective and Specialized Process Models –Introduction to Agility-Agile Process-Extreme programming-XP Process.		**CO1**
UNIT II	**REQUIREMENTS ANALYSIS AND SPECIFICATION**	**9**
Software Requirements: Functional and Non-Functional, User requirements, System requirements, Software Requirements Document – Requirement Engineering Process: Feasibility Studies, Requirement’s elicitation and analysis, requirements validation, requirements management-Classical analysis: Structured system Analysis, Petri Nets- Data Dictionary.		**CO2**
UNIT III	**SOFTWARE DESIGN**	**9**
Design process – Design Concepts-Design Model– Design Heuristic – Architectural Design - Architectural styles, Architectural Design, Architectural Mapping using Data Flow- User Interface Design: Interface analysis, Interface Design –Component level Design: Designing Class based components, traditional Components.		**CO3**
UNIT IV	**TESTING AND MAINTENANCE**	**9**
Software testing fundamentals-Internal and external views of Testing-white box testing - basis path testing-control structure testing-black box testing- Regression Testing – Unit Testing – Integration Testing – Validation Testing – System Testing and Debugging –Software Implementation Techniques: Coding Practices-Refactoring-Maintenance and Reengineering-BPR model-Reengineering process model-Reverse and Forward Engineering.		**CO4**
UNIT V	**PROJECT MANAGEMENT AND SQA**	**9**
Software Project Management: Estimation – LOC, FP Based Estimation, Make/Buy Decision COCOMO I & II Model – Project Scheduling – Scheduling, Earned Value Analysis Planning – Project Plan, Planning Process, RFP Risk Management – Identification, Projection - Risk Management-Risk Identification-RMMM Plan, SQA-Concepts, Cost of Quality, Software Quality Group (SQA)		**CO5**

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Write functions to implement linear and non-linear data structure operations
CO2	Suggest appropriate linear / non-linear data structure operations for solving a given problem
CO3	Apply appropriate hash functions that result in a collision free scenario for data storage and retrieval and the concepts of sorting, searching and hashing

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

CS1308	OBJECT ORIENTED PROGRAMMING LABORATORY	L	P	T	C
	Common to CSE & IT	0	0	4	2

OBJECTIVES

- ❖ Implement Object Oriented programming concept using basic syntaxes of control Structures, strings and function for developing skills of logic building activity.
- ❖ Identify classes, objects, members of a class and the relationships among them needed for a finding the solution to specific problem
- ❖ Identify and describe common abstract user interface components to design GUI in Java using Swing.
- ❖ Understanding the Network Programming in Java.

LIST OF EXPERIMENTS

1. Write a Java program that prints all real solutions to the quadratic equation ax^2 +bx + c = 0. Read in a, b, c and use the quadratic formula. If the discriminate b^2 -4ac is negative, display a message stating that there are no real solutions.	**CO1**
2. The Fibonacci sequence is defined by the following rule: The first two values in the sequence are 1 and 1. Every subsequent value is the sum of the two values preceding it. Write a Java program that uses both recursive and non recursive functions to print the nth value in the Fibonacci sequence	
3. Write a Java program that counts the number of objects created by using static variable	
4. Write a Java program to create a student class with following fields a) Hall ticket number b) Student Name c) Department Create ‘n’ number of Student objects where ‘n’ value is passed as input to constructor	
5. Write a java program to create an abstract class named Shape that contains an empty method named number of Sides ( ). Provide three classes named Trapezoid, Triangle and Hexagon such that each one of the classes extends the class Shape. Each one of the classes contains only the method number Of Sides ( ) that shows the number of sides in the given geometrical figures	
6. Write a JAVA program which has a) A Interface class for Stack Operations b) A Class that implements the Stack Interface and creates a fixed length Stack. c) A Class that implements the Stack Interface and creates a Dynamic length Stack. d) A Class that uses both the above Stacks through Interface reference and does the Stack operations that demonstrates the runtime binding.	**CO2**
7. Complete the following: a) Create a package named shape. b) Create some classes in the package representing some common shapes like Square, Triangle, and Circle. c) Import and compile these classes in other program.	
8. Write a program in Java for String handling which performs the following: a) Checks the capacity of StringBuffer objects. b) Reverses the contents of a string given on console and converts the resultant string in upper case. c) Reads a string from console and appends it to the resultant string of ii.	
9. Write a Java program to make frequency count of words in a given text	

10. Write a Java program to implement a Queue using user defined Exception Handling (also make use of throw, throws.).	
11. Write a Java program to read copy content of one file to other by handling all file related exceptions	
12. Write a Java program that creates three threads. First thread displays "Good Morning" everyone second, the second thread displays "Hello" every two seconds and the third thread displays "Welcome" every three seconds.	
13. Write a java Program to create a window when we press a) M or m the window displays Good Morning b) A or a the window displays Good After Noon c) E or e the window displays Good Evening d) N or n the window displays Good Night	**CO3**
14. Create a GUI program in java with the following components. a) A frame with Flow layout. b) Add the following components on to the frame. i. Two Text Field ii. A button with the label display c) Allow the user to enter data into the JTextField d) When the button is clicked paint the frame by displaying the data entered in the JTextField e) Allow the user to properly close the frame	
15. Develop a program for executing the remote command using TCP Socket	

TOTAL : 60 PERIODS

REFERENCE BOOKS

1. Herbert schildt , The complete reference, 11th edition, Tata Mc Graw Hill, New Delhi. 2018.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Demonstrates how to achieve reusability using inheritance, interfaces and packages and describes faster application development can be achieved
CO2	To be able to make an understanding to developing Strings and exception handling, Multithreading and File Handling
CO3	Identify, Design & develop Network Programming with Sockets and Graphical user interfaces using principal Java Swing classes based on MVC architecture.

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)	PROGRAM SPECIFIC OUTCOMES (PSOs)

MA1453	DISCRETE MATHEMATICS	L	T	P	C
	Common to CSE, IT & AI-DS	3	1	0	4

OBJECTIVES

- To introduce Mathematical Logic, Inference Theory and proof methods.
- To provide fundamental principles on combinatorial counting techniques.
- To introduce graph models, their representation, connectivity and traverse ability.
- To explain the fundamental algebraic structures, groups and their algebraic properties.
- To introduce partial ordering and some functions on a set.

UNIT I	**LOGIC AND PROOFS**	**9+3**
Propositional Logic – Propositional Equivalences – Normal Forms - Predicates and Quantifiers – Nested Quantifiers – Rules of Inference – Introduction to Proofs – Proof Methods and Strategy.		**CO1**
UNIT II	**COMBINATORICS**	**9+3**
Mathematical Induction – Strong Induction and Well Ordering – The Basics of Counting - The Pigeonhole Principle – Permutations and Combinations – Recurrence Relations -Generating Functions - Solving Linear Recurrence Relations Using Generating Functions– Inclusion – Exclusion – Principle and Its Applications.		**CO2**
UNIT III	**SETS AND FUNCTIONS**	**9+3**
Set -Relations on sets – Types of relations and their properties – Partitions – Equivalence relations – Partial ordering – Poset – Hasse diagram. Functions: Characteristic function of a set – Hashing functions – Recursive functions – Permutation functions.		**CO3**
UNIT IV	**GRAPHS**	**9+3**
Graphs and Graph Models – Graph Terminology and Special Types of Graphs – Matrix Representation of Graphs and Graph Isomorphism – Connectivity – Euler and Hamilton Paths.		**CO4**
UNIT V	**ALGEBRAIC STRUCTURES**	**9+3**
Groups – Subgroups – Homomorphisms – Isomorphism - Normal Subgroup and Coset – Lagrange’s Theorem.		**CO5**
		TOTAL : 60 PERIODS

TEXT BOOKS

1. Kenneth H. Rosen, “Discrete Mathematics and its Applications”, Tata McGraw Hill Pub. Co.Ltd., Seventh Edition, Special Indian Edition, New Delhi, 2012.
2. Tremblay J.P. and Manohar R, “Discrete Mathematical Structures with Applications to Computer Science”, Tata McGraw Hill Pub. Co. Ltd, Thirtieth Reprint, New Delhi, 2011.

REFERENCE BOOKS

1. Ralph. P. Grimaldi, “Discrete and Combinatorial Mathematics: An Applied Introduction”, Pearson Education, Fifth Edition, New Delhi, 2014
2. Seymour Lipschutz and Mark Lipson,” Discrete Mathematics”, Schaum‘s Outlines, Tata McGraw Hill Pub. Co. Ltd., Third Edition, New Delhi, 2013.
3. Thomas Koshy,” Discrete Mathematics with Applications”, Elsevier Publications, Boston, 2004.

COURSE OUTCOMES **Upon completion of the course, students will be able to**	
CO1	Construct proofs by using direct proof, proof by contraposition, proof by contradiction. Construct mathematical arguments using logical connectives and quantifiers and verify the correctness of an argument using propositions. Logic helps in arriving inferences for any problem.
CO2	Solve problems on permutation and combination. Prove mathematical theorems using mathematical induction. Demonstrate basic counting principles, compute and interpret the meaning in the context of the particular application which helps to apply the combinatorial techniques in Algorithms and Data structure for analysis and design.
CO3	Understand relations on a set and functions on a set
CO4	Apply the concepts of graph theory in data structures, data mining, image segmentation and in clustering.
CO5	Familiar with algebraic systems, groups, sub groups, Lagrange's theorem and normal subgroups. In Coding algorithms and in theoretical computer science algebraic structures are applied.

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)

CS1401	DESIGN AND ANALYSIS OF ALGORITHMS	L	T	P	C
	Common for CSE, IT, AI-DS & AI-ML	3	0	0	3

OBJECTIVES

- To learn the general framework for analyzing algorithm efficiency
- To be conversant with algorithms for common problems.
- To analyse the algorithms for time/space complexity.
- To write algorithms for a given problem using different design paradigms.
- To understand computational complexity of problems

UNIT I	**INTRODUCTION**	**9**
Algorithm – Fundamentals of Algorithmic Problem Solving – Important Problem Types – The Analysis Framework – Asymptotic Notations and Basic Efficiency Classes – Mathematical Analysis of Nonrecursive and Recursive Algorithms – Empirical Analysis of Algorithms.		**CO1**
UNIT II	**DECREASE AND CONQUER AND DIVIDE-AND-CONQUER**	**9**
Decrease-and-Conquer– Insertion Sort – Binary Search – Computing a Median and the Selection Problem – Divide-and-Conquer – Merge Sort – Quicksort – The Closest –Pair and Convex –Hull Problems by Divide-and-Conquer.		**CO2**
UNIT III	**DYMANIC PROGRAMMING AND GREEDY TECHNIQUE**	**9**
The Knapsack Problem and Memory Functions – Optimal Binary Search Trees – Warshall's Algorithm – Floyd's Algorithm – Greedy Technique – Prim's Algorithm – Kruskal's Algorithm – Dijkstra's Algorithm – Huffman Trees and Codes.		**CO3**
UNIT IV	**ITERATIVE IMPROVEMENT**	**9**
Graphical Method – The Simplex Method – The maximum Flow Problem – Maximum Matching in Bipartite Graphs – The Stable Marriage Problem.		**CO4**
UNIT V	**BACKTRACKING, BRANCH-AND-BOUND AND APPROXIMATION ALGORITHMS**	**9**
P, NP, and NP- Complete Problems – Backtracking – n-Queens Problem – Hamiltonian Circuit Problem – Subset-Sum Problem – Branch-and-Bound – Assignment Problem – Knapsack Problem – Traveling Salesman Problem – Approximation Algorithms for the Traveling Salesman Problem and the Knapsack Problem.		**CO5**
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Anany Levitin, "Introduction to the Design and Analysis of Algorithms", Third Edition, Pearson Education, 2012.
2. Thomas H. Cormen, Charles E. Leiserson, Ronald L. Rivest, Clifford Stein, "Introduction to Algorithms", Third Edition, McGraw Hill, 2009.

REFERENCE BOOKS

1. Steven S. Skiena, “The Algorithm Design Manual”, Second Edition, Springer, 2008.
2. Robert Sedgewick, Kevin Wayne, “Algorithms”, Fourth Edition, Pearson Education, 2011.
3. Donald E. Knuth, “Art of Computer Programming, Volume I - Fundamental Algorithms”, Third Edition, Addison Wesley, 1997.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Ability to investigate an algorithm’s efficiency with respect to running time
CO2	Design and implement problems using algorithmic design techniques such as decrease and conquer and divide and conquer
CO3	Ability to understand the design techniques such as Dynamic programming and Greedy technique
CO4	Ability to understand the iterative design techniques
CO5	Understand the variations among tractable and intractable problems

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

CO2	3	3	3	3	2	-	-	-	3	-	2	3	3	2	2
CO3	3	3	3	3	2	-	-	-	3	-	2	3	3	2	2
CO4	3	3	3	3	2	-	-	-	3	-	2	3	3	2	2
CO5	3	3	3	3	2	-	-	-	3	-	2	3	3	2	2

CS1402	OPERATING SYSTEMS	L	T	P	C
	Common to CSE, IT, AI-DS & AI-ML	3	0	0	3

OBJECTIVES

- To understand the basic concepts and functions of operating systems.
- To understand Processes and Threads
- To analyze Scheduling algorithms.
- To understand the concept of Deadlocks.
- To analyze various memory management schemes.
- To understand I/O management and File systems.
- To be familiar with the basics of Linux system and Mobile OS like iOS and Android

UNIT I	**OPERATING SYSTEM OVERVIEW**	**9**
Computer System Overview-Basic Elements, Instruction Execution, Interrupts, Memory Hierarchy, Cache Memory, Direct Memory Access, Multiprocessor and Multicore Organization. Operating system overview-objectives and functions, Evolution of Operating System.- Computer System Organization Operating System Structure and Operations- System Calls, System Programs, OS Generation and System Boot.		**CO1**
UNIT II	**PROCESS MANAGEMENT**	**9**
Processes – Process Concept, Process Scheduling, Operations on Processes, Inter-process Communication; CPU Scheduling – Scheduling criteria, Scheduling algorithms, Multiple-processor scheduling; Threads- Overview, Multithreading models, Threading issues; Process Synchronization – The critical-section problem, Semaphores, Classical problems of synchronization, Monitors; Deadlock – System model, Deadlock characterization, Methods for handling deadlocks, Deadlock prevention, Deadlock avoidance, Deadlock detection, Recovery from deadlock.		**CO2**
UNIT III	**STORAGE MANAGEMENT**	**9**
Main Memory – Background, Swapping, Contiguous Memory Allocation, Paging, Segmentation, Segmentation with paging, 32 and 64 bit architecture Examples; Virtual Memory – Background, Demand Paging, Need for Page Replacement, Page Replacement Algorithm, Allocation, Thrashing; Allocating Kernel Memory, OS Examples.		**CO3**
UNIT IV	**FILE SYSTEMS AND I/O SYSTEMS**	**9**
Mass Storage system – Overview of Mass Storage Structure, Disk Structure, Disk Scheduling and Management, swap space management; File-System Interface - File concept, Access methods, Directory Structure, Directory organization, File Sharing and Protection; File System Implementation- File System Structure, Directory implementation, Allocation Methods, Free Space Management, Efficiency and Performance, Recovery; I/O Systems – I/O Hardware, Application I/O interface, Kernel I/O subsystem, Streams, Performance.		**CO4**
UNIT V	**CASE STUDY**	**9**
Linux System - Design Principles, Kernel Modules, Process Management, Scheduling, Memory Management, Input-Output Management, File System, Inter-process Communication; Mobile OS - iOS and Android - Architecture and SDK Framework, Media Layer, Services Layer, Core OS Layer, File System.		**CO5**
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Abraham Silberschatz, Peter Baer Galvin and Greg Gagne, —Operating System Concepts, 9th Edition, John Wiley and Sons Inc., 2012.

8. http://nptel.ac.in/.
9. William Stallings, Operating Systems: Internals and Design Principles, Pearson, 9 th Edition (2018).

COURSE OUTCOMES
Upon completion of the course, students will be able to

CO1	Analyze various scheduling algorithms.
CO2	Understand deadlock, prevention and avoidance algorithms.
CO3	Compare and contrast various memory management schemes.
CO4	Understand the functionality of file systems.
CO5	Perform administrative tasks on Linux Servers and Compare iOS and Android

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)

CS1403	DATABASE DESIGN AND MANAGEMENT (Lab Integrated)	L	T	P	C
	Common to CSE, IT, AI-DS & AI-ML	3	0	2	4

OBJECTIVES

- To learn the fundamentals of data models, ER diagrams and to study SQL and relational database design.
- To familiarize relational model with Relational Database design and Normal Forms.
- To understand the fundamental concepts of transaction processing- concurrency control techniques and recovery procedures.
- To understand the implementation techniques by learning file organization and Query Optimization.
- To understand the concepts of distributed databases, Object Oriented databases and XML databases.

UNIT I	**INTRODUCTION TO RELATIONAL DATABASES**	**9 + 6**
Purpose of Database System – Views of data – Data Models – Database System Architecture Entity-Relationship model – E-R Diagrams – Enhanced-ER Model – ER-to-Relational Mapping– Introduction to relational databases – Relational Model – Keys – Relational Algebra – SQL fundamentals – Advanced SQL features **Lab Component** • Data Definition Commands, Data Manipulation Commands for inserting, deleting, updating and retrieving Tables and Transaction Control statements .Database Querying – Simple queries, Nested queries, Sub queries and Joins • Queries using Aggregate functions (COUNT, SUM, AVG, MAX and MIN), GROUP BY, HAVING and Creation and dropping of Views, Synonyms, Sequences. • Conceptual Designing using ER Diagrams (Identifying entities, attributes, keys and relationships between entities, cardinalities, generalization, specialization etc.)		**CO1**
UNIT II	**RELATIONAL DATABASE DESIGN**	**9 + 6**
Embedded SQL– Dynamic SQL - Functional Dependencies – Non-loss Decomposition – First, Second, Third Normal Forms, Dependency Preservation – Boyce/Codd Normal Form – Multi-valued Dependencies and Fourth Normal Form – Join Dependencies and Fifth Normal Form **Lab Component** • Simple Embedded SQL Program to demonstrate the concepts. • Database Design using normalization and Implementation for any application.		**CO2**
UNIT III	**TRANSACTIONS**	**9 + 6**
Transaction Concepts – ACID Properties – Schedules – Serializability – Concurrency Control – Need for Concurrency – Locking Protocols – Two Phase Locking – Deadlock – Transaction Recovery – Save Points – Isolation Levels – SQL Facilities for Concurrency and Recovery. **Lab Component** • Usage of Transaction control language commands like commit, rollback and save point. • Develop Programs using BEFORE and AFTER Triggers for INSERT, DELETE and UPDATE statements		**CO3**
UNIT IV	**IMPLEMENTATION TECHNIQUES**	**9 + 6**
RAID – File Organization – Organization of Records in Files – Indexing and Hashing –Ordered Indices – B+ tree Index Files – B tree Index Files – Static Hashing – Dynamic Hashing. Query Processing Overview – Algorithms for SELECT and JOIN operations – Query optimization using Heuristics and Cost Estimation. **Lab Component** • Implementation of B tree and B+ Tree. • Develop programs to demonstrate hashing techniques.		**CO4**
UNIT V	**ADVANCED TOPICS**	**9 + 6**
Distributed Databases: Architecture, Data Storage, Data Fragmentation - Replication and		**CO5**

Allocation Techniques for Distributed Database Design. Distributed Databases: Architecture, Data Storage, Transaction Processing – Object-based Databases: Object Database Concepts, Object-Relational features, ODMG Object Model, ODL, OQL - XML Databases: XML Hierarchical Model, DTD, XML Schema, XQuery.

Lab Component

- Database Connectivity with Front End Tools
- Case Study using real life database applications.

PRACTICALS: 30 PERIODS	THEORY: 45 PERIODS	TOTAL : 75 PERIODS

TEXT BOOKS

1. Ramez Elmasri and Shamkant B. Navathe; Fundamentals of Database Systems, Pearson, Seventh Edition, Global Edition,2016
2. A Silberschatz, H Korth, S Sudarshan, "Database System and Concepts", fifth Edition McGraw-Hill,2012.
3. Vlad Vlasceanu, Wendy A. Neu, Andy Oram, Sam Alapati, An Introduction to Cloud Databases, O'Reilly Media, Inc.,2019.

REFERENCE BOOKS

1. C.J.Date, "An Introduction to Database Systems", Eighth Edition, Pearson Education,2004.
2. Raghu Ramakrishnan, ―Database Management Systems‖, Fourth Edition, McGraw-Hill College Publications, 2015.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Map ER model to Relational model to perform database design effectively
CO2	Able to understand the various normal forms and to minimize the redundancy in the relations
CO3	Able to know the logic behind the transaction processing, concurrency control and to recover system from failures.
CO4	Able to organize, index the files and to optimize the given queries
CO5	Able to know the concepts of distributed databases, Object Oriented databases and XML databases

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)

CS1404	COMPUTER NETWORKS	L	T	P	C
		3	0	0	3

OBJECTIVES

- To understand the protocol layering and physical level communication and to analyze the performance of a network.
- To analyze the contents of Data Link layer packet, based on the layer concept.
- To learn the functions of network layer and the various routing protocols.
- To familiarize the functions and protocols of the Transport layer.
- To know about different application layer protocols.

UNIT I	**INTRODUCTION AND PHYSICAL LAYER**	**9**
Networks – Network Types – Protocol Layering – TCP/IP Protocol suite – OSI Model – Physical Layer: Performance – Transmission media – Switching – Circuit-switched Networks – Packet Switching.		**CO1**
UNIT II	**DATA-LINK LAYER & MEDIA ACCESS**	**9**
Introduction – Link-Layer Addressing – DLC Services – Data-Link Layer Protocols – HDLC – PPP – Media Access Control – Wired LANs: Ethernet – Wireless LANs – Introduction – IEEE 802.11, Bluetooth – Connecting Devices.		**CO2**
UNIT III	**NETWORK LAYER**	**9**
Network Layer Services – IPV4 Addresses – Forwarding of IP Packets – Network Layer Protocols: IP, ICMP v4 – Unicast Routing Algorithms – Protocols – Multicasting Basics – IPV6 Addressing – IPV6 Protocol.		**CO3**
UNIT IV	**TRANSPORT LAYER**	**9**
Introduction – Transport Layer Protocols – Services – Port Numbers – User Datagram Protocol – Transmission Control Protocol-Congestion Control Mechanisms-Streaming Control Transmission Protocol.		**CO4**
UNIT V	**APPLICATION LAYER**	**9**
WWW and HTTP – FTP – Email –Telnet –SSH – DNS – SNMP- Internet Multimedia.		**CO5**
		TOTAL: 45 PERIODS

TEXT BOOKS

1. Behrouz A. Forouzan, Data Communications and Networking, Fifth Edition TMH, 2013.
2. William Stallings, Data and Computer Communications, Tenth Edition, Pearson Education, 2014.

REFERENCE BOOKS

4. James F. Kurose, Keith W. Ross, Computer Networking, A Top-Down Approach Featuring the Internet, Sixth Edition, Pearson Education, 2013.

COURSE OUTCOMES **Upon completion of the course, students will be able to**	
CO1	Understand the basic layers, functions in computer networks and to evaluate the performance of a network.
CO2	Understand the basics of how data flows from one node to another.
CO3	Analyse and design routing algorithms.
CO4	Understand design goals of Connectionless and Connection oriented protocols.
CO5	Understand the working of various application layer protocols

MAPPING OF COs WITH POs AND PSOs

EC1601	MICROPROCESSORS AND MICROCONTROLLERS	L	T	P	C
		3	0	0	3

OBJECTIVES

- To understand the Architecture of 8086 microprocessor.
- To learn the design aspects of I/O and Memory Interfacing circuits.
- To interface microprocessors with supporting chips.
- To study the Architecture of 8051 microcontroller
- To design a microcontroller-based system

UNIT I	**THE 8086 MICROPROCESSOR**	**9**
Introduction to 8086 – Microprocessor architecture – Addressing modes – Instruction set and assembler directives – Assembly language programming - Interrupts and interrupt service routines.		**CO1**
UNIT II	**8086 SYSTEM BUS STRUCTURE**	**9**
8086 signals – Basic configurations – System bus timing –System design using 8086 – System Bus Structure – Multiprocessor configurations – Coprocessor, Closely coupled and loosely Coupled configurations – Introduction to advanced processors-80186,80286,80386,80486 and Pentium processors.		**CO2**
UNIT III	**I/O INTERFACING**	**9**
Memory Interfacing and I/O interfacing – Parallel communication interface (8255) – Serial communication interface (8251) – D/A Interface and Waveform generation- A/D Interface – Timer (8253) – Keyboard /display controller (8279) – Interrupt controller (8259) – DMA controller (8237).		**CO3**
UNIT IV	**MICROCONTROLLER**	**9**
Architecture of 8051 – Special Function Registers (SFRs) – I/O Pins Ports and Circuits – Instruction set – Addressing modes – Assembly language programming - Interrupts.		**CO4**
UNIT V	**INTERFACING MICROCONTROLLER**	**9**
Programming 8051 Timers – Serial Port Programming – LCD & Keyboard Interfacing – ADC Interface – DAC Interface and Waveform generation – External Memory Interface – Stepper Motor Interface – Introduction to PIC microcontroller, Comparison of Microprocessor, Microcontroller & PIC Microcontroller.		**CO5**
		TOTAL : 45 PERIODS

TEXT BOOKS

1. A.K.Ray, K.M.Bhurchandi, "Advanced Microprocessors and Peripherals " 3rd edition, Tata McGrawHill,2012
2. Kenneth J.Ayala, "The 8051 Microcontroller-Architecture, Programming and Applications" West Publishing company, 3rd edition.)
3. Mohamed Ali Mazidi, Janice Gillispie Mazidi, Rolin McKinlay, "The 8051 Microcontroller and Embedded Systems: Using Assembly and C", Second Edition, Pearson education, 2011. (UNIT IV-V)

REFERENCE BOOKS	
1. DoughlasV.Hall, —Microprocessors and Interfacing, Programming and Hardware,TMH,2012	
COURSE OUTCOMES **Upon completion of the course, students will be able to**	
CO1	Understand and execute 8086 microprocessor Assembly language programs
CO2	Design and implement 8086 microprocessor based system
CO3	Interface 8086 microprocessor with Memory chips and I/O devices
CO4	Write and execute 8051 microcontroller Assembly language programs
CO5	Design and implement 8051 microcontroller-based systems.

MAPPING OF COs WITH POs AND PSOs

CS1407	OPERATING SYSTEMS LABORATORY	L	T	P	C
	Common to CSE & IT	0	0	4	2

OBJECTIVES

- To learn basic Unix commands, shell programming and to implement various Process Management functions such as IPC and Scheduling.
- To implement Process Synchronization, Deadlock Detection and Avoidance and Memory Allocation methods.
- To implement Paging Techniques and File Management Techniques.

LIST OF EXPERIMENTS

Experiment	CO
1. Simulation of Unix Commands like cp, ls, grep, cd, mkdir, cat, rm etc.,	CO1
2. Implementation of Shell Programs.	
3. Implementation of CPU Scheduling Algorithms.	
4. Implementation of Producer Consumer problem using Semaphore.	
5. Implementation of Inter-process Communication using Shared memory.	
6. Implementation of Threading and Synchronization Applications.	CO2
7. Implementation of Bankers Algorithm for Deadlock Avoidance.	
8. Implementation of Deadlock Detection Algorithm.	
9. Implementation of Contiguous Memory Allocation.	
10. Implementation of Memory Management scheme using Paging.	CO3
11. Implementation of Page Replacement Algorithms.	
12. Implementation of Directory Structures.	
13. Implementation of File Allocation Strategies.	

TOTAL: 60 PERIODS

REFERENCE BOOKS

1. Abraham Silberschatz, Peter Baer Galvin and Greg Gagne, —Operating System Concepts‖, 9th Edition, John Wiley and Sons Inc., 2012.
2. William Stallings, “Operating Systems – Internals and Design Principles”, 7 th Edition, Prentice Hall, 2011.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Develop simple applications with shell programming and Scheduling mechanisms.
CO2	Design and develop applications for synchronization, deadlock avoidance and detection.
CO3	Develop applications for implementing Paging and File management concepts.

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

CS1408	NETWORKS LABORATORY	L	P	T	C

	0	0	4	2

OBJECTIVES

- To learn and use network commands.
- To learn socket programming.
- To implement various functions of datalink layer.
- To implement and analyze various network protocols.
- To use simulation tools to analyse the performance of various network protocols.

LIST OF EXPERIMENTS

Experiment	CO
1. Learn to use commands like tcpdump, netstat, ifconfig, nslookup and traceroute. Capture ping and traceroute PDUs using a network protocol analyzer and examine.	CO1
2. Create a socket for HTTP web client program to download a web page	
3. Using TCP/IP sockets, develop a) Echo client and echo server b) Client – Server chat c) File transfer	
4. Simulation of DNS translation of domain name using UDP sockets	
5. Write a code simulating ARP /RARP protocols	CO2
6. Implement the datalink layer framing methods such as character stuffing and bit-stuffing.	
7. Write a program to accept binary as input and perform computation for CRC.	
8. a) Study of Network simulator (NS) b) Simulation of Congestion Control Algorithms using NS.	CO3
9. Study of TCP/UDP performance using Simulation tool.	
10. Simulation of Distance Vector/ Link State Routing algorithm to show the suitable path for transmission.	
11. Performance evaluation of Routing protocols using Simulation tool.	

TOTAL : 60 PERIODS

LIST OF EQUIPMENT FOR A BATCH OF 30 STUDENTS

Standalone desktops with C/Java compiler 30 Nos.

(or)

Server with C/Java compiler supporting 30 terminals or more.

REFERENCE BOOKS

1. Behrouz A. Forouzan, Data Communications and Networking, Fifth Edition TMH, 2013.
2. Computer Networking: A Top-Down Approach, 7th edition, by James Kurose and Keith Ross

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Implement various protocols using TCP and UDP
CO2	Implement various functions of datalink layer.
CO3	Compare the performance of different transport layer protocols and analyze various routing algorithms to select optimal and economical network.

MAPPING OF COs WITH POs AND PSOs

HS1310	PROFESSIONAL SKILLS LABORATORY	L	T	P	C
	Common to CSE & AI-DS	0	0	2	1

OBJECTIVES

- Enhance the Employability and Career Skills of students
- Orient the students towards grooming as a professional
- Make them Employable Graduates
- Develop their confidence and help them attend interviews successfully.

LIST OF EXPERIMENTS

UNIT I	**6**
Introduction to Soft Skills- Hard skills & soft skills - employability and career Skills—Grooming as a professional with values—Making an Oral Presentation–Planning and preparing a model presentation; Organizing the presentation to suit the audience and context; Connecting with the audience during presentation; Projecting a positive image while speaking; Emphasis on effective body language-General awareness of Current Affairs.	**CO1**
UNIT II	**6**
Self-Introduction-organizing the material - Introducing oneself to the audience – introducing the topic – answering questions – individual presentation practice—— Making a Power Point Presentation -- Structure and format; Covering elements of an effective presentation; Body language dynamics. Making an Oral Presentation–Planning and preparing a model presentation; Organizing the presentation to suit the audience and context; Connecting with the audience during presentation; Projecting a positive image while speaking; Emphasis on effective body language	**CO2**
UNIT III	**6**
Introduction to Group Discussion— Participating in group discussions – understanding group dynamics - brainstorming the topic -– questioning and clarifying –GD strategies- Structure and dynamics of a GD; Techniques of effective participation in group discussion; Preparing for group discussion; Accepting others' views / ideas; Arguing against others' views or ideas, etc	**CO3**
UNIT IV	**6**
Basics of public speaking; Preparing for a speech; Features of a good speech; Speaking with a microphone. (Famous speeches may be played as model speeches for learning the art of public speaking). Interview etiquette – dress code – body language – attending job interviews– telephone/skype interview -one to one interview &panel interview –Job Interviews: purpose and process; How to prepare for an interview; Language and style to be used in an interview; Types of interview questions and how to answer them.	**CO4**
UNIT V	**6**
Recognizing differences between groups and teams- managing time managing stress-networking professionally- respecting social protocols understanding career management-developing a long- term career plan making career changes	**CO5**
	TOTAL : 30 PERIODS

REFERENCE BOOKS

1. Butterfield, Jeff Soft Skills for Everyone. Cengage Learning: New Delhi, 2015
2. E. Suresh Kumar et al. Communication for Professional Success. Orient Blackswan: Hyderabad, 2015
3. Raman, Meenakshi and Sangeeta Sharma. Professional Communication. Oxford University Press: Oxford, 2014
4. S. Hariharanetal. Soft Skills. MJP Publishers: Chennai, 2010
5. Interact English Lab Manual for Undergraduate Students,. OrientBalckSwan: Hyderabad, 2016.

COURSE OUTCOMES
Upon completion of the course, students will be able to

CO1	Make effective presentations
CO2	Participate confidently in Group Discussions
CO3	Attend job interviews and be successful in them.
CO4	Develop adequate Soft Skills required for the workplace
CO5	Develop their speaking skills to enable them speak fluently in real contexts

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

MA1501	ALGEBRA AND NUMBER THEORY	L	T	P	C
	Common to CSE & IT	3	1	0	4

OBJECTIVES

- To introduce the basic notions of groups, rings, fields which will then be used to solve related problems.
- To introduce and apply the concepts of rings, finite fields and polynomials.
- To understand the basic concepts in number theory
- To give an integrated approach to number theory and abstract algebra, and provide a firm basis for further reading and study in the subject

UNIT I	**ALGEBRAIC STRUCTURES**	**9+3**
Groups - Definition - Properties - Homomorphism - Isomorphism - Cyclic groups - Cosets - Lagrange's theorem. Rings: Definition - Sub rings - Integral domain - Field - Integer modulo n - Ring homomorphism		**CO1**
UNIT II	**POLYNOMIALS OVER FIELDS**	**9+3**
Polynomial rings - Irreducible polynomials over finite fields - Factorization of polynomials over finite fields		**CO2**
UNIT III	**DIVISIBILITY THEORY AND CANONICAL DECOMPOSITIONS**	**9+3**
Division algorithm – Base - b representations – Number patterns – Prime and composite numbers – GCD – Euclidean algorithm – Fundamental theorem of arithmetic – LCM		**CO3**
UNIT IV	**DIOPHANTINE EQUATIONS AND CONGRUENCES**	**9+3**
Linear Diophantine equations – Congruence‘s – Linear Congruence‘s - Applications: Divisibility tests - Modular exponentiation-Chinese remainder theorem – 2 x 2 linear systems		**CO4**
UNIT V	**CLASSICAL THEOREMS AND MULTIPLICATIVE FUNCTIONS**	**9+3**
Wilson‘s theorem – Fermat‘s little theorem – Euler‘s theorem – Euler‘s Phi functions – Tau and Sigma functions		**CO5**
		TOTAL : 60 PERIODS

TEXT BOOKS

1. Grimaldi, R.P and Ramana, B.V., "Discrete and Combinatorial Mathematics", Pearson Education, 5th Edition, New Delhi, 2007.
2. Koshy, T., ―Elementary Number Theory with Applications‖, Elsevier Publications, New Delhi, 2002

REFERENCE BOOKS

1. Lidl, R. and Pitz, G, "Applied Abstract Algebra", Springer Verlag, New Delhi, 2nd Edition, 2006.
2. Niven, I., Zuckerman.H.S., and Montgomery, H.L., ―An Introduction to Theory of Numbers, John Wiley and Sons , Singapore, 2004.
3. San Ling and Chaoping Xing, ―Coding Theory – A first Course‖, Cambridge Publications, Cambridge, 2004

COURSE OUTCOMES **Upon completion of the course, students will be able to**	
CO1	Understand and apply the basic notions of groups, rings, fields which will then be used to solve related problems.
CO2	Explore of advanced algebraic techniques and demonstrating accurate and efficient use of the same with context to extending concept related to polynomials.
CO3	Understand the basic concepts in number theory and approach into the analysis of numbers
CO4	Apply the basic ideas of number theory to real world problems by the way of congruence and Linear Diophantine equations and Chinese remainder theorem.
CO5	Understand the three classical theorems, apply the same to solve the non - trivial problems related to the field and have strong foundation in dealing with numbers.

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)

CS1501	INTERNET PROGRAMMING	L	T	P	C
		3	0	0	3

OBJECTIVES

- To understand the structure of the Internet and the Web.
- To study and apply the Hyper Text Mark-up Language (HTML) and to explore the Document Object Model (DOM).
- To Understand CSS & JAVASCRIPT
- To Server-Side Scripting – PHP
- To Understand Database Handling, Content Management System

UNIT I	**WEBSITE BASICS, HTML 5, CSS 3, WEB 2.0**	**9**
Web Essentials: Clients, Servers and Communication – The Internet – Basic Internet protocols – World wide web – HTTP Request Message – HTTP Response Message – Web Clients – Web Servers – HTML5 – Tables – Lists – Image --Iframes – HTML5 control elements – Semantic elements – Drag and Drop – Audio – Video controls – CSS3 – Inline, embedded and external style sheets – Rule cascading – Inheritance – Backgrounds – Border Images – Colors – Shadows – Text – Transformations – Transitions – Animations.		**CO1**
UNIT II	**CLIENT SIDE PROGRAMMING**	**9**
Java Script: An introduction to JavaScript–JavaScript DOM Model-Date and Objects,-Regular Expressions- Exception Handling-Validation-Built-in objects-Event Handling- DHTML with JavaScript- JSON introduction – Syntax – Function Files – Http Request – SQL.		**CO2**
UNIT III	**SERVER SIDE PROGRAMMING**	**9**
Servlets: Java Servlet Architecture- Servlet Life Cycle- Form GET and POST actions- Session Handling- Understanding Cookies- Installing and Configuring Apache Tomcat Web Server- DATABASE CONNECTIVITY: JDBC perspectives, JDBC program example – JSP: Understanding Java Server Pages-JSP Standard Tag Library (JSTL)-Creating HTML forms by embedding JSP code.		**CO3**
UNIT IV	**PHP AND XML**	**9**
An introduction to PHP: PHP- Using PHP- Variables- Program control- Built-in functions- Form Validation- Regular Expressions – File handling – Cookies – Connecting to Database. XML: Basic XML- Document Type Definition- XML Schema DOM and Presenting XML, XML Parsers and Validation, XSL and XSLT Transformation, News Feed (RSS)		**CO4**
UNIT V	**WEB APPLICATION PROGRAMMING**	**9**
Asynchronous Web Programming, Synchronous and Asynchronous web programming, AJAX, and JQuery, Web service and API development using PHP		**CO5**
		TOTAL: 45 PERIODS

TEXT BOOKS

1. Deitel and Deitel and Nieto, “Internet and World Wide Web - How to Program”, Prentice Hall, 5th Edition, 2011.

REFERENCE BOOKS

1. Chris Bates, Web Programming – Building Intranet Applications, 3rd Edition, Wiley Publications, 2009.
2. Jeffrey C and Jackson, “Web Technologies A Computer Science Perspective”,Pearson Education, 2011.
3. Gopalan N.P. and Akilandeswari J., “Web Technology”, Prentice Hall of India, 2011.
4. UttamK.Roy, “Web Technologies”, Oxford University Press, 2011.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Construct a basic website using HTML and Cascading Style Sheets.
CO2	Build dynamic web page with validation using Java Script objects and by applying different event handling mechanisms.
CO3	Develop server side programs using Servlets and JSP.
CO4	Construct simple web pages in PHP and to represent data in XML format.
CO5	Use AJAX and web services to develop interactive web applications

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUCOMES		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

CS1502	OBJECT ORIENTED ANALYSIS AND DESIGN	L	P	T	C
Common to CSE & IT		3	0	0	3

OBJECTIVES

- To capture the requirements specifications of an intended software system
- To design software with static and dynamic UML diagrams
- To map the design properly to code
- To improve the software design with design patterns
- To test the software against its requirements specifications

UNIT I	INTRODUCTION	9
Introduction to OOAD with OO Basics - Unified Process – UML diagrams, Use Cases – Case study – the Next Gen Point of Sale (POS) system, Inception Use case Modelling, use case modeling - Relating Use cases – include, extend and generalization.		CO 1
UNIT II	**STATIC MODELLING**	**9**
Class Diagram - Elaboration – Domain Model – Finding conceptual classes and description classes – Associations – Attributes - Domain Modeling using class diagrams - Domain model refinement – Finding conceptual class Hierarchies – Aggregation and Composition.		CO 2
UNIT III	**DYNAMIC MODELLING**	**9**
Dynamic Diagrams - UML interaction diagrams - System sequence diagram – Collaboration diagram - Communication diagram - State machine diagram and Modelling – State Diagram - Activity diagram, Implementation Diagram - UML package diagram - Component and Deployment Diagrams		CO 3
UNIT IV	**DESIGN PATTERNS**	**9**
GRASP: Designing objects with responsibilities – Creator – Information expert – Low Coupling – High Cohesion – Controller. Design Patterns – Creational – Factory method – Structural – Bridge – Adapter – Behavioral– Strategy – Observer, Applying Gang of Four design patterns – Mapping design to code		CO 4
UNIT V	**TESTING**	**9**
Object Oriented Methodologies – Software Quality Assurance – Impact of object orientation on Testing – Develop Test Cases and Test Plans, Revisiting and consolidating all salient points and key insights based on the team projects.		CO 5

TOTAL: 45 PERIODS

TEXT BOOKS

1. Craig Larman, "Applying UML and Patterns: An Introduction to Object-Oriented Analysis and Design and Iterative Development", 3rd. Edition, Pearson Education, 2005.
2. Carol Britton, Jill Doake, "A Student Guide to Object-oriented Development", Elsevier Butterworth-Heinemann, 2005

REFERENCE BOOKS

1. Martin Fowler, "UML Distilled: A Brief Guide to the Standard Object Modeling Language", Third Edition, Addison Wesley, 2003.
2. Erich Gamma, Richard Helm, Ralph Johnson, John Vlissides, "Design Patterns: Elements of Reusable Object-Oriented Software", Pearson, 2015.

COURSE OUTCOMES **Upon completion of the course, students will be able to**	
CO1	Identify and map basic software system requirements in UML
CO2	Express software design with UML diagrams
CO3	Design and implement software systems using OO methodology
CO4	Improve software design using design patterns
CO5	Test the software system developed against the intended requirements

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)

CO2	3	3	3	3	2	-	-	-	-	2	2	2	3	3	2
CO3	3	3	3	3	2	-	-	-	-	2	2	2	3	3	2
CO4	3	3	3	3	2	-	-	-	-	2	2	2	3	3	2
CO5	3	3	3	3	2	-	-	-	-	2	2	2	3	3	2

CS1503	ARTIFICIAL INTELLIGENCE (Lab Integrated)	L	T	P	C
		3	0	2	4

OBJECTIVES

- To impart basic knowledge about Artificial Intelligence
- To learn the methods of solving problems using Artificial Intelligence
- To learn to represent knowledge in solving AI problems
- To understand the different ways of designing intelligent agents
- To understand the application of AI namely Robotics

UNIT I	**INTRODUCTION**	**9 + 6**
Introduction–Definition – Foundation and History of AI - Future of Artificial Intelligence – Characteristics of Intelligent Agents– Agents and Environments – Nature of Environments - Structure of Agents - Typical Intelligent Agents **Lab Component:** • Demonstration of 8-Queen's problem • Implementation of Water Jug Problem		**CO1**
UNIT II	**PROBLEM SOLVING METHODS**	**9 + 6**
Problem solving Methods - Search Strategies- Uninformed - Informed - Heuristics - Local Search Algorithms and Optimization Problems - Searching with Partial Observations - Constraint Satisfaction Problems – Constraint Propagation - Backtracking Search - Game Playing – Optimal Decisions in Games – Alpha - Beta Pruning **Lab Component:** • Path Search problem to find a path from point A to point B using A* Search Algorithm • Usage of Hill Climbing Search Algorithm to find a solution for Travelling Salesman Problem		**CO2**
UNIT III	**KNOWLEDGE REPRESENTATION**	**9 + 6**
First Order Predicate Logic – Prolog Programming – Unification – Forward Chaining-Backward Chaining – Resolution – Knowledge Representation - Ontological Engineering-Categories and Objects – Events - Mental Events and Mental Objects - Reasoning Systems for categories – Reasoning with Default Information. **Lab Component:** • Create a First Order Logic solver • Develop a Forward Chaining Inference Engine.		**CO3**
UNIT IV	**SOFTWARE AGENTS**	**9 + 6**
Architecture for Intelligent Agents – Examples - Agent communication – Speech Acts - KQML-KIF - FIPA ACL - Argumentation among Agents – Trust and Reputation in Multi-agent systems. **Lab Component:** • Develop a Simple Agent for the Vacuum-Cleaner world problem • Create a Tic Tac Toe Game program		**CO4**

UNIT V	APPLICATIONS	9 + 6
AI applications – Language Models – Information Retrieval – Information Extraction – Natural Language Processing – Machine Translation – Speech Recognition – Robot – Hardware - Perception – Planning – Moving **Lab Component:** • Simulation of Turtle moving • Simulation of Game playing		CO5

PRACTICALS:30 PERIODS	THEORY :45 PERIODS	TOTAL : 75 PERIODS

TEXT BOOKS

1. Russell S and Norvig P, "Artificial Intelligence: A Modern Approach, Prentice Hall, Third Edition, 2009.
2. Gerhard Weiss, - Multi Agent Systems , Second Edition, MIT Press, 2013.

REFERENCE BOOKS

1. Tim Jones M - Artificial Intelligence: A Systems Approach (Computer Science), Jones and Bartlett Publishers, Inc.; First Edition, 2008
2. Bratko I - Prolog: Programming for Artificial Intelligence, Fourth edition, Addison-Wesley Educational Publishers Inc., 2011.
3. Kevin Night and Elaine Rich, Nair B., “Artificial Intelligence (SIE)”, Mc Graw Hill- 2008.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Implement basic AI Algorithms.
CO2	Use appropriate search algorithms to solve AI based problems.
CO3	Represent a problem using first order and predicate logic.
CO4	Implement Various intelligent systems.
CO5	Gain knowledge on the functions of Robots.

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)

CS1507	INTERNET PROGRAMMING LABORATORY	L	T	P	C
		0	0	4	2

OBJECTIVES

- To develop an ability to design and implement static and dynamic website
- To design interactive web pages using Scripting languages.
- To learn server side programming using servlets, PHP and JSP with database connectivity.
- To develop web pages using XML/XSLT

LIST OF EXPERIMENTS

Experiment	CO
1. To create an html page with different types of frames such as floating frame, navigation frame& mixed frame	CO1
2. Develop static pages (using only HTML) of an online Book store. The pages should resemble: www.amazon.com the website should consist the following pages. Home page, Registration and user Login, User profile page, Books catalog, Shopping cart, Payment By credit card, order confirmation	CO1
3. Design a web page using CSS (Cascading Style Sheets) which includes the following: a) Use different font, styles: In the style definition you define how each selector should work (font, color etc.). Then, in the body of your pages, you refer to these selectors to activate the styles. b) Set a background image for both the page and single elements on the page. c) Control the repetition of the image with the background-repeat property.	CO1
4. To create a html page to show online exam using JavaScript.	CO2
5. Validate the registration, user login, user profile and payment by credit card pages using JavaScript.	CO2
6. Write an XML file to display the Book information with Title, Author Name, ISBN, Publisher, Edition and Price . a) Write a Document Type Definition (DTD) to validate the above XML file. Display the XML file as follows. b) The contents should be displayed in a table. The header of the table should be in color GREY. And the Author names column should be displayed in one color and should be capitalized and in bold. Use your own colors for remaining columns. c) Write XML schema and XSL for the XML file.	CO2
7. A web application that lists all cookies stored in the browser on clicking “list cookies” button, add cookies if necessary	CO2
8. Consider a case where we have two web Services- an airline service and a travel agent and the travel agent is searching for an airline. Implement this scenario using Web Services and Data base.	CO2
9. Write a PHP program to input previous reading and present reading and prepare an electricity bill using the following conditions	CO2

Units Consumed	Rate
<100	Rs. 3/ Unit
Between 100 and 200	Rs. 4/ Unit
Between 200 and 300	Rs. 5/ Unit
>300	Rs. 6/ Unit

10. Implement the following web application using a) Servlets b) PHP c) JSP I. A user validation web application, where user submits the login name and password to server. These are checked against the data already available in database and if the data matches a successful login page is returned. Otherwise a failure message is shown to the user. II. Modify the above program to use an xml file instead of database. III. Modify the above program to use AJAX to show the result on the same page below the submit button.	**CO2**

TOTAL : 60 PERIODS

REFERENCE BOOKS

1. Web Design with HTML, CSS, JavaScript and jQuery Set 1st Edition.
2. Learning PHP, MySQL & JavaScript: With jQuery, CSS & HTML5 (Learning PHP, MYSQL, Javascript, CSS & HTML5).
3. Murach's PHP and MySQL (3rd Edition).
4. Learn JavaScript VISUALLY with Interactive Exercises.
5. JavaScript and JQuery: Interactive Front-End Web Development.
6. PHP and MySQL for Dynamic Web Sites: Visual QuickPro Guide.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Design screen-based user interfaces, with graphics, textual components, and navigation systems to achieve a unified, functional environment that results in static web pages
CO2	Design and implement dynamic websites with good aesthetic sense of designing and latest technical know-how's.
CO3	Have a Good grounding of Web Application Terminologies, Internet Tools, E – Commerce and other web services

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO 3
CO1	3	3	3	3	2	-	-	-	-	2	2	2	3	3	2
CO2	3	3	3	3	2	-	-	-	-	2	2	2	3	3	2

CS1508	OBJECT ORIENTED ANALYSIS AND DESIGN LABORATORY	L	P	T	C
	Common to CSE & IT	0	0	4	2

OBJECTIVES

- To capture the requirements specification for an intended software system
- To draw the UML diagrams for the given specification
- To map the design properly to code
- To test the software system thoroughly for all scenarios
- To improve the design by applying appropriate design patterns.

LIST OF EXPERIMENTS

Draw standard UML diagrams using an UML modeling tool for a given case study and map design to code and implement a 3 layered architecture. Test the developed code and validate whether the SRS is satisfied.

1. Identify a software system that needs to be developed.	**CO1**
2. Document the Software Requirements Specification (SRS) for the identified system.	
3. Identify use cases and develop the Use Case model.	**CO2**
4. Identify the conceptual classes and develop a Domain Model and also derive a Class Diagram from that.	
5. Using the identified scenarios, find the interaction between objects and represent them using UML Sequence and Collaboration Diagrams	
6. Draw relevant State Chart and Activity Diagrams for the same system.	
7. Implement the system as per the detailed design	
8. Test the software system for all the scenarios identified as per the use case diagram	**CO3**
9. Improve the reusability and maintainability of the software system by applying appropriate design patterns.	
10. Implement the modified system and test it for various scenarios	

SUGGESTED DOMAINS FOR MINI-PROJECT

- Passport automation system.
- Book bank
- Exam registration
- Stock maintenance system.
- Online course reservation system
- Airline/Railway reservation system
- Software personnel management system
- Credit card processing
- e-book management system
- Recruitment system
- Foreign trading system
- Conference management system
- BPO management system
- Library management system
- Student information system

TOTAL : 60 PERIODS

REFERENCE BOOKS

CS1601	COMPILER DESIGN	L	T	P	C
		3	0	0	3

OBJECTIVES

- To learn the various phases of compiler.
- To learn the various parsing techniques.
- To understand intermediate code generation and run-time environment.
- To learn to implement code generator.
- To understand code optimization.

UNIT I	INTRODUCTION TO COMPILERS AND LEXICAL ANALYSIS	9
Translators - Compilation and Interpretation - Language processors - Compiler Construction Tools - Structure of a compiler - Lexical Analysis - Role of Lexical Analyzer - Specification of Tokens - Recognition of Tokens - Lex - Design of Lexical Analyzer for a sample Language- Finite Automata - Regular Expressions to Automata - Minimizing DFA		**CO1**
UNIT II	**SYNTAX ANALYSIS**	**9**
Need and Role of Parser - Context Free Grammars - Top-Down Parsing - Recursive Descent Parser - Predictive Parser- LL(1) Parser-Shift Reduce Parser-LR Parser - LR(0) Items - Construction of SLR Parsing Table - LALR Parser - Error Handling and Recovery in Syntax Analyzer – YACC.		**CO2**
UNIT III	**INTERMEDIATE CODE GENERATION**	**9**
Syntax Directed Definitions - Evaluation Orders for Syntax Directed Definitions - Intermediate Languages: Syntax Tree, Three Address Code - Types and Declarations, Translation of Expressions- Type Checking		**CO3**
UNIT IV	**RUN-TIME ENVIRONMENT AND CODE GENERATION**	**9**
Storage Organization- Stack Allocation Space- Access to Non-local Data on the Stack- Heap Management – Basic blocks and flow graphs-Issues in Code Generation - Design of a Simple Code Generator.		**CO4**
UNIT V	**CODE OPTIMIZATION**	**9**
Principal Sources of Optimization - Peep-hole Optimization - DAG - Optimization of Basic Blocks -Global Data Flow Analysis - Efficient Data Flow Algorithm		**CO5**
		TOTAL: 45 PERIODS

TEXT BOOKS

1. Alfred V. Aho, Monica S. Lam, Ravi Sethi, Jeffrey D. Ullman, Compilers: Principles, Techniques and Tools, Second Edition, Pearson Education, 2009.

REFERENCE BOOKS

3. Keith D Cooper and Linda Torczon, Engineering a Compiler‖, Morgan Kaufmann Publishers Elsevier Science, 2004.
4. V. Raghavan, Principles of Compiler Design‖, Tata McGraw Hill Education Publishers, 2010

COURSE OUTCOMES **Upon completion of the course, students will be able to**	
CO1	Understand the different phases of compiler and identify the tokens using lexical analyzer.
CO2	Apply different parsing algorithms to develop the parsers for a given grammar.
CO3	Understand Syntax-directed translation and formulate the Intermediate Code.
CO4	Categorize the Intermediate Code into basic blocks and generate code
CO5	Apply various optimization techniques for dataflow analysis

CS1602	MOBILE COMPUTING	L	T	P	C
		3	0	0	3

OBJECTIVES

- To understand the basic concepts of mobile computing.
- To learn the basics of mobile telecommunication system.
- To be familiar with the network layer protocols and Ad-Hoc networks.
- To know the basis of transport and application layer protocols.
- To gain knowledge about different mobile platforms and application development.

UNIT I	**INTRODUCTION**	**9**
Introduction to Mobile Computing - Mobile Computing Vs Wireless networking - Applications of Mobile Computing - Structure of Mobile Computing Applications - Generations of Mobile Communication Technologies - MAC Protocols - Wireless MAC Issues – SDMA - TDMA- FDMA - CDMA.		**CO1**
UNIT II	**MOBILE TELECOMMUNICATION SYSTEM**	**9**
Introduction to Cellular Systems – GSM: Services & Architecture – Protocols – Connection Establishment – Handover – Routing – Mobility Management – Security; GPRS- UMTS – Architecture – Handover – Security.		**CO2**
UNIT III	**MOBILE NETWORK LAYER**	**9**
Mobile IP – Features – Key Mechanisms –Route Optimization - DHCP – AdHoc– Proactive protocol-DSDV, Reactive Routing Protocols – DSR, AODV, Hybrid routing –ZRP, Multicast Routing- ODMRP, Vehicular Ad Hoc networks (VANET) –MANET Vs VANET – Security.		**CO3**
UNIT IV	**MOBILE TRANSPORT AND APPLICATION LAYER**	**9**
Mobile TCP– WAP – Architecture – WDP – WTLS – WTP –WSP – WAE – WTA Architecture – WML – WAP 2.0.		**CO4**
UNIT V	**MOBILE PLATFORMS AND APPLICATIONS**	**9**
Mobile Device Operating Systems – Special Constraints & Requirements – Commercial Mobile Operating Systems – Software Development Kit: iOS, Android, Windows Phone – M-Commerce – Structure – Pros & Cons – Mobile Payment System – Security Issues.		**CO5**
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Jochen Schiller, -Mobile Communications, PHI, Second Edition,2009.
2. Prasant Kumar Pattnaik, RajibMall,-Fundamentals of Mobile Computing, second Edition, PHILearning Pvt.Ltd, New Delhi –2015.

REFERENCE BOOKS

1. Dharma PrakashAgarval, Qing and An Zeng, "Introduction to Wireless and Mobile systems",Thomson Asia Pvt Ltd,2005.
2. UweHansmann, LotharMerk, Martin S. Nicklons and Thomas Stober, —Principles of Mobile Computing, Springer,2003.
3. William.C.Y.Lee,—Mobile Cellular Telecommunications-Analog and Digital Systems, Second Edition,Tata McGraw Hill Edition,2006.
4. Toh C K, —AdHoc Mobile Wireless Networks, First Edition, Pearson Education,2002.

6. Apple Developer :https://developer.apple.com.
7. Windows Phone DevCenter :http://developer.windowsphone.com.
8. BlackBerry Developer :http://developer.blackberry.com.

COURSE OUTCOMES **Upon completion of the course, students will be able to**	
CO1	Understand the basics of mobile telecommunication systems.
CO2	Illustrate the generations of telecommunication systems in wireless networks.
CO3	Determine the functionality of MAC, network layer and Identify a routing protocol for a given Ad hoc network.
CO4	Understand the functionality of Transport and Application layers.
CO5	Develop a mobile application using android/ios/Windows SDK.

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

CS1603	DISTRIBUTED SYSTEMS	L	T	P	C
		3	0	0	3

OBJECTIVES

- To understand the foundations of distributed systems.
- To learn issues related to clock Synchronization and the need for global state in distributed systems.
- To learn distributed mutual exclusion and deadlock detection algorithms.
- To understand the significance of agreement, fault tolerance and recovery protocols in Distributed Systems.
- To learn the characteristics of peer-to-peer and distributed shared memory systems.

UNIT I	INTRODUCTION TO DISTRIBUTED SYSTEMS	9
Introduction: Definition –Relation to computer system components –Motivation –Relation to parallel systems – Message-passing systems versus shared memory systems –Primitives for distributed communication –Design issues and challenges. A model of distributed computations: A distributed program –A model of distributed executions –Models of communication networks –Global state – Cuts –Past and future cones of an event –Models of process communications. Logical Time: A framework for a system of logical clocks –Scalar time –Vector time – Physical clock synchronization: NTP.		CO1
UNIT II	**MESSAGE ORDERING & SNAPSHOTS**	**9**
Message ordering and group communication: Message ordering paradigms –Synchronous program order on an asynchronous system –Group communication – Causal order (CO) – Total order. Global state and snapshot recording algorithms: Introduction –System model and definitions –Snapshot algorithms for FIFO channels.		CO2
UNIT III	**DISTRIBUTED MUTEX & DEADLOCK**	**9**
Distributed mutual exclusion algorithms: Introduction – Preliminaries – Lamport‘s algorithm – Ricart-Agrawala algorithm – Maekawa‘s algorithm – Suzuki–Kasami‘s broadcast algorithm. Deadlock detection in distributed systems: Introduction – System model – Preliminaries – Models of deadlocks – Knapp‘s classification – Algorithms for the single resource model, the AND model and the OR model.		CO3
UNIT IV	**RECOVERY & CONSENSUS**	**9**
Checkpointing and rollback recovery: Introduction – Background and definitions – Issues in failure recovery – Checkpoint-based recovery – Log-based rollback recovery – Coordinated checkpointing algorithm – Algorithm for asynchronous checkpointing and recovery. Consensus and agreement algorithms: Problem definition – Overview of results – Agreement in a failure –free system – Agreement in synchronous systems with failures.		CO4
UNIT V	**P2P & DISTRIBUTED SHARED MEMORY**	**9**
Peer-to-peer computing and overlay graphs: Introduction – Data indexing and overlays – Chord – Content addressable networks – Tapestry. Distributed shared memory: Abstraction and advantages – Memory consistency models: Strict consistency - Sequential consistency - Causal consistency –Shared memory Mutual Exclusion.		CO5
		TOTAL: 45 PERIODS

TEXT BOOKS

1. Kshemkalyani, Ajay D., and Mukesh Singhal. Distributed computing: principles, algorithms, and systems. Cambridge University Press, 2011.
2. George Coulouris, Jean Dollimore and Tim Kindberg, ―Distributed Systems Concepts and Design‖, Fifth Edition, Pearson Education, 2012.

REFERENCE BOOKS

1. Pradeep K Sinha, "Distributed Operating Systems: Concepts and Design", Prentice Hall of India, 2007.
2. Mukesh Singhal and Niranjan G. Shivaratri. Advanced concepts in operating systems. McGraw-Hill, Inc., 1994.
3. Tanenbaum A.S., Van Steen M., ―Distributed Systems: Principles and Paradigms‖, Pearson Education, 2007.
4. Liu M.L., ―Distributed Computing, Principles and Applications‖, Pearson Education, 2004.
5. Nancy A Lynch, ―Distributed Algorithms‖, Morgan Kaufman Publishers, USA, 2003.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Elucidate the foundations and issues of distributed systems
CO2	Understand the various synchronization issues and global state for distributed systems
CO3	Understand the Mutual Exclusion and Deadlock detection algorithms in distributed systems
CO4	Describe the agreement protocols and fault tolerance mechanisms in distributed systems
CO5	Describe the features of peer-to-peer and distributed shared memory systems

MAPPING OF COs WITH POs AND PSOs

CS1604	DATA SCIENCE AND ANALYTICS	L	T	P	C
		3	0	0	3

OBJECTIVES

- To know the fundamental concepts of data science and analytics
- To learn various techniques for mining data streams
- To learn Event Modelling for different applications
- To know about Hadoop and Map Reduce procedure

UNIT I	**INTRODUCTION TO DATA SCIENCE AND BIG DATA**	**9**
Introduction to Data Science – Applications - Data Science Process – Exploratory Data analysis – Collection of data – Graphical presentation of data – Classification of data – Storage and retrieval of data – Big data – Challenges of Conventional Systems - Web Data – Evolution Of Analytic Scalability - Analytic Processes and Tools - Analysis vs Reporting - Modern Data Analytic Tools - Statistical Concepts: Sampling Distributions - Re-Sampling - Statistical Inference - Prediction Error		**CO1**
UNIT II	**DATA ANALYSIS**	**9**
Correlation – Regression – Probability – Conditional Probability – Random Variables – Analysis using Mean, Median, Mode, Standard Deviation, Skewness, Kurtosis- Regression Modeling - Multivariate Analysis - Bayesian Modeling - Inference and Bayesian Networks - Support Vector and Kernel Methods - Analysis of Time Series: Linear Systems Analysis - Nonlinear Dynamics		**CO2**
UNIT III	**DATA MINING TECHNIQUES**	**9**
Rule Induction - Neural Networks: Learning and Generalization - Competitive Learning - Principal Component Analysis and Neural Networks - Fuzzy Logic: Extracting Fuzzy Models from Data - Fuzzy Decision Trees - Stochastic Search Methods- Neuro-Fuzzy Modelling – Association rule mining – Clustering – Outlier Analysis – Sequential Pattern Mining – Temporal mining – Spatial mining – Web mining		**CO3**
UNIT IV	**MINING DATA STREAMS**	**9**
Introduction To Streams Concepts – Stream Data Model and Architecture - Stream Computing - Sampling Data in a Stream – Filtering Streams – Counting Distinct Elements in a Stream – Estimating Moments – Counting Oneness in a Window – Decaying Window - Real time Analytics Platform(RTAP) Applications - Case Studies - Real Time Sentiment Analysis, Stock Market Predictions		**CO4**
UNIT V	**FRAMEWORKS AND VISUALIZATION**	**9**
Map Reduce – Hadoop, Hive, MapR – Sharding – NoSQL Databases – Cloud databases - S3 - Hadoop Distributed File Systems – Visualizations - Visual Data Analysis Techniques - Interaction Techniques – Social Network Analysis – Collective Inferencing – Egonets - Systems and Applications		**CO5**
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Michael Berthold, David J. Hand, “Intelligent Data Analysis”, Springer, 2007
2. Anand Rajaraman and Jeffrey David Ullman, “Mining of Massive Datasets”, Cambridge University Press, 2012
3. Bill Franks, “Taming the Big Data Tidal Wave: Finding Opportunities in Huge Data Streams with Advanced Analytics”, John Wiley & sons, 2012
4. Jiawei Han, Micheline Kamber “Data Mining Concepts and Techniques”, Second Edition, Elsevier, Reprinted 2008

REFERENCE BOOKS

1. Rachel Schutt, Cathy O'Neil, “Doing Data Science”, O'Reilly Publishers, 2013
2. Foster Provost, Tom Fawcet, “Data Science for Business”, O'Reilly Publishers, 2013

4. S. N. Sivanandam, S. N Deepa, “Introduction to Neural Networks Using Matlab 6.0”, Tata McGraw- Hill Education, 2006

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Work with big data platform and its analysis techniques
CO2	Design efficient algorithms for mining the data from large volumes
CO3	Model a framework for Human Activity Recognition
CO4	Development with cloud databases
CO5	Apply visualization techniques to present the data

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)

CS1607	MOBILE APPLICATION LABORATORY	L	T	P	C
		0	0	4	2

OBJECTIVES

- Know the components and structure of mobile application development frameworks for Android based mobiles.
- Understand how to work with various mobile application development frameworks.
- Learn the basic and important design concepts and issues of development of mobile applications.

LIST OF EXPERIMENTS

1.	Develop an application for changing the font, color and size of the given text that uses GUI components, Font and Colors	CO1
2.	Develop an application for collecting student's information that uses Layout Managers and event listeners.	
3.	Implement a native Calculator to perform various operations using appropriate GUI Components.	
4.	Write an application that display line, circle, rectangle and other 2D graphical primitives on the screen.	
5.	Develop an application for implementing payroll system by connecting the database where the actual data is stored and retrieved.	CO2
6.	Develop an application that makes use of RSS Feed.	
7.	Implement an application that implements multi-threading	
8.	Develop a native application that uses GPS location information.	
9.	Implement an application that writes data to the SD card.	CO3
10.	Implement an application that creates an alert upon receiving a message.	
11.	Develop an application to send an email.	
12.	Write a mobile application that creates alarm clock.	

TOTAL : 60 PERIODS

REFERENCE BOOKS

1. Erik Hellman, "Android Programming – Pushing the Limits", 1st Edition, Wiley India Pvt Ltd, 2014.
2. Dawn Griffiths and David Griffiths, "Head First Android Development", 1st Edition, O'Reilly SPD Publishers, 2015.
3. DiMarzio J F, "Beginning Android Programming with Android Studio", 4th Edition, Wiley India Pvt Ltd, 2016.
4. Anubhav Pradhan, Anil V Deshpande, "Composing Mobile Apps" using Android, Wiley 2014.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Create, test and debug Android application by setting up Android development environment.
CO2	Demonstrate methods for storing, sharing and retrieving data in Android applications.
CO3	Analyze the performance of android applications to understand the role of permissions and security.

MAPPING OF COs WITH POs AND PSOs															
COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

CO2	3	3	3	3	2	-	-	-	-	2	2	2	3	3	2
CO3	3	3	3	3	2	-	-	-	-	2	2	2	3	3	2

CS1701	GRAPH THEORY	L	T	P	C
		3	0	0	3

OBJECTIVES

- To understand the basic graph terminologies and types of graphs.
- To appreciate graph theoretic terms related to trees and cut-sets.
- To understand the geometric, combinatorial properties of graphs and basic concepts of directed graphs.
- To understand the matrix representation of graphs and the colouring, covering and partitioning of graphs.
- To solve a nontrivial practical problem with the help of high-speed electronic computers.

UNIT I	**INTRODUCTION**	**9**
Introduction - Graph Terminologies - Types of Graphs – Isomorphism- Sub Graphs – Walks, Paths and Circuits – Connected Graphs and Components - Isomorphic Graphs – Operations on Graphs - Euler graphs - Hamiltonian Graph.		**CO1**
UNIT II	**TREES AND CUT-SETS**	**9**
Trees -Properties- Distance and Centers - Types - Rooted Tree- Labeled Tree - Unlabeled Tree - Spanning Tree – Cut-sets - Properties - Fundamental Circuits and Cut-sets- Connectivity and Separability.		**CO2**
UNIT III	**PLANAR, DUAL GRAPHS AND DIRECTED GRAPHS**	**9**
Planar Graph - Representation - Detection - Dual Graph - Geometric and Combinatorial Dual – Directed Graphs – Types- Properties - Euler Digraph.		**CO3**
UNIT IV	**MATRIX REPRESENTATIONS AND CHROMATIC NUMBER**	**9**
Matrix Representation - Incidence matrix- Circuit matrix - Cut-set matrix - Path Matrix- Adjacency Matrix-Properties - Graph Coloring - Chromatic Polynomial - Chromatic Partitioning - Matchings - Coverings.		**CO4**
UNIT V	**GRAPH THEORETIC ALGORITHMS AND COMPUTER PROGRAMS**	**9**
Graph Algorithms: Connectedness and Components- Spanning Tree- Fundamental Circuits- Cut Vertices- Directed Circuits- Shortest Path - Applications overview.		**CO5**
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Narsingh Deo, "Graph Theory with Applications to Engineering and Computer Science", Prentice-Hall of India Pvt.Ltd, 2003.

REFERENCE BOOKS

1. Foulds L R , Graph Theory Applications, Springer ,2016.
2. Bondy, J. A. and Murty, U.S.R., "Graph Theory with Applications", North Holland Publication, 2008.
3. West, D. B., Introduction to Graph Theory, Pearson Education, 2011 .
4. John Clark, Derek Allan Holton, A First Look at Graph Theory, World Scientific Publishing Company, 1991.
5. Diestel, R, Graph Theory, Springer 3rd Edition,2006.
6. Kenneth H.Rosen, Discrete Mathematics and Its Applications, Mc Graw Hill , 2007.

COURSE OUTCOMES **Upon completion of the course, students will be able to**	
CO1	Gain knowledge about basic terminologies of graph, types of graph and various applications of graph theory.
CO2	Develop the system which keeps the vertices together and separates the vertices.
CO3	Understand the combinational and geometric graphs.
CO4	Demonstrate the use of matrices in studying graphs and direct consequence of proper coloring of vertices
CO5	Address the computational aspects of graph theory, including graph-theoretic algorithms and computer programs.

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

CS1702	CLOUD COMPUTING	L	T	P	C
	Common to CSE & IT	3	0	0	3

OBJECTIVES

- To understand the concept of cloud computing.
- To learn about the concept of cloud and utility computing.
- To have knowledge on the various issues in cloud computing.
- To understand the emergence of cloud as the next generation computing paradigm.

UNIT I	INTRODUCTION	9
Introduction to Cloud Computing – Definition of Cloud – Evolution of Cloud Computing – Underlying Principles of Parallel and Distributed Computing – Cloud Characteristics – Benefits and Disadvantages of Cloud Computing- Elasticity in Cloud – On-demand Provisioning		**CO1**
UNIT II	**CLOUD ENABLING TECHNOLOGIES**	**10**
Service Oriented Architecture – REST and Systems of Systems – Web Services – Publish-Subscribe Model – Basics of Virtualization – Types of Virtualization – Implementation Levels of Virtualization – Virtualization Structures – Tools and Mechanisms – Virtualization of CPU – Memory – I/O Devices –Virtualization Support and Disaster Recovery.		**CO2**
UNIT III	**CLOUD ARCHITECTURE, SERVICES AND STORAGE**	**8**
Layered Cloud Architecture Design – NIST Cloud Computing Reference Architecture – Public, Private and Hybrid Clouds - IaaS – PaaS – SaaS – Architectural Design Challenges – Cloud Storage – Storage-as-a-Service – Advantages of Cloud Storage – Cloud Storage Providers – S3.		**CO3**
UNIT IV	**RESOURCE MANAGEMENT AND SECURITY IN CLOUD**	**10**
Inter Cloud Resource Management – Resource Provisioning and Resource Provisioning Methods – Global Exchange of Cloud Resources – Security Overview – Cloud Security Challenges – Software-as-a-Service Security – Security Governance – Virtual Machine Security – IAM – Security Standards.		**CO4**
UNIT V	**CLOUD ADVANCEMENT TECHNOLOGIES**	**8**
Hadoop – MapReduce – Virtual Box -- Google App Engine – Programming Environment for Google App Engine –– Open Stack - Cloud Software Environments - Eucalyptus – Open Nebula.		**CO5**
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Kai Hwang, Geoffrey C. Fox, Jack G. Dongarra, "Distributed and Cloud Computing, From Parallel Processing to the Internet of Things", Morgan Kaufmann Publishers, 2012.
2. RajkumarBuyya, Christian Vecchiola, S. ThamaraiSelvi, —Mastering Cloud Computing, Tata Mcgraw Hill, 2013.
3. Rittinghouse, John W., and James F. Ransome, "Cloud Computing: Implementation, Management, And Security", CRC Press, 2017

REFERENCE BOOKS

3. https://kubernetes.io/docs/home/
4. https://docs.mongodb.com/
5. https://aws.amazon.com/documentdb/

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Articulate the main concepts, key technologies, strengths and limitations of cloud computing.
CO2	Learn the key and enabling technologies that help in the development of cloud.
CO3	Understand the architecture of compute and storage cloud, service and delivery models.
CO4	Explain the core issues of cloud computing such as resource management and security.
CO5	Install and use current cloud technologies and choose the appropriate technologies, approaches for implementation.

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)

CS1703	CRYPTOGRAPHY AND NETWORK SECURITY	L	T	P	C
(Common to CSE & IT)		3	0	0	3

OBJECTIVES

- To define security attacks, services and mechanisms.
- To review modern symmetric-key ciphers based on algebraic structures.
- To understand asymmetric-key cryptography based on some topics in number theory.
- To define cryptographic data integrity algorithms and mutual trust.
- To discuss various security practices and system security measures.

UNIT I	**FUNDAMENTALS**	**9**
Computer Security Concepts – The OSI Security Architecture - Security Attacks, Services and Mechanisms - Model for network security – Classical Encryption Techniques: Substitution Techniques, Transposition Techniques, Steganography – Legal and Ethical Aspects.		**CO1**
UNIT II	**SYMMETRIC CRYPTOGRAPHY**	**9**
Mathematics of Symmetric Key Cryptography: Algebraic structures – Modular arithmetic- GF (2^n Fields) –The Euclidian Algorithm- Polynomial Arithmetic - Symmetric Key Ciphers: Block Cipher and Data Encryption Standard (DES) - Advanced Encryption Standard (AES) – Block Cipher Operation – Random Bit Generation and Stream Ciphers - RC4.		**CO2**
UNIT III	**PUBLIC KEY CRYPTOGRAPHY**	**9**
Mathematics of Asymmetric Key Cryptography: Primes – Primality Testing – Factorization – Chinese Remainder Theorem – Quadratic Congruence- Exponentiation and Logarithm - Asymmetric Key Ciphers: RSA Cryptosystem – Rabin Cryptosystem - Diffie Hellman Key Exchange - ElGamal Cryptosystem – Elliptic Curve Arithmetic - Elliptic Curve Cryptography.		**CO3**
UNIT IV	**CRYPTOGRAPHIC DATA INTEGRITY ALGORITHMS AND MUTUAL TRUST**	**9**
Cryptographic Hash Functions – Message Authentication Codes - Digital Signatures –Key Management and Distribution – X.509 Certificates - User Authentication- Kerberos		**CO4**
UNIT V	**INTERNET SECURITY AND SYSTEM SECURITY**	**9**
Electronic Mail security – PGP, S/MIME – IP security – Cloud Security- Wireless Network Security – System Security: Intruders – Malicious software – Firewalls.		**CO5**
		TOTAL : 45 PERIODS

TEXT BOOKS

1. William Stallings, Cryptography and Network Security: Principles and Practice, PHI 5th Edition, 2011.
2. Behrouz A.Forouzan, Introduction to Cryptography and Network Security, McGraw-Hill Ferouzan Networking Series, 2008.

REFERENCE BOOKS

1. Shyamala C K, N Harini and Dr T R Padmanabhan: Cryptography and Network Security, Wiley India Pvt. Ltd.
2. Charlie Kaufman, Radia Periman and Mike Speciner, Network Security: private Communication in a public World, Prentice Hall, ISBN 0-13-046019-2
3. William Stallings, "Network Security Essentials Applications and Standards", 2nd edition, Pearson Education, 2003.

COURSE OUTCOMES **Upon completion of the course, students will be able to**	
CO1	Describe the key security requirements of confidentiality, Integrity and availability
CO2	Apply the different cryptographic operations of symmetric cryptographic algorithms
CO3	Examines of asymmetric key cryptosystem and design principles
CO4	Describe the various cryptographic data integrity algorithms and various aspects of key management and distribution.
CO5	Understand various network Security practices and System level security issues

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)

CS1709	Edge Computing	L	T	P	C
		3	0	0	3

OBJECTIVES

- ❖ Understand general concepts of Internet of Things (IoT)
- ❖ Recognize various devices, sensors and applications
- ❖ Analyze and Apply design concept to IoT solutions
- ❖ Evaluate design issues in IoT applications
- ❖ Create IoT solutions using sensors, actuators and Devices.

UNIT I	INTRODUCTION TO IoT	9
Evolution of Internet of Things - Enabling Technologies – IoT Architectures - Networking basics, Communication Protocols, Sensor Networks, Machine-to-Machine Communications- IoT Definition - Characteristics of .IoT- Functional Blocks. Web of Things versus Internet of Things. Core IoT functional stack – IoT data management and compute stack.		CO1
UNIT II	**SENSORS AND INTERFACING**	**9**
Introduction to sensors - Transducers, Classification - Roles of sensors in IOT - Various types of sensors - Design of sensors - sensor architecture - special requirements for IOT sensors- Role of actuators - types of actuators. Hardwire the sensors with different protocols such as – COAP – MQTT - 6LoWPAN and Zigbee.		CO2
UNIT III	**IoT PROTOCOLS**	**9**
Protocol Standardization for IoT – Efforts – M2M and WSN Protocols – SCADA and RFID Protocols – Unified Data Standards – Protocols – IEEE 802.15.4 – BACNet Protocol – Modbus– Zigbee Architecture – Network layer – 6LowPAN - CoAP– Security		CO3
UNIT IV	**BUILDING IoT WITH RASPBERRY PI & ARDUINO**	**9**
Building IOT with RASPERRY PI- IoT Systems - Logical Design using Python – IoT Physical Devices and Endpoints - IoT Device -Building blocks -Raspberry Pi -Board - Linux on Raspberry Pi - Raspberry Pi Interfaces -Programming Raspberry Pi with Python - Other IoT Platforms - Arduino.		CO4
UNIT V	**CASE STUDIES AND REAL-WORLD APPLICATIONS**	**9**
Real world design constraints - Applications - Asset management, Industrial automation, smart grid, Commercial building automation, Smart cities - participatory sensing - Data Analytics for IoT – Software & Management Tools for IoT Cloud Storage Models & Communication APIs – Cloud for IoT - Amazon Web Services for IoT-Google Homes in IoT.		CO5

TOTAL: 45 PERIODS

TEXT BOOKS

1. ArshdeepBahga, Vijay Madisetti, —Internet of Things – A hands-on approachǁ, Universities Press, 2015
2. Olivier Hersent, David Boswarthick, Omar Elloumi , —The Internet of Things – Key applications and Protocolsǁ, Wiley, 2012.

REFERENCE BOOKS

1. Dieter Uckelmann, Mark Harrison, Michahelles, Florian (Eds), —Architecting the Internet of Thingsǁ, Springer, 2011.
2. Honbo Zhou, —The Internet of Things in the Cloud: A Middleware Perspectiveǁ, CRC Press, 2012.
3. Jan Ho¨ller, VlasiosTsiatsis , Catherine Mulligan, Stamatis , Karnouskos, Stefan Avesand. David Boyle, "From Machine-to-Machine to the Internet of Things - Introduction to a New Age of Intelligence", Elsevier, 2014.

COURSE OUTCOMES **Upon completion of the course, students will be able to**	
CO1	Analyze various protocols for IoT
CO2	Analyze various sensors and control devices to address IoT applications.
CO3	Design a portable IoT using Raspberry Pi
CO4	Deploy an IoT application and connect to the cloud.
CO5	Analyze applications of IoT in real time scenario

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)

CS1707	CLOUD COMPUTING LABORATORY	L	T	P	C
		0	0	4	2

OBJECTIVES

- To install and create virtual machines and transfer of files from one virtual machine to another.
- To develop web applications in cloud and to learn the design and development process involved in creating a cloud-based application
- To implement and use parallel programming using Hadoop

LIST OF EXPERIMENTS

1. Install Virtual box /VMware Workstation with different flavours of Linux or windows OS on top of windows7/8/10.	CO1
2. Install two virtual machines, VM1 with server OS and VM2 with desktop [Ubuntu/centOS], after installing display the IP address and Ping among VMs	
3. Install a C compiler in the virtual machine created using virtual box and execute Simple Programs.	
4. Create and run virtual machines on Compute Engine EC2 in Google Cloud Platform [GCP].	
5. Create and run two virtual machines VM1 with Ubuntu OS and VM2 with CentOS and transfer files from one virtual machine to another.	
6. Create hello world app or any other simple web applications using python/java and launch the web application using Google App Engine.	CO2
7. Simulate a cloud scenario using CloudSim and create two data centres with one host and a network topology each and run two cloudlets on them.	
8. Simulate a cloud scenario using CloudSim and to create scalable simulations.	
9. Install Hadoop and set up a single node Hadoop cluster.	CO3
10. Create and run simple applications like wordcount.in the single Hadoop cluster.	

TOTAL: 60 PERIODS

COURSE OUTCOMES

Up

on completion of the course, students will be able to

CO1	Configure various virtualization tools such as Virtual Box, VMware workstation and deploy a web application in GCP
CO2	Simulate a cloud environment using cloud sim and install, use a generic cloud environment.
CO3	Manipulate and store large data sets in a parallel environment using Hadoop.

PROFESSIONAL ELECTIVE-I

CS1511	COMPUTER GRAPHICS	L	T	P	C
		3	0	0	3

OBJECTIVES

- To know the mathematical basis of computer graphics.
- To train the students to acquire knowledge in Computer Graphics modelling, animation, and rendering.
- To create graphical applications.
- To acquire knowledge about tools and technologies related to graphics.
- To create visually realistic animations.

UNIT I	INTRODUCTION TO COMPUTER GRAPHICS	9
Graphics Display Devices – Graphics Input Primitives and Devices – OpenGL Basic Graphic Primitives – Line Drawing Algorithms DDA and Bresenham – Windows and Viewports – Clipping Algorithms for Lines, Regular Polygons, Circles and Arcs – Parametric Form for a Curve – Visibility Algorithms – Review of Vectors – Representations of Key Geometric Objects – Lines and Planes		**CO1**
UNIT II	**MODELING AND TRANSFORMATIONS OF OBJECTS**	**9**
Introduction to Transformations – Two Dimensional Transformations – 3D Affine Transformations – Homogeneous Coordinates – Matrix Representation – Drawing 3D Scenes Interactively – Introduction to Solid Modeling with Polygonal Meshes – Mesh Approximations to Smooth Objects – Particle Systems and Physically Based Systems		**CO2**
UNIT III	**VIEWING AND VISUAL REALISM**	**9**
Three-Dimensional Viewing – Hidden Surface Removal – Illumination Models-Depth Cueing – Perspective Projections of 3D Objects – Introduction to Shading Models – Flat Shading and Smooth Shading – Adding Texture to Faces – Morphing – To Add Shadows of Objects – OPENGL Shading Language – Manipulating Pixmaps – Manipulating Symbolically Defined Regions – Aliasing and Anti Aliasing Techniques – Creating More Shades and Colours		**CO3**
UNIT IV	**SURFACE DESIGN**	**9**
Describing Curves using Polynomials – Bezier Curves – Blending Functions – The B-Spline Basis Functions – Modeling Curved Surfaces – Rational Splines and NURBS – Interpolation – Modeling Curved Surfaces – Color Theory – Overview of the Ray Tracing Process – Intersecting Rays with other Primitives – Adding Shadows for Greater Realism – Reflections and Transparency – Boolean Operations on Objects – Ray Casting		**CO4**
UNIT V	**ANIMATIONS**	**9**
Design of Animation Sequence – Animation Function – Raster Animation – Key Frame Systems – Motion Specification – Morphing – Tweening – Types of Animation – Fractals – Tools for Animation Creation		**CO5**
		TOTAL : 45 PERIODS

TEXT BOOKS

1. F. S. Hill, Jr., Stephen M. Kelley, Jr., “Computer graphics using OpenGL”, Pearson Prentice Hall, Third Edition, 2007.
2. Donald D. Hearn, M. Pauline Baker, W. Carithers., “Computer Graphics with Open GL”, Fourth Edition, Pearson Eduction, 2010.

REFERENCE BOOKS

1. Tay Vaughan., “Multimedia: Making it Work”, Ninth Edition, McGraw-Hill Education, 2014.
2. Alan Watt, “3D Computer Graphics”, Third Edition, Pearson Addison Wesley, 2000.
3. Ralf Steinmetz, KlaraNahrstedt, “Multimedia Systems”, Springer, 2004.
4. Mark S. Drew, Zee Nian Li, “Fundamentals of multimedia”, Prentice Hall, 2006.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Understand and Implement algorithms related to graphics creation.
CO2	Design and model graphical structures.
CO3	Understand and comprehend the graphical algorithms.
CO4	Design visually realistic graphical applications.
CO5	Design and develop simple and realistic animations

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)

CS1512	MACHINE LEARNING TECHNIQUES	L	T	P	C
		3	0	0	3

OBJECTIVES

- To understand the basic concepts of machine learning and probability theory.
- To appreciate supervised learning and their applications.
- To understand unsupervised learning like clustering and EM algorithms.
- To understand the theoretical and practical aspects of probabilistic graphical models.
- To learn other learning aspects such as reinforcement learning, representation learning, deep learning, neural networks and other technologies.

UNIT I	**INTRODUCTION**	**9**
Machine Learning – Types of Machine Learning – Supervised Learning – Unsupervised Learning – Basic Concepts in Machine Learning – Machine Learning Process – Weight Space – Testing Machine Learning Algorithms – A Brief Review of Probability Theory –Turning Data into Probabilities – The BiasVarianceTradeoff, FIND– S Algorithm, Candidate - Elimination Algorithm		**CO1**
UNIT II	**SUPERVISED LEARNING**	**9**
Linear Models for Regression – Linear Basis Function Models – The Bias-Variance Decomposition – Bayesian Linear Regression – Common Regression Algorithms – Simple Linear Regression – Multiple Linear Regression – Linear Models for Classification – Discriminant Functions – Probabilistic Generative Models – Probabilistic Discriminative Models – Laplace Approximation – Bayesian Logistic Regression – Common Classification Algorithms – k-Nearest Neighbors – Decision Trees – Random Forest model – Support Vector Machines		**CO2**
UNIT III	**UNSUPERVISED LEARNING**	**9**
Mixture Models and EM – K-Means Clustering – Dirichlet Process Mixture Models – Spectral Clustering – Hierarchical Clustering – The Curse of Dimensionality – Dimensionality Reduction – Principal Component Analysis – Latent Variable Models(LVM) – Latent Dirichlet Allocation (LDA)		**CO3**
UNIT IV	**GRAPHICAL MODELS**	**9**
Bayesian Networks – Conditional Independence – Markov Random Fields – Learning – Naive Bayes Classifiers – Markov Model – Hidden Markov Model.		**CO4**
UNIT V	**ADVANCED LEARNING**	**9**
Reinforcement Learning – Representation Learning – Neural Networks – Active Learning – Ensemble Learning – Bootstrap Aggregation – Boosting – Gradient Boosting Machines – Deep Learning		**CO5**
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Ethem Alpaydin, “Introduction to Machine Learning”, Third Edition, Prentice Hall of India, 2015.

REFERENCE BOOKS

6. Fabio Nelli, "Python Data Analytics with Pandas, Numpy, and Matplotlib", Second Edition, Apress, 2018.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Gain knowledge about basic concepts of machine learning techniques
CO2	Develop predictive model based on both input and output data
CO3	Ability to understand the unsupervised learning algorithm and dimensionality reduction techniques
CO4	Design systems that use the appropriate graphical models of machine learning
CO5	Ability to address the problem of learning control strategies for autonomous agents

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

CS1513	Image Analysis and Computer Vision	L	T	P	C
		3	0	0	3

OBJECTIVES

- ❖ To review image processing techniques for computer vision.
- ❖ To understand feature detection and matching.
- ❖ To understand structure from motion.
- ❖ To understand three-dimensional image analysis techniques and motion analysis.
- ❖ To study some applications of computer vision algorithms.

UNIT I	**Image Formation and Processing**	**9**
Geometric primitives and transformations – 2D and 3D transformation -3D Rotations - Photometric image formation – Lighting, Reflectance and shading, Optics – Image Processing – Point operation – Linear Filtering – Fourier Transforms – Wavelets - Geometric transformations.		**CO1**
UNIT II	**Feature detection and matching**	**9**
Points and Patches – Edges – Lines – Active contours – Split and Merge – Mean Shift and mode finding – 2D and 3D feature-based alignment – Pose estimation		**CO2**
UNIT III	**Structure from motion**	**9**
Triangulation - Two-frame structure from motion - Projective (uncalibrated) reconstruction – Factorization - Bundle adjustment - Constrained structure and motion		**CO3**
UNIT IV	**3D VISION**	**9**
Methods for 3D vision – projection schemes – shape from shading – photometric stereo – shape from texture – shape from focus – active range finding – surface representations – point-based representation – volumetric representations – 3D object recognition – 3D reconstruction – introduction to motion – triangulation – bundle adjustment – translational alignment – parametric motion – spline-based motion – optical flow – layered motion.		**CO4**
UNIT V	**APPLICATIONS**	**9**
Application: Photo album – Face detection – Face recognition – Eigen faces – Active appearance and 3D shape models of faces Application: Surveillance – foreground-background separation – particle filters – Chamfer matching, tracking, and occlusion – combining views from multiple cameras – human gait analysis Application: In-vehicle vision system: locating roadway – road markings – identifying road signs – locating pedestrians.		**CO5**
		TOTAL : 45 PERIODS

TEXT BOOKS

1. D. L. Baggio et al., ―Mastering OpenCV with Practical Computer Vision Projects‖, Packt Publishing, 2012.

REFERENCE BOOKS

1. E. R. Davies, —Computer & Machine Vision‖, Fourth Edition, Academic Press, 2012.
2. Jan Erik Solem, —Programming Computer Vision with Python: Tools and algorithms for analyzing images‖, O'Reilly Media, 2012.
3. Mark Nixon and Alberto S. Aquado, —Feature Extraction & Image Processing for Computer Vision‖, Third Edition, Academic Press, 2012.
4. R. Szeliski, —Computer Vision: Algorithms and Applications‖, Springer 2011.
5. Simon J. D. Prince, —Computer Vision: Models, Learning, and Inference‖, Cambridge University Press, 2012.

COURSE OUTCOMES
Upon completion of the course, students will be able to

CO1	Implement fundamental image processing techniques required for computer vision.
CO2	Implement boundary tracking techniques and perform shape analysis
CO3	Apply Hough Transform for line, circle, and ellipse detections.
CO4	Apply 3D vision techniques and implement motion related techniques.
CO5	Develop applications using computer vision techniques.

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

CS1514	MULTICORE ARCHITECTURE	L	T	P	C
		3	0	0	3

OBJECTIVES

- Understand the challenges in parallel and multi-threaded programming.
- Learn about the various parallel programming paradigms, and solutions.

UNIT I	**MULTI-CORE PROCESSORS**	**9**
Single core to Multi-core architectures – SIMD and MIMD systems – Interconnection networks - Symmetric and Distributed Shared Memory Architectures – Cache coherence - Performance Issues – Parallel program design		**CO1**
UNIT II	**PARALLEL PROGRAM CHALLENGES**	**9**
Performance – Scalability – Synchronization and data sharing – Data races – Synchronization primitives (mutexes, locks, semaphores, barriers) – deadlocks and livelocks – communication between threads (condition variables, signals, message queues and pipes)		**CO2**
UNIT III	**SHARED MEMORY PROGRAMMING WITH OpenMP**	**9**
OpenMP Execution Model – Memory Model – OpenMP Directives – Work-sharing Constructs – Library functions – Handling Data and Functional Parallelism – Handling Loops – Performance Considerations.		**CO3**
UNIT IV	**DISTRIBUTED MEMORY PROGRAMMING WITH MPI**	**9**
MPI program execution – MPI constructs – libraries – MPI send and receive – Point-to-point and Collective communication – MPI derived datatypes – Performance evaluation		**CO4**
UNIT V	**PARALLEL PROGRAM DEVELOPMENT**	**9**
Case studies - n-Body solvers – Tree Search – OpenMP and MPI implementations and comparison		**CO5**
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Peter S. Pacheco, “An Introduction to Parallel Programming”, Morgan-Kauffman/Elsevier, 2011.
2. 2. Darryl Gove, “Multicore Application Programming for Windows, Linux, and Oracle Solaris”, Pearson, 2011 (unit 2)

REFERENCE BOOKS

2. Shameem Akhter and Jason Roberts, “Multi-core Programming”, Intel Press, 2006.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Program Parallel Processors.
CO2	Understand parallel program challenges
CO3	Develop shared memory programming with openMP
CO4	Develop distributed memory programming with MPI
CO5	Design parallel program using openMP

CS1515	FUNDAMENTALS OF DIGITAL IMAGE PROCESSING	L	T	P	C
Common to CSE & IT		3	0	0	3

OBJECTIVES

- To become familiar with digital image fundamentals
- To get exposed to simple image enhancement techniques in Spatial and Frequency domain.
- To learn concepts of degradation function and restoration techniques.
- To study the image segmentation and representation techniques.
- To become familiar with image compression and recognition methods

UNIT I	**DIGITAL IMAGE FUNDAMENTALS**	**9**
Steps in Digital Image Processing – Components – Elements of Visual Perception – Image Sensing and Acquisition – Image Sampling and Quantization – Relationships between pixels – Color image fundamentals – RGB, HSI models, Two-dimensional mathematical preliminaries, 2D transforms – DFT, DCT.		**CO1**
UNIT II	**IMAGE ENHANCEMENT**	**9**
Spatial Domain: Gray level transformations – Histogram processing – Basics of Spatial Filtering– Smoothing and Sharpening Spatial Filtering, Frequency Domain: Introduction to Fourier Transform– Smoothing and Sharpening frequency domain filters – Ideal, Butterworth and Gaussian filters, Homomorphic filtering, Color image enhancement		**CO2**
UNIT III	**IMAGE RESTORATION**	**9**
Image Restoration – degradation model, Properties, Noise models – Mean Filters – Order Statistics – Adaptive filters – Band reject Filters – Band pass Filters – Notch Filters – Optimum Notch Filtering – Inverse Filtering – Wiener filtering		**CO3**
UNIT IV	**IMAGE SEGMENTATION**	**9**
Edge detection, Edge linking via Hough transform – Thresholding – Region based segmentation – Region growing – Region splitting and merging – Morphological processing- erosion and dilation, Segmentation by morphological watersheds – basic concepts – Dam construction – Watershed segmentation algorithm.		**CO4**
UNIT V	**IMAGE COMPRESSION AND RECOGNITION**	**9**
Need for data compression, Huffman, Run Length Encoding, Shift codes, Arithmetic coding, JPEG standard, MPEG. Boundary representation, Boundary description, Fourier Descriptor, Regional Descriptors – Topological feature, Texture – Patterns and Pattern classes – Recognition based on matching.		**CO5**
		TOTAL: 45 PERIODS

TEXT BOOKS

1. Rafael C. Gonzalez, Richard E. Woods, Digital Image Processing Pearson, Third Edition, 2010.
2. Anil K. Jain, Fundamentals of Digital Image Processing Pearson, 2002.

REFERENCE BOOKS

4. William K. Pratt, Digital Image Processing John Wiley, New York, 2002
5. Milan Sonka et al Image processing, analysis and machine vision Brookes/Cole, Vikas Publishing House, 2nd edition, 1999.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Understand the basics and fundamentals of digital image processing.
CO2	Operate on images using the techniques of smoothing, sharpening and enhancement
CO3	Understand the restoration concepts of filtering techniques
CO4	Understand segmentation concepts and feature extraction
CO5	Learn the basics of compression and recognition methods for color models

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

PROFESSIONAL ELECTIVE – II

CS1611	THEORY OF COMPUTATION	L	T	P	C
		3	0	0	3

OBJECTIVES

- To understand the language hierarchy
- To construct automata for any given pattern and find its equivalent regular expressions
- To design a context free grammar for any given language
- To understand Turing machines and their capability
- To understand undecidable problems and NP class problems.

UNIT I	AUTOMATA FUNDAMENTALS	9
Introduction to formal proof – Additional forms of Proof – Inductive Proofs –Finite Automata – Deterministic Finite Automata – Non-deterministic Finite Automata – Finite Automata with Epsilon Transitions		**CO1**
UNIT II	**REGULAR EXPRESSIONS AND LANGUAGES**	**9**
Regular Expressions – FA and Regular Expressions – Proving Languages not to be regular – Closure Properties of Regular Languages – Equivalence and Minimization of Automata		**CO2**
UNIT III	**CONTEXT FREE GRAMMAR AND LANGUAGES**	**9**
CFG – Parse Trees – Ambiguity in Grammars and Languages – Definition of the Pushdown Automata – Languages of a Pushdown Automata – Equivalence of Pushdown Automata and CFG, Deterministic Pushdown Automata		**CO3**
UNIT IV	**PROPERTIES OF CONTEXT FREE LANGUAGES**	**9**
Normal Forms for CFG – Pumping Lemma for CFL – Closure Properties of CFL – Turing Machines – Programming Techniques for TM		**CO4**
UNIT V	**UNDECIDABILITY**	**9**
Non Recursive Enumerable (RE) Language – Undecidable Problem with RE – Undecidable Problems about TM – Post's Correspondence Problem, The Class P and NP		**CO5**

TOTAL: 45 PERIODS

TEXT BOOKS

1. J.E.Hopcroft, R.Motwani and J.D Ullman, ―Introduction to Automata Theory, Languages and Computations‖, Second Edition, Pearson Education, 2003.

2. J.Martin, ―Introduction to Languages and the Theory of Computation, Third Edition, TMH, 2003.
3. MichealSipser, ―Introduction of the Theory and Computation, Thomson Brokecole, 1997.

COURSE OUTCOMES **Upon completion of the course, students will be able to**	
CO1	Construct automata, regular expression for any pattern.
CO2	Write Context free grammar for any construct.
CO3	Design Turing machines for any language.
CO4	Propose computation solutions using Turing machines.
CO5	Derive whether a problem is decidable or not

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

CS1612	SOFTWARE TESTING	L	T	P	C
		3	0	0	3

OBJECTIVES

- To learn the criteria for test cases.
- To learn the design of test cases.
- To understand test management and test automation techniques.
- To apply test metrics and measurements.

UNIT I	**INTRODUCTION**	**9**
Testing as an Engineering Activity – Testing as a Process – Testing Maturity Model- Testing axioms – Basic definitions – Software Testing Principles – The Tester‘s Role in a Software Development Organization – Origins of Defects – Cost of defects – Defect Classes – The Defect Repository and Test Design –Defect Examples- Developer/Tester Support of Developing a Defect Repository		**CO1**
UNIT II	**TEST CASE DESIGN STRATEGIES**	**9**
Test case Design Strategies – Using Black Box Approach to Test Case Design – Boundary Value Analysis – Equivalence Class Partitioning – State based testing – Cause-effect graphing – Compatibility testing – user documentation testing – domain testing - Random Testing – Requirements based testing – Using White Box Approach to Test design – Test Adequacy Criteria – static testing vs. structural testing – code functional testing – Coverage and Control Flow Graphs – Covering Code Logic – Paths – code complexity testing – Additional White box testing approaches- Evaluating Test Adequacy Criteria		**CO2**
UNIT III	**LEVELS OF TESTING**	**9**
The need for Levels of Testing – Unit Test – Unit Test Planning – Designing the Unit Tests – The Test Harness – Running the Unit tests and Recording results – Integration tests – Designing Integration Tests – Integration Test Planning – Scenario testing – Defect bash elimination System Testing – Acceptance testing – Performance testing – Regression Testing – Internationalization testing – Ad-hoc testing – Alpha, Beta Tests – Testing OO systems – Usability and Accessibility testing – Configuration testing –Compatibility testing – Testing the documentation – Website testing		**CO3**
UNIT IV	**TEST MANAGEMENT**	**9**
People and organizational issues in testing – Organization structures for testing teams – testing services – Test Planning – Test Plan Components – Test Plan Attachments – Locating Test Items – test management – test process – Reporting Test Results – Introducing the test specialist – Skills needed by a test specialist – Building a Testing Group- The Structure of Testing Group- .The Technical Training Program		**CO4**
UNIT V	**TEST AUTOMATION**	**9**
Software test automation – skills needed for automation – scope of automation – design and architecture for automation – requirements for a test tool – challenges in automation – Test metrics and measurements – project, progress and productivity metrics		**CO5**
		TOTAL: 45 PERIODS

TEXT BOOK

1. Srinivasan Desikan and Gopalaswamy Ramesh, ―Software Testing – Principles and Practices‖, Pearson Education, 2006.

4. Aditya P. Mathur, ―Foundations of Software Testing _ Fundamental Algorithms and Techniques‖, Dorling Kindersley (India) Pvt. Ltd., Pearson Education, 2008

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Design test cases suitable for a software development for different domains.
CO2	Identify suitable tests to be carried out.
CO3	Prepare test planning based on the document.
CO4	Document test plans and test cases designed.
CO5	Use automatic testing tools and develop and validate test plan

MAPPING OF COs WITH POs AND PSOs

CS1613	ADVANCED JAVA PROGRAMMING	L	T	P	C
		3	0	0	3

OBJECTIVES

- To learn advanced Java programming concepts like interface, threads, Swings etc.
- To develop network programs in Java
- To understand Concepts needed for distributed and multi-tier applications
- To understand issues in enterprise applications development.

UNIT I	**JAVA GUI PROGRAMMING**	**9**
Basics of Swings - Swing Components - Containers and Frames –Layout Manager --Menus and Toolbars - Event Handling		**CO1**
UNIT II	**J2EE CONCEPTS**	**9**
Java EE 5 Platform Overview- Distributed Multi-tiered Applications- Web & Business Components-Java EE Containers – services & types- Java EE Application Assembly & Deployment – Packaging Applications, Java EE modules- Getting Started with Web applications- Model View Controller (MVC)2 Architecture & Packaging – Web application deployment descriptor (web.xml file)- Web Application Archive (*.WAR file) -Ant build tool		**CO2**
UNIT III	**APPLICATIONS IN DISTRIBUTED ENVIRONMENT**	**9**
Remote method Invocation – activation models – RMI custom sockets – Object Serialization – RMI – IIOP implementation – CORBA – IDL technology – Naming Services – CORBA programming Models - JAR file creation		**CO3**
UNIT IV	**MULTI-TIER APPLICATION DEVELOPMENT**	**9**
Server side programming – servlets – Java Server Pages - Applet to Applet communication – applet to Servlet communication - JDBC – Applications on databases – Multimedia streaming applications – Java Media Framework.		**CO4**
UNIT V	**ENTERPRISE APPLICATIONS AND FRAMEWORK**	**9**
Server Side Component Architecture –EJB Introduction-EJB Architecture- Session Beans – Entity Beans – Persistent Entity Beans –Java Frameworks-Strut introduction-HIBERNATE		**CO5**
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Elliotte Rusty Harold, " Java Network Programming", O'Reilly publishers, 3rd Edition 2004 (UNIT II)
2. Ed Roman, "Mastering Enterprise Java Beans", John Wiley & Sons Inc., 3rd edition,2006. (UNIT III and UNIT V)
3. Hortsmann& Cornell, "CORE JAVA 2 ADVANCED FEATURES, VOL II", Pearson Education, 2002. (UNIT I and UNIT IV)

REFERENCE BOOKS

1. Dustin R Callaway – "InsideServlets", 2 nd Edition, 2000.
2. Ivan Bayross "Web Enabled Commercial Application Development Using JAVA 2.0, 4." -2006
3. J.Mcgovern,R.Adatia, Y.Fain "J2EE 1.4 Bible" , 2000

COURSE OUTCOMES
Upon completion of the course, students will be able to

CO1	Develop the Java Basics, Platform independency and GUI Concept
CO2	Develop and derive the Swing design pattern.
CO3	Develop J2EE Server side programming concepts
CO4	Develop RMI, CORBA Chat application in Distributed Environment and web applications using Servlet, JSP and Applet
CO5	Develop the enterprise applications development and Strut, Hibernate Framework

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	3	3	3	3	2	-	-	-	-	1	2	2	3	3	2
CO2	3	3	3	2	1	-	-	-	-	2	2	2	3	3	2
CO3	3	3	3	3	2	-	-	-	-	2	2	2	3	3	2
CO4	3	3	3	3	2	-	-	-	-	1	2	2	3	3	2
CO5	3	3	2	2	1	-	-	-	-	1	2	2	3	3	2

CS1614	Introduction to Deep Learning	L	T	P	C
		3	0	0	3

OBJECTIVES

- To present the mathematical, statistical and computational challenges of building neural networks
- To study the concepts of deep learning
- To introduce dimensionality reduction techniques
- To enable the students to know deep learning techniques to support real-time applications
- To examine the case studies of deep learning techniques

UNIT I	**INTRODUCTION**	**9**
Introduction to machine learning- Linear models (SVMs and Perceptrons, logistic regression)- Intro to Neural Nets: What a shallow network computes- Training a network: loss functions, back propagation and stochastic gradient descent- Neural networks as universal function approximates		**CO1**
UNIT II	**DEEP NETWORKS**	**9**
History of Deep Learning- A Probabilistic Theory of Deep Learning- Backpropagation and regularization, batch normalization- VC Dimension and Neural Nets-Deep Vs Shallow Networks Convolutional Networks- Generative Adversarial Networks (GAN), Semi-supervised Learning		**CO2**
UNIT III	**DIMENSIONALITY REDUCTION AND CONVNET**	**9**
Linear (PCA, LDA) and manifolds, metric learning - Auto encoders and dimensionality reduction in networks - Introduction to Convnet – Convolution and Pooling - Architectures – LeNet, AlexNet, VGG, Inception, ResNet - Training a Convnet: weights initialization, batch normalization, hyperparameter optimization.		**CO3**
UNIT IV	**OPTIMIZATION AND GENERALIZATION**	**9**
Optimization in deep learning– Non-convex optimization for deep networks- Stochastic Optimization Generalization in neural networks- Spatial Transformer Networks- Recurrent networks, LSTM Recurrent Neural Network Language Models- Word-Level RNNs & Deep Reinforcement Learning - Computational & Artificial Neuroscience.		**CO4**
UNIT V	**GENERATIVE MODEL AND CASE STUDY**	**9**
Generative models: Restrictive Boltzmann Machines (RBMs), Stacking RBMs, Belief nets, Learning sigmoid belief nets, Deep belief nets - Applications in vision, speech and natural language processing		**CO5**

TOTAL : 45 PERIODS

TEXT BOOKS

1. Ian J. Goodfellow, Yoshua Bengio, Aaron Courville, “Deep Learning”, MIT Press, 2017.
2. Francois Chollet, “Deep Learning with Python”, Manning Publications, 2018

REFERENCE BOOKS

1. Phil Kim, “Matlab Deep Learning: With Machine Learning, Neural Networks and Artificial Intelligence”, Apress, 2017.
2. Ragav Venkatesan, Baoxin Li, “Convolutional Neural Networks in Visual Computing”, CRC Press, 2018.
3. Navin Kumar Manaswi, “Deep Learning with Applications Using Python”, Apress, 2018.
4. Joshua F. Wiley, “R Deep Learning Essentials”, Packt Publications, 2016.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Know the importance of deep learning in machine learning applications.
CO2	Design and implement deep learning applications
CO3	Design and implement CNN and RNN.
CO4	Understand the use of different deep learning models in image processing.
CO5	Explore the applications of deep learning in various domains.

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	3	3	3	3	2	-	-	-	-	2	2	2	3	3	3
CO2	3	3	3	3	2	-	-	-	-	2	2	2	3	3	3
CO3	3	3	3	3	2	-	-	-	-	2	2	2	3	3	3
CO4	3	3	3	3	2	-	-	-	-	2	2	2	3	3	3
CO5	3	3	3	3	2	-	-	-	-	2	2	2	3	3	3

GE1003	PROFESSIONAL ETHICS IN ENGINEERING	L	T	P	C
		3	0	0	3

OBJECTIVES

- To enable the students to create an awareness on Engineering Ethics and Human Values,
- To install Moral and Social Values and Loyalty and to appreciate the rights of others

UNIT I	**HUMAN VALUES**	**9**
Morals, values and Ethics – Integrity – Work ethic – Service learning – Civic virtue – Respect for others – Living peacefully – Caring – Sharing – Honesty – Courage – Valuing time – Cooperation – Commitment – Empathy – Self-confidence – Character – Spirituality – Introduction to Yoga and meditation for professional excellence and stress management		**CO1**
UNIT II	**ENGINEERING ETHICS**	**9**
Senses of 'Engineering Ethics' – Variety of moral issues – Types of inquiry – Moral dilemmas – Moral Autonomy – Kohlberg's theory – Gilligan's theory – Consensus and Controversy – Models of professional roles - Theories about right action – Self-interest – Customs and Religion – Uses of Ethical Theories		**CO2**
UNIT III	**ENGINEERING AS SOCIAL EXPERIMENTATION**	**9**
Engineering as Experimentation – Engineers as responsible Experimenters – Codes of Ethics – A Balanced Outlook on Law		**CO3**
UNIT IV	**SAFETY, RESPONSIBILITIES AND RIGHTS**	**9**
Safety and Risk – Assessment of Safety and Risk – Risk Benefit Analysis and Reducing Risk - Respect for Authority – Collective Bargaining – Confidentiality – Conflicts of Interest – Occupational Crime – Professional Rights – Employee Rights – Intellectual Property Rights (IPR) – Discrimination		**CO4**
UNIT V	**GLOBAL ISSUES**	**9**
Multinational Corporations – Environmental Ethics – Computer Ethics – Weapons Development – Engineers as Managers – Consulting Engineers – Engineers as Expert Witnesses and Advisors – Moral Leadership –Code of Conduct – Corporate Social Responsibility		**CO5**
		TOTAL: 45 PERIODS

TEXT BOOKS

1. Mike W. Martin and Roland Schinzinger, "Ethics in Engineering", Tata McGraw Hill, New Delhi, 2003.
2. Govindarajan M, Natarajan S, Senthil Kumar V. S, "Engineering Ethics", Prentice Hall of India, New Delhi, 2004.

REFERENCE BOOKS

1. Charles B. Fleddermann, "Engineering Ethics", Pearson Prentice Hall, New Jersey, 2004.
2. Charles E. Harris, Michael S. Pritchard and Michael J. Rabins, "Engineering Ethics – Concepts and Cases", Cengage Learning, 2009
3. John R Boatright, "Ethics and the Conduct of Business", Pearson Education, New Delhi, 2003
4. Edmund G Seebauer and Robert L Barry, "Fundamentals of Ethics for Scientists and Engineers", Oxford University Press, Oxford, 2001
5. Laura P. Hartman and Joe Desjardins, "Business Ethics: Decision Making for Personal Integrity and Social Responsibility" McGraw Hill education, India Pvt. Ltd., New Delhi 2013.
6. World Community Service Centre, " Value Education", Vethathiri publications, Erode, 2011.

COURSE OUTCOMES **Upon completion of the course, students will be able to**	
CO1	To become familiar with human values
CO2	To get exposed engineering ethics.
CO3	To learn engineering as social experimentation
CO4	To study safety responsibilities and rights.
CO5	To become familiar with global issues

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

PROFESSIONAL ELECTIVE – III

CS1711	SOFTWARE PROJECT MANAGEMENT	L	T	P	C
		3	0	0	3

OBJECTIVES

- To understand the Software Project Planning and Evaluation techniques.
- To plan and manage projects at each stage of the software development life cycle (SDLC).
- To learn about the activity planning and risk management principles.
- To manage software projects and control software deliverables.
- To develop skills to manage the various phases involved in project management and people management.
- To deliver successful software projects that support organization 's strategic goals

UNIT I	**PROJECT EVALUATION AND PROJECT PLANNING**	**9**
Importance of Software Project Management – Activities - Methodologies – Categorization of Software Projects – Setting objectives – Management Principles – Management Control – Project portfolio Management – Cost-benefit evaluation technology – Risk evaluation – Strategic program Management – Stepwise Project Planning		**CO1**
UNIT II	**PROJECT LIFE CYCLE AND EFFORT ESTIMATION**	**9**
Software process and Process Models – Choice of Process models - Rapid Application development – Agile methods – Dynamic System Development Method – Extreme Programming– Managing interactive processes – Basics of Software estimation – Effort and Cost estimation techniques – COSMIC Full function points - COCOMO II - a Parametric Productivity Model		**CO2**
UNIT III	**ACTIVITY PLANNING AND RISK MANAGEMENT**	**9**
Objectives of Activity planning – Project schedules – Activities – Sequencing and scheduling – Network Planning models – Formulating Network Model – Forward Pass & Backward Pass techniques – Critical path (CRM) method – Risk identification – Assessment – Risk Planning – Risk Management – – PERT technique – Monte Carlo simulation – Resource Allocation – Creation of critical paths – Cost schedules		**CO3**
UNIT IV	**PROJECT MANAGEMENT AND CONTROL**	**9**
Framework for Management and control – Collection of data – Visualizing progress – Cost monitoring – Earned Value Analysis – Prioritizing Monitoring – Project tracking – Change control – Software Configuration Management – Managing contracts – Contract Management		**CO4**
UNIT V	**STAFFING IN SOFTWARE PROJECTS**	**9**
Managing people – Organizational behavior – Best methods of staff selection – Motivation – The Oldham – Hackman job characteristic model – Stress – Health and Safety – Ethical and Professional concerns – Working in teams – Decision making – Organizational structures – Dispersed and Virtual teams – Communications genres – Communication plans – Leadership		**CO5**
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Bob Hughes, Mike Cotterell and Rajib Mall: Software Project Management – Fifth Edition, Tata McGraw Hill, New Delhi, 2012

REFERENCE BOOKS

1. Robert K. Wysocki ―Effective Software Project Management‖ – Wiley Publication, 2011.
2. Walker Royce: ―Software Project Management‖- Addison-Wesley, 1998.
3. Gopalaswamy Ramesh, ―Managing Global Software Projects‖ – McGraw Hill Education (India), Fourteenth Reprint 2013

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Understand Project Management principles while developing software.
CO2	Gain extensive knowledge about the basic project management concepts, framework and the process models.
CO3	Obtain adequate knowledge about software process models and software effort estimation techniques. Estimate the risks involved in various project activities.
CO4	Define the checkpoints, project reporting structure, project progress and tracking mechanisms using project management principles.
CO5	Learn staff selection process and the issues related to people management

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	1	1	1	2	2	2	3	3	3	2	2	2	3	3	2
CO2	1	1	1	2	2	2	3	3	3	2	2	2	3	3	2
CO3	1	1	1	2	2	2	3	3	3	2	2	2	3	3	2
CO4	1	1	1	2	2	2	3	3	3	2	2	2	3	3	2
CO5	1	1	1	2	2	2	3	3	3	2	2	2	3	3	2

CS1712	VIRTUALIZATION TECHNIQUES		L	T	P	C
Common to CSE & IT			3	0	0	3

OBJECTIVES

- To understand the concept of virtualization.
- To understand the various issues in virtualization.
- To be familiar with the virtualization of various components/functionalities.
- To compare and analyze various virtual machines products.
- To work with virtualization platforms

UNIT I	**INTRODUCTION**	**9**
System Architectures – Virtual Machine Basics – Process Virtual Machines – System Virtual Machines – Taxonomy of Virtual Machines – Emulation: Basic Interpretation – Threaded Interpretation – Pre-Coded & Direct Interpretation – Binary Translation – Full and Para-Virtualization – Types of Hypervisor – Types of Virtualization		**CO1**
UNIT II	**SERVER VIRTUALIZATION**	**9**
Server Virtualization – Partitioning Techniques – Hardware Virtualization – Virtual Hardware – Types of Server Virtualization – Business Cases for Sever Virtualization – Uses of Virtual Server Consolidation – Selecting Server Virtualization Platform		**CO2**
UNIT III	**NETWORK VIRTUALIZATION**	**9**
Design of Scalable Enterprise Networks – Virtualizing the Campus – WAN Design – WAN Architecture – WAN virtualization – Virtual Enterprise Transport Virtualization – VLANs and Scalability – Theory Network Device Virtualization Layer 2 – VLANs Layer 3 VRF Instances Layer 2 – VFIs Virtual Firewall Contexts Network Device Virtualization – Datapath Virtualization Layer 2: 802.1q – Trunking Generic Routing Encapsulation – IPSec L2TPv3 Label Switched Paths – Control-Plane Virtualization – Routing Protocols – VRF- Aware Routing – Multi-Topology Routing		**CO3**
UNIT IV	**STORAGE VIRTUALIZATION**	**9**
Hardware Devices – SCSI – SCSI Communication – Using SCSI Buses – Fiber Channel – Fiber Channel Cables – Fiber Channel Hardware Devices – iSCSI Architecture – Securing iSCSI SAN Backup & Recovery Techniques – RAID – Classic Storage Model – SNIA Shared Storage Model Host based Architecture – Storage based architecture – Network based Architecture – Fault tolerance to SAN – Performing Backups – Virtual Tape Libraries		**CO4**
UNIT V	**APPLYING VIRTUALIZATION**	**9**
Comparison of Virtualization Technologies: Guest OS, Host OS, Hypervisor, Emulation, Kernel Level – Shared Kernel – Enterprise Solutions: Vmware Server, ESXi, Citrix Xen Server, Microsoft Virtual PC, Microsoft Hyper-V, Virtual Box – Server Virtualization: Configuring Server with Server Virtualization, Adjusting & Tuning Virtual Servers, VM Backup and Migration – Desktop Virtualization: Terminal Services, Hosted Desktop, Web Based Solutions, Localized Virtualized Desktop – Network and Storage Virtualization: VPN, VLAN, SAN and VSAN, NAS		**CO5**
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Chris Wolf, Erick M. Halter, “Virtualization: From the Desktop to the Enterprise”, APress, 2005.
2. James E. Smith, Ravi Nair, “Virtual Machines: Versatile Platforms for Systems and Processes”, Elsevier/Morgan Kaufmann, 2005.
3. David Marshall, Wade A. Reynolds, “Advanced Server Virtualization: VMware and Microsoft Platform in the Virtual Data Center”, Auerbach Publications, 2006.

REFERENCE BOOKS

1. William von Hagen, "Professional Xen Virtualization", Wrox Publications, January, 2008.
2. Kumar Reddy, Victor Moreno, "Network virtualization", Cisco Press, July, 2006.
3. Amy Newman, Kenneth Hess, "Practical Virtualization Solutions: Virtualization from the Trenches", Prentice Hall, October 2009

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Create a virtual machine and extend it to a virtual network.
CO2	Perform server virtualization.
CO3	Explain the concept of network virtualization.
CO4	Discuss various tasks in storage virtualization.
CO5	Compile all types of virtualization techniques and utilize them in design of virtual machines

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)

CS1713	GPU ARCHITECTURE AND PROGRAMMING	L	T	P	C
		3	0	0	3

OBJECTIVES

- To understand the basics of GPU architectures
- To write programs for massively parallel processors
- To understand the issues in mapping algorithms for GPUs
- To introduce different GPU programming models

UNIT I	**GPU ARCHITECTURE**	**9**
Evolution of GPU architectures - Understanding Parallelism with GPU –Typical GPU Architecture - CUDA Hardware Overview - Threads, Blocks, Grids, Warps, Scheduling - Memory Handling with CUDA: Shared Memory, Global Memory, Constant Memory and Texture Memory		**CO1**
UNIT II	**CUDA PROGRAMMING**	**9**
Using CUDA - Multi GPU - Multi GPU Solutions - Optimizing CUDA Applications: Problem Decomposition, Memory Considerations, Transfers, Thread Usage, Resource Contentions		**CO2**
UNIT III	**PROGRAMMING ISSUES**	**9**
Common Problems: CUDA Error Handling, Parallel Programming Issues, Synchronization, Algorithmic Issues, Finding and Avoiding Errors		**CO3**
UNIT IV	**OPENCL BASICS**	**9**
OpenCL Standard – Kernels – Host Device Interaction – Execution Environment – Memory Model – Basic OpenCL Examples		**CO4**
UNIT V	**ALGORITHMS ON GPU**	**9**
Parallel Patterns: Convolution, Prefix Sum, Sparse Matrix - Matrix Multiplication - Programming Heterogeneous Cluster		**CO5**
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Shane Cook, CUDA Programming: —A Developer's Guide to Parallel Computing with GPUs (Applications of GPU Computing), First Edition, Morgan Kaufmann, 2012.
2. David R. Kaeli, Perhaad Mistry, Dana Schaa, Dong Ping Zhang, —Heterogeneous computing with OpenCL‖, 3rd Edition, Morgan Kauffman, 2015

REFERENCE BOOKS

1. Nicholas Wilt, —CUDA Handbook: A Comprehensive Guide to GPU Programming, Addison - Wesley, 2013.
2. Jason Sanders, Edward Kandrot, —CUDA by Example: An Introduction to General Purpose GPU Programming‖, Addison - Wesley, 2010.
3. David B. Kirk, Wen-mei W. Hwu, Programming Massively Parallel Processors - A Hands-on Approach, Third Edition, Morgan Kaufmann, 2016.
4. http://www.nvidia.com/object/cuda_home_new.html
5. http://www.openCL.org

COURSE OUTCOMES **Upon completion of the course, students will be able to**	
CO1	Describe GPU Architecture
CO2	Write programs using CUDA, identify issues and debug them
CO3	Implement efficient algorithms in GPUs for common application kernels, such as matrix multiplication
CO4	Write simple programs using OpenCL
CO5	Identify efficient parallel programming patterns to solve problems

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

CO5	3	3	3	3	2	-	-	-	1	2	2	2	3	3	2

CS1714	RESOURCE MANAGEMENT TECHNIQUES	L	T	P	C
		3	0	0	3

OBJECTIVES

- Be familiar with resource management techniques.
- Learn to solve problems in linear programming and Integer programming.
- Be exposed to CPM and PERT.

UNIT I	**LINEAR PROGRAMMING**	**5**
Principal components of decision problem – Modeling phases – LP Formulation and graphic solution – Resource allocation problems – Simplex method – Sensitivity analysis		**CO1**
UNIT II	**DUALITY AND NETWORKS**	**8**
Definition of dual problem – Primal – Dual relationships – Dual simplex methods – Post optimality analysis – Transportation and assignment model – Shortest route problem		**CO2**
UNIT III	**INTEGER PROGRAMMING**	**8**
Cutting plane algorithm – Branch and bound methods, Multistage (Dynamic) programming		**CO3**
UNIT IV	**CLASSICAL OPTIMISATION THEORY**	**12**
Unconstrained external problems, Newton – Ralphson method – Equality constraints – Jacobean methods – Lagrangian method – Kuhn – Tucker conditions – Simple problems		**CO4**
UNIT V	**OBJECT SCHEDULING**	**12**
Network diagram representation – Critical path method – Time charts and resource leveling – PERT		**CO5**
		TOTAL : 45 PERIODS

TEXT BOOK

1. H.A. Taha, “Operation Research”, Prentice Hall of India, 2002
2. V. Sundaresan, K.S. Ganapathy Subramanian, K. Ganesan, “Resource Management Techniques”, A.R. Publications.

REFERENCE BOOKS

1. Paneer Selvam, „Operations Research‟, Prentice Hall of India, 2002
2. Anderson “Quantitative Methods for Business”, 8th Edition, Thomson Learning, 2002.
3. Winston “Operation Research”, Thomson Learning, 2003.
4. Vohra, “Quantitative Techniques in Management”, Tata McGraw Hill, 2002.
5. Anand Sarma, “Operation Research”, Himalaya Publishing House, 2003.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Solve optimization problems using simplex method.
CO2	Solve dual and primal problems
CO3	Apply integer programming and linear programming to solve real-life applications
CO4	Solve unconstrained optimization problems
CO5	Use PERT and CPM for problems in project management

MAPPING OF COs WITH POs AND PSOs

MG1001	PRINCIPLE OF MANAGEMENT	L	T	P	C
Common to CSE & AI-DS		3	0	0	3

OBJECTIVES

- To enable the students to study the evolution of Management
- To study the functions and principles of management
- To learn the application of the principles in an organization

UNIT I	INTRODUCTION TO MANAGEMENT AND ORGANIZATIONS	9
Definition of Management – Science or Art – Manager vs Entrepreneur - types of managers - managerial roles and skills – Evolution of Management – Scientific, human relations , system and contingency approaches – Types of Business organization - Sole proprietorship, partnership, company-public and private sector enterprises - Organization culture and Environment – Current trends and issues in Management.		**CO1**
UNIT II	**PLANNING**	**9**
Nature and purpose of planning – planning process – types of planning – objectives – setting objectives – policies – Planning premises – Strategic Management – Planning Tools and Techniques – Decision making steps and process.		**CO2**
UNIT III	**ORGANISING**	**9**
Nature and purpose – Formal and informal organization – organization chart – organization structure – types – Line and staff authority – departmentalization – delegation of authority –77 centralization and decentralization – Job Design - Human Resource Management – HR Planning, Recruitment, selection, Training and Development, Performance Management , Career planning and management		**CO3**
UNIT IV	**DIRECTING**	**9**
Foundations of individual and group behaviour – motivation – motivation theories – motivational techniques – job satisfaction – job enrichment – leadership – types and theories of leadership – communication – process of communication – barrier in communication – effective communication –communication and IT.		**CO4**
UNIT V	**CONTROLLING**	**9**
System and process of controlling – budgetary and non-budgetary control techniques – use of computers and IT in Management control – Productivity problems and management – control and performance – direct and preventive control – reporting.		**CO5**

TOTAL : 45 PERIODS

TEXT BOOKS

1. Stephen P. Robbins & Mary Coulter, “Management”, Prentice Hall (India) Pvt. Ltd., 10th Edition, 2009.
2. JAF Stoner, Freeman R.E and Daniel R Gilbert “Management”, Pearson Education, 6th Edition, 2004.

REFERENCE BOOKS

1. Stephen A. Robbins & David A. Decenzo & Mary Coulter, “Fundamentals of Management” Pearson Education, 7th Edition, 2011.
2. Robert Kreitner & Mamata Mohapatra, “ Management”, Biztantra, 2008.
3. Harold Koontz & Heinz Weihrich “Essentials of management” Tata McGraw Hill,1998.
4. Tripathy PC & Reddy PN, “Principles of Management”, Tata McGraw Hill, 1999

COURSE OUTCOMES **Upon completion of the course, students will be able to**	
CO1	Familiar with Management and Organizations task
CO2	Decision Making and Planning
CO3	Know about HRM, Performance Management, HR planning.
CO4	Communication and Motivational Theories
CO5	Familiar with controlling of process and reporting

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

PROFESSIONAL ELECTIVE - IV

CS1721	SOFT COMPUTING	L	T	P	C
		3	0	0	3

OBJECTIVES

- Get familiarized with different architectures and training algorithms of neural networks.
- Get exposed to the various neural modelling and control techniques with case study using simulation tool box.
- Gain Knowledge on fuzzy set theory and fuzzy rules.
- Able to design and implement the fuzzy logic controller with case study using simulation tool box.
- Capable of designing hybrid control schemes, selected optimization algorithms with case study using simulation tool box

UNIT I	**ARTIFICIAL NEURAL NETWORK**	**9**
Review of fundamentals – Biological neuron, artificial neuron, activation function, single layer perception – Limitation – Multi layer perception – Back propagation algorithm (BPA) – Recurrent neural network (RNN) – Adaptive resonance theory (ART) based network – Radial basis function network – online learning algorithms, BP through time – RTRL algorithms – Reinforcement learning		**CO1**
UNIT II	**NEURAL NETWORKS FOR MODELING AND CONTROL**	**9**
Modelling of non-linear systems using ANN – Generation of training data – Optimal architecture– Model validation – Control of non-linear systems using ANN – Direct and indirect Neuro control schemes – Adaptive Neuro controller – Familiarization with neural network toolbox		**CO2**
UNIT III	**FUZZY SET THEORY**	**9**
Fuzzy set theory – Fuzzy sets – Operation on fuzzy sets – Scalar cardinality, fuzzy cardinality, union and intersection, complement (Yager and Sugeno), equilibrium points, aggregation, projection, composition, cylindrical extension, fuzzy relation – Fuzzy membership functions		**CO3**
UNIT IV	**FUZZY LOGIC FOR MODELING AND CONTROL**	**9**
Modelling of non-linear systems using fuzzy models – TSK model – Fuzzy logic controller – Fuzzification – Knowledge base – Decision making logic – Defuzzification – Adaptive fuzzy systems – Familiarization with fuzzy logic toolbox		**CO4**
UNIT V	**HYBRID CONTROL SCHEMES**	**9**
Fuzzification and rule base using ANN – Neuro fuzzy systems – ANFIS – Fuzzy neuron– Introduction to GA – Optimization of membership function and rule base using Genetic Algorithm – Introduction to support vector machine – Particle swarm optimization – Case study – Familiarization with ANFIS toolbox		**CO5**
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Laurence Fausett, “Fundamentals of Neural Networks”, Prentice Hall, Englewood Cliffs, N.J., 1992
2. Timothy J. Ross, “Fuzzy Logic with Engineering Applications”, McGraw Hill Inc., 2000.

REFERENCE BOOKS

1. Goldberg, “Genetic Algorithm in Search, Optimization and Machine learning”, Addison Wesley Publishing Company Inc. 1989
2. Millon W.T., Sutton R.S. and Webrose P.J., “Neural Networks for Control”, MIT press, 1992.
3. EthemAlpaydin, “Introduction to Machine learning (Adaptive Computation and Machine Learning series)’, MIT Press, Second Edition, 2010.
4. Zhang Huaguang and Liu Derong, “Fuzzy Modeling and Fuzzy Control Series: Control Engineering”, 2006

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Understand basics of deep learning
CO2	Implement various deep learning models
CO3	Realign high dimensional data using reduction techniques
CO4	Analyze optimization and generalization in deep learning
CO5	Explore the deep learning applications

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	3	3	3	3	2	-	-	-	-	2	2	2	3	3	3
CO2	3	3	3	3	2	-	-	-	-	2	2	2	3	3	3
CO3	3	3	3	3	2	-	-	-	-	2	2	2	3	3	3
CO4	3	3	3	3	2	-	-	-	-	2	2	2	3	3	3
CO5	3	3	3	3	2	-	-	-	-	2	2	2	3	3	3

CS1722	QUANTUM COMPUTING	L	T	P	C
Common to CSE & IT		3	0	0	3

OBJECTIVES

- To introduce the fundamentals of quantum computing
- The problem-solving approach using finite dimensional mathematics

UNIT I	**COMPLEX NUMBERS AND VECTORS**		**9**
Complex numbers and its geometrical representations, Complex vector spaces, inner products and Hilbert spaces, Hermitian and unitary matrices, Tensor products of vector spaces, Quantum bits, Bloch sphere representation of a qubit, multiple qubits, Hilber space, Probabilities and measurements, entanglement, density operators and correlation, basics of quantum mechanics, Measurements in bases other than computational basis		**CO1**	
UNIT II	**QUANTUM MECHANICS**		**9**
Quantum Circuits: Single qubit gates, multiple qubit gates, design of quantum circuits. Classical gates versus quantum gates		**CO2**	
UNIT III	**QUANTUM INFORMATION AND CRYPTOGRAPHY**		**9**
Comparison between classical and quantum information theory. Bell states. Quantum teleportation. Quantum Cryptography, no cloning theorem		**CO3**	
UNIT IV	**QUANTUM ALGORITHMS**		**9**
Classical computation on quantum computers. Relationship between quantum and classical complexity classes. Deutsch's algorithm, Deutsch's-Jozsa algorithm, Shor factorization, Grover search		**CO4**	
UNIT V	**NOISE AND ERROR CORRECTION**		**9**
Graph states and codes, Quantum error correction, fault-tolerant computation		**CO5**	
			TOTAL : 45 PERIODS

TEXT BOOKS

1. Quantum computing for computer scientists, Noson S. Yanofsky, Mirco A. Mannucci, Cambridge University Press 2008.

REFERENCE BOOKS

1. Quantum computing explained, David McMahon, Wiley-interscience, John Wiley & Sons, Inc. Publication 2008
2. Quantum computation and quantum information, Michael A. Nielsen and Isaac L. Chuang, Cambridge University Press 2010
3. Introduction to Quantum Mechanics, 2nd Edition, David J. Griffiths, Prentice Hall New Jersey 1995
4. Pittenger A. O., An Introduction to Quantum Computing Algorithms 2000

COURSE OUTCOMES **Upon completion of the course, students will be able to**	
CO1	Basics of complex vector spaces
CO2	Quantum mechanics as applied in Quantum computing
CO3	Architecture and algorithms
CO4	Fundamentals of Quantum computations
CO5	Understand noise and error correction techniques

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	3	3	3	3	2	-	-	-	-	2	2	2	3	2	1
CO2	3	3	3	3	2	-	-	-	-	2	2	2	3	2	1
CO3	3	3	3	3	2	-	-	-	-	2	2	2	3	3	2
CO4	3	3	3	3	2	-	-	-	-	2	2	2	3	2	1
CO5	3	3	3	3	2	-	-	-	-	2	2	2	3	3	2

CS1723	SOFTWARE ARCHITECTURE	L	T	P	C
		3	0	0	3

OBJECTIVES

- To use architecture to address accelerating growth in requirements and system size.
- For utilizing architecture to optimize key quality attributes.
- Scale systems by discovering architecturally significant influences, using DevOps.
- To understand architecture's role in the organization, so you can deliver more value.

UNIT I	**INTRODUCTION, SOFTWARE ARCHITECTURE, ITS IMPORTANCE**	**9**
Software Architecture, Architectural Structures and Views, Software Architecture Importance: Enabling a System's Quality Attributes, Managing Change, Predicting System Qualities, Communication among Stakeholders, Early Design Decisions, Constraints on Implementation, Organizational Structure, Enabling Incremental Development, Cost and Schedule Estimates, Reusable Model, Architecture Allows Incorporation of Independently Developed Elements.		**CO1**
UNIT II	**QUALITY ATTRIBUTES, QUALITY ATTRIBUTE REQUIREMENTS, INTEGRABILITY**	**9**
Understanding Quality Attributes: Functionality, Quality Attribute Considerations, Specifying Quality Attribute Requirements: Quality Attribute Scenarios, Achieving Quality Attributes through Architectural Patterns and Tactics, Designing with Tactics, Analysing Quality Attribute Design, Integrability: Evaluating the Integrability of an Architecture, Its General Scenario, Integrability Tactics, Its Tactics-Based Questionnaire, Patterns.		**CO2**
UNIT III	**VIRTUALIZATION, ARCHITECTURALLY SIGNIFICANT REQUIREMENTS, DESIGNING** AN **ARCHITECTURE**	**9**
Virtualization: Shared Resources, Virtual Machines, VM Images, Containers and VMs, Container Portability, Pods, Serverless Architecture, Architecturally Significant Requirements: Gathering ASRs from Requirements Documents, Gathering ASRs by Interviewing Stakeholders and understanding the Business Goals, Capturing ASRs in a Utility Tree, Designing an Architecture: Attribute-Driven Design, The Seven Steps of ADD.		**CO3**
UNIT IV	**EVALUATING AN ARCHITECTURE, DOCUMENTING AN ARCHITECTURE**	**9**
Evaluating an Architecture: Evaluation as a Risk Reduction Activity, Key Evaluation Activities, Contextual Factors, The Architecture Trade-off Analysis Method, Lightweight Architecture Evaluation Documenting an Architecture: Uses and Audiences for Architecture Documentation, Notations, Views, Combining View, Documenting Behaviour, Beyond Views, Documenting the Rationale, Architecture Stakeholders.		**CO4**
UNIT V	**ROLE OF ARCHITECTS IN PROJECTS, ARCHITECTURE COMPETENCE**	**9**
The Role of Architects in Projects: The Architect and the Project Manager, Incremental Architecture and Stakeholders, Architecture and Agile Development, Architecture and Distributed Development Architecture Competence: Competence of Individuals: Duties, Skills, and Knowledge of Architects, Competence of a Software Architecture Organization, Become a Better Architect.		**CO5**
		TOTAL: 45 PERIODS

TEXT BOOKS

1. Len Bass, Paul Clements, Rick Kazman, "Software Architecture in Practice", Addison-Wesley Professional, 4th Edition, 2021.

REFERENCE BOOKS

1. Richard H. Thayer, Mark J. Christensen, "Software Engineering, The Development", Volume 1, Third Edition, 2016.
2. Arthur M Langer, "Analysis and Design of Next-generation Software Architectures" , Springer Nature Switcher land, 2020.
3. Mark Richards and Neal Ford, "Software Architecture Fundamentals Workshop Part 1: From Developer to Architect", 2020.
4. Taylor et al., "Software Architecture: Foundations, Theory, and Practice" , John Wiley, 2015.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Introduction to Software Architecture and its importance
CO2	Understanding of Quality Attributes, Quality Attribute Requirements and Integrability
CO3	The concept of Virtualization, Architecture Significant Requirements, Designing an Architecture
CO4	Evaluating an Architecture and Documenting an Architecture
CO5	The role of Architects in Projects and architecture Competence

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	3	3	3	3	2	-	-	-	-	2	2	2	3	3	2

CS1724	MULTIMEDIA AND GRAPHICS PACKAGES	L	T	P	C
		3	0	0	3

OBJECTIVES

- To learn about multimedia system properties and data stream characteristics of continuous media
- To explore the features of different types of media like image, audio and video
- To provide knowledge about Multimedia Communication Systems
- To know about R Graphics
- To explore the concepts of Grid graphics

UNIT I	**MEDIA AND DATA STREAMS**	**9**
Multimedia: Media and Data Streams: Medium –Main properties of Multimedia System –Multimedia –Traditional Data Streams Characteristics –Data Stream characteristics of continuous Media		**CO1**
UNIT II	**MULTIMEDIA**	**9**
Sound / Audio: Basic Sound Concepts –Music –Speech –Images and Graphics: Basic Concepts –Computer I mage Processing –Video and Animation: Basic Concepts –Television –Computer-Based Animation		**CO2**
UNIT III	**MULTIMEDIA COMMUNICATION SYSTEMS**	**9**
Multimedia Communication Systems: Application Subsystem –Collaborative Computing –Session Management - Transport Subsystem –Transport Layer –Network Layer –Quality of Service and Resource Ma nagement – Ba sic Concepts – Establishment and Closing of the Multimedia Call – Managing Resources during Multimedia Transmission		**CO3**
UNIT IV	**INTRODUCTION TO R GRAPHICS**	**9**
R Graphics Examples: Standard Plots –Trellis Plots –The Grammar of Graphics –Specialized plots –Organization of R Graphics: Types of Graphics functions –Traditional Graphics Vs Grid Graphics		**CO4**
UNIT V	**GRID GRAPHICS**	**9**
Trellis Graphics: The Lattice graphics model –lattice plot types –the formula argument and multipanel conditioning – the group argument and legends –layout argument and arranging plots –scale argument a nd labeling a xes – panel argument and annotating plots		**CO5**
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Ralf Steinmetz, Klara Nahrstedt, "Multimedia: Computing, Communications & Applications", Pearson Education Inc., 2011
2. Paul Murrell, "R Graphics", CRC Press, Second Edition, 2012

REFERENCE BOOKS

1. Ze-Nian Li , Mark S. Drew and Jiangchuan Liu, Fundamentals of Multimedia , Springer International Publishing, 2014
2. Winston Chang R., Graphics Cookbook, O'Reilly, 2013

COURSE OUTCOMES **Upon completion of the course, students will be able to**	
CO1	Understand multimedia system properties and data stream characteristics of continuous media
CO2	Analyze the features of different media
CO3	Understand the Multimedia Communication Systems
CO4	Understand the concepts of R graphics
CO5	Analyze the Grid graphics concepts

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	2	2	1	1	2	-	-	-	-	2	2	2	3	3	2
CO2	2	2	1	1	2	-	-	-	-	2	2	2	3	3	2
CO3	2	2	1	1	2	-	-	-	-	2	2	2	3	3	2
CO4	2	2	1	1	2	-	-	-	-	2	2	2	3	3	2

CS1725	HUMAN COMPUTER INTERACTION	L	T	P	C

(Common to CSE & AI-ML)		3	0	0	3

OBJECTIVES

- To know how to analyze and consider user's need in the interaction system
- To understand various interaction design techniques and models
- To understand the theory and framework of HCI
- Understand and analyze the cognitive aspects of human – machine interaction

UNIT I	**INTRODUCTION**	**9**
Foundation – Human – Computer – Interaction – Paradigms – What is HCI – Components – Cognitive Framework – Perception and Representation – Attention and Memory Constraint – Knowledge and Mental Model – Interface Metaphors – Input – Output		**CO1**
UNIT II	**DESIGN PROCESS**	**9**
Interaction Styles – Interaction Design Basics – HCI in the Software Process – Design Rules - Designing Windowing Systems - User Support and On-Line Information - Designing For Collaborative Work and Virtual Environments - Principles and User-Centered Design - Methods for User-Centered Design		**CO2**
UNIT III	**IMPLEMENTATION AND EVALUATION PROCESS**	**9**
Implementation issues – Implementation Support - Evaluation techniques – Universal Design – User Support		**CO3**
UNIT IV	**MODELS**	**9**
Cognitive models – Communication and collaboration models: Models of the system – Models of the System – Modeling Rich Interaction		**CO4**
UNIT V	**APPLICATIONS**	**9**
Socio – organization issues and stakeholder requirements - Ubiquitous Computing - Context – aware User Interfaces - Hypertext, multimedia and the World Wide Web		**CO5**
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Alan Dix, Janet Finlay, Gregory D.Abowd, Russell Beale, “Human Computer Interaction”, Third Edition, Pearson Education, 2004
2. Dix, Finlay, Abowd and Beale. “Human – Computer Interaction”, Second edition, Prentice Hall,1998

REFERENCE BOOKS

1. J. Preece, Y. Rogers, H. Sharp, D. Benyon, S. Holland and T. Carey. “Human – Computer Interaction”, Addison Wesley, 1994.
2. John M.Carrol, “Human Computer Interaction in the New Millenium”, Pearson Education, 2002.

COURSE OUTCOMES **Upon completion of the course, students will be able to**	
CO1	To develop good design for human machine interaction syste
CO2	Analyze the user's need in interaction system
CO3	To design new interaction model to satisfy all types of customers
CO4	Evaluate the usability and effectiveness of various products
CO5	To know how to apply interaction techniques for systems

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)

PROFESSIONAL ELECTIVE – V

CS1811	NATURAL LANGUAGE PROCESSING	L	T	P	C
		3	0	0	3

OBJECTIVES

- To learn the fundamentals of natural language processing
- To understand word level and syntactic analysis.
- To understand the syntax analysis and parsing
- To understand the role of semantics of sentences and pragmatics
- To get knowledge about the machine translation

UNIT I	**INTRODUCTION**	**9**
Overview: Origins and challenges of NLP-Language and Grammar-Processing Indian Languages - NLP Applications-Information Retrieval. Language Modeling: Various Grammar-based Language Models-Statistical Language Model.		**CO1**
UNIT II	**WORD LEVEL ANALYSIS**	**9**
Regular Expressions, Finite-State Automata – English Morphology, Transducers for lexicon and rules, Tokenization, Detecting and Correcting Spelling Errors, Minimum Edit Distance - Unsmoothed N-grams, Evaluating N-grams, Smoothing, Interpolation and Backoff -Words and Word classes-Part-of Speech Tagging - Issues in PoS tagging – Hidden Markov and Maximum Entropy models.		**CO2**
UNIT III	**SYNTACTIC ANALYSIS**	**9**
Context-Free Grammars, Grammar rules for English, Treebank, Normal Forms for grammar – Dependency Grammar – Syntactic Parsing, Ambiguity, Dynamic Programming parsing – Shallow parsing – Probabilistic CFG, Probabilistic CYK, Probabilistic Lexicalized CFGs – Feature structures, Unification of feature structures.		**CO3**
UNIT IV	**SEMANTICS AND PRAGMATICS**	**9**
Requirements for representation, First-Order Logic, Description Logics – Syntax-Driven Semantic analysis, Semantic attachments – Word Senses, Relations between Senses, Thematic Roles, selection restrictions – Word Sense Disambiguation, WSD using Supervised, Dictionary & Thesaurus, Bootstrapping methods – Word Similarity using Thesaurus and Distributional methods.		**CO4**
UNIT V	**NATURAL LANGUAGE GENERATION AND MACHINE TRANSLATION**	**9**
Natural Language Generation: Architecture of NLG Systems- Generation Tasks and Representations- Application of NLG. Machine Translation: Problems in Machine Translation-Characteristics of Indian Languages- Machine Translation Approaches-Translation involving Indian Languages.		**CO5**
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Daniel Jurafsky, James H. Martin, "Speech and Language Processing: An Introduction to Natural Language Processing, Computational Linguistics and Speech Recognition", Second Edition, Pearson Publication, 2014
2. Christopher Manning, "Foundations of Statistical Natural Language Processing", MIT Press, 2009
3. Nitin Indurkhya and Fred J. Damerau, "Handbook of Natural Language Processing", Second Edition, Chapman & Hall/CRC Press, 2010.

REFERENCE BOOKS

1. Steven Bird, Ewan Klein and Edward Loper, "Natural Language Processing with Python", First Edition, OReilly Media, 2009
2. Breck Baldwin, "Natural Language Processing with Java and LingPipe Cookbook", Atlantic Publisher, 2015.
3. Richard M Reese, "Natural Language Processing with Java", First Edition, Packt Publishing,2015.
4. YoavGoldberg, GraemeHirst, "Neural Network Methods for Natural Language Processing - Synthesis Lectures on Human Language Technologies", Morgan and Claypool Life Sciences, 2017.
5. Deepti Chopra, Nisheeth JoshiIti Mathur, "Mastering Natural Language Processing with Python", First Edition, Packt Publishing Limited, 2016
6. Mohamed ZakariaKurdi "Natural Language Processing and Computational Linguistics 1: Speech, Morphology and Syntax", First Edition, ISTE Ltd. Wiley, 2016
7. Atefeh Farzindar, DianaInkpen, "Natural Language Processing for Social Media, Second Edition, Morgan and Claypool Life Sciences, 2015

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	To tag a given text with basic Language features
CO2	To design an innovative application using NLP components
CO3	To implement a rule-based system to tackle morphology/syntax of a language
CO4	To design a tag set to be used for statistical processing for real-time applications
CO5	To perform machine translation by preserving the meaning of the input text, and producing fluent text in the output language

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)										PROGRAM SPECIFIC OUTCOMES (PSOs)

CS1812	MICROCONTROLLER BASED SYSTEM DESIGN	L	T	P	C
		3	0	0	3

OBJECTIVES

- To understand the Architecture of PIC microcontroller
- To learn about Interrupts and timers
- To recognize the Peripheral devices for data communication and transfer
- To know the Functional blocks of ARM processor
- To learn about Architecture of ARM processors

UNIT I	**INTRODUCTION TO PIC MICROCONTROLLER**	**9**
Introduction to PIC Microcontroller–PIC 16C6x and PIC16C7x Architecture–IC16cxx–- Pipelining - Program Memory considerations – Register File Structure - Instruction Set - Addressing modes – Simple Operations		**CO1**
UNIT II	**INTERRUPTS AND TIMER**	**9**
PIC micro controller Interrupts- External Interrupts-Interrupt Programming–Loop time subroutine Timers-Timer Programming– Front panel I/O-Soft Keys– State machines and key switches– Display of Constant and Variability strings		**CO2**
UNIT III	**PERIPHERALS AND INTERFACING**	**9**
I^2C Bus for Peripherals Chip Access– Bus operation-Bus subroutines– Serial EEPROM— Analog to Digital Converter–UART-Baud rate selection–Data handling circuit–Initialization - LCD and keyboard Interfacing -ADC, DAC, and Sensor Interfacing		**CO3**
UNIT IV	**INTRODUCTION TO ARM PROCESSOR**	**9**
Architecture –ARM programmer's model –ARM Development tools- Memory Hierarchy – ARM Assembly Language Programming–Simple Examples–Architectural Support for Operating systems		**CO4**
UNIT V	**ARM ORGANIZATION**	**9**
3-Stage Pipeline ARM Organization– 5-Stage Pipeline ARM Organization–ARM Instruction Execution- ARM Implementation– ARM Instruction Set– ARM coprocessor interface– Architectural support for High Level Languages – Embedded ARM Applications		**CO5**
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Peatman,J.B., "Design with PIC Micro Controllers"PearsonEducation,3rdEdition, 2004
2. Furber,S., "ARM System on Chip Architecture" Addison Wesley trade Computer Publication, 2000

REFERENCE BOOKS
1. Mazidi, M.A.,“PIC Microcontroller” Rollin Mckinlay, Danny causey ,Prentice Hall of India, 2007

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Understand and apply computing platform and software for engineering problems
CO2	Understand the concepts of Architecture of PIC microcontroller
CO3	Acquire knowledge on Interrupts and timers
CO4	Understand the importance of Peripheral devices for data communication
CO5	Acquire knowledge in Architecture of ARM processors

MAPPING OF COs WITH POs AND PSOs

CS1813	FORENSICS AND CYBER LAW	L	T	P	C
		3	0	0	3

OBJECTIVES

- To understand the fundamentals of Forensics and Cyber Crime.
- To know about the types and categories of Cyber Crime.
- To learn about penetration, auditing and testing in Cyber Crime.
- To understand the importance of Cyber Security.
- To recognize the significance of Cyber Act.

UNIT I	**INTRODUCTION TO FORENSICS AND CYBER CRIME**		**9**
Fundamentals of computer, Internet Technology, E-Governance & E-Business ,Crime, criminology, origin, source, recent trends. Emergence of information based society, economic, administration, social, dependence of use of information, accession, threats, civil society and global society, Overview of computer forensics and Investigative Techniques, Computer forensic tools, activities of forensic investigations and testing methodology		**CO1**	
UNIT II	**TYPES AND CATEGORIES OF CYBER CRIME**		**9**
Personal, Business, Financial, Office Security, Cyber Crime – Complete transparency, hacking/cracking, denial of service, IP piracy, phrasing, hetaerism etc. Cyber Attack – cyber attackers		**CO2**	
UNIT III	**ROLE OF COMPUTERS AND INTERNET IN CYBER CRIME, PENETRATION TESTING AND AUDITING**		**9**
Computer as witness, evidence, act, defining evidence, computer forensics, computer storage, media of electric record for use of course of law. Customers and legal agreements, Router penetration testing, Firewalls penetration testing, Intrusion detection system penetration testing, Wireless networks penetration testing, Password cracking penetration testing, Social engineering penetration testing, Application penetration testing, Policies and controls testing. Penetration testing report and documentation writing , Policies and procedures Security Policies-checklist		**CO3**	
UNIT IV	**CYBER SECURITY**		**9**
The concept of cyber security , meaning, scope and the frame work, basic structure development and management, Rules, Regulations, Act, Legislation - Meaning, Scope, Difference between Rules		**CO4**	
UNIT V	**NEED FOR A CYBER ACT**		**9**
The Indian Context , Need for a Cyber Act , Information Technology Act , Scope and further Development , Information Technology Act (Amendment) , coverage of Cyber Security and Cyber Crime Indian cyber Laws vs. cyber laws of U.S.A , similarities , scope and coverage , Effectiveness. Laboratory work: consists of gathering information, evidence with tools like WinHex, Metasploit and Social Engineering toolkit		**CO5**	
			TOTAL : 45 PERIODS

TEXT BOOKS

1. Cyber Forensics: from Data to Digital Evidence , Albert J. Marcella Jr., Wiley,1 st Edition,2012
2. Hack I.T. - Security Through Penetration Testing, T. J. Klevinsky, Scott Laliberte and Ajay Gupta, Addison-Wesley, 1st Edition,2002

REFERENCE BOOKS
1. Computer Forensics: Cybercriminals, Laws, And Evidence , Marie-Helen Maras, Jones & Bartlett Learn ,1st Edition ,2011 2. Computer Forensics: Investigating Network Intrusions and Cyber Crime, EC Council Press Series, Cengage Learning , 2010

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Understand the fundamentals of Forensics and Cyber Crime.
CO2	Know about the types and categories of Cyber Crime.
CO3	Identify about penetration, auditing and testing in Cyber Crime.
CO4	Know the importance of Cyber Security.
CO5	Recognize the significance of Cyber Act.

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	3	3	3	3	2	-	-	-	-	2	2	2	3	3	2
CO2	3	3	3	3	2	-	-	-	-	2	2	2	3	3	2

CS1814	DATA WAREHOUSING AND DATA MINING	L	T	P	C
		3	0	0	3

OBJECTIVES

- Be familiar with mathematical foundations of data mining tools
- Understand and implement classical models and algorithms in data warehouses and data mining
- Characterize the kinds of patterns that can be discovered by association rule mining, classification and clustering
- Master data mining techniques in various applications like social, scientific and environmental context
- Develop skill in selecting the appropriate data mining algorithm for solving practical problems

UNIT I	**DATA WAREHOUSE**	**9**
Introduction to Data Ware House, Differences between operational data base systems and data Ware House, Data Ware House characteristics, Data Ware House Architecture and its components, Extraction-Transformation-Loading, Logical (MulitDimensional), Data Modeling, Schema Design, star and snow-Flake Schema, Fact Constellation, Fact Table, Fully Addictive, Semi-Addictive, Non-Addictive Measures; FactLess-Facts, Dimension Table characteristics; Fact-Less-Facts, Dimension Table characteristics; OLAP cube, OLAP Operations, OLAP Server Architecture-ROLAP, MOLAP and HOLAP		**CO1**
UNIT II	**INTRODUCTION TO DATA MINING**	**9**
Introduction, What is Data Mining, Definition, KDD, Challenges, Data Mining Tasks, Data Preprocessing- Data Cleaning, Missing Data, Dimensionality Reduction, Feature Subset Selection, Discretization and Binaryzation , Data Transformation; Measures of similarity and dissimilarity-Basics		**CO2**
UNIT III	**ASSOCIATION RULES**	**9**
Problem Definition, Frequent Item Set Generation, The APRIORI Principle, Support and Confidence Measures, Association Rule Generation, APRIORI Algorithm, The Partition Algorithms, FP-Growth Algorithms, Compact Representation of Frequent Item Set-Maximal Frequent Item Set, Closed Frequent Item Set		**CO3**
UNIT IV	**CLASSIFICATION**	**9**
Problem definition, General Approaches to solving a classification problem, Evaluation of Classifiers, Classification techniques, Decision trees-Decision Tree Construction, Methods for expressing attribute test conditions, Measures for Selecting the Best split, Algorithm for Decision tree Induction, Naïve-Bayes Classifier, Bayesian Belief Networks; K-nearest neighbor classification-Algorithm and characteristics		**CO4**
UNIT V	**CLUSTERING**	**9**
Problem Definition, Clustering overview, Evaluation of clustering algorithms, Partitioning clustering K-Means Algorithm, K-Means Additional Issues, PAM Algorithm, Hierarchical Clustering-Algorithm- Agglomerative Methods and Divisive Methods, Basic Agglomerative Hierarchical Clustering Algorithm, Specific techniques, Key Issues in Hierarchical Clustering, Strengths and weakness, Outlier Detection		**CO5**
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Jiawei Han, Micheline Kamber, Data Mining-Concepts and Techniques, Morgan Kaufmann Publishers, Elsevier, 2 Edition, 2006
2. Pang-Ning Tan, Vipin Kumar, Michael Steinbanch, Introduction to Data Mining, Pearson Education

REFERENCE BOOKS

1. Arun K Pujari, Data Mining Techniques, 3rd Edition, Universities Press
2. Pualraj Ponnaiah, Data Ware Housing Fundamentals, Wiley Student Edition
3. Ralph Kimball, The Data Ware House Life Cycle Toolkit, Wiley Student Edition
4. Vikaram Pudi, P Radha Krishna, Data Mining, Oxford University

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Understand the functionality of the various data mining and data warehousing component
CO2	Appreciate the strengths and limitations of various data mining and data warehousing models
CO3	Explain the analyzing techniques of various data
CO4	Describe different methodologies used in data mining and data ware housing
CO5	Compare different approaches of data ware housing and data mining with various technologies

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)											PROGRAM SPECIFIC OUTCOMES (PSOs)

CS1815	SOFTWARE QUALITY ASSURANCE	L	T	P	C
		3	0	0	3

OBJECTIVES

- Understand the basic tenets of software quality and quality factors.
- Be exposed to the Software Quality Assurance (SQA) architecture and the details of SQA components.
- Understand of how the SQA components can be integrated into the project life cycle.
- Be familiar with the software quality infrastructure.
- Be exposed to the management components of software quality

UNIT I	**INTRODUCTION TO SOFTWARE QUALITY & ARCHITECTURE**	**9**
Need for Software quality – Quality challenges – Software quality assurance (SQA) – Definition and objectives – Software quality factors- McCall"s quality model – SQA system and architecture – Software Project life cycle Components – Pre project quality components – Development and quality plans		**CO1**
UNIT II	**SQA COMPONENTS AND PROJECT LIFE CYCLE**	**9**
Software Development methodologies – Quality assurance activities in the development process - Verification & Validation – Reviews – Software Testing – Software Testing implementations – Quality of software maintenance – Pre-Maintenance of software quality components – Quality assurance tools – CASE tools for software quality – Software maintenance quality – Project Management		**CO2**
UNIT III	**SOFTWARE QUALITY INFRASTRUCTURE**	**9**
Procedures and work instructions - Templates - Checklists – 3S development team - Staff training and certification Corrective and preventive actions – Configuration management – Software change control – Configuration management audit -Documentation control – Storage and retrieval		**CO3**
UNIT IV	**SOFTWARE QUALITY MANAGEMENT & METRICS**	**9**
Project process control – Computerized tools - Software quality metrics – Objectives of quality measurement – Process metrics – Product metrics – Implementation – Limitations of software metrics – Cost of software quality – Classical quality cost model – Extended model – Application of Cost model		**CO4**
UNIT V	**STANDARDS, CERTIFICATIONS & ASSESSMENTS**	**9**
Quality management standards – ISO 9001 and ISO 9000-3 – capability Maturity Models – CMM and CMMI assessment methodologies - Bootstrap methodology – SPICE Project – SQA project process standards – IEEE st 1012 & 1028 – Organization of Quality Assurance – Department management responsibilities – Project management responsibilities – SQA units and other actors in SQA systems		**CO5**

TOTAL : 45 PERIODS

TEXT BOOK

1. Daniel Galin, “Software Quality Assurance”, Pearson Publication, 2009

REFERENCE BOOKS

1. G.James, D.Witten,T.Hastie,R.Tibshirani-An introduction to statistical learning with applications in R,Springer,2013.
2. E.Alpaydin, Introduction to Machine Learning, Prentice Hall Of India,2010.
3. Trevor Hastie, Robert Tibshirani, Jerome Friedman , The Elements of Statistical Learning-Data Mining, Inference, and Prediction ,Second Edition , Springer Verlag, 2009.
4. C.M.Bishop –Pattern Recognition and Machine Learning,Springer,2006.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Utilize the concepts in software development life cycle
CO2	Demonstrate their capability to adopt quality standards.
CO3	Assess the quality of software product.
CO4	Apply the concepts in preparing the quality plan & documents
CO5	Understand certification and assessments

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

PROFESSIONAL ELECTIVE – VI

CS1821	SOFTWARE DEFINED NETWORKS	L	T	P	C
		3	0	0	3

OBJECTIVES

- To learn the fundamentals of software defined networks.
- To understand the separation of the data plane and the control plane.
- To study about the SDN Programming.
- To study about the various applications of SDN

UNIT I	**INTRODUCTION**	**9**
History of Software Defined Networking (SDN) – Modern Data Center – Traditional Switch Architecture – Why SDN – Evolution of SDN – How SDN Works – Centralized and Distributed Control and Date Planes		**CO1**
UNIT II	**OPEN FLOW & SDN CONTROLLERS**	**9**
Open Flow Specification – Drawbacks of Open SDN, SDN via APIs, SDN via Hypervisor Based Overlays – SDN via Opening up the Device – SDN Controllers – General Concepts		**CO2**
UNIT III	**DATA CENTERS**	**9**
Multitenant and Virtualized Multitenant Data Center – SDN Solutions for the Data Center Network – VLANs – EVPN – VxLAN – NVGRE		**CO3**
UNIT IV	**SDN PROGRAMMING**	**9**
Programming SDNs: Northbound Application Programming Interface, Current Languages and Tools, Composition of SDNs – Network Functions Virtualization (NFV) and Software Defined Networks: Concepts, Implementation and Applications		**CO4**
UNIT V	**SDN**	**9**
Juniper SDN Framework – IETF SDN Framework – Open Daylight Controller – Floodlight Controller – Bandwidth Calendaring – Data Center Orchestration		**CO5**
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Paul Goransson and Chuck Black, ―Software Defined Networks: A Comprehensive Approach, First Edition, Morgan Kaufmann, 2014.
2. Thomas D. Nadeau, Ken Gray, ―SDN: Software Defined Networks, O'Reilly Media, 2013.

REFERENCE BOOKS

1. Siamak Azodolmolky, ―Software Defined Networking with Open Flow, Packet Publishing, 2013.
2. Vivek Tiwari, ―SDN and Open Flow for Beginners‖, Amazon Digital Services, Inc., 2013.
3. Fei Hu, Editor, ―Network Innovation through Open Flow and SDN: Principles and Design, CRC Press, 2014.

COURSE OUTCOMES **Upon completion of the course, students will be able to**	
CO1	Analyze the evolution of software defined networks
CO2	Express the various components of SDN and their uses
CO3	Explain the use of SDN in the current networking scenario
CO4	Design and develop various applications of SDN
CO5	Understand about SDN frameworks

MAPPING OF COs WITH POs AND PSOs

CS1822	iOS APPLICATION DEVELOPMENT	L	T	P	C
		3	0	0	3

OBJECTIVES

- To understand the principles of iOS app development
- To provide hands-on experience and networking with use of Swift programming language
- To understand the conceptual overview, design issues, and practical development via iOS a pp development projects
- To use iOS development tools such as Xcode, design interfaces and interactions and evaluate their usability, and integrate camera, photo, and location -information to enhance iOS apps

UNIT I	INTRODUCTION TO SWIFT PROGRAMMING	9
Swift language essentials: Arrays, Dictionaries, functions, Optionals, Control Flow, Structs Enums and Classes, Playgrounds. Elements of The Swift Foundation classes, Cocoa Touch Foundation Framework, Simple connections to the User Interface		**CO1**
UNIT II	**IOS APP DESIGN AND DEVELOPMENT PRINCIPLES**	**9**
Overview of iOS History, iOS Devices, iOS App Markets, iOS Design Principles, i OS Software Arc hitecture, iOS Development Tools, Xcode, iOS Programming Languages of Swift and Objective-C, Objective-C Compatibility, Foundation Frameworks, Model-View-Controller(MVC), Multiple MVCs		**CO2**
UNIT III	**BEST PRACTICES FOR IOS USER INTERFACE AND FUNCTIONALITY DESIGN**	**9**
UI Overview, Views, Gestures, View Controller Lifecycle, Storyboard, Autolayout, Scroll View, Multithreading, Table View, Unwind Segues, Alerts, Timers, View Animation, Dynamic Animation, Application Lifecycle, Core Motion, Core Location, Map Kit, Modal Segues, Camera, Persistence, Embed Segues, Internationalization and Settings		**CO3**
UNIT IV	**IOS NETWORKING AND SECURITY**	**9**
iOS Networking with MVC, Social Networking in iOS, Web API Security and Data Transport, i OS Secure Network Setting, Basic OAuth2 Functionality, Secure JSON Web APIs, Cryptographically Secured Push Notifications, Core Data, Secure Data Storage		**CO4**
UNIT V	**IOS APP SOFTWARE ENGINEERING**	**9**
Software Development Cycles, Requirements Capture, Automated Testing, Test-Driven Development, Debugging, Deployment to Market, Distribution of iOS App through the App Store, Monetization		**CO5**
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Matt Neuburg, iOS 9 Programming Fundamentals with Swift, O'Reilly, 2015
2. The Swift Programming Language, Swift Programming Series, Apple Inc., 2019

REFERENCE BOOKS

1. Jesse Feiler, "iOS App Development For Dummies," Wiley, 2014
2. Craig Grummitt, "iOS Development with Swift," Manning Publications, 2017
3. Christian Keur, Aaron Hillegass, "iOS Programming: The Big Nerd Ranch Guide," 7th Edition, O'Reilly, 2020
4. Matt Neuburg, "iOS 13 Programming Fundamentals with Swift: Swift, Xcode, and Cocoa Basics," O'Reilly, 2020

COURSE OUTCOMES **Upon completion of the course, students will be able to**	
CO1	Understand iOS development tools and Swift programming language to develop iOS Apps from scratch
CO2	Describe the principles of software requirements for the iOS app development and networking
CO3	Apply the principles of software engineering to the iOS app software development and networking
CO4	Describe the skills required to produce and maintain a high-quality iOS app
CO5	Evaluate and apply software process and software best practices

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	2	2	1	1	1	-	-	1	-	1	1	1	3	3	2
CO2	2	2	1	1	1	-	-	1	-	1	1	1	3	3	2
CO3	2	2	1	1	1	-	-	1	-	1	1	1	3	3	2
CO4	2	2	1	1	1	-	-	1	-	1	1	1	3	3	2
CO5	2	2	1	1	1	-	-	1	-	1	1	1	3	3	2

CS1823	NETWORK SIMULATION USING NS3	L	T	P	C
		3	0	0	3

OBJECTIVES

- To understand the ns3 fundamentals and installation
- To become familiar with events and simulation
- To understand logging and tracing, during network simulation
- To learn the intricacies of building various network topologies
- To run network simulations in ns3 using C++ and Python scripts

UNIT I	**NS3 ARCHITECTURE AND INSTALLATION**	**9**
Introduction – Network Simulation – Network Emulation – Evolution of Network Simulators and Emulators – Testbed – ns3 Installation –Software Organization –ns2 vs ns3 –running ns3 scripts		**CO1**
UNIT II	**RANDOM VARIABLES**	**9**
Pseudo-Random number generation –creating random variables –Class Random Variable Stream –Base Class Public API – Types of Random Variables		**CO2**
UNIT III	**EVENTS AND SIMULATION**	**9**
Simulator object –Scheduler –Simulation time –Events –ns3 source code –key abstractions – Node – Packet – Channel –Net Device –Topology Helpers –ns3 Namespace –Containers – Applications –Building ns3 script		**CO3**
UNIT IV	**LOGGING AND TRACING**	**9**
Logging module –enabling logging –Command Line Arguments –Tracing System –ASCII tracing –parsing traces – PCAP tracing –tcpdump –Wireshark –callbacks –connect with config –dynamic trace sources – Trace sinks – gnuplot –NetAnim		**CO4**
UNIT V	**BUILDINGTOPOLOGIES AND DATA COLLECTION**	**9**
Bus Network topology –Wireless Network topology –Queues –Queuing models –Data collection –GNUPlotHelper –Supported Trace types - FileHelper		**CO5**
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Jack L. Burbank, “An Introduction to Network Simulator 3”, Wiley-Blackwell, First Edition, 2016

REFERENCE BOOKS

1. Klaus Wehrle, Mesut Gunes, James Gross, “Modeling and Tools for Network Simulation”, Springer, 2017

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Understand ns3 software organization and installation
CO2	Generate simple events in simulation
CO3	Implement logging, tracing and Animation
CO4	Build various network topologies
CO5	Analyze wired & wireless network simulations

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)	PROGRAM SPECIFIC OUTCOMES (PSOs)

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	2	3	1	1	1	-	-	1	-	-	1	1	3	3	2
CO2	2	3	1	1	1	-	-	1	-	-	1	1	3	3	2
CO3	2	3	1	1	1	-	-	1	-	-	1	1	3	3	2
CO4	2	3	1	1	1	-	-	1	-	-	1	1	3	3	2
CO5	2	3	1	1	1	-	-	1	-	-	1	1	3	3	2

CS1824	BLOCKCHAIN TECHNOLOGIES	L	T	P	C
	(Common to CSE & IT)	3	0	0	3

OBJECTIVES

- Understand how blockchain systems (mainly Bitcoin and Ethereum) work
- To securely interact with them,
- Design, build, and deploy smart contracts and distributed applications,
- Integrate ideas from blockchain technology into their own projects.

UNIT I	**BASICS**	**9**
Distributed Database, Two General Problem, Byzantine General problem and Fault Tolerance, Hadoop Distributed File System, Distributed Hash Table, ASIC resistance, Turing Complete. Cryptography: Hash function, Digital Signature - ECDSA, Memory Hard Algorithm, Zero Knowledge Proof.		**CO1**
UNIT II	**BLOCKCHAIN**	**9**
Introduction, Advantage over conventional distributed database, Blockchain Network, Mining Mechanism, Distributed Consensus, Merkle Patricia Tree, Gas Limit, Transactions and Fee, Anonymity, Reward, Chain Policy, Life of Blockchain application, Soft & Hard Fork, Private and Public blockchain.		**CO2**
UNIT III	**DISTRIBUTED CONSENSUS**	**9**
Nakamoto consensus, Proof of Work, Proof of Stake, Proof of Burn, Difficulty Level, Sybil Attack, Energy utilization and alternate.		**CO3**
UNIT IV	**CRYPTOCURRENCY**	**9**
History, Distributed Ledger, Bitcoin protocols - Mining strategy and rewards, Ethereum - Construction, DAO, Smart Contract, GHOST, Vulnerability, Attacks, Sidechain, Name coin		**CO4**
UNIT V	**CRYPTOCURRENCY REGULATION**	**9**
Stakeholders, Roots of Bit coin, Legal Aspects-Crypto currency Exchange, Black Market and Global Economy. Applications: Internet of Things, Medical Record Management System, Domain Name Service and future of Blockchain.		**CO5**

TOTAL : 45 PERIODS

TEXT BOOKS

1. Arvind Narayanan, Joseph Bonneau, Edward Felten, Andrew Miller and Steven Goldfeder, Bitcoin and Cryptocurrency Technologies: A Comprehensive Introduction, Princeton University Press (July 19, 2016).

REFERENCE BOOKS

1. Antonopoulos, Mastering Bitcoin: Unlocking Digital Cryptocurrencies
2. Satoshi Nakamoto, Bitcoin: A Peer-to-Peer Electronic Cash System
3. DR. Gavin Wood, “ETHEREUM: A Secure Decentralized Transaction Ledger, ”Yellow paper.2014.
4. Nicola Atzei, Massimo Bartoletti, and Tiziana Cimoli, A survey of attacks on Ethereum smart contracts

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Design principles of Bitcoin and Ethereum and Nakamoto consensus
CO2	Learn the simplified Payment Verification protocol and describe differences between proof-of-work and proof-of-stake consensus.
CO3	Interact with a blockchain system by sending and reading transactions.
CO4	Design, build, and deploy a distributed application.
CO5	Evaluate security, privacy, and efficiency of a given blockchain system.

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

CO4	1	1	2	2	3	2	2	2	2	1	1	3	3	3	2
CO5	1	1	3	3	3	2	1	2	2	1	1	2	3	3	2

CS1825	INFORMATION RETRIEVAL TECHNIQUES	L	T	P	C
		3	0	0	3

OBJECTIVES

- To provide the knowledge on information retrieval system capabilities.
- To introduce different computational search problems and evaluate search engines.
- To introduce different applications of informational retrieval techniques in the internet or web environment.
- To discuss about information visualization and system evaluation.

UNIT I	**INTRODUCTION**		**9**
Introduction to Information Storage and Management: Information Storage, Evolution of Storage Technology and Architecture, Data Center Infrastructure, Key Challenges in Managing Information, Information Lifecycle. Storage System Environment: Components of the Host. RAID: Implementation of RAID, RAID Array Components, RAID Levels, RAID Comparison, RAID Impact on Disk Performance, Hot Spares. Intelligent Storage System: Components, Intelligent Storage Array.		**CO1**	
UNIT II	**CATALOGING AND INDEXING**		**9**
Direct-Attached Storage and Introduction to SCSI: Types of DAS, DAS Benefits and Limitations, Disk Drive Interfaces, Introduction to Parallel SCSI, SCSI Command Model. Storage Area Networks: Fiber Channel, SAN Evolution, SAN Components, Fiber Channel Connectivity, Fiber Channel Ports, Fiber Channel Architecture, Zoning, Fiber Channel Login Types, Fiber Channel Topologies. Network Attached Storage: Benefits of NAS, NAS File I/Components of NAS, NAS Implementations, NAS-Implementations, NAS File Sharing Protocols, NAS I/O Operations.		**CO2**	
UNIT III	**AUTOMATIC INDEXING**		**9**
IP SAN: iSCSI, FCIP. Content-Addressed Storage: Fixed Content and Archives, Types of Archives, Features and Benefits of CAS, CAS Architecture, Object Storage and Retrieval in CAS, CAS Examples. Storage Virtualization: Forms of Virtualization, NIA Storage Virtualization Taxonomy, Storage Virtualization Configurations, Storage Virtualization Challenges, Types of Storage Virtualization.		**CO3**	
UNIT IV	**USER SEARCH TECHNIQUES**		**9**
Introduction to Business Continuity: Information Availability, BC Terminology, BC Planning Lifecycle, Failure Analysis, Business Impact Analysis, BC Technology Solutions. Backup and Recovery: Backup Purpose, Considerations, Granularity, Recovery Considerations, Backup Methods and Process, Backup and Restore Operations, Backup Topologies, Backup in NAS Environments, Backup Technologies.		**CO4**	
UNIT V	**INFORMATION VISUALIZATION**		**9**
Local Replication: Source and Target, Uses of Local Replicas, Data Consistency, Local Replication Technologies, Restore and Restart Considerations, Creating Multiple Replicas, Management Interface. Remote Replication: Modes of Remote Replication and its technologies, Network Infrastructure.		**CO5**	
			TOTAL : 45 PERIODS

TEXT BOOK

1. Kowalski, Gerald, Mark T May bury: INFORMATION RETRIEVAL SYSTEMS: Theory and Implementation, Kluwer Academic Press, 1997

REFERENCE BOOKS

1. Gerald Kowalski: INFORMATION RETRIEVAL Architecture and Algorithms.
2. Frakes, W.B., Ricardo Baeza-Yates: Information Retrieval data Structures and Algorithms, Prentice Hall, 1992.
3. Modern Information Retrieval by Yates Pearson Education.
4. Information Storage & Retrieval by Robert Korfhage –John Wiley & Sons.

COURSE OUTCOMES
Upon completion of the course, students will be able to

CO1	Understand various functionalities and capabilities of Information Retrieval System.
CO2	Gain knowledge on cataloguing and data structure methodology for IRS.
CO3	Differentiate various clustering algorithms and indexing.
CO4	Differentiate various user search techniques and system search techniques.
CO5	Understand the concepts of information visualization and text search

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)

OPEN ELECTIVES – I & II

OBT101	INDUSTRIAL BIOTECHNOLOGY	L	T	P	C
		3	0	0	3

OBJECTIVE

- To motivate students to excel in research and to practice the technologies in the field of Industrial biotechnology. To provide students with a solid understanding of Biotechnology fundamentals and applications required to solve real life problems. To provide students with an academic environment that is aware of professional excellence and leadership through interaction with professional bodies

UNIT I	**OVERVIEW OF THE CELL**	**9**
Cell, structure and properties, prokaryotic and eukaryotic cells, structural organization and function of intracellular organelles; Cell wall, Nucleus, Mitochondria, Golgi bodies, Lysosomes, Endoplasmic reticulum, Peroxisomes and Chloroplast.		**CO1**
UNIT II	**MICROBIAL GROWTH: PURE CULTURE TECHNIQUES**	**9**
Enrichment culture techniques for isolation of chemoautotrophs, chemoheterotrophs and photosynthetic microorganisms. The definition of growth, mathematical expression of growth, Growth curve, availability of oxygen, culture collection and maintenance of cultures. Media formulation: principles of microbial nutrition, formulation of culture medium, selective media, factors influencing the choice of various carbon and nitrogen sources, vitamins, minerals, precursors and antifoam agents. Importance of pH.		**CO2**
UNIT III	**MANAGEMENT OF WASTE**	**9**
Management of Contaminated land, lake sediments and Solid Waste, Anaerobic digestion, Biostimulation, Bioaugmentation, Phytoremediation, Natural attenuation, Vermicomposting		**CO3**
UNIT IV	**BIOREMEDIATION**	**9**
Definition, constraints and priorities of Bioremediation, Types of bioremediation, In-situ and Ex-situ bioremediation techniques, Factors affecting bioremediation. Bioremediation of Hydrocarbons. Lignocellulosic Compounds.		**CO4**
UNIT V	**BIOENERGY AND BIOMINING**	**9**
Bio energy: Energy and Biomass Production from wastes, biofuels, bio hydrogen and biomass. Biomining: Bioleaching, monitoring of pollutants, microbially enhanced oil recovery, microbial fuel cells.		**CO5**
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Molecular Biology of cell, Alberts. B et al. Developmental Biology, SF Gilbert, Sinauer Associates Inc.
2. AVN Swamy, Industrial Pollution Control Engineering, 2006, Galgotia Publication,

REFERENCE BOOKS

1. Environmental Biotechnology - Allan Stagg.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Design, perform experiments, analyze and interpret data for investigating complex problems in Biotechnology, Engineering and related fields.
CO2	Decide and apply appropriate tools and techniques in biotechnological manipulation.
CO3	Justify societal, health, safety and legal issues
CO4	Understand his responsibilities in biotechnological engineering practices
CO5	Understand the need and impact of biotechnological solutions on environment and societal context keeping in view need for sustainable solution.

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

OBT104	BIOSENSORS	L	T	P	C
		3	0	0	3

OBJECTIVE

- Understand protein based biosensors and their enzyme reactivity, stability and their application

UNIT I	**PROTEIN BASED BIOSENSORS**	**9**
Nano structure for enzyme stabilization - Single enzyme nano particles - Nanotubes microporus silica - Protein based nanocrystalline Diamond thin film for processing		**CO1**
UNIT II	**DNA BASED BIOSENSOR**	**9**
Heavy metal complexing with DNA and its determination water and food samples - DNA zymo biosensors		**CO2**
UNIT III	**ELECTRO CHEMICAL APPLICATION**	**9**
Detection in biosensors - Flurorescence - Absorption - Electrochemical. Integration of various techniques - Fibre optic biosensors		**CO3**
UNIT IV	**FABRICATION OF BIOSENSORS**	**9**
Techniques used for microfabrication - Microfabrication of electrodes - On chip analysis		**CO4**
UNIT V	**BIOSENSORS IN RESEARCH**	**9**
Future direction in biosensor research - Designed protein pores-as components of biosensors - Molecular design -Bionanotechnology for cellular biosensing - Biosensors for drug discovery - Nanoscale biosensors		**CO5**

TOTAL : 45 PERIODS

REFERENCE BOOKS

1. Biosensors: A Practical Approach, J. Cooper & C. Tass, Oxford University Press, 2004
2. Nanomaterials for Biosensors, Cs. Kumar, Willey - VCH, 2007
3. Smart Biosensor Technology, G.K. Knoff, A.S. Bassi, CRC Press, 2006.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	The students will able to understand protein based biosensors and their enzyme reactivity, stability and their application in protein based nano crystalline thin film processing
CO2	The students will able to describe DNA based biosensors to study the presence of heavy metals in the food products
CO3	The students will able to understand fluorescence, UV-Vis and electrochemical applications of biosensors
CO4	The students will able to study about the fabrication of biosensors and its application as nanochipanalyzer
CO5	To understand the Future direction in biosensor research

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)

OBT105	INTRODUCTION TO NANOSCIENCE AND NANOTECHNOLOGY	L	T	P	C
		3	0	0	3

OBJECTIVE

- Understand the principles of processing, manufacturing and characterization of nanomaterials and nanostructures.

UNIT I	BASICS OF NANOTECHNOLOGY	9
Introduction - Time and length scale in structures -Definition of a nanosystem -Dimensionality and size dependent phenomena -Surface to volume ratio -Fraction of surface atoms - Surface energy and surface stress- surface defects-Effect of nanoscale on various properties - Structural, thermal, mechanical, magnetic, optical and electronic properties.		CO1
UNIT II	**DIFFERENT CLASSES OF NANOMATERIALS**	**9**
Classification based on dimensionality-Quantum Dots,Wells and Wires - Carbon based nano materials (buckyballs, nanotubes, grapheme) - Metal based nanomaterials (nanogold, nanosilver and metal oxides) - Nanocomposites-Nanopolymers - Nano ceramics -Biological nanomaterials.		CO2
UNIT III	**SYNTHESIS OF NANOMATERIALS**	**9**
Chemical Methods: Metal Nanocrystals by Reduction -Sol - gel processing - Solvothermal Synthesis - Photochemical Synthesis - Chemical Vapor Deposition(CVD) - Metal Oxide - Chemical Vapor Deposition (MOCVD).Physical Methods: Ball Milling - Electrodeposition - Spray Pyrolysis - DC/RF Magnetron Sputtering - Molecular Beam Epitaxy (MBE).		CO3
UNIT IV	**CHARACTERIZATION OF NANOSTRUCTURES**	**9**
Introduction, structural characterization, X-ray diffraction (XRD-Powder/Single crystal), Small angle X-ray scattering (SAXS), Scanning Electron Microscopy (SEM) - Energy Dispersive X-ray analysis (EDAX)- Transmission Electron Microscope (TEM) - Scanning Tunneling Microscope (STM)-Atomic Force Microscopy (AFM), UV-vis spectroscopy (liquid and solid state) - Raman Spectroscopy -X-ray Photoelectron Spectroscopy (XPS) - Auger Electron spectroscopy (AES).		CO4
UNIT V	**APPLICATIONS**	**9**
Solar energy conversion and catalysis - Molecular electronics and printed electronics - Nanoelectronics -Polymers with a special architecture - Liquid crystalline systems - Applications in displays and other devices -Nanomaterials for data storage -Photonics, Plasmonics- Chemical and biosensors -Nanomedicine and Nanobiotechnology		CO5

TOTAL : 45 PERIODS

TEXT BOOKS

1. Nano Technology: Basic Science and Emerging Technologies, Mick Wilson, Kamali Kannargare., Geoff Smith Overseas Press (2005)
2. A Textbook of Nanoscience and Nanotechnology,Pradeep T., Tata McGrawHill Education Pvt. Ltd., 2012.
3. Nanostructured Materials and Nanotechnology,Hari Singh Nalwa,Academic Press, 2002.
4. Introduction to Nanotechnology, Charles P.Poole, FrankJ.Owens, Wiley Interscience (2003)
5. Textbook of Nanoscience and Nanotechnology, B.S. Murty, P. Shankar, Baldev Raj, B BRath, James Murday, Springer Science & Business Media, 2013.

REFERENCE BOOKS

1. Nanotechnology: A gentle introduction to the next Big idea, Mark A.Ratner, Daniel Ratner, Mark Ratne, Prentice Hall P7R:1st Edition (2002)
2. Fundamental properties of nanostructed materials Ed D. Fioran, G.Sberveglier, World Scientific 1994
3. Nanoscience: Nanotechnologies and Nanophysics, Dupas C., Houdy P., Lahmani M., Springer-Verlag Berlin Heidelberg, 2007

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Demonstrate the understanding of length scales concepts, nanostructures and nanotechnology
CO2	Understand the different classes of nanomaterials.
CO3	Identify the CVD, MOCVD
CO4	Outline the applications of nanotechnology and
CO5	Develop an ability to critically evaluate the promise of a nanotechnology device.

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

OCE102	INTRODUCTION TO GEOGRAPHIC INFORMATION SYSTEM	L	P	T	C
		3	0	0	3

OBJECTIVES

- To introduce the fundamentals and components of Geographic Information System
- To provide details of spatial data models.
- To know the details of data input and topology
- To know the knowledge on data management and output processes
- To know the data quality and standards

UNIT I	FUNDAMENTALS OF GIS	9
Introduction to GIS - Basic spatial concepts - Coordinate Systems - GIS and Information Systems – Definitions – History of GIS - Components of a GIS – Hardware, Software, Data, People, Methods – Proprietary and open-source Software - Types of data – Spatial, Attribute data- types of attributes – scales/ levels of measurements.		CO1
UNIT II	**SPATIAL DATA MODELS**	**9**
Database Structures – Relational, Object Oriented – ER diagram - spatial data models – Raster Data Structures – Raster Data Compression - Vector Data Structures - Raster vs Vector ModelsTIN and GRID data models - OGC standards - Data Quality.		CO2
UNIT III	**DATA INPUT AND TOPOLOGY**	**9**
Scanner - Raster Data Input – Raster Data File Formats – Vector Data Input –Digitiser – Topology - Adjacency, connectivity and containment – Topological Consistency rules – Attribute Data linking – ODBC – GPS - Concept GPS based mapping.		CO3
UNIT IV	**DATA ANALYSIS**	**9**
Vector Data Analysis tools - Data Analysis tools - Network Analysis - Digital Education models - 3D data collection and utilisation.		CO4
UNIT V	**APPLICATIONS**	**9**
GIS Applicant - Natural Resource Management - Engineering - Navigation - Vehicle tracking and fleet management - Marketing and Business applications - Case studies.		CO5
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Kang - Tsung Chang, Introduction to Geographic Information Systems, McGraw Hill Publishing, 2nd Edition,2011.
2. Ian Heywood, Sarah Cornelius, Steve Carver,Srinivasa Raju, “An Introduction Geographical Information Systems, Pearson Education, 2ndEdition,2007.

REFERENCE BOOKS

1. Lo.C.P., Albert K.W. Yeung, Concepts and Techniques of Geographic Information Systems, Prentice-Hall India Publishers,2006

COURSE OUTCOMES **Upon completion of the course, students will be able to**	
CO1	Have basic idea about the fundamentals of GIS.
CO2	Understand the types of data models.
CO3	Get knowledge about data input and topology.
CO4	Gain knowledge on data quality and standards.
CO5	Understand data management functions and data output

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	2	2	1	1	2	-	1	-	-	-	-	2	2	2	1

CO4	2	2	1	1	2	-	1	-	-	-	-	2	2	2	1
CO5	2	2	1	1	2	-	1	-	-	-	-	2	2	2	2

OCH101	HOSPITAL MANAGEMENT	L	T	P	C
		3	0	0	3

OBJECTIVES

- To understand the fundamentals of hospital administration and management.
- To know the market related research process and its HRM
- To understand the recruitment and training processes in hospitals
- To explore various information management systems and relative supportive services.
- To learn the quality and safety aspects in hospital.

UNIT I	OVERVIEW OF HOSPITAL ADMINISTRATION	9
Distinction between Hospital and Industry, Challenges in Hospital Administration – Hospital Planning- Equipment Planning – Functional Planning		CO1
UNIT II	HUMAN RESOURCE MANAGEMENT IN HOSPITAL	9
Principles of HRM – Functions of HRM – Profile of HRD Manager –Human Resource Inventory – Manpower Planning.		CO2
UNIT III	RECRUITMENT AND TRAINING	9
Different Departments of Hospital, Recruitment, Selection, Training Guidelines – Methods of Training – Evaluation of Training – Leadership grooming and Training, Promotion – Transfer.		CO3
UNIT IV	SUPPORTIVE SERVICES	9
Medical Records Department – Central Sterilization and Supply Department – Pharmacy – Food Services - Laundry Services.		CO4
UNIT V	COMMUNICATION AND SAFETY ASPECTS IN HOSPITAL	9
Purposes – Planning of Communication, Modes of Communication – Telephone, ISDN, Public Address and Piped Music – CCTV.Security – Loss Prevention – Fire Safety – Alarm System – Safety Rules.		CO5
		TOTAL : 45 PERIODS

TEXT BOOKS

1. R.C.Goyal, “Hospital Administration and Human Resource Management”, PHI – Fourth Edition, 2006.
2. G.D.Kunders, “Hospitals – Facilities Planning and Management – TMH, New Delhi – Fifth Reprint 2007.

REFERENCE BOOKS

1. Cesar A.Caceres and Albert Zara, “The Practice of Clinical Engineering, Academic Press, New York, 1977.
2. Norman Metzger, “Handbook of Health Care Human Resources Management”, 2nd edition Aspen Publication Inc. Rockville, Maryland, USA, 1990.
3. Peter Berman “Health Sector Reform in Developing Countries” - Harvard University Press, 1995.
4. William A. Reinke “Health Planning For Effective Management” - Oxford University Press.1988
5. Blane, David, Brunner, “Health and SOCIAL Organization: Towards a Health Policy for the 21st Century”, Eric Calrendon Press 2002.
6. Arnold D. Kalcizony & Stephen M. Shortell, “Health Care Management”, 6th Edition Cengage Learning, 2011.

COURSE OUTCOMES

Upon completion of the course, students will be able to	
CO1	Explain the principles of Hospital administration.
CO2	Identify the importance of Human resource management.
CO3	List various marketing research techniques.
CO4	Identify Information management systems and issues in supporting departments of hospitals
CO5	Understand safety procedures followed in hospitals

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)

OEC103	BASICS OF EMBEDDED SYSTEMS AND IoT	L	T	P	C
		3	0	0	3

OBJECTIVES

- Understand the concepts of embedded system design and analysis
- Learn the architecture and programming of ARM processor
- Be exposed to the basic concepts of embedded programming
- Learn the concepts of IoT

UNIT I	**INTRODUCTION TO EMBEDDED SYSTEM**	**9**
Complex systems and microprocessors– Embedded system design process - Design methodologies- Design flows - Requirement Analysis – Specifications-System analysis and architecture design – Quality Assurance techniques–Design example: Model train controller.		**CO1**
UNIT II	**BASICS OF ARM ARCHITECTURE AND PERIPHERAL INTERFACING**	**9**
ARM Architecture Versions – ARM Architecture – Instruction Set – Stacks and Subroutines – Features of the LPC 214X Family – Peripherals – The Timer Unit – Pulse Width Modulation Unit – UART – Block Diagram of ARM9 and ARM Cortex M3 MCU		**CO2**
UNIT III	**EMBEDDED PROGRAMMING CONCEPTS**	**9**
Components for embedded programs- Models of programs- Assembly, linking and loading – compilation techniques- Program level performance analysis – Software performance optimization – Program level energy and power analysis and optimization – Analysis and optimization of program size- Program validation and testing		**CO3**
UNIT IV	**INTRODUCTION TO IoT**	**9**
Functional blocks of an IoT system - Basics of Physical and logical design of IoT - IoT enabled domains - Difference between IoT - Passive and active sensors - Different applications of sensors - IoT front-end hardware Case Studies – Smart Parking, Air Pollution Monitoring.		**CO4**
UNIT V	**COMMUNICATION PROTOCOLS FOR EMBEDDED AND IoT**	**9**
Embedded Networking: Introduction-Serial/Parallel Communication - Serial communication protocols- RS485 - Synchronous Serial Protocols - Serial Peripheral Interface (SPI) - Inter Integrated Circuits (I2C). IoT Infrastructure - 6LowPAN - IPv6 - Wi-Fi, Bluetooth, ZigBee.		**CO5**
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Marilyn Wolf, ―Computers as Components - Principles of Embedded Computing System Design‖, Third Edition ―Morgan Kaufmann Publisher (An imprint from Elsevier), 2012. (UNIT I, II, III, IV)
2. Arshdeep Bahga, Vijay Madisetti, "Internet of Things, A Hands-on-Approach", 1st Edition, Universities press Pvt. Ltd., India, 2015.
3. Daniel Minoli, "Building the Internet of Things with IPv6 and MIPv6, 1st Edition, John Wiley & Sons", Inc, USA, 2013

REFERENCE BOOKS

a. Adrian McEwen and Hakim Cassimally, "Designing the Internet of Things", 1st Edition, John Wiley & Sons Ltd, UK, 2014
b. Peter Waher, "Learning Internet of Things", 1st Edition, Packt Publishing Ltd, UK, 2015.
c. Charles Bell, "Beginning Sensor Networks with Arduino and Raspberry Pi" , 1st Edition, Apress Publishers, USA, 2013.
d. Raj Kamal, Internet of Things, Architecture and Design Principles, McGraw-Hill, 2017

COURSE OUTCOMES **Upon completion of the course, students will be able to**	
CO1	Understand the Embedded System Design Process
CO2	Describe the architecture and programming of ARM processor
CO3	Outline the concepts of embedded system programming
CO4	Explain the basic concepts of IOT
CO5	Model Networked systems with basic protocols

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

OEE101	BASIC CIRCUIT THEORY	L	P	T	C
		3	0	0	3

OBJECTIVES

- To introduce electric circuits and its analysis
- To impart knowledge on solving circuit equations using network theorems
- To introduce the phenomenon of resonance in coupled circuits.
- To introduce Phasor diagrams and analysis of three phase circuits

UNIT I	**BASIC CIRCUITS ANALYSIS**	**9**
Resistive elements - Resistors in series and parallel circuits; Ohm's Law; Kirchoffs laws – methods of analysis-Mesh current and node voltage.		**CO1**
UNIT II	**NETWORK REDUCTION AND THEOREMS FOR DC CIRCUITS**	**9**
Network reduction- voltage and current division, source transformation, star delta conversion; Network theorems- Thevenins and Norton Theorems, Superposition Theorem, Maximum power transfer theorem, Reciprocity Theorem, Millman's theorem.		**CO2**
UNIT III	**ANALYSIS OF AC CIRCUITS**	**9**
Introduction to AC circuits- Inductive reactance, Capacitive reactance, Phasor diagrams, real power, reactive power, apparent power, power factor; RL, RC , RLC networks; Network reductions- voltage and current division, source transformation; Mesh and node analysis; Network theorems- Thevenins and Norton Theorems, Superposition Theorem , Maximum power transfer theorem, Reciprocity Theorem, Millman's theorem.		**CO3**
UNIT IV	**THREE PHASE CIRCUITS**	**9**
A.C. circuits – Average and RMS value, Phasor Diagram, Power, Power Factor and Energy; Analysis of three phase 3-wire and 4-wire circuits with star and delta connected loads, balanced & un balanced; phasor diagram of voltages and currents; power measurement in three phase circuits.		**CO4**
UNIT V	**RESONANCE AND COUPLED CIRCUITS**	**9**
Series and parallel resonance – frequency response, Quality factor and Bandwidth; Self and mutual inductance; Coefficient of coupling; Tuned circuits – Single tuned circuits.		**CO5**
		TOTAL : 45 PERIODS

TEXT BOOKS

1. William H. Hayt Jr, Jack E. Kemmerly and Steven M. Durbin, "Engineering Circuits Analysis", McGraw Hill publishers, edition, New Delhi, 2013.
2. Charles K. Alexander, Mathew N.O. Sadiku, "Fundamentals of Electric Circuits",Second Edition, McGraw Hill, 2013.
3. Allan H. Robbins, Wilhelm C. Miller, "Circuit Analysis Theory and Practice", Cengage Learning India, 2013.

REFERENCE BOOKS

1. Chakrabarti A, "Circuits Theory (Analysis and synthesis), Dhanpath Rai & Sons, New Delhi, 1999.
2. Jegatheesan, R., "Analysis of Electric Circuits," McGraw Hill, 2015.
3. Joseph A. Edminister, Mahmood Nahri, "Electric circuits", Schaum's series, McGraw- Hill, New Delhi, 2010.
4. M E Van Valkenburg, "Network Analysis",Prentice-Hall of India Pvt Ltd, New Delhi, 2015.
5. Mahadevan, K., Chitra, C., "Electric Circuits Analysis," Prentice-Hall of India Pvt Ltd.,New Delhi, 2015.

7. Sudhakar A and Shyam Mohan SP, "Circuits and Network Analysis and Synthesis",McGraw Hill, 2015.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Ability to introduce electric circuits and its analysis
CO2	Ability to impart knowledge on solving circuit equations using network theorems
CO3	Ability to introduce the phenomenon of resonance in coupled circuits.
CO4	Ability to introduce Phasor diagrams and analysis of three phase circuits
CO5	Ability to impart knowledge on resonance and coupled circuits

OEE103	INTRODUCTION TO RENEWABLE ENERGY SYSTEMS	L	P	T	C
		3	0	0	3

OBJECTIVES

- About the stand alone and grid connected renewable energy systems.
- Design of power converters for renewable energy applications.
- Wind electrical generators and solar energy systems.
- Power converters used for renewable energy systems.

UNIT I	**INTRODUCTION**	**9**
Environmental aspects of electric energy conversion: impacts of renewable energy generation on environment (cost-GHG Emission) - Qualitative study of different renewable energy resources: Solar, wind, ocean, Biomass, Fuel cell, Hydrogen energy systems and hybrid renewable energy systems.		**CO1**
UNIT II	**ELECTRICAL MACHINES FOR RENEWABLE ENERGY CONVERSION**	**9**
Reference theory fundamentals-principle of operation and analysis: IG and PMSG		**CO2**
UNIT III	**POWER CONVERTERS**	**9**
Solar: Block diagram of solar photo voltaic system -Principle of operation: line commutated converters (inversion-mode) - Boost and buck-boost converters- selection of inverter, battery sizing, array sizing Wind: Three phase AC voltage controllers		**CO3**
UNIT IV	**ANALYSIS OF WIND AND PV SYSTEMS**	**9**
Standalone operation of fixed and variability speed wind energy conversion systems and solar system-Grid connection Issues -Grid integrated PMSG, SCIG Based WECS, grid Integrated solar system		**CO4**
UNIT V	**HYBRID RENEWABLE ENERGY SYSTEMS**	**9**
Need for Hybrid Systems- Range and type of Hybrid systems- Case studies of Wind-PV Maximum Power Point Tracking (MPPT).		**CO5**
		TOTAL : 45 PERIODS

TEXT BOOKS

1. S. N. Bhadra, D.Kastha, S.Banerjee, “Wind Electrical Systems”, Oxford University Press, 2005.
2. B.H.Khan, “Non-conventional Energy Sources”, Tata McGraw-hill Publishing Company, New Delhi, 2017.

REFERENCE BOOKS

1. Muhammad H. Rashid, “Power Electronics Hand Book”, Third Edition, Butterworth- Heinemann, 2015.
2. Ion Boldea, “Variability Speed Generators”, Second Edition, CRC Press, 2015.
3. Rai. G.D, “Non- conventional Energy Sources”, Khanna Publishers, 2004.
4. Gray, L. Johnson, “Wind Energy Systems”, Prentice Hall, 2006.
5. Andrzej M. Trzynnadlowski, “Introduction to Modern Power Electronics”, Third Edition, Wiley India Pvt. Ltd, 2016.

COURSE OUTCOMES **Upon completion of the course, students will be able to**	
CO1	Ability to understand and analyze power system operation, stability, control and protection.
CO2	Ability to handle the engineering aspects of electrical energy generation and utilization.
CO3	Ability to understand the stand alone and grid connected renewable energy systems.
CO4	Ability to design of power converters for renewable energy applications.
CO5	Ability to acquire knowledge on wind electrical generators and solar energy systems.

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)

OEI102	ROBOTICS	L	T	P	C
		3	0	0	3

OBJECTIVE

- To understand the functions of the basic components of a Robot.
- To study the use of various types of End of Effectors and Sensors
- To impart knowledge in Robot Kinematics and Programming
- To learn Robot safety issues and economics.

UNIT I	FUNDAMENTALSOF ROBOT	9
Robot - Definition - Robot Anatomy - Coordinate Systems, Work Envelope Types and Classification- Specifications-Pitch, Yaw, Roll, Joint Notations, Speed of Motion, Pay Load- Robot Parts and their Functions-Need for Robots-Different Applications.		CO1
UNIT II	**ROBOT DRIVE SYSTEMS ANDEND EFFECTORS**	**9**
Pneumatic Drives-Hydraulic Drives-Mechanical Drives-Electrical Drives-D.C. Servo Motors, Stepper Motors, A.C. Servo Motors-Salient Features, Applications and Comparison of all these Drives, End Effectors-Grippers-Mechanical Grippers, Pneumatic and Hydraulic- Grippers, Magnetic Grippers, Vacuum Grippers; Two Fingered and Three Fingered Grippers; Internal Grippers and External Grippers; Selection and Design Considerations.		CO2
UNIT III	**SENSORS AND MACHINEVISION**	**9**
Requirements of a sensor, Principles and Applications of the following types of sensors- Position sensors - Piezo Electric Sensor, LVDT, Resolvers, Optical Encoders, pneumatic Position Sensors, Range Sensors Triangulations Principles, Structured, Lighting Approach, Time of Flight, Range Finders, Laser Range Meters, Touch Sensors ,binary Sensors., Analog Sensors, Wrist Sensors, Compliance Sensors, Slip Sensors, Camera, Frame Grabber, Sensing and Digitizing Image Data-Signal Conversion, Image Storage, Lighting Techniques, Image Processing and Analysis-Data Reduction, Segmentation, Feature Extraction, Object Recognition, Other Algorithms, Applications-Inspection, Identification, Visual Serving and Navigation.		CO3
UNIT IV	**ROBOT KINEMATICS AND ROBOTPROGRAMMING**	**9**
Forward Kinematics, Inverse Kinematics and Difference; Forward Kinematics and Reverse Kinematics of manipulators with Two, Three Degrees of Freedom (in 2 Dimension), Four Degrees of freedom (in 3 Dimension) Jacobians, Velocity and Forces-Manipulator Dynamics, Trajectory Generator, Manipulator Mechanism Design-Derivations and problems. Lead through Programming, Robot programming Languages-VAL Programming-Motion Commands, Sensor Commands, End Effector commands and simple Programs.		CO4
UNIT V	**IMPLEMENTATION ANDROBOTECONOMICS**	**9**
RGV, AGV; Implementation of Robots in Industries-Various Steps; Safety Considerations for Robot Operations - Economic Analysis of Robots.		CO5
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Klafter R.D., Chmielewski T.A and Negin M., “Robotic Engineering - An Integrated Approach”, Prentice Hall, 2003.
2. Groover M.P., “Industrial Robotics -Technology Programming and Applications”, McGraw Hill,2001.

REFERENCE BOOKS

1. Craig J.J., “Introduction to Robotics Mechanics and Control”, Pearson Education,2008.
2. Deb S.R., “Robotics Technology and Flexible Automation” Tata McGraw Hill Book Co.,1994.

4. Fu.K.S.,Gonzalz R.C. and Lee C.S.G., “Robotics Control, Sensing, Vision and Intelligence”, McGraw Hill Book Co., 1987.
5. Janakiraman P.A., “Robotics and Image Processing”, Tata McGraw Hill,1995.
6. Rajput R.K., “Robotics and Industrial Automation”, S.Chand and Company,2008.
7. Surender Kumar, “Industrial Robots and Computer Integrated Manufacturing”, Oxford and IBH Publishing Co. Pvt. Ltd.,1991.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Understand the functions of the basic components of a Robot.
CO2	Study the use of various types of End of Effectors and Sensors
CO3	Understand Sensors and Machine Vision of Robot
CO4	Understand Robot Kinematics and Robot Programming
CO5	Understand the Implementation of Robots in Industries

MAPPING OF COs WITH POs AND PSOs

OMB101	TOTAL QUALITY MANAGEMENT	L	T	P	C
		3	0	0	3
OBJECTIVES ❖ To learn the quality philosophies and tools in the managerial perspective.					
UNIT I	**INTRODUCTION**				**9**
Quality – vision, mission and policy statements. Customer Focus – customer perception of quality, Translating needs into requirements, customer retention. Dimensions of product and service quality. Cost of quality.					**CO1**
UNIT II	**PRINCIPLES AND PHILOSOPHIES OF QUALITY MANAGEMENT**				**9**
Overview of the contributions of Deming, Juran Crosby, Masaaki Imai, Feigenbaum, Ishikawa, Taguchi techniques – introduction, loss function, parameter and tolerance design, signal to noise ratio. Concepts of Quality circle, Japanese 5S principles and 8D methodology					**CO2**
UNIT III	**STATISTICAL PROCESS CONTROL**				**9**
Meaning and significance of statistical process control (SPC) – construction of control charts for variables and attributed. Process capability – meaning, significance and measurement – Six sigma - concepts of process capability. Reliability concepts – definitions, reliability in series and parallel, product life characteristics curve.Total productive maintenance (TMP), Terotechnology. Business process Improvement (BPI) – principles, applications, reengineering process, benefits and limitations.					**CO3**
UNIT IV	**TOOLS AND TECHNIQUES FOR QUALITY MANAGEMENT**				**9**
Quality functions development (QFD) – Benefits, Voice of customer, information organization, House of quality (HOQ), building a HOQ, QFD process. Failure mode effect analysis (FMEA) – requirements of reliability, failure rate, FMEA stages, design, process and documentation. Seven Tools (old & new). Bench marking and POKA YOKE.					**CO4**
UNIT V	**QUALITY SYSTEMS ORGANIZING AND IMPLEMENTATION**				**9**
Introduction to IS/ISO 9004:2000 – quality management systems – guidelines for performance improvements. Quality Audits. TQM culture, Leadership – quality council, employee involvement, motivation, empowerment, recognition and reward - TQM framework, benefits, awareness and obstacles.					**CO5**
					TOTAL : 45 PERIODS
TEXT BOOKS					
1. Dale H.Besterfield, Carol Besterfield – Michna, Glen H. Besterfield, Mary Besterfield – Sacre Hermant – Urdhwareshe, Rashmi Urdhwareshe, Total Quality Management, Revised Third edition, Pearson Education, 2011 2. Shridhara Bhat K, Total Quality Management – Text and Cases, Himalaya Publishing House, First Edition 2002.					

REFERENCE BOOKS

1. Douglas C. Montgomory, Introduction to Statistical Quality Control, Wiley Student Edition, 4th Edition, Wiley India Pvt Limited, 2008.
2. James R. Evans and William M. Lindsay, The Management and Control of Quality, Sixth Edition, Thomson, 2005.
3. Poornima M.Charantimath, Total Quality Management, Pearson Education, First Indian Reprint 2003.
4. Indian standard – quality management systems – Guidelines for performance improvement (Fifth Revision), Bureau of Indian standards, New Delhi.

COURSE OUTCOMES

At the end of the course, the student should be able:

CO1	To apply quality philosophies and tools to facilitate continuous improvement and ensure customer delight.
CO2	To understand the principles of business process improvement
CO3	To understand and apply the concepts of statistical process control
CO4	To apply the tools and techniques used for quality management
CO5	To understand the methods in organizing and implementation of quality systems

OME104	INDUSTRIAL SAFETY ENGINEERING	L	T	P	C

	3	0	0	3

OBJECTIVES

- To provide exposure to the students about safety and health provisions related to hazardous processes as laid out in Factories act 1948
- To familiarize students with powers of inspectorate of factories
- To help students to learn about Environment act 1986 and rules framed under the act.
- To provide wide exposure to the students about various legislations applicable to an industrial unit.
- To prepare onsite and offsite emergency plan.

UNIT I	**FACTORIES ACT – 1948**	**9**
Statutory authorities – inspecting staff, health, safety, provisions relating to hazardous processes, welfare, working hours, employment of young persons – special provisions – penalties and procedures-Tamil Nadu Factories Rules 1950 under Safety and health chapters of Factories Act 1948		**CO1**
UNIT II	**ENVIRONMENT ACT – 1986**	**9**
General powers of the central government, prevention, control and abatement of environmental pollution-Biomedical waste (Management and handling Rules, 1989-The noise pollution (Regulation and control) Rules, 2000-The Batteries (Management and Handling Rules) 2001- No Objection certificate from statutory authorities like pollution control board. Air Act 1981 and Water Act 1974: Central and state boards for the prevention and control of air pollution-powers and functions of boards – prevention and control of air pollution and water pollution – fund – accounts and audit, penalties and procedures.		**CO2**
UNIT III	**MANUFACTURE, STORAGE AND IMPORT OF HAZARDOUS CHEMICAL RULES 1989**	**9**
Definitions – duties of authorities – responsibilities of occupier – notification of major accidents – information to be furnished – preparation of offsite and onsite plans – list of hazardous and toxic chemicals – safety reports – safety data sheets.		**CO3**
UNIT IV	**OTHER ACTS AND RULES**	**9**
Indian Boiler Act 1923, static and mobile pressure vessel rules (SMPV), motor vehicle rules, mines act 1952, workman compensation act, rules – electricity act and rules – hazardous wastes (management and handling) rules, 1989, with amendments in 2000- the building and other construction workers act 1996., Petroleum rules, Gas cyclinder rules-Explosives Act 1983- Pesticides Act		**CO4**
UNIT V	**INTERNATIONAL ACTS AND STANDARDS**	**9**
Occupational Safety and Health act of USA (The Williames - Steiger Act of 1970) – Health and safety work act (HASAWA 1974, UK) – OSHAS 18000 – ISO 14000 – American National Standards Institute (ANSI).		**CO5**

TOTAL : 45 PERIODS

TEXT BOOKS

1. The Factories Act 1948, Madras Book Agency, Chennai, 2000
2. The Environment Act (Protection) 1986, Commercial Law Publishers (India) Pvt.Ltd., New Delhi.
3. Water (Prevention and control of pollution) act 1974, Commercial Law publishers (India) Pvt.Ltd., New Delhi.

REFERENCE BOOKS

1. Air (Prevention and control of pollution) act 1981, Commercial Law Publishers (India) Pvt.Ltd., New Delhi.

2. The Indian boilers act 1923, Commercial Law Publishers (India) Pvt.Ltd., Allahabad.
3. The manufacture, storage and import of hazardous chemical rules 1989, Madras Book Agency, Chennai.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	To list out important legislations related to health, Safety and Environment.
CO2	To list out requirements mentioned in factories act for the prevention of accidents.
CO3	To understand the health and welfare provisions given in factories act.
CO4	To understand the statutory requirements for an Industry on registration, license and its renewal.
CO5	To prepare onsite and offsite emergency plan.

OTHER COURSES OFFERED BY CSE

CS1406	FUNDAMENTALS OF DATA STRUCTURES IN C (LAB INTEGRATED)	L	T	P	C
Common to EEE and EIE		3	0	2	4

OBJECTIVES

- To learn the basics of C Programming
- To learn the advanced features of C Programming
- To explore the applications of linear data structures
- To learn about how to represent and implement non-linear data structure
- To learn about the basics of sorting, searching and Hash Table.

UNIT I	C PROGRAMMING BASICS	9 + 6
Structure of C program – Data Types — Storage classes – Variables— Constants — Keywords — Operators – Input/Output statements, Assignment statements — Decision making statements – Switch statement – Looping statements — Introduction to Arrays: Declaration, Initialization — One dimensional array — Two dimensional arrays. **Lab Component** • Implementation of basic c programs a. Find greatest of three numbers b. Create a simple Calculator • Implementation of array a. Computing Mean, Median and Mode b. Matrix Addition		**CO1**
UNIT II	**FUNCTIONS, POINTERS AND STRUCTURES**	**9 + 6**
Introduction to functions: Function prototype, function definition, function call, Recursion — Pointers — Pointer operators — Pointer arithmetic — Array of pointers — Parameter passing: Pass by value, Pass by reference. Structure – Nested structures — Pointer and Structures — Array of structures — Self-referential structures — Dynamic memory allocation. **Lab Component** • Implementation of user defined data types a. Computation of Sine series. b. Swapping of two numbers and changing the value of a variable using pass by reference		**CO2**
UNIT III	**LINEAR DATA STRUCTURES**	**9 + 6**
List – Singly Linked lists – Application of List - Polynomial addition - Linked list implementation of Stacks – Applications of Stack - Evaluating arithmetic expressions - Linked list implementation of Queues – Application of Queue. **Lab Component** • Implementation of linear data structure a. List implementation of List, Stack, Queue. b. Implement polynomial addition using list. c. Evaluate arithmetic expression.		**CO3**
UNIT IV	**NON-LINEAR DATA STRUCTURES**	**9 + 6**
Trees – Binary Trees – Binary tree representation and traversals –Binary Search Trees – Applications of trees. Graph and its representations – Graph Traversals – Topological Sort – Applications of graphs. **Lab Component** • Implementation of tree		**CO4**

a. Construct binary search tree. b. Traverse the binary tree recursively in pre-order, post-order and in-order. • Graph traversal a. Depth first search b. Breadth first search.	

UNIT V	SEARCHING, SORTING AND HASH TABLE	9 + 6
Linear Search – Binary Search. Bubble Sort – Insertion sort – Merge sort – Quick sort – Hashing functions - Hash tables – Introduction to Overflow handling. **Lab Component** • Sorting & Searching a. Insertion sort b. Merge sort c. Linear Search d. Binary Search		**CO5**

THEORY : 45 PERIODS

PRACTICAL : 30 PERIODS

TOTAL : 75 PERIODS

TEXT BOOKS

1. Reema Thareja, —Data Structures Using C, Second Edition, Oxford University Press, 2014.

REFERENCE BOOKS

1. Mark Allen Weiss, "Data Structures and Algorithm Analysis in C", Fourth Edition, Pearson Education, 2013.
2. Ellis Horowitz, Sartaj Sahni, Susan Anderson-Freed, —Fundamentals of Data Structures in C, Second Edition, University Press, 2008.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Implement basics of C
CO2	Implement advanced features of C
CO3	Apply the different linear data structures to problem solutions.
CO4	Implement Tree and Graph data structure.
CO5	Analyse the various sorting, searching algorithms and hash table.

MAPPING OF COs WITH POs AND PSOs															
COs	PROGRAM OUTCOMES (POs)											PROGRAM SPECIFIC OUTCOMES (PSOs)

CS1516	VISUAL PROGRAMMING	L	T	P	C
Common to EEE and EIE		3	0	0	3

OBJECTIVES

- To study about the concepts of windows programming models, MFC applications, drawing with the GDI, getting inputs from Mouse and the Keyboard.
- To study the concepts of Menu basics, menu magic and classic controls of the windows programming using VC++.
- To study the concept of Document/View Architecture with single & multiple document interface, toolbars, status bars and File I/O Serialization.
- To study about the integrated development programming event driven programming, variability's, constants, procedures and basic ActiveX controls in visual basic.
- To understand the database and the database management system, visual data manager, data bound controls and ADO controls in VB

UNIT I	FUNDAMENTALS OF WINDOWS AND MFC	9
Messages : Windows programming - SDK style - Hungarian notation and windows data types - SDK programming in perspective. The benefits of C++ and MFC - MFC design philosophy – Document / View architecture - MFC class hierarchy - AFX functions. Application object - Frame window object - Message map. Drawing the lines – Curves – Ellipse – Polygons and other shapes. GDI pens – Brushes - GDI fonts - Deleting GDI objects and deselecting GDI objects. Getting input from the mouse: Client & Non-client - Area mouse messages - Mouse wheel - Cursor. Getting input from the keyboard: Input focus - Keystroke messages - Virtual key codes - Character & dead key messages.		CO1
UNIT II	**RESOURCES AND CONTROLS**	**9**
Creating a menu – Loading and displaying a menu – Responding to menu commands – Command ranges - Updating the items in menu, update ranges – Keyboard accelerators. Creating menus programmatically - Modifying menus programmatically - The system menu - Owner draw menus – Cascading menus - Context menus. The C button class – C list box class – C static class - The font view application – C edit class – C combo box class – C scrollbar class. Model dialog boxes – Modeless dialog boxes.		CO2
UNIT III	**DOCUMENT / VIEW ARCHITECTURE**	**9**
The in existence function revisited – Document object – View object – Frame window object Dynamic object creation. SDI document template - Command routing. Synchronizing multiple views of a document – Mid squares application – Supporting multiple document types – Alternatives to MDI. Splitter Windows: Dynamic splitter window – Static splitter windows. Creating & initializing a toolbar - Controlling the toolbar's visibility – Creating & initializing a status bar - Creating custom status bar panes – Status bar support in app wizard. Opening, closing and creating the files - Reading & Writing – C file derivatives – Serialization basics - Writing serializability classes.		CO3
UNIT IV	**FUNDAMENTALS OF VISUAL BASIC**	**9**
Menu bar – Tool bar – Project explorer – Toolbox – Properties window – Form designer – Form layout – Intermediate window. Designing the user interface: Aligning the controls – Running the application – Visual development and event driven programming. Variabilitys: Declaration – Types – Converting variability types – User defined data types - Lifetime of a variability. Constants - Arrays – Types of arrays. Procedures: Subroutines – Functions – Calling procedures. Text box controls – List box & Combo box controls – Scroll bar and slider controls – File controls.		CO4

UNIT V	DATABASE PROGRAMMING WITH VB	9
Record sets – Data control – Data control properties, methods. Visual data manager: Specifying indices with the visual data manager – Entering data with the visual data manager. Data bound list control – Data bound combo box – Data bound grid control. Mapping databases: Database object – Tability def object, Query def object. Programming the active database objects – ADO object model – Establishing a connection - Executing SQL statements–Cursortypes and locking mechanism–Manipulating the record set object – Simple record editing and updating.		**CO5**

TOTAL : 45 PERIODS

TEXT BOOKS

1. Jeff Prosise, 'Programming Windows With MFC', Second Edition, WP Publishers & Distributors (P) Ltd, Reprinted,2002.
2. Evangelos Petroutsos, 'Mastering Visual Basic 6.0', BPB Publications,2002.

REFERENCE BOOKS

1. Herbert Schildt, 'MFC Programming From the Ground Up', Second Edition, McGraw Hill, reprinted,2002.
2. John Paul Muller, 'Visual C++ 6 From the Ground Up Second Edition', McGraw Hill, Reprinted,2002.
3. Curtis Smith & Micheal Amundsen, 'Teach Yourself Database Programming with Visual Basic 6 in 21 days', Tech media Pub,1999.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Understand study about the concepts of windows programming models.
CO2	Understand the concepts of Menu basics, menu magic and classic controls.
CO3	Understand the concept of Document/View Architecture with single & multiple document interface.
CO4	Understand the integrated development programming event driven document interface.
CO5	Understand the database and the database management system programming.

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)

CO4	2	1	1	1	1	1	1	1	1	1	1	2	3	2	2
CO5	2	2	1	1	1	1	1	1	1	1	1	2	3	2	2

OPEN ELECTIVE COURSES OFFERED BY CSE

OCS101	INTRODUCTION TO C PROGRAMMING	L	T	P	C
		3	0	0	3

OBJECTIVES

- To understand the basic concepts in C Programming Language.
- To understand Input and Output Statements.
- To enhance analyzing and problem solving skills and use the same for writing programs in C.
- To familiarize the basic syntax in arrays and pointers
- To provide exposure to problem-solving through programming

UNIT I	**INTRODUCTORY CONCEPTS & C FUNDAMENTALS**	**9**
Introduction to Computers - Computer Characteristics - Modes of Operation - Types of Programming Languages - Introduction to C - Some Simple C Programs - Desirable Program Characteristics - The C Character Set - Identifiers and Keywords - Data Types - Constants - Variables and Arrays - Declarations - Expressions - Statements - Symbolic Constants.		**CO1**
UNIT II	**OPERATORS, EXPRESSIONS, DATA INPUT & OUTPUT AND CONTROL STATEMENTS**	**9**
Arithmetic Operators - Unary Operators - Relational and Logical Operators - Assignment Operators - The Conditional Operator - Library Functions - getchar, putchar, scanf, printf, gets and puts Functions - Preliminaries - Branching: The if else Statement - Looping: The while Statement - do while Statement - for Statement - Nested Control Structures - The switch Statement - The break Statement - The continue Statement - The Comma Operator - The goto Statement		**CO2**
UNIT III	**FUNCTIONS & PROGRAM STRUCTURE**	**9**
Defining a Function - Accessing a Function - Function Prototypes - Passing Arguments to a Function – Recursion - Storage Classes - Automatic Variables - External (Global) Variables - Static Variables - Multifile Programs - More About Library Functions		**CO3**
UNIT IV	**ARRAYS & POINTERS**	**9**
Defining an Array - Processing an Array - Passing Arrays to Functions - Multidimensional Arrays - Arrays and Strings - Fundamentals - Pointer Declarations - Passing Pointers to Functions - Pointers and One-Dimensional Arrays - Dynamic Memory Allocation - Operations on Pointers - Pointers and Multidimensional Arrays - Arrays of Pointers - Passing Functions to Other Functions		**CO4**
UNIT V	**STRUCTURES, UNIONS & DATA FILES**	**9**
Defining a Structure - Processing a Structure - User-Defined Data Types (typedef) - Structures and Pointers - Passing Structures to Functions - Self-Referential Structures – Unions - Opening and Closing a Data File - Creating a Data File - Processing a Data File - Unformatted Data Files		**CO5**
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Byron Gottfried - Schaum's Outline of Programming with C, 2nd Edition, McGraw-Hill, 1996.

REFERENCE BOOKS

1. The C Programming Language by Brian Kernighan and Dennis Ritchie 2nd Edition.
2. Let Us C Yashavant kanetkar, BPB

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Identify situations where computational methods and computers would be useful.
CO2	Demonstrate the use of operators, input and output statements and control statements
CO3	Identify solution to a problem and apply control structures and user defined functions for solving the problem
CO4	Demonstrate the use of numeric arrays and pointers
CO5	Demonstrate the ability to design creative solutions to real life problems faced by the industry.

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)

OCS102	PROGRAMMING AND DATA STRUCTURES	L	T	P	C
		3	0	0	3

OBJECTIVES

- To learn the basics of C Programming
- To learn the advanced features of C Programming
- To explore the applications of linear data structures
- To learn about how to represent and implement non-linear data structure
- To learn about the basics of sorting, searching and Hash Table

UNIT I	C PROGRAMMING BASICS	9
Structure of C program – Data Types — Storage classes – Variables— Constants — Keywords — Operators – Input/Output statements, Assignment statements — Decision making statements – Switch statement – Looping statements — Introduction to Arrays: Declaration, Initialization — One dimensional array — Two dimensional arrays.		**CO1**
UNIT II	**FUNCTIONS, POINTERS AND STRUCTURES**	**9**
Introduction to functions: Function prototype, function definition, function call, Recursion — Pointers — Pointer operators — Pointer arithmetic — Array of pointers — Parameter passing: Pass by value, Pass by reference. Structure – Nested structures — Pointer and Structures — Array of structures — Self-referential structures — Dynamic memory allocation.		**CO2**
UNIT III	**LINEAR DATA STRUCTURES**	**9**
List – Singly Linked lists – Application of List - Polynomial addition - Linked list implementation of Stacks – Applications of Stack - Evaluating arithmetic expressions - Linked list implementation of Queues – Application of Queue..		**CO3**
UNIT IV	**NON-LINEAR DATA STRUCTURES**	**9**
Trees – Binary Trees – Binary tree representation and traversals –Binary Search Trees – Applications of trees. Graph and its representations – Graph Traversals – Topological Sort – Applications of graphs.		**CO4**
UNIT V	**SEARCHING, SORTING AND HASH TABLE**	**9**
Linear Search – Binary Search. Bubble Sort – Insertion sort – Merge sort – Quick sort – Hashing functions - Hash tables – Introduction to Overflow handling.		**CO5**
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Reema Thareja, —Data Structures Using C, Second Edition, Oxford University Press, 2014.

REFERENCE BOOKS

OCS103	INTRODUCTION TO CLOUD COMPUTING	L	T	P	C
		3	0	0	3

OBJECTIVES

- To have the fundamental ideas behind Cloud Computing, the evolution of the paradigm, its applicability, benefits, as well as current and future challenges
- To have knowledge on the various virtualization techniques that serve in computation and storage services on the cloud
- To understand the technologies, architecture and applications of cloud computing
- To understand the key security and compliance challenges of cloud computing

UNIT I	**INTRODUCTION**	**9**
Introduction to Cloud Computing – Roots of Cloud Computing- Parallel and Distributed Computing, Mainframe and Grid Computing, Desired Features and benefits of Cloud Computing – Challenges and Risks of Cloud Computing		**CO1**
UNIT II	**VIRTUALIZATION**	**9**
Introduction to Virtualization Technology – Load Balancing and Virtualization – Understanding Hypervisor and its types, Types of Virtualizations – Hardware, OS, Memory, Application Virtualization, Levels of Virtualization		**CO2**
UNIT III	**CLOUD ARCHITECTURE, SERVICES AND STORAGE**	**9**
NIST Cloud Computing Reference Architecture, Layered Cloud Architecture, Architectural Design Challenges – Deployment models of cloud, Services of cloud – Cloud Storage.		**CO3**
UNIT IV	**RESOURCE MANAGEMENT AND SECURITY IN CLOUD**	**9**
Inter Cloud Resource Management – Resource Provisioning Methods – Security Overview – Cloud Security Architecture-Cloud Security Challenges – Data Security –Application Security – Virtual Machine Security.		**CO4**
UNIT V	**CASE STUDIES**	**9**
Google App Engine (GAE) – GAE Architecture – Functional Modules of GAE – Amazon Web Services (AWS) – GAE Applications – Cloud Software Environments – Bio-data Platform & Bio Cloud		**CO5**
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Buyya R., Broberg J., Goscinski A., "Cloud Computing: Principles and Paradigm", First Edition, John Wiley & Sons, 2011.
2. Kai Hwang, Geoffrey C. Fox, Jack G. Dongarra, "Distributed and Cloud Computing, From Parallel Processing to the Internet of Things", Morgan Kaufmann Publishers, 2012.
3. Rittinghouse, John W., and James F. Ransome, "Cloud Computing: Implementation, Management, And Security", CRC Press, 2017.

REFERENCE BOOKS

1. Rajkumar Buyya, Christian Vecchiola, S. ThamaraiSelvi, "Mastering Cloud Computing", Tata Mcgraw Hill, 2013.
2. Toby Velte, Anthony Velte, Robert Elsenpeter, "Cloud Computing - A Practical Approach", Tata Mcgraw Hill, 2009.
3. George Reese, "Cloud Application Architectures: Building Applications and Infrastructure in the Cloud: Transactional Systems for EC2 and Beyond (Theory in Practice)", O'Reilly, 2009.

COURSE OUTCOMES Upon completion of the course, students will be able to	
CO1	Articulate the main concepts, key technologies, strengths, and limitations of cloud computing and the possible applications for state-of-the-art cloud computing
CO2	Understanding of fundamentals and technological aspects of virtualization along with various terminologies used in Cloud Computing
CO3	Identify the architecture and infrastructure of cloud computing, including SaaS, PaaS, IaaS, public cloud, private cloud, hybrid cloud, etc.
CO4	Enlighten the core issues of cloud computing such as security, privacy, and interoperability.
CO5	Be familiarization with areas of cloud technologies and working experience in several of them

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)

OCS104	FUNDAMENTALS OF DATABASE DESIGN	L	T	P	C
		3	0	0	3

OBJECTIVES

- To learn the fundamentals of data models and to represent a database system using ER diagrams.
- To study the database design and SQL
- To make the students to understand the fundamentals of Transaction Processing and concurrency
- To have an basic knowledge about the Storage implementation and query processing
- To understand database security concepts and database programming

UNIT I	INTRODUCTION	9
Purpose of Database System – Views of data – Data Models – Database System Architecture – Introduction to relational databases – Relational Model – Keys – Relational Algebra – SQL fundamentals – DDL-DML-DCL-TCL- Advanced SQL features - Embedded SQL-Static Vs Dynamic SQL		CO1
UNIT II	**DATABASE DESIGN**	**9**
Entity-Relationship model – E-R Diagrams – Enhanced-ER Model – ER-to-Relational Mapping – Functional Dependencies – Non-loss Decomposition – First, Second, Third Normal Forms, Dependency Preservation – Boyce/Codd Normal Form – Multi-valued Dependencies and Fourth Normal Form – Join Dependencies and Fifth Normal Form		CO2
UNIT III	**TRANSACTION CONCEPTS AND CONCURRENCY CONTROL**	**9**
Introduction-Properties of Transaction- Serializability- Concurrency Control – Locking Mechanisms- Two Phase Locking -Two Phase Commit Protocol-Dead lock- SQL Facilities for Concurrency and Recovery		CO3
UNIT IV	**IMPLEMENTATION TECHNIQUES**	**9**
RAID – File Organization – Organization of Records in Files – Indexing and Hashing –Ordered Indices – B+ tree Index Files – B tree Index Files – Static Hashing – Dynamic Hashing – Query Processing Overview –Query optimization using Heuristics and Cost Estimation		CO4
UNIT V	**ADVANCED TOPICS AND DATABASE PROGRAMMING**	**9**
Database security issues – Discretionary access control – role based access – Encryption and public key infrastructures – challenges. Information Retrieval: IR Concepts, Retrieval Models, Queries in IR systems. Implementing functions, views, and triggers in MySQL / Oracle. ODBC/JDBC connectivity with front end tools		CO5

TOTAL : 45 PERIODS

TEXT BOOKS

1. RamezElmasri, Shamkant B. Navathe, “Fundamentals of Database Systems”, Sixth Edition , Pearson.
2. Abraham Silberschatz, Henry F. Korth, S. Sudharshan, “Database System Concepts”, Sixth Edition, Tata McGraw Hill.

REFERENCE BOOKS

1. C.J.Date, A.Kannan, S.Swamynathan, “An Introduction to Database Systems”, Eighth Edition, Pearson Education.
2. Raghu Ramakrishnan, ―Database Management Systems‖, Fourth Edition, McGraw-Hill College Publications.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	To understand relational data model, evolve conceptual model of a given problem and SQL

CO2	To understand Relational model and normalization to perform database design effectively
CO3	Apply and relate the concept of transaction, concurrency control and recovery in database
CO4	To understand the implementation technique and query processing
CO5	To understand the concepts of database security and database programming

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)

OCS105	DATA ANALYTICS WITH R PROGRAMMING	L	T	P	C
		3	0	0	3

OBJECTIVES

- Students will learn R. Programming language, data analytics, data visualization and statistical model for data analytics
- By completion of this course, students will be able to become data analyst

UNIT I	**INTRODUCTION TO DATA ANALYSIS**	**9**
Overview of Data Analytics, Need of Data Analytics, Nature of Data**,** Classification of Data: Structured, Semi-Structured, Unstructured, Characteristics of Data, Applications of Data Analytics		**CO1**
UNIT II	**R PROGRAMMING BASICS**	**9**
Overview of R programming, Environment setup with R Studio, R Commands, Variables and Data Types, Control Structures, Array, Matrix, Vectors, Factors, Functions, R packages		**CO2**
UNIT III	**DATA VISUALIZATION USING R**	**9**
Reading and getting data into R (External Data): Using CSV files, XML files, Web Data, JSON files, Databases, Excel files. **Working with R Charts and Graphs:** Histograms, Boxplots, Bar Charts, Line Graphs, Scatterplots, Pie Charts		**CO3**
UNIT IV	**STATISTICS WITH R**	**9**
Random Forest, Decision Tree, Normal and Binomial distributions, Time Series Analysis, Linear and Multiple Regression, Logistic Regression		**CO4**
UNIT V	**PRESCRIPTIVE ANALYTICS**	**9**
Creating data for analytics through designed experiments, Creating data for analytics through active learning, Creating data for analytics through reinforcement learning		**CO5**

TOTAL : 45 PERIODS

TEXT BOOKS

1. An Introduction to R, Notes on R: A Programming Environment for Data Analysis and Graphics. W. N. Venables, D.M. Smith and the R Development Core Team. URL: https://cran.r-project.org/doc/manuals/r-release/R-intro.pdf

REFERENCE BOOKS

1. Jared P Lander, R for everyone: advanced analytics and graphics, Pearson Education, 2013 Dunlop, Dorothy D., and Ajit C. Tamhane. Statistics and data analysis: from elementary to intermediate. Prentice Hall, 2000.
2. G Casella and R.L. Berger, Statistical Inference, Thomson Learning 2002.
3. P. Dalgaard. Introductory Statistics with R, 2nd Edition. (Springer 2008)
4. Michael Berthold, David J. Hand, Intelligent Data Analysis, Springer
5. Hastie, Trevor, et al.The elements of statistical learning.Vol. 2. No. 1. New York: springer, 2009.
6. Montgomery, Douglas C., and George C. Runger. Applied Statistics and Probability for Engineers. John Wiley &Sons, 2010
7. Joseph F Hair, William C Black etal , "Multivariate Data Analysis" , Pearson Education, 7th edition, 2013.
8. Mark Gardener, "Beginning R - The Statistical Programming Language", John Wiley & Sons, Inc., 2012.
9. W. N. Venables, D. M. Smith and the R Core Team, "An Introduction to R", 2013

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Understand the basics of data analytics
CO2	Understand and apply the R-Programming concepts
CO3	Apply R-Programming for data visualization
CO4	Implement various classification techniques using R
CO5	Apply R programming to perform perspective analytics on data

MAPPING OF COs WITH POs AND PSOs

CO5	3	3	3	3	2	-	-	-	-	2	2	2	3	1	2

OCS106	DATA COMMUNICATIONS AND NETWORKING	L	T	P	C
		3	0	0	3

OBJECTIVES

- To understand the protocol layering and physical level communication and to analyze the performance of a network.
- To analyze the contents of Data Link layer packet, based on the layer concept.
- To learn the functions of network layer and the various routing protocols.
- To familiarize the functions and protocols of the Transport layer.
- To know about different application layer protocols

UNIT I	**INTRODUCTION AND PHYSICAL LAYER**	**9**
Networks – Network Types – Protocol Layering – TCP/IP Protocol suite – OSI Model – Physical Layer: Performance – Transmission media – Switching – Circuit-switched Networks – Packet Switching.		**CO1**
UNIT II	**DATA-LINK LAYER & MEDIA ACCESS**	**9**
Introduction – Link-Layer Addressing – DLC Services – Data-Link Layer Protocols – HDLC – PPP – Media Access Control – Wired LANs: Ethernet – Wireless LANs – Introduction – IEEE 802.11, Bluetooth – Connecting Devices.		**CO2**
UNIT III	**NETWORK LAYER**	**9**
Network Layer Services – IPV4 Addresses – Forwarding of IP Packets – Network Layer Protocols: IP, ICMP v4 – Unicast Routing Algorithms – Protocols – Multicasting Basics – IPV6 Addressing – IPV6 Protocol.		**CO3**
UNIT IV	**TRANSPORT LAYER**	**9**
Introduction – Transport Layer Protocols – Services – Port Numbers – User Datagram Protocol – Transmission Control Protocol-Congestion Control Mechanisms-Streaming Control Transmission Protocol.		**CO4**
UNIT V	**APPLICATION LAYER**	**9**
WWW and HTTP – FTP – Email –Telnet –SSH – DNS – SNMP- Internet Multimedia.		**CO5**
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Behrouz A. Forouzan, Data Communications and Networking, Fifth Edition TMH, 2013
2. William Stallings, Data and Computer Communications, Tenth Edition, Pearson Education, 2014.

REFERENCE BOOKS

1. Larry L. Peterson, Bruce S. Davie, Computer Networks: A Systems Approach, Fifth Edition, Morgan Kaufmann Publishers Inc., 2012
2. Nader F. Mir, Computer and Communication Networks, Second Edition, Prentice Hall, 2014.
3. Ying-Dar Lin, Ren-Hung Hwang and Fred Baker, Computer Networks: An Open Source Approach, McGraw Hill Publisher, 2011
4. James F. Kurose, Keith W. Ross, Computer Networking, A Top-Down Approach Featuring the Internet, Sixth Edition, Pearson Education, 2013.

COURSE OUTCOMES **Upon completion of the course, students will be able to**	
CO1	Understand the basic layers, functions in computer networks and to evaluate the performance of a network.
CO2	Understand the basics of how data flows from one node to another.
CO3	Analyse and design routing algorithms.
CO4	Understand design goals of Connectionless and Connection oriented protocols.
CO5	Understand the working of various application layer protocols.

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)

OCS107	MACHINE LEARNING FOR INTELLIGENT SYSTEMS	L	T	P	C
		3	0	0	3

OBJECTIVES

- To introduce basic machine learning techniques such as regression, classification
- To learn about introduction of clustering, types and segmentation methods
- To learn about fuzzy logic, fuzzification and defuzzification
- To learn about basics of neural networks and neuro fuzzy networks.
- To learn about Recurrent neural networks and Reinforcement learning.

UNIT - I	**INTRODUCTION TO MACHINE LEARNING**	**9**
Philosophy of learning in computers, Overview of different forms of learning, Classifications vs. Regression, Evaluation metrics and loss functions in Classification, Evaluation metrics and loss functions in Regression, Applications of AI in Robotics.		CO1
UNIT - II	**CLUSTERING AND SEGMENTATION METHODS**	**9**
Introduction to clustering, Types of Clustering, Agglomerative clustering, K-means clustering, Mean Shift clustering, K-means clustering application study, Introduction to recognition, K-nearest neighbor algorithm, KNN Application case study, Principal component analysis (PCA), PCA Application case study in Feature Selection for Robot Guidance.		CO2
UNIT - III	**FUZZY LOGIC**	**9**
Introduction to Fuzzy Sets, Classical and Fuzzy Sets, Overview of Classical Sets, Membership Function, Fuzzy rule generation, Fuzzy rule generation, Operations on Fuzzy Sets, Numerical examples, Fuzzy Arithmetic, Numerical examples, Fuzzy Logic, Fuzzification, Fuzzy Sets, Defuzzification, Application Case Study of Fuzzy Logic for Robotics Application		CO3
UNIT - IV	**NEURAL NETWORKS**	**9**
Mathematical Models of Neurons, ANN architecture, Learning rules, Multi-layer Perceptrons, Back propagation, Introduction of Neuro-Fuzzy Systems, Architecture of Neuro Fuzzy Networks, Application Case Study of Neural Networks in Robotics		CO4
UNIT - V	**RNN AND REINFORCEMENT LEARNING**	**9**
Unfolding Computational Graphs, Recurrent neural networks, Application Case Study of recurrent networks in Robotics, Reinforcement learning, Examples for reinforcement learning, Markov decision process, Major components of RL, Q-learning. Application Case Study of reinforcement learning in Robotics		CO5
	TOTAL PERIODS:	**45**

COURSE OUTCOMES
Upon completion of the course, students will be able to

CO1	Understand basic machine learning techniques such as regression, classification
CO2	Understand about clustering and segmentation
CO3	Model a fuzzy logic system with fuzzification and defuzzification
CO4	Understand the concepts of neural networks and neuro fuzzy networks.
CO5	Gain knowledge on Reinforcement learning.

TEXT BOOKS:

OCS109	Fundamentals of Database MANAGEMENT SYSTEMS	L	T	P	C
		3	0	0	3

Objectives

- To learn the fundamentals of data models
- To learn conceptual modeling using ER diagrams.
- To study SQL queries and database programming
- To learn proper designing of relational database.
- To understand database security concepts
- To understand Information retrieval techniques

UNIT - I	DBMS AND CONCEPTUALDATAMODELING	9
Purpose of Database System – Data independence - Data Models – Database System Architecture – Conceptual Data modeling: ER models - Enhanced-ER Model. Introduction to relational databases – Relational Model – Keys – ER-to-Relational Mapping. Modeling of a library management system.		**CO1**

UNIT - II	DATABASE QUERYING	9
Relational Algebra – SQL: fundamentals – DDL – Specifying integrity constraints - DML – Basic retrieval queries in SQL - Complex SQL retrieval queries – nested queries – correlated queries –joins aggregate functions. Creating a table, populating data, adding integrity constraints, querying tables with simple and complex queries.		**CO2**

UNIT – III	DATABASE PROGRAMMING	9
Database programming with function calls, stored procedures - views – triggers. Embedded SQL. ODBC connectivity with front end tools. Implementation using ODBC/JDBC and SQL/PSM, implementing functions, views, and triggers in MySQL / Oracle		**CO3**

UNIT – IV	DATABASE DESIGN	9
Functional Dependencies – Design guidelines – Normal Forms: first, second, third – Boyce/Codd Normal Form – Normalization algorithms. Design of a banking database system/ university database system.		**CO4**

UNIT – V	ADVANCED TOPICS	9
Database security issues – Discretionary access control – role based access – Encryption and public key infrastructures – challenges. Information Retrieval: IR Concepts, Retrieval Models, Queries in IR systems.		**CO5**
	Total Periods:	**45**

Text Books:

1. Ramez Elmasri, Shamkant B. Navathe, “Fundamentals of Database Systems”, Sixth Edition , Pearson,2011.
2. Abraham Silberschatz, Henry F. Korth, S. Sudharshan, “Database System Concepts”, Sixth Edition, Tata McGraw Hill,2011

Reference Books:

1. C.J.Date, A.Kannan, S.Swamynathan, “An Introduction to Database Systems”, Eighth Edition, Pearson Education,2006.
2. Raghu Ramakrishnan, —Database Management Systems, Fourth Edition, McGraw-Hill College Publications,2015.

Course Outcomes (CO)

CO1	Ability to understand relational data model, evolve conceptual model of a given problem.
CO2	Understand query the relational database and write programs with database connectivity
CO3	Ability to understand the DBMS programming
CO4	Ability to understand the DBMS Design
CO5	Ability to understand the database security and information retrieval concepts

MAPPING COURSE OUTCOMES WITH PROGRAMME OUTCOMES

AUDIT COURSES

AD1001	CONSTITUTION OF INDIA	L	T	P	C
		2	0	0	0

OBJECTIVES

- Teach history and philosophy of Indian Constitution.
- Describe the premises informing the twin themes of liberty and freedom from a civil rights perspective.
- Summarize powers and functions of Indian government.
- Explain emergency rule.
- Explain structure and functions of local administration.

UNIT I	**INTRODUCTION**	**6**
History of Making of the Indian Constitution-Drafting Committee- (Composition & Working) - Philosophy of the Indian Constitution-Preamble-Salient Features		**CO1**
UNIT II	**CONTOURS OF CONSTITUTIONAL RIGHTS & DUTIES**	**6**
Fundamental Rights-Right to Equality-Right to Freedom-Right against Exploitation Right to Freedom of Religion-Cultural and Educational Rights-Right to Constitutional Remedies Directive Principles of State Policy-Fundamental Duties		**CO2**
UNIT III	**ORGANS OF GOVERNANCE**	**6**
Parliament-Composition-Qualifications and Disqualifications-Powers and Functions-Executive President-Governor-Council of Ministers-Judiciary, Appointment and Transfer of Judges, Qualifications Powers and Functions		**CO3**
UNIT IV	**EMERGENCY PROVISIONS**	**6**
Emergency Provisions - National Emergency, President Rule, Financial Emergency		**CO4**
UNIT V	**LOCAL ADMINISTRATION**	**6**
District's Administration head- Role and Importance-Municipalities- Introduction- Mayor and role of Elected Representative-CEO of Municipal Corporation-Pachayati raj- Introduction- PRI- Zila Pachayat-Elected officials and their roles- CEO Zila Pachayat- Position and role-Block level Organizational Hierarchy (Different departments)-Village level- Role of Elected and Appointed officials-Importance of grass root democracy		**CO5**

TOTAL : 30 PERIODS

TEXT BOOKS

1. Basu D D, Introduction to the Constitution of India, Lexis Nexis, 2015.
2. Busi S N, Ambedkar B R framing of Indian Constitution, 1st Edition, 2015.
3. Jain M P, Indian Constitution Law, 7th Edn., Lexis Nexis, 2014.
4. The Constitution of India (Bare Act), Government

COURSE OUTCOMES Upon completion of the course, students will be able to	
CO1	Able to understand history and philosophy of Indian Constitution.
CO2	Able to understand the premises informing the twin themes of liberty and freedom from a civil rights perspective.
CO3	Able to understand powers and functions of Indian government.
CO4	Able to understand emergency rule.
CO5	Able to understand structure and functions of local administration.

MAPPING OF COs WITH POs AND PSOs

CO2	-	-	-	-	-	-	-	-	1	-	-	1	-	-	-
CO3	-	-	-	-	-	-	-	-	1	-	-	1	-	-	-
CO4	-	-	-	-	-	-	-	-	1	-	-	1	-	-	-
CO5	-	-	-	-	-	-	-	-	1	-	-	1	-	-	-

AD1002	VALUE EDUCATION	L	T	P	C
		2	0	0	0

OBJECTIVES

- Develop knowledge of self-development
- Explain the importance of Human values
- Develop the overall personality through value education
- Overcome the self destructive habits with value education
- Interpret social empowerment with value education

UNIT I	**INTRODUCTION TO VALUE EDUCATION**	**6**
Values and self-development –Social values and individual attitudes, Work ethics, Indian vision of humanism, Moral and non- moral valuation, Standards and principles, Value judgments		**CO1**
UNIT II	**IMPORTANCE OF VALUES**	**6**
Importance of cultivation of values, Sense of duty, Devotion, Self-reliance, Confidence, Concentration, Truthfulness, Cleanliness. Honesty, Humanity, Power of faith, National Unity, Patriotism, Love for nature, Discipline		**CO2**
UNIT III	**INFLUENCE OF VALUE EDUCATION**	**6**
Personality and Behaviour development - Soul and Scientific attitude. Positive Thinking, Integrityand discipline, Punctuality, Love and Kindness, Avoid fault Thinking, Free from anger, Dignity of labour, Universal brotherhood and religious tolerance, True friendship Happiness Vs suffering,love for truth.		**CO3**
UNIT IV	**REINCARNATION THROUGH VALUE EDUCATION**	**6**
Aware of self-destructive habits, Association and Cooperation, Doing best for saving nature Character and Competence –Holy books vs Blind faith, Self-management and Good health, Science of reincarnation		**CO4**
UNIT V	**VALUE EDUCATION IN SOCIAL EMPOWERMENT**	**6**
Equality, Non violence, Humility, Role of Women, All religions and same message, Mind your Mind, Self-control, Honesty, Studying effectively		**CO5**
		TOTAL : 30 PERIODS

REFERENCE BOOKS

1. Chakroborty , S.K. “Values and Ethics for organizations Theory and practice”, Oxford University Press ,New Delhi

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Gain knowledge of self-development
CO2	Learn the importance of Human values
CO3	Develop the overall personality through value education
CO4	Overcome the self destructive habits with value education
CO5	Interpret social empowerment with value education

MAPPING OF COs WITH POs AND PSOs															
COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	-	-	-	-	-	-	1	1	-	-	-	1	-	-	-
CO2	-	-	-	-	-	-	1	1	1	-	-	1	-	-	-
CO3	-	-	-	-	-	-	1	1	1	-	-	1	-	-	-
CO4	-	-	-	-	-	-	1	1	-	-	-	1	-	-	-
CO5	-	-	-	-	-	-	1	1	-	-	-	1	-	-	-

AD1003	PEDAGOGY STUDIES	L	T	P	C
		2	0	0	0

OBJECTIVES

- Understand the methodology of pedagogy.
- Compare pedagogical practices used by teachers in formal and informal classrooms in developing countries.
- Infer how can teacher education (curriculum and practicum) and the school curriculum and guidance materials best support effective pedagogy.
- Illustrate the factors necessary for professional development.
- Identify the Research gaps in pedagogy.

UNIT I	INTRODUCTION AND METHODOLOGY	6
Aims and rationale, Policy background, Conceptual framework and terminology - Theories of learning, Curriculum, Teacher education - Conceptual framework, Research questions — Overview of methodology and Searching.		CO1
UNIT II	**THEMATIC OVERVIEW**	**6**
Pedagogical practices are being used by teachers in formal and informal classrooms in developing countries - Curriculum, Teacher education.		CO2
UNIT III	**EVIDENCE ON THE EFFECTIVENESS OF PEDAGOGICAL PRACTICES**	**6**
Methodology for the in depth stage: quality assessment of included studies - How can teacher education (curriculum and practicum) and the school curriculum and guidance materials best support effective pedagogy? - Theory of change - Strength and nature of the body of evidence for effective pedagogical practices - Pedagogic theory and pedagogical approaches - Teachers‘ attitudes and beliefs and Pedagogic strategies.		CO3
UNIT IV	**PROFESSIONAL DEVELOPMENT**	**6**
Professional development: alignment with classroom practices and follow up support — Peer support - Support from the head teacher and the community - Curriculum and assessment — Barriers to learning: limited resources and large class sizes		CO4
UNIT V	**RESEARCH GAPS AND FUTURE DIRECTIONS**	**6**
Research design – Contexts – Pedagogy - Teacher education - Curriculum and assessment - Dissemination and research impact.		CO5
		TOTAL : 30 PERIODS

REFERENCE BOOKS

1. Ackers J, Hardman F (2001) Classroom interaction in Kenyan primary schools, Compare, 31 (2): 245-261.
2. Agrawal M (2004) Curricular reform in schools: The importance of evaluation, Journal of Curriculum Studies, 36 (3): 361-379.
3. Akyeampong K (2003) Teacher training in Ghana - does it count? Multi-site teacher education research project (MUSTER) country report 1. London: DFID.
4. Akyeampong K, Lussier K, Pryor J, Westbrook J (2013) Improving teaching and learning of basic maths and reading in Africa: Does teacher preparation count? International Journal Educational Development, 33 (3): 272–282.
5. Alexander RJ (2001) Culture and pedagogy: International comparisons in primary education. Oxford and Boston: Blackwell.

COURSE OUTCOMES **Upon completion of the course, students will be able to**	
CO1	Understand the methodology of pedagogy
CO2	Understand Pedagogical practices used by teachers in formal and informal classrooms in developing countries.
CO3	Find how can teacher education (curriculum and practicum) and the school curriculum and guidance materials best support effective pedagogy.
CO4	Know the factors necessary for professional development.
CO5	Identify the Research gaps in pedagogy.

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)											PROGRAM SPECIFIC OUTCOMES (PSOs)

AD1004	STRESS MANAGEMENT BY YOGA	L	T	P	C
		2	0	0	0

OBJECTIVES

- ❖ Develop healthy mind in a healthy body thus improving social health also improve efficiency
- ❖ Invent Do‘s and Don‘t‘s in life through Yam
- ❖ Categorize Do‘s and Don‘t‘s in life through Niyam
- ❖ Develop a healthy mind and body through Yog Asans
- ❖ Invent breathing techniques through Pranayam

UNIT I	**INTRODUCTION TO YOGA**	**6**
Definitions of Eight parts of yog.(Ashtanga)		**CO1**
UNIT II	**YAM**	**6**
Do`s and Don‘t‘s in life.Shaucha, santosh, tapa, swadhyay, ishwarpranidhan		**CO2**
UNIT III	**NIYAM**	**6**
Do`s and Don‘t‘s in life. Ahinsa, satya, astheya, bramhacharya and aparigraha		**CO3**
UNIT IV	**ASAN**	**6**
Various yog poses and their benefits for mind & body		**CO4**
UNIT V	**PRANAYAM**	**6**
Regularization of breathing techniques and its effects-Types of pranayam		**CO5**
		TOTAL : 30 PERIODS

REFERENCE BOOKS

1. “Rajayoga or conquering the Internal Nature” by Swami Vivekananda, Advaita Ashrama (Publication Department), Kolkata
2. ‘Yogic Asanas for Group Tarining-Part-I” : Janardan Swami Yogabhyasi Mandal, Nagpur

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Develop healthy mind in a healthy body thus improving social health also improve efficiency
CO2	Learn Do‘s and Don‘t‘s in life through Yam
CO3	Learn Do‘s and Don‘t‘s in life through Niyam
CO4	Develop a healthy mind and body through Yog Asans
CO5	Learn breathing techniques through Pranayam

MAPPING OF COs WITH POs AND PSOs

AD1005	PERSONALITY DEVELOPMENT THROUGH LIFE ENLIGHTENMENT SKILLS	L	T	P	C
		2	0	0	0

OBJECTIVES

- Develop basic personality skills holistically
- Develop deep personality skills holistically to achieve happy goals
- Rewrite the responsibilities
- Reframe a person with stable mind

UNIT I	**NEETISATAKAM-HOLISTIC DEVELOPMENT OF PERSONALITY - I**	**6**
Verses- 19,20,21,22 (wisdom) - Verses- 29,31,32 (pride & heroism) — Verses- 26,28,63,65 (virtue)		**CO1**
UNIT II	**NEETISATAKAM-HOLISTIC DEVELOPMENT OF PERSONALITY - II**	**6**
Verses- 52,53,59 (dont's) - Verses- 71,73,75,78 (do's)		**CO2**
UNIT III	**ORGANS OF GOVERNANCE**	**6**
Shrimad Bhagwad Geeta: Chapter 2-Verses 41, 47,48 - Chapter 3-Verses 13, 21, 27, 35 Chapter6-Verses 5,13,17,23, 35 - Chapter 18-Verses 45, 46, 48		**CO3**
UNIT IV	**EMERGENCY PROVISIONS**	**6**
Statements of basic knowledge - Shrimad Bhagwad Geeta: Chapter2-Verses 56, 62, 68 Chapter12 -Verses 13, 14, 15, 16,17, 18		**CO4**
UNIT V	**LOCAL ADMINISTRATION**	**6**
Chapter 2-Verses 17, Chapter 3-Verses 36,37,42 - Chapter 4-Verses 18, 38,39 Chapter 18 – Verses 37,38,63		**CO5**

TOTAL : 30 PERIODS

REFERENCE BOOKS

1. Gopinath,Rashtriya Sanskrit Sansthanam P, Bhartrihari's ThreeSatakam , Niti-sringarvairagya, New Delhi,2010
2. Swami Swarupananda , Srimad Bhagavad Gita, Advaita Ashram,Publication Department, Kolkata,2016.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	To develop basic personality skills holistically
CO2	To develop deep personality skills holistically to achieve happy goals
CO3	To rewrite the responsibilities
CO4	To reframe a person with stable mind, pleasing personality and determination
CO5	To awaken wisdom in students

AD1006	UNNAT BHARAT ABHIYAN	L	T	P	C
		2	0	0	0

OBJECTIVES

- To engage the students in understanding rural realities
- To identify and select existing innovative technologies, enable customization of technologies, or devise implementation method for innovative solutions, as per the local needs.
- To leverage the knowledge base of the institutions to devise processes for effective implementation of various government programmes
- To understand causes for rural distress and poverty and explore solutions for the same
- To apply classroom knowledge of courses to field realities and thereby improve quality of learning

UNIT I	QUALITY OF RURAL LIFE IN VILLAGES AND UNNAT BHARAT ABHIYAN	6
Introduction to Unnat Bharat Abhiyan - concept, scope and objectives, rural life, rural society, cast and gender relations, rural values with respect to community, nature and resources, elaboration of “Soul of India lies in villages” — (Gandhi Ji), Rural infrastructure, problems in rural area. **Assignment:** Prepare a map (Physical, visual and digital) of the village you visited and write an essay about inter-family relation in that village.		**CO1**
UNIT II	**RURAL ECONOMY AND LIVELIHOOD**	**6**
Agriculture, farming, land ownership pattern, water management, animal husbandry, non-farm livelihoods and artisans, rural entrepreneurs, rural market. **Assignment:** Describe your analysis of rural household economy, it‘s challenges and possible pathways to address them. Group discussion in class- (4) Field visit 3.		**CO2**
UNIT III	**RURAL INSTITUTIONS**	**6**
History of Rural Development, Traditional rural organizations, Self Help Groups, Gram Swaraj and 3- Tier Panchayat Raj Institutions (Gram Sabha, Gram Panchayat, Standing Committee), local civil society, local administration. Introduction to Constitution, Constitutional Amendments in Panchayati Raj — Fundamental Rights and Directive Principles. **Assignment:** Panchayati Raj institutions in villages? What would you suggest to improve their effectiveness? Present a case study (written or audio-visual). Field Visit — 4.		**CO3**
UNIT IV	**RURAL DEVELOPMENT PROGRAMMES**	**6**
National programmes - Sarva Shiksha Abhiyan, Beti Bachao, Beti Padhao, Ayushman Bharat, Swatchh Bharat, PM Awass Yojana, Skill India, Gram Panchayat Decentralised Planning, NRLM, MNREGA, etc. **Written Assignment:** Describe the benefits received and challenges faced in the delivery of one of these programmes in the rural community, give suggestions about improving implementation of the programme for the rural poor.		**CO4**

UNIT V	FIELD WORK	6
Each student selects one programme for field visit Field based practical activities: ❖ Interaction with SHG women members, and study of their functions and challenges; planning for their skill building and livelihood activities ❖ Visit MGNREGS project sites, interact with beneficiaries and interview functionaries at the work site ❖ Field visit to Swachh Bharat project sites, conduct analysis and initiate problem solving measures ❖ Conduct Mission Antyodaya surveys to support under Gram Panchayat Development Plan(GPDP) ❖ Interactive community exercise with local leaders, panchayat functionaries, grass-root officials and local institutions regarding village development plan preparation and resource mobilization ❖ Visit Rural Schools I mid-day meal centres, study Academic and infrastructural resources and gaps ❖ Participate in Gram Sabha meetings, and study community participation ❖ Associate with Social audit exercises at the Gram Panchayat level, and interact with programme beneficiaries ❖ Attend Parent Teacher Association meetings, and interview school drop outs ❖ Visit local Anganwadi Centre and observe the services being provided ❖ Visit local NGOs, civil society organisations and interact with their staff and beneficiaries. ❖ Organize awareness programmes, health camps, Disability camps and cleanliness camps o Conduct soil health test, drinking water analysis, energy use and fuel efficiency surveys ❖ Raise understanding of people's impacts of climate change, building up community's disaster preparedness ❖ Organise orientation programmes for farmers regarding organic cultivation, rational use of irrigation and fertilizers and promotion of traditional species of crops and plants ❖ Formation of committees for common property resource management, village pond maintenance and fishing.		**CO5**

TOTAL : 30 PERIODS

TEXT BOOKS

1. Singh, Katar, Rural Development Principles, Policies and Management, Sage Publications, New Delhi, 2015
2. A Hand book on Village Panchayat Administration, Rajiv Gandhi Chair for Panchayati Raj Studies, 2002
3. United Nations, Sustainable Development Goals, 2015 un.org/sdgs

REFERENCE BOOKS

1. M.P.Boraian, Best Practices in Rural Development, Shanlax Publishers
2. Unnat Bharat Abhiyan Website : www.unnatbharatabhiyan.gov.in

COURSE OUTCOMES **Upon completion of the course, students will be able to**	
CO1	Understand of rural life, culture and social realities
CO2	Understand the concept of measurement by comparison or balance of parameters.
CO3	Develop a sense of empathy and bonds of mutuality with local community
CO4	Appreciate significant contributions of local communities to Indian society and economy
CO5	Value the local knowledge and wisdom of the community

AD1007	ESSENCE OF INDIAN KNOWLEDGE TRADITION	L	T	P	C
		2	0	0	0

OBJECTIVES

- Get a knowledge about Indian Culture
- Know Indian Languages and Literature religion and philosophy and the fine arts in India
- Explore the Science and Scientists of Ancient, Medieval and Modern India
- Understand education systems in India

UNIT I	**INTRODUCTION TO CULTURE**	**6**
Culture, civilization, culture and heritage, general characteristics of culture, importance of culture in human literature, Indian Culture, Ancient India, Medieval India, Modern India		**CO1**
UNIT II	**INDIAN LANGUAGES AND LITERATURE**	**6**
Indian Languages and Literature – I: Languages and Literature of South India, – Indian Languages and Literature – II: Northern Indian Languages & Literature		**CO2**
UNIT III	**RELIGION AND PHILOSOPHY**	**6**
Major religions practiced in India and Understanding their Philosophy – religious movements in Modern India (Selected movements only)		**CO3**
UNIT IV	**FINE ARTS IN INDIA (ART, TECHNOLOGY& ENGINEERING)**	**6**
Indian Painting, Indian handicrafts, Music, divisions of Indian classic music, modern Indian music, Dance and Drama, Indian Architecture (ancient, medieval and modern), Science and Technology in India, development of science in ancient, medieval and modern India		**CO4**
UNIT V	**EDUCATION SYSTEM IN INDIA**	**6**
Education in ancient, medieval and modern India, aims of education, subjects, languages, Science and Scientists of Ancient India, Science and Scientists of Medieval India, Scientists of Modern India		**CO5**

TOTAL : 30 PERIODS

REFERENCE BOOKS

1. Kapil Kapoor, “Text and Interpretation: The India Tradition”,ISBN: 81246033375, 2005
2. “Science in Samskrit”, Samskrita Bharti Publisher, ISBN 13: 978-8187276333, 2007
3. NCERT, “Position paper on Arts, Music, Dance and Theatre”, ISBN 81-7450 494-X, 200
4. Narain, “Examinations in ancient India”, Arya Book Depot, 1993
5. Satya Prakash, “Founders of Sciences in Ancient India”, Vijay Kumar Publisher, 1989
6. M. Hiriyanna, “Essentials of Indian Philosophy”, Motilal Banarsidass Publishers, ISBN 13: 978-8120810990, 2014

COURSE OUTCOMES Upon completion of the course, students will be able to	
CO1	Understand philosophy of Indian culture.
CO2	Distinguish the Indian languages and literature.
CO3	Learn the philosophy of ancient, medieval and modern India.
CO4	Acquire the information about the fine arts in India.
CO5	Understand education systems in India

AD1008	SANGA TAMIL LITERATURE APPRECIATION	L	T	P	C
		2	0	0	0

OBJECTIVES

- ❖ Introduction to Sanga Tamil Literature.
- ❖ 'Agathinai' and'Purathinai' in SangaTamil Literature.
- ❖ 'Attruppadai' in SangaTamil Literature.
- ❖ 'Puranaanuru' in SangaTamil Literature.
- ❖ 'Pathitrupaththu' in SangaTamil Literature.

UNIT I	**SANGA TAMIL LITERATURE – AN INTRODUCTION**	**6**
Introduction to Tamil Sangam–History of Tamil Three Sangams–Introduction to Tamil SangamLiterature–Special Branches in Tamil Sangam Literature- Tamil Sangam Literature's GrammarTamil Sangam Literature's parables.		**CO1**
UNIT II	**'AGATHINAI'AND'PURATHINAI'**	**6**
Tholkappiyar's Meaningful Verses–Three literature materials–Agathinai's message- History ofCulturefrom Agathinai– Purathinai–Classification–Mesaage to Society from Purathinai.		**CO2**
UNIT III	**'ATTRUPPADAI'**	**6**
Attruppadai Literature – Attruppadaiin 'Puranaanuru' – Attruppadaiin 'Pathitrupaththu'- Attruppadaiin 'Paththupaattu'.		**CO3**
UNIT IV	**'PURANAANURU'**	**6**
Puranaanuru on Good Administration, Ruler and Subjects–Emotion & its Effect in Puranaanuru.		**CO4**
UNIT V	**'PATHITRUPATHTHU'**	**6**
Pathitrupaththuin 'Ettuthogai' — Pathitrupaththu's Parables –Tamildynasty: Valor, Administration, Charity in Pathitrupaththu - Mesaage to Society from Pathitrupaththu.		**CO5**
		TOTAL : 30 PERIODS

REFERENCE BOOKS

1. Sivaraja Pillai, The Chronology oftheEarlyTamils,SagwanPress,2018.
2. HankHeifetz andGeorgeL. Hart, The Purananuru,Penguin Books,2002.

5. XavierS.Thani Nayagam, Landscape and poetry:a study of nature in classical Tamil poetry,Asia Pub.House, 1967.

COURSE OUTCOMES **Upon completion of the course, students will be able to**	
CO1	Appreciate and apply the messages in Sanga Tamil Literature in their life.
CO2	Differentiate ‘Agathinai‘ and ‘Purathinai‘in their personal and societal life.
CO3	Appreciate and apply the messages in’ Attruppadai‘ in their personal and societal life.
CO4	Appreciate and apply the messages in’ Puranaanuru‘ in their personal and societal life.
CO5	Appreciate and apply the messages in’ Pathitrupaththu‘ in their personal and societal life.

Value Added Courses

VAC001	INDUSTRIAL INTERNET OF THINGS	L	T	P	C
		1	0	2	2

OBJECTIVES

- The main learning objective of this course is to make the students an appreciation for:
- To provide students with good depth of knowledge of Designing Industrial IOT Systems for various application.
- Knowledge for the design and analysis of Industry 4.0Systems for Electronics Engineering students

UNIT I	**INTRODUCTION TO INDUSTRIAL IOT (IIOT) SYSTEMS**	**9**
The Various Industrial Revolutions – Role of Internet of Things (IoT) & Industrial Internet of Things (IIoT) in Industry – Industry 4.0 revolutions – Support System for Industry 4.0 – Smart Factories.		**CO1**
UNIT II	**IMPLEMENTATION SYSTEMS FOR IIOT**	**9**
Sensors and Actuators for Industrial Processes, Sensor networks, Process automation and Data Acquisitions on IoT Platform, Microcontrollers and Embedded PC roles in IIoT, Wireless Sensor nodes with Bluetooth, WiFi, and LoRa Protocols and IoT Hub systems.		**CO2**
UNIT III	**IIOT DATA MONITORING & CONTROL**	**9**
IoT Gate way – IoT Edge Systems and It's Programming – Cloud computing – Real Time Dashboard for Data Monitoring – Data Analytics and Predictive Maintenance with IIoT technology		**CO3**
UNIT IV	**IIOT Sensors & Networks**	**9**
Next Generation Sensors – Collaborative Platform and Product Lifecycle Management – Industrial IoT- Layers – Software Defined Networks: IIoT Analytics – Security and Fog Computing – Fog Computing in IIoT – Emerging descriptive data standards for IIoT – Cloud data base.		**CO4**
UNIT V	**INDUSTRIAL IOT- APPLICATIONS**	**9**
Healthcare Power Plants – Inventory Management & Quality Control – Plant Safety and Security Oil – Chemical and Pharmaceutical industry – Applications of UAVs in Industries.		**CO5**
	TOTAL : 45 PERIODS	

REFERENCE:

1. Industry 4.0: The Industrial Internet of Things Alasdair Gilchrist Publications: Apress.

2. The Concept Industry 4.0 An Empirical Analysis of Technologies and Applications in Production Logistics Authors: Bartodziej, Christoph Jan Springer: Publication in the field of economic science.

3. Embedded System: Architecture, Programming and Design by Rajkamal, TMH3.

4. Dr. OvidiuVermesan, Dr. Peter Friess, "Internet of Things: Converging Technologies for Smart Environments and Integrated Ecosystems", River Publishers.

COURSE OUTCOMES

Upon completion of the course, students will be able to	
CO1	Students can develop a comprehensive understanding of Internet of Things (IoT) technologies, including sensors, communication protocols, cloud computing, and data analytics.
CO2	The program can provide students with hands-on experience in designing, implementing, and managing IoT-based solutions for industrial applications.
CO3	The program can provide students with an understanding of IoT security and privacy issues, including data encryption, access control, and device authentication.
CO4	The program can help students develop effective communication and teamwork skills through group projects and case studies, which are essential for working in cross-functional teams in industrial IoT settings.
CO5	Graduates of the program can be better equipped to take on roles in IoT-based industrial applications and other areas of technology, due to their in-depth knowledge of IoT technologies and their practical experience in designing and implementing industrial IoT solutions.

VAC002	AUGMENTED REALITY & VIRTUAL REALITY	L	T	P	C
		1	0	2	2

OBJECTIVES

The main learning objective of this course is to make the students an appreciation for:

1. To provide students with good depth of knowledge of Augmented Reality and Virtual Reality
2. Knowledge on Tools and Applications of Augmented Reality and Virtual Reality

UNIT I	**Introduction to Augmented Reality and Virtual Reality (VR)**	**9**
History of AR - Augmented reality characteristics– Difference between Augmented Reality and Virtual Reality– AR technological components– Technologies used in AR– Feature Extraction – Hardware components – AR devices – Importance of AR - Real world uses of AR – AR types – Software tools available for AR.		**CO1**
UNIT II	**Computer Graphics and Geometric Modeling**	**9**
The Virtual world space, positioning the virtual observer, the perspective projection, human vision, stereo perspective projection, Color theory, Conversion From 2D to 3D, 3D space curves, 3D boundary representation, Simple 3D modelling, 3D clipping, Illumination models, Reflection models, Shading algorithms, Geometrical Transformations: Introduction, Frames of reference.		**CO2**
UNIT III	**Need of technologies for Augmented Reality & Virtual Reality**	**9**
Hardware technology– virtual scenes – 3D objects– AR & VR components Display – HMD – Eyeglasses– Contact Lenses – significance of AR – AR powered devices – Motion tracking –Virtual environment - VR technology, AR & VR application development drawbacks – Compatibility Performance.		**CO3**
UNIT IV	**Tools and Applications of Augmented Reality & Virtual Reality**	**9**
Tools available for Augmented Reality and Recognition - Hardware: Introduction, sensor hardware, Head-coupled displays, Acoustic hardware, Integrated VR systems - Software: Introduction, Modelling virtual world, Physical simulation, VR toolkits, Introduction to VRML.		**CO4**
UNIT V	**Augmented Realities and Virtual Reality for Micro Learning**	**9**
Micro learning techniques – Utilizing VR for learning – VR for Practical online assessment – VR info graphics – Virtual case considerations - Utilizing AR for learning – Accessible learning – sensible data – elevated learner engagement - Engineering, Entertainment, Science, Training, Game Development		**CO5**
		TOTAL : 45 PERIODS

1. Charles Palmer, John Williamson, “Virtual Reality Blueprints: Create compelling VR experiences for mobile”, Packt Publisher, 2018
2. Dieter Schmalstieg, Tobias Hollerer, “Augmented Reality: Principles & Practice”, Addison Wesley, 2016

COURSE OUTCOMES	
Upon completion of the course, students will be able to	
CO1	Understand the importance of augmented reality in Industry 4.0 with real-time examples
CO2	To describe the history and recent developments of AR
CO3	To provide the need on emerging technologies AR and VR
CO4	To discuss the revolution and impact of AR
CO5	To understand the applications of AR and VR

VAC003	ETHICAL HACKING - CYBER SECURITY	L	P	C
		1	2	2

OBJECTIVES:

- To learn the fundamentals of Cyber Security and Ethical Hacking
- To learn the Foot printing & Reconnaissance and Scanning Networks
- To understand Enumeration and Vulnerability Analysis
- To understand Exploitation on Network
- To learn the Web Attacks and Report Writing

UNIT I	FUNDAMENTALS OF CYBER SECURITY AND ETHICAL HACKING	9
Introduction to Cyber Security - Cyber Security & Ethical Hacking - Domains of Cyber Security - Principles of Cybersecurity (CIA Triad, Security Models, Principles of Privileges) - Offensive & Defensive Security - Cyber Kill Chain - Types of Security Teams (Red Team, Blue Team, Purple Team) - Cyber Security Frameworks (NIST, MITRE, ISO/IEC) Phases & Methodologies in Ethical Hacking - Introduction to Malware - Types of Malware		CO1

UNIT II	FOOTPRINTING RECONNAISSANCE AND SCANNING NETWORKS	9
Introduction to Foot printing Reconnaissance - Types of Reconnaissance (Passive & Active) - Active Reconnaissance (Ping, Traceroute, Telnet, Whatweb, Wappalyzer, Netcraft) - Passive Reconnaissance (nslookup, whois, dig, DNSDumpster, Shodan) - Introduction to OSINT (OSINT Framework, OSRFRAMEWORK, Social Searcher,) - Introduction to Scanning Networks - Types of Network Scanning (Port Scan, Service Scan, Vulnerability Scan) - Scanning Techniques - Port Scanning (TCP, UDP) - Host Discovery (ICMP, ARP) - Introduction to Wireshark - Capturing Data Packets - Packet Analysis.		CO2

UNIT III	ENUMERATION AND VULNERABILITY ANALYSIS	9
Internet of Things - Physical Design- Logical Design- IoT Enabling Technologies - IoT Levels & Deployment Templates - OGC architecture - IoT reference model - Domain model - information model - functional model - communication model - IoT reference architecture.		CO3

UNIT IV	EXPLOITATION ON NETWORK	9
Introduction to Exploitation - What is Shell - Types of Linux Shells (Bash, Csh/Tcsh, Ksh, Zsh, Fish) - What is Gaining Access & Maintaining Access - Reverse Shell & Bind Shell - Introduction to Metasploit Framework - Metasploit Modules - Staged Payload & Non-Staged Payload - Using Metasploit Framework Gaining the User Shell Acess - Gaining Root Shell Acess in Metasploit Framework - Introduction to Manual Exploitation - Gaining User Shell in Manual Exploitation - What is Privilege Escalation - Linux & Windows Privilege Escalation - Using Linpeass Script Finding Non-Privilege Path on Linux System - Using Winpeass Script Finding Non-Privilege Path on Windows System - Hands-on Windows & Linux Privilege Escalation - Introduction to Post Exploitation.		CO 4

UNIT V	WEB ATTACKS AND REPORT DOCUMENTATION	9
Introduction to OWAP TOP 10 and SANS TOP 25 - Web Server & Web Application Attack Methodology - Indirect Object Reference (IDOR) - SQL Injection - Cross Site Scripting - XML Injection or XML External Internal - Account Hijacking - Sensitive Data Exposure - Server Side Forgery - Race Condition - Generate Proper Vulnerability Assessment Penetration Testing Report Document.		CO5
		TOTAL : 45 PERIODS

REFERENCE:

1. Michael T. Simpson, Kent Backman, and James E. Corley, Hands-On Ethical Hacking and Network Defense, Course Technology, Delmar Cengage Learning, 2010.
2. The Basics of Hacking and Penetration Testing - Patrick Engebretson, SYNGRESS, Elsevier, 2013.
3. The Web Application Hacker's Handbook: Finding and Exploiting Security Flaws, Dafydd Stuttard and Marcus Pinto, 2011.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Understand the importance of fundamentals of cyber security and ethical hacking
CO2	To gain understanding on different foot printing, reconnaissance and scanning methods.
CO3	To demonstrate the enumeration and vulnerability analysis methods
CO4	To acquire knowledge on the options for network protection.
CO5	To gain knowledge on hacking options available in Web applications.

MAPPING OF COs WITH POs AND PSOs

VAC004	BLOCKCHAIN AND CRYPTO CURRENCIES		L	T	P	C
			1	0	2	2

OBJECTIVES

1. To understand Blockchain's fundamental components, and examine decentralization using blockchain.
2. To understand Cryptocurrency and its background concepts.
3. To learn smart contract programing language solidity.
4. To understand public blockchain application development platform and develop distributed applications.
5. To understand enterprise blockchain application development platform and develop distributed enterprise applications

UNIT I	**Introduction**	**9**
Need for Distributed Record Keeping, Modeling faults and adversaries, Byzantine Generals problem, Consensus algorithms and their scalability problems, Nakamoto's concept with Blockchain based cryptocurrency, Technologies Borrowed in Blockchain – hash function, consensus, byzantine fault-tolerant, distributed computing, 51% attack, digital cash etc.		**CO1**
UNIT II	**Cryptocurrency Basics**	**9**
Bitcoin blockchain, Challenges and solutions, Crypto mining, mining types, mining hardware, proof of work, Proof of stake, alternatives to Bitcoin consensus, other crypto currencies like Ethereum, Tether, BNB etc		**CO2**
UNIT III	**Solidity Walkthrough**	**9**
Introduction to Ethereum blockchain – Ethereum Virtual Machine – remix IDE - MetaMask wallet – running simple smart contract – voting application – Lottery application – File sharing application		**CO3**
UNIT IV	**Public Blockchain Application Development**	**9**
Create Github Account, Create Repository, Create Azure Organization, Create a new pipeline, Build a sample code, Modify azure-pipelines.yaml file		**CO4**
UNIT V	**Enterprise Blockchain Application Development**	**9**
Introduction to Hyperledger – Hyperledger Fabric architecture– language supports for hyperledger fabric – setting up hyprledger fabric - Building application in hyperledger fabric.		**CO5**
	TOTAL : 45 PERIODS

3. Alex Leverington, "Ethereum Programming" Packt Publishing, 2017.
4. https://hyperledger-fabric.readthedocs.io/en/latest/tutorials.html

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Understand Blockchain's fundamental components, and examine decentralization using blockchain.
CO2	Understand Cryptocurrency and its background concepts
CO3	Write smart contract using programing language solidity.
CO4	Develop distributed applications using public blockchain application development platform Ethereum.
CO5	Develop distributed applications using enterprise blockchain application development platform Hyperledger

MAPPING OF COs WITH POs AND PSOs

VAC005	INDUSTRIAL PRACTICES WITH DEVOPS	L	T	P	C
		1	0	2	2

OBJECTIVES

1. To introduce DevOps terminology, definition & concepts
2. To understand the Maven, Profiles and Plugins
3. To understand the concepts of Continuous Integration/ Continuous Testing/ ContinuousDeployment using Jenkins
4. To understand to leverage Cloud-based DevOps tools using Azure DevOps
5. Illustrate the benefits and drive the adoption of cloud-based Devops tools to solve realworld problems

UNIT I	**INTRODUCTION TO DEVOPS**	**9**
Devops Essentials - Introduction to AWS, GCP, Azure - Version control systems: Git and Github		**CO1**
UNIT II	**COMPILE AND BUILD USING MAVEN & GRADLE**	**9**
Introduction, Installation of Maven, POM files, Maven Build lifecycle, Build phases (compile build, test, package) Maven Profiles, Maven repositories (local, central, global), Maven plugins, Maven create and build Artifacts, Dependency management, Installation of Gradle, understand build using Gradle		**CO2**
UNIT III	**CONTINUOUS INTEGRATION USING JENKINS**	**9**
Install & Configure Jenkins, Jenkins Architecture Overview, creating a Jenkins Job, configuring a Jenkins job, Introduction to Plugins, Adding Plugins to Jenkins, commonly used plugins (Git Plugin, Parameter Plugin, HTML Publisher, Copy Artifact and Extended choice parameters). Configuring Jenkins to work with java, Git and Maven, Creating a Jenkins Build and Jenkins workspace		**CO3**
UNIT IV	**BUILDING DEVOPS PIPELINES USING AZURE**	**9**
Create Github Account, Create Repository, Create Azure Organization, Create a new pipeline, Build a sample code, Modify azure-pipelines.yaml file		**CO4**
UNIT V	**DEVOPS PRACTICALS**	**9**
Create Maven Build pipeline in Azure - Run regression tests using Maven Build pipeline in Azure - Install Jenkins in Cloud - Create CI pipeline using Jenkins - Create a CD pipeline in Jenkins and deploy in Cloud		**CO5**
		TOTAL : 45 PERIODS

4. https://www.jenkins.io/user-handbook.pdf
5. https://maven.apache.org/guides/getting-started

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Understand different actions performed through Version control tools like Git.
CO2	Compile and Build using Maven & Gradle applications
CO3	Ability to Perform Continuous Integration using Jenkins.
CO4	Understand to leverage Cloud-based DevOps tools using Azure DevOps
CO5	Develop various Devops applications

VAC006	APPLIED MACHINE LEARNING WITH PYTHON	L	T	P	C
		1	0	2	2

OBJECTIVES

- To provide a basic understanding of data manipulation.
- To understand scikit learn for model evaluation.
- To provide a comprehensive understanding of neural networks and computer vision.

UNIT I	DATA MANIPULATION WITH PYTHON LIBRARIES	9
Overview of Data Manipulation with Python-Introduction to Pandas and NumPy-Data Cleaning and Preprocessing-Handling Missing Data-Data Exploration and Analysis		CO1
UNIT II	**MACHINE LEARNING BASICS WITH SCIKIT-LEARN**	**9**
Introduction to Machine Learning-Types of Machine Learning Algorithms-Overview of Decision Trees and Random Forests-Hands-on Implementation with Scikit-Learn-Model Evaluation and Validation.		CO2
UNIT III	**LINEAR REGRESSION AND BEYOND**	**9**
Linear Regression Fundamentals-Implementing Linear Regression from Scratch-Logistic Regression for Classification-Introduction to Support Vector Machines (SVM)-Hands-on Exercises with Scikit-Learn.		CO3
UNIT IV	**ADVANCED MACHINE LEARNING TECHNIQUES**	**9**
Introduction to Gradient Boosting-Implementation of Gradient Boosting with XGBoost-Neural Networks Basics with PyTorch-Deep Learning Fundamentals-Applications of Neural Networks.		CO4
UNIT V	**COMPUTER VISION AND TRANSFER LEARNING**	**9**
Image Classification with Convolutional Neural Networks (CNN)-Transfer Learning Concepts and Applications-Hands-on Image Classification with PyTorch-Fine-tuning Pre-trained Models-Building Custom Models for Specific Tasks.		CO5
		TOTAL : 45 PERIODS

REFERENCE:

1. " Data Wrangling with Pandas" by Kevin Markham - A practical guide that delves into data cleaning, preprocessing, handling missing data, and exploratory data analysis using Pandas.

2. "Hands-On Machine Learning with Scikit-Learn, Keras, and TensorFlow" by Aurélien Géron - A comprehensive guide that covers a wide range of machine learning topics, including decision trees, random forests, and model evaluation with scikit-learn.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	To understand a predictive models that can classify or regress on data by recursively partitioning.
CO2	To develop a foundational understanding of the underlying algorithms, optimizing model parameters
CO3	To build a robust and high-performance ensemble model for regression or classification tasks.
CO4	To understand the automatic learning of hierarchical representations from data for tasks such as classification, regression, and feature extraction.
CO5	To incorporating transfer learning are to leverage pre-trained models to efficiently learn and classify features in images, facilitating accurate predictions.

M.E. COMPUTER SCIENCE AND ENGINEERING

REGULATION – 2021

CHOICE BASED CREDIT SYSTEM

I - IV SEMESTERS CURRICULA AND SYLLABI

PROGRAM EDUCATIONAL OBJECTIVES (PEOS)

Profession: Graduates excel in computer technology in order to pursue higher education and research, or have a successful career in industries or as entrepreneurs.

Technophile: Graduates will have the ability and attitude to adapt emerging technological changes in the field of Computer Science and Engineering.

Team Player: Possess an ability to collaborate as a team member and team leader to affect technical solutions for computing systems, providing improved function and outcomes.

PROGRAM OUTCOMES POs:

Engineering Graduates will be able to:

1. **Engineering knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals and an engineering specialization to the solution of complex engineering problems.
2. **Problem analysis:** Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
3. **Design/development of solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
4. **Conduct investigations of complex problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
5. **Modern tool usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
6. **The engineer and society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

7. **Environment and sustainability:** Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
8. **Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
9. **Individual and team work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
10. **Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
11. **Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
12. **Life-long learning:** Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PROGRAM SPECIFIC OBJECTIVES (PSOs):

Efficacy: Ability to apply mathematical methodologies and foundational concepts of Computer Science and Engineering to solve computational tasks, model the real world problem using appropriate data structure and algorithm with suitable programming languages.

Potentiality to design: Analyze, design and evaluate a computer based system by applying software engineering principles and practices for developing quality software for scientific and business applications.

Technical expertise: Adapt to modern engineering technologies and thereby build robust, reliable, maintainable, scalable, innovative and efficient computing systems by considering social, environmental, economic, and security constraints

MAPPING OF PROGRAM OUTCOMES (POs) WITH
PROGRAM EDUCATIONAL OBJECTIVES (PEOs) and PROGRAM SPECIFIC OUTCOMES (PSOs)

Program Outcomes (POs)	Program Educational Objectives (PEOs)			Program Specific Outcomes (PSOs)		
	Profession	Technophile	Team Player	Efficacy	Potentiality to design	Technical expertise
Engineering knowledge	3	3	1	3	3	3
Problem analysis	3	3	2	3	3	2

MA1151	ADVANCED MATHEMATICS FOR SCIENTIFIC COMPUTING	L	T	P	C
		4	0	0	4

OBJECTIVES

- To understand the basics of random variables and standard distributions
- To understand the arrival process and various queuing and server models
- To appreciate the use of simulation techniques
- To apply testing of hypothesis to infer outcome of experiments
- To apply mathematical linear programming techniques to solve constrained problems.

UNIT I	RANDOM VARIABLES	12
Random variables – Bernoulli, Binomial, Geometric, Poisson, Uniform, Exponential, Erlang and Normal distributions – Function of a Random variable - Moments, Moment generating function.		CO1
UNIT II	**QUEUING MODELS**	**12**
Poisson Process – Markovian Queues – Single and Multi-server Models – Model 1: (M/M/1): FIFO/∞/∞)-Model 2: (M/M/1): FIFO/N/∞)- Model 3: (M/M/C): FIFO/∞/∞)- Model 4: (M/M/C): FIFO/N/∞)- Little‟s formula –Machine Interference Model – Steady State analysis – Self Service Queue		CO2
UNIT III	**SIMULATION**	**12**
Discrete Event Simulation – Monte – Carlo Simulation – Stochastic Simulation – Applications to Queuing systems.		CO3
UNIT IV	**TESTING OF HYPOTHESIS**	**12**
Sampling distributions – Estimation of parameters - Statistical hypothesis – Tests based on Normal, t, Chi-square and F distributions for mean, variance and proportion.		CO4
UNIT V	**LINEAR PROGRAMMING**	**12**
Formulation – Graphical solution – Simplex method – Two phase method -Transportation and Assignment Problems.		CO5
		TOTAL : 60 PERIODS

7. Ross. S.M., “Probability Models for Computer Science”, Academic Press, 2002.

COURSE OUTCOMES **Upon completion of the course, students will be able to**	
CO1	Identify the type of random variable and distribution for a given operational conditions /scene
CO2	The course gives ideas on Queuing models modelling through Monrovian Queues through which students will be able to Design appropriate queuing model for a given problem / system situation.
CO3	Handle the real-life situation through discrete event simulation and do the analysis.
CO4	Gain the knowledge on testing of hypotheses on data from biological, economic and social experiments and all kinds of generalizations based on information from samples.
CO5	Learn an optimization technique by learning the solution procedures of linear programming, the same can be applied to Formulate and find optimal solution in the real life optimizing /allocation /assignment problems involving conditions and resource constraints

MAPPING OF COs WITH POs AND PSOs

CP1101	ALGORITHM DESIGN AND IMPLEMENTATION (Lab Integrated)	L	T	P	C
		3	0	2	4

OBJECTIVES

- To understand the usage of algorithms in computing.
- To learn and use hierarchical data structures and its operations
- To learn the usage of graphs and its applications.
- To select and design data structures and algorithms that is appropriate for problems.
- To study about NP Completeness of problems.

UNIT I	ALGORITHM DESIGN INTRODUCTION	9+6

Review off Data Structures-Program Performance- Time and space complexity, average and worst-case analysis, asymptotic notation, recurrence equations- Search techniques (backtracking and bounding), Sorting algorithms - lower bound, sorting in linear time, Greedy algorithms (Huffman coding, knapsack), Divide and conquer - Master theorem, Dynamic programming (0/1 knapsack, Traveling salesman problem, matrix multiplication, all-pairs shortest paths)

Lab Component

- Implement nth Fibonacci using recursive and non-recursive function. Compare the time complexities of both.
- Sort a given set of n integer elements using Merge Sort method and compute its time complexity. Run the program for varied values of n> 5000, and record the time taken to sort. Plot a graph of the time taken versus non graph sheet. The elements can be read from a file or can be generated using the random number generator. Demonstrate using Java how the divide-and-conquer method works along with its time complexity analysis: worst case, average case and best case.

CO1

UNIT II	ADVANCED STRUCTURES	9+6

Binary search trees, B trees, AVL trees, Red black trees, splay trees. Van Emde Boas trees. Randomly built binary search trees. Heaps, Binomial heaps, Fibonacci heaps. Minimum spanning trees, BFS, DFS, strongly connected components, Biconnected components.

Lab Component

- Implement B trees and Red black trees
- Implement Binomial Heaps and Fibonacci heaps

CO2

UNIT III	NETWORK FLOW AND STRING MATCHING	9+6

Flow networks, The Ford-Fulkerson method, Maximum bipartite matching. String Matching: Naive string-matching algorithm, Rabin-Karp algorithm, String matching with finite automata, Knuth-Morris-Pratt algorithm.

Lab Component

- Analyse the flow of network using Ford-Fulkerson method
- Implement Knuth-Morris-Pratt algorithm

CO3

UNIT IV	APPROXIMATION ALGORITHMS	9+6

NP completeness, Reductions, coping with NP completeness, Approximation algorithms: The vertex cover problem, - the travelling salesman problem, The set covering problem, The Subset-sum problem. Graph colouring.

Lab Component

- Use approximation algorithms and implement the technique in the travelling salesman problem.
- Design and implement in Java to find a subset of a given set S = {Sl, S2,.....,Sn} of n positive integers whose SUM is equal to a given positive integer d. For example, if S ={1, 2, 5, 6, 8} and d= 9, there are two solutions {1,2,6}and {1,8}. Display a suitable message, if the given problem instance doesn't have a solution. 12. Design and implement in Java to find all Hamiltonian Cycles in a connected undirected Graph G of n vertices using backtracking principle.

CO4

UNIT V	RANDOMIZED ALGORITHMS	9+6
Las Vegas and Monte Carlo algorithm, Random variables and their expectations. Probabilistic analysis and uses of indicator random variables: Birthday paradox, coupon collector's problem, The online hiring problem. Randomized version of quick sort, Miller Rabin randomized primality Test. **Lab Component** • Implement Las Vegas using randomized algorithm • Simulate the Miller Rabin randomized primality Test.		CO5

PRACTICAL :30 PERIODS	THEORY:45 PERIODS	TOTAL : 75 PERIODS

TEXT BOOKS

1. T. H. Cormen, C. E. Leiserson, R. L. Rivest, Clifford Stein. "Introduction to Algorithms," Third edition ,Prentice Hall India, 2011

REFERENCE BOOKS

1. Mark Allen Weiss, "Data Structures and Algorithm Analysis in C++," Third edition, Pearson 2007.
2. Michael Sipser, "Introduction to theory of computation", Thomson Course technology, 2006
3. R. Motwani and P. Raghavan, "Randomized Algorithms," Cambridge University Press, 1995

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Demonstrate the following capabilities: to evaluate algorithms, to select from a range of possible options, to provide justification for that selection, and to implement the algorithm in programming context.
CO2	Choose the appropriate data structure for modelling a given problem and Compare and contrast the costs and benefits of different data structure implementations.
CO3	Choose the appropriate string matching and network flow algorithms
CO4	Explain the significance of NP-completeness and importance of approximation algorithms.
CO5	Explain the use of randomization in the design of an algorithm for a problem where a deterministic algorithm is unknown or much more difficult

MAPPING OF COs WITH POs AND PSOs

CP1102	ADVANCED COMPUTER ARCHITECTURE	L	T	P	C
		3	0	0	3

OBJECTIVES

- To introduce the students to the recent trends in the field of Computer Architecture and identify performance related parameters.
- To learn the different multiprocessor issues.
- To expose the different types of multicore architectures.
- To understand the design of the memory hierarchy.

UNIT I	**FUNDAMENTALS OF COMPUTER DESIGN AND ILP**	**9**
Fundamentals of Computer Design – Measuring and Reporting Performance – Instruction Level Parallelism and its Exploitation – Concepts and Challenges –Exposing ILP - Advanced Branch Prediction - Dynamic Scheduling - Hardware-Based Speculation - Exploiting ILP - Instruction Delivery and Speculation - Limitations of ILP - Multithreading		**CO1**
UNIT II	**MEMORY HIERARCHY DESIGN**	**9**
Introduction – Optimizations of Cache - Performance– Memory Technology and Optimizations – Protection: Virtual Memory and Virtual Machines – Design of Memory Hierarchies – Case Studies.		**CO2**
UNIT III	**MULTIPROCESSOR ISSUES**	**9**
Introduction- Centralized, Symmetric and Distributed Shared Memory Architectures –Cache Coherence Issues – Performance Issues – Synchronization – Models of Memory Consistency – Case Study-Interconnection Networks – Buses, Crossbar and Multi-stage Interconnection Networks		**CO3**
UNIT IV	**MULTICORE ARCHITECTURES**	**9**
Homogeneous and Heterogeneous Multi-core Architectures – Intel Multicore Architectures – SUN CMP architecture – IBM Cell Architecture. Introduction to Warehouse-scale computers-Architectures- Physical Infrastructure and Costs- Cloud Computing –Case Study- Google Warehouse-Scale Computer		**CO4**
UNIT V	**VECTOR, SIMD AND GPU ARCHITECTURES**	**9**
Introduction-Vector Architecture – SIMD Extensions for Multimedia – Graphics Processing Units – Case Studies – GPGPU Computing – Detecting and Enhancing Loop Level Parallelism-Case Studies		**CO5**
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Darryl Gove, ―Multicore Application Programming: For Windows, Linux, and Oracle Solaris‖, Pearson, 2011
2. David B. Kirk, Wen-mei W. Hwu, ―Programming Massively Parallel Processors‖, Morgan Kauffman, 2010

REFERENCE BOOKS

1. David E. Culler, Jaswinder Pal Singh, ―Parallel computing architecture : A hardware/software approach‖ , Morgan Kaufmann /Elsevier Publishers, 1999
2. John L. Hennessey and David A. Patterson, ―Computer Architecture – A Quantitative Approach‖, Morgan Kaufmann / Elsevier, 5th edition, 2012.

COURSE OUTCOMES **Upon completion of the course, students will be able to**	
CO1	Identify the limitations of ILP.
CO2	Discuss the issues related to multiprocessing and suggest solutions
CO3	Discuss the various techniques used for optimising the cache performance
CO4	Point out the salient features of different multicore architectures and how they exploit parallelism.
CO5	Point out how data level parallelism is exploited in architectures

CP1103	ADVANCED NETWORK PRINCIPLES AND PROTOCOLS	L	T	P	C
		3	0	0	3

OBJECTIVES

- To understand the principles required for network design
- To explore various technologies in the wireless domain
- To study about 3G and 4G cellular networks
- To understand the paradigm of Software defined networks

UNIT I	NETWORK PRINCIPLES	9
Advanced multiplexing – Code Division Multiplexing, DWDM and OFDM – Shared media networks – Switched networks – End to end semantics – Connectionless, Connection oriented, Wireless Scenarios –Applications, Quality of Service – End to end level and network level solutions. LAN cabling topologies – Ethernet Switches, Routers, Firewalls and L3 switches – Remote Access Technologies and Devices – Modems and DSLs – SLIP and PPP – Core networks, and distribution networks.		CO1
UNIT II	**WIRELESS NETWORKS**	**9**
IEEE802.16 and WiMAX – Security – Advanced 802.16 Functionalities – Mobile WiMAX - 802.16e – Network Infrastructure – WLAN – Configuration – Management Operation – Security – IEEE 802.11e and WMM – QoS – Comparison of WLAN and UMTS – Bluetooth – Protocol Stack – Security – Profiles		CO2
UNIT III	**CELLULAR NETWORKS**	**9**
GSM – Mobility Management and call control – GPRS – Network Elements – Radio Resource Management – Mobility Management and Session Management – Small Screen Web Browsing over GPRS and EDGE – MMS over GPRS – UMTS – Channel Structure on the Air Interface – UTRAN –Core and Radio Network Mobility Management – UMTS Security		CO3
UNIT IV	**4G NETWORKS**	**9**
LTE – Network Architecture and Interfaces – FDD Air Interface and Radio Networks – Scheduling – Mobility Management and Power Optimization – LTE Security Architecture – Interconnection with UMTS and GSM – LTE Advanced (3GPPP Release 10) - 4G Networks and Composite Radio Environment – Protocol Boosters – Hybrid 4G Wireless Networks Protocols – Green Wireless Networks – Physical Layer and Multiple Access – Channel Modelling for 4G – Introduction to 5G		CO4
UNIT V	**SOFTWARE DEFINED NETWORKS**	**9**
Introduction – Centralized and Distributed Control and Data Planes – Open Flow – SDN Controllers – General Concepts – VLANs – NVGRE – Open Flow – Network Overlays – Types – Virtualization – Data Plane – I/O – Design of SDN Framework		CO5
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Erik Dahlman, Stefan Parkvall, Johan Skold, ―4G: LTE/LTE-Advanced for Mobile Broadband‖, Academic Press, 2013.
2. Jonathan Rodriguez, ―Fundamentals of 5G Mobile Networks‖, Wiley, 2015.

REFERENCE BOOKS
1. Martin Sauter, "From GSM to LTE, An Introduction to Mobile Networks and Mobile Broadband", Wiley, 2014. 2. Martin Sauter, ―Beyond 3G - Bringing Networks, Terminals and the Web Together: LTE, WiMAX, IMS, 4G Devices and the Mobile Web 2.0‖, Wiley, 2009. 3. Paul Goransson, Chuck Black, ―Software Defined Networks: A Comprehensive Approach‖, Morgan Kauffman, 2014.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Identify the components required for designing a network
CO2	Design a network at a high-level using different networking technologies
CO3	Analyze the various protocols of wireless and cellular networks
CO4	Discuss the features of 4G and 5G networks
CO5	Experiment with software defined networks

CP1104	MACHINE LEARNING TECHNIQUES	L	T	P	C
		3	0	0	3

OBJECTIVES

- To introduce students to the basic concepts and techniques of Machine Learning.
- To have a thorough understanding of the Supervised and Unsupervised learning techniques
- To study the various probability-based learning techniques
- To understand graphical models of machine learning algorithms

UNIT I	INTRODUCTION	9
Learning – Types of Machine Learning – Supervised Learning – The Brain and the Neuron – Design a Learning System – Perspectives and Issues in Machine Learning – Concept Learning Task – Concept Learning as Search – Finding a Maximally Specific Hypothesis – Version Spaces and the Candidate Elimination Algorithm – Linear Discriminants – Perceptron – Linear Separability – Linear Regression.		CO1
UNIT II	**LINEAR MODELS**	**9**
Multi-layer Perceptron – Going Forwards – Going Backwards: Back Propagation Error – Multi-layer Perceptron in Practice – Examples of using the MLP – Overview – Deriving Back-Propagation – Radial Basis Functions and Splines – Concepts – RBF Network – Curse of Dimensionality – Interpolations and Basis Functions – Support Vector Machines.		CO2
UNIT III	**TREE AND PROBABILISTIC MODELS**	**9**
Learning with Trees – Decision Trees – Constructing Decision Trees – Classification and Regression Trees – Ensemble Learning – Boosting – Bagging – Different ways to Combine Classifiers – Probability and Learning – Data into Probabilities – Basic Statistics – Gaussian Mixture Models – Nearest Neighbor Methods – Unsupervised Learning – K means Algorithms – Vector Quantization – Self Organizing Feature Map		CO3
UNIT IV	**DIMENSIONALITY REDUCTION AND EVOLUTIONARY MODELS**	**9**
Dimensionality Reduction – Linear Discriminant Analysis – Principal Component Analysis – Factor Analysis – Independent Component Analysis – Locally Linear Embedding – Isomap – Least Squares Optimization – Evolutionary Learning – Genetic algorithms – Genetic Offspring: - Genetic Operators – Using Genetic Algorithms – Reinforcement Learning – Overview – Getting Lost Example – Markov Decision Process		CO4
UNIT V	**GRAPHICAL MODELS**	**9**
Markov Chain Monte Carlo Methods – Sampling – Proposal Distribution – Markov Chain Monte Carlo – Graphical Models – Bayesian Networks – Markov Random Fields – Hidden Markov Models – Tracking Methods		CO5
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Stephen Marsland ―Machine Learning – An Algorithmic Perspective‖, Second Edition, Chapman and Hall/CRC Machine Learning and Pattern Recognition Series, 2014.

3. Tom M Mitchell, ―Machine Learning‖, First Edition, McGraw Hill Education, 2013.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Distinguish between, supervised, unsupervised and semi-supervised learning
CO2	Apply the appropriate machine learning strategy for any given problem
CO3	Suggest supervised, unsupervised or semi-supervised learning algorithms for any given problem
CO4	Design systems that use the appropriate graph models of machine learning
CO5	Modify existing machine learning algorithms to improve classification efficiency

MAPPING OF COs WITH POs AND PSOs

RM1101	RESEARCH METHODOLOGY AND IPR	L	T	P	C
		2	0	0	2

OBJECTIVES

- ❖ Problem formulation, analysis and solutions.
- ❖ Technical paper writing / presentation without violating professional ethics
- ❖ Patent drafting and filing patents.

UNIT I	**RESEARCH PROBLEM FORMULATION**	**6**
Meaning of research problem- Sources of research problem, criteria characteristics of a good research problem, errors in selecting a research problem, scope and objectives of research problem. Approaches of investigation of solutions for research problem, data collection, analysis, interpretation, necessary instrumentations		**CO1**
UNIT II	**LITERATURE REVIEW**	**6**
Effective literature studies approaches, analysis, plagiarism, and research ethics.		**CO2**
UNIT III	**TECHNICALWRITING /PRESENTATION**	**6**
Effective technical writing, how to write report, paper, developing a research proposal, format of research proposal, a presentation and assessment by a review committee.		**CO3**
UNIT IV	**INTRODUCTION TO INTELLECTUAL PROPERTY RIGHTS (IPR)**	**6**
Nature of Intellectual Property: Patents, Designs, Trade and Copyright. Process of Patenting and Development: technological research, innovation, patenting, development. International Scenario: International cooperation on Intellectual Property. Procedure for grants of patents, Patenting under PCT.		**CO4**
UNIT V	**INTELLECTUAL PROPERTY RIGHTS (IPR)**	**6**
Patent Rights: Scope of Patent Rights. Licensing and transfer of technology. Patent information and databases. Geographical Indications. New Developments in IPR: Administration of Patent System, IPR of Biological Systems, Computer Software etc. Traditional knowledge Case Studies, IPR and IITs.		**CO5**
		TOTAL: 30 PERIODS

REFERENCE BOOKS

1. Asimov, “Introduction to Design”, Prentice Hall, 1962.
2. Halbert, “Resisting Intellectual Property”, Taylor & Francis Ltd ,2007.

4. Niebel, “Product Design”, McGraw Hill, 1974.
5. Ranjit Kumar, 2nd Edition, “Research Methodology: A Step-by-Step Guide for beginners” 2010

COURSE OUTCOMES **Upon completion of the course, students will be able to**	
CO1	To understand the concept of research methods and apply in problem solving.
CO2	To analyse the data using statistical tools to solve practical problems.
CO3	To understand the guidelines for effective report writing
CO4	To understand and acquire the knowledge on Intellectual Property Rights
CO5	To acquire knowledge on patent and copyright, trademark, and industrial design

CP1107	MACHINE LEARNING LAB	L	T	P	C
		0	0	4	2

OBJECTIVES

- The course serves as a comprehensive introduction to various topics in machine learning.
- Students should be able to design and implement machine learning solutions to classification, regression, and clustering problems
- Students should able to evaluate and interpret the results of the algorithms.

LIST OF EXPERIMENTS

1. Implement and demonstrate the FIND-S algorithm for finding the most specific hypothesis based on a given set of training data samples. Read the training data from a .CSV file.	**CO1**
2. For a given set of training data examples stored in a .CSV file, implement and demonstrate the Candidate-Elimination algorithm to output a description of the set of all hypotheses consistent with the training examples.	
3. Write a program to demonstrate the working of the decision tree based ID3 algorithm. Use an appropriate data set for building the decision tree and apply this knowledge to classify a new sample.	**CO2**
4. Build an Artificial Neural Network by implementing the Backpropagation algorithm and test the same using appropriate data sets.	
5. Write a program to implement the naïve Bayesian classifier for a sample training data set stored as a .CSV file. Compute the accuracy of the classifier, considering few test data sets.	
6. Assuming a set of documents that need to be classified, use the naïve Bayesian Classifier model to perform this task. Built-in Java classes/API can be used to write the program. Calculate the accuracy, precision, and recall for your data set.	
7. Write a program to construct a Bayesian network considering medical data. Use this model to demonstrate the diagnosis of heart patients using standard Heart Disease Data Set. You can use Java/Python ML library classes/API.	**CO3**
8. Apply EM algorithm to cluster a set of data stored in a .CSV file. Use the same data set for clustering using k-Means algorithm. Compare the results of these two algorithms and comment on the quality of clustering. You can add Java/Python ML library classes/API in the program.	
9. Write a program to implement k-Nearest Neighbour algorithm to classify the iris data set. Print both correct and wrong predictions. Java/Python ML library classes can be used for this problem.	
10. Implement the non-parametric Locally Weighted Regression algorithm in order to fit data points. Select appropriate data set for your experiment and draw graphs.	

TOTAL : 60 PERIODS

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Understand the implementation procedures for the machine learning algorithms. Design Java/Python programs for various Learning algorithms.
CO2	Apply appropriate data sets to the Machine Learning algorithms.
CO3	Identify and apply Machine Learning algorithms to solve real world problems.

CP1201	INFORMATION STORAGE MANAGEMENT	L	T	P	C
		3	0	0	3

OBJECTIVES

- To understand the basic components of Storage System Environment.
- To understand the Storage Area Network Characteristics and Components
- To examine emerging technologies including IP-SAN.
- To understand the concepts in Business continuity and backup technologies
- To learn replication and modes off replication

UNIT I	STORAGE SYSTEMS	9
Introduction to Information Storage and Management: Information Storage, Evolution of Storage Technology and Architecture, Data Centre Infrastructure, Key Challenges in Managing Information, Information Lifecycle. Storage System Environment: Components of the Host. RAID: Implementation of RAID, RAID Array Components, RAID Levels, RAID Comparison, RAID Impact on Disk Performance, Hot Spares. Intelligent Storage System: Components, Intelligent Storage Array.		**CO1**
UNIT II	**STORAGE NETWORKING TECHNOLOGIES**	**9**
Direct-Attached Storage and Introduction to SCSI: Types of DAS, DAS Benefits and Limitations, Disk Drive Interfaces, Introduction to Parallel SCSI, SCSI Command Model. Storage Area Networks: Fiber Channel, SAN Evolution, SAN Components, Fiber Channel Connectivity, Fiber Channel Ports, Fiber Channel Architecture, Zoning, Fiber Channel Login Types, Fiber Channel Topologies. Network Attached Storage: Benefits of NAS, NAS File I/Components of NAS, NAS Implementations, NAS-Implementations, NAS File Sharing Protocols, NAS I/O Operations.		**CO2**
UNIT III	**ADVANCED STORAGE NETWORKING AND VIRTUALIZATION**	**9**
IP SAN: iSCSI, FCIP. Content-Addressed Storage: Fixed Content and Archives, Types of Archives, Features and Benefits of CAS, CAS Architecture, Object Storage and Retrieval in CAS, CAS Examples. Storage Virtualization: Forms of Virtualization, NIA Storage Virtualization Taxonomy, Storage Virtualization Configurations, Storage Virtualization Challenges, Types of Storage Virtualization.		**CO3**
UNIT IV	**BUSINESS CONTINUITY**	**9**
Introduction to Business Continuity: Information Availability, BC Terminology, BC Planning Lifecycle, Failure Analysis, Business Impact Analysis, BC Technology Solutions. Backup and Recovery: Backup Purpose, Considerations, Granularity, Recovery Considerations, Backup Methods and Process, Backup and Restore Operations, Backup Topologies, Backup in NAS Environments, Backup Technologies.		**CO4**
UNIT V	**REPLICATION**	**9**
Local Replication: Source and Target, Uses of Local Replicas, Data Consistency, Local Replication Technologies, Restore and Restart Considerations, Creating Multiple Replicas, Management Interface. Remote Replication: Modes of Remote Replication and its technologies, Network Infrastructure		**CO5**
		TOTAL : 45 PERIODS

TEXT BOOKS
1. EMC Corporation, "Information Storage and Management: Storing, Managing, and Protecting Digital Information", Wiley, India, 2010
2. Somasundaram Gnana Sundaram, Alok Shrivastava, Information Storage Management, John Wiley & sons,2nd Edition 2014.

REFERENCE BOOKS
1. Robert Spalding, —Storage Networks: The Complete Reference—, Tata McGraw Hill, Osborne, 2003.
2. Marc Farley, —Building Storage Networks‖, Tata McGraw Hill ,Osborne, 2001
3. http://download.101com.com/GIG/Custom/2010PDFS/StorageMgt/Storage_Management2010.pdf

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Select from various storage technologies to suit for required application.
CO2	Apply security measures to safeguard storage & farm.
CO3	Analyse QoS on Storage.
CO4	Usage of Business continuity and planning in real time
CO5	Understanding local replication technologies.

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

CP1202	COMPILER OPTIMIZATION TECHNIQUES	L	T	P	C
		4	0	0	4

OBJECTIVES

- To be aware of different forms of intermediate languages and analysing programs.
- To understand optimizations techniques for simple program blocks.
- To apply optimizations on procedures, control flow and parallelism.
- To learn inter procedural analysis and optimizations.
- To explore the knowledge about resource utilization.

UNIT I	**INTERMEDIATE REPRESENTATIONS AND ANALYSIS**	**9**
Review of Compiler Structure- Structure of an Optimizing Compiler – Intermediate Languages - LIR, MIR, HIR – Control Flow Analysis – Iterative Data Flow Analysis – Static Single Assignment – Dependence Relations - Dependences in Loops and Testing-Basic Block Dependence DAGs – Alias Analysis.		**CO1**
UNIT II	**EARLY AND LOOP OPTIMIZATIONS**	**9**
Importance of Code Optimization Early Optimizations: Constant-Expression Evaluation - Scalar Replacement of Aggregates - Algebraic Simplifications and Re-association - Value Numbering - Copy Propagation - Sparse Conditional Constant Propagation. Redundancy Elimination: Common - Subexpression Elimination - Loop-Invariant Code Motion - Partial- Redundancy Elimination - Redundancy Elimination and Re-association - Code Hoisting. Loop Optimizations: Induction Variable Optimizations - Unnecessary Bounds Checking Elimination		**CO2**
UNIT III	**PROCEDURE OPTIMIZATION AND SCHEDULING**	**9**
Procedure Optimizations: Tail-Call Optimization and Tail-Recursion Elimination - Procedure Integration - In-Line Expansion - Leaf-Routine Optimization and Shrink Wrapping. Code Scheduling: Instruction Scheduling - Speculative Loads and Boosting - Speculative Scheduling - Software Pipelining - Trace Scheduling - Percolation Scheduling. Control-Flow and Low-Level Optimizations : Unreachable-Code Elimination - Straightening - If Simplifications - Loop Simplifications -Loop Inversion – Un-switching - Branch Optimizations - Tail Merging or Cross Jumping - Conditional Moves - Dead-Code Elimination - Branch Prediction - Machine Idioms and Instruction Combining.		**CO3**
UNIT IV	**INTER PROCEDURAL OPTIMIZATION**	**9**
Symbol table – Runtime Support – Inter procedural Analysis and Optimization: Interprocedural Control Flow Analysis - The Call Graph – Inter procedural Data-Flow Analysis Interprocedural Constant Propagation - Interprocedural Alias Analysis - Interprocedural Optimizations - Interprocedural Register Allocation - Aggregation of Global References.		**CO4**
UNIT V	**REGISTER ALLOCATION AND OPTIMIZING FOR MEMORY**	**9**
Register Allocation: Register Allocation and Assignment - Local Methods - Graph Coloring – Priority Based Graph Coloring - Other Approaches to Register Allocation. Optimization for the Memory Hierarchy: Impact of Data and Instruction Caches - Instruction-Cache Optimization - Scalar Replacement of Array Elements - Data-Cache Optimization - Scalar vs. Memory-Oriented Optimizations.		**CO5**
		TOTAL : 45 PERIODS

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Identify the different optimization techniques for simple program blocks.
CO2	Design performance enhancing optimization techniques
CO3	Perform the optimization on procedures
CO4	Ensure better utilization of resources
CO5	Ensure resource allocation and memory optimization

CP1204	BIG DATA ANALYTICS	L	T	P	C
		3	0	0	3

OBJECTIVES

- To understand the competitive advantages of big data analytics
- To understand the big data frameworks
- To learn data analysis methods
- To learn stream computing
- To gain knowledge on Hadoop related tools such as HBase, Cassandra, Pig, and Hive for big data analytics.

UNIT I	INTRODUCTION TO BIG DATA	9
Big Data – Definition, Characteristic Features – Big Data Applications - Big Data vs Traditional Data - Risks of Big Data - Structure of Big Data - Challenges of Conventional Systems - Web Data – Evolution of Analytic Scalability - Evolution of Analytic Processes, Tools and methods - Analysis vs Reporting - Modern Data Analytic Tools.		CO1
UNIT II	**HADOOP FRAMEWORK**	**9**
Distributed File Systems - Large-Scale FileSystem Organization – HDFS concepts - MapReduce Execution, Algorithms using MapReduce, Matrix-Vector Multiplication – Hadoop YARN		CO2
UNIT III	**DATA ANALYSIS**	**9**
Statistical Methods: Regression modelling, Multivariate Analysis - Classification: SVM & Kernel Methods - Rule Mining - Cluster Analysis, Types of Data in Cluster Analysis, Partitioning Methods, Hierarchical Methods, Density Based Methods, Grid Based Methods, Model Based Clustering Methods, Clustering High Dimensional Data - Predictive Analytics – Data analysis using R.		CO3
UNIT IV	**MINING DATA STREAMS**	**9**
Streams: Concepts – Stream Data Model and Architecture - Sampling data in a stream - Mining Data Streams and Mining Time-series data - Real Time Analytics Platform (RTAP) Applications - Case Studies - Real Time Sentiment Analysis, Stock Market Predictions.		CO4
UNIT V	**BIG DATA FRAMEWORKS**	**9**
Introduction to NoSQL – Aggregate Data Models – Hbase: Data Model and Implementations – Hbase Clients – Examples – .Cassandra: Data Model – Examples – Cassandra Clients – Hadoop Integration. Pig – Grunt – Pig Data Model – Pig Latin – developing and testing Pig Latin scripts. Hive – Data Types and File Formats – HiveQL Data Definition – HiveQL Data Manipulation – HiveQL Queries		CO5
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Bill Franks, ―Taming the Big Data Tidal Wave: Finding Opportunities in Huge Data Streams with Advanced Analytics‖, Wiley and SAS Business Series, 2012.
2. David Loshin, "Big Data Analytics: From Strategic Planning to Enterprise Integration with Tools, Techniques, NoSQL, and Graph", 2013.

REFERENCE BOOKS

1. Michael Berthold, David J. Hand, —Intelligent Data Analysis‖, Springer, Second Edition, 2007.
2. Michael Minelli, Michelle Chambers, and Ambiga Dhiraj, "Big Data, Big Analytics: Emerging Business Intelligence and Analytic Trends for Today's Businesses", Wiley, 2013.
3. P. J. Sadalage and M. Fowler, "NoSQL Distilled: A Brief Guide to the Emerging World of Polyglot Persistence", Addison-Wesley Professional, 2012.
4. Richard Cotton, "Learning R – A Step-by-step Function Guide to Data Analysis, , O‘Reilly Media, 2013.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Understand how to leverage the insights from big data analytics
CO2	Understand the Hadoop framework
CO3	Analyse data by utilizing various statistical and data mining approaches
CO4	Perform analytics on real-time streaming data
CO5	Understand the various No Sql alternative database models

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

CP1207	DATA ANALYTICS LABORATORY	L	T	P	C
		0	0	4	2

OBJECTIVES

- The course serves as a comprehensive introduction to various topics in machine learning.
- Students should be able to design and implement machine learning solutions to classification, regression, and clustering problems
- Students should able to evaluate and interpret the results of the algorithms.

LIST OF EXPERIMENTS

1.	Install, configure and run Hadoop and HDFS	CO1
2.	Implement word count / frequency programs using MapReduce	
3.	Implement an MR program that processes a weather dataset	CO2
4.	Implement Linear and logistic Regression	
5.	Implement SVM / Decision tree classification techniques	
6.	Implement clustering techniques	
7.	Visualize data using any plotting framework	CO3
8.	Implement an application that stores big data in Hbase / MongoDB / Pig using Hadoop / R.	

TOTAL : 60 PERIODS

REFERENCE BOOKS

1. Data Science and Big Data Analytics: Discovering, Analyzing, Visualizing, and Presenting Data, John Wiley & Sons

WEB REFERENCES

1. https://www.thedatalab.com/skills-talent/online-learning/

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Process big data using Hadoop framework
CO2	Build and apply linear and logistic regression models
CO3	Perform data analysis with machine learning methods and graphical data analysis

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)

CP1211	DESIGN AND ANALYSIS OF PARALLEL ALGORITHMS	L	T	P	C
		3	0	0	3

OBJECTIVES

- To understand different parallel structures and models of computation.
- To introduce the various classes of PRAM algorithms.
- To study MIMD algorithms for basic problems.
- Design and analyse parallel algorithms for matrix operations
- To learn about parallel computing models, design and analyze parallel algorithms Interconnection networks.

UNIT I	STRUCTURES AND ALGORITHMS FOR ARRAY PROCESSORS	9
Structures and algorithms for array processors: SIMD Array Processors, Interconnection networks, Parallel algorithms for Array processors. Multiprocessor architecture- Interconnection networks-multiprocessor control and algorithms- parallel algorithms for multiprocessors.		CO1
UNIT II	PRAM ALGORITHMS	9
Parallel Algorithms for Reduction – Prefix Sum – List Ranking –Preorder Tree Traversal – Searching -Sorting – Merging Two Sorted Lists – Matrix Multiplication- Selection - broadcast-all sums- parallel selection. Searching a random sequence, sorted sequence on PRAM models		CO2
UNIT III	MIMD	9
Merging - A network for merging - merging on PRAM models. Sorting on a linear array, EREW, CREW and CRCW SIMD models, MIMD Enumeration sort.		CO3
UNIT IV	MATRIX OPERATIONS	9
Matrix operations- Transposition, Matrix by matrix multiplication, matrix by vector multiplication. Numerical problems- solving systems of linear equations, finding roots of non-linear equations on PRAM models.		CO4
UNIT V	GRAPHS	9
Graphs - Connected components- dense graphs- sparse graphs. Minimum spanning tree-Solli's algorithm, Disconnected components, Ear decomposition, Directed graphs.		CO5
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Michael J. Quinn, "Parallel Computing: Theory & Practice", Tata McGraw Hill Edition, Second edition, 2017.
2. Ellis Horowitz, Sartaj Sahni and Sanguthevar Rajasekaran, "Fundamentals of Computer Algorithms", University press, Second edition , 2011
3. V Rajaraman, C Siva Ram Murthy," Parallel computers- Architecture and Programming ", PHI learning, 2016.

REFERENCE BOOKS
1. Kai Wang and Briggs, "Computer Architecture and Parallel Processing", McGraw Hill, 1985. 2. S. G. Akl, "Designa and Analysis of Parallel Algorithms", Prentice Hall Inc., 1992. 3. Joseph Jaja, " An Introduction to parallel Algorithms", Addison Wesley, 1992.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Develop structures and algorithms for standard problems and applications.
CO2	Analyse efficiency of different parallel algorithms
CO3	Develop parallel algorithms for standard problems and applications.
CO4	Understand matrix operations in parallel algorithms
CO5	To enable the student to design and analyse parallel algorithms

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

CO4	3	3	3	2	2	1	1	2	2	1	1	3	3	3	2
CO5	3	3	3	1	2	1	1	2	2	1	1	2	3	3	2

CP1212	OPEN SOURCE PROGRAMING	L	T	P	C
		3	0	0	3

OBJECTIVES

- ❖ Understand the difference between open-source programming and familiarity with Linux operating system.
- ❖ To build applications based on Open-Source web technology like PHP
- ❖ To understand web database applications
- ❖ Understanding and development of web applications using open source web technologies like MySql, PERL, TCL, Python.

UNIT I	INTRODUCTION	9
Introduction to open source programming languages, advantages and drawbacks of open source programming, threats and vulnerabilities in open source languages, Operating System – Ubuntu Linux – Introduction to shell programming.		**CO1**
UNIT II	**PHP**	**9**
PHP Language Basics, Functions - calling a function, variable function, and anonymous function, Strings - cleaning, encoding and escaping, and comparing strings, Arrays – storing data in arrays, extracting multiple values, traversing, and sorting arrays, Objects – creation, introspection, and serialization, Web Techniques – processing forms and maintaining state.		**CO2**
UNIT III	**WEB DATABASE APPLICATIONS**	**9**
Three-tier architecture, Introduction to Object oriented programming with PHP 5, Database basics, MYSQL - querying web databases, writing to web databases, validation with Javascript, Form based authentication, protecting data on the web.		**CO3**
UNIT IV	**MSQL,PERL, TCL, AND PYTHON**	**9**
MySQL - MySQL Functions - Inserting Records Selecting Records - Deleting Records - Update Records –PERL: Numbers and Strings, Control Statements, Lists and Arrays, Files, Pattern matching, Hashes, Functions. TCL: Introduction to TCL/TK, Python: Introduction to Python.		**CO4**
UNIT V	**SECURITY IN WEB APPLICATIONS**	**9**
Recognizing web application security threats, Code Grinder, Building functional and secure web applications, Security problems with Javascript, vulnerable GCI scripts, Code Auditing and Reverse Engineering, types of security used in applications.		**CO5**
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Kevin Tatroe, Peter MacIntyre, Rasmus Lerdorf, “Programming PHP”, O’Reilly Media, 2012.
2. Michael Cross, “Developer’s Guide to Web Application Security”, Syngress Publishers, 2007
3. Hugh E. Williams, David Lane, “Web Database applications with PHP and MYSQL”, Second Edition, O’Reilly Media, 2004.

REFERENCE BOOKS

1. Tom Christiansen, Brian D Foy, Larry Wall, Jon Orwant, “Programming Perl”, Fourth Edition, O’Reilly Media, 2012.
2. Mark Lutz, “Programming Python”, Fourth Edition, O’Reilly Media, 2010.
3. Online Tutorials and Recent IEEE/ACM Journal Papers

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Understand and use the concepts of open-source programming
CO2	Usage of PHP in web applications
CO3	Develop codes in open-source web applications
CO4	Usage of open-source languages like MYSQL, PERL, TCL and Python
CO5	Understand the risks associated with the open-source codes and write secure CGI scripts.

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

CO2	2	2	2	1	3	1	1	2	2	1	1	2	3	3	2
CO3	1	3	3	2	1	1	1	1	2	1	1	2	3	3	2
CO4	1	2	2	2	2	1	1	2	2	1	1	3	3	3	2
CO5	1	1	3	3	2	1	1	2	2	1	1	2	3	3	2

CP1213	PRINCIPLES OF CRYPTOGRAPHY	L	T	P	C
		3	0	0	3

OBJECTIVES

- To provide deeper understanding into cryptography, its application to network security, threats / vulnerabilities to networks and countermeasures.
- To explain various approaches to Encryption techniques, strengths of Traffic Confidentiality, Message Authentication Codes.
- To familiarize Digital Signature Standard and provide solutions for their issues.
- To familiarize with cryptographic techniques for secure (confidential) communication of two parties over an insecure (public) channel; verification of the authenticity of the source of a message.

UNIT I	**INTRODUCTION**	**9**
Security trends, The OSI Security Architecture, Security Attacks, Security Services and Security Mechanisms, A model for Network security. CLASSICAL ENCRYPTION TECHNIQUES: Symmetric Cipher Modes, Substitute Techniques, Transposition Techniques, Rotor Machines, Stenography.		**CO1**
UNIT II	**BLOCK CIPHER AND DATA ENCRYPTION STANDARDS**	**9**
Block Cipher Principles, Data Encryption Standards, the Strength of DES, Differential and Linear Crypt Analysis, Block Cipher Design Principles. ADVANCED ENCRYPTION STANDARDS: Evaluation Criteria for AES, the AES Cipher. SYMMETRIC CIPHERS: Multiple Encryption, Triple DES, Block Cipher Modes of Operation, Stream Cipher and RC4.		**CO2**
UNIT III	**PUBLIC KEY CRYPTOGRAPHY AND RSA**	**9**
Principles Public key crypto Systems, Diffie Hellman Key Exchange, the RSA algorithm, Key Management, , Elliptic Curve Arithmetic, Elliptic Curve Cryptography. MESSAGE AUTHENTICATION AND HASH FUNCTIONS: Authentication Requirement, Authentication Function, Message Authentication Code, Hash Function, Security of Hash Function and MACs HASH AND MAC ALGORITHM: Secure Hash Algorithm, Whirlpool, HMAC, CMAC.DIGITAL SIGNATURE: Digital Signature, Authentication Protocol, Digital Signature Standard.		**CO3**
UNIT IV	**AUTHENTICATION APPLICATION**	**9**
Kerberos, X.509 Authentication Service, Public Key Infrastructure. EMAIL SECURITY: Pretty Good Privacy (PGP) and S/MIME.IP SECURITY: Overview, IP Security Architecture, Authentication Header, Encapsulating Security Payload, Combining Security Associations and Key Management.		**CO4**
UNIT V	**WEB SECURITY**	**9**
Requirements, Secure Socket Layer (SSL) and Transport Layer Security (TLS), Secure Electronic Transaction (SET), Intruders, Viruses and related threats. FIREWALL: Firewall Design principles, Trusted Systems.		**CO5**
		TOTAL : 45 PERIODS

TEXT BOOKS
1. William Stallings (2006), Cryptography and Network Security: Principles and Practice, 4th edition, Pearson Education, India. 2. William Stallings (2000), Network Security Essentials (Applications and Standards), Pearson Education, India.
REFERENCE BOOKS
1. Charlie Kaufman (2002), Network Security: Private Communication in a Public World, 2nd edition, Prentice Hall of India, New Delhi. 2. Atul Kahate (2008), Cryptography and Network Security, 2nd edition, Tata McGraw-Hill, India 3. Robert Bragg, Mark Rhodes (2004), Network Security: The complete reference, Tata McGraw-Hill, India

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Understand security trends and classical cryptography methods.
CO2	Understand Block cipher and encryption standards
CO3	Simulate with RSA and public key cryptography
CO4	Usage of Authentication methods
CO5	Develop web security principles as security measures,

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

CP1214	COMPUTER GRAPHICS AND IMAGE PROCESSING	L	T	P	C
		3	0	0	3

OBJECTIVES

- To understand basic algorithms for computer graphics and image processing.
- To understand various filters, Point processing, and Arithmetic operations in image processing.
- To understand different applications of graphics and image processing.

UNIT I	**GRAPHICS SYSTEMS AND GRAPHICAL USER INTERFACE**	**9**
Pixel, Resolution, Video display devices - Types – Graphical devices – Direct screen interaction – Logical input function –GKS. User dialogue – Interactive picture construction techniques.		**CO1**
UNIT II	**GEOMETRIC DISPLAY PRIMITIVES AND ATTRIBUTES**	**9**
Geometric display primitives: Points, Lines and Polygons. Point display method – Line drawing: DDA 2D Transformations and Viewing: Transformations - types – matrix representation – Concatenation - Scaling, Rotation, Translation, Shearing, Mirroring. Homogeneous coordinates – Window to view port transformations. Windowing and Clipping: Point, Lines, Polygons - boundary intersection methods.		**CO2**
UNIT III	**DIGITAL IMAGE FUNDAMENTALS**	**9**
Image Formation and types – Basic geometric transformations – Fourier Transforms – Walsh – Hadamard – Discrete Cosine – Hotelling Transforms.		**CO3**
UNIT IV	**IMAGE ENHANCEMENT AND RESTORATION**	**9**
Histogram Modification Techniques – Image Smoothening – Image Sharpening – Image Restoration – Degradation Model – Noise Models – Spatial Filtering – Frequency Domain Filtering.		**CO4**
UNIT V	**IMAGE SEGMENTATION AND RECOGNITION**	**9**
Detection of Discontinuities – Edge Linking and Boundary Detection – Thresholding – Region Based Segmentation – Morphology operations. Pattern classification - Clustering and Matching - Knowledge representation and use for scene analysis and image understanding (2D and 3D) - Object recognition and identification – Case study of various applications.		**CO5**
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Donald Hearn & M. Pauline Baker , and warren R. Carithers, “Computer Graphics”, Prentice-Hall of India, Fourth edition 2011. (UNIT I & II)
2. Rafael C. Gonzalez, Richard E. Woods, “Digital Image Processing”, Pearson Education, Third edition, 2011. (UNIT III, IV &V)

REFERENCE BOOKS

1. Newmann W.M. and Sproull R.F., "Principles of Interactive Computer Graphics", Tata McGraw-Hill, Second edition, 2008
2. Foley J.D., Van Dam A, Fiener S.K. and Hughes J.F., “Computer Graphics", Second edition, Pearson education, 2008.
3. Anil Jain K, “Fundamentals of Digital Image Processing”, Prentice-Hall of India, 2001.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Usage of Graphical systems and GUI
CO2	Develop simpler games using geometric display primitives
CO3	Usage of Digital Image fundamentals.
CO4	Usage off image enhancement and restoration in creation of Animation
CO5	Use image segmentation in pattern recognition applications

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)

CP1215	INTERNET OF THINGS		L	T	P	C
			3	0	0	3

OBJECTIVES

- ❖ To understand the fundamentals of Internet of Things
- ❖ To learn about the basics of IOT protocols
- ❖ To build a small low-cost embedded system using Raspberry Pi.
- ❖ To apply the concept of Internet of Things in the real-world scenario

UNIT I	INTRODUCTION TO IoT	9
Internet of Things - Physical Design- Logical Design- IoT Enabling Technologies - IoT Levels & Deployment Templates - Domain Specific IoTs - IoT and M2M - IoT System Management with NETCONF-YANG- IoT Platforms Design Methodology		CO1
UNIT II	**IoT ARCHITECTURE**	**9**
M2M high-level ETSI architecture - IETF architecture for IoT - OGC architecture - IoT reference model - Domain model - information model - functional model - communication model - IoT reference architecture		CO2
UNIT III	**IoT PROTOCOLS**	**9**
Protocol Standardization for IoT – Efforts – M2M and WSN Protocols – SCADA and RFID Protocols – Unified Data Standards – Protocols – IEEE 802.15.4 – BACNet Protocol – Modbus– Zigbee Architecture – Network layer – 6LowPAN - CoAP - Security		CO3
UNIT IV	**BUILDING IoT WITH RASPBERRY PI & ARDUINO**	**9**
Building IOT with RASPERRY PI- IoT Systems - Logical Design using Python – IoT Physical Devices & Endpoints - IoT Device -Building blocks -Raspberry Pi -Board - Linux on Raspberry Pi - Raspberry Pi Interfaces -Programming Raspberry Pi with Python - Other IoT Platforms - Arduino.		CO4
UNIT V	**CASE STUDIES AND REAL-WORLD APPLICATIONS**	**9**
Real world design constraints - Applications - Asset management, Industrial automation, smart grid, Commercial building automation, Smart cities - participatory sensing - Data Analytics for IoT – Software & Management Tools for IoT Cloud Storage Models & Communication APIs – Cloud for IoT - Amazon Web Services for IoT.		CO5
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Arshdeep Bahga, Vijay Madisetti, -Internet of Things – A hands-on approach‖, Universities Press, 2015
2. Dieter Uckelmann, Mark Harrison, Michahelles, Florian (Eds), -Architecting the Internet of Things‖, Springer, 2011.

REFERENCE BOOKS

1. Honbo Zhou, -The Internet of Things in the Cloud: A Middleware Perspective‖, CRC Press, 2012.
2. Jan Ho¨ ller, Vlasios Tsiatsis , Catherine Mulligan, Stamatis , Karnouskos, Stefan Avesand. David Boyle, "From Machine-to-Machine to the Internet of Things -Introduction to a New Age of Intelligence", Elsevier, 2014.
3. Olivier Hersent, David Boswarthick, Omar Elloumi , -The Internet of Things – Key applications and Protocols‖, Wiley, 2012

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Analyze various protocols for IoT
CO2	Develop web services to access/control IoT devices.
CO3	Design a portable IoT using Rasperry Pi
CO4	Deploy an IoT application and connect to the cloud.
CO5	Analyze applications of IoT in real time scenario

MAPPING OF COs WITH POs AND PSOs

CP1311	HUMAN COMPUTER INTERACTION	L	T	P	C
		3	0	0	3

OBJECTIVES

- To know how to analyze and consider user's need in the interaction system
- To understand various interaction design techniques and models
- To understand the theory and framework of HCI
- Understand and analyze the cognitive aspects of human – machine interaction

UNIT I	**INTRODUCTION**	**9**
Foundation – Human – Computer – Interaction – Paradigms – What is HCI – Components – Cognitive Framework – Perception and Representation – Attention and Memory Constraint – Knowledge and Mental Model – Interface Metaphors – Input – Output		**CO1**
UNIT II	**DESIGN PROCESS**	**9**
Interaction Styles – Interaction Design Basics – HCI in the Software Process – Design Rules - Designing Windowing Systems - User Support and On-Line Information - Designing For Collaborative Work and Virtual Environments - Principles and User-Centered Design - Methods for User-Centered Design		**CO2**
UNIT III	**IMPLEMENTATION AND EVALUATION PROCESS**	**9**
Implementation issues – Implementation Support - Evaluation techniques – Universal Design – User Support		**CO3**
UNIT IV	**MODELS**	**9**
Cognitive models – Communication and collaboration models: Models of the system – Models of the System – Modeling Rich Interaction.		**CO4**
UNIT V	**APPLICATIONS**	**9**
Socio – organization issues and stakeholder requirements - Ubiquitous Computing - Context – aware User Interfaces - Hypertext, multimedia and the World Wide Web		**CO5**
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Alan Dix, Janet Finlay, Gregory D.Abowd, Russell Beale, "Human Computer Interaction", Third Edition, Pearson Education, 2004
2. Dix, Finlay, Abowd and Beale. "Human – Computer Interaction", Second edition, Prentice Hall,1998.

REFERENCE BOOKS

1. J. Preece, Y. Rogers, H. Sharp, D. Benyon, S. Holland and T. Carey. "Human – Computer Interaction", Addison Wesley, 1994.
2. John M.Carrol, "Human Computer Interaction in the New Millenium", Pearson Education, 2002.

COURSE OUTCOMES **Upon completion of the course, students will be able to**	
CO1	To develop good design for human machine interaction syste
CO2	Analyze the user's need in interaction system
CO3	To design new interaction model to satisfy all types of customers
CO4	Evaluate the usability and effectiveness of various products
CO5	To know how to apply interaction techniques for systems

MAPPING OF COs WITH POs AND PSOs

CP1312	IMAGING AND MULTIMEDIA SYSTEMS	L	T	P	C
		3	0	0	3

OBJECTIVES

- To understand the basics of image processing and image security techniques
- To study various compression and file formats used in imaging and multimedia systems
- To analyse different media and design issues related to multimedia systems

UNIT I	INTRODUCTION	9
Introduction to Image Processing: Steps in Image Processing Systems –Image Acquisition – Sampling and Quantization – Pixel Relationships – Colour Fundamentals and Models. Introduction to Multimedia: Multimedia Elements – Multimedia applications – Multimedia System Architecture – Evolving technologies for Multimedia – Defining objects for Multimedia systems – Multimedia Data interface standards – Multimedia Databases		CO1
UNIT II	**COMPRESSION AND FILE FORMATS**	**9**
Compression and Decompression: Need for Data Compression – Types of Compression – Binary Image Compression Schemes – Image Compression – Video Compression – Audio Compression. Data and File Format Standards: Rich Text Format – TIFF File Format – Resource Interface File Format – MIDI File Format - JPEG DIB File Format – AVI Indeo File Format – MPEG Standards –TWAIN.		CO2
UNIT III	**IMAGE COMPUTING AND SECURITY**	**9**
Image computing: The basics of processing 2D images- Thresholding -Convolution-Edge Detection-Mathematical Morphology and Shape Descriptors-Noise Reduction- Image Fusion. Image Security: Image Forensics - Steganography -Image Cryptography Techniques-Chaos based and Non-Chaos based methods.		CO3
UNIT IV	**I/O TECHNOLOGIES**	**9**
Input and Output Technologies: Multimedia I/O Technologies: Image Scanners – Digital Voice and Audio – Digital Camera – Video Images and Animation – Full Motion Video -Video Motion Analysis.		CO4
UNIT V	**APPLICATION DESIGN**	**9**
Multimedia Application Classes – Types of Multimedia Systems – Virtual Reality – Components of Multimedia Systems -Multimedia Authoring Systems – Multimedia Authoring Tools - User Interface Design- Mobile Messaging – Hypermedia Message Components -Hypermedia Linking and embedding.		CO5
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Rafael C Gonzalez, Richard E Woods 2nd Edition, Digital Image Processing - Pearson Education, 2011.
2. Ralf Steinmetz, Klara Steinmetz, “Multimedia Computing, Communications & Applications”, Pearson education, 2009.

REFERENCE BOOKS
1. A.K. Jain, Fundamentals of Digital Image Processing ,PHI, New Delhi, 2001. 2. William K Pratt, Digital Image Processing, John Willey , 2012. 3. Prabat K Andleigh and Kiran Thakrar, “Multimedia Systems and Design”, Prentice Hall India, 2007,New Delhi. 4. Tay Vaughan, “Multimedia Making It Work”, McGraw Hill, 2011. 5. Parekh R “Principles of Multimedia” Tata McGraw-Hill, 2006.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Know to basics of image processing Systems
CO2	Technics to develop new compression standard
CO3	Understand image computing and secuity
CO4	Acquire skill set to handle all multimedia components efficient
CO5	Develop Integrated and Collaborative multimedia system

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	2	2	2	1	1	2	1	2	2	1	1	2	3	3	2
CO2	2	2	2	1	1	2	2	2	2	1	1	2	3	3	2
CO3	2	2	2	1	1	2	1	1	2	1	1	2	3	3	2
CO4	2	2	2	2	1	2	2	2	2	1	1	3	3	3	2
CO5	2	2	2	2	1	2	1	2	2	1	1	2	3	3	2

CP1313	AGENT BASED INTELLIGENT SYSTEMS	L	T	P	C
		3	0	0	3

OBJECTIVES

- To introduce the basics of Problem-Solving Agents.
- To study the concepts of Knowledge representation.
- To learn the planning techniques.
- To enable the students to know uncertainty techniques to support real-time applications
- To understand the knowledge of higher-level agents

UNIT I	**INTRODUCTION**	**9**
Definitions - Foundations - History - Intelligent Agents-Problem Solving-Searching - Heuristics - Constraint Satisfaction Problems - Game playing.		**CO1**
UNIT II	**KNOWLEDGE REPRESENTATION AND REASONING**	**9**
Logical Agents-First order logic-First Order Inference-Unification-Chaining- Resolution Strategies-Knowledge Representation-Objects-Actions-Events		**CO2**
UNIT III	**PLANNING AGENTS**	**9**
Logical Agents-First order logic-First Order Inference-Unification-Chaining- Resolution Strategies-Knowledge Representation-Objects-Actions-Events		**CO3**
UNIT IV	**AGENTS AND UNCERTAINITY**	**9**
Acting under uncertainty – Probability Notation-Bayes Rule and use - Bayesian Networks-Other Approaches-Time and Uncertainty-Temporal Models- Utility Theory - Decision Network – Complex Decisions.		**CO4**
UNIT V	**HIGHER LEVEL AGENTS**	**9**
Knowledge in Learning-Relevance Information-Statistical Learning Methods-Reinforcement Learning-Communication-Formal Grammar-Augmented Grammars-Future of AI.		**CO5**
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Stuart Russell and Peter Norvig, "Artificial Intelligence - A Modern Approach",2nd Edition, Prentice Hall, 2002

REFERENCE BOOKS

1. Michael Wooldridge, "An Introduction to Multi Agent System", John Wiley, 2002.
2. Patrick Henry Winston, Artificial Intelligence, 3rd Edition, AW, 1999.
3. Nils.J.Nilsson, Principles of Artificial Intelligence, Narosa Publishing House, 1992.

COURSE OUTCOMES **Upon completion of the course, students will be able to**	
CO1	Understand basics of intelligent agents.
CO2	Represent knowledge and implement reasoning techniques.
CO3	Understand various categories of multi agents.
CO4	Explore the deep learning applications
CO5	Analyze optimization and generalization in Higher Level Agents

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	2	2	2	1	2	3	1	2	2	1	1	2	3	3	2

CO3	2	2	2	1	2	3	1	1	2	1	1	2	3	3	2
CO4	2	2	2	1	2	2	2	2	2	1	1	3	3	3	2
CO5	2	2	2	1	2	2	1	2	2	1	1	2	3	3	2

CP1314	DEEP LEARNING	L	T	P	C
		3	0	0	3

OBJECTIVES

- To present the mathematical, statistical and computational challenges of building neural networks
- To study the concepts of deep learning
- To introduce dimensionality reduction techniques
- To enable the students to know deep learning techniques to support real-time applications
- To examine the case studies of deep learning techniques

UNIT I	INTRODUCTION	9
Introduction to machine learning- Linear models (SVMs and Perceptron, logistic regression)- Intro to Neural Nets: What a shallow network computes- Training a network: loss functions, back propagation and stochastic gradient descent- Neural networks as universal function approximates		**CO1**
UNIT II	**DEEP NETWORKS**	**9**
History of Deep Learning- A Probabilistic Theory of Deep Learning- Back propagation and regularization, batch normalization- VC Dimension and Neural Nets-Deep Vs Shallow Networks Convolutional Networks- Generative Adversarial Networks (GAN), Semi-supervised Learning		**CO2**
UNIT III	**DIMENTIONALITY REDUCTION**	**9**
Linear (PCA, LDA) and manifolds, metric learning - Auto encoders and dimensionality reduction in networks - Introduction to Convnet - Architectures – AlexNet, VGG, Inception, ResNet - Training a Convnet: weights initialization, batch normalization, hyperparameter optimization.		**CO3**
UNIT IV	**OPTIMIZATION AND GENERALIZATION**	**9**
Optimization in deep learning– Non-convex optimization for deep networks- Stochastic Optimization Generalization in neural networks- Spatial Transformer Networks- Recurrent networks, LSTM - Recurrent Neural Network Language Models- Word-Level RNNs & Deep Reinforcement Learning - Computational & Artificial Neuroscience		**CO4**
UNIT V	**CASE STUDY AND APPLICATIONS**	**9**
Imagenet- Detection-Audio WaveNet-Natural Language Processing Word2Vec - Joint Detection Bioinformatics- Face Recognition- Scene Understanding- Gathering Image Captions		**CO5**

TOTAL : 45 PERIODS

TEXT BOOKS

1. Cosma Rohilla Shalizi, Advanced Data Analysis from an Elementary Point of View, 2015.
2. Deng & Yu, Deep Learning: Methods and Applications, Now Publishers, 2013.

REFERENCE BOOKS

1. Ian Goodfellow, Yoshua Bengio, Aaron Courville, Deep Learning, MIT Press, 2016.
2. Michael Nielsen, Neural Networks and Deep Learning, Determination Press, 2015.

COURSE OUTCOMES **Upon completion of the course, students will be able to**	
CO1	Understand basics of deep learning
CO2	Implement various deep learning models
CO3	Realign high dimensional data using reduction techniques
CO4	Analyze optimization and generalization in deep learning
CO5	Explore the deep learning applications

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	3	3	3	2	2	3	1	2	2	1	1	2	3	3	2
CO2	3	3	3	1	3	2	2	2	2	1	1	2	3	3	2
CO3	3	3	3	2	1	3	1	1	2	1	1	2	3	3	2
CO4	3	3	3	2	2	2	2	2	2	1	1	3	3	3	2
CO5	3	3	3	3	2	2	1	2	2	1	1	2	3	3	2

CP1315	INFORMATION RETRIEVAL TECHNIQUES	L	T	P	C
		3	0	0	3

OBJECTIVES

- To understand the basics of information retrieval with pertinence to modelling, query operations and indexing
- To get an understanding of machine learning techniques for text classification and clustering.
- To understand the various applications of information retrieval giving emphasis to multimedia IR, web search
- To understand the concepts of digital libraries

UNIT I	**INTRODUCTION: MOTIVATION**	**9**
Basic Concepts – Practical Issues - Retrieval Process – Architecture - Boolean Retrieval – Retrieval Evaluation – Open-Source IR Systems–History of Web Search – Web Characteristics– The impact of the web on IR —IR Versus Web Search–Components of a Search engine		**CO1**
UNIT II	**MODELING**	**9**
Taxonomy and Characterization of IR Models – Boolean Model – Vector Model - Term Weighting – Scoring and Ranking –Language Models – Set Theoretic Models - Probabilistic Models – Algebraic Models – Structured Text Retrieval Models – Models for Browsing.		**CO2**
UNIT III	**INDEXING**	**9**
Static and Dynamic Inverted Indices – Index Construction and Index Compression. Searching - Sequential Searching and Pattern Matching. Query Operations -Query Languages – Query Processing - Relevance Feedback and Query Expansion - Automatic Local and Global Analysis – Measuring Effectiveness and Efficiency		**CO3**
UNIT IV	**CLASSIFICATION AND CLUSTERING**	**9**
Text Classification and Naïve Bayes – Vector Space Classification – Support vector machines and Machine learning on documents. Flat Clustering – Hierarchical Clustering – Matrix decompositions and latent semantic indexing – Fusion and Meta learning		**CO4**
UNIT V	**SEARCHING THE WEB**	**9**
Searching the Web –Structure of the Web –IR and web search – Static and Dynamic Ranking – Web Crawling and Indexing – Link Analysis - XML Retrieval Multimedia IR: Models and Languages – Indexing and Searching Parallel and Distributed IR – Digital Libraries		**CO5**
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Christopher D. Manning, Prabhakar Raghavan, Hinrich Schutze, “Introduction to Information Retrieval”, Cambridge University Press, First South Asian Edition, 2008.
2. Ricardo Baeza – Yates, Berthier Ribeiro – Neto, “Modern Information Retrieval: The concepts and Technology behind Search” (ACM Press Books), Second Edition, 2011.

REFERENCE BOOKS

1. Stefan Buttcher, Charles L. A. Clarke, Gordon V. Cormack, “Information Retrieval Implementing and Evaluating Search Engines”, The MIT Press, Cambridge, Massachusetts London, England, 2010

COURSE OUTCOMES Upon completion of the course, students will be able to	
CO1	Build an Information Retrieval system using the available tool
CO2	Identify and design the various components of an Information Retrieval system
CO3	Apply various indexing techniques in information retrieval.
CO4	Apply machine learning techniques to text classification and clustering which is used for efficient Information Retrieval
CO5	Design an efficient search engine and analyze the Web content structure

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	3	3	3	1	2	3	1	2	2	1	1	2	3	3	2
CO2	3	3	2	1	3	2	2	2	2	1	1	2	3	3	2
CO3	3	3	3	1	1	3	1	1	2	1	1	2	3	3	2
CO4	3	3	2	1	2	2	2	2	2	1	1	3	3	3	2
CO5	3	3	3	1	2	2	1	2	2	1	1	2	3	3	2

CP1321	BLOCKCHAIN TECHNOLOGIES		L	T	P	C
			3	0	0	3

OBJECTIVES

- ❖ Understand how blockchain systems (mainly Bitcoin and Ethereum) work
- ❖ To securely interact with them,
- ❖ Design, build, and deploy smart contracts and distributed applications,
- ❖ Integrate ideas from blockchain technology into their own projects

UNIT I	BASICS	9
Distributed Database, Two General Problem, Byzantine General problem and Fault Tolerance, Hadoop Distributed File System, Distributed Hash Table, ASIC resistance, Turing Complete. Cryptography: Hash function, Digital Signature - ECDSA, Memory Hard Algorithm, Zero Knowledge Proof.		**CO1**
UNIT II	**BLOCKCHAIN**	**9**
Introduction, Advantage over conventional distributed database, Blockchain Network, Mining Mechanism, Distributed Consensus, Merkle Patricia Tree, Gas Limit, Transactions and Fee, Anonymity, Reward, Chain Policy, Life of Blockchain application, Soft & Hard Fork, Private and Public blockchain.		**CO2**
UNIT III	**DISTRIBUTED CONSENSUS**	**9**
Nakamoto consensus, Proof of Work, Proof of Stake, Proof of Burn, Difficulty Level, Sybil Attack, Energy utilization and alternate.		**CO3**
UNIT IV	**CRYPTOCURRENCY**	**9**
History, Distributed Ledger, Bitcoin protocols - Mining strategy and rewards, Ethereum - Construction, DAO, Smart Contract, GHOST, Vulnerability, Attacks, Sidechain, Namecoin		**CO4**
UNIT V	**CRYPTOCURRENCY REGULATION**	**9**
Stakeholders, Roots of Bit coin, Legal Aspects-Crypto currency Exchange, Black Market and Global Economy. Applications: Internet of Things, Medical Record Management System, Domain Name Service and future of Blockchain.		**CO5**

TOTAL : 45 PERIODS

TEXT BOOKS

1. Arvind Narayanan, Joseph Bonneau, Edward Felten, Andrew Miller and Steven Goldfeder, Bitcoin and Cryptocurrency Technologies: A Comprehensive Introduction, Princeton University Press (July 19, 2016).

REFERENCE BOOKS

1. Antonopoulos, Mastering Bitcoin: Unlocking Digital Cryptocurrencies
2. Satoshi Nakamoto, Bitcoin: A Peer-to-Peer Electronic Cash System
3. DR. Gavin Wood, “ETHEREUM: A Secure Decentralized Transaction Ledger,”Yellow paper.2014.
4. Nicola Atzei, Massimo Bartoletti, and Tiziana Cimoli, A survey of attacks on Ethereum smart contracts

COURSE OUTCOMES **Upon completion of the course, students will be able to**	
CO1	Design principles of Bitcoin and Ethereum. and Nakamoto consensus
CO2	Learn the simplified Payment Verification protocol and describe differences between proof-of-work and proof-of-stake consensus.
CO3	Interact with a blockchain system by sending and reading transactions.
CO4	Design, build, and deploy a distributed application.
CO4	Evaluate security, privacy, and efficiency of a given blockchain system.

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	1	1	3	2	3	3	1	2	2	1	1	2	3	3	2
CO2	1	1	2	1	3	2	2	2	2	1	1	2	3	3	2
CO3	1	1	3	2	3	3	1	1	2	1	1	2	3	3	2
CO4	1	1	2	2	3	2	2	2	2	1	1	3	3	3	2
CO5	1	1	3	3	3	2	1	2	2	1	1	2	3	3	2

CP1322	SPEECH PROCESSING AND SYNTHESIS	L	T	P	C
		3	0	0	3

OBJECTIVES

- To understand the mathematical foundations needed for speech processing
- To understand the basic concepts and algorithms of speech processing and synthesis
- To familiarize the students with the various speech signal representation, coding and recognition techniques
- To appreciate the use of speech processing in current technologies and to expose the students to real– world applications of speech processing

UNIT I	**SPEECH PROCESSING AND SYNTHESIS**	**9**
Introduction – Spoken Language Structure – Phonetics and Phonology – Syllables and Words – Syntax and Semantics – Probability, Statistics and Information Theory – Probability Theory – Estimation Theory – Significance Testing – Information Theory.		**CO1**
UNIT II	**SPEECH SIGNAL REPRESENTATIONS AND CODING**	**9**
Overview of Digital Signal Processing – Speech Signal Representations – Short time Fourier Analysis – Acoustic Model of Speech Production – Linear Predictive Coding – Cepstral Processing – Formant Frequencies – The Role of Pitch – Speech Coding – LPC Coder.		**CO2**
UNIT III	**SPEECH RECOGNITION**	**9**
Hidden Markov Models – Definition – Continuous and Discontinuous HMMs – Practical Issues – Limitations. Acoustic Modeling – Variability in the Speech Signal – Extracting Features – Phonetic Modeling – Adaptive Techniques – Confidence Measures – Other Techniques.		**CO3**
UNIT IV	**TEXT ANALYSIS**	**9**
Lexicon – Document Structure Detection – Text Normalization – Linguistic Analysis – Homograph Disambiguation – Morphological Analysis – Letter-to-sound Conversion – Prosody – Generation schematic – Speaking Style – Symbolic Prosody – Duration Assignment – Pitch Generation		**CO4**
UNIT V	**SPEECH SYNTHESIS**	**9**
Attributes – Formant Speech Synthesis – Concatenative Speech Synthesis – Prosodic Modification of Speech – Source-filter Models for Prosody Modification – Evaluation of TTS Systems.		**CO5**
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Joseph Mariani, ―Language and Speech Processing‖, Wiley, 2009.
2. Lawrence Rabiner and Biing-Hwang Juang, ―Fundamentals of Speech Recognition‖, Prentice Hall Signal Processing Series, 1993.

REFERENCE BOOKS

1. Sadaoki Furui, ―Digital Speech Processing: Synthesis, and Recognition, Second Edition, (Signal Processing and Communications)‖, Marcel Dekker, 2000.
2. Thomas F.Quatieri, ―Discrete-Time Speech Signal Processing‖, Pearson Education, 2002.
2. Xuedong Huang, Alex Acero, Hsiao-Wuen Hon, ―Spoken Language Processing – A guide to Theory, Algorithm and System Development‖, Prentice Hall PTR, 2001.

COURSE OUTCOMES **Upon completion of the course, students will be able to**	
CO1	Identify the various temporal, spectral and cepstral features required for identifying speech units – phoneme, syllable and word
CO2	Determine and apply Mel-frequency cepstral coefficients for processing all types of signals
CO3	Justify the use of formant and concatenative approaches to speech synthesis
CO4	Identify the apt approach of speech synthesis depending on the language to be processed
CO5	Determine the various encoding techniques for representing speech.

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	2	3	3	1	2	3	1	2	2	1	1	2	3	3	2
CO2	2	2	2	1	3	2	2	2	2	1	1	2	3	3	2
CO3	2	3	3	1	1	3	1	1	2	1	1	2	3	3	2
CO4	2	2	2	1	2	2	2	2	2	1	1	3	3	3	2
CO5	2	2	3	1	2	2	1	2	2	1	1	2	3	3	2

CP1323	ADVANCED SOFTWARE ENGINEERING	L	T	P	C
		3	0	0	3

OBJECTIVES

- To comprehend software development process and formal specifications
- To know advanced software development techniques and its application in real world context
- To understand how to manage complex projects
- To use advanced software testing techniques
- To understand process improvement and re -engineering

UNIT I	**SOFTWARE ENGINEERING PROCESS AND FORMAL METHODS**	**9**
Software Process models – Software Life Cycle – Development Activities – Managing Software Development – Unified Modeling Language – Requirement elicitation and specification – Understanding formal methods – motivation for formal methods – informal requirements to formal specifications – validating formal specifications – Overview of Z specification		**CO1**
UNIT II	**AGILE AND ASPECT ORIENTED SOFTWARE ENGINEERING**	**9**
Agile Development: Agility – agile principles- Extreme Programming -— Agile process models – Agile modeling – Agile unified Process – tools set for agile process – Complex Projects: SCRUM — basics, SCRUM Process, Development using SCRUM — Aspect Oriented Software Development: Aspect-Orientation in the Software Lifecycle – Generic Aspect-Oriented Design with UML – Modeling for Aspect-Oriented Software Development- Developing Secure Applications Through Aspect-Oriented Programming.		**CO2**
UNIT III	**COMPONENT-BASED SOFTWARE ENGINEERING**	**9**
Engineering of component-based systems, the CBSE process – Designing class based components – component design for Web Apps – Component-based development – Component-level design patterns – Classifying and retrieving components, and economics of CBSE.		**CO3**
UNIT IV	**ADVANCED SOFTWARE TESTING TECHNIQUES**	**9**
Software Review – Testing Strategies - Testing Conventional Applications – Testing Object- Oriented Applications – Testing Web Applications – Formal Modeling and verification – Metrics : Product, process, project, testing and quality metrics – Software Test Automation		**CO4**
UNIT V	**SOFTWARE PROCESS IMPROVEMENT AND REENGINEERING**	**9**
SPI process – CMMI – SPI frameworks – SPI Trends – Emerging trends ion Software Engineering – identifying soft trends – Technology directions – Tool-related trends – Software Maintenance and Reengineering: software reengineering, reverse reengineering, restructuring, forward reengineering.		**CO5**

TOTAL : 45 PERIODS

TEXT BOOKS

1. Roger S. Pressman, "Software Engineering — A Practioner‟s Approach", MCGraw Hill, 7thedition, 2009.
2. Ian Sommerville, "Software Engineering", Addison-Wesley 9th Edition, 2010.
3. Bernd Bruegge, Allen H. Dutoit, "Object-Oriented Software Engineering", Prentice Hall, Third Edition, 2009.

REFERENCE BOOKS

1. Robert E. Filman, Tzilla Elrad, Siobhán Clarke, Mehmet Aksit, "Aspect-Oriented Software Development", Addison-Wesley Professional, 2004.
2. Renu Rajni, Pradeep Oak, "Software Testing: Effective Methods, Tools and Techniques", TataMcGraw Hill, 2004.
3. Jonathan Bowen, "Formal Specification and Documentation using Z - A Case Study Approach",Intl Thomson Computer Press, 1996.
4. Antoni Diller, "Z: An Introduction to Formal Methods", Wiley, 1994.
5. James Shore, Shane Warden "The Art of Agile Development - Pragmatic guide to agile software development", O'Reilly Media, October 2007.
6. Ken Schwaber, "Agile Project Management with SCRUM", Microsoft Press, 2004.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Analytically apply general principles of software development in the development of complex software and software- intensive systems
CO2	Usage of Agile technology in SCRUM Development
CO3	Discuss methods and techniques for advanced software development and also to be able to use these in various development situations
CO4	Apply testing techniques for object-oriented software and web-based systems
CO5	Apply re-engineering concepts in software development process

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	2	3	3	2	2	3	1	2	2	1	1	2	3	3	2
CO2	2	2	2	1	3	2	2	2	2	1	1	2	3	3	2

CP1324	MOBILE NETWORK SYSTEMS	L	T	P	C
		3	0	0	3

OBJECTIVES

- To understand the fundamentals of Mobile communication systems.
- To understand the different multiplexing scheme.
- To understand the significance of different layers in mobile system.

UNIT I	INTRODUCTION	9
Introduction to wireless, mobile and cellular mobile systems- cellular mobile telephone systems, analog and digital cellular systems- frequency reuse, co-channel interference.		CO1
UNIT II	**MAC**	**9**
Medium access control - MAC, SDMA, FDMA, TDMA, CDMA, Hand offs and dropped calls- initiation of handoff, power difference, mobile assisted cell-site and Intersystem handoff.		CO2
UNIT III	**COMMUNICATION SYSTEMS**	**9**
Mobile Telecommunication standards, GSM, DECT, TETRA, IMT-2000, CTEO, satellite systems – GEO, LEO and MEO, and broadcast systems –Digital audio and video broadcasting, IEEE 802.11, HIPERLAN, Bluetooth, Wireless ATM, WATM services.		CO3
UNIT IV	**MOBILE NETWORK LAYER**	**9**
Network support for mobile systems – Mobile IP- IP packet delivery- Agent discovery-tunnelling and encapsulation, reverse tunnelling, IPV6, DHCP.		CO4
UNIT V	**MOBILE TRANSPORT LAYER**	**9**
Mobile transport and application layer protocol - Review of traditional TCP, fast retransmit/fast recovery, transmission/timeout freezing, file systems, WWW, WAP.		CO5

TOTAL : 45 PERIODS

TEXT BOOKS

1. Jochen Sciiiller, "Mobile Communications ", Pearson Education India, 2009.

REFERENCE BOOKS

1. Theodore S. Rappaport, “Wireless Communications: Principles and Practice”, 2/e, Pearson Education, 2010.
2. William C.Y Lee, "Mobile Cellular Telecommunications ", McGraw Hill International Editions, 1995

COURSE OUTCOMES **Upon completion of the course, students will be able to**	
CO1	Understand the concepts of mobile and wireless communications.
CO2	Understand the concepts of MAC in mobile and wireless communication
CO3	Understand the concepts of Communication systems in mobile and wireless communications
CO4	Understand the concepts of packet delivery in mobile and wireless communications
CO5	Apply the knowledge gained in exploring, application and protocol development

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

CO2	2	2	2	1	3	2	2	2	2	1	1	2	3	3	2
CO3	2	2	2	2	1	3	1	1	2	1	1	2	3	3	2
CO4	2	2	2	2	2	2	2	2	2	1	1	3	3	3	2
CO5	2	2	2	3	2	2	1	2	2	1	1	2	3	3	2

CP1325	CYBER SECURITY	L	T	P	C
		3	0	0	3

OBJECTIVES

- ❖ To understand fundamentals of Hacking and Hackers process
- ❖ To learn finger printing services and system hacking.
- ❖ To understand malware threats and denial of service.
- ❖ To know webserver hacking and mobile device operation.
- ❖ To know about IDS, Honey bots and botnets.

UNIT I	**INTRODUCTION TO ETHICAL HACKING**	**9**
Security Fundamental, Security testing, Hacker and Cracker, Descriptions, Test Plans-keeping It legal, Ethical and Legality- The Attacker's Process, The Ethical Hacker's Process, Security and the Stack		**CO1**
UNIT II	**FOOTPRINTING AND SCANNING**	**9**
Information Gathering, Determining the Network Range, Identifying Active Machines, Finding Open Ports and Access Points, OS Fingerprinting Services, Mapping the Network Attack Surface -Enumeration, System Hacking		**CO2**
UNIT III	**MALWARE THREATS**	**9**
Viruses and Worms, Trojans, Covert Communication, Keystroke Logging and Spyware, Malware Counter measures- Sniffers, Session Hijacking, Denial of Service and Distributed Denial of Service		**CO3**
UNIT IV	**WEB SERVER HACKING**	**9**
Web Server Hacking, Web Application Hacking, Database Hacking- Wireless Technologies, Mobile Device Operation and Security, Wireless LANs.		**CO4**
UNIT V	**PHYSICAL SECURITY**	**9**
Physical Security, Social Engineering- Intrusion Detection Systems, Firewalls, Honeypots-Cloud Computing, Botnets		**CO5**

TOTAL : 45 PERIODS

TEXT BOOKS

1. Nancy R Mead,Carol C Woody,Cyber security Engineering,A practical approach for systems and software assurance,CRC press,2016.

REFERENCE BOOKS

1. Certified Ethical Hacker, Version 9, Second Edition, Michael Gregg, Pearson IT Certification
2. Hacking the Hacker, Roger Grimes, Wiley, Online ISBN:9781119396260, © 2017 by John Wiley & Sons, Inc.
3. The Unofficial Guide to Ethical Hacking, Ankit Fadia, Premier Press,2002

COURSE OUTCOMES **Upon completion of the course, students will be able to**	
CO1	Describe and understand the basics of the ethical hacking
CO2	Perform the foot printing and scanning - Demonstrate the techniques for system hacking
CO3	Characterize the malware and their attacks and detect and prevent them
CO4	Determine the signature of different attacks and prevent them
CO5	Detect and prevent the security attacks in different environments

MAPPING OF COs WITH POs AND PSOs

COs	**PROGRAM OUTCOMES (POs)**												**PROGRAM SPECIFIC OUTCOMES (PSOs)**		
	PO1	**PO2**	**PO3**	**PO4**	**PO5**	**PO6**	**PO7**	**PO8**	**PO9**	**PO10**	**PO11**	**PO12**	**PSO1**	**PSO2**	**PSO3**

CP1331	CLOUD COMPUTING	L	T	P	C
		3	0	0	3

OBJECTIVES

- To understand the concepts of virtualization and virtual machines
- To gain expertise in server, network and storage virtualization. To understand and deploy practical virtualization solutions and enterprise solutions
- To gain knowledge on the concept of Cloud architecture and virtualization support that is fundamental to cloud computing
- To understand the security issues in the grid and the cloud environment.
- To be able to know the insight on the programming model and set up a private cloud

UNIT I	VIRTUALIZATION	9
Basics of Virtual Machines - Process Virtual Machines – System Virtual Machines –Emulation – Interpretation – Binary Translation - Taxonomy of Virtual Machines. Virtualization – Management Virtualization –– Hardware Maximization – Architectures – Virtualization Management – Storage Virtualization – Network Virtualization.		CO1
UNIT II	**VIRTUALIZATION INFRASTRUCTURE**	**9**
Comprehensive Analysis – Resource Pool – Testing Environment –Server Virtualization – Virtual Workloads – Provision Virtual Machines – Desktop Virtualization – Application Virtualization - Implementation levels of virtualization – virtualization structure – virtualization of CPU, Memory and I/O devices – virtual clusters and Resource Management – Virtualization for data center automation.		CO2
UNIT III	**CLOUD PLATFORM ARCHITECTURE**	**9**
Cloud deployment models: public, private, hybrid, community – Categories of cloud computing: Everything as a service: Infrastructure, platform, software- A Generic Cloud Architecture Design – Layered cloud Architectural Development – Virtualization Support and Disaster Recovery –Architectural Design Challenges - Public Cloud Platforms: GAE,AWS – Inter-cloud Resource Management		CO3
UNIT IV	**CLOUD SECURITY**	**9**
Cloud Infrastructure security: network, host and application level – aspects of data security, provider data and its security, Identity and access management architecture, IAM practices in the cloud, SaaS, PaaS, IaaS availability in the cloud - Key privacy issues in the cloud –Cloud Security and Trust Management		CO4
UNIT V	**PROGRAMMING MODEL**	**9**
Introduction to Hadoop Framework - MapReduce, Input splitting, map and reduce functions, specifying input and output parameters, configuring and running a job –Developing Map Reduce Applications - Design of Hadoop file system –Setting up Hadoop Cluster - Cloud Software Environments -Eucalyptus, Open Nebula, Open Stack, Nimbus		CO5
		TOTAL : 45 PERIODS

TEXT BOOKS

1. John W.Rittinghouse and James F.Ransome, "Cloud Computing: Implementation, Management, and Security", CRC Press, 2010.
2. Kai Hwang, Geoffrey C Fox, Jack G Dongarra, "Distributed and Cloud Computing, From Parallel Processing to the Internet of Things", Morgan Kaufmann Publishers, 2012.
3. Tim Mather, Subra Kumaraswamy, and Shahed Latif ,"Cloud Security and Privacy", O'Reilly Media, Inc.,2009.

REFERENCE BOOKS

1. Danielle Ruest, Nelson Ruest, "Virtualization: A Beginner's Guide", McGraw-Hill Osborne Media, 2009.
2. Jim Smith, Ravi Nair , "Virtual Machines: Versatile Platforms for Systems and Processes", Elsevier/Morgan Kaufmann, 2005
3. Toby Velte, Anthony Velte, Robert Elsenpeter, "Cloud Computing, A Practical Approach", McGraw-Hill Osborne Media, 2009.
4. Tom White, "Hadoop: The Definitive Guide", Yahoo Press, 2012.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Employ the concepts of storage virtualization, network virtualization and its management
CO2	Apply the concept of virtualization in the cloud computing
CO3	Identify the architecture, infrastructure and delivery models of cloud computing
CO4	Develop services using Cloud computing
CO5	Apply the security models in the cloud environment

MAPPING OF COs WITH POs AND PSOs

CP1332	SOFTWARE ARCHITECTURE AND DESIGN PATTERNS	L	T	P	C
		3	0	0	3

OBJECTIVES

- Understand the creational and structural patterns.
- Be able to explain the role of analyzing architectures.
- Be capable of applying his knowledge to create an architecture for given application.
- Be able to identify different structural and behavioral patterns.
- To know the usage of design patterns by solving a case study

UNIT I	**ENVISIONING ARCHITECTURE**	**9**
.The Architecture Business Cycle, What is Software Architecture, Architectural patterns, reference models, reference architectures, architectural structures and views. Creating an Architecture- Quality Attributes, Achieving qualities, Architectural styles and patterns, designing the Architecture, Documenting software architectures, Reconstructing Software Architecture.		**CO1**
UNIT II	**ANALYZING ARCHITECTURES**	**9**
Architecture Evaluation, Architecture design decision making, ATAM, CBAM. Moving from one system to many: Software Product Lines, Building systems from off the shelf components, Software architecture in future.		**CO2**
UNIT III	**CREATIONAL AND STRUCTURAL PATTERNS**	**9**
Patterns: Pattern Description, Organizing catalogs, role in solving design problems ,Selection and usage. Creational and Structural patterns: Abstract factory, builder, factory method, prototype, singleton, adapter, bridge, composite, façade, flyweight, Proxy.		**CO3**
UNIT IV	**BEHAVIORAL PATTERNS**	**9**
Chain of responsibility, command, Interpreter, iterator, mediator, memento, observer, state, strategy, template method, visitor.		**CO4**
UNIT V	**CASE STUDIES**	**9**
A-7E – A case study in utilizing architectural structures, The World Wide Web - a case study in interoperability, Air Traffic Control – a case study in designing for high availability, Celsius Tech – a case study in product line development		**CO5**

TOTAL : 45 PERIODS

TEXT BOOKS

1. Len Bass,Paul Clements&Rick Kazman, Software Architecture in Practice, 2nd Edition, Pearson Education, 2003.
2. Erich Gamma, Design Patterns, 1st Edition, Pearson Education,1995
3. http://en.wikibooks.org/wiki/Introduction_to_Software_Engineering/Architecture/Design_Patterns.

REFERENCE BOOKS

1. Luke Hohmann , Beyond Software architecture, Addison wesley, 2003.
2. David M. Dikel, David Kane and James R. Wilson, Software architecture, 1st Edition, Prentice Hall,2001
4. F.Buschmann , Pattern Oriented Software Architecture, Wiley&Sons,1st Edition,2001

COURSE OUTCOMES **Upon completion of the course, students will be able to**	
CO1	Understand the architecture, creating it and moving from one to any, different structural patterns.
CO2	Analyze the architecture and build the system from the components.
CO3	Design creational and structural patterns.
CO4	Learn about behavioural patterns.
CO5	Do a case study in utilizing architectural structures.

MAPPING OF COs WITH POs AND PSOs

CP1333	BIG DATA MINING AND ANALYTICS	L	T	P	C
		3	0	0	3

OBJECTIVES

- To understand big data and data analytics lifecycle
- To learn Basic Data analytic methods using R
- To understand concepts in clustering and regression
- To learn classification techniques in text documents
- To Get a knowledge on advanced analytical methods, technology and tools

UNIT I	BIG DATA OVERVIEW	9
State of the practice in Analytics-Key roles for new big data ecosystem Data Analytics Lifecycle-Data analytics lifecycle overview- Discovery- Data Preparation-Model Planning-Model Building-Communicate Results operationalize		CO1
UNIT II	**INTRODUCTION TO R**	**9**
Exploratory Data Analytics-Statistical methods for evaluation Hadoop & Map Reduce framework for R, R with Relational Database Management Systems, R with Non-Relational (NoSQL) DBs		CO2
UNIT III	**CLUSTERING**	**9**
Overview of Clustering-K-means, Association Rules-Overview-Apriori Algorithm-Evaluation of candidate rules-An Example: Transactions in grocery Store-Validation and Testing-Diagnostics, Regression-Linear Regression-Logistic Regression-Reason to choose and Cautions-Additional Regression Models		CO3
UNIT IV	**CLASSIFICATION**	**9**
Decision Trees-Naïve Bayes-Diagnostics of Classifiers-Additional classification methods, Time series Analysis Overview of Time series analysis-ARIMA Model-Additional methods, Text Analysis-Text analysis steps-A text analysis Example-Collecting raw Text-Representing Text-Term Frequency—Inverse document frequency(TFIDF)-Categorizing documents by Topics-Determining Sentiments-Gaining insights		CO4
UNIT V	**ANALYTICS FOR UNSTRUCTURED DATA**	**9**
The Hadoop Ecosystem-NoSQL, In-Database Analytics-SQL Essentials-In-Database Text Analysis-Advanced SQL		CO5
		TOTAL : 45 PERIODS

TEXT BOOKS

1. EMC Education Services, “Data Science and Big Data Analytics: Discovering, Analyzing, Visualizing and Presenting Data”, Wiley publishers, 2015. .
2. Simon Walkowiak, “Big Data Analytics with R” PackT Publishers, 2016

REFERENCE BOOKS

1. Bart Baesens, “Analytics in a Big Data World: The Essential Guide to Data Science and its Applications”, Wiley Publishers, 2015.
3. Kim H. Pries and Robert Dunnigan, “Big Data Analytics: A Practical Guide for Managers” CRC Press, 2015

COURSE OUTCOMES **Upon completion of the course, students will be able to**	
CO1	Understand the big data concepts
CO2	Utilize and apply the Analytical methods, Technology and tools in the industry.
CO3	Apply the techniques of clustering in real time applications
CO4	Apply the concepts off classification to classify text documents.
CO5	Understand Hadoop ecosystem and apply to solve real-life problems

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)

CO4	2	2	2	1	2	1	2	2	2	1	1	3	3	3	2
CO5	2	2	2	1	2	1	1	2	2	1	1	2	3	3	2

CP1334	SOCIAL NETWORK ANALYSIS		L	T	P	C
			3	0	0	3

OBJECTIVES

- To understand the components of the social Network
- To model and visualize the social network
- To mine the users in the w4
- To understand the evolution of the social Network
- To know the applications in Real Time Systems

UNIT I	**INTRODUCTION**	**9**
Introduction to Web - Limitations of current Web – Development of Semantic Web – Emergence of the Social Web – Statistical Properties of Social Networks -Network analysis - Development of Social Network Analysis - Key concepts and measures in network analysis - Discussion networks - Blogs and online communities - Web-based networks		**CO1**
UNIT II	**MODELING AND VISUALIZATION MODELING AND VISUALIZATION**	**9**
Visualizing Online Social Networks - A Taxonomy of Visualizations - Graph Representation - Centrality- Clustering - Node-Edge Diagrams - Visualizing Social Networks with Matrix-Based Representations- Node-Link Diagrams - Hybrid Representations - Modelling and aggregating social network data – Random Walks and their Applications –Use of Hadoop and Map Reduce - Ontological representation of social individuals and relationships.		**CO2**
UNIT III	**MINING COMMUNITIES**	**9**
Aggregating and reasoning with social network data, Advanced Representations – Extracting evolution of Web Community from a Series of Web Archive - Detecting Communities in Social Networks - Evaluating Communities – Core Methods for Community Detection & Mining - Applications of Community Mining Algorithms - Node Classification in Social Networks.		**CO3**
UNIT IV	**EVOLUTION**	**9**
Evolution in Social Networks – Framework - Tracing Smoothly Evolving Communities - Models and Algorithms for Social Influence Analysis - Influence Related Statistics - Social Similarity and Influence - Influence Maximization in Viral Marketing - Algorithms and Systems for Expert Location in Social Networks - Expert Location without Graph Constraints - with Score Propagation – Expert Team Formation - Link Prediction in Social Networks - Feature based Link Prediction – Bayesian Probabilistic Models - Probabilistic Relational Models		**CO4**
UNIT V	**APPLICATIONS**	**9**
A Learning Based Approach for Real Time Emotion Classification of Tweets, A New Linguistic Approach to Assess the Opinion of Users in Social Network Environments, Explaining Scientific and Technical Emergence Forecasting, Social Network Analysis for Biometric Template Protection		**CO5**
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Ajith Abraham, Aboul Ella Hassanien, Václav Snášel, "Computational Social Network Analysis: Trends, Tools and Research Advances", Springer, 2012
2. Charu C. Aggarwal, "Social Network Data Analytics", Springer; 2014
3. Peter Mika, "Social networks and the Semantic Web", Springer, 2007.
4. Guandong Xu,Yanchun Zhang, and Lin Li, "Web Mining and Social Networking Techniques and Applications", Springer.

REFERENCE BOOKS

1. Borko Furht, “Handbook of Social Network Technologies and Applications”, Springer, 1st edition, 2011
2. Peter Mika, “Social Networks and the Semantic Web”, Springer, 1st edition, 2007.
3. Przemyslaw Kazienko, Nitesh Chawla,”Applications of Social Media and Social Network Analysis”, Springer,2015

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Work on the internals components of the social network
CO2	Model and visualize the social network
CO3	Mine the behavior of the users in the social network
CO4	Predict the possible next outcome of the social network
CO5	Apply social network in real time application.

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

CP1335	COGNITIVE SCIENCE	L	T	P	C
		3	0	0	3

OBJECTIVES

- To know the basic concepts, approaches and issues in the field of cognitive science
- To increase the awareness of the students to the questions raised in the disciplines of computer science, linguistics, philosophy and psychology;
- To focus on the interaction of these disciplines in approaching the study of the mind – brain language.
- Specialization on topics central to cognitive development such as the nature of mental representation, reasoning, perception, language use, learning as well as other cognitive processes of humans and other intelligent systems.
- To focus on memory and social cognition

UNIT I	INTRODUCTION TO COGNITIVE SCIENCE	9
Introduction to the study of cognitive sciences. A brief history of cognitive science. Methodological concerns in philosophy, artificial intelligence and psychology. Structure and constituents of the brain; Brief history of neuroscience; Mathematical models; Looking at brain signals		CO1
UNIT II	**REPRESENTATION OF SENSORY INFORMATION**	**9**
Processing of sensory information in the brain- Neural Network Models; Processing of sensory information in the brain; motor and sensory areas; Brain Imaging, fMRI, MEG, PET, EEG-Multisensory integration in cortex; information fusion; from sensation to cognition, cybernetics		CO2
UNIT III	**LANGUAGE AND LATERALIZATION**	**9**
Linguistic knowledge: Syntax, semantics, (and pragmatics); Generative linguistics; Brain and language; Language disorders; Lateralization; Cognitivist and emergent standpoints ; A robotic perspective		CO3
UNIT IV	**COGNITIVE DEVELOPMENT**	**9**
Introduction to Psychology- Attention and related concepts; Human visual attention; Computational models of attention; Applications of computational models-Learning: Categories and concepts; Concept learning; Logic ; Machine learning		CO4
UNIT V	**MEMORY AND SOCIAL COGNITION**	**9**
Constructing memories; Explicit vs. implicit memory; Information processing (three-boxes) model of memory; Sensory memory; Short term memory; Long term memory- Rationality; Bounded rationality; Prospect theory ; Heuristics and biases; Reasoning in computers- social cognition; Context and social judgment; Schemas; Social signals		CO5

TOTAL : 45 PERIODS

TEXT BOOKS

1. Gardner, The Mind's New Science, chapters 2,3,4. Gardner, Howard E. The mind's new science: A history of the cognitive revolution. Basic books, 2008.
2. Wallace, Mark T., and Barry E. Stein. "Sensory organization of the superior colliculus in cat and monkey." Progress in brain research 112 (1996): 301-311.
3. Fromkin, Rodman, and Hyams. An Introduction to Language, Boston, MA: Thomson Wadsworth, 9th edition, 2011.

REFERENCE BOOKS

1. "Language and the Brain", https://web.stanford.edu/~zwicky/language-and-the-brain-ch4-8.pdf
2. Simon, Bounded Rationality in Social Science: Today and Tomorrow, Mind & Society, 1, 2000, 25-39

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Apply the basics of Cognitive science.
CO2	Use the sensory information and neural network models in real time.
CO3	Apply Linguistic knowledge in terms of robots perspective
CO4	Learn the computational models
CO5	Apply the knowledge of Memory and Social cognition.

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)

OPEN ELECTIVE COURSES – I

OBY101	ESSENTIALS OF HAZARDOUS WASTE MANAGEMENT	L	T	P	C
		3	0	0	3

OBJECTIVES

- Understand the type, nature and treatment of hazardous wastes.

UNIT I	**INTRODUCTION**	**9**
Hazardous waste definition- Regulatory aspects of Hazardous Waste Management in India – Sources, characterization, categories - Analysis of hazardous waste -Physical and biological routes of transport of hazardous substances.		
UNIT II	**HAZARDOUS WASTES MANAGEMENT**	**9**
Handling, collection, storage and transport- TSDF concept -Hazardous waste treatment technologies-Physical, chemical and thermal treatment of hazardous waste–Solidification-Chemical fixation–Encapsulation-Pyrolysis and Incineration–Biological Treatment of Hazardous Waste, Hazardous waste landfills-Site selections-design and operation-HW reduction- Recycling and reuse–Hazardous Site remediation – onsite and offsite Techniques.		
UNIT III	**BIOMEDICAL WASTE MANAGEMENT**	**9**
Biomedical waste–Definition– Regulatory aspects of Biomedical Waste. Sources–Classification– Waste Handling and Collection–Segregation and labeling- Treatment – autoclaving, Incineration, Chemical Disinfection - ,disposal. Infection control Practices.		
UNIT IV	**RADIOACTIVE WASTE MANAGEMENT**	**9**
Radioactive waste: Definition–Measurement of Radiation -Sources-Effects -Low level and high level radioactive wastes-Transuranic Waste-and their management–Uranium Mine and Tailings, Characterization – Treatment and Control - Radiation standard by ICRP and AERB.		
UNIT V	**E-WASTE MANAGEMENT**	**9**
Regulatory aspects of E-I Waste management, Waste characteristics- Generation–- Collection - Material Composition-Transport– Treatment and disposal. Recycling and Recovery – intergraded e-waste management		

TOTAL : 45 PERIODS

TEXT BOOKS

1. Hazardous waste management Charles A.Wentz. Second edition 1995.McGraw Hill International.
2. Hazardous waste management Michael D. La Gerga, PhilipL Buckingham, Jeffrey C. Evans, Second edition 2010.Waveland Press.
3. Criteria for hazardous waste landfills–CPCBguidelines2000

REFERENCE BOOKS

1. Basic Hazardous waste management, "William C.Blackman.Jr", Third Edition, 2001, Lewis Publishers
2. Integrated solidwaste management George Techobanoglous, Hilary Theisen & Sammuel A.Vigil.
3. Criteria for hazardous waste landfills–CPCB guidelines 2000..
4. Standard handbook of Hazardous waste treatment and disposal by Harry M. Freeman, McGraw Hill 1997.
5. Management of Solid waste in developing countries by Frank Flint off, WH Original publication.

COURSE OUTCOMES **Upon completion of the course, students will be able to**	
CO1	To understand Hazardous Solid Waste
CO2	To introduce students to basic concepts of planning and management of hazardous waste management.
CO3	The content involves importance of necessity of hazardous waste management
CO4	To understand Physico-Chemical Treatment: Incineration
CO5	To understand the Hazard analysis.

OCP101	BUSINESS DATA ANALYTICS	L	T	P	C
		3	0	0	3

OBJECTIVES

- To understand the basics of business analytics and its life cycle.
- To gain knowledge about fundamental business analytics.
- To learn modeling for uncertainty and statistical inference.
- To understand analytics using Hadoop and Map Reduce frameworks.
- To acquire insight on other analytical frameworks.

UNIT I **OVERVIEW OF BUSINESS ANALYTICS** **9**

Introduction – Drivers for Business Analytics – Applications of Business Analytics: Marketing and Sales, Human Resource, Healthcare, Product Design, Service Design, Customer Service and Support – Skills Required for a Business Analyst – Framework for Business Analytics Life Cycle for Business Analytics Process.

Suggested Activities:

- Case studies on applications involving business analytics.
- Converting real–time decision–making problems into hypothesis.
- Group discussion on entrepreneurial opportunities in Business Analytics.

Suggested Evaluation Methods:

- Assignment on business scenario and business analytical life cycle process.
- Group presentation on big data applications with societal need.Quiz on case studies.

CO1

UNIT II **ESSENTIALS OF BUSINESS ANALYTICS** **9**

Descriptive Statistics – Using Data – Types of Data – Data Distribution Metrics: Frequency, Mean, Median, Mode, Range, Variance, Standard Deviation, Percentile, Quartile, Z–Score, Covariance, Correlation – Data Visualization: Tables, Charts, Line Charts, Bar and Column Chart, Bubble Chart, Heat Map – Data Dashboards.

Suggested Activities:

- Solve numerical problems on basic statistics.
- Explore chart wizard in MS Excel Case using sample real time data for data visualization.
- Use R tool for data visualization.

Suggested Evaluation Methods:

- Assignment on descriptive analytics using benchmark data. Quiz on data visualization for univariate, bivariate data.

UNIT III **MODELING UNCERTAINTY AND STATISTICAL INFERENCE** **9**

Modeling Uncertainty: Events and Probabilities – Conditional Probability – Random Variables – Discrete Probability Distributions – Continuous Probability Distribution – Statistical Inference: Data Sampling – Selecting a Sample – Point Estimation – Sampling Distributions – Interval Estimation – Hypothesis Testing.

Suggested Activities:

- Solving numerical problems in sampling, probability, probability distributions and
- Hypothesis testing.
- Converting real–time decision–making problems into hypothesis.

Suggested Evaluation Methods:

- Assignments on hypothesis testing.
- Group presentation on real time applications involving data sampling and hypothesis testing. Quizzes on topics like sampling and probability.

UNIT IV	ANALYTICS USING HADOOP AND MAPREDUCE FRAMEWORK	9

Introducing Hadoop – RDBMS versus Hadoop – Hadoop Overview – HDFS (Hadoop Distributed File System) – Processing Data with Hadoop – Introduction to MapReduce – Features of MapReduce – Algorithms Using Map–Reduce: Matrix–Vector Multiplication, Relational Algebra Operations, Grouping and Aggregation – Extensions to MapReduce.

Suggested Activities:

- Practical – Install and configure Hadoop.
- Practical – Use web–based tools to monitor Hadoop setup.
- Practical – Design and develop MapReduce tasks for word count, searching involving text corpus etc.

Suggested Evaluation Methods:

- Evaluation of the practical implementations.

Quizzes on topics like HDFS and extensions to MapReduce.

UNIT V	OTHER DATA ANALYTICAL FRAMEWORKS	9

Overview of Application development Languages for Hadoop – PigLatin – Hive – Hive Query Language (HQL) – Introduction to Pentaho, JAQL – Introduction to Apache: Sqoop, Drill and Spark, Cloudera Impala – Introduction to NoSQL Databases – Hbase and MongoDB.

Suggested Activities:

- Practical – Installation of NoSQL database like MongoDB.
- Practical – Demonstration on Sharding in MongoDB.
- Practical – Install and run Pig
- Practical – Write PigLatin scripts to sort, group, join, project, and filter data.
- Design and develop algorithms to be executed in MapReduce involving numerical methods for analytics.

Suggested Evaluation Methods:

Mini Project (Group) – Real time data collection, saving in NoSQL, implement analytical techniques using Map–Reduce Tasks and Result Projection

TOTAL : 45 PERIODS

REFERENCE BOOKS

7. Rui Miguel Forte, 'Mastering Predictive Analytics with R', Packt Publication, 2015.

COURSE OUTCOMES **Upon completion of the course, students will be able to**	
CO1	Identify the real–world business problems and model with analytical solutions.
CO2	Solve analytical problem with relevant mathematics background knowledge.
CO3	Convert any real–world decision–making problem to hypothesis and apply suitable statistical testing.
CO4	Write and demonstrate simple applications involving analytics using Hadoop and MapReduce
CO5	Use open–source frameworks for modeling and storing data and apply suitable visualization technique using R for visualizing voluminous data

MAPPING OF COs WITH POs AND PSOs

OEC101	NEXT GENERATION WIRELESS NETWORKS	L	T	P	C
		3	0	0	3

OBJECTIVES

- To know how Convergence of video/voice/data, high-performance wireless networks, mobile networking has been implemented for broad band applications
- To know about the broad landscape of emerging networking and inter-networking technologies

UNIT I	HETEROGENEOUS RADIO TECHNOLOGIES	9
Evolution of Wireless Networks - Wireless Local Area Networks - Public Wide-Area Wireless networks. Introduction to 1G/2G/3G/4G Terminology -Evolution of Public Mobile Services – First Wave of Mobile Data Services: Text-Based Instant Messaging - Second Wave of Mobile Data Services: Low Speed Mobile Internet Services - Current Wave of Mobile Data Services: High-Speed and Multimedia Mobile Internet Services - IP-Based Wireless Networks - 3GPP, 3GPP2.		
UNIT II	**WIRELESS IP NETWORK ARCHITECTURES**	**9**
3GPP Packet Data Networks - Network Architecture-3GPP2 Packet Data - MWIF All-IP Mobile Networks – Network Architectures - Access to MWIF Networks - Session Management.		
UNIT III	**IP MULTIMEDIA SUBSYSTEMS AND APPLICATION-LEVEL SIGNALING**	**9**
Signaling in IP Networks -Session Initiation Protocol (SIP) -Session Description Protocol (SDP)3GPP IP Multimedia Subsystem (IMS) - IMS Architecture - Mobile Station Addressing for Accessing the IMS - Reference Interfaces –Service Architecture - Registration with the IMS - Deregistration with the IMS -End-to-End Signalling Flows for Session Control- 3GPP2 IP Multimedia Subsystem (IMS).		
UNIT IV	**MOBILITY MANAGEMENT**	**9**
Basic Issues in Mobility Management - Mobility Management in IP Networks - Mobility Management in 3GPP Packet Networks -Mobility Management in 3GPP2 - Packet Data Networks – mobility Management in MWIF Networks - Comparison of Mobility Management in IP, 3GPP and 3GPP2 Networks.		
UNIT V	**QUALITY OF SERVICE**	**9**
Internet QoS - QoS Challenges in Wireless IP Networks - QoS in 3GPP - QoS in 3GPP2 - 3GPP2 QoS Architecture - 3GPP2 QoS Management -3GPP2 QoS Classes - QoS Attributes (QoS Profile) -Management of End-to-End IP QoS.		
		TOTAL : 45 PERIODS

REFERENCE BOOKS

1. Jyh-Cheng Chen and Tao Zhang, "IP-Based Next-Generation Wireless Networks Systems, Architectures, and Protocols," John Wiley & Sons, Inc. Publication, First Edition, 2008.
2. Crosspoint Boulevard, "Wireless and Mobile All-IP Networks," Wiley Publication, 2005.
3. Minoru Etoh, "Next Generation Mobile Systems3G and Beyond", Wiley Publications, First Edition, 2005.
4. SavoGlisic, "Advanced Wireless Communications 4G Technologies," Wiley Publications, First Edition,2009

COURSE OUTCOMES Upon completion of the course, students will be able to	
CO1	Analyze Packet Switching Services of the Next Generation wireless services
CO2	Explain the architectures of wireless IP network.
CO3	Evaluate the performance of Voice and data over Internet Protocol
CO4	Explain the Mobility management schemes of the Next Generation wireless services.
CO5	Evaluate integrated broadband access using telecommunications systems in terms of QoS.

COURSE OUTCOMES **Upon completion of the course, students will be able to**	
CO1	The student has the basic knowledge about historical development of optimization problems, formulation of the problem, classification and application to various engineering domain.
CO2	Ability to approach and solve the linear equations of operational research problems which relates to the real engineering business problem.
CO3	Ability to approach and solve the Non-linear equations of operational research problems which relates to the real engineering business problem.
CO4	Ability to use the various optimization techniques for solving the various experimental studies to obtain the optimum objective function value.
CO5	The student has the knowledge about various simulation techniques and knows to relate these techniques to various experimental studies to obtain the optimum objective function value.

OPE101	RENEWABLE SOURCES OF ELECTRICAL ENERGY	L	T	P	C
		3	0	0	3

OBJECTIVES

- To understand the energy scenario and various energy sources.
- To learn the solar photovoltaic and solar thermal systems.
- To impart knowledge on wind energy and bio-mass energy conversion systems.
- To provide knowledge about the Geothermal and Ocean energy conversion system.
- To design and implement hybrid energy conversion system.

UNIT I	**INTRODUCTION**	**9**
Renewable energy sources and its energy scenario - global and Indian; Environmental aspects and impacts of renewable energy generation on environment; Types of Renewable energy sources: solar - wind - Biomass - Ocean - Tidal - Geothermal and Fuel cell.		
UNIT II	**SOLAR ENERGY SYSTEMS**	**9**
Solar radiation at the earth's surface - solar radiation measurements - estimation of average solar radiation - Introduction to Solar photo-voltaic (PV) system and Solar - thermal system; Equivalent circuit of a solar cell, solar array and its sizing. Solar thermal collectors: flat plate collectors - concentrating collectors; solar thermal applications - heating, cooling, desalination, drying, cooking - solar thermal electric power plant.		
UNIT III	**WIND ENERGY AND BIO-MASS ENERGY**	**9**
Wind Sources: horizontal and vertical axis wind turbine - performance characteristics - types of wind turbine generators - Betz criteria; Bio-mass: Principles of Bio-Conversion - Anaerobic/aerobic digestion - types of Bio-gas digesters - gas yield - combustion characteristics of bio-gas - utilization for cooking.		
UNIT IV	**GEOTHERMAL AND OCEAN ENERGY**	**9**
Geothermal: Resources - types of wells - methods of harnessing the energy. Ocean Energy: OTEC- Principles, utilization - setting of OTEC plants - thermodynamic cycles. Tidal and wave energy: Potential and conversion techniques - mini-hydro power plants and their economics.		
UNIT V	**HYBRID RENEWABLE ENERGY SYSTEMS**	**9**
Need for Hybrid Systems - Types of Hybrid systems - Case studies of solar and Wind.		**CO5**
		TOTAL : 45 PERIODS

TEXT BOOKS

1. S. P. Sukhatme, Solar Energy Principle of Thermal Collection and Storage", Tata McGraw Hill, 1990.
2. Rai G.D, "Non-Conventional Energy Sources", Khanna Publishers, 2011.

REFERENCE BOOKS

1. G. L. Johnson, Wind energy systems, Prentice Hall Inc. New Jersey.
2. J. M. Kriender, Principles of Solar Engineering", McGraw Hill, 1987.
3. Twidell&Wier, "Renewable Energy Resources", CRC Press (Taylor & Francis), 2011
4. V. S. Mangal, Solar Engineering", Tata McGraw Hill, 1992.
5. N. K. Bansal, Renewable Energy Source and Conversion Technology", Tata McGraw Hill, 1989.
6. P. J. Lunde, Solar Thermal Engineering", John Willey & Sons, New York, 1988.

3. J. A. Duffie and W. A. Beckman, Solar Engineering of Thermal Processes", Wiley & Sons, 1990.

COURSE OUTCOMES **Upon completion of the course, students will be able to**	
CO1	Understand the energy scenario and the various sources of non-conventional energy sources.
CO2	Learn the physics of solar energy and to understand the solar photovoltaic, solar-thermal energy conversion system.
CO3	Acquire knowledge in wind and bio-mass energy conversion system.
CO4	Acquire knowledge in Geothermal and Ocean energy conversion system.
CO5	Design and implement hybrid energy systems.

AUDIT COURSES

AD1001	CONSTITUTION OF INDIA	L	T	P	C
		2	0	0	0

OBJECTIVES

- Teach history and philosophy of Indian Constitution.
- Describe the premises informing the twin themes of liberty and freedom from a civil rights perspective.
- Summarize powers and functions of Indian government.
- Explain emergency rule.
- Explain structure and functions of local administration.

UNIT I	INTRODUCTION	9
History of Making of the Indian Constitution-Drafting Committee- (Composition & Working) - Philosophy of the Indian Constitution-Preamble-Salient Features		CO1
UNIT II	**CONTOURS OF CONSTITUTIONAL RIGHTS & DUTIES**	**9**
Fundamental Rights-Right to Equality-Right to Freedom-Right against Exploitation Right to Freedom of Religion-Cultural and Educational Rights-Right to Constitutional Remedies Directive Principles of State Policy-Fundamental Duties		CO2
UNIT III	**ORGANS OF GOVERNANCE**	**9**
Parliament-Composition-Qualifications and Disqualifications-Powers and Functions-Executive President-Governor-Council of Ministers-Judiciary, Appointment and Transfer of Judges, Qualifications Powers and Functions		CO3
UNIT IV	**EMERGENCY PROVISIONS**	**9**
Emergency Provisions - National Emergency, President Rule, Financial Emergency		CO4
UNIT V	**LOCAL ADMINISTRATION**	**9**
District's Administration head- Role and Importance-Municipalities- Introduction- Mayor and role of Elected Representative-CEO of Municipal Corporation-Pachayati raj- Introduction- PRI-Zila Pachayat-Elected officials and their roles- CEO Zila Pachayat- Position and role-Block level Organizational Hierarchy (Different departments)-Village level- Role of Elected and Appointed officials-Importance of grass root democracy		CO5
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Basu D D, Introduction to the Constitution of India, Lexis Nexis, 2015.
2. Busi S N, Ambedkar B R framing of Indian Constitution, 1st Edition, 2015.
3. Jain M P, Indian Constitution Law, 7th Edn., Lexis Nexis, 2014.
4. The Constitution of India (Bare Act), Government

COURSE OUTCOMES Upon completion of the course, students will be able to	
CO1	Able to understand history and philosophy of Indian Constitution.
CO2	Able to understand the premises informing the twin themes of liberty and freedom from a civil rights perspective.
CO3	Able to understand powers and functions of Indian government.
CO4	Able to understand emergency rule.
CO5	Able to understand structure and functions of local administration.

AD1002	VALUE EDUCATION	L	T	P	C
		2	0	0	0

OBJECTIVES

- ❖ Develop knowledge of self-development
- ❖ Explain the importance of Human values
- ❖ Develop the overall personality through value education
- ❖ Overcome the self-destructive habits with value education
- ❖ Interpret social empowerment with value education

UNIT I	**INTRODUCTION TO VALUE EDUCATION**	**9**
Values and self-development –Social values and individual attitudes, Work ethics, Indian vision of humanism, Moral and non- moral valuation, Standards and principles, Value judgments		**CO1**
UNIT II	**IMPORTANCE OF VALUES**	**9**
Importance of cultivation of values, Sense of duty, Devotion, Self-reliance, Confidence, Concentration, Truthfulness, Cleanliness. Honesty, Humanity, Power of faith, National Unity, Patriotism, Love for nature, Discipline		**CO2**
UNIT III	**INFLUENCE OF VALUE EDUCATION**	**9**
Personality and Behaviour development - Soul and Scientific attitude. Positive Thinking, Integrityand discipline, Punctuality, Love and Kindness, Avoid fault Thinking, Free from anger, Dignity of labour, Universal brotherhood and religious tolerance, True friendship Happiness Vs suffering,love for truth.		**CO3**
UNIT IV	**REINCARNATION THROUGH VALUE EDUCATION**	**9**
Aware of self-destructive habits, Association and Cooperation, Doing best for saving nature Character and Competence –Holy books vs Blind faith, Self-management and Good health, Science of reincarnation		**CO4**
UNIT V	**VALUE EDUCATION IN SOCIAL EMPOWERMENT**	**9**
Equality, Non violence, Humility, Role of Women, All religions and same message, Mind your Mind, Self-control, Honesty, Studying effectively		**CO5**

TOTAL : 45 PERIODS

REFERENCE BOOKS

1. Chakroborty , S.K. “Values and Ethics for organizations Theory and practice”, Oxford University Press ,New Delhi

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Gain knowledge of self-development
CO2	Learn the importance of Human values
CO3	Develop the overall personality through value education
CO4	Overcome the self destructive habits with value education
CO5	Interpret social empowerment with value education

MAPPING OF COs WITH POs AND PSOs															
COs	**PROGRAM OUTCOMES (POs)**												**PROGRAM SPECIFIC OUTCOMES (PSOs)**

AD1003	PEDAGOGY STUDIES	L	T	P	C
		2	0	0	0

OBJECTIVES

- Understand the methodology of pedagogy.
- Compare pedagogical practices used by teachers in formal and informal classrooms in developing countries.
- Infer how can teacher education (curriculum and practicum) and the school curriculum and guidance materials best support effective pedagogy.
- Illustrate the factors necessary for professional development.
- Identify the Research gaps in pedagogy.

UNIT I	INTRODUCTION AND METHODOLOGY	9
Aims and rationale, Policy background, Conceptual framework and terminology - Theories of learning, Curriculum, Teacher education - Conceptual framework, Research questions – Overview of methodology and Searching.		CO1
UNIT II	**THEMATIC OVERVIEW**	**9**
Pedagogical practices are being used by teachers in formal and informal classrooms in developing countries - Curriculum, Teacher education.		CO2
UNIT III	**EVIDENCE ON THE EFFECTIVENESS OF PEDAGOGICAL PRACTICES**	**9**
Methodology for the in depth stage: quality assessment of included studies - How can teacher education (curriculum and practicum) and the school curriculum and guidance materials best support effective pedagogy? - Theory of change - Strength and nature of the body of evidence for effective pedagogical practices - Pedagogic theory and pedagogical approaches - Teachers' attitudes and beliefs and Pedagogic strategies.		CO3
UNIT IV	**PROFESSIONAL DEVELOPMENT**	**9**
Professional development: alignment with classroom practices and follow up support – Peer support - Support from the head teacher and the community - Curriculum and assessment – Barriers to learning: limited resources and large class sizes		CO4
UNIT V	**RESEARCH GAPS AND FUTURE DIRECTIONS**	**9**
Research design – Contexts – Pedagogy - Teacher education - Curriculum and assessment - Dissemination and research impact.		CO5

TOTAL : 45 PERIODS

REFERENCE BOOKS

AD1004	STRESS MANAGEMENT BY YOGA	L	T	P	C
		2	0	0	0

OBJECTIVES

- ❖ Develop healthy mind in a healthy body thus improving social health also improve efficiency
- ❖ Invent Do's and Don't's in life through Yam
- ❖ Categorize Do's and Don't's in life through Niyam
- ❖ Develop a healthy mind and body through Yog Asans
- ❖ Invent breathing techniques through Pranayam

UNIT I	**INTRODUCTION TO YOGA**	**9**
Definitions of Eight parts of yog.(Ashtanga)		**CO1**
UNIT II	**YAM**	**9**
Do`s and Don't's in life.Shaucha, santosh, tapa, swadhyay, ishwarpranidhan		**CO2**
UNIT III	**NIYAM**	**9**
Do`s and Don't's in life. Ahinsa, satya, astheya, bramhacharya and aparigraha		**CO3**
UNIT IV	**ASAN**	**9**
Various yog poses and their benefits for mind & body		**CO4**
UNIT V	**PRANAYAM**	**9**
Regularization of breathing techniques and its effects-Types of pranayam		**CO5**
		TOTAL : 45 PERIODS

REFERENCE BOOKS

1. "Rajayoga or conquering the Internal Nature" by Swami Vivekananda, Advaita Ashrama (Publication Department), Kolkata
2. 'Yogic Asanas for Group Tarining-Part-I" : Janardan Swami Yogabhyasi Mandal, Nagpur

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Develop healthy mind in a healthy body thus improving social health also improve efficiency
CO2	Learn Do's and Don't's in life through Yam
CO3	Learn Do's and Don't's in life through Niyam
CO4	Develop a healthy mind and body through Yog Asans
CO5	Learn breathing techniques through Pranayam

AD1006	UNNAT BHARAT ABHIYAN	L	T	P	C
		2	0	0	0

OBJECTIVES

- To engage the students in understanding rural realities
- To identify and select existing innovative technologies, enable customization of technologies, or devise implementation method for innovative solutions, as per the local needs.
- To leverage the knowledge base of the institutions to devise processes for effective implementation of various government programmes
- To understand causes for rural distress and poverty and explore solutions for the same
- To apply classroom knowledge of courses to field realities and thereby improve quality of learning

UNIT I	QUALITY OF RURAL LIFE IN VILLAGES AND UNNAT BHARAT ABHIYAN	9
Introduction to Unnat Bharat Abhiyan - concept, scope and objectives, rural life, rural society, cast and gender relations, rural values with respect to community, nature and resources, elaboration of "Soul of India lies in villages" – (Gandhi Ji), Rural infrastructure, problems in rural area. **Assignment:** Prepare a map (Physical, visual and digital) of the village you visited and write an essay about inter-family relation in that village.		CO1
UNIT II	RURAL ECONOMY AND LIVELIHOOD	9
Agriculture, farming, land ownership pattern, water management, animal husbandry, non-farm livelihoods and artisans, rural entrepreneurs, rural market. **Assignment:** Describe your analysis of rural household economy, it's challenges and possible pathways to address them. Group discussion in class- (4) Field visit 3.		CO2
UNIT III	RURAL INSTITUTIONS	9
History of Rural Development, Traditional rural organizations, Self Help Groups, Gram Swaraj and 3- Tier Panchayat Raj Institutions (Gram Sabha, Gram Panchayat, Standing Committee), local civil society, local administration. Introduction to Constitution, Constitutional Amendments in Panchayati Raj – Fundamental Rights and Directive Principles. **Assignment:** Panchayati Raj institutions in villages? What would you suggest to improve their effectiveness? Present a case study (written or audio-visual). Field Visit – 4.		CO3
UNIT IV	RURAL DEVELOPMENT PROGRAMMES	9
National programmes - Sarva Shiksha Abhiyan, Beti Bachao, Beti Padhao, Ayushman Bharat, Swatchh Bharat, PM Awass Yojana, Skill India, Gram Panchayat Decentralised Planning, NRLM, MNREGA, etc. **Written Assignment:** Describe the benefits received and challenges faced in the delivery of one of these programmes in the rural community, give suggestions about improving implementation of the programme for the rural poor.		CO4

UNIT V	FIELD WORK	9

Each student selects one programme for field visit Field based practical activities:

- ❖ Interaction with SHG women members, and study of their functions and challenges; planning for their skill building and livelihood activities
- ❖ Visit MGNREGS project sites, interact with beneficiaries and interview functionaries at the work site
- ❖ Field visit to Swachh Bharat project sites, conduct analysis and initiate problem solving measures
- ❖ Conduct Mission Antyodaya surveys to support under Gram Panchayat Development Plan(GPDP)
- ❖ Interactive community exercise with local leaders, panchayat functionaries, grass-root officials and local institutions regarding village development plan preparation and resource mobilization
- ❖ Visit Rural Schools I mid-day meal centres, study Academic and infrastructural resources and gaps
- ❖ Participate in Gram Sabha meetings, and study community participation
- ❖ Associate with Social audit exercises at the Gram Panchayat level, and interact with programme beneficiaries
- ❖ Attend Parent Teacher Association meetings, and interview school drop outs
- ❖ Visit local Anganwadi Centre and observe the services being provided
- ❖ Visit local NGOs, civil society organisations and interact with their staff and beneficiaries.
- ❖ Organize awareness programmes, health camps, Disability camps and cleanliness camps o Conduct soil health test, drinking water analysis, energy use and fuel efficiency surveys
- ❖ Raise understanding of people's impacts of climate change, building up community's disaster preparedness
- ❖ Organise orientation programmes for farmers regarding organic cultivation, rational use of irrigation and fertilizers and promotion of traditional species of crops and plants
- ❖ Formation of committees for common property resource management, village pond maintenance and fishing.

CO5

TOTAL : 45 PERIODS

TEXT BOOKS

1. Singh, Katar, Rural Development Principles, Policies and Management, Sage Publications, New Delhi, 2015
2. A Hand book on Village Panchayat Administration, Rajiv Gandhi Chair for Panchayati Raj Studies, 2002
3. United Nations, Sustainable Development Goals, 2015 un.org/sdgs

REFERENCE BOOKS
1. M.P.Boraian, Best Practices in Rural Development, Shanlax Publishers 2. Unnat Bharat Abhiyan Website : www.unnatbharatabhiyan.gov.in

COURSE OUTCOMES Upon completion of the course, students will be able to	
CO1	Understand of rural life, culture and social realities
CO2	Understand the concept of measurement by comparison or balance of parameters.
CO3	Develop a sense of empathy and bonds of mutuality with local community
CO4	Appreciate significant contributions of local communities to Indian society and economy
CO5	Value the local knowledge and wisdom of the community

MAPPING OF COs WITH POs AND PSOs

AD1007	ESSENCE OF INDIAN KNOWLEDGE TRADITION	L	T	P	C
		2	0	0	0

OBJECTIVES

- Get a knowledge about Indian Culture
- Know Indian Languages and Literature religion and philosophy and the fine arts in India
- Explore the Science and Scientists of Ancient, Medieval and Modern India
- Understand education systems in India

UNIT I	**INTRODUCTION TO CULTURE**	**9**
Culture, civilization, culture and heritage, general characteristics of culture, importance of culture in human literature, Indian Culture, Ancient India, Medieval India, Modern India		**CO1**
UNIT II	**INDIAN LANGUAGES AND LITERATURE**	**9**
Indian Languages and Literature – I: Languages and Literature of South India, – Indian Languages and Literature – II: Northern Indian Languages & Literature		**CO2**
UNIT III	**RELIGION AND PHILOSOPHY**	**9**
Major religions practiced in India and Understanding their Philosophy – religious movements in Modern India (Selected movements only)		**CO3**
UNIT IV	**FINE ARTS IN INDIA (ART, TECHNOLOGY& ENGINEERING)**	**9**
Indian Painting, Indian handicrafts, Music, divisions of Indian classic music, modern Indian music, Dance and Drama, Indian Architecture (ancient, medieval and modern), Science and Technology in India, development of science in ancient, medieval and modern India		**CO4**
UNIT V	**EDUCATION SYSTEM IN INDIA**	**9**
Education in ancient, medieval and modern India, aims of education, subjects, languages, Science and Scientists of Ancient India, Science and Scientists of Medieval India, Scientists of Modern India		**CO5**
		TOTAL : 45 PERIODS

REFERENCE BOOKS

1. Kapil Kapoor, “Text and Interpretation: The India Tradition”,ISBN: 81246033375, 2005
2. “Science in Samskrit”, Samskrita Bharti Publisher, ISBN 13: 978-8187276333, 2007
3. NCERT, “Position paper on Arts, Music, Dance and Theatre”, ISBN 81-7450 494-X, 200
4. Narain, “Examinations in ancient India”, Arya Book Depot, 1993

6. M. Hiriyanna, “Essentials of Indian Philosophy”, Motilal Banarsidass Publishers, ISBN 13: 978-8120810990, 2014

COURSE OUTCOMES **Upon completion of the course, students will be able to**	
CO1	Understand philosophy of Indian culture.
CO2	Distinguish the Indian languages and literature.
CO3	Learn the philosophy of ancient, medieval and modern India.
CO4	Acquire the information about the fine arts in India.
CO5	Understand education systems in India

AD1008	SANGA TAMIL LITERATURE APPRECIATION	L	T	P	C
		2	0	0	0

OBJECTIVES

- Introduction to Sanga Tamil Literature.
- ‘Agathinai’ and‘Purathinai’ in SangaTamil Literature.
- ‘Attruppadai’ in SangaTamil Literature.
- ‘Puranaanuru’ in SangaTamil Literature.
- ‘Pathitrupaththu’ in SangaTamil Literature.

UNIT I	SANGA TAMIL LITERATURE – AN INTRODUCTION	9
Introduction to Tamil Sangam–History of Tamil Three Sangams–Introduction to Tamil SangamLiterature–Special Branches in Tamil Sangam Literature- Tamil Sangam Literature’s GrammarTamil Sangam Literature’s parables.		**CO1**
UNIT II	**‘AGATHINAI’AND‘PURATHINAI’**	**9**
Tholkappiyar’s Meaningful Verses–Three literature materials–Agathinai’s message- History ofCulturefrom Agathinai– Purathinai–Classification–Mesaage to Society from Purathinai.		**CO2**
UNIT III	**‘ATTRUPPADAI’**	**9**
Attruppadai Literature – Attruppadaiin ‘Puranaanuru’ – Attruppadaiin ‘Pathitrupaththu’- Attruppadaiin ‘Paththupaattu’.		**CO3**
UNIT IV	**‘PURANAANURU’**	**9**
Puranaanuru on Good Administration, Ruler and Subjects–Emotion & its Effect in Puranaanuru.		**CO4**
UNIT V	**‘PATHITRUPATHTHU’**	**9**
Pathitrupaththuin ‘Ettuthogai’ – Pathitrupaththu’s Parables –Tamildynasty: Valor, Administration, Charity in Pathitrupaththu - Mesaage to Society from Pathitrupaththu.		**CO5**

ANNA UNIVERSITY, CHENNAI
AFFILIATED INSTITUTIONS
M.E.APPLIED ELECTRONICS
REGULATIONS – 2017
CHOICE BASED CREDIT SYSTEM

PROGRAM EDUCATIONAL OBJECTIVES (PEOs)

1. To enable graduates to develop solutions to real world problems in the frontier areas of Applied Electronics.
2. To enable the graduates to adapt to the latest trends in technology through self-learning and to pursue research to meet out the demands in industries and Academia.
3. To enable the graduates to exhibit leadership skills and enhance their abilities through lifelong learning.

PROGRAM OUTCOMES (POs)

Engineering Graduates will be able to:

1. **Engineering knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
2. **Problem analysis**: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
3. **Design/development of solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
4. **Conduct investigations of complex problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
5. **Modern tool usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
6. **The engineer and society**: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
7. **Environment and sustainability**: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
8. **Ethics**: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
9. **Individual and team work**: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

10. **Communication**: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

11. **Project management and finance**: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

12. **Life-long learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PROGRAMME SPECIFIC OUTCOMES (PSOs)

PSO1: To critically evaluate the design and provide optimal solutions to problem areas in advanced signal processing, digital system design, embedded systems and VLSI design.

PSO2: **To e**nhance and develop electronic systems using modern engineering hardware and software tools.

PSO3: To work professionally and ethically in applied electronics and related areas.

MA5152 APPLIED MATHEMATICS FOR ELECTRONICS ENGINEERS L T P C
4 0 0 4

OBJECTIVES:

The main objective of this course is to demonstrate various analytical skills in applied mathematics and extensive experience with the tactics of problem solving and logical thinking applicable in electronics engineering. This course also will help the students to identify, formulate, abstract, and solve problems in electrical engineering using mathematical tools from a variety of mathematical areas, including fuzzy logic, matrix theory, probability, dynamic programming and queuing theory.

UNIT I FUZZY LOGIC 12

Classical logic – Multivalued logics – Fuzzy propositions – Fuzzy quantifiers.

UNIT II MATRIX THEORY 12

Cholesky decomposition - Generalized Eigenvectors - Canonical basis - QR factorization - Least squares method - Singular value decomposition.

UNIT III PROBABILITY AND RANDOM VARIABLES 12

Probability – Axioms of probability – Conditional probability – Baye's theorem - Random variables - Probability function – Moments – Moment generating functions and their properties – Binomial, Poisson, Geometric, Uniform, Exponential, Gamma and Normal distributions – Function of a Random variable.

UNIT IV DYNAMIC PROGRAMMING 12

Dynamic programming – Principle of optimality – Forward and backward recursion – Applications of dynamic programming – Problem of dimensionality.

UNIT V QUEUEING MODELS 12

Poisson Process – Markovian queues – Single and multi server models – Little's formula - Machine interference model – Steady state analysis – Self service queue.

TOTAL: 60 PERIODS

OUTCOMES:

After completing this course, students should demonstrate competency in the following skills:

- Concepts of fuzzy sets, knowledge representation using fuzzy rules, fuzzy logic, fuzzy prepositions and fuzzy quantifiers and applications of fuzzy logic.
- Apply various methods in matrix theory to solve system of linear equations.
- Computation of probability and moments, standard distributions of discrete and continuous random variables and functions of a random variable.
- Conceptualize the principle of optimality and sub-optimization, formulation and computational procedure of dynamic programming
- Exposing the basic characteristic features of a queuing system and acquire skills in analyzing queuing models.
- Using discrete time Markov chains to model computer systems.

AP5151 ADVANCED DIGITAL SYSTEM DESIGN L T P C
3 0 0 3

OBJECTIVES:

- To introduce methods to analyze and design synchronous and asynchronous sequential circuits.
- To introduce the architectures of programmable devices.
- To introduce design and implementation of digital circuits using programming tools.

UNIT I SEQUENTIAL CIRCUIT DESIGN 9

Analysis of clocked synchronous sequential circuits and modeling- State diagram, state table, state table assignment and reduction-Design of synchronous sequential circuits design of iterative circuits-ASM chart and realization using ASM

UNIT II ASYNCHRONOUS SEQUENTIAL CIRCUIT DESIGN 9

Analysis of asynchronous sequential circuit – flow table reduction-races-state assignment-transition table and problems in transition table- design of asynchronous sequential circuit-Static, dynamic and essential hazards – data synchronizers – mixed operating mode asynchronous circuits – designing vending machine controller

UNIT III FAULT DIAGNOSIS AND TESTABILITY ALGORITHMS 9

Fault table method-path sensitization method – Boolean difference method-D algorithm - Tolerance techniques – The compact algorithm – Fault in PLA – Test generation-DFT schemes – Built in self test

UNIT IV SYNCHRONOUS DESIGN USING PROGRAMMABLE DEVICES 9

Programming logic device families – Designing a synchronous sequential circuit using PLA/PAL – Realization of finite state machine using PLD – FPGA – Xilinx FPGA-Xilinx 4000

UNIT V SYSTEM DESIGN USING VERILOG 9

Hardware Modelling with Verilog HDL – Logic System, Data Types and Operators For Modelling in Verilog HDL - Behavioural Descriptions in Verilog HDL – HDL Based Synthesis – Synthesis of Finite State Machines– structural modeling – compilation and simulation of Verilog code –Test bench - Realization of combinational and sequential circuits using Verilog – Registers – counters – sequential machine – serial adder – Multiplier- Divider – Design of simple microprocessor.

TOTAL : 45 PERIODS

OUTCOMES:

At the end of the course, the student should be able to:

- Analyze and design sequential digital circuits
- Identify the requirements and specifications of the system required for a given application
- Design and use programming tools for implementing digital circuits of industry standards

AP5152	ADVANCED DIGITAL SIGNAL PROCESSING	L	T	P	C
		3	2	0	4

OBJECTIVES:

- The student comprehends mathematical description and modelling of discrete time random signals.
- The student is conversant with important theorems and random signal processing algorithms.
- The student learns relevant figures of merit such as power, energy, bias and consistency.
- The student is familiar with estimation, prediction, filtering, multirate concepts and techniques.

UNIT I DISCRETE RANDOM SIGNAL PROCESSING 9+6

Discrete random processes – Ensemble averages – Wide sense stationary process – Properties - Ergodic process – Sample mean & variance - Auto-correlation and Auto-correlation matrices-Properties – White noise process – Weiner Khitchine relation - Power spectral density – Filtering random process – Spectral Factorization Theorem – Special types of Random Processes – AR,MA, ARMA Processes – Yule-Walker equations.

UNIT II SPECTRUM ESTIMATION 9+6

Bias and Consistency of estimators - Non-Parametric methods – Periodogram – Modified Periodogram – Barlett's method – Welch's mehod – Blackman-Tukey method – Parametric methods – AR, MA and ARMA spectrum estimation - Performance analysis of estimators.

UNIT III SIGNAL MODELING AND OPTIMUM FILTERS 9+6

Introduction- Least square method – Pade approximation – Prony's method – Levinson Recursion – Lattice filter - FIR Wiener filter – Filtering – Linear Prediction – Non Causal and Causal IIR Weiner Filter -– Mean square error – Discrete Kalman filter.

UNIT IV ADAPTIVE FILTERS 9+6

FIR Adaptive filters - Newton's steepest descent method – Widrow Hoff LMS Adaptive algorithm – Convergence – Normalized LMS – Applications – Noise cancellation - channel equalization – echo canceller – Adaptive Recursive Filters - RLS adaptive algorithm – Exponentially weighted RLS-sliding window RLS.

UNIT V MULTIRATE SIGNAL PROCESSING 9+6

Decimation - Interpolation – Sampling Rate conversion by a rational factor I/D – Multistage implementation of sampling rate conversion – Polyphase filter structures – Applications of multirate signal processing.

TOTAL45+30: 75 PERIODS

OUTCOMES:

- Formulate time domain and frequency domain description of Wide Sense Stationary process in terms of matrix algebra and relate to linear algebra concepts.
- State W-K theorem, spectral factorization theorem, spectrum estimation, bias and consistency of estimators.
- Wiener filtering, LMS algorithms, Levinson recursion algorithm, applications of adaptive filters
- Decimation, interpolation, Sampling rate conversion, Applications of multirate signal processing

AP5191 EMBEDDED SYSTEM DESIGN L T P C
3 0 0 3

OBJECTIVES:

The students should be made to:

- Learn design challenges and design methodologies
- Study general and single purpose processor
- Understand bus structures

UNIT I EMBEDDED SYSTEM OVERVIEW 9

Embedded System Overview, Design Challenges – Optimizing Design Metrics, Design Methodology, RT-Level Combinational and Sequential Components, Optimizing Custom Single-Purpose Processors.

UNIT II GENERAL AND SINGLE PURPOSE PROCESSOR 9

Basic Architecture, Pipelining, Superscalar and VLIW architectures, Programmer’s view, Development Environment, Application-Specific Instruction-Set Processors (ASIPs) Microcontrollers, Timers, Counters and watchdog Timer, UART, LCD Controllers and Analog-to-Digital Converters, Memory Concepts.

UNIT III BUS STRUCTURES 9

Basic Protocol Concepts, Microprocessor Interfacing – I/O Addressing, Port and Bus-Based I/O, Arbitration, Serial Protocols, I^2C, CAN and USB, Parallel Protocols – PCI and ARM Bus, Wireless Protocols – IrDA, Bluetooth, IEEE 802.11**.**

UNIT IV STATE MACHINE AND CONCURRENT PROCESS MODELS 9

Basic State Machine Model, Finite-State Machine with Datapath Model, Capturing State Machine in Sequential Programming Language, Program-State Machine Model, Concurrent Process Model, Communication among Processes, Synchronization among processes, Dataflow Model, Real-time Systems, Automation: Synthesis, Verification : Hardware/Software Co-Simulation, Reuse: Intellectual Property Cores, Design Process Models.

UNIT V EMBEDDED SOFTWARE DEVELOPMENT TOOLS AND RTOS 9

Compilation Process – Libraries – Porting kernels – C extensions for embedded systems – emulation and debugging techniques – RTOS – System design using RTOS.

TOTAL: 45 PERIODS

OUTCOMES:

At the end of this course, the students should be able to:

- Explain different protocols
- Discuss state machine and design process models
- Outline embedded software development tools and RTOS

AP5101 SENSORS, ACTUATORS AND INTERFACE ELECTRONICS L T P C
3 0 0 3

OBJECTIVES:

- Understand static and dynamic characteristics of measurement systems.
- Study various types of sensors.
- Study different types of actuators and their usage.
- Study State-of-the-art digital and semiconductor sensors.

UNIT I INTRODUCTION TO MEASUREMENT SYSTEMS 9

Introduction to measurement systems: general concepts and terminology, measurement systems, sensor classification, general input-output configuration, methods of correction, performance characteristics: static characteristics of measurement systems, accuracy, precision, sensitivity, other characteristics: linearity, resolution, systematic errors, random errors, dynamic characteristics of measurement systems: zero-order, first-order, and second-order measurement systems and response.

UNIT II RESISTIVE AND REACTIVE SENSORS 9

Resistive sensors: potentiometers, strain gages, resistive temperature detectors, magneto resistors, light-dependent resistors, Signal conditioning for resistive sensors: Wheatstone bridge, sensor bridge calibration and compensation, Instrumentation amplifiers, sources of interference and interference reduction, Reactance variation and electromagnetic sensors, capacitive sensors, differential, inductive sensors, linear variable differential transformers (LVDT), magneto elastic sensors, hall effect sensors, Signal conditioning for reactance-based sensors & application to the LVDT.

UNIT III SELF-GENERATING SENSORS 9

Self-generating sensors: thermoelectric sensors, piezoelectric sensors, pyroelectric sensors, photovoltaic sensors, electrochemical sensors, Signal conditioning for self-generating sensors: chopper and low-drift amplifiers, offset and drifts amplifiers, electrometer amplifiers, charge amplifiers, noise in amplifiers.

UNIT IV ACTUATORS DRIVE CHARACTERISTICS AND APPLICATIONS 9

Relays, Solenoid drive, Stepper Motors, Voice-Coil actuators, Servo Motors, DC motors and motor control, 4-to-20 mA Drive, Hydraulic actuators, variable transformers: synchros, resolvers, Inductosyn, resolver-to-digital and digital-to-resolver converters.

UNIT V DIGITAL SENSORS AND SEMICONDUCTOR DEVICE SENSORS 9

Digital sensors: position encoders, variable frequency sensors – quartz digital thermometer, vibrating wire strain gages, vibrating cylinder sensors, saw sensors, digital flow meters, Sensors based on semiconductor junctions: thermometers based on semiconductor junctions, magneto diodes and magneto transistors, photodiodes and phototransistors, sensors based on MOSFET transistors, CCD imaging sensors , ultrasonic sensors, fiber-optic sensors.

TOTAL: 45 PERIODS

OUTCOMES:

Upon completion of the course the student will be able to

- Compare Actuators
- Evaluate digital sensors and semiconductor device sensors
- Discuss Self-generating sensors

AP5111 ELECTRONICS SYSTEM DESIGN LABORATORY I L T P C
0 0 4 2

OBJECTIVES:

- To study of different interfaces
- To learn asynchronous and clocked synchronous sequential circuits
- To understand the concept of built in self test and fault diagnosis

1. System design using PIC, MSP430, ‘51 Microcontroller and 16- bit Microprocessor - 8086.
2. Study of different interfaces (using embedded microcontroller)
3. Implementation of Adaptive Filters and multistage multirate system in DSP Processor
4. Simulation of QMF using Simulation Packages
5. Analysis of Asynchronous and clocked synchronous sequential circuits

6. Built in self test and fault diagnosis
7. Sensor design using simulation tools
8. Design and analysis of real time signal processing system – Data acquisition and signal processing

TOTAL: 60 PERIODS

OUTCOMES:
Upon Completion of the course, the students will be able to:

- Apply PIC, MSP430, '51 Microcontroller and 8086 for system design
- Simulate QMF
- Design sensor using simulation tools
- Design and analyze of real time signal processing system

AP5251 SOFT COMPUTING AND OPTIMIZATION TECHNIQUES

L	T	P	C
3	0	0	3

OBJECTIVES:

- To learn various Soft computing frameworks.
- To familiarizes with the design of various neural networks.
- To understand the concept of fuzzy logic.
- To gain insight onto Neuro Fuzzy modeling and control.
- To gain knowledge in conventional optimization techniques.
- To understand the various evolutionary optimization techniques.

UNIT I NEURAL NETWORKS 9
Machine Learning using Neural Network, Learning algorithms, Supervised Learning Neural Networks – Feed Forward Networks, Radial Basis Function, Unsupervised Learning Neural Networks – Self Organizing map , Adaptive Resonance Architectures, Hopfield network

UNIT II FUZZY LOGIC 9
Fuzzy Sets – Operations on Fuzzy Sets – Fuzzy Relations – Membership Functions-Fuzzy Rules and Fuzzy Reasoning – Fuzzy Inference Systems – Fuzzy Expert Systems – Fuzzy Decision Making

UNIT III NEURO-FUZZY MODELING 9
Adaptive Neuro-Fuzzy Inference Systems – Coactive Neuro-Fuzzy Modeling – Classification and Regression Trees – Data Clustering Algorithms – Rule base Structure Identification – Neuro-Fuzzy Control – Case Studies.

UNIT IV CONVENTIONAL OPTIMIZATION TECHNIQUES 9
Introduction to optimization techniques, Statement of an optimization problem, classification, Unconstrained optimization-gradient search method-Gradient of a function, steepest gradient-conjugate gradient, Newton's Method, Marquardt Method, Constrained optimization –sequential linear programming, Interior penalty function method, external penalty function method.

UNIT V EVOLUTIONARY OPTIMIZATION TECHNIQUES 9
Genetic algorithm - working principle, Basic operators and Terminologies, Building block hypothesis, Travelling Salesman Problem, Particle swam optimization, Ant colony optimization.

TOTAL :45 PERIODS

OUTCOMES:

Upon Completion of the course, the students will be able to:

- Implement machine learning through Neural networks.
- Develop a Fuzzy expert system.
- Model Neuro Fuzzy system for clustering and classification.
- Able to use the optimization techniques to solve the real world problems

AP5252	**ASIC AND FPGA DESIGN**	**L T P C**
		3 0 0 3

OBJECTIVES:

- To study the design flow of different types of ASIC.
- To familiarize the different types of programming technologies and logic devices.
- To learn the architecture of different types of FPGA.
- To gain knowledge about partitioning, floor planning, placement and routing including circuit extraction of ASIC

UNIT I OVERVIEW OF ASIC AND PLD 9

Types of ASICs - Design flow – CAD tools used in ASIC Design – Programming Technologies: Antifuse – static RAM – EPROM and EEPROM technology, Programmable Logic Devices: ROMs and EPROMs – PLA –PAL. Gate Arrays – CPLDs and FPGAs

UNIT II ASIC PHYSICAL DESIGN 9

System partition -partitioning - partitioning methods – interconnect delay models and measurement of delay - floor planning - placement – Routing: global routing - detailed routing - special routing - circuit extraction - DRC

UNIT III LOGIC SYNTHESIS, SIMULATION AND TESTING 9

Design systems - Logic Synthesis - Half gate ASIC -Schematic entry - Low level design language - PLA tools -EDIF- CFI design representation. Verilog and logic synthesis -VHDL and logic synthesis - types of simulation -boundary scan test - fault simulation - automatic test pattern generation.

UNIT IV FIELD PROGRAMMABLE GATE ARRAYS 9

FPGA Design : FPGA Physical Design Tools -Technology mapping - Placement & routing - Register transfer (RT)/Logic Synthesis - Controller/Data path synthesis - Logic minimization.

UNIT V SOC DESIGN 9

System-On-Chip Design - SoC Design Flow, Platform-based and IP based SoC Designs, Basic Concepts of Bus-Based Communication Architectures. High performance algorithms for ASICs/ SoCs as case studies: Canonical Signed Digit Arithmetic, Knowledge Crunching Machine, Distributed Arithmetic, High performance digital filters for sigma-delta ADC.

TOTAL: 45 PERIODS

OUTCOMES:

- To analyze the synthesis, Simulation and testing of systems.
- To apply different high performance algorithms in ASICs.
- To discuss the design issues of SOC.

AP5291 HARDWARE - SOFTWARE CO-DESIGN L T P C
3 0 0 3

OBJECTIVES:

- To acquire the knowledge about system specification and modelling.
- To learn the formulation of partitioning
- To study the different technical aspects about prototyping and emulation.

UNIT I SYSTEM SPECIFICATION AND MODELLING 9

Embedded Systems, Hardware/Software Co-Design, Co-Design for System Specification and Modeling , Co-Design for Heterogeneous Implementation - Single-Processor Architectures with one ASIC and many ASICs, Multi-Processor Architectures, Comparison of Co- Design Approaches, Models of Computation, Requirements for Embedded System Specification.

UNIT II HARDWARE / SOFTWARE PARTITIONING 9

The Hardware/Software Partitioning Problem, Hardware-Software Cost Estimation, Generation of the Partitioning Graph, Formulation of the HW/SW Partitioning Problem, Optimization , HW/SW Partitioning based on Heuristic Scheduling, HW/SW Partitioning based on Genetic Algorithms .

UNIT III HARDWARE / SOFTWARE CO-SYNTHESIS 9

The Co-Synthesis Problem, State-Transition Graph, Refinement and Controller Generation, Co-Synthesis Algorithm for Distributed System- Case Studies with any one application.

UNIT IV PROTOTYPING AND EMULATION 9

Introduction, Prototyping and Emulation Techniques , Prototyping and Emulation Environments, Future Developments in Emulation and Prototyping ,Target Architecture- ArchitectureSpecialization Techniques ,System Communication Infrastructure, Target Architectures and Application System Classes, Architectures for Control-Dominated Systems, Architectures for Data-Dominated Systems ,Mixed Systems and Less Specialized Systems

UNIT V DESIGN SPECIFICATION AND VERIFICATION 9

Concurrency, Coordinating Concurrent Computations, Interfacing Components, Verification ,Languages for System-Level Specification and Design System-Level Specification ,Design Representation for System Level Synthesis, System Level Specification Languages, Heterogeneous Specification and Multi-Language Co- simulation.

TOTAL:45 PERIODS

OUTCOMES:

- To assess prototyping and emulation techniques
- To compare hardware / software co-synthesis.
- To formulate the design specification and validate its functionality by simulation

REFERENCES:

AP5292 DIGITAL IMAGE PROCESSING L T P C

3 0 0 3

OBJECTIVES:

The students should be made to:

- Understand fundamentals of digital images
- Learn different image transforms
- Study concept of segmentation

UNITI DIGITAL IMAGE FUNDAMENTALS 9

A simple image model, Sampling and Quantization, Imaging Geometry, Digital Geometry, Image Acquisition Systems, Different types of digital images. Basic concepts of digital distances, distance transform, medial axis transform, component labeling, thinning, morphological processing, extension to gray scale morphology.

UNIT II IMAGE TRANSFORMS 9

1D DFT, 2D transforms - DFT, DCT, Discrete Sine, Walsh, Hadamard, Slant, Haar, KLT, SVD, Wavelet transform.

UNIT III SEGMENTATION OF GRAY LEVEL IMAGES 9

Histogram of gray level images, multilevel thresholding, Optimal thresholding using Bayesian classification, Watershed and Dam Construction algorithms for segmenting gray level image. Detection of edges and lines: First order and second order edge operators, multi-scale edge detection, Canny's edge detection algorithm, Hough transform for detecting lines and curves, edge linking.

UNIT IV IMAGE ENHANCEMENT AND COLOR IMAGE PROCESSING 9

Point processing, Spatial Filtering, Frequency domain filtering, multi-spectral image enhancement, image restoration. Color Representation, Laws of color matching, chromaticity diagram, color enhancement, color image segmentation, color edge detection, color demosaicing.

UNIT V IMAGE COMPRESSION 9

Lossy and lossless compression schemes, prediction based compression schemes, vector quantization, sub-band encoding schemes, JPEG compression standard, Fractal compression scheme, Wavelet compression scheme.

TOTAL: 45 PERIODS

OUTCOMES:

At the end of this course, the students should be able to:

- Discuss image enhancement techniques
- Explain color image processing
- Compare image compression schemes

AP5211 ELECTRONICS SYSTEM DESIGN LABORATORY II

L	T	P	C
0	0	4	2

OBJECTIVES:

- To study of 32 bit ARM7 microcontroller RTOS and its application
- To understand testing RTOS environment and system programming
- To learn wireless network design using embedded systems
- To learn System design using ASIC
- To know use of Verilog and VHDL in sequential digital system modeling

1. Study of 32 bit ARM7 microcontroller RTOS and its application
2. Testing RTOS environment and system programming
3. Designing of wireless network using embedded systems
4. Implementation of ARM with FPGA
5. Design and Implementation of ALU in FPGA using VHDL and Verilog
6. Modeling of Sequential Digital system using Verilog and VHDL
7. Flash controller programming - data flash with erase, verify and fusing
8. System design using ASIC
9. Design, simulation and analysis of signal integrity

TOTAL: 60 PERIODS

OUTCOMES:
At the end of this course, the students should be able to:
- Utilize ARM with FPGA
- Demonstrate design of ALU in FPGA using VHDL and Verilog
- Assess flash controller programming - data flash with erase, verify and fusing
- Explain design, simulation and analysis of signal integrity

CP5281 TERM PAPER WRITING AND SEMINAR L T P C
0 0 2 1

In this course, students will develop their scientific and technical reading and writing skills that they need to understand and construct research articles. A term paper requires a student to obtain information from a variety of sources (i.e., Journals, dictionaries, reference books) and then place it in logically developed ideas. The work involves the following steps:

1. Selecting a subject, narrowing the subject into a topic
2. Stating an objective.
3. Collecting the relevant bibliography (atleast 15 journal papers)
4. Preparing a working outline.
5. Studying the papers and understanding the authors contributions and critically analysing each paper.
6. Preparing a working outline
7. Linking the papers and preparing a draft of the paper.
8. Preparing conclusions based on the reading of all the papers.
9. Writing the Final Paper and giving final Presentation

Please keep a file where the work carried out by you is maintained.
Activities to be carried Out

Activity	Instructions	Submission week	Evaluation
Selection of area of interest and Topic Stating an Objective	You are requested to select an area of interest, topic and state an objective	2^{nd} week	**3 %** Based on clarity of thought, current relevance and clarity in writing

Collecting Information about your area & topic	1. List 1 Special Interest Groups or professional society 2. List 2 journals 3. List 2 conferences, symposia or workshops 4. List 1 thesis title 5. List 3 web presences (mailing lists, forums, news sites) 6. List 3 authors who publish regularly in your area 7. Attach a call for papers (CFP) from your area.	3rd week	**3%** (the selected information must be area specific and of international and national standard)
Collection of Journal papers in the topic in the context of the objective – collect 20 & then filter	• You have to provide a complete list of references you will be using- Based on your objective -Search various digital libraries and Google Scholar • When picking papers to read - try to: • Pick papers that are related to each other in some ways and/or that are in the same field so that you can write a meaningful survey out of them, • Favour papers from well-known journals and conferences, • Favour "first" or "foundational" papers in the field (as indicated in other people's survey paper), • Favour more recent papers, • Pick a recent survey of the field so you can quickly gain an overview, • Find relationships with respect to each other and to your topic area (classification scheme/categorization) • Mark in the hard copy of papers whether complete work or section/sections of the paper are being considered.	4th week	**6%** (the list of standard papers and reason for selection)
Reading and notes for first 5 papers	Reading Paper Process • For each paper form a Table answering the following questions: • What is the main topic of the article? • What was/were the main issue(s) the author said they want to discuss? • Why did the author claim it was important? • How does the work build on other's work, in the author's opinion? • What simplifying assumptions does the author claim to be making? • What did the author do? • How did the author claim they were going to evaluate their work and	5th week	**8%** (the table given should indicate your understanding of the paper and the evaluation is based on your conclusions about each paper)

	compare it to others? • What did the author say were the limitations of their research? • What did the author say were the important directions for future research? Conclude with limitations/issues not addressed by the paper (from the perspective of your survey)		
Reading and notes for next5 papers	Repeat Reading Paper Process	6th week	**8%** (the table given should indicate your understanding of the paper and the evaluation is based on your conclusions about each paper)
Reading and notes for final 5 papers	Repeat Reading Paper Process	7th week	**8%** (the table given should indicate your understanding of the paper and the evaluation is based on your conclusions about each paper)
Draft outline 1 and Linking papers	Prepare a draft Outline, your survey goals, along with a classification / categorization diagram	8th week	**8%**(this component will be evaluated based on the linking and classification among the papers)
Abstract	Prepare a draft abstract and give a presentation	9th week	**6%** (Clarity, purpose and conclusion) **6%** Presentation & Viva Voce
Introduction Background	Write an introduction and background sections	10th week	**5%** (clarity)
Sections of the paper	Write the sections of your paper based on the classification / categorization diagram in keeping with the goals of your survey	11thweek	**10%** (this component will be evaluated based on the linking and classification among the papers)
Your conclusions	Write your conclusions and future work	12th week	**5%** (conclusions – clarity and your ideas)
Final Draft	Complete the final draft of your paper	13th week	**10%** (formatting, English, Clarity and linking) **4%** Plagiarism Check Report
Seminar	A brief 15 slides on your paper	14th & 15th week	**10%** (based on presentation and Viva-voce)

TOTAL : 30 PERIODS

AP5301 ADVANCED MICROPROCESSORS AND MICROCONTROLLERS ARCHITECTURES

	L	T	P	C
	3	0	0	3

OBJECTIVES:

- To familiarize about the features, specification and features of modern microprocessors.
- To gain knowledge about the architecture of Intel 32 and 64 bit microprocessors and salient features associated with them.
- To familiarize about the features, specification and features of modern microcontrollers.
- To gain knowledge about the 32 bit microcontrollers based on ARM and PIC32 architectures

UNIT I FEATURES OF MODERN MICROPROCESSORS 9

Evolution of microprocessors - Data and Address buses – clock speed – memory interface - multi-core architectures – cache memory hierarchy – operating modes – super scaler execution – dynamic execution – over clocking – integrated graphics processing - performance benchmarks.

UNIT I HIGH PERFORMANCE CISC ARCHITECTURES 9

Introduction to IA 32 bit architecture – Intel Pentium Processors family tree – Memory Management – Branch prediction logic - Superscalar architecture – Hyper threading technology – 64 bit extension technology – Intel 64 bit architecture - Intel Core processor family tree – Turbo boost technology – Smart cache - features of Nehalem microarchitecture

UNIT II HIGH PERFORMANCE RISC ARCHITECTURE - ARM 9

RISC architecture merits and demerits – The programmer's model of ARM Architecture – 3-stage pipeline ARM organization - 3-stage pipeline ARM organization – ARM instruction execution – Salient features of ARM instruction set - ARM architecture profiles (A, R and M profiles)

UNIT III FEATURES OF MODERN MICROPROCESSORS 9

Introduction to microcontrollers – microcontroller vs microprocessors – microcontroller architecture - Processor Core – Memory interfaces– Communication interfaces (SPI,I^2C, USB and CAN) – ADC - PWM – Watchdog timers – Interrupts – Debugging interfaces

UNIT IV HIGH PERFORMANCE MICROCONTROLLER ARCHITECTURES 9

Introduction to the Cortex-M Processor Family - ARM 'Cortex-M3' architecture for microcontrollers – Thumb 2 instruction technology – Internal Registers - Nested Vectored Interrupt controller - Memory map - Interrupts and exception handling – Applications of Cotex-M3 architecture

TOTAL : 45 PERIODS

OUTCOMES:

After completion of the course, the students should be able

- To explain the features and important specifications of modern microprocessors
- To explain the salient features CISC microprocessors based on IA-32 bit and IA-64 bit architectures
- To explain the salient features RISC processors based on ARM architecture and different application profiles of ARM core
- To explain the features and important specifications of modern microcontrollers
- To explain about ARM – M3 architecture and its salient features

AP5091 DIGITAL CONTROL ENGINEERING L T P C
3 0 0 3

OBJECTIVES:
- The student learns the principles of PI,PD,PID controllers.
- The student analyses time and frequency response discrete time control system.
- The student is familiar with digital control algorithms.
- The student has the knowledge to implement PID control algorithms.

UNIT I CONTROLLERS IN FEEDBACK SYSTEMS 9
Review of frequency and time response analysis and specifications of first order and second order feedback control systems, need for controllers, continuous time compensations, continuous time PI, PD, PID controllers, digital PID controllers.

UNIT II BASIC DIGITAL SIGNAL PROCESSING IN CONTROL SYSTEMS 9
Sampling theorem, quantization, aliasing and quantization error, hold operation, mathematical model of sample and hold, zero and first order hold, factors limiting the choice of sampling rate, reconstruction.

UNIT III MODELING OF SAMPLED DATA CONTROL SYSTEM 9
Difference equation description, Z-transform method of description, pulse transfer function, time and frequency response of discrete time control systems, stability of digital control systems, Jury's stability test, state space description, first companion, second companion, Jordan canonical models, discrete state variable models (elementary principles only).

UNIT IV DESIGN OF DIGITAL CONTROL ALGORITHMS 9
Review of principle of compensator design, Z-plane specifications, digital compensator design using frequency response plots, discrete integrator, discrete differentiator, development of digital PID controller, transfer function, design in the Z-plane.

UNIT V PRACTICAL ASPECTS OF DIGITAL CONTROL ALGORITHMS 9
Algorithm development of PID control algorithms, standard programmes for microcontroller implementation, finite word length effects, choice of data acquisition systems, microcontroller based temperature control systems, microcontroller based motor speed control systems, DSP implementation of motor control system.

TOTAL: 45 PERIODS

OUTCOMES:

- Describe continuous time and discrete time controllers analytically.
- Define and state basic analog to digital and digital to analog conversion principles.
- Analyze sampled data control system in time and frequency domains.
- Design simple PI, PD, PID continuous and digital controllers.
- Develop schemes for practical implementation of temperature and motor control systems.

AP5001 COMPUTER ARCHITECTURE AND PARALLEL PROCESSING **L T P C**
3 0 0 3

OBJECTIVES:

- Understand the difference between pipeline and parallel processing concepts
- Study various types of processor architectures and the importance of scalable architectures
- Study Memory Architectures, Memory Technology and Optimization.

UNIT I COMPUTER DESIGN AND PERFORMANCE MEASURES 9

Fundamentals of Computer Design – Parallel and Scalable Architectures – Multiprocessors –Multi-vector and SIMD architectures – Multithreaded architectures – Stanford Dash multiprocessor – KSR1 - Data-flow architectures - Performance Measures

UNIT II PARALLEL PROCESSING, PIPELINING AND ILP 9

Instruction Level Parallelism and Its Exploitation - Concepts and Challenges - Pipelining processors - Overcoming Data Hazards with Dynamic Scheduling – Dynamic Branch Prediction - Speculation - Multiple Issue Processors - Performance and Efficiency in Advanced Multiple Issue Processors

UNIT III MEMORY HIERARCHY DESIGN 9

Memory Hierarchy - Memory Technology and Optimizations – Cache memory – Optimizations of Cache Performance – Memory Protection and Virtual Memory - Design of Memory Hierarchies.

UNIT IV MULTIPROCESSORS 9

Symmetric and distributed shared memory architectures – Cache coherence issues – Performance Issues – Synchronization issues – Models of Memory Consistency - Interconnection networks – Buses, crossbar and multi-stage switches.

UNIT V MULTI-CORE ARCHITECTURES 9

Software and hardware multithreading – SMT and CMP architectures – Design issues – Case-studies – Intel Multi-core architecture – SUN CMP architecture – IBM cell architecture – hp architecture.

TOTAL : 45 PERIODS

OUTCOMES:

- Explain design of memory hierarchies
- Assess Performance Issues and Synchronization issues
- Compare multicore architectures

AP5002 CAD FOR VLSI CIRCUITS L T P C
3 0 0 3

OBJECTIVES:

- To study various physical design methods in VLSI.
- To understand the concepts behind the VLSI design rules and routing techniques.
- To understand the concepts of various algorithms used for floor planning and routing techniques.

UNIT I INTRODUCTION TO VLSI DESIGN FLOW 9

Introduction to VLSI Design methodologies, Basics of VLSI design automation tools, Algorithmic Graph Theory and Computational Complexity, Tractable and Intractable problems, General purpose methods for combinatorial optimization.

UNIT II LAYOUT, PLACEMENT AND PARTITIONING 9

Layout Compaction, Design rules, Problem formulation, Algorithms for constraint graph compaction, Placement and partitioning, Circuit representation, Placement algorithms, Partitioning

UNIT III FLOOR PLANNING AND ROUTING 9

Floor planning concepts, Shape functions and floorplan sizing, Types of local routing problems, Area routing, Channel routing, Global routing, Algorithms for global routing.

UNIT IV SIMULATION AND LOGIC SYNTHESIS 9

Simulation, Gate-level modeling and simulation, Switch-level modeling and simulation, Combinational Logic Synthesis, Binary Decision Diagrams, Two Level Logic Synthesis.

UNIT V HIGH LEVEL SYNTHESIS 9

Hardware models for high level synthesis, internal representation, allocation, assignment and scheduling, scheduling algorithms, Assignment problem, High level transformations.

TOTAL: 45 PERIODS

OUTCOMES:

- To use the simulation techniques at various levels in VLSI design flow
- Discuss the concepts of floor planning and routing
- Outline high level synthesis

REFERENCES:

CU5292 ELECTROMAGNETIC INTERFERENCE AND COMPATIBILITY **L T P C**
3 0 0 3

OBJECTIVES:
The students should be made to be familiar with:

- The basics of EMI
- EMI sources.
- EMI problems.
- Solution methods in PCB.
- Measurements techniques for emission.
- Measurement techniques for immunity.

UNIT I BASIC THEORY 9

Introduction to EMI and EMC, Intra and inter system EMI, Elements of Interference, Sources and Victims of EMI, Conducted and Radiated EMI emission and susceptibility, Case Histories, Radiation hazards to humans, Various issues of EMC, EMC Testing categories EMC Engineering Application.

UNIT II COUPLING MECHANISM 9

Electromagnetic field sources and Coupling paths, Coupling via the supply network, Common mode coupling, Differential mode coupling, Impedance coupling, Inductive and Capacitive coupling, Radioactive coupling, Ground loop coupling, Cable related emissions and coupling, Transient sources, Automotive transients.

UNIT III EMI MITIGATION TECHNIQUES 9

Working principle of Shielding and Murphy‟s Law, LF Magnetic shielding, Apertures and shielding effectiveness, Choice of Materials for H, E, and free space fields, Gasketting and sealing, PCB Level shielding, Principle of Grounding, Isolated grounds, Grounding strategies for Large systems, Grounding for mixed signal systems, Filter types and operation, Surge protection devices, Transient Protection.

UNIT IV STANDARD AND REGULATION 9

Need for Standards, Generic/General Standards for Residential and Industrial environment, Basic Standards, Product Standards, National and International EMI Standardizing Organizations; IEC, ANSI, FCC, AS/NZS, CISPR, BSI, CENELEC, ACEC. Electro Magnetic Emission and susceptibility standards and specifications, MIL461E Standards.

UNIT V EMI TEST METHODS AND INSTRUMENTATION 9

Fundamental considerations, EMI Shielding effectiveness tests, Open field test, TEM cell for immunity test, Shielded chamber , Shielded anechoic chamber, EMI test receivers, Spectrum analyzer, EMI test wave simulators, EMI coupling networks, Line impedance stabilization networks, Feed through capacitors, Antennas, Current probes, MIL -STD test methods, Civilian STD test methods.

TOTAL: 45 PERIODS

OUTCOMES:

At the end of this course, the student should be able to:

- Identify Standards
- Compare EMI test methods
- Discuss EMI mitigation techniques

AP5003 VLSI DESIGN TECHNIQUES L T P C
3 0 0 3

OBJECTIVES:

- This course deals comprehensively with all aspects of transistor level design of all the digital building blocks common to all CMOS microprocessors, DPSs, network processors, digital backend of all wireless systems etc.
- The focus will be on the transistor level design and will address all important issues related to size, speed and power consumption. The units are classified according to the important building and will introduce the principles and design methodology in terms of the dominant circuit choices, constraints and performance measures.

UNIT I MOS TRANSISTOR PRINCIPLES AND CMOS INVERTER 12

MOS(FET) Transistor Characteristic under Static and Dynamic Conditions, MOS Transistor Secondary Effects, Process Variations, Technology Scaling, Internet Parameter and electrical wise models CMOS Inverter - Static Characteristic, Dynamic Characteristic, Power, Energy, and Energy Delay parameters.

UNIT II COMBINATIONAL LOGIC CIRCUITS 9

Propagation Delays, Stick diagram, Layout diagrams, Examples of combinational logic design, Elmore's constant, Dynamic Logic Gates, Pass Transistor Logic, Power Dissipation, Low Power Design principles.

UNIT III SEQUENTIAL LOGIC CIRCUITS 9

Static Latches and Registers, Dynamic Latches and Registers, Timing Issues, Pipelines, Pulse and sense amplifier based Registers, Nonbistable Sequential Circuits.

UNIT IV ARITHMETIC BUILDING BLOCKS AND MEMORY ARCHITECTURES 9

Data path circuits, Architectures for Adders, Accumulators, Multipliers, Barrel Shifters, Speed and Area Tradeoffs, Memory Architectures, and Memory control circuits.

UNIT V INTERCONNECT AND CLOCKING STRATEGIES 6

Interconnect Parameters – Capacitance, Resistance, and Inductance, Electrical Wire Models, Timing classification of Digital Systems, Synchronous Design, Self-Timed Circuit Design.

TOTAL : 45 PERIODS

OUTCOMES:

At the end of the course, the student should be able to:

- Carry out transistor level design of the most important building blocks used in digital CMOS VLSI circuits.
- Discuss design methodology of arithmetic building block
- Analyze tradeoffs of the various circuit choices for each of the building block.

AP5071 NANOELECTRONICS L T P C
3 0 0 3

OBJECTIVES

- To understand how transistor as Nano device
- To understand various forms of Nano Devices
- To understand the Nano Sensors

UNIT I SEMICONDUCTOR NANO DEVICES 9

Single-Electron Devices; Nano scale MOSFET – Resonant Tunneling Transistor - Single-Electron Transistors; Nanorobotics and Nanomanipulation; Mechanical Molecular Nanodevices; Nanocomputers: Optical Fibers for Nanodevices; Photochemical Molecular Devices; DNA-Based Nanodevices; Gas-Based Nanodevices.

UNIT II ELECTRONIC AND PHOTONIC MOLECULAR MATERIALS 9

Preparation – Electroluminescent Organic materials - Laser Diodes - Quantum well lasers:- Quantum cascade lasers- Cascade surface-emitting photonic crystal laser- Quantum dot lasers - Quantum wire lasers:- White LEDs - LEDs based on nanowires - LEDs based on nanotubes - LEDs based on nanorods - High Efficiency Materials for OLEDs- High Efficiency Materials for OLEDs - Quantum well infrared photo detectors.

UNIT III THERMAL SENSORS 9

Thermal energy sensors -temperature sensors, heat sensors - Electromagnetic sensors - electrical resistance sensors, electrical current sensors, electrical voltage sensors, electrical power sensors, magnetism sensors - Mechanical sensors - pressure sensors, gas and liquid flow sensors, position sensors - Chemical sensors - Optical and radiation sensors.

UNIT IV GAS SENSOR MATERIALS 9

Criteria for the choice of materials - Experimental aspects – materials, properties, measurement of gas sensing property, sensitivity; Discussion of sensors for various gases, Gas sensors based on semiconductor devices.

UNIT V BIOSENSORS 9

Principles - DNA based biosensors – Protein based biosensors – materials for biosensor applications - fabrication of biosensors - future potential.

TOTAL: 45 PERIODS

OUTCOMES:

- To be able to simulate and design the nano device
- To be able to simulate and design the nano sensors

REFERENCES:

1. K.E. Drexler, “Nano systems”, Wiley,1992.
2. M.C. Petty, “Introduction to Molecular Electronics”, 1995.
3. W. Ranier, “Nano Electronics and Information Technology”, Wiley, 2003.

CU5097	WIRELESS ADHOC AND SENSOR NETWORKS	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To understand the basics of Ad-hoc & Sensor Networks.
- To learn various fundamental and emerging protocols of all layers.
- To study about the issues pertaining to major obstacles in establishment and efficient management of Ad-hoc and sensor networks.
- To understand the nature and applications of Ad-hoc and sensor networks.
- To understand various security practices and protocols of Ad-hoc and Sensor Networks.

UNIT I MAC & TCP IN AD HOC NETWORKS 9

Fundamentals of WLANs – IEEE 802.11 Architecture - Self configuration and Auto configuration-Issues in Ad-Hoc Wireless Networks – MAC Protocols for Ad-Hoc Wireless Networks – Contention Based Protocols - TCP over Ad-Hoc networks-TCP protocol overview - TCP and MANETs – Solutions for TCP over Ad-Hoc Networks.

UNIT II ROUTING IN AD HOC NETWORKS 9

Routing in Ad-Hoc Networks- Introduction-Topology based versus Position based Approaches-Proactive, Reactive, Hybrid Routing Approach-Principles and issues – Location services - DREAM – Quorums based location service – Grid – Forwarding strategies – Greedy packet forwarding – Restricted directional flooding- Hierarchical Routing- Issues and Challenges in providing QoS.

UNIT III MAC, ROUTING & QOS IN WIRELESS SENSOR NETWORKS 9

Introduction – Architecture - Single node architecture – Sensor network design considerations – Energy Efficient Design principles for WSNs – Protocols for WSN – Physical Layer : Transceiver Design considerations – MAC Layer Protocols – IEEE 802.15.4 Zigbee – Link Layer and Error Control issues - Routing Protocols – Mobile Nodes and Mobile Robots - Data Centric & Contention Based Networking – Transport Protocols & QOS – Congestion Control issues – Application Layer support.

UNIT IV SENSOR MANAGEMENT 9

Sensor Management - Topology Control Protocols and Sensing Mode Selection Protocols - Time synchronization - Localization and positioning – Operating systems and Sensor Network programming – Sensor Network Simulators.

UNIT V SECURITY IN AD HOC AND SENSOR NETWORKS 9

Security in Ad-Hoc and Sensor networks – Key Distribution and Management – Software based Anti-tamper techniques – water marking techniques – Defense against routing attacks - Secure Adhoc routing protocols – Broadcast authentication WSN protocols – TESLA – Biba – Sensor Network Security Protocols – SPINS.

TOTAL : 45 PERIODS

OUTCOMES:

Upon Completion of the course, the students should be able to

- Identify different issues in wireless ad hoc and sensor networks.
- To analyze protocols developed for ad hoc and sensor networks.
- To identify and address the security threats in ad hoc and sensor networks.
- Establish a Sensor network environment for different type of applications.

AP5004 HIGH PERFORMANCE NETWORKS L T P C
3 0 0 3

OBJECTIVES:

- To develop a comprehensive understanding of multimedia networking.
- To study the types of VPN and tunneling protocols for security.
- To learn about network security in many layers and network management.

UNIT I INTRODUCTION 9

Review of OSI, TCP/IP; Multiplexing, Modes of Communication, Switching, Routing. SONET – DWDM – DSL – ISDN – BISDN,ATM.

UNIT II MULTIMEDIA NETWORKING APPLICATIONS 9

Streaming stored Audio and Video – Best effort service – protocols for real time interactive applications – Beyond best effort – scheduling and policing mechanism – integrated services – RSVP- differentiated services.

UNIT III ADVANCED NETWORKS CONCEPTS 9

VPN-Remote-Access VPN, site-to-site VPN, Tunneling to PPP, Security in VPN.MPLS- operation, Routing, Tunneling and use of FEC, Traffic Engineering, MPLS based VPN, overlay networks-P2P connections.

UNIT IV TRAFFIC MODELLING 9

Little's theorem, Need for modeling, Poisson modeling and its failure, Non- poisson models, Network performance evaluation.

UNIT V NETWORK SECURITY AND MANAGEMENT 9

Principles of cryptography – Authentication – integrity – key distribution and certification – Access control and: fire walls – attacks and counter measures – security in many layers. Infrastructure for network management – The internet standard management framework – SMI, MIB, SNMP, Security and administration – ASN.1

TOTAL: 45PERIODS

OUTCOMES:

Upon completion of this course, the students should be able to:

- Discuss advanced networks concepts
- Outline traffic modeling
- Evaluate network security

DS5191 DSP PROCESSOR ARCHITECTURE AND PROGRAMMING

L	T	P	C
3	0	0	3

OBJECTIVES:

The objective of this course is to provide in-depth knowledge on

- Digital Signal Processor basics
- Third generation DSP Architecture and programming skills
- Advanced DSP architectures and some applications.

UNIT I FUNDAMENTALS OF PROGRAMMABLE DSPs 9

Multiplier and Multiplier accumulator – Modified Bus Structures and Memory access in PDSPs – Multiple access memory – Multi-port memory – VLIW architecture- Pipelining – Special Addressing modes in P-DSPs – On chip Peripherals.

UNIT II TMS320C5X PROCESSOR 9

Architecture – Assembly language syntax - Addressing modes – Assembly language Instructions - Pipeline structure, Operation – Block Diagram of DSP starter kit – Application Programs for processing real time signals.

UNIT III TMS320C6X PROCESSOR 9

Architecture of the C6x Processor - Instruction Set - DSP Development System: Introduction – DSP Starter Kit Support Tools- Code Composer Studio - Support Files - Programming Examples to Test the DSK Tools – Application Programs for processing real time signals.

UNIT IV ADSP PROCESSORS 9

Architecture of ADSP-21XX and ADSP-210XX series of DSP processors- Addressing modes and assembly language instructions – Application programs –Filter design, FFT calculation.

UNIT V ADVANCED PROCESSORS 9

Architecture of TMS320C54X: Pipe line operation, Code Composer studio – Architecture of TMS320C6X - Architecture of Motorola DSP563XX – Comparison of the features of DSP family processors.

TOTAL : 45 PERIODS

OUTCOMES:

Students should be able to:

- Become Digital Signal Processor specialized engineer
- DSP based System Developer

AP5073 **RF SYSTEM DESIGN** **L T P C**
3 0 0 3

OBJECTIVES:

- The CMOS RF Front End (RFE) is a very crucial building block and in all of wireless and many high frequency wire-line systems. The RFE has few important building blocks within ii including the Low Noise Amplifiers, Phase Locked Loop Synthesizers, Mixers, Power Amplifiers, and impedance matching circuits.
- The present course will introduce the principles of operation and design principles associated with these important blocks.
- The course will also provide and highlight the appropriate digital communication related design objectives and constraints associated with the RFEs

UNIT I CMOS PHYSICS, TRANSCEIVER SPECIFICATIONS AND ARCHITECTURES 9

Introduction to MOSFET Physics, Noise: Thermal, shot, flicker, popcorn noise, Two port Noise theory, Noise Figure, THD, IP2, IP3, Sensitivity, SFDR, Phase noise - Specification distribution over a communication link, Homodyne Receiver, Heterodyne Receiver, Image reject, Low IF Receiver Architectures Direct upconversion Transmitter, Two step upconversion Transmitter.

UNIT II IMPEDANCE MATCHING AND AMPLIFIERS 9

S-parameters with Smith chart, Passive IC components, Impedance matching networks, Common Gate, Common Source Amplifiers, OC Time constants in bandwidth estimation and enhancement, High frequency amplifier design, Power match and Noise match, Single ended and Differential LNAs, Terminated with Resistors and Source Degeneration LNAs.

UNIT III FEEDBACK SYSTEMS AND POWER AMPLIFIERS 9

Stability of feedback systems: Gain and phase margin, Root-locus techniques, Time and Frequency domain considerations, Compensation, General model – Class A, AB, B, C, D, E and F amplifiers, Power amplifier Linearisation Techniques, Efficiency boosting techniques, ACPR metric, Design considerations.

UNIT IV MIXERS AND OSCILLATORS 9

Mixer characteristics, Non-linear based mixers, Quadratic mixers, Multiplier based mixers, Single balanced and double balanced mixers, subsampling mixers, Oscillators describing Functions, Colpitts oscillators Resonators, Tuned Oscillators, Negative resistance oscillators, Phase noise.

UNIT V PLL AND FREQUENCY SYNTHESIZERS 9

Linearised Model, Noise properties, Phase detectors, Loop filters and Charge pumps, Integer-N frequency synthesizers, Direct Digital Frequency synthesizers.

TOTAL : 45 PERIODS

OUTCOMES:

- The student after completing this course must be able to translate the top level wireless communications system specifications into block level specifications of the RFE.
- The student should be also able to carry out transistor level design of the entire RFE.

AP5074 **SPEECH AND AUDIO SIGNAL PROCESSING** **L T P C**
3 0 0 3

OBJECTIVES:

- To study basic concepts of processing speech and audio signals
- To study and analyse various M-band filter-banks for audio coding
- To understand audio coding based on transform coders.
- To study time and frequency domain speech processing methods

UNIT I MECHANICS OF SPEECH AND AUDIO 9

Introduction - Review of Signal Processing Theory-Speech production mechanism – Nature of Speech signal – Discrete time modelling of Speech production – Classification of Speech sounds – Phones – Phonemes – Phonetic and Phonemic alphabets – Articulatory features. Absolute Threshold of Hearing - Critical Bands- Simultaneous Masking, Masking-Asymmetry, and the Spread of Masking- Non-simultaneous Masking - Perceptual Entropy - Basic measuring philosophy -Subjective versus objective perceptual testing - The perceptual audio quality measure (PAQM) - Cognitive effects in judging audio quality.

UNIT II TIME-FREQUENCY ANALYSIS: FILTER BANKS AND TRANSFORMS 9

Introduction - Analysis-Synthesis Framework for M-band Filter Banks- Filter Banks for Audio Coding: Design Considerations - Quadrature Mirror and Conjugate Quadrature Filters - Tree-Structured QMF and CQF M-band Banks - Cosine Modulated "Pseudo QMF" M-band Banks -Cosine Modulated Perfect Reconstruction (PR) M-band Banks and the Modified Discrete Cosine
Transform (MDCT) - Discrete Fourier and Discrete Cosine Transform - Pre-echo Distortion- Pre-echo Control Strategies

UNIT III AUDIO CODING AND TRANSFORM CODERS 9

Lossless Audio Coding – Lossy Audio Coding - ISO-MPEG-1A, 2A, 2A-Advaned, 4A Audio Coding - Optimum Coding in the Frequency Domain - Perceptual Transform Coder –Brandenburg - Johnston Hybrid Coder - CNET Coders - Adaptive Spectral Entropy Coding –Differential Perceptual Audio Coder - DFT Noise Substitution -DCT with Vector Quantization -MDCT with Vector Quantization

UNIT IV TIME AND FREQUENCY DOMAIN METHODS FOR SPEECH PROCESSING 9

Time domain parameters of Speech signal – Methods for extracting the parameters :Energy, Average Magnitude – Zero crossing Rate – Silence Discrimination using ZCR and energy Short Time Fourier analysis – Formant extraction – Pitch Extraction using time and frequency domain methods Homomorphic Speech Analysis: Cepstral analysis of Speech – Formant and Pitch Estimation – Homomorphic Vocoders

UNIT V PREDICTIVE ANALYSIS OF SPEECH 9

Formulation of Linear Prediction problem in Time Domain – Basic Principle – Auto correlation method – Covariance method – Solution of LPC equations – Cholesky method – Durbin's Recursive algorithm – lattice formation and solutions – Comparison of different methods – Application of LPC parameters – Pitch detection using LPC parameters – Formant analysis – VELP – CELP

TOTAL : 45 PERIODS

OUTCOMES:

Upon completion of this course, the students should be able to:

- Evaluate audio coding and transform coders
- Discuss time and frequency domain methods for speech processing
- Explain predictive analysis of speech

REFERENCES:

1. B.Gold and N.Morgan, “Speech and Audio Signal Processing”, Wiley and Sons, 2000.

4. Udo Zölzer, "Digital Audio Signal Processing", Second Edition A John Wiley& sons Ltd

AP5092 SOLID STATE DEVICE MODELLING AND SIMULATION L T P C
3 0 0 3

OBJECTIVES:

- To understand the concept of device modeling
- To learn multistep method
- To study device simulations

UNIT I MOSFET DEVICE PHYSICS MOSFET 9

capacitor, Basic operation, Basic modeling, Advanced MOSFET modeling, RF modeling of MOS transistors, Equivalent circuit representation of MOS transistor, High frequency behavior of MOS transistor and A.C small signal modeling, model parameter extraction, modeling parasitic BJT, Resistors, Capacitors, Inductors.

UNIT II DEVICE MODELLING 9

Prime importance of circuit and device simulations in VLSI; Nodal, mesh, modified nodal and hybrid analysis equations. Solution of network equations: Sparse matrix techniques, solution of nonlinear networks through Newton-Raphson technique, convergence and stability.

UNIT III MULTISTEP METHODS 9

Solution of stiff systems of equations, adaptation of multistep methods to the solution of electrical networks, general purpose circuit simulators.

UNIT IV MATHEMATICAL TECHNIQUES DEVICE SIMULATIONS 9

Poisson equation, continuity equation, drift-diffusion equation, Schrodinger equation, hydrodynamic equations, trap rate, finite difference solutions to these equations in 1D and 2D space, grid generation.

UNIT V SIMULATION OF DEVICES 9

Computation of characteristics of simple devices like p-n junction, MOS capacitor and MOSFET; Small-signal analysis.

TOTAL :45PERIODS

OUTCOMES:

Upon completion of this course, the students should be able to:

- Explain the importance of MOS Capacitor and Small signal modeling
- Apply and determine the drift diffusion equation and stiff system equation.
- Analyze circuits using parasitic BJT parameters and newton Raphson method.
- Model the MOS transistor using schrodinger equation and Multistep methods.

CP5292	INTERNET OF THINGS	L	T	P	C
		3	0	0	3

OBJECTIVES:
- To understand the fundamentals of Internet of Things
- To learn about the basics of IOT protocols
- To build a small low cost embedded system using Raspberry Pi.
- To apply the concept of Internet of Things in the real world scenario

UNIT I INTRODUCTION TO IoT 9
Internet of Things - Physical Design- Logical Design- IoT Enabling Technologies - IoT Levels & Deployment Templates - Domain Specific IoTs - IoT and M2M - IoT System Management with NETCONF-YANG- IoT Platforms Design Methodology

UNIT II IoT ARCHITECTURE 9
M2M high-level ETSI architecture - IETF architecture for IoT - OGC architecture - IoT reference model - Domain model - information model - functional model - communication model - IoT reference architecture

UNIT III IoT PROTOCOLS 9
Protocol Standardization for IoT – Efforts – M2M and WSN Protocols – SCADA and RFID Protocols – Unified Data Standards – Protocols – IEEE 802.15.4 – BACNet Protocol – Modbus– Zigbee Architecture – Network layer – 6LowPAN - CoAP - Security

UNIT IV BUILDING IoT WITH RASPBERRY PI & ARDUINO 9
Building IOT with RASPERRY PI- IoT Systems - Logical Design using Python – IoT Physical Devices & Endpoints - IoT Device -Building blocks -Raspberry Pi -Board - Linux on Raspberry Pi - Raspberry Pi Interfaces -Programming Raspberry Pi with Python - Other IoT Platforms - Arduino.

UNIT V CASE STUDIES AND REAL-WORLD APPLICATIONS 9
Real world design constraints - Applications - Asset management, Industrial automation, smart grid, Commercial building automation, Smart cities - participatory sensing - Data Analytics for IoT – Software & Management Tools for IoT Cloud Storage Models & Communication APIs - Cloud for IoT - Amazon Web Services for IoT.

TOTAL :45 PERIODS

OUTCOMES:

Upon completion of this course, the students should be able to:

- Analyze various protocols for IoT
- Develop web services to access/control IoT devices.
- Design a portable IoT using Rasperry Pi
- Deploy an IoT application and connect to the cloud.
- Analyze applications of IoT in real time scenario

AP5005	SYSTEM ON CHIP DESIGN	L	T	P	C
		3	0	0	3

OBJECTIVES:

- understanding of the concepts, issues, and process of designing highly integrated SoCs following systematic hardware/software co-design & co-verification principles

UNIT I INTRODUCTION 9

Introduction to SoC Design, system level design, methodologies and tools, system hardware: IO, communication, processing units, memories; operating systems: prediction of execution, real time scheduling, embedded OS, middle ware; Platform based SoC design, multiprocessor SoC and Network on Chip, Low power SoC Design

UNIT II SYSTEM LEVEL MODELLING 9

SystemC: overview, Data types, modules, notion of time, dynamic process, basic channels, structure communication, ports and interfaces, Design with examples

UNIT III HARDWARE SOFTWARE CO-DESIGN 9

Analysis, partitioning, high level optimisations, real-time scheduling, hardware acceleration, voltage scaling and power management; Virtual platform models, co-simulation and FPGAs for prototyping of HW/SW systems.

UNIT IV SYNTHESIS 9

System synthesis: Transaction Level Modelling (TLM) based design, automaticTLM generation and mapping, platform synthesis; software synthesis: code generation, multi task synthesis, internal and external communication; Hardware synthesis: RTL architecture, Input models, estimation and optimisation, resource sharing and pipelining and scheduling

UNIT V SOC VERIFICATION AND TESTING 9

SoC and IP integration, Verification : Verification technology options, verification methodology, overview: system level verification, physical verification, hardware/software co-verification; Test requirements and methodologies, SoC design for testability - System modeling, test power dissipation, test access mechanism

TOTAL : 45 PERIODS

OUTCOMES:

- Analyse algorithms and architecture of hardware software inorder to optimise the system based on requirements and implementation constraints
- Model and specify systems at high level of abstraction
- appreciate the co-design approach and virtual platform models
- Understand hardware, software and interface synthesis

AP5093	**ROBOTICS**	**L**	**T**	**P**	**C**
		3	**0**	**0**	**3**

OBJECTIVES:

- To understand robot locomotion and mobile robot kinematics
- To understand perception in robotics
- To understand mobile robot localization
- To understand mobile robot mapping
- To understand simultaneous localization and mapping (SLAM)
- To understand robot planning and navigation

UNIT I LOCOMOTION AND KINEMATICS 9

Introduction to Robotics – key issues in robot locomotion – legged robots – wheeled mobile robots – aerial mobile robots – introduction to kinematics – kinematics models and constraints – robot maneuverability

UNIT II ROBOT PERCEPTION 9

Sensors for mobile robots – vision for robotics – cameras – image formation – structure from stereo – structure from motion – optical flow – color tracking – place recognition – range data

UNIT III MOBILE ROBOT LOCALIZATION 9

Introduction to localization – challenges in localization – localization and navigation – belief representation – map representation – probabilistic map-based localization – Markov localization – EKF localization – UKF localization – Grid localization – Monte Carlo localization – localization in dynamic environments

UNIT IV MOBILE ROBOT MAPPING 9

Autonomous map building – occupancy grip mapping – MAP occupancy mapping – SLAM –extended Kalman Filter SLAM – graph-based SLAM – particle filter SLAM – sparse extended information filter – fastSLAM algorithm.

UNIT V PLANNING AND NAVIGATION 9

Introduction to planning and navigation – planning and reacting – path planning – obstacle avoidance techniques – navigation architectures – basic exploration algorithms

TOTAL 45 PERIODS

OUTCOMES:

Upon Completion of the course, the students will be able to

- Explain robot locomotion
- Apply kinematics models and constraints
- Implement vision algorithms for robotics
- Implement robot localization techniques
- Implement robot mapping techniques
- Implement SLAM algorithms
- Explain planning and navigation in robotics

AP5006 **PHYSICAL DESIGN OF VLSI CIRCUITS** **L T P C**
3 0 0 3

OBJECTIVES:

- To introduce the physical design concepts such as routing, placement, partitioning and packaging
- To study the performance of circuits layout designs, compaction techniques.

UNIT I INTRODUCTION TO VLSI TECHNOLOGY 9

Layout Rules-Circuit abstraction Cell generation using programmable logic array transistor chaining, Wein Berger arrays and gate matrices-layout of standard cells gate arrays and sea of gates, field programmable gate array(FPGA)-layout methodologies Packaging-Computational Complexity - Algorithmic Paradigms.

UNIT II PLACEMENT USING TOP-DOWN APPROACH 9

Partitioning: Approximation of Hyper Graphs with Graphs, Kernighan-Lin Heuristic Ratio cut partition with capacity and i/o constrants. Floor planning: Rectangular dual floor planning hierarchical approach- simulated annealing- Floor plan sizing Placement: Cost function- force directed method- placement by simulated annealing partitioning placement- module placement on a resistive network – regular placement linear placement.

UNIT III ROUTING USING TOP DOWN APPROACH 9

Fundamentals: Maze Running- line searching- Steiner trees Global Routing: Sequential Approaches - hierarchial approaches - multi commodity flow based techniques - Randomised Routing- One Step approach - Integer Linear Programming Detailed Routing: Channel Routing - Switch box routing. Routing in FPGA: Array based FPGA- Row based FPGAs

UNIT IV PERFORMANCE ISSUES IN CIRCUIT LAYOUT 9

Delay Models: Gate Delay Models- Models for interconnected Delay- Delay in RC trees. Timing – Driven Placement: Zero Stack Algorithm- Weight based placement- Linear Programming Approach Timing riving Routing: Delay Minimization- Click Skew Problem- Buffered Clock Trees. Minimization: constrained via Minimization unconstrained via Minimization- Other issues in minimization

UNIT V SINGLE LAYER ROUTING, CELL GENERATION AND COMPACTION 9

Planar subset problem(PSP)- Single Layer Global Routing- Single Layer detailed Routing- Wire length and bend minimization technique – Over The Cell (OTC) Routing Multiple chip modules(MCM)- programmable Logic Arrays- Transistor chaining- Wein Burger Arrays- Gate matrix layout- 1D compaction- 2D compaction.

TOTAL: 45 PERIODS

OUTCOMES:

Upon Completion of the course, the students will be able to

- Explain different types of routing
- Discuss performance issues in circuit layout
- Outline 1D compaction- 2D compaction.

AP5094 SIGNAL INTEGRITY FOR HIGH SPEED DESIGN L T P C
3 0 0 3

OBJECTIVES:

- To identify sources affecting the speed of digital circuits.
- To introduce methods to improve the signal transmission characteristics

UNIT I SIGNAL PROPAGATION ON TRANSMISSION LINES 9

Transmission line equations, wave solution, wave *vs*. circuits, initial wave, delay time, Characteristic impedance , wave propagation, reflection, and bounce diagrams Reactive terminations – L, C , static field maps of micro strip and strip line cross-sections, per unit length parameters, PCB layer stackups and layer/Cu thicknesses, cross-sectional analysis tools, Zo and Td equations for microstrip and stripline Reflection and terminations for logic gates, fan-out, logic switching , input impedance into a transmission-line section, reflection coefficient, skin-effect, dispersion

UNIT II MULTI-CONDUCTOR TRANSMISSION LINES AND CROSS-TALK 9

Multi-conductor transmission-lines, coupling physics, per unit length parameters ,Near and far-end cross-talk, minimizing cross-talk (stripline and microstrip) Differential signalling, termination, balanced circuits ,S-parameters, Lossy and Lossles models

UNIT III NON-IDEAL EFFECTS 9

Non-ideal signal return paths – gaps, BGA fields, via transitions , Parasitic inductance and capacitance , Transmission line losses – Rs, tanδ , routing parasitic, Common-mode current, differential-mode current , Connectors

UNIT IV POWER CONSIDERATIONS AND SYSTEM DESIGN 9

SSN/SSO , DC power bus design , layer stack up, SMT decoupling ,, Logic families, power consumption, and system power delivery , Logic families and speed Package types and parasitic ,SPICE, IBIS models ,Bit streams, PRBS and filtering functions of link-path components , Eye diagrams , jitter , inter-symbol interference Bit-error rate ,Timing analysis

UNIT V CLOCK DISTRIBUTION AND CLOCK OSCILLATORS 9

Timing margin, Clock slew, low impedance drivers, terminations, Delay Adjustments, canceling parasitic capacitance, Clock jitter.

TOTAL : 45 PERIODS

OUTCOMES:

- Ability to identify sources affecting the speed of digital circuits.
- Able to improve the signal transmission characteristics.

3. SPECCTRAQUEST from Cadence, http://www.specctraquest.com

VL5091 **MEMS AND NEMS** **L T P C**
3 0 0 3

OBJECTIVES:

- To introduce the concepts of microelectromechanical devices.
- To know the fabrication process of Microsystems.
- To know the design concepts of micro sensors and micro actuators.
- To familiarize concepts of quantum mechanics and nano systems.

UNIT I OVERVIEW 9

New trends in Engineering and Science: Micro and Nanoscale systems, Introduction to Design of MEMS and NEMS, MEMS and NEMS – Applications, Devices and structures. Materials for MEMS: Silicon, silicon compounds, polymers, metals.

UNIT II MEMS FABRICATION TECHNOLOGIES 9

Microsystem fabrication processes: Photolithography, Ion Implantation, Diffusion, Oxidation. Thin film depositions: LPCVD, Sputtering, Evaporation, Electroplating; Etching techniques: Dry and wet etching, electrochemical etching; Micromachining: Bulk Micromachining, Surface Micromachining, High Aspect- Ratio (LIGA and LIGA-like) Technology; Packaging: Microsystems packaging, Essential packaging technologies, Selection of packaging materials.

UNIT III MICRO SENSORS 9

MEMS Sensors: Design of Acoustic wave sensors, resonant sensor, Vibratory gyroscope, Capacitive and Piezo Resistive Pressure sensors- engineering mechanics behind these Microsensors. Case study: Piezo-resistive pressure sensor.

UNIT IV MICRO ACTUATORS 9

Design of Actuators: Actuation using thermal forces, Actuation using shape memory Alloys, Actuation using piezoelectric crystals, Actuation using Electrostatic forces (Parallel plate, Torsion bar, Comb drive actuators), Micromechanical Motors and pumps. Case study: Comb drive actuators.

UNIT V NANOSYSTEMS AND QUANTUM MECHANICS 9

Atomic Structures and Quantum Mechanics, Molecular and Nanostructure Dynamics: Schrodinger Equation and Wave function Theory, Density Functional Theory, Nanostructures and Molecular Dynamics, Electromagnetic Fields and their quantization, Molecular Wires and Molecular Circuits.

TOTAL: 45 PERIODS

OUTCOMES:

At the end of this course, the student should be able to:

- Discuss micro sensors
- Explain micro actuators
- Outline nanosystems and Quantum mechanics

AP5007 SECURE COMPUTING SYSTEMS

	L	T	P	C
	3	0	0	3

OBJECTIVES:

- To learn computer hardware, system software and data concepts from a security perspective

UNIT I UNIT I COMPUTER SECURITY AND MANAGEMENT 9

Overview of Computer Security, Threats, Malware, Vulnerabilities, Authentication, Access Control, Security Management Models, Security Management Practices, Protection Mechanisms, Legal aspects of security, Ethical Hacking.

UNIT II HARDWARE SECURITY 9

Need for Hardware Security, Computer Memory and storage, Bus and Interconnection, I/O and Network Interface, CPU; Side channel Analysis: Power Analysis Attack, Timing Attack, Fault attack. Countermeasures of Side Channel Attack, Secure Hardware Intellectual Properties, Physically Unclonable Functions(PUFs), Secure PUF.

UNIT III ASSEMBLY AND OPERATING SYSTEMS SECURITY 9

Opcode, Operands, Addressing Modes, Stack and Buffer Overflow, FIFO and M/M/1 Problem, Kernel, Drivers and OS Security; Secure Design Principles, Trusted Operating Systems, Trusted System Functions

UNIT IV ADVANCED COMPUTER ARCHITECTURE 9

Security aspects : Multiprocessors, parallel processing, Ubiquitous computing, Grid, Distributed and cloud computing, Internet computing, Virtualization

UNIT V NETWORK AND WEBSECURITY 9

TCP/IP Protocol, Network switches, Routers, Gateways, Wireless Networks and Network Address Translation (NAT); Network Security Issues in TCP/IP, Threat Models, Denial of Service Attacks, Firewalls, Intrusion Detection, Browser Attacks, Web Attacks Targeting Users, Email Attacks, Secure Shell (SSH), HTTPS

TOTAL : 45 PERIODS

OUTCOMES:

- Aware of Security aspects
- Able to appreciate security in hardware, OS and it future need
- Learn security issues in various types of computing networks

REFERENCES:

AP5008	PATTERN RECOGNITION	L T P C 3 0 0 3

OBJECTIVES:

- To learn about supervised and unsupervised pattern classifiers.
- To familiarize about different feature extraction techniques.
- To explore the role of Hidden Marko model and SVM in pattern recognition.
- To understand the application of Fuzzy logic and genetic algorithms for pattern classifier

UNIT I PATTERN CLASSIFIER 9

Overview of Pattern recognition – Discriminant functions – Supervised learning – Parametric estimation – Maximum Likelihood Estimation – Bayesian parameter Estimation – Problems with Bayes approach– Pattern classification by distance functions – Minimum distance pattern classifier.

UNIT II CLUSTERING 9

Clustering for unsupervised learning and classification–Clustering concept – C Means algorithm – Hierarchical clustering – Graph theoretic approach to pattern Clustering – Validity of Clusters.

UNIT III FEATURE EXTRACTION AND STRUCTURAL PATTERN RECOGNITION 9

Principle component analysis, Independent component analysis, Linear discriminant analysis, Feature selection through functional approximation – Elements of formal grammars, Syntactic description – Stochastic grammars – Structural Representation.

UNIT IV HIDDEN MARKOV MODELS AND SUPPORT VECTOR MACHINE 9

State Machines – Hidden Markov Models – Training – Classification – Support vector Machine – Feature Selection.

UNIT V RECENT ADVANCES 9

Fuzzy logic – Fuzzy Pattern Classifiers – Pattern Classification using Genetic Algorithms – Case Study Using Fuzzy Pattern Classifiers and Perception.

TOTAL : 45 PERIODS

OUTCOMES:

Upon completion of the course the student will be able to

- Differentiate between supervised and unsupervised classifiers
- Classify the data and identify the patterns.
- Extract feature set and select the features from given data set.
- Apply fuzzy logic and genetic algorithms for classification problems

(An Autonomous Institution)

St. Joseph's Group of Institutions

Jeppiaar Educational Trust

OMR,Chennai-119.

REGULATIONS 2021

B. TECH. CHEMICAL ENGINEERING

CHOICE BASED CREDIT SYSTEM

1. Progra mme Educational Objectives (PEOs)

Graduates of B. Tech. Chemical Engineering will

a) Apply principles of mathematics, science, and engineering to analyze and solve problems encountered in chemical engineering and related areas.

b) Think critically and creatively, especially about the use of technology to addresslocal and global problems and become a socially responsible engineer by involving with community and professional organizations.

c) Exhibit professional, ethical codes of conduct, team work and continuous learning for catering the ever changing needs of the society.

2. Programme Outcomes (POs)

On successful completion of the B. Tech. Chemical Engineering programme,

1. Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution complex engineering problems.
2. Problem analysis: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences and engineering sciences.
3. Design/development of solutions: Design solutions for complex engineering problems and design system components or process that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal and environmental considerations.
4. Conduct investigations of complex problems: Use research based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to proceed valid conclusions.
5. Modern tool usage: create, select and apply appropriate techniques, resources and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

6. The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
7. Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of and need for sustainable development.
8. Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
9. Individual and team work: Function effectively as an individual and as a member or leader in diverse teams, and in multidisciplinary settings.
10. Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
11. Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
12. Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

(APPLICABLE FOR THE STUDENTS JOINED IN THE YEAR 2022 – 2023)

I TO VIII SEMESTERS (FULL TIME) CURRICULUM AND SYLLABI

SEMESTER I

SI. No	COURSE CODE	COURSE TITLE	CATEGORY	CONTACT PERIODS	L	T	P	C
THEORY								
1.	HS1101	Communicative English	HSMC	3	3	0	0	3
2.	MA1102	Engineering Mathematics- I	BSC	4	3	1	0	4
3.	PH1103	Engineering Physics	BSC	3	3	0	0	3
4.	CY1104	Engineering Chemistry	BSC	3	3	0	0	3
5.	GE1105	Problem solving and Python Programming	ESC	3	3	0	0	3
6.	GE1106	Engineering Graphics	ESC	6	2	0	4	4
TOTAL CREDITS FOR THEORY				**22**	**18**	**0**	**4**	**20**
PRACTICALS								
7.	GE1107	Python Programming Laboratory	ESC	4	0	0	4	2
8.	BS1108	Physics and Chemistry Laboratory	BSC	4	0	0	4	2
TOTAL CREDITS FOR LAB				**8**	**0**	**0**	**8**	4
SEMESTER TOTAL (THEORY + LABORATORY)				**30**	**18**	**0**	**12**	**24**

SEMESTER II

SI. No	COURSE CODE	COURSE TITLE	CATEGORY	CONTACT PERIODS	L	T	P	C
THEORY								
1.	HS1201	Professional English	HSMC	3	3	0	0	3
2.	MA1202	Engineering Mathematics – II	BSC	4	3	1	0	4
3.	PH1255	Physics of Materials	BSC	3	3	0	0	3
4.	GE1204	Environmental Science and Engineering	HSMC	3	3	0	0	3
5.	GE1205	Basic Civil and Mechanical Engineering	PCC	3	3	0	0	3
6.	CH1206	Introduction to Chemical Engineering	PCC	3	3	0	0	2
7.	GE1209	Heritage of Tamils	HSMC	1	1	0	0	1
TOTAL CREDITS FOR THEORY				**20**	**20**	**0**	**0**	**19**

PRACTICALS								
8.	GE1207	Engineering Practices Laboratory	ESC	4	0	0	4	2
9.	CH1208	Technical Analysis Laboratory	BSC	4	0	0	4	2
		TOTAL CREDITS FOR LAB		**8**	**0**	**0**	**8**	**4**
		SEMESTER TOTAL (THEORY + LABORATORY)		**28**	**20**	**0**	**8**	**23**

SEMESTER III

SI. No	COURSE CODE	COURSE TITLE	CATEGORY	CONTACT PERIODS	L	T	P	C
THEORY								
1.	MA1353	Applied numerical analysis	BSC	4	4	0	0	4
2.	CH1301	Process Calculations	PCC	4	3	1	0	4
3.	CH1302	Fluid Mechanics for chemical Engineers	PCC	3	2	1	0	3
4.	EE1353	Principles of Electrical and Electronics Engineering	ESC	3	3	0	0	3
5.	CH1303	Solid Mechanics for Technologists	ESC	3	3	0	0	3
6.	GE1210	Tamils and Technology	HSMC	1	1	0	0	1
		TOTAL CREDITS FOR THEORY		**18**	**16**	**2**	**0**	**18**
PRACTICALS								
6.	CH1307	Fluid Mechanics Laboratory	PCC	4	0	0	4	2
7.	EE1358	Electrical Engineering Laboratory	ESC	4	0	0	4	2
		TOTAL CREDITS FOR LAB		**8**	0	0	**8**	**4**
		SEMESTER TOTAL (THEORY + LABORATORY)		**26**	**16**	**2**	**8**	**21**

SEMESTER IV

SI. No	COURSE CODE	COURSE TITLE	CATEGORY	CONTACT PERIODS	L	T	P	C
THEORY								
1.	MA1452	Applied probability and statistics	BSC	4	4	0	0	4
2.	CH1401	Chemistry for chemical Engineers	BSC	3	3	0	0	3
3.	CH1402	Computer applications in Chemical Engineering (Integrated Lab)	PCC	5	2	1	2	4
4.	CH1403	Mechanical operations	PCC	3	3	0	0	3
5.	CH1404	Chemical Process Industries	PCC	3	3	0	0	3
6.	CH1405	Instrumental Methods of Chemical Analysis	BSC	3	3	0	0	3
		TOTAL CREDITS FOR THEORY		**21**	**18**	**1**	**2**	**20**
PRACTICALS								

7.	CH1407	Mechanical operations Laboratory	PCC	4	0	0	4	2
8.	HS1310	Professional Skills Laboratory	EEC	2	0	0	2	1
TOTAL CREDITS FOR LAB				**6**	**0**	**0**	**5**	**3**
SEMESTER TOTAL (THEORY + LABORATORY)				**27**	**18**	**1**	**7**	**23**

SEMESTER V

SI. No	COURSE CODE	COURSE TITLE	CATEGORY	CONTACT PERIODS	L	T	P	C
THEORY								
1.	CH1501	Chemical Reaction Engineering I	PCC	3	2	1	0	3
2.	CH1502	Heat Transfer	PCC	3	2	1	0	3
3.	CH1503	Mass Transfer I	PCC	3	2	1	0	3
4.		Professional Elective I	PEC	3	3	0	0	3
5.		Open Elective I	OEC	3	3	0	0	3
6.		Audit course *(one from the list of audit courses)	AC	2	2	0	0	0

REGULATION 2021

B. TECH CHEMICAL ENGINEERING – CHOICE BASED CREDIT SYSTEM

(APPLICABLE FOR THE STUDENTS JOINED IN THE YEAR 2023 – 2024)

I TO VIII SEMESTERS (FULL TIME) CURRICULUM AND SYLLABI

SEMESTER I

SI. No	COURSE CODE	COURSE TITLE	CATEGORY	CONTACT PERIODS	L	T	P	C
THEORY								
1.	HS1101	Communicative English	HSMC	3	3	0	0	3
2.	MA1102	Engineering Mathematics- I	BSC	4	3	1	0	4
3.	PH1103	Engineering Physics	BSC	3	3	0	0	3
4.	CY1104	Engineering Chemistry	BSC	3	3	0	0	3
5.	GE1105	Problem solving and Python Programming	ESC	3	3	0	0	3
6.	GE1106	Engineering Graphics	ESC	6	2	0	4	4
7.	GE1209	Heritage of Tamils	HSMC	1	1	0	0	1
TOTAL CREDITS FOR THEORY				23	**19**	**0**	**4**	**21**
PRACTICALS								
8.	GE1107	Python Programming Laboratory	ESC	4	0	0	4	2
9.	BS1108	Physics and Chemistry Laboratory	BSC	4	0	0	4	2
TOTAL CREDITS FOR LAB				**8**	**0**	**0**	**8**	4
SEMESTER TOTAL (THEORY + LABORATORY)				**30**	**19**	**0**	**12**	**25**

SEMESTER II

SI. No	COURSE CODE	COURSE TITLE	CATEGORY	CONTACT PERIODS	L	T	P	C
THEORY								
1.	HS1201	Professional English	HSMC	3	3	0	0	3
2.	MA1202	Engineering Mathematics – II	BSC	4	3	1	0	4
3.	PH1255	Physics of Materials	BSC	3	3	0	0	3
4.	GE1204	Environmental Science and Engineering	HSMC	3	3	0	0	3
5.	GE1205	Basic Civil and Mechanical Engineering	PCC	3	3	0	0	3
6.	CH1206	Introduction to Chemical Engineering	PCC	3	3	0	0	2
7.	GE1210	Tamils and Technology	ESC	1	1	0	0	1
TOTAL CREDITS FOR THEORY				**20**	**20**	**0**	**0**	19

PRACTICALS								
8.	GE1207	Engineering Practices Laboratory	ESC	4	0	0	4	2
9.	CH1208	Technical Analysis Laboratory	BSC	4	0	0	4	2
			TOTAL CREDITS FOR LAB	**8**	**0**	**0**	**8**	**4**
			SEMESTER TOTAL (THEORY + LABORATORY)	**28**	**20**	**0**	**8**	**23**

SEMESTER III

SI. No	COURSE CODE	COURSE TITLE	CATEGORY	CONTACT PERIODS	L	T	P	C
THEORY								
1.	MA1353	Applied numerical analysis	BSC	4	4	0	0	4
2.	CH1301	Process Calculations	PCC	4	3	1	0	4
3.	CH1302	Fluid Mechanics for chemical Engineers	PCC	3	2	1	0	3
4.	EE1353	Principles of Electrical and Electronics Engineering	ESC	3	3	0	0	3
5.	CH1303	Solid Mechanics for Technologists	ESC	3	3	0	0	3
			TOTAL CREDITS FOR THEORY	**17**	**15**	**2**	**0**	17
PRACTICALS								
7.	CH1307	Fluid Mechanics Laboratory	PCC	4	0	0	4	2
8.	EE1358	Electrical Engineering Laboratory	ESC	4	0	0	4	2
			TOTAL CREDITS FOR LAB	**8**	**0**	**0**	**8**	4
			SEMESTER TOTAL (THEORY + LABORATORY)	**25**	**15**	**2**	**8**	**21**

SEMESTER IV

SI. No	COURSE CODE	COURSE TITLE	CATEGORY	CONTACT PERIODS	L	T	P	C
THEORY								
1.	MA1452	Applied probability and statistics	BSC	4	4	0	0	4
2.	CH1401	Chemistry for chemical Engineers	BSC	3	3	0	0	3
3.	CH1402	Computer applications in Chemical Engineering (Integrated Lab)	PCC	5	2	1	2	4
4.	CH1403	Mechanical operations	PCC	3	3	0	0	3
5.	CH1404	Chemical Process Industries	PCC	3	3	0	0	3
6.	CH1405	Instrumental Methods of Chemical Analysis	BSC	3	3	0	0	3
			TOTAL CREDITS FOR THEORY	**21**	**18**	**1**	**2**	**20**
PRACTICALS								
7.	CH1407	Mechanical operations Laboratory	PCC	4	0	0	4	2

8.	HS1310	Professional Skills Laboratory	EEC	2	0	0	2	1
		TOTAL CREDITS FOR LAB		**6**	**0**	**0**	**6**	**3**
		SEMESTER TOTAL (THEORY + LABORATORY)		**27**	**18**	**1**	**8**	**23**

SEMESTER V

SI. No	COURSE CODE	COURSE TITLE	CATEGORY	CONTACT PERIODS	L	T	P	C
		THEORY						
1.	CH1501	Chemical Reaction Engineering I	PCC	3	2	1	0	3
2.	CH1502	Heat Transfer	PCC	3	2	1	0	3
3.	CH1503	Mass Transfer I	PCC	3	2	1	0	3
4.		Professional Elective I	PEC	3	3	0	0	3
5.		Open Elective I	OEC	3	3	0	0	3
6.		Audit course *(one from the list of audit courses)	AC	2	2	0	0	0
		TOTAL CREDITS FOR THEORY		**17**	**14**	**3**	**0**	15
		PRACTICALS						
7.	CH1507	Heat and mass Transfer Laboratory	PCC	4	0	0	4	2
8.	CH1508	Computational Programming Laboratory for Chemical Engineers	PCC	4	0	0	4	2
		TOTAL CREDITS FOR LAB		**8**	**0**	**0**	**8**	**4**
		SEMESTER TOTAL (THEORY + LABORATORY)		**25**	**14**	**3**	**8**	**19**

SEMESTER VI

SI. No	COURSE CODE	COURSE TITLE	CATEGORY	CONTACT PERIODS	L	T	P	C
		THEORY						
1.	CH1601	Chemical Reaction Engineering II	PCC	4	3	1	0	4
2.	CH1602	Mass Transfer II (Integrated Laboratory)	PCC	4	2	1	2	4
3.	CH1603	Chemical Engineering Thermodynamics	PCC	3	2	1	0	3
4.	CH1604	Process Dynamics and Control	PCC	3	2	1	0	3
5.	CH1605	Process Economics and Industrial Management	PCC	3	3	0	0	3
6.		Professional Elective II	PEC	3	3	0	0	3
		TOTAL CREDITS FOR THEORY		**20**	**15**	**4**	**2**	**20**
		PRACTICALS						
7.	CH1607	Professional Ethical Practice *(Internal Assessment only)	PCC	2	0	0	2	1
8.	CH1608	Chemical Reaction Engineering Laboratory	PCC	4	0	0	4	2

TOTAL CREDITS FOR LAB		6	0	0	6	3
SEMESTER TOTAL (THEORY + LABORATORY)		26	15	4	8	23
CHVA01	Value added course*(Internal Assessment only)	1 WEEK				2

SEMESTER VII

SI. No	COURSE CODE	COURSE TITLE	CATEGORY	CONTACT PERIODS	L	T	P	C
THEORY								
1.	CH1701	Transport Phenomena	PCC	3	2	1	0	3
2.	CH1702	Chemical Process Equipment Design (Integrated Lab)	PCC	5	2	1	2	4
3.	CH1703	Safety and Hazard analysis	PCC	3	3	0	0	3
4.		Professional Elective III	PEC	3	3	0	0	3
5.		Professional Elective IV	PEC	3	3	0	0	3
6.		Open Elective II	OEC	3	3	0	0	3
TOTAL CREDITS FOR THEORY				**20**	**16**	**2**	**2**	**19**
PRACTICALS								
7.	CH1707	Mini Project	PCC	4	0	0	4	2
8.	CH1708	Process Control and dynamics Laboratory	PCC	4	0	0	4	2
9.	CH1709	Internship (Undergone during 6th Semester summer holidays, evaluated in the 7th semester)	EEC	0	0	0	0	1
TOTAL CREDITS FOR LAB				**8**	**0**	**0**	**8**	**5**
SEMESTER TOTAL (THEORY + LABORATORY)				**28**	**16**	**2**	**10**	**24**

SEMESTER VIII

SI. No	COURSE CODE	COURSE TITLE	CATEGORY	CONTACT PERIODS	L	T	P	C
THEORY								
1.	CH1801	Professional Elective V	PEC	3	3	0	0	3
2.	CH1802	Professional Elective VI	PEC	3	3	0	0	3
TOTAL CREDITS FOR THEORY				**6**	**6**	**0**	**0**	**6**
PRACTICALS								
3.	CH1807	Project Work	EEC	20	0	0	20	12
TOTAL CREDITS FOR LAB				**20**	**0**	**0**	**20**	**12**
SEMESTER TOTAL (THEORY + LABORATORY)				**26**	**6**	**0**	**20**	**18**

PROFESSIONAL ELECTIVES (PE)

PROFESSIONAL ELECTIVE I, SEMESTER V

SI. No	COURSE CODE	COURSE TITLE	CATEGORY	CONTACT PERIODS	L	T	P	C
1.	CH1509	Chemical Works Organization and Management	PEC	3	3	0	0	3
2.	CH1510	Membrane Science and Engineering	PEC	3	3	0	0	3
3.	CH1511	Polymer Technology	PEC	3	3	0	0	3
4.	CH1512	Fundamentals of Thermodynamics	PEC	3	2	1	0	3
5.	CH1513	Essentials of Thermodynamics	PEC	3	2	1	0	3

PROFESSIONAL ELECTIVE II, SEMESTER VI

SI. No	COURSE CODE	COURSE TITLE	CATEGORY	CONTACT PERIODS	L	T	P	C
1.	CH1609	Industrial Air Pollution	PEC	3	3	0	0	3
2.	CH1610	Industrial Instrumentation	PEC	3	3	0	0	3
3.	CH1611	Electrochemical Engineering	PEC	3	3	0	0	3
4.	CH1612	Process Plant Utilities	PEC	3	3	0	0	3

PROFESSIONAL ELECTIVE III, SEMESTER VII

SI. No	COURSE CODE	COURSE TITLE	CATEGORY	CONTACT PERIODS	L	T	P	C
1.	CH1710	Modern Separation Techniques	PEC	3	3	0	0	3
2.	CH1711	Waste Water Treatment	PEC	3	3	0	0	3
3.	CH1712	Fluidization Engineering	PEC	3	2	1	0	3
4.	CH1713	Distillation	PEC	3	3	0	0	3

PROFESSIONAL ELECTIVE IV, SEMESTER VII

SI. No	COURSE CODE	COURSE TITLE	CATEGORY	CONTACT PERIODS	L	T	P	C
1.	CH1714	Piping and Instrumentation	PEC	3	3	0	0	3
2.	CH1715	Food Technology	PEC	3	3	0	0	3
3.	CH1716	Biochemical Engineering	PEC	3	3	0	0	3
4.	GE1003	Professional Ethics	PEC	3	3	0	0	3

PROFESSIONAL ELECTIVE V, SEMESTER VIII

SI. No	COURSE CODE	COURSE TITLE	CATEGORY	CONTACT PERIODS	L	T	P	C
1.	CH1808	Optimization of Chemical Processes	PEC	3	3	0	0	3
2.	CH1809	Fermentation Engineering	PEC	3	3	0	0	3
3.	CH1810	Nuclear Engineering	PEC	3	3	0	0	3
4.	CH1811	Energy Technology	PEC	3	3	0	0	3

PROFESSIONAL ELECTIVE VI, SEMESTER VIII

SI. No	COURSE CODE	COURSE TITLE	CATEGORY	CONTACT PERIODS	L	T	P	C
1.	CH1812	Fertilizer Technology	PEC	3	3	0	0	3
2.	CH1813	Pulp and Paper Technology	PEC	3	3	0	0	3
3.	CH1814	Mixing Theory and Practice	PEC	3	3	0	0	3
4.	CH1815	Petroleum Refining and Petrochemicals	PEC	3	3	0	0	3

LIST OF COURSES FOR OPEN ELECTIVE I, SEMESTER V

SI. No	COURSE CODE	COURSE TITLE	CATEGORY	CONTACT PERIODS	L	T	P	C
1.	OCE103	Environmental Impact Assessments	OEC	3	3	0	0	3
2.	OCS101	Introduction to C Programming	OEC	3	3	0	0	3
3.	OEE105	Solar Energy Utilization	OEC	3	3	0	0	3
4.	OBT101	Industrial Biotechnology	OEC	3	3	0	0	3
5.	OBT102	Hazardous Waste Management	OEC	3	3	0	0	3
6.	OEE106	Energy Conservation and Management	OEC	3	3	0	0	3

LIST OF COURSES FOR OPEN ELECTIVE II, SEMESTER VII

SI. No	COURSE CODE	COURSE TITLE	CATEGORY	CONTACT PERIODS	L	T	P	C
1.	OBT103	Fuel Cell Chemistry	OEC	3	3	0	0	3
2.	OEE102	Renewable Energy Sources	OEC	3	3	0	0	3
3.	OME102	Design of Experiments	OEC	3	3	0	0	3
4.	OBT104	Biosensors	OEC	3	3	0	0	3
5.	OME106	Testing of Materials	OEC	3	3	0	0	3
6.	OBT105	Introduction to Nanoscience and Nanotechnology	OEC	3	3	0	0	3

AUDIT COURSE

SI. No	COURSE CODE	COURSE TITLE	CATEGORY	CONTACT PERIODS	L	T	P	C
1.	AD1001	Constitution of India	AC	2	2	0	0	0
2.	AD1002	Value Education	AC	2	2	0	0	0
3.	AD1003	Pedagogy Studies	AC	2	2	0	0	0
4.	AD1004	Stress Management by Yoga	AC	2	2	0	0	0
5.	AD1005	Personality Development Through Life Enlightenment Skills	AC	2	2	0	0	0
6.	AD1006	Unnat Bharat Abhiyan	AC	2	2	0	0	0
7.	AD1007	Essence of Indian Knowledge Tradition	AC	2	2	0	0	0
8.	AD1008	Sanga Tamil Literature Appreciation	AC	2	2	0	0	0

B. TECH CHEMICAL ENGINEERING – CHOICE BASED CREDIT SYSTEM

(APPLICABLE FOR THE STUDENTS JOINED IN THE YEAR 2024 – 2025)

I TO VIII SEMESTERS (FULL TIME) CURRICULUM AND SYLLABI

SEMESTER I

SI. No	COURSE CODE	COURSE TITLE	CATEGORY	CONTACT PERIODS	L	T	P	C
THEORY								
1.	HS1101	Communicative English	HSMC	3	3	0	0	3
2.	MA1102	Engineering Mathematics- I	BSC	4	3	1	0	4
3.	PH1103	Engineering Physics	BSC	3	3	0	0	3
4.	CY1104	Engineering Chemistry	BSC	3	3	0	0	3
5.	GE1109	Problem solving and Programming in C	ESC	3	3	0	0	3
6.	GE1106	Engineering Graphics	ESC	6	2	0	4	4
7.	GE1209	Heritage of Tamils	HSMC	1	1	0	0	1
TOTAL CREDITS FOR THEORY				23	**19**	**0**	**4**	**21**
PRACTICALS								
8.	GE1110	Programming in C Laboratory	ESC	4	0	0	4	2
9.	BS1108	Physics and Chemistry Laboratory	BSC	4	0	0	4	2
TOTAL CREDITS FOR LAB				**8**	**0**	**0**	**8**	4
SEMESTER TOTAL (THEORY + LABORATORY)				**30**	**19**	**0**	**12**	**25**

SEMESTER II

SI. No	COURSE CODE	COURSE TITLE	CATEGORY	CONTACT PERIODS	L	T	P	C
THEORY								
1.	HS1201	Professional English	HSMC	3	3	0	0	3
2.	MA1202	Engineering Mathematics – II	BSC	4	3	1	0	4
3.	PH1255	Physics of Materials	BSC	3	3	0	0	3
4.	GE1204	Environmental Science and Engineering	HSMC	3	3	0	0	3
5.	GE1205	Basic Civil and Mechanical Engineering	PCC	3	3	0	0	3
6.	CH1206	Introduction to Chemical Engineering	PCC	3	3	0	0	2
7.	GE1210	Tamils and Technology	ESC	1	1	0	0	1
TOTAL CREDITS FOR THEORY				**20**	**20**	**0**	**0**	19

PRACTICALS								
8.	GE1207	Engineering Practices Laboratory	ESC	4	0	0	4	2
9.	CH1208	Technical Analysis Laboratory	BSC	4	0	0	4	2
			TOTAL CREDITS FOR LAB	**8**	**0**	**0**	**8**	**4**
			SEMESTER TOTAL (THEORY + LABORATORY)	**28**	**20**	**0**	**8**	**23**

SEMESTER III

SI. No	COURSE CODE	COURSE TITLE	CATEGORY	CONTACT PERIODS	L	T	P	C
THEORY								
1.	MA1353	Applied numerical analysis	BSC	4	4	0	0	4
2.	CH1301	Process Calculations	PCC	4	3	1	0	4
3.	CH1302	Fluid Mechanics for chemical Engineers	PCC	3	2	1	0	3
4.	EE1353	Principles of Electrical and Electronics Engineering	ESC	3	3	0	0	3
5.	CH1303	Solid Mechanics for Technologists	ESC	3	3	0	0	3
			TOTAL CREDITS FOR THEORY	**17**	**15**	**2**	**0**	17
PRACTICALS								
6.	CH1307	Fluid Mechanics Laboratory	PCC	4	0	0	4	2
7.	EE1358	Electrical Engineering Laboratory	ESC	4	0	0	4	2
			TOTAL CREDITS FOR LAB	**8**	**0**	**0**	**8**	4
			SEMESTER TOTAL (THEORY + LABORATORY)	**25**	**15**	**2**	**8**	**21**

SEMESTER IV

SI. No	COURSE CODE	COURSE TITLE	CATEGORY	CONTACT PERIODS	L	T	P	C
THEORY								
1.	MA1452	Applied probability and statistics	BSC	4	4	0	0	4
2.	CH1401	Chemistry for chemical Engineers	BSC	3	3	0	0	3
3.	CH1402	Computer applications in Chemical Engineering (Integrated Lab)	PCC	5	2	1	2	4
4.	CH1403	Mechanical operations	PCC	3	3	0	0	3
5.	CH1404	Chemical Process Industries	PCC	3	3	0	0	3
6.	CH1405	Instrumental Methods of Chemical Analysis	BSC	3	3	0	0	3
			TOTAL CREDITS FOR THEORY	**21**	**18**	**1**	**2**	**20**
PRACTICALS								
7.	CH1407	Mechanical operations Laboratory	PCC	4	0	0	4	2

8.	HS1310	Professional Skills Laboratory	EEC	2	0	0	2	1
TOTAL CREDITS FOR LAB				**6**	**0**	**0**	**6**	**3**
SEMESTER TOTAL (THEORY + LABORATORY)				**27**	**18**	**1**	**8**	**23**

SEMESTER V

SI. No	COURSE CODE	COURSE TITLE	CATEGORY	CONTACT PERIODS	L	T	P	C
THEORY								
1.	CH1501	Chemical Reaction Engineering I	PCC	3	2	1	0	3
2.	CH1502	Heat Transfer	PCC	3	2	1	0	3
3.	CH1503	Mass Transfer I	PCC	3	2	1	0	3
4.		Professional Elective I	PEC	3	3	0	0	3
5.		Open Elective I	OEC	3	3	0	0	3
6.		Audit course *(one from the list of audit courses)	AC	2	2	0	0	0
TOTAL CREDITS FOR THEORY				**17**	**14**	**3**	**0**	**15**
PRACTICALS								
7.	CH1507	Heat and mass Transfer Laboratory	PCC	4	0	0	4	2
8.	CH1508	Computational Programming Laboratory for Chemical Engineers	PCC	4	0	0	4	2
TOTAL CREDITS FOR LAB				**8**	**0**	**0**	**8**	**4**
SEMESTER TOTAL (THEORY + LABORATORY)				**25**	**14**	**3**	**8**	**19**

SEMESTER VI

SI. No	COURSE CODE	COURSE TITLE	CATEGORY	CONTACT PERIODS	L	T	P	C
THEORY								
1.	CH1601	Chemical Reaction Engineering II	PCC	4	3	1	0	4
2.	CH1602	Mass Transfer II (Integrated Laboratory)	PCC	4	2	1	2	4
3.	CH1603	Chemical Engineering Thermodynamics	PCC	3	2	1	0	3
4.	CH1604	Process Dynamics and Control	PCC	3	2	1	0	3
5.	CH1605	Process Economics and Industrial Management	PCC	3	3	0	0	3
6.		Professional Elective II	PEC	3	3	0	0	3
TOTAL CREDITS FOR THEORY				**20**	**15**	**4**	**2**	**20**
PRACTICALS								
7.	CH1607	Professional Ethical Practice *(Internal Assessment only)	PCC	2	0	0	2	1
8.	CH1608	Chemical Reaction Engineering Laboratory	PCC	4	0	0	4	2
TOTAL CREDITS FOR LAB				**6**	**0**	**0**	**6**	**3**

SEMESTER TOTAL (THEORY + LABORATORY)		**26**	**15**	**4**	**8**	**23**
CHVA01	**Value added course***(Internal Assessment only)	**1 WEEK**				**2**

SEMESTER VII

SI. No	COURSE CODE	COURSE TITLE	CATEGORY	CONTACT PERIODS	L	T	P	C
		THEORY						
1.	CH1701	Transport Phenomena	PCC	3	2	1	0	3
2.	CH1702	Chemical Process Equipment Design (Integrated Lab)	PCC	5	2	1	2	4
3.	CH1703	Safety and Hazard analysis	PCC	3	3	0	0	3
4.		Professional Elective III	PEC	3	3	0	0	3
5.		Professional Elective IV	PEC	3	3	0	0	3
6.		Open Elective II	OEC	3	3	0	0	3
			TOTAL CREDITS FOR THEORY	**20**	**16**	**2**	**2**	**19**
		PRACTICALS						
7.	CH1707	Mini Project	PCC	4	0	0	4	2
8.	CH1708	Process Control and dynamics Laboratory	PCC	4	0	0	4	2
9.	CH1709	Internship (Undergone during 6th Semester summer holidays, evaluated in the 7th semester)	EEC	0	0	0	0	1
			TOTAL CREDITS FOR LAB	**8**	**0**	**0**	**8**	**5**
			SEMESTER TOTAL (THEORY + LABORATORY)	**28**	**16**	**2**	**10**	**24**

SEMESTER VIII

SI. No	COURSE CODE	COURSE TITLE	CATEGORY	CONTACT PERIODS	L	T	P	C
		THEORY						
1.	CH1801	Professional Elective V	PEC	3	3	0	0	3
2.	CH1802	Professional Elective VI	PEC	3	3	0	0	3
			TOTAL CREDITS FOR THEORY	**6**	**6**	**0**	**0**	**6**
		PRACTICALS						
3.	CH1807	Project Work	EEC	20	0	0	20	12
			TOTAL CREDITS FOR LAB	**20**	**0**	**0**	**20**	**12**
			SEMESTER TOTAL (THEORY + LABORATORY)	**26**	**6**	**0**	**20**	**18**

PROFESSIONAL ELECTIVES (PE)

PROFESSIONAL ELECTIVE I, SEMESTER V

SI. No	COURSE CODE	COURSE TITLE	CATEGORY	CONTACT PERIODS	L	T	P	C
1.	CH1509	Chemical Works Organization and Management	PEC	3	3	0	0	3
2.	CH1510	Membrane Science and Engineering	PEC	3	3	0	0	3
3.	CH1511	Polymer Technology	PEC	3	3	0	0	3
4.	CH1512	Fundamentals of Thermodynamics	PEC	3	2	1	0	3
5.	CH1513	Essentials of Thermodynamics	PEC	3	2	1	0	3

PROFESSIONAL ELECTIVE II, SEMESTER VI

SI. No	COURSE CODE	COURSE TITLE	CATEGORY	CONTACT PERIODS	L	T	P	C
1.	CH1609	Industrial Air Pollution	PEC	3	3	0	0	3
2.	CH1610	Industrial Instrumentation	PEC	3	3	0	0	3
3.	CH1611	Electrochemical Engineering	PEC	3	3	0	0	3
4.	CH1612	Process Plant Utilities	PEC	3	3	0	0	3

PROFESSIONAL ELECTIVE III, SEMESTER VII

SI. No	COURSE CODE	COURSE TITLE	CATEGORY	CONTACT PERIODS	L	T	P	C
1.	CH1710	Modern Separation Techniques	PEC	3	3	0	0	3
2.	CH1711	Waste Water Treatment	PEC	3	3	0	0	3
3.	CH1712	Fluidization Engineering	PEC	3	2	1	0	3
4.	CH1713	Distillation	PEC	3	3	0	0	3

PROFESSIONAL ELECTIVE IV, SEMESTER VII

SI. No	COURSE CODE	COURSE TITLE	CATEGORY	CONTACT PERIODS	L	T	P	C
1.	CH1714	Piping and Instrumentation	PEC	3	3	0	0	3
2.	CH1715	Food Technology	PEC	3	3	0	0	3
3.	CH1716	Biochemical Engineering	PEC	3	3	0	0	3
4.	GE1003	Professional Ethics	PEC	3	3	0	0	3

PROFESSIONAL ELECTIVE V, SEMESTER VIII

SI. No	COURSE CODE	COURSE TITLE	CATEGORY	CONTACT PERIODS	L	T	P	C
1.	CH1808	Optimization of Chemical Processes	PEC	3	3	0	0	3
2.	CH1809	Fermentation Engineering	PEC	3	3	0	0	3
3.	CH1810	Nuclear Engineering	PEC	3	3	0	0	3
4.	CH1811	Energy Technology	PEC	3	3	0	0	3

PROFESSIONAL ELECTIVE VI, SEMESTER VIII

SI. No	COURSE CODE	COURSE TITLE	CATEGORY	CONTACT PERIODS	L	T	P	C
1.	CH1812	Fertilizer Technology	PEC	3	3	0	0	3
2.	CH1813	Pulp and Paper Technology	PEC	3	3	0	0	3
3.	CH1814	Mixing Theory and Practice	PEC	3	3	0	0	3
4.	CH1815	Petroleum Refining and Petrochemicals	PEC	3	3	0	0	3

LIST OF COURSES FOR OPEN ELECTIVE I, SEMESTER V

SI. No	COURSE CODE	COURSE TITLE	CATEGORY	CONTACT PERIODS	L	T	P	C
1.	OCE103	Environmental Impact Assessments	OEC	3	3	0	0	3
2.	OCS101	Introduction to C Programming	OEC	3	3	0	0	3
3.	OEE105	Solar Energy Utilization	OEC	3	3	0	0	3
4.	OBT101	Industrial Biotechnology	OEC	3	3	0	0	3
5.	OBT102	Hazardous Waste Management	OEC	3	3	0	0	3
6.	OEE106	Energy Conservation and Management	OEC	3	3	0	0	3

LIST OF COURSES FOR OPEN ELECTIVE II, SEMESTER VII

SI. No	COURSE CODE	COURSE TITLE	CATEGORY	CONTACT PERIODS	L	T	P	C
1.	OBT103	Fuel Cell Chemistry	OEC	3	3	0	0	3
2.	OEE102	Renewable Energy Sources	OEC	3	3	0	0	3
3.	OME102	Design of Experiments	OEC	3	3	0	0	3
4.	OBT104	Biosensors	OEC	3	3	0	0	3
5.	OME106	Testing of Materials	OEC	3	3	0	0	3
6.	OBT105	Introduction to Nanoscience and Nanotechnology	OEC	3	3	0	0	3

AUDIT COURSE

SEMESTER I

HS1101	Communicative English	L	T	P	C
		3	0	0	3

Objectives

- ✓ To develop the basic reading and writing skills of first year engineering and technology students
- ✓ To help learners develop their listening skills, which will, enable them listen to lectures andcomprehend them by asking questions; seeking clarifications.
- ✓ To help learners develop their speaking skills and speak fluently in real contexts.
- ✓ To help learners develop vocabulary of a general kind by developing their reading skills

Course Outcomes (CO)

CO1	Speak clearly, confidently, comprehensibly, and communicate with one or many listeners using appropriate communicative strategies.
CO2	Write cohesively and coherently and flawlessly avoiding grammatical errors, using a wide vocabulary range, organizing their ideas logically on a topic.
CO3	Read different genres of texts adopting various reading strategies.
CO4	Listen/view and comprehend different spoken discourses/excerpts in different accents
CO5	Identify topics and formulate questions for productive inquiry

UNIT - I	SHARING INFORMATION RELATED TO ONESELF/FAMILY& FRIENDS	9

Reading – critical reading – finding key information in a given text – shifting facts from opinions - Writing - autobiographical writing - developing hints. Listening- short texts- short formal and informal conversations. Speaking-basics in speaking - introducing oneself - exchanging personal information- speaking on given topics & situations Language development– voices- WH- Questions- asking and answering-yes or no questions– parts of speech. Vocabulary development-- prefixes- suffixes- articles - Polite Expressions.

UNIT - II	GENERAL READING AND FREE WRITING	9

Reading: Short narratives and descriptions from newspapers (including dialogues and conversations); Reading Comprehension Texts with varied question types - Writing – paragraph writing - topic sentence- main ideas- free writing, short narrative descriptions using some suggested vocabulary and structures –. Listening - long texts - TED talks - extensive speech on current affairs and discussions Speaking — describing a simple process —asking and answering questions - Language development – prepositions, clauses. Vocabulary development- guessing meanings of words in context –use of sequence words.

UNIT - III	GRAMMAR AND LANGUAGE DEVELOPMENT	9

Reading- short texts and longer passages (close reading) & making a critical analysis of the given text Writing —types of paragraph and writing essays — rearrangement of jumbled sentences. Listening: Listening to ted talks and long speeches for comprehension. Speaking- role plays -asking about routine actions and expressing opinions. Language development- degrees of comparison- pronouns- Direct vs. Indirect Questions. Vocabulary development– idioms and phrases- cause & effect expressions, adverbs.

UNIT - IV	READING AND LANGUAGE DEVELOPMENT	9
Reading- comprehension-reading longer texts- reading different types of texts- magazines. Writing- letter writing, informal or personal letters-e-mails-conventions of personal email- Listening: Listening comprehension (IELTS, TOEFL and others). Speaking -Speaking about friends/places/hobbies - Language development- Tenses- simple present-simple past- present continuous and past continuous- conditionals — if, unless, in case, when and others Vocabulary development- synonyms-antonyms- Single word substitutes- Collocations.		

UNIT - V	EXTENDED WRITING	9
Reading: Reading for comparisons and contrast and other deeper levels of meaning – Writing- brainstorming -writing short essays – developing an outline- identifying main and subordinate ideas- dialogue writing- Listening- popular speeches and presentations - Speaking - impromptu speeches & debates Language development-modal verbs- present/ past perfect tense - Vocabulary Development-Phrasal verbs- fixed and semi-fixed expressions		
	Total Periods:	**45 PERIODS**

MA1102	Engineering Mathematics – I	L	T	P	C
		3	1	0	4

Objectives

- ✓ The goal of this course is to achieve conceptual understanding and to retain the best traditions oftraditional calculus.
- ✓ The syllabus is designed to provide the basic tools of calculus mainly for the purpose of modeling theengineering problems mathematically and obtaining solutions.
- ✓ Matrix Algebra is one of the powerful tools to handle practical problems arising in the field ofengineering.
- ✓ This is a foundation course of Single Variable and multivariable calculus plays an important role in the understanding of science, engineering, economics and computer science, among other disciplines.

Course Outcomes (CO)

CO1	To have a clear idea of matrix algebra pertaining Eigenvalues and Eigenvectors in addition dealing with quadratic forms.
CO2	To understand the concept of limit of a function and apply the same to deal with continuity and derivative of a given function. Apply differentiation to solve maxima and minima problems, which are related to real world problems.
CO3	To have the idea of extension of a function of one variable to several variables. Multivariable functions of real variables are inevitable in engineering.
CO4	To understand the concept of integration through fundamental theorem of calculus. Also, acquire skills to evaluate the integrals using the techniques of substitution, partial fraction and integration by parts along with the knowledge of improper integrals.
CO5	To do double and triple integration so that they can handle integrals of higher order which are applied in engineering field.

UNIT - I	**MATRICES**	**12**

Eigenvalues and Eigenvectors of a real matrix – Characteristic equation – Properties of Eigenvalues and Eigenvectors– Cayley-Hamilton theorem – Diagonalization of matrices – Reduction of a quadratic form to canonical form byorthogonal transformation – Nature of quadratic forms

UNIT - II	**CALCULUS OF ONE VARIABLE**	**12**

Limit of a function - Continuity - Derivatives - Differentiation rules – Interval of increasing and decreasingfunctions – Maxima and Minima - Intervals of concavity and convexity.

UNIT - III	**CALCULUS OF SEVERAL VARIABLES**	**12**

Partial differentiation – Homogeneous functions and Euler‘s theorem – Total derivative – Change of variables –Jacobians – Partial differentiation of implicit functions – Taylor‘s series for functions of two variables –Maxima and minima of functions of two variables – Lagrange‘s method of undetermined multipliers.

UNIT - IV	**INTEGRAL CALCULUS**	**12**

Definite and Indefinite integrals - Substitution rule - Techniques of Integration - Integration by parts, Trigonometric integrals, Trigonometric substitutions, Integration of rational functions by partial fraction, Integration of irrational functions - Improper integrals.

UNIT - V	**MULTIPLE INTEGRALS**	**12**

Double integrals – Change of order of integration – Double integrals in polar coordinates – Area enclosed by plane curves – Change of variables from Cartesian to polar in double integrals- Triple integrals – Volume of solids

Total Periods:	**60 PERIODS**

PH1103	**Engineering Physics**	**L**	**T**	**P**	**C**
		3	0	0	3

Objectives

To make the students conversant with

- ✓ Elastic properties of materials and various moduli of elasticity.
- ✓ Principles of laser and fiber optics and its various technological applications.
- ✓ Thermal conduction in solids, heat exchangers and its applications in various devices.
- ✓ Quantum concepts to explain black body radiation, Compton effect and matter waves.
- ✓ Various crystal structures, Miller indices and crystal growth techniques.

Course Outcomes (CO)

CO1	To understand the elastic property and stress strain diagram, determination of rigidity modulus by torsional pendulum and Young's modulus by various methods.
CO2	To understand the principle of laser, Einstein's coefficients of laser action, semiconductor laser and its applications, optical fibers and their applications in sensors and communication system.
CO3	To understand the heat transfer through solids and the determination of thermal conductivity in a bad conductor by Lee's disc method and radial flow of heat.
CO4	To know the quantum concepts and its use to explain black body radiation, Compton effect and wave equation for matter waves, tunneling electron microscopy and its applications.
CO5	To understand the importance of various crystal structures, Miller indices and various growth techniques.

UNIT - I	PROPERTIES OF MATTER	9
Elasticity – Stress-strain diagram and its uses - factors affecting elastic modulus and tensile strength – torsional stress and deformations – twisting couple - torsion pendulum: theory and experiment - bending of beams - bending moment – cantilever: theory and experiment – uniform and non-uniform bending: theory and experiment – Practical applications of modulus of elasticity- I shaped girders - stress due to bending in beams.		
UNIT - II	**LASER AND FIBER OPTICS**	**9**
Lasers : population of energy levels, Einstein's A and B coefficients derivation – resonant cavity, optical amplification (qualitative) – ND-YAG Laser-Semiconductor lasers: homo junction and heterojunction – Industrial and medical applications of Laser– Fiber optics: principle, numerical aperture and acceptance angle - types of optical fibers (material, refractive index, mode) – losses associated with optical fibers – Fabrication of Optical fiber- Double crucible method-fiber optic sensors: pressure and displacement-Industrial and medical applications of optical fiber- Endoscopy-Fiber optic communication system.		
UNIT - III	**THERMAL PHYSICS**	**9**
Transfer of heat energy – thermal expansion of solids and liquids – expansion joints - bimetallic strips - thermal conduction, convection and radiation – heat conductions in solids – thermal conductivity –Rectilinear flow of heat-conduction through compound media (series and parallel)- Lee's disc method: theory and experiment - Radial flow of heat– thermal insulation – applications: heat exchangers, refrigerators, oven, Induction furnace and solar water heaters.		
UNIT - IV	**QUANTUM PHYSICS**	**9**
Black body radiation – Planck's theory (derivation) – Compton effect: theory and experimental verification – wave particle duality – electron diffraction – concept of wave function and its physical significance – Schrödinger's wave equation – time independent and time dependent equations – particle in a one-dimensional rigid box – Electron microscope-tunneling (qualitative) - scanning tunneling microscope-Applications of electron microscopy.		
UNIT - V	**CRYSTAL PHYSICS**	**9**
Single crystalline, polycrystalline and amorphous materials – single crystals: unit cell, crystal systems, Bravais lattices,directions and planes in a crystal, Miller indices – inter-planar distances coordination number and packing factor for SC,BCC, FCC, HCP and diamond structures – Graphite structure-crystal imperfections: point defects, line defects – Burgervectors, stacking faults – growth of single crystals: solution and melt growth techniques- Epitaxial growth-Applications of Single crystal (Qualitative).		
	Total Periods:	**45 PERIODS**

CY1104	Engineering Chemistry	L	T	P	C
		3	0	0	3

Objectives

To make the student conversant with the

- ✓ Principles of water characterization and treatment for industrial purposes.
- ✓ Principles and applications of surface chemistry and catalysis.
- ✓ Phase rule and various types of alloys
- ✓ Various types of fuels, applications and combustion
- ✓ Conventional and non–conventional energy sources and energy storage device

Course Outcomes (CO)

CO1	Able to understand impurities in industrial water, boiler troubles, internal and external treatment methods of purifying water.
CO2	Able to understand concepts of absorption, adsorption, adsorption isotherms, application of adsorption for pollution abatement, catalysis and enzyme kinetics.
CO3	Able to recognize significance of alloying, functions of alloying elements and types of alloys, uses ofalloys, phase rule, reduced phase and its applications in alloying.
CO4	Able to identify various types of fuels, properties, uses and analysis of fuels. They should be able to understand combustion of fuels, method of preparation of bio-diesel, synthetic petrol.
CO5	Able to understand conventional, non-conventional energy sources, nuclear fission and fusion, power generation by nuclear reactor, wind, solar energy and preparation, uses of various batteries.

UNIT - I | WATER AND ITS TREATMENT | 9

Hardness of water – Types – Expression of hardness – Units – Estimation of hardness by EDTA method – Numerical problems on EDTA method – Boiler troubles (scale and sludge, caustic embrittlement, boiler corrosion, priming and foaming) – Treatment of boiler feed water – Internal treatment (carbonate, phosphate, colloidal, sodium aluminate and calgon conditioning) – External treatment – Ion exchange process, Zeolite process – Desalination of brackish water by reverse Osmosis.

UNIT - II | SURFACE CHEMISTRY AND CATALYSIS | 9

Surface chemistry: Types of adsorption – Adsorption of gases on solids – Adsorption of solute from solutions – Adsorption isotherms – Freundlich's adsorption isotherm – Langmuir's adsorption isotherm – Kinetics of uni-molecular surface reactions – Adsorption in chromatography – Applications of adsorption in pollution abatement using PAC.

Catalysis: Catalyst – Types of catalysis – Criteria – Contact theory – Catalytic poisoning and catalytic promoters – Industrial applications of catalysts – Catalytic convertor – Auto catalysis – Enzyme catalysis – Michaelis-Menten equation.

UNIT -III | PHASE RULE AND ALLOYS | 9

Phase rule: Introduction – Definition of terms with examples – One component system – Water system – Reduced phase rule – Thermal analysis and cooling curves – Two component systems – Lead-silver system – Pattinson process.

Alloys: Introduction – Definition – Properties of alloys – Significance of alloying – Functions and effect of alloying elements – Nichrome, Alnico, Stainless steel (18/8) – Heat treatment of steel – Non-ferrous alloys – Brass and bronze.

UNIT -IV | FUELS AND COMBUSTION | 9

Fuels: Introduction – classification of fuels – Comparison of solid, liquid, gaseous fuels – Coal – Analysis of coal (proximate and ultimate) – Carbonization – Manufacture of metallurgical coke (Otto Hoffmann method) –Petroleum – Cracking – Manufacture of synthetic petrol (Bergius process, Fischer Tropsch Process) – Knocking –Octane number– Diesel oil – Cetane number – Compressed natural gas (CNG) – Liquefied petroleum gases (LPG) – Power alcoholand biodiesel.

Combustion of fuels: Introduction – Calorific value – Higher and lower calorific values – Theoretical calculationof calorific value – Ignition temperature – Spontaneous ignition temperature – Explosive range – Flue gas analysis by Orsat Method.

UNIT -V	NON–CONVENTIONAL ENERGY SOURCES AND STORAGE DEVICES	9

Nuclear energy – Fission and fusion reactions – Differences – Chain reactions – Nuclear reactors – Classification of reactors – Light water nuclear reactor for power generation – Breeder reactor – Solar energy conversion – Solar cells – Wind energy – Fuel cells – Hydrogen-oxygen fuel cell.

Batteries – Types of batteries - Alkaline batteries – Lead-acid, Nickel-cadmium and Lithium batteries

Total Periods: 45 PERIODS

GE1109	**Problem Solving and Programming in C (Common for all branches of B.E. /B. Tech Programmes)**	L	T	P	C
		3	0	0	3

Objectives

- ✓ To know the problem solving and develop C Program using basic programming constructs.
- ✓ To develop C programs using decision control and looping statements, functions and arrays.
- ✓ To use python predefined data structures
- ✓ To develop applications in C using structures and union.
- ✓ To develop applications using sequential and random-access file processing.

Course Outcomes (CO)

CO1	Develop simple applications in C using basic constructs.
CO2	Design and implement applications using arrays, strings and functions.
CO3	Develop and implement applications in C using pointers.
CO4	Develop applications in C using structures and union.
CO5	Design applications using sequential and random-access file processing.

UNIT - I	**PROBLEM SOLVING AND BASICS OF C PROGRAMMING**	**9**
A Introduction, Algorithms, building blocks of algorithms, Algorithmic problem-solving steps; Simple Strategies and notation for developing algorithms: Control flow, Flow charts, Pseudo codes, Programming languages; Introduction to C; Structure of a C Program; Compiling and Executing C Programmes, C Tokens and character set, Keywords, Identifiers, Basic Data types, Variables, Constants, Input/ Output statements, Operators, Type conversion and Type Casting.		
UNIT – II	**DECISION CONTROL, LOOPING STATEMENTS, FUNCTIONS, AND ARRAYS**	**9**
Conditional Branching statements, Iterative statements, Nested loops, The Break and continue statements, go to statements; Introduction to Functions: Function declaration, Function definition, Function call, return statement, passing parameters to the function, Recursive Functions; Introduction to Arrays: Declaration, Accessing the Elements, storing values, operations on arrays, Passing Arrays to functions, two-dimensional array, Multidimensional arrays.		
UNIT - III	**STRINGS AND POINTERS**	**9**
String: Introduction to String, Suppressing Input, String Taxonomy, String operation; Pointers: Introduction to Pointers, declaring pointers variables, Pointer expression and Pointer arithmetic, passing arguments to Function using Pointers, Pointers and Arrays, Array of pointers; Function Pointers, Pointers to Pointers, memory allocation in C Programs, Dynamic memory allocation; Drawbacks of pointers.		
UNIT - IV	**STRUCTURES, UNIONS AND ENUMERATED DATA TYPE**	**9**
Structure: declaration and initialization, accessing members of structure; Nested structures; Array of structures; Structures and functions; Self-referential structures; Union: declaration and initialization, Accessing members of Union; Array of Union variable; Unions inside Structures, Structures inside unions, Enumerated Data type.		
UNIT - V	**FILE PROCESSING**	**9**
Introduction to files, using files in C, read data from files, Writing Data to files, Detecting the End of file, Error Handling during file operations; Accepting Command line arguments, Function for selecting a record randomly, Remove and renaming the File, Creating temporary file, Preprocessor directives.		
	Total Periods:	**45 PERIODS**

GE1106	**Engineering Graphics** (Common for all branches of B.E. /B. Tech Programmes)	**L**	**T**	**P**	**C**
		2	0	4	4

Objectives

- ✓ To develop graphic skills for communication of concepts, ideas and design of engineering products.
- ✓ To inculcate drawing practice in standardized form whenever technical drawing is needed.
- ✓ To expose them to existing national standards related to technical drawings.

CONCEPTS AND CONVENTIONS (Not for Examination)

- ✓ Importance of graphics in engineering applications – Use of drafting instruments – BIS conventions andspecifications – Size, layout and folding of drawing sheets – Lettering and dimensioning.

Course Outcomes (CO)

CO1	To understand the fundamentals and standards of Engineering graphics
CO2	To perform freehand sketching of basic geometrical constructions and multiple views of objects
CO3	To understand the concept of orthographic projections of lines and plane surfaces
CO4	To draw the projections of section of solids and development of surfaces
CO5	To visualize and to project isometric and perspective sections of simple solids

UNIT - I	**PLANE CURVES AND FREEHAND SKETCHING**	**7+12**

Basic Geometrical constructions, Curves used in engineering practices: Conics – Construction of ellipse, parabola and hyperbola by eccentricity method – Construction of cycloidal curves – construction of involutes of square and circle – Drawing of tangents and normal to the above curves.

Visualization concepts and Free Hand sketching: Visualization principles –Representation of Three-Dimensional objects– Layout of views- Freehand sketching of multiple views from pictorial views of objects (Draw without using drawing instruments)

UNIT - II	**PROJECTION OF POINTS, LINES AND PLANE SURFACE**	**6+12**

Orthographic projection- Principles-Principal Planes-First angle projection-projection of points. Projection of straight lines (only First angle projections) inclined to both the principal planes - Determination of true lengths and true inclinations by rotating line method and traces. Projection of planes (polygonal and circular surfaces) inclined to both the principal planes by rotating object method.

UNIT - III	PROJECTION OF SOLIDS	5+12
Projection of simple solids like prisms, pyramids, cylinder, cone and truncated solids when the axis is inclined to oneof the principal planes when the solid is simply suspended by rotating object method.		
UNIT - IV	**PROJECTION OF SECTIONED SOLIDS AND DEVELOPMENTOFSURFACES**	**5+12**
Sectioning of simple solids like prisms, pyramids, cylinder, cone in simple vertical position when the cutting plane isinclined to the one of the principal planes and perpendicular to the other – obtaining true shape of section. Development of lateral surfaces of simple and sectioned solids – Prisms, pyramids cylinders and cones - Graphically finding the shortest distance connecting two points.		
UNIT - V	**ISOMETRIC AND PERSPECTIVE PROJECTIONS**	**6+12**
Principles of isometric projection – isometric scale –Isometric projections and isometric views of simple solids andtruncated solids – Prisms, pyramids, cylinders, cones- combination of two solid objects in simple vertical positions. Perspective projection of simple solids-Prisms, pyramids and cylinders by visual ray method.		
	Total Periods:	**90 PERIODS**

GE1110	**Programming in C Laboratory** (Common for all branches of B.E. /B. Tech Programmes)	**L**	**T**	**P**	**C**
		0	0	4	2

Objectives

- ✓ To develop programs in C using basic constructs.
- ✓ To develop applications in C using strings, pointers, functions, structures.
- ✓ To develop applications in C using file processing.

Course Outcomes (CO)

CO1	Develop C programs for simple applications making use of basic constructs.
CO2	Develop C programs involving Arrays.
CO3	Develop C programs for string, functions, and recursion.
CO4	Develop C Programs for pointers, structures and Union.
CO5	Design applications using sequential and random-access file processing.

1. C programming using simple statements and expressions.
2. Scientific problem-solving using decision making and looping.
3. Generating different patterns using multiple control statements.
4. Problems solving using one dimensional array.
5. Mathematical problem solving using two dimensional arrays.
6. Solving problems using string functions.
7. Solving problems with user defined functions.
8. Solving problems using recursive function.
9. Solving problems with dynamic memory allocation.
10. Real-time application using structures and unions.
11. Real time problem solving using sequential and random-access
12. Solving problems with command line argument.

BS1108	Physics and Chemistry laboratory	L	T	P	C
		0	0	4	2

Objectives

The students will be trained to perform experiments to study the following.

- ✓ The Properties of Matter
- ✓ The Optical properties, Characteristics of Lasers & Optical Fibre
- ✓ Electrical & Thermal properties of Materials
- ✓ Enable the students to enhance accuracy in experimental measurements.
- ✓ To make the student to acquire practical skills in the determination of water quality parametersthrough volumetric analysis
- ✓ Instrumental method of analysis such as potentiometry, conductometry and pH metry

Course Outcomes (CO)

CO1	Able to understand the concept about the basic properties of matter like stress, strain and types of moduli. Able to understand the procedure to estimate the amount of dissolved oxygen present in the water.
CO2	Able to understand the concept of optics like reflection, refraction, diffraction by using spectrometergrating. Able to understand the concept about measuring the conductance of strong acid and strong base and mixture of acids by using conductivity meter.
CO3	Able to understand the thermal properties of solids and to calculate thermal conductivity of a bad conductor. Able to understand the principle and procedure involved in the amount of chloride present in the given sample of water.
CO4	Able to understand the concept of microscope and its applications in determining the moduli. Able to understand the concept of determining the emf values by using potentiometer.
CO5	Able to calculate the particle size of poly crystalline solids. Able to understand the concept of determining the pH value and strength of a given acid sample by using pH meter.

Total Periods:	**60 PERIODS**

LIST OF EQUIPMENT FOR A BATCH OF 30 STUDENTS

- ✓ Python 3 interpreter for Windows/Linux

LIST OF EXPERIMENTS – PHYSICS

(A minimum of 5 experiments to be performed from the given list)

1. Determination of Young's modulus of the material of the given beam by Non-uniform bending method.
2. Determination of rigidity modulus of the material of the given wire using torsion pendulum.
3. Determination of wavelength of mercury spectra using Spectrometer and grating.
4. Determination of dispersive power of prism using Spectrometer.
5. (a) Determination of wavelength and particle size using a laser.
   (b) Determination of numerical aperture and acceptance angle of an optical fibre.
   (c) Determination of width of the groove of compact disc using laser.
6. Determination of Young's modulus of the material of the given beam by uniform bending method.
7. Determination of energy band gap of the semiconductor.
8. Determination of coefficient of thermal conductivity of the given bad conductor using Lee's disc.

DEMONSTRATION EXPERIMENT

1. Determination of thickness of a thin sheet / wire – Air wedge method

LIST OF EXPERIMENTS – CHEMISTRY

(A minimum of 6 experiments to be performed from the given list)

1. Estimation of HCl using Na2CO3 as primary standard and determination of alkalinity in water sample.
2. Determination of total, temporary & permanent hardness of water by EDTA method.
3. Determination of DO content of water sample by Winkler's method.
4. Determination of chloride content of water sample by argentometric method.
5. Estimation of copper content of the given solution by Iodometry.
6. Determination of strength of given hydrochloric acid using pH meter.
7. Determination of strength of acids in a mixture of acids using conductivity meter.
8. Estimation of iron content of the given solution using potentiometer.
9. Determination of molecular weight of polyvinyl alcohol using Ostwald viscometer.
10. Conductometric titration of strong acid vs strong base.

DEMONSTRATION EXPERIMENTS

Estimation of iron content of the water sample using spectrophotometer (1, 10- Phenanthroline / thiocyanatemethod).
Estimation of sodium and potassium present in water using flame photometer.

SEMESTER II

HS1201	Professional English	L	T	P	C
		3	0	0	3

Objectives

The Course prepares second semester engineering and Technology students to:

- ✓ Develop strategies and skills to enhance their ability to read and comprehendEngineering and technology texts.
- ✓ Foster their ability to write convincing job applications and effective reports.
- ✓ Develop their speaking skills to make technical presentations, participate in group discussions.
- ✓ Strengthen their listening skill which will help them comprehend lectures and talks in their areas of specialization.

Course Outcomes (CO)		
CO1	Speak clearly, confidently, comprehensibly, and communicate with one or many listeners using appropriate communicative strategies.	
CO2	Write cohesively and coherently and flawlessly avoiding grammatical errors, using a wide vocabulary range, organizing their ideas logically on a topic.	
CO3	Read different genres of texts adopting various reading strategies.	
CO4	Listen/view and comprehend different spoken discourses/excerpts in different accents	
CO5	Identify topics and formulate questions for productive inquiry	
UNIT - I	**INTRODUCTION TO PROFESSIONAL ENGLISH**	**9**
Listening: Listening to technical talks with comprehension tasks - Speaking – conversation methods in real life occurrences using expressions of different emotions and imperative usages - Reading – reading short technical texts from journals- newspapers- Writing- purpose statements – extended definitions – writing instructions – checklists- recommendations- Vocabulary Development- technical vocabulary Language Development – tenses- subject verb agreement - compound words.		
UNIT - II	**READING AND STUDY SKILLS**	**9**
Listening-Listening Comprehension of a discussion on a technical topic of common interest by three or four participants (real life as well as online videos). -Speaking – describing a process- Reading: Practice in chunking and speed reading - Paragraphing- Writing- interpreting charts, graphs- Vocabulary Development: Important foreign expressions in Use, homonyms, homophones, homographs- easily confused words Language Development- impersonal passive voice, numerical adjectives.		
UNIT - III	**TECHNICAL WRITING AND GRAMMAR**	**9**
Listening – listening to conversation – effective use of words and their sound aspects, stress, intonation & pronunciation - Speaking – mechanics of presentations -Reading: Reading longer texts for detailed understanding. (GRE/IELTS practice tests); Writing- Describing a process, use of sequence words- Vocabulary Development- sequence words- Informal vocabulary and formal Substitutes-Misspelled words. Language Development- embedded sentences and Ellipsis.		
UNIT - IV	**REPORT WRITING**	**9**
Listening – Model debates & documentaries and making notes. Speaking – expressing agreement/disagreement, assertiveness in expressing Opinions-Reading: Technical reports, advertisements and minutes of meeting - Writing- email etiquette- job application – cover letter –Résumé preparation (via email and hard copy)- analytical essays and issue based essays--Vocabulary Development- finding suitable synonyms-paraphrasing- Language Development- clauses- if conditionals.		
UNIT - V	**GROUP DISCUSSION AND JOBAPPLICATIONS**	**9**
Listening: Extensive Listening. (radio plays, rendering of poems, audio books and others) Speaking –participating in a group discussion - Reading: Extensive Reading (short stories, novels, poetry and others)– Writing reports- minutes of a meeting- accident and survey- Writing a letter/ sending an email to the Editor - cause and effect sentences – Vocabulary Development- verbal analogies. Language Development- reported speech.

		3	1	0	4

Objectives

- ✓ This course is designed to cover topics such as Differential Equations, Vector Calculus, ComplexAnalysis and Laplace Transform.
- ✓ The various methods of complex analysis and Laplace transforms can be used for efficiently
- ✓ solving the problems that occur in various branches of engineering disciplines.

Course Outcomes (CO)

CO1	The students will be imbibed with techniques in solving ordinary differential equations that arises in most of the engineering problems
CO2	The students will be acquainted with the concepts of vector calculus like Gradient, Divergence, Curl, Directional derivative, Irrational vector and Solenoidal vector. The course gives an understanding of Vector integration, needed for problems in all engineering disciplines.
CO3	The students will develop an understanding of the standard techniques of complex variable and mapping so as to enable the student to apply them with confidence, in application areas such as heat conduction,elasticity, fluid dynamics and flow of electric current .
CO4	The student will be exposed to the concept of Cauchy's integral theorem, Taylor and Laurent expansions, Singular points, Application of residue theorem to evaluate complex integrals.
CO5	Students will understand the purpose of using transforms to create new domain in which can give easier ways to handle the problem that is being investigated.

UNIT - I	**ORDINARY DIFFERENTIAL EQUATIONS**	**12**

Higher order linear differential equations with constant coefficients - Method of variation of parameters– Homogenous equation of Euler 's and Legendre 's type – System of simultaneous first order linear differential equations with constant coefficients

UNIT - II	VECTOR CALCUCUS	12
Gradient and directional derivative – Divergence and curl - Vector identities – Irrotational and Solenoidal vector fields – Line integral over a plane curve – Surface integral - Volume integral - Green 's, Gauss divergence and Stoke's theorems – Verification and simple application in evaluating line, surface and volume integrals.		
UNIT - III	**COMPLEX VARIABLES**	**12**
Analytic functions – Necessary and sufficient conditions for analyticity in Cartesian and polar coordinates (C-Requations) - Properties – Harmonic conjugates – Construction of analytic function (Milne-Thomson method) –Conformal mapping – Standard transformations W = Z +C, CZ, 1/Z - Bilinear transformation.		
UNIT - IV	**COMPLEX INTEGRATION**	**12**
Cauchy integral theorem – Cauchy integral formula – Taylor and Laurent series – Singularities – Residues – Cauchy'sResidue theorem – Application of residue theorem for evaluation of real integrals – Use of circular contour and semicircular contour(excluding poles on the real line).		
UNIT - V	**LAPLACE TRANSFORMS**	**12**
Existence conditions — Transforms of elementary functions — Transform of unit step function and unit impulse function - Basic properties - Shifting theorems – transforms of derivatives and integrals –Transform of periodic functions - Inverse transforms using properties, partial fractions and Convolution theorem — Application to solution of linear second order ordinary differential equations with constant coefficients.		
	Total Periods:	**60 PERIODS**

PH1255	**Physics of Materials** (Common to BIO & CHEM)	**L**	**T**	**P**	**C**
		3	0	0	3

Objectives

To make the student conversant with the

- ✓ Electronic properties in metals, properties of superconductors and its applications.
- ✓ Intrinsic and extrinsic semiconductors, Hall effect, LED, organic LED and solar cells.
- ✓ Types of magnetic materials and their applications, types of polarization and application
- ✓ Types, synthesis, properties and applications of nanostructured materials.
- ✓ Importance of various new engineering materials like ceramics, SMA, metallic glasses and biomaterials.

Course Outcomes (CO)

CO1	Have the knowledge about carrier density calculation in metals, properties of superconductors and its applications.
CO2	Have the knowledge about carrier density calculation in intrinsic and extrinsic semiconductors, Halleffect, LED, OLED and solar cells.
CO3	Obtain the knowledge about magnetic and dielectric materials and their applications.
CO4	Explore the knowledge about types, synthesis, properties and applications of nanostructured materials.
CO5	Understand the importance, properties and applications of various new engineering materials like ceramics, SMA, metallic glasses and biomaterials.

UNIT - I **CONDUCTING AND SUPERCONDUCTING MATERIALS** **9**

Classical free electron theory – expression for electrical conductivity – thermal conductivity, Wiedemann-Franz law – electrons in metals: particle in a three-dimensional box (Qualitative) – degenerate states – Fermi-Dirac statistics– density of energy states – electron in periodic potential (concept only) – electron effective mass – concept of hole – Superconducting phenomena, properties of superconductors – Meissner effect and isotope effect. Type Iand Type II superconductors, High Tc superconductors – Magnetic levitation and SQUIDS.

UNIT - II **SEMICONDUCTING MATERIALS** **9**

Elemental Semiconductors – Compound semiconductors – Origin of band gap in solids (qualitative) – carrierconcentration in an intrinsic semiconductor (derivation) – Fermi level – variation of Fermi level with temperature– electrical conductivity – band gap determination – carrier concentration in n-type and p-type semiconductors(derivation) – variation of Fermi level with temperature and impurity concentration – Hall effect – determination ofHall coefficient –LED – Organic LED-Solar cells.

UNIT - III **DIELECTRIC AND MAGNETIC MATERIALS** **9**

Dielectric materials – Electronic, Ionic, Orientational and space charge polarization – Internal field and deduction of Clausius Mosotti equation –Frequency and temperature variation of dielectric materials- dielectric loss – different types of dielectric breakdown – classification of insulating materials and their applications - Introduction to magnetic materials - Domain theory of ferromagnetism, Hysteresis, Soft and Hard magnetic materials – Anti-ferromagnetic materials – Ferrites - magnetoresistance - Giant magneto-resistance - Introduction to spintronics.

UNIT - IV **NANO MATERIALS** **9**

Nanoscience and technology – Surface to volume ratio – Classifications of nanostructured materials – nano particles – quantum dots, nanowires, ultra-thin films-multilayered materials.Bottom-up Synthesis –Top-down Approach: Co-Precipitation, Ultrasonication, ball Milling, sol- gel method-Properties: electrical, magnetic, catalytic and antimicrobial resistance – Applications of nanomaterials in agriculture and medicine.

UNIT - V **NEW MATERIALS AND APPLICATIONS** **9**

Metallic glasses – Shape memory alloys: Copper, Nickel and Titanium based alloys – graphene, graphene oxide and its properties – Ceramics: types and applications – Composites: classification, role of matrix and reinforcement – processing of fibre reinforced plastics and fibre reinforced metals – Biomaterials: hydroxyapatite – PMMA – Silicone – Sensors: Chemical Sensors - Bio-sensors – conducting and semiconducting polymers – Nanofluids-Electro and magneto rheological fluids.

GE1204	Environmental Science and Engineering	L	T	P	C
		3	0	0	3

Objectives

- ✓ To study the inter relationship between living organisms and environment.
- ✓ To appreciate the importance of environment by assessing its impact on the human world; envision thesurrounding environment, its functions and its value.
- ✓ To find and implement scientific, technological, economic and political solutions to environmentalproblems.
- ✓ To study the integrated themes and biodiversity, natural resources, pollution control and wastemanagement.
- ✓ To study the dynamic processes and understand the features of the earth’s interior and surface.

Course Outcomes (CO)

CO1	To obtain knowledge about environment, ecosystems and biodiversity.
CO2	To take measures to control environmental pollution.
CO3	To gain knowledge about natural resources and energy sources.
CO4	To find and implement scientific, technological, economic and political solutions to the environmental problems.
CO5	To understand the impact of environment on human population and human health.

UNIT - I	ENVIRONMENT, ECOSYSTEM AND BIODIVERSITY	11
Definition, scope and importance of environment – Need for public awareness – Role of Individual in Environmental protection – Concept of an ecosystem – Structure and function of an ecosystem – Producers, consumers and decomposers – Energy flow in the ecosystem – Food chains, food webs and ecological pyramids –Ecological succession – Types, characteristic features, structure and function of forest, grass land, desert and aquatic (ponds, lakes, rivers, oceans, estuaries) ecosystem. Biodiversity – Definition – Genetic, species and ecosystem diversity – Value of biodiversity – Consumptive use, productive use, social, ethical, aesthetic and option values – Biodiversity at global, national and local levels –India as a mega diversity nation – Hot spots of biodiversity – Threats to biodiversity– Habitat loss, poaching of wild life, human-wildlife conflicts – Wildlife protection act and forest conservation act –Endangered and endemic species – Conservation of biodiversity – In-situ and ex-situ conservation of biodiversity.		
UNIT - II	**ENVIRONMENTAL POLLUTION**	**9**
Definition – Causes, effects and control measures of: (a) Air pollution (b) Water pollution (c) Soil pollution (d) Marine pollution (e) Noise pollution (f) Thermal pollution (g) Nuclear hazards – Solid waste management: causes, effects and control measures of municipal solid wastes – Problems of e-waste – Role of an individual in prevention of pollution – Pollution case studies – Disaster management – Floods, earthquake, cyclone,tsunami and landslides – Field study of local polluted site – Urban / Rural / Industrial / Agricultural.		
UNIT - III	**NATURAL RESOURCES**	**9**
Forest resources: Uses and over-exploitation – Deforestation – Case studies – Timber extraction, mining, dams and their effects on forests and tribal people – Water resources – Use and overutilization of surface and ground water, floods, drought, conflicts over water – Dams: benefits and problems – Mineral resources: Uses and exploitation – Environmental effects of extracting and using mineral resources – Case studies – Food resources: World food problems – Changes caused by agriculture and overgrazing – Effects of modern agriculture: fertilizer–pesticide problems, water logging, salinity – Case studies – Energy resources: Growing energy needs – Renewable and non renewable energy sources – Use of alternate energy sources – Case studies – Land resources: Land as aresource – Land degradation, man induced landslides, soil erosion and desertification – Role of an individual in conservation of natural resources – Equitable use of resources for sustainable lifestyles – Field study of local areato document environmental assets – River / Forest / Grassland / Hill / Mountain.		
UNIT - IV	**SOCIAL ISSUES AND THE ENVIRONMENT**	**8**
From unsustainable to sustainable development – Urban problems related to energy – Water conservation, rain water harvesting, watershed management – Resettlement and rehabilitation of people; its problems and concerns, case studies – Role of non-governmental organization – Environmental ethics – Issues and possible solutions – Climate change – Global warming – Acid rain, Ozone layer depletion –Nuclear accidents and holocaust – Case studies – Wasteland reclamation – Consumerism and waste products – Principles of Green Chemistry – Environment protection act – Air (Prevention and Control of Pollution) Act – Water (Prevention and control of Pollution) Act – Wildlife protection Act – Forest conservation Act – Enforcement machinery involved in environmental legislation– Central and state pollution control boards– National Green Tribunal – Public awareness.		
UNIT - V	**HUMAN POPULATION AND THE ENVIRONMENT**	**8**
Population growth – Variation among nations – Population explosion – Family welfare programme – Environment and human health – Human rights – Value education – HIV /AIDS – COVID 19 – Women and child welfare – Role of information technology in environment and human health – Case studies

GE1205	**Basic Civil and Mechanical Engineering** (Common to Bio Tech, CHEMICAL, EEE, EIE)	**L**	**T**	**P**	**C**
		3	0	0	3
Objectives					
✓ The objective of this course is to introduce basic knowledge on Civil Engineering Materials, Surveying, Foundations, Civil Engineering Structures, IC Engine, Working Principle of Power Plant, Accessories Of Power Plant, Refrigeration And Air Conditioning System					
Course Outcomes (CO)					
CO1	To impart basic knowledge on Civil and Mechanical Engineering.				
CO2	To familiarize the materials and measurements used in Civil Engineering.				
CO3	To provide the exposure on the fundamental elements of civil engineering structures.				
CO4	To enable the students to distinguish the components and working principle of power plant, IC engines				
CO5	To provide the exposure on the fundamental elements of R & AC system.				
UNIT - I	**SCOPE OF CIVIL AND MECHANICAL ENGINEERING**				**6**
Overview of Civil Engineering - Civil Engineering contributions to the welfare of Society – Specialized sub disciplines in Civil Engineering – Structural, Construction, Geotechnical, Environmental, Transportation and Water Resources Engineering Overview of Mechanical Engineering - Mechanical Engineering contributions to the welfare of Society – Specialized sub disciplines in Mechanical Engineering - Production, Automobile, Energy Engineering - Interdisciplinary concepts in Civil and Mechanical Engineering.					
UNIT - II	**SURVEYING AND CIVIL ENGINEERING MATERIALS**				**9**
Surveying: Objects – classification – principles – measurements of distances – angles –leveling – determinationof areas– contours - examples. Civil Engineering Materials: Bricks – stones – sand – cement – concrete – steel – timber - modern materials					

UNIT - III	BUILDING COMPONENTS AND STRUCTURES	12
Foundations: Types of foundations - Bearing capacity and settlement – Requirement of good foundations. Civil Engineering Structures: Brick masonry – stonemasonry – beams – columns – lintels – roofing flooring – plastering – floor area, carpet area and floor space index - Types of Bridges and Dams – water supply - sources and quality of water - Rain water harvesting - introduction to high way and rail way.		
UNIT - IV	**INTERNAL COMBUSTION ENGINES AND POWER PLANTS**	**12**
Classification of Power Plants - Internal combustion engines as automobile power plant – Working principle of Petroland Diesel Engines — Four stroke and two stroke cycles — Comparison of four stroke and two stroke engines —Working principle of steam, Gas, Diesel, Hydro - electric and Nuclear Power plants –- working principle of Boilers, Turbines, Reciprocating Pumps (single acting and double acting) and Centrifugal Pumps		
UNIT - V	**REFRIGERATION AND AIR CONDITIONING SYSTEM**	**6**
Terminology of Refrigeration and Air Conditioning. Principle of vapour compression and absorption system–Layout of typical domestic refrigerator–Window and Split type room Air conditioner.		
	Total Periods:	**45 PERIODS**

CH1206	INTRODUCTION TO CHEMICAL ENGINEERING	L	T	P	C
		3	0	0	2

Objectives

- ✓ To understand the overview of Chemical Engineering
- ✓ To gain knowledge on role of basic sciences in Chemical Engineering
- ✓ To know about the various unit operations and unit process in Chemical Engineering
- ✓ To understand the importance of computer applications in Chemical Engineering
- ✓ To know about the future and various opportunities for Chemical Engineers

Course Outcomes (CO)

CO1	To Learn about basics of chemical Engineering
CO2	To Understand the concept of components of Chemical Engineering

CO3	To learn about the Unit Operation and Unit Processes of Chemical Engineering
CO4	To Understand the role of various disciplines in Chemical Engineering
CO5	To learn about paradigm shifts, Opportunities in Chemical Engineering.

UNIT - I	**INTRODUCTION**	**5**
Historical overview of Chemical Engineering – Chemistry and Chemical Engineering - Chemical process industries– Chemical Engineering in everyday life - Recent developments in Chemical Engineering		
UNIT - II	**ROLE OF BASIC SCIENCES IN CHEMICAL ENGINEERING**	**5**
Units and dimensions - Role of physics, chemistry, biology, mathematics in Chemical Engineering – Concepts offluid flow- Velocity and stress field - Newtonian and non-Newtonian fluids - Scope of thermodynamics; laws of thermodynamics – Chemical Kinetics- Rate equation, elementary, non-elementary reactions, order and molecularity		
UNIT - III	**REPRESENTATION OF UNIT OPERATIONS & FLOWSHEETING**	**5**
Description and representation of different Unit Processes and Unit Operations; Heat and mass transfer operation; Modes of heat transfer - Fourier's law of heat conduction; Fick's Law; Designing of equipment; Flow sheet representation of process plants, Evolution of an Industry		
UNIT - IV	**ROLE OF SOFTWARES & OTHER DISCIPLINES IN CHEMICAL ENGINEERING**	**10**
Role of Computers simulations (MATLAB, ASPEN PLUS, ASPEN HYSYS, ANSYS FLUENT) and their Applications; Role of Chemical Engineers in the area of Food, Medical, Energy, Environmental, Biochemical –Introduction to Process control		
UNIT - V	**FUTURE & RECENT ADVANCES IN CHEMICAL ENGINEERING**	**5**
Paradigm shifts in Chemical Engineering; Range of scales in Chemical Engineering; Opportunities for Chemical Engineers – Process Intensification, Biomass conversions		
	Total Periods:	**30 PERIODS**

Text Books:

GE1207	Engineering Practices Laboratory	L	T	P	C
		0	0	4	2
Objectives					
✓ To provide exposure to the students with hands on experience on various basic engineering practices inCivil, Mechanical, Electrical and Electronics Engineering					
Course Outcomes (CO)					
CO1	Able to fabricate carpentry components and pipe connections including plumbing works.				
CO2	Able to use welding equipment to join the structures, carry out the basic machining operations, and make the models using sheet metal works.				
CO3	Able to illustrate on centrifugal pump, air conditioner, operations of smithy, foundry and fittings.				
CO4	Able to carry out basic home electrical works and appliances, measure the electrical quantities.				
CO5	Able to elaborate on the electronic components and gates, soldering practices.				
	Total Periods:	**60 PERIODS**			

LIST OF EQUIPMENT FOR A BATCH OF 30 STUDENTS
GROUP A (CIVIL & MECHANICAL)

I CIVIL ENGINEERING PRACTICE 13

Buildings:

(a) Study of plumbing and carpentry components of residential and industrial buildings. Safety aspects.

Plumbing Works:

a) Study of pipeline joints, its location and functions: valves, taps, couplings, unions, reducers, elbows inhousehold fittings.
b) Study of pipe connections requirements for pumps and turbines.
c) Preparation of plumbing line sketches for water supply and sewage works.
d) Hands-on-exercise:
   Basic pipe connections – Mixed pipe material connection – Pipe connections with different joiningcomponents.
e) Demonstration of plumbing requirements of high-rise buildings.

Carpentry using Power Tools only:

a) Study of the joints in roofs, doors, windows and furniture.
b) Hands-on-exercise:
   Wood work, joints by sawing, planning and cutting.

II MECHANICAL ENGINEERING PRACTICE 18

Welding:

(a) Preparation of butt joints, lap joints and T- joints by Shielded metal arc welding.
(b) Gas welding practice

Basic Machining:

(a) Simple Turning and Taper turning
(b) Drilling Practice

Sheet Metal Work:

(a) Forming & Bending:
(b) Model making – Trays and funnels.
(c) Different type of joints.

Machine assembly practice:

(a) Study of centrifugal pump
(b) Study of air conditioner

Demonstration on:

(a) Smithy operations, upsetting, swaging, setting down and bending. Example –Exercise – Production of hexagonal headed bolt.

(b) Foundry operations like mould preparation for gear and step cone pulley.

(c) Fitting – Exercises – Preparation of square fitting and V – fitting models.

GROUP B (ELECTRICAL & ELECTRONICS)

III ELECTRICAL ENGINEERING PRACTICE 13

1. Residential house wiring using switches, fuse, indicator, lamp and energy meter.
2. Fluorescent lamp wiring.
3. Stair case wiring
4. Measurement of electrical quantities – voltage, current, power & power factor in RLC circuit.
5. Measurement of energy using single phase energy meter.
6. Measurement of resistance to earth of an electrical equipment.

IV ELECTRONICS ENGINEERING PRACTICE 16

1. Study of electronic components and equipment – Resistor, colour coding measurement of AC signal parameter (peak-peak, rms period, frequency) using CR.
2. Study of logic gates AND, OR, EX-OR and NOT.
3. Generation of Clock Signal.
4. Soldering practice – Components Devices and Circuits – Using general purpose PCB.
5. Measurement of ripple factor of HWR and FWR

Total periods:60

LIST OF EQUIPMENT FOR A BATCH OF 30 STUDENTS

S.No.	Description of Equipment	Quantity required
	CIVIL	
1.	Assorted components for plumbing consisting of metallic pipes, plastic pipes, flexible pipes, couplings, unions, elbows, plugs and other fittings.	**15 sets**
2.	Carpentry vice (fitted to work bench)	**15 Nos**
3.	Standard woodworking tools 15 Sets.	**15 Sets.**
4.	Models of industrial trusses, door joints, furniture joints	**5 each**
5.	**Power Tools:** (a) Rotary Hammer (b) Demolition Hammer (c) Circular Saw (d) Planer (e) Hand Drilling Machine (f) Jigsaw	**2 Nos**
	MECHANICAL	
1.	Arc welding transformer with cables and holders.	**5 Nos**
2.	Welding booth with exhaust facility.	**5 Nos**

3.	Welding accessories like welding shield, chipping hammer, wire brush, etc.	**5 Sets**
4.	Oxygen and acetylene gas cylinders, blow pipe and other welding outfit.	**2 Nos**
5.	Centre lathe.	**2 Nos**
6.	Hearth furnace, anvil and smithy tools.	**2 Sets**
7.	Moulding table, foundry tools.	**2 Sets**
8.	Power Tool: Angle Grinder.	**2 Nos**
9.	**Study-purpose items:** centrifugal pump, air-conditioner.	**1 each**
	ELECTRICAL	
1.	Assorted electrical components for house wiring.	**15 Sets**
2.	Electrical measuring instruments.	**10 Sets**
3.	**Study purpose items:** Iron box, fan and regulator, emergency lamp.	**1 each**
4.	Megger (250V/500V).	**1 No.**
5.	**Power Tools:** (a) Range Finder (b) Digital Live-wire detector	**2 Nos**
	ELECTRONICS	
1.	Soldering guns 10 Nos.	**10 Nos.**
2.	Assorted electronic components for making circuits 50 Nos.	**50 Nos.**
3.	Small PCBs.	**10 Nos.**
4.	Multimeters	**10 Nos.**
5.	**Study purpose items:** Telephone, FM radio, low-voltage power supply	**1 each**

CH1208	**Technical Analysis Laboratory**	**L**	**T**	**P**	**C**
		0	0	4	2

Objectives

- ✓ To make the student acquire practical skills in the wet chemical and instrumental methods forquantitative estimation of nitrite in water, cement, oil, coal and Pheno

Course Outcomes (CO)

CO1	Able to analyze oil, soap and bleaching powder
CO2	Able to analyze cement phenol and
CO3	Able to analyze fuel and fertilizer.
CO4	Able to analysis of water
CO5	Able to viscosity of sample

LIST OF EXPERIMENTS

1. Oil Analysis: (3 experiments)
   (a) Acid value
   (b) Saponification value
   (c) Iodine value
2. Soap Analysis: (2 experiments)
   (a) Alkali Content
   (b) Fatty acid content of Soap
3. Estimation of purity of glycerol: by Dichromatic method
4. Analysis of water:
5. Determination chlorine demand in water: Estimation of residual chlorine in water by Volumetric method
6. Cement Analysis (3 experiments)
7. Estimation of silica content
8. Estimation of calcium oxide content
9. Estimation of mixed oxide content
10. Fertilizer Analysis: Estimation of Nitrogen in Urea by Kjeldals method
11. Estimation of Phenol
12. Estimation of available chlorine present in bleaching powder
13. Estimation of viscosity of given sample of oil
14. Estimation of flash point, fire point, cloud point, pour point of fuel
15. Estimation of aniline point of fuel
16. Applications: Implementing GUI using turtle, pygame.

Total Periods:	**60 PERIODS**

SEMESTER III

MA1353	APPLIED NUMERICAL ANALYSIS	L	T	P	C
		4	0	0	4

Objectives

- ✓ To introduce the basic concepts of solving algebraic and transcendental equations.
- ✓ To introduce the numerical techniques of interpolation in various intervals in real life
- ✓ To acquaint the student with understanding of numerical techniques of differentiation and integration this playsan important role in engineering and technology disciplines.
- ✓ To acquaint the knowledge of various techniques and methods of solving ordinary differential equations
- ✓ To understand the knowledge of various techniques and methods of solving various types of partial differentialequations

Course Outcomes (CO)	
CO1	Do curve fitting , solve algebraic , transcendental equation and system of linear equations
CO2	Interpolate using standard methods like finite difference methods and cubic splines
CO3	Apply Numerical differentiation and integration for the observed data
CO4	Have an insight of finding the numerical solution of first order differential equation by Standardsingle step methods and multi-step methods.
CO5	Understand the finite difference solution of second order ordinary differential equation and getthe solution of the standard engineering partial differential equation by explicit method and implicit method

UNIT - I	**CURVE FITTING AND SOLUTION OF EQUATIONS**	**12**

Introduction – Method of least square -Curve fitting - Fitting a straight line and parabola -Calculation of sum of the squares of residuals. Solution of algebraic and transcendental equations - Fixed point iteration method – Newton Raphson method - Solution of linear system of equations - Gauss elimination method– Iterative method - Gauss Seidel, method

UNIT - II	**INTERPOLATION AND APPROXIMATION**	**12**

Interpolation with unequal intervals - Lagrange's interpolation – Newton’s divided difference interpolation – CubicSplines - Difference operators and relations - Interpolation with equal intervals - Newton’s forward and backward difference formulae.

UNIT - III	**NUMERICAL DIFFERENTIATION AND INTEGRATION**	**12**

Approximation of derivatives using interpolation polynomials - Numerical integration using Trapezoidal, Simpson’s 1/3 rule and 3/8 rule – Romberg’s Method - Two point and three point Gaussian quadrature formulae – Evaluation ofdouble integrals by Trapezoidal and Simpson’s 1/3 rules.

UNIT - IV	**INITIAL VALUE PROBLEMS FOR ORDINARY DIFFERENTIAL EQUATIONS**	**12**

Single step methods - Taylor’s series method - Euler’s method - Modified Euler’s method–Fourth order Runge – Kuttamethod for solving first order equations -Multistep Methods-Milne’s and Adams - Bash forth predictor corrector methods for solving first order equations.

UNIT - V	BOUNDARY VALUE PROBLEMS IN ORDINARY AND PARTIALDIFFERENTIAL EQUATIONS	12

Finite difference methods for solving second order two - point linear boundary value problems – Finite difference techniques for the solution of two dimensional Laplace’s and Poisson’s equations on rectangular domain–One dimensional heat flow equation by explicit and implicit (Crank Nicholson) methods – One dimensional wave equation by explicit method.

Total Periods: 60 PERIODS

CH1301	Process Calculations	L	T	P	C
		3	1	0	4

Objectives

- ✓ To acquire knowledge on laws of chemistry and its application to solution of mass and energy balance equations for single and network of units and introduce to process simulators.

Course Outcomes (CO)

CO1	To familiarize the student's basic concepts of units, dimensions, and other technical terms, and enable them to do unit conversions.
CO2	To introduce the concepts of material balances by taking industrial examples and train in mathematical computations with respect to bypass, purging and recycle operations
CO3	To introduce the concept of ideal and non-ideal systems and related problems and training the students with combustion problems.
CO4	Effectively bring in the concept of energy balances and computations in various types of energy balance problems related to chemical industries.
CO5	To bring in the latest advancements in design and modelling, related process simulators and problems on non-ideal systems.

UNIT - I — **12**

Base and derived Units - Composition of Mixture and solutions - calculations of pressure, volume and temperature using ideal gas law. Use of partial pressure and pure component volume in gas calculations, applications of real gasrelationship in gas calculation.

UNIT - II — **12**

Stoichiometric principles, Application of material balance to unit operations like distillation, evaporation, crystallization, drying etc., - Material balance with chemical reaction - Limiting and excess reactants - recycle – bypass and purging - Unsteady state material balances.

UNIT - III — **12**

Calculation of absolute humidity, molal humidity, relative humidity and percentage humidity - Use of humidity in condensation and drying - Humidity chart, dew point.

UNIT - IV — **12**

Heat capacity of solids, liquids, gases and solutions, use of mean heat capacity in heat calculations, problems involvingsensible heat and latent heats, evaluation of enthalpy. Standard heat of reaction, heats of formation, combustion, solution, mixing etc., calculation of standard heat of reaction - Effect of pressure and temperature on heat of reaction - Energy balance for systems with and without chemical reaction - Unsteady state energy balances

UNIT - V — **12**

Determination of Composition by Orsat analysis of products of combustion of solid, liquid and gas fuels - Calculationof excess air from orsat technique, problems on sulphur and sulphur burning compounds - Application of Process simulators in energy and material balance problems.

Total Periods: 60 PERIODS

CH1302	**Fluid Mechanics for Chemical Engineers**	**L**	**T**	**P**	**C**
		2	1	0	3

Objectives

- ✓ To acquire a sound knowledge on fluid properties, fluid statics, dynamic characteristics of fluid flow for through pipes and porous medium, flow measurement and fluid machineries

Course Outcomes (CO)

CO1	To gain engineering knowledge on types of fluids based on Newton's law of viscosity.
CO2	To educate the students about hydrostatic pressure distribution, manometry and law of conservation of mass.
CO3	To score engineering knowledge on analyzing the system using dimensional analysis and scale-up.
CO4	To be conversant with types of fluid flow and pressure drop involved with it, major losses and minorlosses and flow through fluidized and packed beds.
CO5	Able to understand the Flow measurement techniques.

UNIT – I	**INTRODUCTION**	**9**

Methods of analysis and description - fluid as a continuum – Velocity and stress field -Newtonian and non-Newtonian fluids – Classification of fluid motion

UNIT – II	**FLUID STATICS**	**9**

Fluid statics – basic equation - equilibrium of fluid element – pressure variation in a static fluid - application tomanometer – Differential analysis of fluid motion – continuity, equation of motions, Bernoulli equation and Navier- Stokes equation.

UNIT – III	DIMENSIONAL ANALYSIS	9
The principle of dimensional homogeneity – dimensional analysis, Rayleigh method and the Pi-theorem - non-dimensional action of the basic equations - similitude – relationship between dimensional analysis and similitude – use of dimensional analysis for scale up studies.		
UNIT – IV	**FLOW THROUGH PIPES**	**9**
Reynolds number regimes, internal flow - flow through pipes – pressure drop under laminar and turbulent flow conditions – major and minor losses; Line sizing; External flows - boundary layer concepts, boundary layer thickness under laminar and turbulent flow conditions- Flow over a sphere – friction and pressure drag - flow through fixed and fluidized beds.		
UNIT - V	**FLOW MEASUREMENT**	**9**
Flow measurement - Constant and variable head meters; Velocity measurement techniques; Types, characteristics, and sizing of valves; Classification, performance characteristics and sizing of pumps, compressors, and fans		
	Total Periods:	**45**

EE1353	Principles of Electrical and Electronics Engineering	L	T	P	C
		3	0	0	3

Objectives

To impart knowledge on

- ✓ Electric circuit laws, single and three phase circuits and wiring
- ✓ Working Principles of Electrical Machines
- ✓ Various Electronic Devices and Measuring Instruments

Course Outcomes (CO)

CO1	To explain the basic laws and theorems used in Electrical circuits
CO2	To impart knowledge on single phase and three phase AC circuit and wiring
CO3	To comprehend the construction and working principle of Electrical machines
CO4	To explain the fundamentals of semiconductor and applications.
CO5	To impart knowledge on different measuring instruments

UNIT – I	**ELECTRICAL CIRCUITS**	**9**

Basic principles involved in power generation, transmission and distribution, Basic circuit components - Ohms Law,Kirchoff's Law, steady state solution of DC circuits, Thevenin's Theorem, Norton's Theorem, Superposition Theorem, Maximum power transfer theorem.

UNIT – II	**AC CIRCUITS**	**9**

Introduction to AC circuits – waveforms and RMS value – power and power factor, single phase and three-phase balanced circuits, housing wiring, industrial wiring, materials of wiring.

UNIT – III	**ELECTRICAL MACHINES**	**9**

Construction, Principles of operation and characteristics of DC machines, Transformers (single and three phase),Synchronous machines, single phase and three phase induction motors.

UNIT – IV	**ELECTRONIC DEVICES AND CIRCUITS**	**9**

Types of Materials –Silicon & Germanium- N type and P type materials – PN Junction –Forward and Reverse Bias – Semiconductor Diodes –Bipolar Junction Transistor – Characteristics – transistor as an Amplifier – Introduction tooperational Amplifier –Inverting Amplifier –Non Inverting Amplifier –DAC– ADC.

UNIT – V	**MEASUREMENTS AND INSTRUMENTATION**	**9**

Introduction to transducers: pressure, temperature, position, electrical measurements, Classification of instruments –moving coil and moving iron Ammeter and Voltmeter – multimeters – dynamometer type Wattmeter – three-phase power measurements – energy meter – megger – instrument transformers (CT and PT)

Total: 45 Periods

CH1303	**Solid Mechanics for Technologists**	**L**	**T**	**P**	**C**
		3	0	0	3

Objectives

- ✓ To obtain skill in creating database retrieval of data and to solve Mathematical models through linear and non-linear programming.

Course Outcomes (CO)

CO1	Define various types of stresses and strain developed on determinate and indeterminate members
CO2	Draw shear force and bending moment diagram for various types of transverse loading and support
CO3	Compute the slope and deflection, bending stresses and shear stresses on a beam
CO4	Apply the concept of principal stresses and theories of failure to determine stresses
CO5	Calculate the Torsional shear stress in shaft and buckling on the column

UNIT - I	**STRESS, STRAINAND DEFORMATION OF SOLIDS**	**9**

Stress and Strain: Load and its effect, Types of stresses, Types of strain, Support and free body diagram, Hooke's law and simple problems – compound bars – thermal stresses – elastic constants and poission's ratio.

UNIT - II	**TRANSVERSE LOADING ON BEAMS**	**9**

Beams –support conditions–types of Beams –transverse loading on beams–shear force and bending moment in beams–analysis of cantilevers, simply – supported beams and over hanging beams – relationships between loading, S.F. and B.M.Inbeams and their applications– S.F.& B.M. diagrams.

UNIT - III	**DEFLECTIONS OF BEAMS**	**9**

Double integration method – Macaulay's method –Area – moment theorems for computation of slopes and deflectionsin beams.

UNIT - IV	**STRESSES IN BEAMS**	**9**

Theory of simple bending – assumptions and derivation of bending equation (M/I=F/Y= E/R)– analysis of stresses inbeams–loads carrying capacity of beams–proportioning beam sections – leaf springs – flitched beams.

UNIT - V	TORSION AND COLUMNS	9
Torsion of circular shafts – derivation of torsion equation (T/J = fs/R = Cθ/L) – stress and deformation in circular and hollow shafts – stresses and deformation in circular and hollow shafts–Euler's theory of long columns		
	Total Periods:	**45**

CH1307	Fluid Mechanics Laboratory	L	T	P	C
		0	0	3	2

Objectives

- ✓ To learn experimentally to calibrate flow meters, find pressure loss for fluid flows and determine pumpcharacteristics.

Course Outcomes (CO)

CO1	Identify and characterize of flow patterns and regimes
CO2	Calibrate flow measurement devices
CO3	Correlate the difference between fixed and fluidized bed columns and its application.
CO4	Select pumps for the transportation of fluids based on process conditions/requirements and fluid properties
CO5	Compare the results of theoretical analytical models to the actual behavior of real fluid flows and draw sustainable conclusions

LIST OF EXPERIMENTS

1. Viscosity measurement of non-Newtonian fluids
2. Calibration of constant and variable head meters
3. Calibration of weirs and notches
4. Open drum orifice and draining time
5. Flow through straight pipe
6. Flow through annular pipe
7. Flow through helical coil and spiral coil
8. Losses in pipe fittings and valves
9. Characteristic curves of pumps (Centrifugal / Gear / Reciprocating)
10. Pressure drop studies in packed column
11. Hydrodynamics of fluidized bed
12. Drag coefficient of solid particle

LIST OF EQUIPMENT FOR A BATCH OF 30 STUDENTS

1. Viscometer
2. Venturi meter
3. Orifice meter
4. Rotameter
5. Weir
6. Open drum with orifice
7. Pipes and fittings
8. Helical and spiral coils
9. Centrifugal pump
10. Packed column
11. Fluidized bed

EE1358	Electrical Engineering Laboratory	L	T	P	C
		0	0	3	2

Objectives

- ✓ To validate the principles studied in theory by performing experiments in the laboratory

Course Outcomes (CO)

CO1	Ability to perform DC Shunt and Series Motor characteristics and to analyze the speed control behaviour of DC shunt Motor.
CO2	Ability to perform the characteristics of DC Shunt generator on O.C and Load conditions.
CO3	Ability to perform Open circuit, Short Circuit and Load test on Single Phase Transformer.
CO4	Ability to perform regulation characteristics on the alternator and to analyze the V-curve and Inverted V-curve of a Synchronous motor.
CO5	Ability to perform the speed control behaviour of an induction motor and also to know the working principles of AC and DC motor starters.

LIST OF EXPERIMENTS

1. Load test on DC Shunt & DC Series motor
2. O.C.C & Load characteristics of DC Shunt and DC Series generator
3. Speed control of DC shunt motor (Armature, Field control)
4. Load test on single phase transformer
5. O.C & S.C Test on a single phase transformer
6. Regulation of an alternator by EMF & MMF methods.
7. V curves and inverted V curves of synchronous Motor
8. Load test on three phase squirrel cage Induction motor
9. Speed control of three phase slip ring Induction Motor
10. Study of DC & AC Starters

LIST OF EQUIPMENT FOR A BATCH OF 30 STUDENTS

S. No.	NAME OF THE EQUIPMENT	Qty.
1	DC Shunt motor	2
2	DC Series motor	1
3	DC shunt motor-DC Shunt Generator set	1
4	DC Shunt motor-DC Series Generator set	1
5	Single phase transformer	2
6	Three phase alternator	2
7	Three phase synchronous motor	1
8	Three phase Squirrel cage Induction motor	1
9	Three phase Slip ring Induction motor	1

SEMESTER IV

MA1452	**Applied Probability and Statistics** (Common to BIO, CHEM)	**L**	**T**	**P**	**C**
		4	0	0	4

Objectives

- ✓ This course aims at providing the required skill to apply the statistical tools in engineering problems.
- ✓ To introduce the basic concepts of probability and random variables.
- ✓ To introduce the basic concepts of two dimensional random variables.
- ✓ To acquaint the knowledge of testing of hypothesis for small and large samples which plays an important rolein real life problems.
- ✓ To introduce the basic concepts of classifications of design of experiments which plays very important roles in the field of agriculture and statistical quality control.

Course Outcomes (CO)

CO1	Get exposure to random variables and well-founded knowledge of standard distributions which can describe real life phenomena.
CO2	Get ideas to handle situations involving more than one random variable
CO3	Gain the knowledge on Large Samples and Small Samples. These concepts are very useful in biological, economic and social experiments and all kinds of generalizations based on information about a smaller sample and larger samples. Apply the appropriate test in the problems related with sampling.
CO4	Apply the basic concepts of design of experiments and handle the same.
CO5	Understand the concept of the Control charts to apply in the field of quality assessment, Production processes, to monitor process stability and control of the manufacturing product.

UNIT - I	**PROBABILITY AND RANDOM VARIABLES**	**12**

Probability – The axioms of probability – Conditional probability – Baye's theorem - Discrete and continuous randomvariables – Moments – Moment generating functions – Binomial, Poisson, Geometric, Uniform, Exponential and Normal distributions.

UNIT - II	**TWO - DIMENSIONAL RANDOM VARIABLES**	**12**

Joint distributions – Marginal and conditional distributions – Covariance – Correlation and linear regression – Centrallimit theorem (for independent and identically distributed random variables).

UNIT - III	**TESTING OF HYPOTHESIS**	**12**

Sampling distributions - Estimation of parameters - Statistical hypothesis - Large sample tests based on Normal distribution for single mean and difference of means -Tests based on t, Chi-square and F distributions for mean, varianceand proportion - Contingency table (test for independent) – Goodness of fit.

UNIT - IV	**DESIGN OF EXPERIMENTS**	**12**

One way and Two way classifications - Completely randomized design – Randomized block design –Latin square design

UNIT - V	**STATISTICAL QUALITY CONTROL**	**12**

Control charts for measurements (and R charts) – Control charts for attributes (p, c and np charts) –Tolerance limits -Acceptance sampling.

Total:	**60 PERIODS**

CH1401	**Chemistry for Chemical Engineers**	**L**	**T**	**P**	**C**
		3	0	0	3

Objectives

The course is aimed to

- ✓ To provide the knowledge of basic chemistry to understand the fundamental principles of chemical engineering.
- ✓ To familiarize the basic terms of reaction engineering.
- ✓ To understand the basic concepts of reaction components and systems.

Course Outcomes (CO)

CO1	Understand the basic principles of chemistry applicable to chemical engineering.
CO2	Understand the basics of organic compounds
CO3	Familiarize the basic reaction concepts.
CO4	Familiarize the basic terms of reaction engineering.
CO5	Understand electrochemistry.

UNIT - I		9
Preparation, Physical & Chemical properties and Uses of Pyrrole, Furan, Furfural, Tetrahydro Furan, Thiophene, Indole, Pyridine, Quinoline and Isoquinoline. Synthesis of Antimalarial drugs – isopentaquine and chloroquine Synthesis of Antibacterial drugs – Sulphaniliamide, Sulphapyridine, Sulphathiazole and Phenacetin.		
UNIT - II		**9**
Carbohydrates – classification. Monosaccharides- reaction of Glucose and fructose, open chain and cyclic structures ofglucose and fructose, mutarotation, epimerzation, KillianiFisher synthesis, Ruff degradation, conversion of aldoses to ketoses and Ketoses to aldoses. Disaccharides – properties and structure of sucrose. Polysaccharides – properties and structure of starch and cellulose		
UNIT - III		**9**
Elimination Reaction – E1, E2 elimination – Bredt's rule – Zartsev's rule – Condensation reaction – Benzoin Condensation – Aldol Condensation and Claisen Condensation – Preparation and synthetic uses of acetoacetic and malonic esters – Molecular rearrangement – Hofmann rearrangement – Schmidt rearrangement – Beckmann rearrangement.		
UNIT - IV		**9**
Electrolytic conductance – Specific, Equivalent and Molar conductance – Kohlrauch's law and its applications. Electropotential, Electro chemical cell – EMF of a cell and its measurements – Reference electrodes – Hydrogen, calomel and glass electrodes. The Nernst equation and applications – Concentrations cell. Conductometry – Cell constant –Conductometric titrations – Potentiometry – Principle of acid – base – and oxidation, reduction titrations.		
UNIT - V		**9**
Rate of reaction – Rate constants – Order and molecularity of reaction – First, second, third and zero order reactions – Method of determining order of reactions – Differential and integral rate expressions – Rate measurement method – Volumetry – Spectrophotometry. Complex reactions – Reverse reactions – Parallel or side reactions, chain reactions, consecutive reactions and explosive reaction. Effect of temperature and solvent on reaction rate. Theories of reaction rates – Activated complex theory of Bi-molecular reactions, the lindemann theory of unimolecular reactions.		
	Total:	**45 PERIODS**

Text Books:

1. Advance organic Chemistry – B.S. Bahl and Arun Bahl
2. Text book of organic chemistry – P.L.Soni
3. Principles of Physical Chemistry - B. R. Puri, L.R. Sharma, M.S. Pathania

Reference Books:

1. R.P.Singh, Handbook of Chemistry, 3rd Edition, 2015, Arihant Publications
2. Jain & Jain, Engineering Chemistry, 16th Edition, 2015, , Dhanpat Rai Pulishing Compnay

CH1402	Computer applications in Chemical Engineering	L	T	P	C
		2	1	2	4

Objectives

- ✓ Students will be equipped with the software applications and the numerical solutions of chemical engineering
problems.

Course Outcomes (CO)

CO1	Map ER model to Relational model to perform database design effectively
CO2	Write queries using normalization criteria and optimize queries
CO3	Design the Query Processor and Transaction Processor
CO4	Learn different database concepts like distributed databases, spatial databases and mobile databases.
CO5	Apply security concepts to databases, review cloud databases, streaming and graph databases.

UNIT - I **9 + 3**

Review on Programming languages- Basic, Application in Density, molecular weight, mole and percentage compositions, Empirical and Molecular formula calculations, Heat of mixing, Gas laws, Vapor pressure, Chemical Kinetics calculations.

Lab Component

- Calculation of average molecular weight of given gas mixture.
- Find out Empirical and molecular weight using MS Excel

UNIT - II **9 + 3**

Application in data processing, Statistical analysis of data, Regression. Analysis of variance, Interpolation, Graphical representations of various Chemical Engineering problem both in laboratory exercise and core subjects such as Mechanical operation, Reaction Engineering, Distillation etc.

Lab Component

- Regression Analysis using spread sheet
- Find out the number of theoretical plates using spread sheet

UNIT - III **9 + 3**

Design and developments of simple databases on Chemical and Physical properties of substances. Retrieval and Database in report, query and other formats, Interfacing with other software. Preparation of Material and energy Balances preparation of plant layout.

Lab Component

- Material and energy balance using spread sheet
- Find out the physical and Chemical properties using spread sheet

UNIT - IV **9 + 3**

Problem solving techniques – Program – Program development cycle – Algorithm design – Flowchart - Pseudo code.Introduction to C – C tokens – data types – Operators and expressions – I/O functions

Lab Component

- Solve quadratic equation for different sets of inputs.
- Use of spreadsheet to create Charts(XY, Bar, Pie) and apply the formulae wherever necessary C Programming(Flowcharts and algorithms are essential for the programming exercises)

UNIT - V **9 + 3**

Decision making statements – branching and looping – arrays – multidimensional arrays – Functions – Recursion –Passing array to functions Storage classes – Strings – String library functions

Lab Component

- Matrix operations- Addition - Transpose – Multiplication
- Greatest of three numbers using conditional operator and if statement

CH1403	**Mechanical Operations**	**L**	**T**	**P**	**C**
		3	0	0	3
Objectives					
✓ To impact knowledge in the field of particle size reduction and deals with the detail construction and working of equipment's used for mechanical operations.					
Course Outcomes (CO)					
CO1	To gain engineering knowledge on particle size, shape and its characteristics including various methods of screen analysis, equipment's, and its effectiveness.				
CO2	To educate the students about various laws of crushing and suitable design equipment's.				
CO3	To score engineering knowledge on settling characteristics, its types and design of continuous thickeners using batch sedimentation.				
CO4	To be conversant with types of filtrations, design of various filtration equipment's and optimum cycle of operation.				
CO5	To make the students understand the importance of mixing and agitation of different mixtures, storage, and transportation of solids.				
UNIT - I	**PARTICLE CHARACTERIZATION AND MEASUREMENT**				**9**
General characteristics of solids, different techniques of size analysis- Static - Image analysis and Dynamic analysis -Light scattering techniques, shape factor, surface area determination, estimation of particle size. Advanced particle size analysis techniques. Screening methods and equipment, screen efficiency, ideal and actual screens.					
UNIT - II	**PARTICLE SIZE REDUCTION AND SIZE ENLARGEMENT**				**9**
Laws of size reduction, energy relationships in size reduction, methods of size reduction, classification of equipment's, crushers, grinders, disintegrators for coarse, intermediate, and fine grinding, power requirement, work index; Advanced size reduction techniques - Nano particle fabrication - Top down 49 approach - Bottom-up approach. Size enlargement- Importance of size enlargement, principle of granulation, briquetting, pelletisation, and flocculation. Fundamentals of particle generation.					

UNIT - III	PARTICLE SEPARATION (GAS-SOLID AND LIQUID-SOLID SYSTEM)	9
Gravity settling, sedimentation, thickening, elutriation, double cone classifier, rake classifier, bowl classifier. Centrifugal separation - continuous centrifuges, super centrifuges, design of basket centrifuges; industrial dust removingequipment, cyclones, and hydro cyclones, electrostatic and magnetic separators, heavy media separations, floatation, jigging		
UNIT - IV	**FILTRATION AND FILTRATION EQUIPMENTS**	**9**
Theory of filtration, Batch and continuous filters, Flow through filter cake and filter media, compressible and incompressible filter cakes, filtration equipment's - selection, operation and design of filters and optimum cycle ofoperation, filter aids.		
UNIT - V	**MIXING AND PARTICLE HANDLING**	**9**
Mixing and agitation - Mixing of liquids (with or without solids), mixing of powders, selection of suitable mixers, powerrequirement for mixing. Storage and conveying of solids - Bunkers, silos, bins and hoppers, transportation of solids in bulk, Powder hazards, conveyer selection, different types of conveyers and their performance characteristics.		
	Total:	**45 PERIODS**

CH1404	Chemical Process Industries	L	T	P	C
		3	0	0	3

Objectives

- ✓ To impart knowledge on various aspects of production engineering and make the student understand the practical methods of production in a chemical factory.

Course Outcomes (CO)

CO1	To gain engineering knowledge on various aspects of production engineering and the practical methods of production of sulphur, sulphuric acid and cement
CO2	To understand the practical methods of production of fertilizer products
CO3	To learn &understand the practical methods of production of pulp, paper, sugar and starch industries
CO4	To gain engineering knowledge on various aspects of production of petroleum and petro chemical industries
CO5	To learn &understand and analyse the fuel and industrial gases

UNIT - I	**SULFUR, SULFURIC ACID AND CEMENT**	**9**

Sulfur, Raw materials Sources, Mining and production of Sulfur – Sulfuric acid, Methods of production of Sulfuric acid – Contact process – Chamber process. Cement – properties of Cement – Methods of production – Overall factors forCement industry.

UNIT - II	**FERTILIZER INDUSTRY**	**9**

Major Components of Fertilizer industries – Nitrogen industries, ammonia, nitric acid, urea – Phosphorus industries -Phosphorus, Phosphoric acid, Super Phosphate – Potassium chloride, Potassium Sulphate

UNIT - III	**PULP, PAPER, SUGAR AND STARCH INDUSTRIES**	**9**

Pulp – Methods of production – Comparison of pulping processes. Paper – types of paper products, Raw materials, Methods of production. Sugar – Methods of production – by products of the Sugar industry – Starch – Methods ofproduction, Starch derivations.

UNIT - IV	**PETROLEUM AND PETRO CHEMICAL INDUSTRIES**	**9**

Petroleum – Chemical Composition, Classification of crude petroleum, Petroleum Refinery products – Petroleum Conversion processes – Pyrolysis and Cracking, Reforming Polymerization, isomerization and Alkylation – petrochemicals – methanol, chloro methanol, Acetylene and ethylene, Isopropanol, Acrylonitrile, Butadiane – Chemicals from Aromatics - Benzene, Toluene and Xylene.

UNIT - V	**FUEL AND INDUSTRIAL GASES**	**9**

Fuel Gases – Producer gas, Water gas, Coke oven gas, Natural gas, Liquefied natural gas – Industrial gases – Carbon dioxide, hydrogen, nitrogen and oxygen.

Total:	**45 PERIODS**

CH1405	**Instrumental Methods of Chemical Analysis**	**L**	**T**	**P**	**C**
		3	0	0	3

Objectives

- ✓ To know the principle and importance of various analytical instruments used for the characterization of variousmaterials.

Course Outcomes (CO)

CO1	To Learn About Introduction of Spectrometry
CO2	To Understand concept of molecular spectroscopy
CO3	To learn about magnetic resonance spectroscopy and mass spectroscopy
CO4	To Understand separation methods
CO5	To learn about electro analysis and surface microscopy

UNIT – I INTRODUCTION TO SPECTROSCOPICAL METHODS OF ANALYSIS 9

Electromagnetic radiation: various ranges, dual properties, various energy levels, interaction of photons with matter, absorbance & transmittance and their relationship, permitted energy levels for the electrons of an atom and simple molecules, various electronic transitions in organic and inorganic compounds effected by UV, and visible radiations, various energy level diagrams of saturated, unsaturated and carbonyl compounds, excitation by UV and visible radiations, choice of solvents, cut off wavelengths for solvents

UNIT - II QUALITATIVE ANALYSIS BY UV AND VISIBLE SPECTROCOPY 9

Lamda max and epsilon max rules, Woodward -Fieser rules for the calculation of absorption maxima (Lamda max) fordienes and carbonyl compounds, Effects of auxochromes and effects of conjugation on the absorption maxima, Differentshifts of absorption peaks (Bathochromic, hypsochromic, hypochromic), Instrumentation for UV and Visible spectrophotometers (source, optical parts, and detectors), Applications of UV and Visible spectroscopy.

UNIT - III QUANTITATIVE ANALYSIS BY UV AND VISIBLE SPECTROCOPY 9

Beer-Lambert's law, limitations, deviations (real, chemical, instrumental), estimation of inorganic ions such as Fe, Ni and estimation of nitrite using Beer -Lambert's law, multicomponent analysis (no overlap, single way overlap and two-way overlap), photometric titration (experimental set -up and various types of titrations and their corresponding curves).

UNIT - IV IR SPECTROSCOPY 9

Theory of IR spectroscopy, various stretching, and vibration modes for diatomic and triatomic molecules (both linear and nonlinear), various ranges of IR (near, mid, fingerprint and far) and their usefulness, Instrumentation (only the sources and detectors used in different regions), sample preparation techniques, qualitative analysis of alkanes, alkenes, and carbonyl compounds.

UNIT - V CHROMATOGRAPHIC METHODS 9

Classification of chromatographic methods, column, thin layer, paper, gas, High Performance Liquid Chromatographical methods (principle, mode of separation and technique).

	Total:	45 PERIODS

CH1407	Mechanical Operations Laboratory	L	T	P	C
		0	0	3	2
Objectives					
✓ To learn experimentally to calibrate flow meters, find pressure loss for fluid flows and determine pump characteristics.					
Course Outcomes (CO)					
CO1	Determine the size analysis in solid- solid separation systems				
CO2	Capability to select different solid - fluid separation equipment.				
CO3	Evaluate the size reduction and various crushing parameters				
CO4	Estimate the separation characteristics				
CO5	Understand the technical methods related to unit operations in process plant				

LIST OF EXPERIMENTS

1. Sieve analysis
2. Batch filtration studies using a Leaf filter
3. Batch filtration studies using a Plate and Frame Filter press
4. Characteristics of batch Sedimentation
5. Reduction ratio in Jaw Crusher / Pulverizer/ Hammer Mill
6. Reduction ratio in Ball mill
7. Separation characteristics of Cyclone separator
8. Reduction ratio of Roll Crusher
9. Separation characteristics of Elutriator
10. Reduction ratio of Drop weight crusher
11. Size separation using Sub-Sieving
12. Determination of specific surface area using air permeability set up

LIST OF EQUIPMENT FOR A BATCH OF 30 STUDENTS

1. Sieve shaker
2. Leaf filter
3. Plate and Frame Filter Press
4. Sedimentation Jar
5. Jaw Crusher
6. Ball Mill
7. Cyclone Separator
8. Roll Crusher
9. Elutriator
10. Drop Weight Crusher
11. Sieves

HS1310	Professional Skills Lab	L	T	P	C
		0	0	2	1

Objectives

- ✓ Enhance the Employability and Career Skills of students
- ✓ Orient the students towards grooming as a professional
- ✓ Make them Employable Graduates
- ✓ Develop their confidence and help them attend interviews successfully.

Course Outcomes (CO)

CO1	Make effective presentations
CO2	Participate confidently in Group Discussions
CO3	Attend job interviews and be successful in them.
CO4	Develop adequate Soft Skills required for the workplace
CO5	Develop their speaking skills to enable them speak fluently in real contexts

UNIT – I **6**

Introduction to Soft Skills- Hard skills & soft skills - employability and career Skills—Grooming as a professional with values—Making an Oral Presentation–Planning and preparing a model presentation; Organizing the presentation to suitthe audience and context; Connecting with the audience during presentation; Projecting a positive image while speaking; Emphasis on effective body language-General awareness of Current Affairs.

UNIT - II **6**

Self-Introduction-organizing the material - Introducing oneself to the audience – introducing the topic – answering questions – individual presentation practice–– Making a Power Point Presentation -- Structure and format; Covering elements of an effective presentation; Body language dynamics. Making an Oral Presentation–Planning and preparing a model presentation; Organizing the presentation to suit the audience and context; Connecting with the audience duringpresentation; Projecting a positive image while speaking; Emphasis on effective body language

UNIT - III **6**

Introduction to Group Discussion— Participating in group discussions – understanding group dynamics - brainstormingthe topic -– questioning and clarifying –GD strategies- Structure and dynamics of a GD; Techniques of effective participation in group discussion; Preparing for group discussion; Accepting others' views / ideas; Arguing against others' views or ideas, etc

UNIT - IV **6**

Basics of public speaking; Preparing for a speech; Features of a good speech; Speaking with a microphone. (Famous speeches may be played as model speeches for learning the art of public speaking). Interview etiquette – dress code – body language – attending job interviews– telephone/skype interview -one to one interview &panel interview –Job Interviews: purpose and process; How to prepare for an interview; Language and style to be used in an interview; Typesof interview questions and how to answer them.

UNIT - V **6**

Recognizing differences between groups and teams- managing time managing stress- networking professionally-respecting social protocols understanding career management- developing a long- term career plan making career changes

Total: 30 PERIODS

LIST OF EQUIPMENT FOR A BATCH OF 30 STUDENTS

- One Server
- 30 Desktop ComputersOne Hand Mike
- One LCD Projector

SEMESTER V

CH1501	**Chemical Reaction Engineering I**	**L**	**T**	**P**	**C**
		2	1	0	3
Objectives					
The course is aimed to ✓ Learn reaction kinetics, types of reactors, design of reactors, understand the isothermal, nonisothermal operationof reactors and gain knowledge about non ideal reactors.					
Course Outcomes (CO)					
CO1	To understand the kinetics of homogenous reactions				
CO2	To develop performance equation and determine the conversion for different reactors				
CO3	To understand the design of reactor for multiple reactions				
CO4	To understand the non-isotherm operation of the reactor				
CO5	To understand the residence time distribution function and analyze the non-ideality in the reactor				
UNIT – I	**KINETICS OF HOMOGENEOUS REACTIONS**				**9**
Rate equation, elementary, non-elementary reactions, theories of reaction rate and Prediction; Design equation forconstant and variable volume batch reactors, analysis of experimental kinetics data, integral and differential analysis. Half-life calculation.					
UNIT – II	**IDEAL REACTORS AND ITS COMBINATIONS**				**9**
Ideal reactor classification. Design of continuous reactors - stirred tank and tubular flow reactor, recycle reactors, combination of reactors, and size comparison of reactors.					
UNIT – III	**DESIGN OF PARALLEL REACTIONS**				**9**
Design of reactors for multiple reactions - consecutive, parallel and mixed reactions - factors affecting choice, optimum yield and conversion, selectivity, reactivity and yield.					

UNIT – IV	TEMPERATURE EFFECTS ON REACTORS	9
Non-isothermal homogeneous reactor systems, adiabatic reactors, rates of heat exchanges for different reactors, design for constant rate input and constant heat transfer coefficient, operation of batch and continuous reactors, optimumtemperature progression.		
UNIT – V	**NON IDEAL REACTORS AND ITS MODELS**	**9**
The residence time distribution for chemical reactors, residence time functions and relationship between them in reactor; Models for non-ideal reactors, conversion in non-ideal reactors.		
	Total:	**45 PERIODS**

Text Books:

1. O. Levenspiel, Chemical Reaction Engineering, Third Edition, John Wiley 1999
2. H.S. Fogler, Elements of Chemical Reaction Engineering, Third Edition, Prentice Hall of India, 1999

CH1502	Heat Transfer	L	T	P	C
		2	1	0	3

Objectives

The course is aimed to

- ✓ Teach the fundamental concepts of heat transfer viz., conduction, convection, radiation, boiling and condensation and its application to the students

Course Outcomes (CO)

CO1	To familiarize the students with the fundamental concepts of Heat Transfer. provide the student with knowledge about heat transfer by conduction in solids for steady state
CO2	Students will understand convective heat transfer and use of heat transfer coefficients for laminar and turbulent flows
CO3	Students will understand radiative heat transfer including blackbody radiation and Kirchoff's law and will be able to solve radiative problems apply knowledge of heat transfer to solve thermal engineeringproblems
CO4	Students will be able to calculate and use overall heat transfer coefficients in designing heat exchangers
CO5	The course provides the student with knowledge about heat transfer with phase change (boiling and condensation) and evaporation

UNIT – I	BASIC CONCEPTS & CONDUCTIVE HEAT TRANSFER	9

Importance of heat transfer in Chemical Engineering operations - Modes of heat transfer – Mean temperature difference- Concept of heat conduction - Fourier's law of heat conduction – One dimensional steady state heat conduction equation for flat plate, hollow cylinder, hollow sphere – Heat conduction through a series of resistances - Analogy between flow of heat and flow of electricity - Effect of temperature on thermal conductivity- Conduction through liquids- Individual and overall heat transfer coefficients and the relationship between them - Transient heat conduction.

UNIT – II	CONVECTION	9

Concept of heat transfer by convection - Natural and forced convection - Application of dimensional analysis for convection - Equations for forced convection under laminar, transition and turbulent conditions - Equations for naturalconvection - Heat transfer from condensing vapors- Heat transfer to boiling liquids - Influence of boundary layer on heat transfer - Heat transfer to molten metals – Heat transfer in packed and fluidized beds.

UNIT – III	RADIATION	9

Concept of thermal radiations - Black body concept - Stefan Boltzman's law - Emissive power – Black body radiation – Emissivity - Plank's Law - Radiation between black surfaces - Gray surfaces - Radiation Shields - RadiationApplications

UNIT – IV	HEAT EXCHANGERS	9

Parallel and counter flow heat exchangers - Log mean temperature difference - Single pass and multipass heat Exchangers-Plate Heat Exchangers-Use of correction factor charts- Heat Exchangers Effectiveness-Number of transfer unit - Chart for different configurations - Fouling factors and Wilson's plot - Design of various types of heat exchangers - Design of condensers.

UNIT – V	EVAPORATION	9

Types of evaporation - Single effect and multiple effect evaporation - Design calculation for single and multiple effectevaporation- Boiling Point Elevation - Effect of Liquid Head - Capacity and Economy of multiple effect evaporators -Evaporation Equipment's.

CH1503	Mass Transfer I	L	T	P	C
		2	1	0	3

Objectives

The course is aimed to

- ✓ Learn and determine mass transfer rates under laminar and turbulent conditions and apply these concepts in thedesign of humidification columns, dryers and crystallisers.

Course Outcomes (CO)

CO1	To understand the fundamentals, types and mechanism of mass transfer operations
CO2	To understand the theories of mass transfer and the concept of inter-phase mass transfer
CO3	To understand the basics of humidification process and its application
CO4	To understand the concept and mechanism of drying operations
CO5	To understand the concept of crystallization process and identification of suitable crystallizer

UNIT – I	**MOLECULAR DIFFUSION**	**9**

Introduction to mass transfer operations. Molecular diffusion in gases, liquids and solids. Diffusivity measurement and prediction; multi-component diffusion

UNIT – II	**CONVECTIVE & INTERPHASE MASS TRANSFER**	**9**

Eddy diffusion, concept of mass transfer coefficients, theories of mass transfer, different transport analogies, application of correlations for mass transfer coefficients, inter phase mass transfer, relationship between individual and overall mass transfer coefficients. NTU and NTP concepts, Stage-wise and differential contractors.

UNIT – III	**HUMIDIFICATION & DE – HUMIDIFICATION OPERATIONS**	**9**

Humidification – Equilibrium, humidity chart, adiabatic and wet bulb temperatures; humidification operations; theory and design of cooling towers, dehumidifiers and humidifiers using enthalpy transfer unit concept.

UNIT – IV	**DRYING**	**9**

Drying – Equilibrium. Classification of dryers, batch drying – Mechanism and time of cross through circulation drying, theoretical estimation of drying rate and time. Continuous dryers – material and energy balance. Advance dryingtechniques such as freeze drying, microwave drying.

UNIT – V	**CRYSTALLIZATION**	**9**

Crystal geometry. Equilibrium, yield and purity of products, theory of super saturation, nucleation and crystal growth, classification of crystallizers, design of batch crystallizers and continuous crystallizers.

Total:	**45 PERIODS**

CH1507	Heat and Mass Transfer Laboratory	L	T	P	C
		0	0	3	2

Objectives

The course is aimed to

- ✓ Develop sound practical knowledge for students on different types of heat transfer equipment
- ✓ Develop sound practical knowledge for students on different types of mass transfer equipment

Course Outcomes (CO)

CO1	Apply the concepts of heat transfer and fluid dynamics to the operation of heat transfer equipment’s.
CO2	Estimate the heat transfer rate and heat transfer co-efficient
CO3	Determine the diffusivity practically and compare the results with the empirical correlations.
CO4	Estimate the mass transfer rate and mass transfer co-efficient
CO5	Evaluate the performance/calculate the parameters in different distillation processes

LIST OF EXPERIMENTS

1. Heat Transfer in a Double Pipe Heat Exchanger
2. Heat transfer by Forced / Natural Convection
3. Batch drying kinetics using Tray Dryer
4. Heat Transfer in Helical column
5. Heat Transfer through Packed Bed
6. Heat Transfer through bare type heat exchanger
7. Heat Transfer through finned type heat exchanger
8. Drying characteristics of Vacuum Dryer
9. Drying characteristics of Rotary dryer
10. Measurement of diffusivity
11. Surface evaporation
12. Mass transfer coefficient determination by Wetted wall column

LIST OF EQUIPMENT FOR A BATCH OF 30 STUDENTS

1. Double pipe Heat Exchanger
2. Tray drier
3. Helical column
4. Packed Bed
5. Bare type heat exchanger
6. Finned type heat exchanger
7. Vacuum Dryer
8. Rotary dryer
9. Diffusivity set-up
10. Surface evaporation set-up
11. Wetted wall column set-up

CH1508	Computational Programming Laboratory for Chemical Engineers	L	T	P	C
		0	0	3	2

Objectives

The course is aimed to

- ✓ To give the students an understanding the fundamentals concepts in mathematics, problems solving andcomputer programming.

Course Outcomes (CO)

CO1	Solving chemical engineering problems using different tools available in the excel software
CO2	Solving simultaneous equation and differential equation using polymath
CO3	Simulation of simple chemical process with controller using simulink tool
CO4	Estimation of fluid property and understand the unit operation simulation using Aspen Plus
CO5	Dynamic simulation of chemical process using aspen plus

Suggested Exercises

1. Equations of state using Newton's method
2. Regression for parameter estimation using a set of data points
3. Equilibrium flash distillation (Multicomponent Ideal)
4. Batch Reactor
5. CSTR in Series Stage wise contacting equipment
6. Solving a simple flow sheet by simultaneous approach
7. Simulation of batch Distillation (binary ideal).
8. Gravity Flow Tank
9. Heat Exchanger
10. Plug Flow Reactor
11. Absorber

Specific examples in ASPEN/HYSYs/MATLAB/EXCEL

1. Solving equation of state, regression of parameters using EXCEL/MATLAB
2. Calculation of Reynolds number, friction factor and pressure drop using EXCEL/MATLAB
3. Calculation of heat transfer coefficient in a Heat Exchanger using EXCEL/MATLAB
4. Calculation of minimum Reflux ratio for binary/tertiary system in a fractionator using EXCEL/MATLAB
5. Calculation of HTU and NTU in a Absorber using EXCEL/MATLAB
6. Calculation of Antoine's coefficient using EXCEL/MATLAB
7. Estimation of settling velocity of solids in liquids using Stoke's law using EXCEL/MATLAB
8. Calculation of minimum number of stages in a distillation column using EXCEL/MATLAB
9. Solving mass and energy balance problems using EXCEL/MATLAB
10. Calculation of Power in Reciprocating compressor using EXCEL/MATLAB
11. Steady state simulation of Heat Exchanger using ASPEN PLUS/ HYSYS
12. Steady state simulation of a CSTR using ASPEN PLUS/ HYSYS
13. Steady state simulation of Flash vessel using ASPEN PLUS/ HYSYS
14. Steady state simulation of Distillation Column using ASPEN PLUS/ HYSYS
15. Steady state simulation of an Absorption column using ASPEN PLUS/ HYSYS
16. Dynamic simulation of Heat Exchanger using ASPEN PLUS/ HYSYS
17. Dynamic simulation of a CSTR using ASPEN PLUS/HYSYS
18. Dynamic simulation of Flash vessel using ASPEN PLUS/ HYSYS
19. Dynamic simulation of Distillation Column using ASPEN PLUS/ HYSYS
20. Dynamic simulation of an Absorption column using ASPEN PLUS/ HYSYS

SEMESTER VI

CH1601	Chemical Reaction Engineering II	L	T	P	C
		3	1	0	4

Objectives

The course is aimed to

- ✓ Learn gas solid non catalytic, gas solid catalytic and fluid- fluid reaction and apply the knowledge for the reactordesign.

Course Outcomes (CO)

CO1	To understand the gas solid non catalytic reaction and different models for non-catalytic reaction.
CO2	To understand catalyst, catalyst preparation, property estimation and isotherm study.
CO3	To understand the gas solid catalytic reaction and their mechanism
CO4	To design of catalytic reactor for gas solid reaction.
CO5	To understand the concept of Mass Transfer and Mass transfer with reaction for fluid- fluid reaction and tower design.

UNIT – I	FLUID SOLID NON CATALYTIC KINETICS	12

Gas solid non catalytic reaction. Reaction kinetics, Shrinking Core Model and Progressive conversion model, Controlling resistances (diffusion through gas film, ash layer and chemical reaction controlling), rate controlling steps;time for Complete Conversion for Single and Mixed Sizes, design of fluid –particle reactors.

UNIT – II	CATALYSIS & ADSORPTION	12

Catalysis and adsorption: physical properties of catalyst, surface area, void volume, solid density, volume determination, catalyst classification and preparation, catalyst promoters, catalyst inhibitors, catalyst poisons. Adsorption Isotherms Freundlich and Langumir isotherms.

UNIT – III	KINETICS OF CATALYTIC REACTIONS	12

Gas solid catalytic reaction: steps in catalytic reaction, Single site, dual site mechanisms, Langmuir Hinshelwood, Rate controlling steps. Experimental methods for determining rate, differential , integral reactor and reactor deign

UNIT – IV	FLUID SOLID CATALYTIC KINETICS	12

Diffusion Within Catalyst Particle, Mass and Heat Transfer Within Catalyst Pellets, Effectiveness Factor, Thiele Modulus, Effectiveness factor for non-isothermal condition.

UNIT – V	FLUID -FLUID KINETICS	12

Fluid-Fluid reaction. Kinetics and design of Fluid-Fluid Reactions. Rate equation, Kinetic regimes for absorptioncombined with chemical reaction. Various cases of mass transfer with chemical reaction , Factors to select the contactor, Tower Reactor Design

Total:	**60 PERIODS**

Text Books:
1. J.M.Smith Chemical Engineering Kinetics, Third Edition, Mc Graw Hill New York 1981 2. O. Levenspiel, Chemical Reaction Engineering, Third Edition, John Wiley 1999 3. H.S. Fogler, Elements of Chemical Reaction Engineering, Third Edition, Prentice Hall of India, 1999

CH1602	**Mass Transfer II**	**L**	**T**	**P**	**C**
		2	1	2	4

Objectives

The course is aimed to

- ✓ Impart knowledge on how certain substances undergo the change in composition, change in phases and exhibit their properties according to the changed environment. Also, to design absorber and stripper, distillation column,extraction and leaching equipment and adsorber.

Course Outcomes (CO)

CO1	To understand concept and determine the theoretical stages, number of transfer units and height requirements for a gas absorption process
CO2	To identify the suitable distillation techniques, determine the number of trays for stage wise contact and determine the height of the packed tower.
CO3	To apply the ternary equilibrium diagram concepts to determine the number of stages required for separation of liquid-liquid extraction process.
CO4	To describe core principles of leaching, setting up mass balances, use graphical methods to estimate the number of ideal stages in leaching operation.
CO5	To understand the concept of adsorption techniques, various isotherms and ion exchange process

UNIT – I	**ABSORPTION**	**9 + 3**

Absorption factor, Equipments in gas liquid operations, design of packed and plate type absorbers; Operating characteristics of stage wise and differential contactors, concepts of NTU, HTU and overall volumetric mass transfercoefficients; Absorption with chemical reaction.

Lab Component

- To study the Packed bed Absorber

UNIT – II	DISTILLATION	9 + 3
Vapour liquid equilibria - Raoult's law, Ideal and non-ideal systems, Principle of distillation - flash distillation, differential distillation, steam distillation, Azeotropic and extractive distillation, Number of ideal stages by Mc.Cabe -Thiele method, Introduction to Ponchan - Savarit method, Total reflux, minimum reflux ratio, optimum reflux ratio. **Lab Component** • To study the Simple, Steam and Packed distillation column		
UNIT – III	**LIQUID LIQUID EXTRACTION**	**9 + 3**
Equipments used in Liquid - liquid extraction – differential contact equipment-spray, packed and mechanically agitated contactors, Pulsed extractors, centrifugal extractors-Supercritical extraction, Selection of solvent, stage wisecontact – partially soluble and insoluble, cross current and counter current extraction. **Lab Component** • To study the Liquid-Liquid extraction and RDC Extractor		
UNIT – IV	**LEACHING**	**9 + 3**
Single stage leaching, Solid-liquid equilibria- leaching equipment for batch and continuous operations, calculation ofnumber of stages - Leaching - Leaching by percolation through stationary solid beds, moving bed leaching, counter current multiple contact (shank's system), multi stage continuous cross current and countercurrent leaching, stage calculations, stage efficiency. **Lab Component** • Experimental studies of Single stage leaching		
UNIT – V	**ADSORPTION, ION EXCHANGE, MEMBRANE SEPARATION PROCESSES**	**9 + 3**
Adsorption - Types of adsorption, nature of adsorbents, adsorption equilibria, effect of pressure and temperature on adsorption isotherms, Adsorption operations - stage wise operations, Principle of Ion exchange, techniques and applications. Solid and liquid membranes; concept of osmosis; reverse osmosis; electro dialysis; ultrafiltration, membrane distillation, recent development. **Lab Component** • Adsorption studies using Silica gel		
	Total:	**60 PERIODS**

CH1603	Chemical Engineering Thermodynamics	L	T	P	C
		2	1	0	3

Objectives

The course is aimed to

- ✓ Understand the phase Behavior of fluids under different PVT conditions and apply them for practical purposes.The course will render a comprehensive understanding of theory and application of solution thermodynamics.

Course Outcomes (CO)

CO1	To understand the systematic development of new class of properties to describe real mixtures
CO2	To develop the idea of chemical potential to derive the idea of phase equilibria
CO3	To understand the concept of equilibrium between combination of two co existing phases other than liquid and vapour
CO4	To understand the principle of chemical reaction thermodynamics for the prediction of equilibrium conversion.
CO5	To analyze the ideal and actual vapor-compression refrigeration cycle and Evaluate the performance of innovative vapor compression refrigeration systems

UNIT – I	**SOLUTION THERMODYNAMICS**	**9**

Thermodynamic formulation, Partial molar properties, ideal and non-ideal solutions, standard states definition and choice, Gibbs-Duhem equation, excess properties of mixtures, pure species and liquids.

UNIT – II	**PHASE EQUILIBRIA**	**9**

Phase equilibrium in ideal solution, excess Gibbs free energy models, Henry's law, fugacity, Phase diagrams for homogeneous systems and for systems with a miscibility gap, effect of temperature and pressure on azeotrope composition, liquid-liquid equilibrium, ternary liquid-liquid equilibrium.

UNIT – III	**CORRELATION AND PREDICTION OF PHASE EQUILIBRIA**	**9**

Vapor-Liquid Equilibrium at low, moderate and high pressures; bubble and dew point calculation, thermodynamic consistency test of VLE data

UNIT – IV	**CHEMICAL REACTION EQUILIBRIA**	**9**

Chemical Reaction Equilibrium of single and multiple reactions, Standard Gibbs free change, equilibrium constant-effect of temperature; homogeneous gas and liquid phase reactions.

UNIT – V	**REFRIGERATION**	**9**

Principles of refrigeration, methods of producing refrigeration, liquefaction process, coefficient of performance, Evaluation and performance of vapor compression and gas refrigeration cycles.

CH1604	**Process Dynamics and Control**	**L**	**T**	**P**	**C**
		2	1	0	3
Objectives					
The course is aimed to ✓ Determine possible control objectives, input variables (manipulated variables and disturbances), model thedynamic behavior of a process, design PID controllers, frequency response and analyze stability of closed loop and open loop systems.					
Course Outcomes (CO)					
CO1	To understand the need to develop mathematical description of a chemical process as a prerequisite to process design and to control the process.				
CO2	To develop transient models for chemical processes using material and/or energy balance equations by incorporating constitutive relationships and seek their solution using Laplace Transforms				
CO3	To convert a process and instrumentation diagram to a control block diagram				
CO4	To understand Frequency response of control systems and tune the PID controllers				
CO5	To appreciate the performance augmentation of PID controllers by using advanced control strategies such as Cascade, Feed forward, Dead time compensation.				
UNIT – I	**INTRODUCTION**				**9**
Introduction to Chemical Process Control, Mathematical description of chemical processes, Formulating Process Models, Laplace Transforms, Properties of Laplace Transforms, Solution of ODE using Laplace Transforms, Standardinput forcing functions, State – Space representation, transform domain models, Impulse response models, Inter relationship between process model forms					
UNIT – II	**FIRST ORDER AND HIGHER ORDER SYSTEMS**				**9**
Open-loop systems, first order systems and their transient response for standard input functions, first order systems in series, linearization and its application in process control, second order systems and their dynamics; transportation lag,FOPDT Model, Skogestaad's rule for FOPDT and SOPDT, Lead- Lag systems					
UNIT – III	**CLOSED LOOP CONTROL SYSTEM**				**9**
Closed loop control systems, development of block diagram for feed-back control systems, servo and regulatoryproblems, transfer function for controllers and final control element, principles of pneumatic and electronic controllers, control valves, transient response of closed-loop control systems and their stability, Root locus diagram.					
UNIT – IV	**FREQUENCY RESPONSE**				**9**
Introduction to frequency response of closed-loop systems, control system design by frequency response techniques, Bode diagram, stability criterion, tuning of controller settings, Nyquist Stability Criterion					

UNIT – V	ADVANCED CONTROL SYSTEMS	9
Introduction to advanced control systems, cascade control, feed forward control, Controllers for Inverse response Smith predictor controller, control of distillation towers and heat exchangers, introduction to computer control ofchemical processes.		
	Total:	**45 PERIODS**

CH1605	Process Economics and Industrial Management	L	T	P	C
		3	0	0	3

Objectives

The course is aimed to

- ✓ Understand the various concepts of economics, process development, design consideration and cost estimationin chemical industry..

Course Outcomes (CO)

CO1	To understand the concept of economics in a process plant, time value of money and cost indices
CO2	Able to integrate knowledge about financial statements, Depreciation and Accounting
CO3	Able develop economic balance for chemical engineering equipment's and determine the optimum cost for operation
CO4	To understand the basics of principles of management, types of organization and MIS
CO5	To understand the theory behind Work measurement technique, Production planning and elements of production control

UNIT – I	INTEREST AND PLANT COST	9
Economics-Engineering economics-Financial efficiency, human factors, capital, accounting. Time value of money – Interest, present worth, annuities, Depreciation-methods, capital investment, estimation of capital cost, elements of cost, break even analysis (BEA)		
UNIT – II	**PROFITABILITY AND FINANCIAL RATIOS**	**9**
Profitability - methods to estimate profitability, Alternative investments, Balance sheet-Preparation, Income statement (Profit and loss account) and financial ratio analysis.		
UNIT – III	**ECONOMIC BALANCE IN EQUIPMENTS**	**9**
Essentials of economic balance, economic balance in batch operations, cyclic operations, economic balance for insulation, evaporation, heat transfer equipment, plate and frame filter press.		
UNIT – IV	**PRINCIPLES OF MANAGEMENT**	**9**
Principles of management, planning and organizing, staffing, process of directing-communication and types of communication, coordinating and controlling, Types of organizations, Management information systems (MIS).		
UNIT – V	**PRODUCTION PLANNING CONTROL**	**9**
Work measurement techniques, motion study(Work sampling)-procedure and application , time study procedure-performance rating-types of performance rating- learning curve, elements of production control, forecasting, planning, routing, scheduling, dispatching, inventory and control, role of control charts in quality control.		
	Total:	**45 PERIODS**

Text Books:

1. Peters and Timmerhaus, Plant design and Economics for Chemical Engineers, McGraw Hill 5th Edition, 2004.
2. Ahuja K.K, Industrial management, Khanna publishers, New Delhi, 1985.
3. Schweyer. H.E, “Process Engineering Economics”, Mc Graw Hill, 1969

Reference Books:

CH1607	Professional Ethical Practice	L	T	P	C
		0	3	3	1

Objectives

- ✓ The course should cover the following topics by way of Seminars, Expert Lecturers and Assignments.

Course Outcomes (CO)

CO1	Distinguish between ethical and non-ethical situations.
CO2	Practice moral judgment in conditions of dilemma.
CO3	Relate the code of ethics to social experimentation

CO4	Develop concepts based on moral issues and enquiry
CO5	Resolve moral responsibilities in complications.

1. Engineering Ethics – Moral Issues, Ethical theories and their uses
2. Engineering as Experimentation – Code of Ethics
3. Engineer's Responsibility for Safety
4. Responsibilities in Rights
5. Global issues of engineering ethics

Course Outcomes	**Program Outcomes**												**Program Specific Outcomes**	
	1	**2**	**3**	**4**	**5**	**6**	**7**	**8**	**9**	**10**	**11**	**12**	**1**	**2**

CH1608	**Chemical Reaction Engineering Laboratory**	**L**	**T**	**P**	**C**
		0	0	3	2

Objectives

The course is aimed to

- ✓ Develop sound practical knowledge for students on different types of reactors.

Course Outcomes (CO)

CO1	Determine the rate constant experimentally in a batch reactor.
CO2	Determine the conversion of a reaction in different reactors (batch, CSTR, PFR)
CO3	Study of temperature dependence of rate constant.
CO4	Determine the non-ideal behaviour and residence time distribution in PFR and CSTR.
CO5	Determine the conversion of reactor arranged in series.

LIST OF EXPERIMENTS

1. Kinetic studies in a Batch reactor
2. Kinetic studies in a Plug flow reactor
3. Kinetic studies in a CSTR
4. Kinetic studies in a Packed bed reactor
5. Kinetic studies in a PFR followed by a CSTR
6. RTD studies in a PFR
7. RTD studies in a Packed bed reactor
8. RTD studies in a CSTR
9. Studies on micellar catalysis
10. Study of temperature dependence of rate constant using CSTR.
11. Kinetic studies in Sono chemical reactor
12. Studies on Cascade CSTR
13. Kinetics of photochemical reaction
14. Demonstration of heterogeneous catalytic reaction
15. Demonstration of gas-liquid reaction
16. Kinetics study in Adiabatic reactor
17. Determination of Activation Energy of a reaction
18. Kinetic study in semi batch reactor

LIST OF EQUIPMENT FOR A BATCH OF 30 STUDENTS

1. Batch reactor
2. Plug flow reactor
3. Continuous Stirred Tank Reactor
4. Sono chemical reactor
5. Photo chemical reactor
6. Packed bed reactor

Total Periods:	**60 PERIODS**

SEMESTER VII

CH1701	**Transport Phenomena**	**L**	**T**	**P**	**C**
		2	1	0	3

Objectives

- ✓ Describe mass, momentum and energy transport at molecular, microscopic and macroscopic level to determinevelocity, temperature and concentration profiles

Course Outcomes (CO)

CO1	To enable the students to understand different types of fluids, rheological models, conservation laws, theories of transport properties of gases and liquids.
CO2	To enable the students to acquire knowledge in the field General method of shell balance approach totransfer problems; Choosing the shape of the shell; most common boundary conditions; momentum flux and velocity distribution for flow of Newtonian and non-Newtonian fluids.
CO3	To enable the students to acquire knowledge in the field of equations of change and their applications
CO4	To enable the students to acquire knowledge in the field General method of shell balance approach to Mass transfer problems.
CO5	To enable the students to acquire knowledge in the field turbulents phenomena; phenomenological relations for transfer fluxes; time smoothed equations of change and their applications for turbulent Flow.

UNIT - I	**MOMENTUM TRANSPORT**	**9**

Viscosity, temperature and pressure effect on viscosity of gases and liquids, Newton’s law, mechanism of momentum transport, shell momentum balance method, Shear stress and velocity distributions in falling film, circular tube, annulus, slit.

UNIT - II	ENERGY TRANSPORT	9
Thermal conductivity, temperature and pressure effect on thermal conductivity of gases and liquids, Fourier's law, mechanism of energy transport, shell energy balance method, Energy flux and temperature distribution in solids andlaminar flow with electrical, nuclear, viscous, chemical heat source, heat conduction through composite walls, fins.		
UNIT - III	**MASS TRANSPORT**	**9**
Diffusivity, temperature and pressure effect on diffusivity, Fick's law, mechanism of mass transport, shell mass balance method, Mass flux and concentration distribution in solids and in laminar flow: stagnant gas film, heterogeneous andhomogeneous chemical reaction systems, falling film, porous catalyst.		
UNIT - IV	**EQUATION OF CHANGE AND THEIR APPLICATIONS**	**9**
Momentum: Equations of continuity, motion and mechanical energy (Isothermal), Energy: Equation of energy (non-isothermal). Mass: Equations of change (multi-component), equations of continuity for each species, equation of energy (multi-component). Solutions of momentum, heat and mass transfer problems discussed under shell balance by applications of equation of change, dimensional analysis of equations of change.		
UNIT - V	**TRANSPORT IN TURBULENT FLOWS AND ANALOGIES**	**9**
Comparison of laminar and turbulent flows, time-smoothed equations of change, empirical expressions. Comparison of laminar and turbulent hydrodynamics, thermal and concentration boundary layer and their thicknesses. Developmentand applications of analogies between momentum, heat and mass transfer.		
	Total:	**45 PERIODS**

Text Books:

1. Bird, R. B., Stewart, W. E. and Lighfoot, E. W., "Transport Phenomena", 2nd Edn., John Wiley, 2002
2. Brodkey, R. S., and Hershey, H. C., "Transport Phenomena", McGraw-Hill, 1988

Reference Books:

CH1702	Chemical Process Equipment Design (Integrated Lab)	L	T	P	C
		2	1	2	4

Objectives

- ✓ Students learn to do in detail process and mechanical design and engineering drawing of different chemicalengineering equipment.

Course Outcomes (CO)

CO1	Apply the skill in thermal design of heat transfer equipment like shell and tube, double pipe heat exchangers and evaporators, and assessing thermal efficiency of the above equipment in practice

CO2	Demonstrate the skills in basic design and drawing of different dryers, cooling towers and cyclone separators.
CO3	Apply the concepts involved in phase separation and design of distillation, Extraction and absorption columns.
CO4	Demonstrate the skills in mechanical design of process equipment, design considerations of pressure vessels and its auxiliary devices design the layout of process industries
CO5	To study the Plant Layout, Pipe Lines and Pipe Layouts, Schematics and Presentation Materials of Construction

UNIT - I		**9+3**

Heat Exchangers, Condensers, Evaporators

Lab Component

- Drawing considerations of Heat Exchangers

UNIT - II		**9+3**

Cooling Tower, Dryers

Lab Component

- Drawing considerations of cooling towers

UNIT - III		**9+3**

Absorption column, Distillation Column, Extraction Column, Adsorption column

Lab Component

- Drawing considerations of Distillation Column and Adsorption column

UNIT - IV		**9+3**

Packed bed Reactors, Pressure Vessel, Storage Vessel

Lab Component

- Drawing consideration of vessels subjected to internal pressure, and external pressure
- Drawing considerations of bolt, nut and screws, welded and riveted joints, flanged joints, nozzles and reinforcements

UNIT - V		**9+3**

Design of Plant Layout, Pipe Lines and Pipe Layouts, Schematics and Presentation Materials of Construction and Selection of process equipment

Lab Component

- Drawing consideration of Plant Layout, Pipe Lines and Pipe Layouts

	Total:	**60 PERIODS**

Text Books:

1. M.V.Joshi and V.V. Mahajan, "Process Equipment Design", MacMillan India Ltd.
2. S.D.Dawande, "Process Design of Equipments", Central Techno Publications, Nagpur, 2000

CH1703	**Safety and Hazard analysis**	**L**	**T**	**P**	**C**
		3	0	0	3

Objectives

To enable the students to

- ✓ Become a skilled person in hazard hazel analysis and finding out the root cause of an accident.
- ✓ Gain knowledge in devising safety policy and procedures to be adopted to implement total safety in a plant

Course Outcomes (CO)

CO1	To understand the need and importance of Industrial safety
CO2	To understand the causes and effects of chemical hazards
CO3	To understand how industries affect the environment
CO4	To familiarize with hazard analysis and assessment procedures
CO5	To understand the concept of Disaster management

UNIT - I **INTRODUCTION TO SAFETY PROGRAMMES** **9**

Safety in industries; need for development; importance safety consciousness in Indian chemical industry; social environmental setup; tolerance limit of the society; psychological attitude towards safety programmes. Elements of safety programme; effective realization; economic and social benefits; effective communication training at various levels of production and operation.

UNIT - II **PLANT SAFETY** **9**

Chemical process industries; potential hazards; chemical and physical job safety analysis; high pressure; high temperature operation; dangerous and toxic chemicals; highly radioactive materials; safe handling and operation of materials and machineries; planning and layout.

UNIT - III **SAFETY PERFORMANCE** **9**

Appraisal; effective steps to implement safety procedures; periodic inspection and study of plant layout and constant maintenance; periodic advice and checking to follow safety procedures; proper selection and replacement of handling equipment's; personal protective equipment's.

UNIT - IV **ACCIDENTS** **9**

Industrial accidents – accident costs – identification of accident spots; remedial measures; identification and analysis of causes of injury to men and machines – accident prevention – accident proneness – vocational guidance, fault free analysis. Fire prevention and fire protection.

UNIT - V **HEALTH HAZARDS AND LEGAL ASPECTS** **9**

Health hazards – occupational – industrial health hazards – health standards, and rules – safe working environments – parliamentary legislations – factories act – labour welfare act – ESI Act – Workmen Compensation Act .Role of Government, safety organizations, management and trade unions in promoting industrial safety.

Total: **45 PERIODS**

Text Books:

1. Ridley Safety at Work, VII Edition, Butterworth Heinman 2007.
2. William Handley, Industrial Safety Hand Book McGraw-Hill Book Company 2nd Edition, 1977.
3. Fawatt, H.H. and Wood, W.S.Safety and Accident Prevention in Chemical Operation, Interscience, 1965

Reference Books:
1. Heinrich, H.W. Dan Peterson, P.E. and Nester Rood. Industrial Accident Prevention, McGraw-Hill Book Co., 1980 2. Blake, R.P., Industrial Safety, Prentice Hall Inc., New Jersy – 3rd Edn. 1963.

CH1707	Mini Project	L	T	P	C
		0	0	3	2

Objectives

- ✓ The objective of the mini project is to make use of the knowledge gained by the student at early stages of the degree course.

Course Outcomes (CO)

CO1	Demonstrate a sound technical knowledge of their selected project topic.
CO2	Undertake problem identification, formulation and solution.
CO3	Design engineering solutions to complex problems utilizing a systems approach.
CO4	Conduct an engineering project.
CO5	Demonstrate the knowledge, skills and attitudes of a professional engineer.

Each student is required to submit a report on the project assigned to him by the department. The report should be based on the information available in the literature or data obtained in the laboratory/industry.
Students, in addition to the home problem will be permitted to undertake industrial/ consultancy project work, outside the department, in industries/Research labs for which proportional weightage will be given in the final assessment.

Total Periods:	60 PERIODS

Course Outcomes	Program Outcomes												Program Specific Outcomes	
	1	2	3	4	5	6	7	8	9	10	11	12	1	2

CH1708	PROCESS CONTROL AND DYNAMICS LABORATORY	L	T	P	C
		0	0	3	2

Objectives

The course is aimed to

- ✓ Gain the hands-on training about the control systems

Course Outcomes (CO)

CO1	Able to determine the response of a first order and second order system for various input
CO2	Able to determine the response of an interacting and non- interacting system for various input
CO3	Understand the difference between an open loop and closed loop system
CO4	Understand the concept of three classical controller P, PI, PID controller
CO5	Understand the concept of stability and tuning of a system

LIST OF EXPERIMENTS

1. Response of first order system
2. Response of second order system
3. Response of Non-Interacting level System
4. Response of Interacting level System
5. Open loop study on a level system
6. Open loop study on a flow system
7. Open loop study on a thermal system
8. Closed loop study on a level system
9. Closed loop study on a flow system
10. Closed loop study on a thermal system
11. Tuning of a level system
12. Tuning of a flow system
13. Tuning of a thermal system
14. Flow co-efficient of control valves

13. Characteristics of different types of control valves

LIST OF EQUIPMENT FOR A BATCH OF 30 STUDENTS

1. Thermometer and Thermo well setup
2. U tube manometer (mercury and water) setup
3. Non- interacting System
4. Interacting System
5. Closed loop Level system
6. Closed loop flow system
7. Closed loop thermal system
8. Control valve setup

CH1709	Internship	L	T	P	C
		0	0	0	1

Objectives

- ✓ Explore career alternatives prior to graduation.

Course Outcomes (CO)

CO1	Integrate theory and practice.
CO2	Develop work habits and attitudes necessary for job success.
CO3	Build a record of work experience.
CO4	Acquire employment contacts leading directly to a full-time job following graduation from college.
CO5	Develop communication, interpersonal and other critical skills in the job interview process.

Students shall undergo training in R&D institutions / Academics / Industries for a minimum period of 15 days. At the end of internship students must submit a report for internal evaluation.

PROFESSIONAL ELECTIVE I

CH1509	CHEMICAL WORKS ORGANIZATION AND MANAGEMENT	L	T	P	C
		3	0	0	3

OBJECTIVE

The course is aimed to

- To Introduce the labour welfare act, plant location and layout
- To introduce the multi-dimensional facts of organizational behaviour.
- Effectiveness of the individual dimensions, the group dimensions and its dynamics

Course Outcomes (CO)

CO1	To assess their own entrepreneurial and enterprising potential
CO2	To develop an understanding of the general role of Small Business Enterprises
CO3	To gain knowledge on material and scientific management
CO4	Know the difference between entrepreneurial and managerial type jobs
CO5	Understanding of individual personalities and interpersonal skills needed for effective communications

UNIT – I **9**

Industrial Relations – Introduction. Significance & conditions for good industrial relations Causes of poor industrial relations & suggestions to improve it. Labour disputes in India. Industrial disputes act-1947 (only Salient Points). Types of industrial disputes – strikes – lockouts. Regulation of strikes & Lockouts.

UNIT – II **9**

Business organization - Various forms of private, ownerships, comparison and choice. Industrial Organizations - Plant location - Factors influencing plant location - split and coupled locations- size of industrial units. Plant layout - Choice of equipment various types of layout - guarding of machineries - illumination, heating and ventilation.

UNIT – III **9**

Material management - Organization - Production Planning, purchase, store - inventory control, sales and marketing. Scientific management - Rationalization - time and motion study analysis. Time management.

UNIT – IV **9**

Personality predispositions – personality and personality types, Maddi's models of personality. Perpectual process – development of perpectual skills. Motivation and work performance. Reinforcement theory – Relationship between motivation and performance.

UNIT – V **9**

Dynamics of communication – The communication process, structure of communication, Transactional Analysis, The five common communication networks in an organization. Group Dynamics – Synergy through groups, Group behaviour, group effectiveness, stages of group development. Properties and Characteristics of Highly effective groups

Total Periods: 45

Text Books:

1. Sukla,M.C., Business Organization and Management, 2010.
2. Uma sekaran – "Organisational Behaviour – Text and Cases" 2004, Tata McGrawHill New Delhi.

CH1510	**MEMBRANE SCIENCE AND ENGINEERING**	**L**	**T**	**P**	**C**
		3	0	0	3

OBJECTIVE

The course is aimed

- To make students understand the various types of Membrane compositions. To familiarize the studentsof various Membrane Configuration Units.
- To provide knowledge about the various Membrane separations techniques.
- To illustrate the various membrane synthesis techniques and its applications

Course Outcomes (CO)

CO1	To Familiarize main membrane processes, principles, separation mechanisms, and applications
CO2	To Appreciate the selection criteria for different membrane processes
CO3	To Describe the principle of the most common membrane applications
CO4	To Gain knowledge on different modules
CO5	To Understand the application of membrane in various fields.

UNIT – I **9**

Synthetic Membranes - configuration, morphology, principles of permeation and separation, membranematerials.

UNIT – II **9**

Processing: Phase-inversion process, anisotropic membranes, isotropic porous membranes. Polymer blends and alloys, dynamic membranes, liquid membranes, bio mimetic membranes ion exchange membranes, electro dialysis, bipolar membranes, mosaic membranes.

UNIT – III **9**

Separation processes: Electro dialysis, micro filtration, ultra- filtration, reverse osmosis, hemodialysis, hem filtration.

UNIT – IV **9**

Membrane systems: Plate and frame, spiral-wound Unit, hollow fiber Units.

UNIT – V **9**

Membrane Applications: Wastewater treatment, bio separation, biomedical.

Total Periods: 45

OBJECTIVE

The course is aimed to

- To enable the students to compute molecular weight averages from the molecular weight distribution, Condensation polymerization and transition in polymers.

Course Outcomes (CO)	
CO1	To understand the fundamental concepts of macromolecules
CO2	To understand the addition polymerization
CO3	To understand the condensation polymerization
CO4	To analyse the polymer property relations and their application
CO5	To understand the transition polymers and its properties

UNIT – I	**INTRODUCTION**	**9**

History of Macromolecules – structure of natural products like cellulose, rubber, proteins – concepts of macro molecules – Staudinger's theory of macromolecules – difference between simple organic molecules and macromolecules.

UNIT – II	**ADDITION POLYMERIZATION**	**9**

Chemistry of Olefins and Dienes – double bonds – Chemistry of free radicals – monomers – functionality – Polymerization: Initiation – types of initiation – free radical polymerization – cationic polymerization – anionic polymerization – coordination polymerization – industrial polymerization – bulk, emulsion, suspension and solution polymerization techniques – Kinetics – Copolymerization concepts.

UNIT – III	**CONDENSATION POLYMERIZATION**	**9**

Simple condensation reactions – Extension of condensation reactions to polymer synthesis – functional group reactivity – polycondensation – kinetics of polycondensation- Carother's equation – Linear polymers by polycondensation – Interfacial polymerization – crosslinked polymers by condensation – gel point.

UNIT – IV	MOLECULAR WEIGHTS OF POLYMERS	9
Difference in molecular weights between simple molecules and polymers – number average and weight average molecular weights – Degree of polymerization and molecular weight – molecular weight distribution – Polydispersity – molecular weight determination. Different methods – Gel Permeation Chromatography – Osmometry, Light Scattering.		
UNIT – V	**TRANSITIONS IN POLYMERS**	**9**
First and second order transitions – Glass transition, Tg – multiple transitions in polymers – experimental study – significance of transition temperatures – crystallinity in polymers – effect of crystallization – in polymers – factors affecting crystallization crystal nucleation and growth – relationship between Tg and Tm – Relationship between properties and crystalline structure.		
	Total Periods:	**45**

CH1512	FUNDAMENTALS OF THERMODYNAMICS	L	T	P	C
		2	1	0	3

OBJECTIVE

The course is aimed to

- understand and appreciate thermodynamics as applied to various Chemical Engineering Processes.
- introduce the behavior of components in a mixture or solution.
- impart fundamental concepts of solution thermodynamics involving ideal and non-ideal systems.

Course Outcomes (CO)

CO1	Outline the terminology associated with engineering thermodynamics, apply the concepts of heat, work and energy conversion to calculate heat and work quantities for industrial processes and predict the properties of ideal and real mixtures based on thermodynamic principles
CO2	Apply the basic concepts of first and second laws of thermodynamics for the design and analyse of the open and closed system in chemical process plants
CO3	Predict the changes in the properties of real fluids undergoing changes in process plant equipment.
CO4	Use empirical correlations and experimental date to evaluate thermodynamic quantities that relate to the vapour - liquid or liquid-liquid equilibria of ideal and non-ideal chemical mixtutes.
CO5	Determine equilibrium constants, standard enthalpy, Gibbs free Energy and equilibrium compositions for single and multiple reaction systems.

UNIT – I	BASIC CONCEPTS AND LAWS OF THERMODYNAMICS	9

Terminologies of thermodynamics, categorization of systems and processes, Laws of Thermodynamics. Reversible and Irreversible process. PVT behaviour gases. Equation of state. Entropy change in reversible and irreversible process, Internal energy and entropy as a function of temperature and pressure

UNIT – II	THERMODYNAMIC PROPERTIES	9

Thermodynamics relations, Maxwell relations. Fugacity and fugacity coefficients. Estimation of thermodynamic properties. Types of thermodynamic diagrams.

UNIT – III	PHASE EQUILIBRIA AND VAPOUR LIQUID EQUILIBRIA	9

Phase equilibria - Activity and activity coefficients. Gibbs-Duhem equations. Van laar, Margules equation. Consistency test. Prediction of VLE.

UNIT – IV	CHEMICAL REACTION EQUILIBRIA	9

Criteria of equilibrium. Standard free energy change and equilibrium constants. Effect of temperature. Evaluation of equilibrium constants

UNIT – V	APPLICATION OF LAWS OF THERMODYNAMICS	9

Compression and expansion of fluids. Theory of multistage compression. Refrigeration principles and applications

Total Periods: 45

CH1513	ESSENTIALS OF THERMODYNAMICS	L	T	P	C
		2	1	0	3

OBJECTIVE

The course is aimed to

- Learn PVT behaviour of fluids, laws of thermodynamics, thermodynamic property relations and their application to fluid flow, power generation and refrigeration processes.

Course Outcomes(CO)

CO1	To understand the fundamental concepts of thermodynamics and its related functions
CO2	To understand and apply the law of thermodynamics in various processes
CO3	To relate PVT behaviour of fluids and understand the real gas behavior
CO4	To apply second law and analyze the feasibility of system
CO5	To solve the thermodynamic problems using MATLAB software

UNIT– I BASIC CONCEPTS AND LAWS OF THERMODYNAMICS **9**

Terminologies of thermodynamics, the variables and quantities of thermodynamics, characteristics of systems and processes, energy classifications, point and path functions, energy in transition work and heat. zeroth law; temperature scales

UNIT– II FIRST LAW OF THERMODYNAMICS **9**

Joule's experiment ,The first law of thermodynamics, statements of first law for the flow and non-flow processes, Heat capacity, energy balance for closed systems, mass and energy balance for open systems Internal Energy

UNIT– III P-V-T BEHAVIOUR AND HEAT EFFECTS **9**

PVT behaviour of fluids; Mathematical representation of PVT behavior; Generalized compressibility factor correlation; Generalized equations of state,

UNIT– IV SECOND LAW OF THERMODYNAMICS **9**

Limitations of the First Law of Thermodynamics, Statements of the second law of thermodynamics, Clausius inequality, heat engine and Carnot cycle and Carnot theorems, Third law of thermodynamics

UNIT– V APPLICATION OF MATLAB IN THERMODYNAMICS **9**

Thermodynamic property relations –Compressibility Factors, cubic equation, generalized equation of state

PROFESSIONAL ELECTIVE II

CH1609	**INDUSTRIAL AIR POLLUTION**	**L**	**T**	**P**	**C**
		3	0	0	3

OBJECTIVE

The course is aimed to

- To enable the students to learn about Air Pollution, effects of air pollution, Global effects, Sampling of pollutants, Meteorology and air pollution, Atmospheric stability, Plume rise and dispersion and Prediction of air quality.

Course Outcomes (CO)

CO1	To understand Laws and Regulation of air act
CO2	To identify the suitable gaseous pollutants and handling technique.
CO3	To study the particulate matter removal technique.
CO4	To study the types of equipment to remove pollutant.
CO5	To understand the concept of adsorption techniques, various control equipment

UNIT – I INTRODUCTION **9**

Air Pollution Regulatory Framework History – Air Pollution Regulatory Framework - Regulatory System – Laws and Regulations – Clean air Act – Provisions for Recent Developments.

UNIT – II AIR POLLUTION GASES **9**

Measurement fundamentals – chemicals and physical properties – Phase Equelbonemconsecoation laws – Incinerators – Design and Performance – Operation and Maintenance - Absorbers – Design operation and improving performances Absorbers.

UNIT – III PARTICULATE AIR POLLUTION **9**

Particle Collection mechanisms– Fluid particle Dynamics – Particle size Distribution – Efficiency – Gravity Setling chambers Cyclones- Electrostatic preceptors Bannouses

UNIT – IV HYBRID SYSTEM **9**

Heat electrostatic precipitation – Genizing Heat Scrubbers – Dry Scrubbers – Electrostatically Augmented Fabric Fillration

UNIT – V AIR POLLUTION CONTROL EQUIPMENT **9**

Introduction – Installation, Equipment's – Cost Model.

Total Periods: 45

Text Books:

1. Air Pollution Control Equipment Louis Theodore, Burley Intuscence 2008.
2. Air Pollution Control CD Cooper and FC.Alley Wairland Press III Edition 2002.
3. Air Pollution Control Engg, Noel de nevey – Mcgrew Hill.

CH1610	INDUSTRIAL INSTRUMENTATION	L	T	P	C
		3	0	0	3

OBJECTIVE

The course is aimed to

- To introduce the measurement techniques of force, torque and speed. To introduce the measurementtechniques of acceleration, Vibration and density

Course Outcomes (CO)

CO1	analyze repeatability, precision and accuracy of the instruments
CO2	understand the measurement techniques for pressure
CO3	understand the measurement techniques for temperature
CO4	understand the measurement techniques for flow and Level
CO5	understand the measurement techniques for composition

UNIT – I **9**

Characteristics of Measurement System -Elements of instruments, static and dynamic characteristics, basicconcepts and qualities of measurement, basic concepts of response of first order type instruments, mercury in glass thermometer

UNIT – II **9**

Pressure measurement: Pressure, Methods of pressure measurement, Manometers, Elastic pressure transducers,Measurement of vacuum, Force-balance pressure gauges, Electrical pressure transducers, Pressure switches, Calibration of pressure measuring instruments, Maintenance and repair of pressure measuring instruments, Troubleshooting

UNIT – III **9**

Temperature measurement: Temperature, Temperature scales, Methods of temperature measurement, Expansion temperature, Filled-system thermometers, Electrical temperature instruments. Pyrometers: Radiationand optical

UNIT – IV **9**

Flow Measurement: Methods of flow measurement, Inferential flow measurement, Quantity flowmeters, Mass flowmeters, Calibration of flowmeters, Selection of flowmeters. Level measurement: Methods of liquid level measurement, Direct methods, level measurement in pressure vessels, measurement of interface level, level of dry materials. Instruments for Analysis - recording instruments, indicating and signaling instruments, instrumentation diagram.

UNIT – V **9**

Methods of composition analysis: Spectroscopic analysis, Absorption spectroscopy, Emission spectroscopy, Mass spectroscopy

Total Periods: 45

Text Books:

1. D. P. Eckman, Industrial Instrumentation, Wiley Eastern Ltd.,2004
2. J. P. Bentley, Principles of Measurement Systems, Longman
3. G. C. Barney, Intelligent Instrumentation, PHI Pvt Ltd.

CH1611	ELECTROCHEMICAL ENGINEERING	L	T	P	C
		3	0	0	3

OBJECTIVE

The course is aimed to

- Students will gain knowledge about electrochemical process and its application

Course Outcomes (CO)

CO1	To understand the basics of electrochemistry
CO2	To understand the Mass transfer in electrochemical systems
CO3	To understand the corrosion control measures
CO4	To understand the basics of principles of electro refining
CO5	To understand the theory behind different type of electrochemical reactors

UNIT – I **9**

Review basics of electrochemistry: Faraday's law - Nernst potential –Galvanic cells – Polarography, Theelectrical double layer: 94It's role in electrochemical processes –Electrocapillary curve – Helmoltz layer – Guoy–Steven's layer – fields at the interface.

UNIT – II **9**

Mass transfer in electrochemical systems: diffusion controlled electrochemical reaction – the importance of convention and the concept of limiting current over potential, primary-secondary current distribution – rotating disc electrode.

UNIT – III **9**

Introduction to corrosion, series, corrosion theories derivation of potential-current relations of activities controlled and diffusion controlled corrosion process. Potential-pH diagram, Forms of corrosion- definition, factors and control methods of various forms of corrosion-corrosion control measures- industrial boiler water corrosion control – protective coatings –Vapor phase inhibitors – cathodic protection, sacrificial anodes – Paint removers.

UNIT – IV **9**

Electro deposition – electro refining – electroforming – electro polishing – anodizing – Selective solar coatings, Primary and secondary batteries – types of batteries, Fuel cells.

UNIT – V **9**

Electrodes used in different electrochemical industries: Metals-Graphite – Lead dioxide – Titanium substrate insoluble electrodes – Iron oxide – semi conducting type etc. Metal finishing-cell design. types of electrochemicalreactors, batch cell, fluidized bed electrochemical reactor, filter press cell, Swiss roll cell, plug flow cell, design equation, figures of merits of different type of electrochemical reactors.

CH1612	**PROCESS PLANT UTILITIES**	**L**	**T**	**P**	**C**
		3	0	0	3

OBJECTIVE

The course is aimed

- To enable the students to understand the process plant utilities and optimization techniques to optimize various parameters in chemical industries.

Course Outcomes (CO)

CO1	To understand the Chemical Softening and Demineralization
CO2	To understand the problems based on Steam, Types of Steam Generator
CO3	To understand the Monochlorodifluro Methane, Chlorofluro Carbons and Brins
CO4	To understand the Air – Water Vapors and use of Humidity Chart and its calculation
CO5	To understand the Natural Gas, Liquid Petroleum Fuels, Coal and Coke

UNIT – I | IMPORTANT OF UTILITIES | 9

Hard and Soft water, Requisites of Industrial Water and its uses. Methods of water Treatment such as Chemical Softening and Demineralization, Resins used for Water Softening and Reverse Osmosis. Effects of impure Boiler Feed Water

UNIT – II | STEAM AND STEAM GENERATION | 9

Properties of Steam, problems based on Steam, Types of Steam Generator such as Solid Fuel Fired Boiler, WasteGas Fired Boiler and Fluidized Bed Boiler. Scaling and Trouble Shooting. Steam Traps and Accessories.

UNIT – III | REFRIGERATION | 9

Refrigeration Cycles, Methods of Refrigeration used in Industry and Different Types of Refrigerants such as Monochlorodifluro Methane, Chlorofluro Carbons and Brins. Refrigerating Effects and Liquefaction Processes.

UNIT – IV | COMPRESSED AIR | 9

Classification of Compressor, Reciprocating Compressor, Single Stage and Two Stage Compressor, Velocity Diagram for Centrifugal Compressor, Silp Factor, Impeller Blade Shape. Properties of Air – Water Vapors and use of Humidity Chart. Equipments used for Humidification, Dehumidification and Cooling Towers.

UNIT – V | FUEL AND WASTE DISPOSAL | 9

Types of Fuel used in Chemical Process Industries for Power Generation such as Natural Gas, Liquid Petroleum Fuels, Coal and Coke. Internal Combustion Engine, Petrol and Diesel Engine. Waste Disposal.

PROFESSIONAL ELECTIVE III

CH1710	**MODERN SEPARATION TECHNIQUES**	**L**	**T**	**P**	**C**
		3	0	0	3

OBJECTIVE

The course is aimed to

- Students will gain knowledge about recent separation methods

Course Outcomes (CO)

CO1	To understand the basics of separation process
CO2	To understand membrane separations
CO3	To understand the separation by adsorption
CO4	To understand the inorganic separations
CO5	To understand the other pervaporation and permeation techniques

UNIT – I	**BASICS OF SEPARATION PROCESS**	**9**

Review of Conventional Processes, Recent advances in Separation Techniques based on size, surface properties,ionic properties and other special characteristics of substances, Process concept, Theory and Equipment used incross flow Filtration, cross flow Electro Filtration, Surface based solid – liquid separations involving a second liquid.

UNIT – II	**MEMBRANE SEPARATIONS**	**9**

Types and choice of Membranes, Plate and Frame, tubular, spiral wound and hollow fiber Membrane Reactors and their relative merits, commercial, Pilot Plant and Laboratory Membrane permeators involving Dialysis, Reverse Osmosis, Nanofiltration, Ultra filtration and Micro filtration, CeramicHybrid process and Biological Membranes.

UNIT – III	**SEPARATION BY ADSORPTION**	**9**

Types and choice of Adsorbents, Adsorption Techniques, Dehumidification Techniques, Affinity Chromatography and Immuno Chromatography, Recent Trends in Adsorption.

UNIT – IV	**INORGANIC SEPARATIONS**	**9**

Controlling factors, Applications, Types of Equipment employed for Electrophoresis, Dielectrophoresis, Ion Exchange Chromatography and Eletrodialysis, EDR, Bipolar Membranes.

UNIT – V	**OTHER TECHNIQUES**	**9**

Separation involving Lyophilisation, Pervaporation and Permeation Techniques for solids, liquids and gases, zone melting, Adductive Crystallization, other Separation Processes, Supercritical fluid Extraction, Oil spill Management, Industrial Effluent Treatment by Modern Techniques.

	Total Periods:	45

CH1711	WASTE WATER TREATMENT	L	T	P	C
		3	0	0	3

OBJECTIVE

The course is aimed

- To focus on the wastewater transport system and the theory and design technique for the wastewater treatment process.

Course Outcomes (CO)

CO1	To understand the Regulations – Health and Environment Concerns in waste water.
CO2	To understand the process analysis and selection
CO3	To understand the chemical unit process in water treatment
CO4	To understand the principle of biological treatment.
CO5	To understand the filtration, Membrane and ion exchanger

UNIT – I WASTE WATER TREATMENT AN OVERVIEW **9**

Terminology – Regulations – Health and Environment Concerns in waste water management – Constituents in waste water inorganic – Organic and metallic constituents.

UNIT – II PROCESS ANALYSIS AND SELECTION **9**

Components of waste water flows – Analysis of Data – Reactors used in waste water treatment – Mass Balance Analysis – Modelling of ideal and non ideal flow in Reactors – Process Selection.

UNIT – III CHEMICAL UNIT PROCESSES **9**

Role of unit processes in waste water treatment chemical coagulation – Chemical precipitation for improved plant performance chemical oxidation – Neutralization – Chemical Storage

UNIT – IV BIOLOGICAL TREATMENT **9**

Overview of biological Treatment – Microbial metabolism – Bacterial growth and energatus – Aerobic biological oxidation – Anaerobic fermentation and oxidation – Trickling filters – Rotating biological contractors – Combined aerobic processes – Activated sludge film packing.

UNIT – V ADVANCED WASTE WATER TREATMENT **9**

Technologies used in advanced treatment – Classification of technologies Removal of Colloids and suspended particles – Depth Filtration – Surface Filtration – Membrane Filtration Absorption – Ion Exchange – Advanced oxidation process.

	Total Periods:	45

Text Books:

1. Waste water Engineering Treatment and Reuse: Mc Graw Hill, G. Tchobanoglous, FI Biston, 2002.
2. Industrial Waste Water Management Treatment and Disposal by Waste Water Mc Graw Hill III Edition 2008.

CH1712	**FLUIDIZATION ENGINEERING**	**L**	**T**	**P**	**C**
		2	1	0	3

OBJECTIVE

The course is aimed

- To enable the students to learn the design aspects of fluidized beds.

Course Outcomes (CO)

CO1	To understand the fundamental concepts of Fluidization
CO2	To understand the Minimum fluidization conditions
CO3	To understand the Bed expansion in liquid – Solid and gas – Solid fluidizations
CO4	To understand the Heat and mass transfer in fluidized bed systems
CO5	To understand the Single stage and multistage fluidization

UNIT – I BASICS OF FLUIDIZATION **9**

Packed bed – Velocity – Pressure drop relations – Correlations of Ergun, Kozneykarman – On set of fluidization – Properties of fluidized beds – Development of fluidization from fixed bed.

UNIT – II FLUIDIZED BED TYPES **9**

Minimum fluidization conditions – Expanded bed – Elutriation – Moving solids and dilute phase – spouted bed.

UNIT – III DESIGN ASPECTS **9**

Channeling – Bed expansion in liquid – Solid and gas – Solid fluidizations. Design aspects of fluidized bed systems.

UNIT – IV HEAT AND MASS TRANSFER IN FLUIDIZED BEDS **9**

Heat and mass transfer in fluidized bed systems – Industrial applications and case studies of fluidized bed systems.

UNIT – V OTHER TYPES OF FLUIDIZATION **9**

Single stage and multistage fluidization – Collection of fines – Use of cyclones.

Total Periods: 45

Text Books:

1. Levenspiel, "Fluidization Engineering", 2nd Edition, Butterworth – Heinmann, 1991.
2. Robert H. Perry and Don W. Green, "Perry's Chemical Engineer's Hand Book", 7th Edition, Mc Graw Hill – International, 1997.

CH1713	DISTILLATION	L	T	P	C
		3	0	0	3

OBJECTIVE

The course is aimed

- To provide the basic knowledge on Principles of Distillation Process and Industrial Application.
- To familiarize the students, the functioning of different types of Distillation Processes
- To illustrate the concepts of various types of Distillation Processes and Design

Course Outcomes (CO)

CO1	Understanding of the Basic Principles of Distillation Process
CO2	Distinguish between Different types of Distillation Processes.
CO3	Understanding of Industrial application of Distillation Process.
CO4	Understanding the different types of Distillation Processes
CO5	And the concepts of various types of Distillation Processes and Design

UNIT – I **9**

Gibbs phase rule, phase equilibrium, ideal and non-ideal gas mixtures, Raoult's law, nonideal liquid - liquid mixtures; phase diagrams, effect of pressure on phase equilibria; Vapor Liquid Equilibria: Ideal and non-ideal binary and multi-component systems - Correlation and prediction –consistency tests; VLE of complex system-true boiling point curves-ASTM distillation, equilibrium flash vaporization curves

UNIT – II **9**

Equilibrium and simple distillation: flash vaporization of binary and multi-component systems, differential vaporization and condensation; steam distillation; fractionation of binary systems- analytical and graphical methods of determination of number of equilibrium stages.

UNIT – III **9**

Ternary systems and multi-component systems- Sorel method, Lewis-Matheson method, Thiele-Geddes method, short cut methods, graphical evaluation of number of stages for ternary systems. Complex system fractionation: Pseudo-component design method, fraction with side streams.

UNIT – IV **9**

Azeotropic distillation and extractive distillation: separation of homogeneous azeoptropes, separation of heterogeneous azeotropes, selection of addition agents-design of azeotropic distillation process, design ofextractive distillation process; Reactive Distillation and Case studies.

UNIT – V **9**

Design methods: fractionation devices, bubble cap, sieve and other types of trays-plate and column hydraulics and efficiency- plate fractionation column design methods, packed column design

Total Periods: 45

Text Books:

1. Van Winkle,M., Distillation, 2nd ed. 1967, McGraw Hill publications.

PROFESSIONAL ELECTIVE IV

CH1714	PIPING AND INSTRUMENTATION	L	T	P	C
		3	0	0	3

OBJECTIVE

The course is aimed

- To impart knowledge on piping technology and instrumentation on pipelines.

Course Outcomes (CO)	
CO1	To understand the introduction, applications. Piping
CO2	To understand the Pipe sizing based on velocity and pressure drop
CO3	To understand the Different types of stresses and its impact on piping
CO4	To understand the support based on requirement and its calculation
CO5	To understand the and piping & instrumentation diagram

UNIT – I	FUNDAMENTALS OF PIPING ENGINEERING	9

Definitions, Piping Components their introduction, applications. Piping MOC, Budget Codes and Standards, Fabrication and Installations of piping.

UNIT – II	PIPE HYDRAULICS AND SIZING	9

Pipe sizing based on velocity and pressure drop consideration cost, least annual cost approach, pipe drawing basics, development of piping general arrangement drawing, dimensions and drawing of piping.

UNIT – III	PLOT PLAN	9

Development of plot plan for different types of fluid storage, equipment layout, process piping layout, utility piping layout. Stress analysis -Different types of stresses and its impact on piping, methods of calculation, dynamic analysis, and flexibility analysis.

UNIT – IV	PIPING SUPPORT	9

Different types of support based on requirement and its calculation.

UNIT – V	INSTRUMENTATION	9

Final Control Elements; measuring devices, instrumentation symbols introduction to process flow diagram (PFD)and piping & instrumentation diagram (P&ID)

Total Periods:	**45**

Text Books:
1. Piping Handbook, 6 th edition, M.L. Nayyar, P.E., Mc Graw-Hill, Inc 2. Piping Design Handbook edited by Johan J McKetta, CRC Press, 1992. 3. Luyben, W. L.," Process Modeling Simulation and Control for Chemical Engineers, McGraw Hill, 1990.

CH1715	**FOOD TECHNOLOGY**	**L**	**T**	**P**	**C**

OBJECTIVE

The course is aimed

- To enable the students to learn to design processing equipment's for Food Industries.

Course Outcomes (CO)

CO1	To understand the general aspects of food industry
CO2	To understand the food quality and standards
CO3	To understand the basics process and its application
CO4	To understand the concept and mechanism of preservative methods
CO5	To understand the concept of utilization of food products

UNIT – I	**AN OVERVIEW**	**9**
General aspects of food industry; world food needs and Indian situation.		
UNIT – II	**FOOD CONSTITUENTS, QUALITY AND DERIVATIVE FACTORS**	**9**
Constituents of food; quality and nutritive aspects; food additives; standards; deteriorative factors and their control		
UNIT – III	**GENERAL ENGINEERING ASPECTS AND PROCESSING METHODS**	**9**
Preliminary processing methods; conversion and preservation operations.		
UNIT – IV	**FOOD PRESERVATION METHODS**	**9**
Preservation by heat and cold; dehydration; concentration; drying irradiation; microwave heating; sterilization and pasteurization; fermentation and pickling; packing methods.		
UNIT – V	**PRODUCTION AND UTILISATION OF FOOD PRODUCTS**	**9**
Cereal grains; pulses; vegetables; fruits; spices; fats and oils; bakery; confectionery and chocolate products; soft and alcoholic beverages; dairy products; meat; poultry and fish products.		
	Total Periods:	**45**

Text Books:

CH1716	BIOCHEMICAL ENGINEERING	L	T	P	C

OBJECTIVE

The course is aimed

- This course mainly discusses the role of enzymes and microbes in biotechnology sectors.

Course Outcomes (CO)

CO1	To understand the development and scope of biochemical engineering
CO2	To understand the modulation and regulation of enzyme activity
CO3	To understand the models for cellular growth unstructured, structured and cybernetic models
CO4	To understand the determination of oxygen transfer rates, power requirements
CO5	To understand the disruption-mechanical and non-mechanical methods

UNIT – I INTRODUCTION 9

Industrial biochemical processes with typical examples, comparing chemical and biochemical processes, development and scope of biochemical engineering as a discipline. Industrially important microbial strains; their classification; structure; cellular genetics.

UNIT – II KINETICS OF ENZYME ACTION 9

Kinetics of enzyme catalyzed reaction: the enzyme substrate complex and enzyme action, modulation and regulation of enzyme activity, types of inhibition. Immobilized enzyme technology: enzyme immobilization, Immobilized enzyme kinetics: effect of external mass transfer resistance.

UNIT – III KINETICS OF MICROBIAL GROWTH 9

Kinetics of cellular growth in batch and continuous culture, models for cellular growth unstructured, structured and cybernetic models, medium formulation. Thermal death kinetics of cells and spores, stoichiometry of cell growth and product formation, Design and analysis of biological reactors.

UNIT – IV TRANSPORT PHENOMENA 9

Transport phenomena in bioprocess systems: Gas-liquid mass transfer in cellular systems, determination of oxygen transfer rates, power requirements for sparged and agitated vessels, scaling of mass transfer equipment,heat transfer.

UNIT – V DOWN STREAM PROCESSING 9

Down stream processing: Strategies to recover and purify products; separation of insoluble products, filtration and centrifugation; cell disruption-mechanical and non-mechanical methods; separation of soluble products: liquid-liquid extractions, membrane separation (dialysis, ultra filtration and reverse osmosis),chromatographic separation-gel permeation chromatography, electrophoresis, final steps in purification –crystallization and drying.

Total Periods: 45

Text Books:

1. Biochemical engineering fundamentals by J.E.Bailey and D.F.Ollis, 2nd ed, 1986, McGraw Hill.
2. Bioprocess Engineering by Michael L. Shuler and FikretKargi, 2nd edition, Pearson education.

Reference Books:
1. Biochemical engineering by James M.Lee – Prentice-Hall-1992. 2. Bioprocess engineering principles, Pauline M. Doran, Academic Press. 3. Biochemical Engineering, H.W. Blanch and D.S. Clark, Marcel Dekker, 1997.

GE1003	PROFESSIONAL ETHICS	L	T	P	C
		3	0	0	3

OBJECTIVE

The course is aimed

- To create awareness on professional ethics and human values
- To create awareness on engineering ethics providing basic knowledge about engineering ethics, varietyof moral issues, inquiry and virtues.
- To provide basic familiarity about engineers as responsible experimenters and codes of ethics
- To inculcate knowledge and exposure on safety, risk and rights of an employee
- To have an adequate knowledge about global issues in multi-national companies

Course Outcomes (CO)

CO1	Define the dimensions or senses of engineering ethics and describe the various theories of moral development.
CO2	Describe the similarities and contrast of engineering experiments Vs scientific experiments and to define the code of ethics of various professional societies.
CO3	Understand significance of safety and risk assessment when developing engineering products.
CO4	Understand the social responsibilities and intellectual property rights of engineers.
CO5	Understand the process of how a multinational company works and to describe about the role of engineers in computer ethics, environment ethics, and weapons development

UNIT – I	**HUMAN VALUES**	**9**

Morals, values and Ethics; Integrity; Work ethics; Service learning; Civic virtue; Respect for others; Living peacefully, Caring, Sharing, Honesty, Courage, Valuing time, Cooperation, Commitment, Empathy, Self- confidence, Character; Spirituality; Introduction to Yoga and meditation for professional excellence and stress management.

UNIT – II	**ENGINEERING ETHICS**	**9**

Senses of 'Engineering Ethics' – Variety of moral issues, Types of inquiry, Moral dilemmas, Moral Autonomy, Kohlberg's theory; Gilligan's theory; Consensus and Controversy; Models of professional roles; Theories about right action; Self–interest; Customs and Religion; Uses of Ethical Theories.

UNIT – III	**ENGINEERING AS SOCIAL EXPERIMENTATION**	**9**

Engineering as Experimentation – Engineers as responsible Experimenters; Codes of Ethics; Balanced Outlook on Law.

UNIT – IV	**SAFETY, RESPONSIBILITIES AND RIGHTS**	**9**

Safety and Risk – Assessment of Safety and Risk, Risk Benefit Analysis and Reducing Risk; Respect for Authority; Collective Bargaining; Confidentiality; Conflicts of Interest; Occupational Crime; ProfessionalRights; Employee Rights; Intellectual Property Rights (IPR), Discrimination.

UNIT – V	GLOBAL ISSUES	9
Multinational Corporations; Environmental Ethics; Computer Ethics; Weapons Development; Engineers as Managers – Consulting Engineers, Engineers as Expert Witnesses and Advisors; Moral Leadership; Code of Conduct; Corporate Social Responsibility.		
	Total Periods:	**45**

Text Books

1.Mike W. Martin and Roland Schinzinger, "Ethics in Engineering", Tata McGraw Hill, New Delhi, 2003.
2.Govindarajan M, Natarajan S, Senthil Kumar V. S, "Engineering Ethics", Prentice Hall of India, New Delhi, 2004.

PROFESSIONAL ELECTIVE V

CH1808	OPTIMIZATION OF CHEMICAL PROCESSES	L	T	P	C
		3	0	0	3

OBJECTIVE

The course is aimed

- Students will gain knowledge about process modelling and optimization

Course Outcomes (CO)

CO1	To understand the applications of optimization in chemical engineering
CO2	To understand the conditions for optimum; region elimination methods
CO3	To understand the search methods; indirect search methods
CO4	To understand the dynamic and integer programming
CO5	To understand the equipment design, resource allocation and inventory control.

UNIT – I	INTRODUCTION	9
Introduction to optimization; applications of optimization in chemical engineering; classification of optimization problems.		

UNIT – II	SINGLE VARIABLE OPTIMIZATION	9
Necessary and sufficient conditions for optimum; region elimination methods; interpolation methods; direct root methods.		
UNIT – III	**MULTIVARIABLE OPTIMIZATION WITHOUT AND WITH CONSTRAINTS**	**9**
Necessary and sufficient conditions for optimum; direct search methods; indirect search methods.		
UNIT – IV	**OTHER OPTIMIZATION METHODS**	**9**
Introduction to geometric, dynamic and integer programming and genetic algorithms.		
UNIT – V	**APPLICATIONS OF OPTIMIZATION**	**9**
Formulation of objective functions; fitting models to data; applications in fluid mechanics, heat transfer, mass transfer, reaction engineering, equipment design, resource allocation and inventory control.		
	Total Periods:	**45**
Text Books:		
1. Rao, S. S., Engineering Optimization - Theory and Practice, Third Edition, John Wiley & Sons, New York, 1996. 2. CH1809	FERMENTATION ENGINEERING	L	T	P	C
		3	0	0	3

OBJECTIVE

The course is aimed

- To enable the students to understand the role of fermentation microorganisms and (bio) chemical activities and conversions that take place during fermentations, and their impact on quality.

Course Outcomes (CO)	
CO1	To understand the Microbial Enzymes – Microbial metabolites
CO2	To understand the Flow measurement and control
CO3	To understand the Different centrifuge cell description
CO4	To understand the chemical and biological – Aerobic process – Anaerobic treatment
CO5	To understand the Air sterilization – Heating and cooling – Recovery costs..

UNIT – I	INTRODUCTION TO FERMENTATION PROCESSES	9
Microbial biomass – Microbial Enzymes – Microbial metabolites – Recombinant products – Transformation Process – Microbial growth binetus – Isolation and preservation and improvement of industrially important micro organism.		

UNIT – II	INSTRUMENTATION AND CONTROL	9
Measurement of process variables – Temperature and its control – Flow measurement and control – Gases and Liquids – Pressure measurement and control – Cenline analysis – Control System – 93 Combination of Control Systems – Computer application in termentation technology.		
UNIT – III	**RECOVERY AND PURIFICATION OF FERMENTATIONPRODUCTS**	**9**
Removal of Microbial cells – Foam Separation – Precipitation Filtration – Different Filtration process – Centifugation – Different centrifuge cell description – Different methods – Solvent recovery – Superfluid extraction – Chromatography – Membrane processes – Drying – Crystallization – Whole growth processing.		
UNIT – IV	**EFFLUENT TREATMENT**	**9**
Strength of fermentation effluent – Treatment and disposal – Treatment Processes – Physical, chemical and biological – Aerobic process – Anareobic treatment.		
UNIT – V	**FERMENTATION ECONOMICS**	**9**
Introduction – Isolation of micro organisms of industrial interest – Strain improvement – Market potential – Plant and equipment – Media – Air sterilization – Heating and cooling – Recovery costs.		
	Total Periods:	**45**
Text Books:		
1. Principles of fermentation Technology P.Stanbury Buttuworth Hanman – 1999. 2. Fermentation and Biochemical Engineering Handbook – C.C Haber. William Andrew II Edition 2007. 3. Bioprocess Engineering Hydersen B.K Nancy A.delaK.L.Nelsen Wiley Interscience,1994.

CH1810	NUCLEAR ENGINEERING	L	T	P	C
		3	0	0	3

OBJECTIVE

The course is aimed

- To gain some fundamental knowledge about nuclear physics, nuclear reactor, nuclear fuels, reactorsand safe disposal of nuclear wastes.

Course Outcomes (CO)

CO1	Ability to understand nuclear reaction process
CO2	Able to gain knowledge on nuclear fuels.
CO3	Gaining knowledge in nuclear fuel reprocessing technology
CO4	Understanding of nuclear power plants
CO5	Acquiring knowledge in safety and disposal of nuclear fuels

UNIT – I	NUCLEAR PHYSICS	9
Nuclear model of an atom-Equivalence of mass and energy-binding- radio activity-half life neutron interactions-cross sections.		
UNIT – II	**NUCLEAR REACTOR**	**9**
Nuclear reactors: types of fast breeding reactors. Design and construction of fast breeding reactors-heat transfer techniques in nuclear reactors- reactor shielding. Fusion reactors.		

UNIT – III	NUCLEAR REACTIONS AND REACTION MATERIALS	9
Mechanism of nuclear fission and fusion- radio activity- chain reactions-critical mass and composition-nuclear fuel cycles and its characteristics-uranium production and purification. Zirconium, thorium, beryllium.		
UNIT – IV	**PROPERTIES OF IRRADIATED FUEL - SEPARATION OF REACTOR PRODUCTS**	**9**
Uses of stable isotopes and methods of isotope separation principles of isotope separation - Separation of isotopes of light elements - separation of isotopes of heavy elements.		
UNIT – V	**SAFETY AND DISPOSAL**	**9**
Nuclear plant safety-safety systems-changes and consequences of accident-criteria for safety nuclear waste-types of waste and its disposal-radiation hazards and their prevention weapons proliferation.		
	Total Periods:	**45**

Text Books:

1. Thomas J.Cannoly, “Fundamentals of Nuclear Engineering” 1978, John Wiley.
2. Collier J.G., and Hewitt G.F, “Introduction to Nuclear power”, 1987, Hemisphere publishing, New York.

CH1811	ENERGY TECHNOLOGY	L	T	P	C
		3	0	0	3

OBJECTIVE

The course is aimed to

- Students will gain knowledge about different energy sources

Course Outcomes (CO)

CO1	To understand the general classification of energy
CO2	To understand the Thermal, hydel and nuclear reactors
CO3	To understand the solar cooling, solar distillation, solar refrigeration, solar dryers, solar pond, solar thermal power generation
CO4	To understand the hydrolysis & hydrogenation, solvolysis, biocrude
CO5	To understand the Energy management importance, duties and responsibilities.

UNIT – I	ENERGY	9
Introduction to energy – Global energy scene – Indian energy scene - Units of energy, conversion factors, general classification of energy, energy crisis, energy alternatives.		
UNIT – II	**CONVENTIONAL ENERGY**	**9**
Conventional energy resources, Thermal, hydel and nuclear reactors, thermal, hydel and nuclear power plants, efficiency, merits and demerits of the above power plants, combustion processes, fluidized bed combustion.		

UNIT – III	NON-CONVENTIONAL ENERGY	9
Solar energy, solar thermal systems, flat plate collectors, focusing collectors, solar water heating, solar cooling,solar distillation, solar refrigeration, solar dryers, solar pond, solar thermal power generation, solar energy application in India, energy plantations. Wind energy, types of windmills, types of wind rotors, Darrieus rotor and Gravian rotor, wind electric power generation, wind power in India, economics of wind farm, ocean wave energy conversion, ocean thermal energy conversion, tidal energy conversion, geothermal energy.		

UNIT – IV	BIOMASS ENERGY	9
Biomass origin - Resources – Biomass estimation. Thermochemical conversion – Biological conversion,Chemical conversion – Hydrolysis & hydrogenation, solvolysis, biocrude, biodiesel power generation gasifier, biogas, integrated gasification.		
UNIT – V	**ENERGY CONSERVATION**	**9**
Energy conservation - Act; Energy management importance, duties and responsibilities; Energy audit – Types methodology, reports, instruments. Benchmalcing and energy performance, material and energy balance, thermal energy management.		
	Total Periods:	**45**

PROFESSIONAL ELECTIVE VI

CH1812	FERTILIZER TECHNOLOGY	L	T	P	C
		3	0	0	3

OBJECTIVE

The course is aimed

- Students will gain knowledge about petroleum refining process and production of petrochemical products

Course Outcomes (CO)	
CO1	To understand the Synthetic fertilizers
CO2	To understand the Nitrogenous Fertilizers
CO3	To understand Toyo-Koatsu total recycle process
CO4	To understand the Potassium Fertilizers
CO5	To understand the Miscellaneous Fertilizer and Bio Fertilizers

UNIT – I		9
Introduction to Chemical Fertilizers: Chemical inorganic Fertilizers and Organic manures. Types of fertilizers: Mixed, complex and Granulated, plant nutrients.		
UNIT – II		**9**
Processes for Raw Materials: Processes for manufacture of ammonia, nitric acid, phosphoric acid and sulphuricacid.		
UNIT – III		**9**
Nitrogenous and Potassium Fertilizers: Processes for urea and di-ammonium phosphate. Recovery of Potassium salts, processes for ammonium chloride and ammonium sulphate.		
UNIT – IV		**9**
Complex Fertilizers: Processes for nitro - phosphates and complex NPK fertilizers liquid fertilizers		
UNIT – V		**9**
Phosphatic Fertilizers and Indian Fertilizer Industry: Single and Triple Superphosphate, biofertilizer. Fertilizer Industry in India		
	Total Periods:	**45**

Reference Books:

1. Strelzoff, "Technology and Manufacture of Ammonia", 2nd Edn., Wiley, 1981.
2. L. J. Carpentire, "New Developments in Phosphate Fertilizer Technology", Elsevier, 1971.

CH1813	PULP AND PAPER TECHNOLOGY	L	T	P	C
		3	0	0	3

OBJECTIVE

The course is aimed

- Gaining Knowledge of pulp & paper industry, mill Operations, products, process variables, equipment,and terminology.
- Increasing knowledge of how the Pulp &Paper processes affect product properties, in order to improve product quality and troubleshoot variations in quality.

Course Outcomes (CO)	
CO1	Understand the basic concepts of pulp and paper technology to produce paper
CO2	Apply reactions and unit operations steps to manufacture pulp.
CO3	Understand the operation of equipments employed in pulp and paper industry
CO4	Apply waste disposal techniques in pulp and paper industry.
CO5	Perform various chemical tests to monitor quality of raw material, output quality and influent/effluent of pulp and paper industry

UNIT – I	**INTRODUCTION**	**9**
Introduction to pulp and paper technology – Wood haves dry – Wood as a raw material.		
UNIT – II	**WOODYARD OPERATION**	**9**
Woodyard operation - Mechanical pulping – Chemical pulping – Secondary fibre pulp processing.		
UNIT – III	**PAPER MACHINE**	**9**
Paper Machine wet and addition paper machine dry and operation – Paper machine - Wet and operation		
UNIT – IV	**PAPER AND PAPERBOARD**	**9**
Paper and paperboard frames and products – Surface treatments – Finishing operation– End uses.		
UNIT – V	**PROPERTIES AND TESTING OF PULP AND PAPER**	**9**
Properties and Testing of pulp and paper Process control – Quality assurance – Water and air pollution control.		
	Total Periods:	**45**

1. Monica ER Monica, Goran Gellerstcdt Gunnar Hennksson De Gneyter, Pulp and paper chemistry and Technology, 2009.

CH1814	**MIXING THEORY AND PRACTICE**	**L**	**T**	**P**	**C**
		3	0	0	3

OBJECTIVE

The course is aimed

- To teach the students about the importance of mixing in chemical process industries.
- To teach the students about the heat and mass transfer coefficient and its reaction.
- To provide basic knowledge about the Non Newtonian Liquids.

Course Outcomes (CO)	
CO1	Understand the Basics of Chemical Process Industries.

CO2	Able to select the equipment for mixing
CO3	Able to design the equipment for mixing
CO4	Understand heat and mass transfer aspects in mixing
CO5	Understand mixing in non Newtonian liquids

UNIT – I		**9**
Examples of processes signifying importance of mixing - Goodness of mixing: Qualification - Significance of dimensionless groups - dimensional analysis - power number correlation - Expressions for NRe, NFr, NWe, NPr from their definitions as ratios applied to resisting forces - analogy between drag coefficient and power number		
UNIT – II		**9**
Effect of mixing on chemical reactions - introduction -batch reactor and CSTR comparison - Residence time distribution - mixing concepts and models - RTD functions J(8) and J'(8) - Average residence time from RTD - RTD from response measurements - Interpretation of response data by mixing models - Imperfect mixing in Stirred tanks - transient analysis of chemical reactors in series.		
UNIT – III		**9**
Heat transfer promotion by mixing - mixing and overall heat transfer coefficient - Heat transfer correlation for helical coils and jacketed vessels - transient analysis of heat transfer - isothermal heating or cooling medium - non isothermal cooling medium - external heat exchanger - isothermal/non isothermal heating/cooling medium -Design calculation for heat transfer in mixing vessels - Stirred tank scale-up heat transfer consideration - Scale up of batch and other reactors.		
UNIT – IV		**9**
Mixing and mass transfer - introduction - Liquid liquid extraction - equipments - batch - continuous differential - Triangular representation of concentration - phase equilibrium diagram - Material balance for stage wise contact - counter current continuous and differential contact - problems - Interfacial phenomena - drop size distribution - coalescence - breakage - emulsion - surfactant - Mass transfer coefficient - two film concept - mass transfer modeling - Correlation for mass transfer coefficient - stage efficiency.		
UNIT – V		**9**
Non-Newtonian liquids mixing - introduction, pseudoplastic, dilatant, Bingham plastic liquid, - thixotropic and rheopectic liquids - shear rate - shear stress behaviour - apparent viscosity - Power curve for non-Newtonian liquids - Viscometry - shear in stirred tanks - Shear in stirred tanks related to shear in pipes, apparent viscosity in pipe-line flow and stirred tanks - discussion of experimental work literature - Reynolds number modification - Practical application of Non-Newtonian mixing.		
	Total Periods:	**45**

CH1815	PETROLEUM REFINING AND PETROCHEMICALS	L	T	P	C
		3	0	0	3

OBJECTIVE

The course is aimed

- Students will gain knowledge about petroleum refining process and production of petrochemical products

Course Outcomes (CO)

CO1	To understand the Testing of Petroleum Products
CO2	To understand the Cracking, Thermal Cracking
CO3	To understand the Removal of Sulphur Compounds
CO4	To understand the Catalytic Reforming of Petroleum Feed Stocks
CO5	To understand the Production of Petrochemicals

UNIT – I **9**

Origin, Formation and Evaluation of Crude Oil. Testing of Petroleum Products. Refining of Petroleum – Atmospheric and Vaccum Distillation.

UNIT – II **9**

Cracking, Thermal Cracking, Vis-breaking, Catalytic Cracking (FCC), Hydro Cracking, Coking and Air Blowing of Bitumen.

UNIT – III **9**

Treatment Techniques: Removal of Sulphur Compounds in all Petroleum Fractions to improve performance, Solvent Treatment Processes, Dewaxing, Clay Treatment and Hydrofining.

UNIT – IV **9**

Cracking of Naphtha and Feed stock gas for the production of Ethylene, Propylene, Isobutylene and Butadiene. Production of Acetylene from Methane, Catalytic Reforming of Petroleum Feed Stocks and Extraction of Aromatics.

UNIT – V **9**

Production of Petrochemicals like Dimethyl Terephathalate (DMT), Ethylene Glycol, Synthetic Glycerine, Linear Alkyl Benzene (LAB), Acrylonitrile, Methyl Methacrylate (MMA), Vinyl Acetate Monomer, Phthalic Anhydride, Maleic Anhydride, Phenol and Acetone, Methanol, Formaldehyde, Acetaldehyde, Pentaerythritol and Production of Carbon Black.

Total Periods: 45

OPEN ELECTIVE I

OCE103	ENVIRONMENTAL IMPACT ASSESSMENT	L	T	P	C
		3	0	0	3

OBJECTIVE

The course is aimed

- To impart knowledge on Environmental management and Environmental Impact Assessment.

Course Outcomes (CO)

CO1	Carry out scoping and screening of developmental projects for environmental and social assessments
CO2	Explain different methodologies for environmental impact prediction and assessment
CO3	Plan environmental impact assessments and environmental management plans
CO4	Evaluate environmental impact assessment reports
CO5	To understand the Membrane Applications.

UNIT – I INTRODUCTION 9

Impact of development projects–EIA Notifications-Urbanization–Meaning– Activities involved– Effects on environment-Environmental Impact Assessment(EIA)-Environmental Impact Statement(EIS) –

UNIT – II METHODOLOGIES 9

Methods of EIA–Checklists–Matrices–Networks–Cost-benefit analysis–Analysis of alternatives – Uncertaintyin EIA

UNIT – III PREDICTION AND ASSESSMENT 9

Assessment of Impact on land, water, air, social & cultural activities and on flora& Fauna- Mathematical models- Public participation–SIA Judgment authorities-Rapid EIA

UNIT – IV ENVIRONMENTAL MANAGEMENT PLAN 9

Plan for mitigation of adverse impact on environment–Options for mitigation of impact on water, air, land and on flora& fauna- Addressing the issues related to the Project Affected People.

UNIT – V CASESTUDIES 9

EIA for infrastructure projects–Dams–Highways–Multi-storey Buildings–Water Supply and Drainage Projects–Waste water treatment plants, STP

OCS101	INTRODUCTION TO C PROGRAMMING	L	T	P	C
		3	0	0	3

OBJECTIVE

The course is aimed

- To express algorithms and draw flowcharts in a language independent manner.
- To teach how to write modular, efficient and readable C programs
- To impart knowledge in creating and using Arrays of the C data types.
- To describe the techniques for creating program modules in C using functions and recursive functions.

Course Outcomes (CO)

CO1	Write, compile and debug programs in C language.
CO2	Use different data types in a computer program.
CO3	Design programs involving decision structures, loops, arrays and functions
CO4	Identify the difference between call by value and call by reference
CO5	Use pointers to understand the dynamics of memory, Create and perform different file operations

UNIT – I **9**

Introduction to the C Language – Algorithm, Pseudo code, Flow chart, Background, C Programs, Identifiers, Data Types, Variables, Constants, Input / Output, Operators(Arithmetic, relational, logical, bitwise etc.), Expressions, Precedence and Associatively, Expression Evaluation, Type conversions.

UNIT – II **9**

Statements- Selection Statements (making decisions) – if and switch statements, Repetition statements (loops)- while, for, do-while statements, Loop examples, other statements related to looping – break, continue, go to, Simple C Program examples

UNIT – III **9**

Functions- Introduction to Structured Programming, Functions- basics, user defined functions, inter function communication (call by value, call by reference), Standard functions. Storage classes-auto,

UNIT – IV **9**

Arrays– Basic concepts, one-dimensional arrays, two – dimensional arrays, multidimensional arrays, C programming examples Pointers – Introduction (Basic Concepts), pointers to pointers, compatibility, Pointer Applications, Arrays and Pointers, Pointer Arithmetic, memory allocation functions, array of pointers, pointers to void, pointers to functions, command –line arguments, Introduction to structures and unions.

UNIT – V **9**

Strings – Concepts, C Strings, String Input / Output functions, string manipulation functions, string /data conversion. Input and Output – Concept of a file, streams, text files and binary files, Differences between text and binary files, State of a file, Opening and Closing files, file input / output functions (standard library input / output functions for files), file status functions (error handling),Positioning functions.

Total Periods: 45

Text Books:

1. Computer Science: A Structured Programming Approach Using C, B.A.Forouzan and R.F. Gilberg, Third Edition, Cengage Learning.
2. The C Programming Language by Brian Kernighan and Dennis Ritchie 2nd edition

OEE105	**SOLAR ENERGY UTILIZATION**	**L**	**T**	**P**	**C**
		3	0	0	3

OBJECTIVE

The course is aimed

- To learn the fundamental concepts of solar energy and radiation collecting instruments
- To study about approaches for the storage of solar energy along with solar energy collectors

Course Outcomes (CO)

CO1	To understand the History of solar energy utilization - Solar radiation and modeling
CO2	To understand the Types – Nuclear waste
CO3	To understand the Materials for flat plate collector and their properties
CO4	To understand the solar pond - solar thermal power generation
CO5	To understand the Thermal Storage - Electrical Storage

UNIT – I SOLAR RADIATION **9**

History of solar energy utilization - Solar radiation and modeling - Empirical equations for predicting the availability of solar radiation – Measurement of global, direct and diffuse radiation – Radiation computations on inclined surfaces – Angstrom's turbidity - Solar chart - Standard radiation scale.

UNIT – II SOLAR RADIATION MEASUREMENT AND ESTIMATION **9**

Measurement of solar radiation - Solar energy measuring instruments – Pyranometer – Pyrheliometer – Sunshine recorder - Estimation of average solar radiation - Ratio of beam and total radiation on tilted surface ofthat on horizontal surface.

UNIT – III SOLAR COLLECTORS **9**

Flat plate collector - Materials for flat plate collector and their properties - Thermal Analysis of Flat- plate Collector and Useful Heat Gained by the fluid - fin efficiency - collector efficiency factor - Heat Removal Factor - Focusing collectors - Types and applications of focusing collectors

UNIT – IV SOLAR ENERGY APPLICATIONS **9**

Introduction and principle of operation of solar cooker - solar air heater - solar water heater - solar distillation - solar pond - solar thermal power generation – Greenhouse - Solar PV system.

UNIT – V STORAGE OF SOLAR ENERGY **9**

Types of Energy Storage - Thermal Storage - Electrical Storage - Chemical Storage - hydro-storage

Total Periods: 45

OBT101	**INDUSTRIAL BIOTECHNOLOGY**	**L**	**T**	**P**	**C**
		3	0	0	3

OBJECTIVE

The course is aimed

- To motivate students to excel in research and to practice the technologies in the field of Industrial biotechnology. To provide students with a solid understanding of Biotechnology fundamentals and applications required to solve real life problems. To provide students with an academic environment that is aware of professional excellence and leadership through interaction with professional bodies

Course Outcomes (CO)

CO1	Design, perform experiments, analyze and interpret data for investigating complex problems in Biotechnology, Engineering and related fields.
CO2	Decide and apply appropriate tools and techniques in biotechnological manipulation.
CO3	Justify societal, health, safety and legal issues
CO4	Understand his responsibilities in biotechnological engineering practices
CO5	Understand the need and impact of biotechnological solutions on environment and societal context keeping in view need for sustainable solution.

UNIT – I	**OVERVIEW OF THE CELL**	**9**

Cell, structure and properties, prokaryotic and eukaryotic cells, structural organization and function of intracellular organelles; Cell wall, Nucleus, Mitochondria, Golgi bodies, Lysosomes, Endoplasmic reticulum, Peroxisomes and Chloroplast.

UNIT – II	**MICROBIAL GROWTH: PURE CULTURE TECHNIQUES**	**9**

Enrichment culture techniques for isolation of chemoautotrophs, chemoheterotrophs and photosynthetic microorganisms. The definition of growth, mathematical expression of growth, Growth curve, availability of oxygen, culture collection and maintenance of cultures.

Media formulation: principles of microbial nutrition, formulation of culture medium, selective media, factors influencing the choice of various carbon and nitrogen sources, vitamins, minerals, precursors and antifoam agents. Importance of pH.

UNIT – III	**MANAGEMENT OF WASTE**	**9**

Management of Contaminated land, lake sediments and Solid Waste, Anaerobic digestion, Biostimulation, Bioaugmentation, Phytoremediation, Natural attenuation, Vermicomposting

UNIT – IV	Bioremediation	**9**

Definition, constraints and priorities of Bioremediation, Types of bioremediation, In-situ and Ex-situ bioremediation techniques, Factors affecting bioremediation. Bioremediation of Hydrocarbons. Lignocellulosic Compounds.

UNIT – V	**BIOENERGY & BIOMINING**	**9**

Bio energy: Energy and Biomass Production from wastes, biofuels, bio hydrogen and biomass. Biomining: Bioleaching, monitoring of pollutants, microbially enhanced oil recovery, microbial fuel cells.

Total Periods:	**45**

OBT102	**HAZARDOUS WASTE MANAGEMENT**	**L**	**T**	**P**	**C**
		3	0	0	3

OBJECTIVE

The course is aimed

- Understand the type, nature and treatment of hazardous wastes.

Course Outcomes (CO)		
CO1	To understand Hazardous Solid Waste	
CO2	To introduce students to basic concepts of planning and management of hazardous waste management.	
CO3	The content involves importance of Biomedical waste management	
CO4	To understand Radioactive waste management	
CO5	To understand the E – Waste Management.	
UNIT – I	**INTRODUCTION**	**9**
Hazardous waste definition- Regulatory aspects of Hazardous Waste Management in India – Sources, characterization, categories - Analysis of hazardous waste -Physical and biological routes of transport of hazardous substances		
UNIT – II	**HAZARDOUS WASTES MANAGEMENT**	**9**
Handling, collection, storage and transport- TSDF concept -Hazardous waste treatment Technologies-Physical, chemical and thermal treatment of hazardous waste–Solidification- Chemical fixation–Encapsulation-Pyrolysis and Incineration–Biological Treatment of Hazardous Waste, Hazardous waste Landfills-Site selections-design and operation-HW reduction- Recycling and reuse–Hazardous Site remediation – onsite and offsite Techniques		
UNIT – III	**BIOMEDICAL WASTE MANAGEMENT**	**9**
Biomedical waste–Definition– Regulatory aspects of Biomedical Waste. Sources–Classification– Waste Handling and Collection–Segregation and labeling- Treatment – autoclaving, Incineration, Chemical Disinfection - disposal. Infection control Practices.		
UNIT – IV	**RADIOACTIVE WASTE MANAGEMENT**	**9**
Radioactive waste: Definition–Measurement of Radiation -Sources-Effects -Low level and high level radioactive wastes-Transuranic Waste-and their management–Uranium Mine and Tailings, Characterization – Treatment and Control - Radiation standard by ICRP and AERB.		

UNIT – V	E-WASTE MANAGEMENT	9
Regulatory aspects of E-l Waste management, Waste characteristics- Generation–- Collection - Material Composition-Transport– Treatment and disposal. Recycling and Recovery – intergraded e-waste management		
	Total Periods:	**45**

Text Books:

1. Hazardous waste management CharlesA.Wentz.Second edition 1995.McGraw Hill international.
2. Hazardous waste management Michael D. La Gerga, PhilipL Buckingham, Jeffrey C. Evans, Second edition 2010.Waveland Press.
3. Criteria for hazardous waste landfills–CPCBguidelines2000

Reference Books:

1. Basic Hazardous waste management, "William C.Blackman.Jr", Third Edition, 2001, Lewis Publishers
2. Integrated solidwaste management George Techobanoglous, Hilary Theisen & Sammuel A.Vigil.
3. Criteria for hazardous waste landfills–CPCB guidelines 2000.
4. Standard handbook of Hazardous waste treatment and disposal by Harry M. Freeman, McGraw Hill 1997.
5. Management of Solid waste in developing countries by Frank Flint off, WH Original publication.

OEE106	ENERGY CONSERVATION AND MANAGEMENT	L	T	P	C
		3	0	0	3

OBJECTIVE

The course is aimed

- Understand and analyse the energy data of industries

Course Outcomes (CO)

CO1	the students can able to analyse the energy data of industries
CO2	To understand the energy pricing, energy
CO3	Can carry out energy accounting and balancing
CO4	Conduct energy audit and suggest methodologies for energy savings and Utilize the available resources in optimal ways
CO5	Can suggest methodologies for energy savings

UNIT – I	INTRODUCTION	9
Energy - Power – Past & Present scenario of World; National Energy Consumption Data – Environmental aspects associated with energy utilization –Energy Auditing: Need, Types, Methodology and Barriers. Role of Energy Managers. Instruments for energy auditing		

UNIT – II	ELECTRICAL SYSTEMS	9
Components of EB billing – HT and LT supply, Transformers, Cable Sizing, Concept of Capacitors, Power Factor Improvement, Harmonics, Electric Motors - Motor Efficiency Computation, Energy Efficient Motors, Illumination – Lux, Lumens, Types of lighting, Efficacy, LED Lighting and scope of Encon in Illumination.		
UNIT – III	**THERMAL SYSTEMS**	**9**
Stoichiometry, Boilers, Furnaces and Thermic Fluid Heaters – Efficiency computation and encon measures. Steam: Distribution &U sage: Steam Traps, Condensate Recovery, Flash Steam Utilization, Insulators & Refractories		
UNIT – IV	**ENERGY CONSERVATION IN MAJOR UTILITIES**	**9**
Pumps, Fans, Blowers, Compressed Air Systems, Refrigeration and Air Conditioning Systems – Cooling Towers – D.G. sets		
UNIT – V	**ECONOMICS**	**9**
Energy Economics – Discount Rate, Payback Period, Internal Rate of Return, Net Present Value, Life Cycle Costing –ESCO concept		
	Total Periods:	**45**

OPEN ELECTIVE II

OBT103	FUEL CELL CHEMISTRY	L	T	P	C
		3	0	0	3

OBJECTIVE

The course is aimed

- To create awareness about alternate clean fuel available.
- To familiarize the students with the concepts and chemistry of fuel cell

Course Outcomes (CO)	
CO1	Students will be aware of alternate energy sources and its importance of it.
CO2	To understand the Fuel cell kinetics
CO3	To understand the Fuel cell characterization techniques
CO4	To understand the principle of renewable sources and its storage.
CO5	To understand the Fuel cell power plants and its portable applications

UNIT – I	INTRODUCTION	9
Overview of fuel cells: Low and high temperature fuel cells; Fuel cell thermodynamics - heat, work potentials, prediction of reversible voltage, fuel cell efficiency.		

UNIT – II	FUEL CELL KINETICS	9
Fuel cell reaction kinetics - electrode kinetics, overvoltage, Tafel equation, charge transfer reaction, exchange currents, electro catalysis - design, activation kinetics, Fuel cell charge and mass transport - flow field, transport in electrode and electrolyte.		
UNIT – III	**CHARACTERIZATION TECHNIQUES**	**9**
Fuel cell characterization - in-situ and ex-situ characterization techniques, i-V curve, frequency response analysis; Fuel cell modeling and system integration: - 1D model – analytical solution and CFD models.		
UNIT – IV	**RENEWABLE SOURCES**	**9**
Balance of plant; Hydrogen production from renewable sources and storage; safety issues, cost expectation andlife cycle analysis of fuel cells.		
UNIT – V	**APPLICATIONS OF FUEL CELL**	**9**
Fuel cell power plants: fuel processor, fuel cell power section (fuel cell stack), power conditioner; automotive applications, portable applications		
	Total Periods:	**45**

Text Books:

OEE102	RENEWABLE ENERGY SOURCES	L	T	P	C
		3	0	0	3

OBJECTIVE

The course is aimed

- To explain concept of various forms of renewable energy
- To outline division aspects and utilization of renewable energy sources for both domestics and industrial applications and to analysis the environmental and cost economics of using renewable energy sources compared to fossil fuels.

Course Outcomes (CO)

CO1	Summarize the current energy scenario – Auditing – production – planning and benchmarking
CO2	Analyze the basic concepts, advantages limitations and applications of solar energy utilization
CO3	Analyze the basic concepts, advantages limitations and applications of wind energy utilization

CO4	Analyze the basic concepts, advantages limitations and applications of bio-energy utilization
CO5	Prioritize the options of other energy sources – Ocean energy, geothermal energy, fuel cells

UNIT – I	**INTRODUCTION TO ENERGY**	**9**

Indian Energy Scenario – Types & Forms of Energy - Primary / Secondary Energy Sources – Energy Conservation – Need – EC Act 2003 : Salient Features – Energy Intensive Industries – Barriers -Roles & Responsibility of Energy Managers – Energy Auditing : Preliminary & Detailed - Benchmarking .

UNIT – II	**SOLAR ENERGY**	**9**

Solar radiation at the earth's surface – solar radiation measurements – estimation of average solar radiation - solar thermal flat plate collectors - concentrating collectors – solar thermal applications - heating, cooling, desalination, drying, cooking, etc – solar thermal electric power plant - principle of photovoltaic conversion of solar energy, types of solar cells - Photovoltaic applications: battery charger, domestic lighting, street lighting, water pumping etc - solar PV power plant – Net metering concept.

UNIT – III	**WIND ENERGY**	**9**

Nature of the wind – power in the wind – factors influencing wind – wind data and energy estimation - wind speed monitoring - wind resource assessment - Betz limit - site selection - wind energy conversion devices - classification, characteristics, applications – offshore wind energy – Hybrid systems - safety and environmental aspects – wind energy potential and installation in India - Repowering concept.

UNIT – IV	**BIO-ENERGY**	**9**

Biomass resources and their classification - Biomass conversion processes - Thermo chemical conversion - direct combustion – biomass gasification - pyrolysis and liquefaction – biochemical conversion - anaerobic digestion - types of biogas Plants - applications - alcohol production from biomass – bio diesel production – Urban waste to energy conversion - Biomass energy programme in India.

UNIT – V	**OTHER TYPES OF ENERGY**	**9**

Ocean energy resources - principle of ocean thermal energy conversion (OTEC) - ocean thermal power plants - ocean wave energy conversion - tidal energy conversion – small hydro – geothermal energy - geothermal power plants – hydrogen production and storage - Fuel cell – principle of working - various types - construction and applications.– Energy scenario in India – Growth of energy sector and its planning in India.

OME102	DESIGN OF EXPERIMENTS	L	T	P	C
		3	0	0	3

OBJECTIVE

The course is aimed

- To demonstrate knowledge and understanding of Taguchi's approach
- To demonstrate knowledge and understanding of Classical Design of Experiments (DOE) To develop skills to design and conduct experiments using DOE and Taguchi's approach
- To develop competency for analyzing the data to determine the optimal process parameters that optimize the process.

Course Outcomes (CO)

CO1	To understand the fundamental principles of Classical Design of Experiments
CO2	To apply DOE for process understanding and optimization
CO3	To apply Taguchi based approach to evaluate quality
CO4	To describe the Taguchi's approach to experimental design for process performance robustness
CO5	To understand the Ranking method, Column effect method & Plotting method, Analysis of variance (ANOVA) in Factorial Experiments: YATE's algorithm

UNIT – I **FUNDAMENTALS OF EXPERIMENTAL DESIGNS** **9**

Hypothesis testing – single mean, two means, dependant/ correlated samples – confidence intervals, Experimentation – need, Conventional test strategies, Analysis of variance, F-test, terminology, basic principlesof design, steps in experimentation – choice of sample size – Normal and half normal probability plot – simple linear and multiple linear regression, testing using Analysis of variance.

UNIT – II **SINGLE FACTOR EXPERIMENTS** **9**

Completely Randomized Design- effect of coding the observations- model adequacy checking - estimation of model parameters, residuals analysis- treatment comparison methods- Duncan's multiple range test, Newman- Keuel's test, Fisher's LSD test, Tukey's test- testing using contrasts- Randomized Block Design – Latin Square Design- Graeco Latin Square Design – Applications.

UNIT – III **FACTORIAL DESIGNS** **9**

Main and Interaction effects - Two and three factor full factorial designs- Fixed effects and random effects model - Rule for sum of squares and Expected Mean Squares- 2K Design with two and three factors- Yate's Algorithm- fitting regression model- Randomized Block Factorial Design - Practical applications.

UNIT – IV **SPECIAL EXPERIMENTAL DESIGNS** **9**

Blocking and Confounding in 2K Designs- blocking in replicated design- 2K Factorial Design in two blocks- Complete and partial confounding- Confounding 2K Design in four blocks- Two level Fractional Factorial Designs- one-half fraction of 2K Design, design resolution, Construction of one-half fraction with highest design resolution, one-quarter fraction of 2K Design- introduction to response surface methods, central composite design

UNIT – V **TAGUCHI METHODS** **9**

Design of experiments using Orthogonal Arrays, Data analysis from Orthogonal experiments- Response Graph Method, ANOVA- attribute data analysis- Robust design- noise factors, Signal to noise ratios, Inner/outer OA design- case studies

Total Periods: 45

OBT104	**BIOSENSORS**	**L**	**T**	**P**	**C**
		3	0	0	3

OBJECTIVE

The course is aimed

- understand protein based biosensors and their enzyme reactivity, stability and their application

Course Outcomes (CO)

CO1	The students will able to understand protein-based biosensors and their enzyme reactivity, stability and their application in protein based nano crystalline thin film processing
CO2	The students will able to describe DNA based biosensors to study the presence of heavy metals in the food products
CO3	The students will able to understand fluorescence, UV-Vis and electrochemical applications of biosensors
CO4	The students will able to study about the fabrication of biosensors and its application as nano chip analyzer
CO5	To understand the Future direction in biosensor research

UNIT – I	**PROTEIN BASED BIOSENSORS**	**9**
Nano structure for enzyme stabilization - Single enzyme nano particles - Nanotubes microporus silica - Protein based nano crystalline Diamond thin film for processing		
UNIT – II	**DNA BASED BIOSENSOR**	**9**
Heavy metal complexing with DNA and its determination water and food samples - DNA zymo biosensors		
UNIT – III	**ELECTRO CHEMICAL APPLICATION**	**9**
Detection in biosensors - Flurorescence - Absorption - Electrochemical. Integration of various techniques - Fibre optic biosensors		
UNIT – IV	**FABRICATION OF BIOSENSORS**	**9**
Techniques used for microfabrication - Microfabrication of electrodes - On chip analysis		
UNIT – V	**BIOSENSORS IN RESEARCH**	**9**
Future direction in biosensor research - Designed protein pores-as components of biosensors - Molecular design -Bio nanotechnology for cellular biosensing - Biosensors for drug discovery - Nanoscale biosensors		
	Total Periods:	**45**

Text Books:
1. Biosensors: A Practical Approach, J. Cooper & C. Tass, Oxford University Press, 2004
Reference Books:

OME106	**TESTING OF MATERIALS**	**L**	**T**	**P**	**C**
		3	0	0	3

OBJECTIVE

The course is aimed

- To understand the various destructive and non-destructive testing methods of materials and its industrial applications

Course Outcomes (CO)

CO1	Ability to use the different technique and know its applications and limitations
CO2	Identify suitable testing technique to inspect industrial component
CO3	To understand the Visual inspection, Liquid penetrant test
CO4	To understand the Differential scanning calorimetry
CO5	To understand the Thermomechanical and Dynamic mechanical analysis

UNIT – I	**INTRODUCTION TO MATERIALS TESTING**	**9**

Overview of materials, Classification of material testing, Purpose of testing, Selection of material, Development of testing, Testing organizations and its committee, Testing standards, Result Analysis, Advantages of testing.

UNIT – II	**MECHANICAL TESTING**	**9**

Introduction to mechanical testing, Hardness test (Vickers, Brinell, Rockwell), Tensile test, Impact test (Izod, Charpy) - Principles, Techniques, Methods, Advantages and Limitations, Applications. Bend test, Shear test, Creep and Fatigue test - Principles, Techniques, Methods, Advantages and Limitations, Applications.

UNIT – III	**NON DESTRUCTIVE TESTING**	**9**

Visual inspection, Liquid penetrant test, Magnetic particle test, Thermography test – Principles, Techniques, Advantages and Limitations, Applications. Radiographic test, Eddy current test, Ultrasonic test, Acoustic emission- Principles, Techniques, Methods, Advantages and Limitations, Applications.

UNIT – IV	**MATERIAL CHARACTERIZATION TESTING**	**9**

Macroscopic and Microscopic observations, Optical and Electron microscopy (SEM and TEM) - Principles, Types, Advantages and Limitations, Applications. Diffraction techniques, Spectroscopic Techniques, Electrical and Magnetic Techniques- Principles, Types, Advantages and Limitations, Applications.

UNIT – V	**OTHER TESTING**	**9**

Thermal Testing: Differential scanning calorimetry, Differential thermal analysis. Thermo- mechanical and Dynamic mechanical analysis: Principles, Advantages, Applications. Chemical Testing: X-Ray Fluorescence, Elemental Analysis by Inductively Coupled Plasma-Optical Emission Spectroscopy and Plasma-Mass Spectrometry.

Total Periods:	**45**

OBT105	**INTRODUCTION TO NANOSCIENCE AND NANOTECHNOLOGY**	**L**	**T**	**P**	**C**
		3	0	0	3

OBJECTIVE

The course is aimed to

- Understand the principles of processing, manufacturing and characterization of nanomaterials and nanostructures.

Course Outcomes (CO)

CO1	Demonstrate the understanding of length scales concepts, nanostructures and nanotechnology
CO2	Understand the different classes of nanomaterials.
CO3	Identify the CVD, MOCVD
CO4	Outline the applications of nanotechnology and
CO5	develop an ability to critically evaluate the promise of a nanotechnology device.

UNIT – I	**BASICS OF NANOTECHNOLOGY**	**9**

Introduction - Time and length scale in structures -Definition of a Nano system -Dimensionality and size dependent phenomena -Surface to volume ratio -Fraction of surface atoms - Surface energy and surface stress-surface defects-Effect of nanoscale on various properties - Structural, thermal, mechanical, magnetic, optical and electronic properties.

UNIT – II	DIFFERENT CLASSES OF NANOMATERIALS	9
Classification based on dimensionality-Quantum Dots, Wells and Wires- Carbon based nano materials (buckyballs, nanotubes, graphene)- Metal based nanomaterials (nanogold, nanosilver and metal oxides) - Nanocomposites-Nanopolymers - Nano ceramics -Biological nanomaterials.		
UNIT – III	**SYNTHESIS OF NANOMATERIALS**	**9**
Chemical Methods:Metal Nanocrystals by Reduction -Sol - gel processing -Solvothermal Synthesis- Photochemical Synthesis - Chemical Vapor Deposition(CVD) - Metal Oxide - Chemical Vapor Deposition (MOCVD).Physical Methods:Ball Milling - Electrodeposition - Spray Pyrolysis - DC/RF Magnetron Sputtering - Molecular Beam Epitaxy (MBE).		
UNIT – IV	**CHARACTERIZATION OF NANOSTRUCTURES**	**9**
Introduction, structural characterization, X-ray diffraction (XRD-Powder/Single crystal), Small angle X-ray scattering (SAXS), Scanning Electron Microscopy (SEM) - Energy Dispersive X-ray analysis (EDAX)-Transmission Electron Microscope (TEM) - Scanning Tunneling Microscope (STM)-Atomic Force Microscopy (AFM), UV-vis spectroscopy (liquid and solid state) - Raman Spectroscopy -X-ray Photoelectron Spectroscopy (XPS) - Auger Electron spectroscopy (AES).		
UNIT – V	**APPLICATIONS**	**9**
Solar energy conversion and catalysis - Molecular electronics and printed electronics -Nanoelectronics -Polymers with a special architecture - Liquid crystalline systems - Applications in displays and other devices - Nanomaterials for data storage -Photonics, Plasmonics- Chemical and biosensors -Nanomedicine and Nanobiotechnology		
	Total Periods:	**45**

AUDIT COURSES

AD1001	CONSTITUTION OF INDIA	L	T	P	C
		2	0	0	0

OBJECTIVES:

- Teach history and philosophy of Indian Constitution.
- Describe the premises informing the twin themes of liberty and freedom from a civil rights perspective.
- Summarize powers and functions of Indian government.
- Explain emergency rule.
- Explain structure and functions of local administration

COURSE OUTCOMES

Upon completion of the course, the students will be

CO1	Able to understand history and philosophy of Indian Constitution.
CO2	Able to understand the premises informing the twin themes of liberty and freedomfrom a civil rights perspective.
CO3	Able to understand powers and functions of Indian government.
CO4	Able to understand emergency rule.
CO5	Able to understand structure and functions of local administration.

UNIT I: INTRODUCTION **9**

History of Making of the Indian Constitution-Drafting Committee- (Composition & Working) - Philosophy of theIndian Constitution-Preamble-Salient Features

UNIT II: CONTOURS OF CONSTITUTIONAL RIGHTS & DUTIES **9**

Fundamental Rights-Right to Equality-Right to Freedom-Right against Exploitation Right to Freedom of Religion- Cultural and Educational Rights-Right to Constitutional Remedies Directive Principles of State Policy-FundamentalDuties

UNIT III: ORGANS OF GOVERNANCE **9**

Parliament-Composition-Qualifications and Disqualifications-Powers and Functions-Executive President-Governor- Council of Ministers-Judiciary, Appointment and Transfer of Judges, Qualifications Powers and Functions

UNIT IV: EMERGENCY PROVISIONS **9**

Emergency Provisions - National Emergency, President Rule, Financial Emergency

UNIT V: LOCAL ADMINISTRATION **9**

District's Administration head- Role and Importance-Municipalities- Introduction- Mayor and role of Elected Representative-CEO of Municipal Corporation-Pachayati raj- Introduction- PRI- Zila Pachayat-Elected officials and their roles- CEO ZilaPachayat- Position and role-Block levelOrganizational Hierarchy (Different departments)-Village level- Role of Elected and Appointed officials-Importance of grass root democracy

AD1002	VALUE EDUCATION	L	T	P	C
		2	0	0	0

OBJECTIVES:

- Develop knowledge of self-development
- Explain the importance of Human values
- Develop the overall personality through value education
- Overcome the self destructive habits with value education
- Interpret social empowerment with value education

COURSE OUTCOMES

Upon completion of the course, the students will be

CO1	Gain knowledge of self-development
CO2	Learn the importance of Human values
CO3	Develop the overall personality through value education
CO4	Overcome the self-destructive habits with value education
CO5	Interpret social empowerment with value education

UNIT I:	**INTRODUCTION TO VALUE EDUCATION**	**9**

Values and self-development –Social values and individual attitudes, Work ethics, Indian vision of humanism, Moral
and non- moral valuation, Standards and principles, Value judgments

UNIT II:	**IMPORTANCE OF VALUES**	**9**

Importance of cultivation of values, Sense of duty, Devotion, Self-reliance, Confidence, Concentration, Truthfulness, Cleanliness. Honesty, Humanity, Power of faith, National Unity, Patriotism, Love fornature, Discipline

UNIT III:	**INFLUENCE OF VALUE EDUCATION**	**9**

Personality and Behaviour development - Soul and Scientific attitude. Positive Thinking, Integrity and discipline, Punctuality, Love and Kindness, Avoid fault Thinking, Free from anger, Dignity of labour, Universal brotherhood and
religious tolerance, True friendship Happiness Vs suffering,love for truth.

UNIT IV:	**REINCARNATION THROUGH VALUE EDUCATION**	**9**

Aware of self-destructive habits, Association and Cooperation, doing best for saving nature Character and Competence –Holy books vs Blind faith, Self-management and Good health, Science of reincarnation

UNIT V:	**VALUE EDUCATION IN SOCIAL EMPOWERMENT**	**9**

Equality, Nonviolence, Humility, Role of Women, All religions and same message, Mind your Mind, Self-control, Honesty, Studying effectively

TOTAL PERIODS: 45

AD1003	PEDAGOGY STUDIES	L	T	P	C
		2	0	0	0

OBJECTIVES:

- Understand the methodology of pedagogy.
- Compare pedagogical practices used by teachers in formal and informal classrooms in developing countries.
- Infer how can teacher education (curriculum and practicum) and the school curriculum and guidance materialsbest support effective pedagogy.
- Illustrate the factors necessary for professional development.
- Identify the Research gaps in pedagogy.

COURSE OUTCOMES

Upon completion of the course, the students will be able to

CO1	Understand the methodology of pedagogy
CO2	Understand Pedagogical practices used by teachers in formal and informal classrooms in developingcountries.
CO3	Find how can teacher education (curriculum and practicum) and the school curriculum and guidancematerials best support effective pedagogy.
CO4	Know the factors necessary for professional development.
CO5	Identify the Research gaps in pedagogy.

UNIT I:	**INTRODUCTION AND METHODOLOGY**	**9**

Aims and rationale, Policy background, Conceptual framework and terminology - Theories of learning, Curriculum,Teacher education - Conceptual framework, Research questions - Overview of methodology and Searching.

UNIT II:	**THEMATIC OVERVIEW**	**9**

Pedagogical practices are being used by teachers in formal and informal classrooms in developing countries -Curriculum, Teacher education.

UNIT III:	**EVIDENCE ON THE EFFECTIVENESS OF PEDAGOGICAL PRACTICES**	**9**

Methodology for the in depth stage: quality assessment of included studies - How can teacher education (curriculumand practicum) and the school curriculum and guidance materials best support effective pedagogy? - Theory of change - Strength and nature of the body of evidence for effective pedagogical practices - Pedagogic theory and pedagogical approaches - Teachers' attitudes and beliefs and Pedagogic strategies.

UNIT IV:	**PROFESSIONAL DEVELOPMENT**	**9**

Professional development: alignment with classroom practices and follow up support – Peer support - Support from thehead teacher and the community - Curriculum and assessment – Barriers to learning: limited resources and large class sizes

UNIT V:	**RESEARCH GAPS AND FUTURE DIRECTIONS**	**9**

Research design – Contexts – Pedagogy - Teacher education - Curriculum and assessment -Dissemination and research impact.

TOTAL PERIODS:	**45**

AD1004	STRESS MANAGEMENT BY YOGA	L	T	P	C
		2	0	0	0

OBJECTIVES:

- Develop healthy mind in a healthy body thus improving social health also improve efficiency
- Invent Do’s and Don’t’s in life through Yam
- Categorize Do’s and Don’t’s in life through Niyam
- Develop a healthy mind and body through Yog Asans
- Invent breathing techniques through Pranayam

COURSE OUTCOMES

Upon completion of the course, the students will be able to

CO1	Develop healthy mind in a healthy body thus improving social health also improve efficiency
CO2	Learn Do’s and Don’t’s in life through Yam
CO3	Learn Do’s and Don’t’s in life through Niyam
CO4	Develop a healthy mind and body through Yog Asans
CO5	Learn breathing techniques through Pranayam

UNIT I: INTRODUCTION TO YOGA **9**

Definitions of Eight parts of yog.(Ashtanga)

UNIT II: YAM **9**

Do`s and Don’t’s in life.Shaucha, santosh, tapa, swadhyay, ishwarpranidhan

UNIT III: NIYAM **9**

Do`s and Don’t’s in life. Ahinsa, satya, astheya, bramhacharya and aparigraha

UNIT IV: ASAN **9**

Various yog poses and their benefits for mind & body

UNIT V: PRANAYAM **9**

Regularization of breathing techniques and its effects-Types of pranayam

TOTAL PERIODS: 45

AD1005	**PERSONALITY DEVELOPMENT THROUGH LIFEENLIGHTENMENT SKILLS**	**L**	**T**	**P**	**C**
		2	**0**	**0**	**0**

OBJECTIVES:

- Develop basic personality skills holistically
- Develop deep personality skills holistically to achieve happy goals
- Rewrite the responsibilities
- Reframe a person with stable mind

COURSE OUTCOMES

Upon completion of the course, the students will be

CO1	To develop basic personality skills holistically
CO2	To develop deep personality skills holistically to achieve happy goals
CO3	To rewrite the responsibilities
CO4	To reframe a person with stable mind, pleasing personality and determination
CO5	To awaken wisdom in students

UNIT I:	**NEETISATAKAM-HOLISTIC DEVELOPMENT OF PERSONALITY - I**	**9**

Verses- 19,20,21,22 (wisdom) - Verses- 29,31,32 (pride & heroism) – Verses- 26,28,63,65 (virtue)

UNIT II:	**NEETISATAKAM-HOLISTIC DEVELOPMENT OF PERSONALITY - II**	**9**

Verses- 52,53,59 (dont’s) - Verses- 71,73,75,78 (do’s)

UNIT III:	**ORGANS OF GOVERNANCE**	**9**

Shrimad Bhagwad Geeta: Chapter 2-Verses 41, 47,48 - Chapter 3-Verses 13, 21, 27, 35 Chapter6-Verses 5,13,17,23, 35- Chapter 18-Verses 45, 46, 48

UNIT IV:	**EMERGENCY PROVISIONS**	**9**

Statements of basic knowledge - Shrimad Bhagwad Geeta: Chapter2-Verses 56, 62, 68 Chapter12 -Verses 13, 14, 15,16,17, 18

UNIT V:	**LOCAL ADMINISTRATION**	**9**

Chapter2-Verses 17, Chapter 3-Verses 36,37,42 - Chapter 4-Verses 18, 38,39 Chapter18 –Verses 37,38,63

TOTAL PERIODS:45

AD1006	UNNAT BHARAT ABHIYAN	L	T	P	C
		2	0	0	0

OBJECTIVES:

- To engage the students in understanding rural realities
- To identify and select existing innovative technologies, enable customization of technologies, or devise implementation method for innovative solutions, as per the local needs.
- To leverage the knowledge base of the institutions to devise processes for effective implementation of various government programmes
- To understand causes for rural distress and poverty and explore solutions for the same
- To apply classroom knowledge of courses to field realities and thereby improve quality of learning

COURSE OUTCOMES

Upon completion of the course, the students will be able to

CO1	Able to understand of rural life, culture and social realities
CO2	Able to understand the concept of measurement by comparison or balance of parameters.
CO3	Able to develop a sense of empathy and bonds of mutuality with local community
CO4	Able to appreciate significant contributions of local communities to Indian society and economy
CO5	Learned to value the local knowledge and wisdom of the community

UNIT I: QUALITY OF RURAL LIFE IN VILLAGES AND UNNAT BHARAT ABHIYAN **9**

Introduction to Unnat Bharat Abhiyan - concept, scope and objectives, rural life, rural society, cast and gender relations, rural values with respect to community, nature and resources, elaboration of "Soul of India lies in villages" – (Gandhi Ji), Rural infrastructure, problems in rural area.
Assignment: Prepare a map (Physical , visual and digital) of the village you visited and write an essay about inter-family relation in that village.

UNIT II: RURAL ECONOMY AND LIVELIHOOD **9**

Agriculture, farming, land ownership pattern, water management, animal husbandry, non-farm livelihoods and artisans, rural entrepreneurs, rural market.
Assignment: Describe your analysis of rural household economy, it's challenges and possible pathways to address them. Group discussion in class- (4) Field visit 3.

UNIT III: RURAL INSTITUTIONS **9**

History of Rural Development, Traditional rural organizations, Self Help Groups, Gram Swaraj and 3- Tier Panchayat Raj Institutions (Gram Sabha, Gram Panchayat, Standing Committee), local civil society, local administration. Introduction to Constitution, Constitutional Amendments in Panchayati Raj – Fundamental Rights and Directive Principles.
Assignment: Panchayati Raj institutions in villages? What would you suggest to improve their effectiveness? Present a case study (written or audio-visual). Field Visit – 4.

UNIT IV: RURAL DEVELOPMENT PROGRAMMES **9**

National programmes - Sarva Shiksha Abhiyan, Beti Bachao, Beti Padhao, Ayushman Bharat, Swatchh Bharat, PM Awass Yojana, Skill India, Gram Panchayat Decentralised Planning, NRLM, MNREGA, etc.
Written Assignment: Describe the benefits received and challenges faced in the delivery of one of these programmes in the rural community, gve suggestions about improving implementation of the programme for the rural poor

UNIT V:	FIELD WORK	9

Each student selects one programme for field visit Field based practical activities:
• Interaction with SHG women members, and study of their functions and challenges; planning for their skill building and livelihood activities
• Visit MGNREGS project sites, interact with beneficiaries and interview functionaries at the work site
• Field visit to Swachh Bharat project sites, conduct analysis and initiate problem solving measures
• Conduct Mission Antyodaya surveys to support under Gram Panchayat Development Plan(GPDP)
• Interactive community exercise with local leaders, panchayat functionaries, grass-root officials and local institutions regarding village development plan preparation and resource mobilization
• Visit Rural Schools I mid-day meal centres, study Academic and infrastructural resources and gaps
• Participate in Gram Sabha meetings, and study community participation

Associate with Social audit exercises at the Gram Panchayat level, and interact with programme beneficiaries
• Attend Parent Teacher Association meetings, and interview school drop outs
• Visit local Anganwadi Centre and observe the services being provided
• Visit local NGOs, civil society organisations and interact with their staff and beneficiaries.
• Organize awareness programmes, health camps, Disability camps and cleanliness camps o Conduct soil health test, drinking water analysis, energy use and fuel efficiency surveys
• Raise understanding of people's impacts of climate change, building up community's disaster preparedness
• Organise orientation programmes for farmers regarding organic cultivation, rational use of irrigation and fertilizers and promotion of traditional species of crops and plants
• Formation of committees for common property resource management, village pond maintenance and fishing .

AD1007	ESSENCE OF INDIAN KNOWLEDGE TRADITION	L	T	P	C
		2	0	0	0

OBJECTIVES:

The course will introduce the students to
- Get a knowledge about Indian Culture
- Know Indian Languages and Literature religion and philosophy and the fine arts in India
- Explore the Science and Scientists of Ancient, Medieval and Modern India
- Understand education systems in India

COURSE OUTCOMES

Upon completion of the course, the students will be able to

CO1	Understand philosophy of Indian culture.
CO2	Distinguish the Indian languages and literature.
CO3	Learn the philosophy of ancient, medieval and modern India.
CO4	Acquire the information about the fine arts in India.
CO5	Know the contribution of scientists of different eras.
CO6	Understand education systems in India

UNIT I:	INTRODUCTION TO CULTURE	9

Culture, civilization, culture and heritage, general characteristics of culture, importance of culture in human literature,Indian Culture, Ancient India, Medieval India, Modern India

UNIT II:	INDIAN LANGUAGES AND LITERATURE	9

Indian Languages and Literature – I: Languages and Literature of South India, – Indian Languagesand Literature – II:Northern Indian Languages & Literature

UNIT III:	RELIGION AND PHILOSOPHY	9
Major religions practiced in India and Understanding their Philosophy – religious movements in Modern India (Selected movements only)		
UNIT IV:	**FINE ARTS IN INDIA (ART, TECHNOLOGY& ENGINEERING)**	**9**
Indian Painting, Indian handicrafts, Music, divisions of Indian classic music, modern Indian music, Dance and Drama, Indian Architecture (ancient, medieval and modern), Science and Technology in India, development of science inancient, medieval and modern India		
UNIT V:	**EDUCATION SYSTEM IN INDIA**	**9**
Education in ancient, medieval and modern India, aims of education, subjects, languages, Scienceand Scientists of Ancient India, Science and Scientists of Medieval India, Scientists of Modern India

AD1008	SANGA TAMIL LITERATURE APPRECIATION	L	T	P	C
		2	0	0	0

OBJECTIVES:

The main learning objective of this course is to make the students an appreciation for:

1. Introduction to Sanga Tamil Literature.
2. 'Agathinai' and 'Purathinai' in Sanga Tamil Literature.
3. 'Attruppadai' in Sanga Tamil Literature.
4. 'Puranaanuru' in Sanga Tamil Literature.
5. 'Pathitrupaththu' in Sanga Tamil Literature.

COURSE OUTCOMES

Upon completion of the course, the students will be able to

CO1	Appreciate and apply the messages in Sanga Tamil Literature in their life.
CO2	Differentiate 'Agathinai' and 'Purathinai'in their personal and societal life.
CO3	Appreciate and apply the messages in' Attruppadai' in their personal and societal life.
CO4	Appreciate and apply the messages in' Puranaanuru' in their personal and societal life.
CO5	Appreciate and apply the messages in' Pathitrupaththu' in their personal and societal life.

UNIT I:	SANGA TAMIL LITERATURE – AN INTRODUCTION	9
Introduction to Tamil Sangam–History of Tamil Three Sangams–Introduction to Tamil Sangam Literature–SpecialBranches in Tamil Sangam Literature- Tamil Sangam Literature's Grammar Tamil Sangam Literature's parables.		

UNIT II:	‘AGATHINAI’AND‘PURATHINAI’	9
Tholkappiyar’s Meaningful Verses–Three literature materials–Agathinai’s message- History of Culture from Agathinai– Purathinai–Classification–Mesaage to Society from Purathinai.		
UNIT III:	**‘ATTRUPPADAI’.**	**9**
AttruppadaiLiterature–Attruppadaiin‘Puranaanuru’-Attruppadaiin‘Pathitrupaththu’-Attruppadaiin ‘Paththupaattu’.		
UNIT IV:	**‘PURANAANURU’**	**9**
Puranaanuru on Good Administration, Ruler and Subjects–Emotion & its Effect in Puranaanuru.		
UNIT V:	**‘PATHITRUPATHTHU’**	**9**
Pathitrupaththuin‘Ettuthogai’–Pathitrupaththu’sParables–Tamildynasty:Valor, Administration, Charity in Pathitrupaththu- Mesaage to Society from Pathitrupaththu.

St. JOSEPH'S COLLEGE OF ENGINEERING

(An Autonomous Institution)

St. Joseph's Group of Institutions

OMR, Chennai - 119.

DEPARTMENT OF BIOTECHNOLOGY

REGULATIONS 2021

M. Tech. BIOTECHNOLOGY

CHOICE BASED CREDIT SYSTEM

VISION AND MISSION OF THE DEPARTMENT

Vision of the Department

- To provide a world class department to facilitate learning, training and research in Biotechnology by providing infrastructural facilities and competent faculty leading to technological innovations to serve the global society.

Mission of the Department

- The Mission of the Department is to provide quality education to students and to produce competent Biotechnologists to meet the challenges faced by industry and mankind.
- To inculcate high moral, ethical & professional standards among our students.
- To develop overall personality of the students.

PROGRAMME EDUCATIONAL OBJECTIVES (PEOs) :

I. To provide students with solid fundamentals and strong foundation in statistical, scientific and engineering subjects required to create and innovate in the field of biotechnology.
II. To train students with good scientific and technical knowledge so as to comprehend, analyze, design, and create novel products and solutions for developing novel therapeutics and enzymes.
III. To prepare students to excel and succeed in Biotechnology research or industry through the latest state-of-art post graduate education.
IV. To sensitize students about scientific temper and the necessity of bioethics, social responsibility and awareness of the environment.
V. This course enables the student to develop good communication and leadership skills, respect for authority, loyalty and the life-long learning needed for a successful scientific and professional career.

PROGRAMME OUTCOMES (POs):

On successful completion of the Masters in Biotechnology graduates will be able to

1. Acquire in depth knowledge of Biological science and Bioengineering for gaining ability to develop and evaluate new ideas
2. Demonstrate Scientific and technological skills to design and perform research through modern techniques for the development of high throughput process and products.
3. Analyze Biotechnological problems and formulate intellectual and innovative vistas for research and development.
4. Provide potential solutions for solving technological problems in various domains of Biotechnology considering the societal, public health, cultural environmental factors.
5. Examine the outcomes of Biotechnological issues critically and gain knowledge for composing suitable corrective measures.
6. Create and apply modern engineering tools for the prediction and modeling of complex bioengineering activities.
7. Possess self-management and team work skills towards collaborative, multidisciplinary scientific endeavors in order to achieve common goals.
8. Develop entrepreneurial and managerial skills for the implementation of multidisciplinary projects.
9. Demonstrate adherence to accepted standards of professional bioethics and social responsibilities.
10. Possess the attitude necessary for lifelong and acquire communication skills relevant to professional positions

PROGRAMME SPECIFIC OUTCOMES (PSOs)

1. Our Biotech graduates shall possess strong knowledge in the field of biotechnology and applied sciences.
2. Our Biotech graduates shall be able to design and conduct experiments in biotechnology as well as analyze and interpret data.
3. Our Biotech graduates shall be able to use current techniques, skills and modern tools necessary for modelling and design of bioprocesses.

SEMESTER I

MA1155	APPLIED STATISTICAL TECHNIQUES	L	P	T	C
		4	0	0	4

OBJECTIVES

- This course is designed to provide a solid foundation on topics in statistics that can be useful for the biotechnologists to conduct research on different types of data arising in public health and clinical studies. It is framed to address the issues in biotechnology using the concepts on probability, regression, sampling, testing of hypothesis and design an analysis of experiments.

UNITI RANDOM VARIABLE AND PROBABILITY DISTRIBUTION 12

Discrete random variable– Probability mass function–Properties– Continuous random variable – Probability density function – Properties – Moments : Mean and variance with properties– Special distributions: Binomial, Poisson, Geometric, Uniform, Exponential, Gamma, and Normal–Properties-Simple roblems. **CO1**

UNITII JOINT PROBABILITY DISTRIBUTION 12

Bivariate distribution- conditional and marginal distribution - Correlation coefficient, properties-problems- Regression equations-problems-curve fitting by the method of least squares - fitting curves oftheformax+b,ax^2+bx+c,ab^xandax^b **CO2**

UNIT III TESTING OF HYPOTHESIS 12

Sampling distributions – Type I and Type II errors – Tests based on Normal, t,χ^2 and F-distributions for testing of mean, difference between two means, proportion, difference between two proportions, variance, ratio of two variances – Independence of attributes(rxc contingency table)-Goodness of fit. **CO3**

UNITIV NON-PARAMETRIC STATISTICS 12

One sample sign test–Sign test for paired samples–Signed rank test–Rank sum test: The U-test–Rank-sum test: The H-test– Test based on runs. **CO4**

UNITV DESIGN OF EXPERIMENTS 12

Basic principles of experimentation - Analysis of variance - one-way, Two-way classifications - Randomized block design, Latin square design - problems. **CO5**

TOTAL: 60 PERIODS

COURSEOUTCOMES

Upon completion of the course, students will be able to

CO1	Understand the fundamental concepts of probability and gain knowledge on standard distributions which can describe real life phenomenon.
CO2	Understand the basic concepts of one and two dimensional random variables, curve fitting and apply the techniques in research and on different types of data analysis.
CO3	Apply the concept of testing of hypothesis for small and large samples in real life problems
CO4	Understand the need of non parametric methods and to apply in data analysis without any assumptions about specific population.
CO5	Apply the basic concepts of classifications of design of experiments in the field of agriculture and statistical quality control.

BY1101	**ADVANCED GENETIC ENGINEERING**	**L**	**T**	**P**	**C**
		3	**0**	**0**	**3**

OBJECTIVES:

- To understand the gene cloning methods, tools and techniques involved in genecloning, genome analysis and genomics.
- To explain the heterologous expression of cloned genes in different hosts, production of recombinant proteins and PCR techniques.
- To understand comparative genomics and proteomics.

UNIT I: CLONING WITH SPECIALIST-PURPOSE VECTORS 9

M13 based vectors, production of RNA probes and interfering RNA - controllable promoters for maximal expression of cloned gene – λPL, trc, T7 and pBAD - factors affecting the expression of cloned genes - purification tags for purification of cloned gene product – vectors for solubilization of expressed proteins

- gateway system of transferring DNA fragments to vectors.

UNIT II: cDNA LIBRARY CONSTRUCTION 9

OligodT priming, self priming and its limitations. Full length cDNA cloning – CAPture method and Oligo capping. Screening strategies – Hybridization, PCR, Immunoscreening, South-western and North-Western. Functional cloning – Functional complementation and gain of function. Difference cloning: Differential screening, Subtracted DNA library, differential display by PCR.

UNIT III: MUTAGENESIS AND ALTERED PROTEIN SYNTHESIS 9

Random mutagenesis - Error-prone PCR, Rolling circle error-prone PCR, use of mutator strains, temporary mutator strains, Insertion mutagenesis, ethyl methanesulfonate, DNA Shuffling, signature tagged mutagenesis and transposon mutagenesis. Incorporation of unnatural amino acids into proteins – Phage and cell-surface display for selection of mutant peptides.

UNIT IV: GENOME ENGINEERING 9

DNA damage – sources and types - DNA double stranded break repair mechanisms - Engineered nucleases in genome engineering - meganucleases, ZFNs, TALEN and CRISPR-Cas system – Mechanisms and applications – Benefits of genome engineering – targeted gene mutation, creating chromosome rearrangement, studying gene function with stem cells, transgenic animals, endogenous gene labelling and targeted transgene addition – genome engineering -prospects and limitations.

UNIT V: GENETIC MANIPULATION OF CELLS AND ANIMALS 9

Overview - principle of gene transfer - methods of gene transfer to animal cell culture - selectable markers for animal cells - Isolation and manipulation of mammalian embryonic stem cells - Using gene transfer to study gene expression and function - creating disease models using gene transfer and gene targeting technology - potential of animal for modelling human disease.

COURSE OUTCOMES

Upon completion of the course, the students will gain knowledge on

CO1	Cloning, expression and purification of commercially important genes.
CO2	Library creation and screening techniques involved for recombinant clones
CO3	Mutagenesis and importance of creating altered protein synthesis
CO4	Application of Engineered nucleases in genome engineering
CO5	Gene transfer principles and methods adapted for animal cell culture inorder to create disease models.

BY1102	**ENZYME TECHNOLOGY & FERMENTATION TECHNOLOGY**	**L**	**T**	**P**	**C**
		3	**0**	**0**	**3**

OBJECTIVES:

The course will enable the students

- To gain advanced knowledge about the sterilisation methods, media formulation and use of fermentation processes.
- To have knowledge on operational modes of reactors and selection of process for enzyme production and about immobilisation of enzymes and their applicatons.
- To acquire knowledge involved in the isolation, processing, production and purification of enzymes, organic acids, alcohols and secondary metabolites.
- To understand the theoritical and practical aspects of kinetics and its applicability in research.
- To study the importance of enzymes and its applications in various fields food, pharma and chemical industries etc including research.

UNIT - I FUNDAMENTALS OF FERMENTATION 9

Overview of fermentation – Microbial biomass – Microbial Enzymes – Microbial Metabolites – Types of fermentation – Media for industrial fermentations –– Medium sterilization––Development of inoculum for industrial fermentation -Medium optimization – Oxygen requirements of industrial fermentation – Mass transfer in fermentation – Determination of KLa values – Factors affecting KLavalues in fermentation.

UNIT - II INDUSTRIAL FERMENTATION PROCESSES 9

Aerobic and anaerobic fermentations – Batch culture, continuous culture, fed batch culture –Comparison of batch and continuous culture – Submerged and solid state fermentation for the production of enzymes – Immobilization of enzymes and techniques for enzyme immobilization –Biocatalysis in organic media using enzymes – Biotransformation with crude enzymes and whole cells.

UNIT - III PRODUCTION OF ENZYMES AND METABOLITES 9

Production of Proteases, Cellulases, Lipase, Amylase, Glucose isomerase, Pectinase, Peroxidase, Production of primary metabolites– organic acids (Citric acid, Lactic acid), amino acids (Glutamic acid, Lysine),alcohols (ethanol, butanol). Production of secondary metabolites – aminoacids, (Glutamic acid, Lysine), antibiotics (Penicillin, streptomycin), Vitamins (Vitamin B12, Riboflavin).

UNIT - IV ENZYME KINETICS 9

Overview of enzyme and its action – Time course of enzymatic reactions – Effects of substrate concentration on velocity – Rapid equilibrium model of enzyme kinetics – Steady state model of enzyme kinetics – Significance of *kcat*and *Km* – Experimental Measurement of *kcat*and *Km* – Linear transformations of enzyme kinetic data – Bi Bi reaction mechanisms – Modes of reversible inhibition-Allosteric regulation of enzymes.

UNIT V APPLICATIONS OF ENZYMES 9

Enzymes in organic synthesis – Enzymes as biosensors – Enzymes for food, pharmaceutical, tannery, textile, paper and pulp industries – Enzyme for environmental applications- Enzymes for analytical and diagnostic applications – Enzymes for molecular biology research.

2. Copeland, R. A., “Enzymes- A Practical Introduction to Structure, Mechanism and data analyses” 2nd Edition, WILEY–VCH, 2012.

COURSE OUTCOMES

Upon completion of the course, the students will be able

CO1	To design media and choose a suitable fermentation process for the production of a bio product.
CO2	To select an immobilisation method and explore the possibility of choice of a bioreactor for the production of enzyme.
CO3	To apply the various steps involved in the isolation, processing, production and purification of enzymes, organic acids, alcohols and secondary metabolites.
CO4	To apply the knowledge gained on the theoretical and practical aspects of kinetics for the economical production of the enzyme.
CO5	To understand the importance of enzymes and its applications in various fields like including research.

BY1103	**BIOINFORMATICS AND APPLICATIONS**	**L**	**T**	**P**	**C**
		3	**0**	**0**	**3**

OBJECTIVES:

- To improve the programming skills of the student in the field of Biological research
- To let the students know the recent evolution in biological databank usage
- To train the students to analyse the genome of an organism
- To equip the students in protein modelling and visualization
- To familiarise the students in the drug designing domain using in-silico tools

UNIT I: LINUX OS AND PERL 9+3

Introduction to Operating systems, Linux commands, File transfer protocols ftp and telnet, Introduction to Bioinformatics and Computational Biology, Programming in PERL: Name conventions – Variables – Operators – Functions – Control structures – File input and output.

UNIT II: BIOLOGICAL SEQUENCES AND DATABANKS 9+3

Introduction to Biological sequences and methods of sequencing, Biological databases: Primary, Secondary and Composite databanks - Scoring matrices: PAM, BLOSUM - Data lifecycle.

UNIT III: SEQUENCE ANALYSIS 9+3

Pairwise Sequence alignment: Dynamic Programming Algorithms, Needleman-Wunch Algorithm, Smith-Waterman Algorithm, FASTA, BLAST – Multiple sequence alignment: Progressive methods, Iterative methods, Applications – Motif representation- PSSM - Gene finding-Artificial Neural Network – Hidden Markov Model

UNIT IV: DATA ANALYSIS AND PHYLOGENETIC METHODS 9+3

Analysis of gene expression, Analysis of mutations in cancer using High-throughput techniques - Microarray analysis, High volume scatter plots and Heat maps. Structural genomics - Plotting along genomic coordinates and Mapping analysis. Introduction to phylogenetics - Distance based and character based trees, tree evaluation.

UNIT V: PROTEIN STRUCTURE ANALYSIS AND DRUG DESIGNING 9+3

Protein structure prediction methods - Homology modeling, abinitio approaches. Protein structure visualization: Pymol, Rasmol. Threading, Critical Assessment of Structure Prediction and RNA structure prediction. Introduction to Systems Biology and Synthetic Biology, DNA computing, Bioinformatics approaches for drug discovery- Rosetta, protein-ligand docking – QSAR analysis, protein-protein interaction, Peptide mass fingerprinting.

TOTAL PERIODS: 60

TEXT BOOKS:

1. Introduction to Bioinformatics by Arthur K. Lesk , Oxford University Press.
2. Algorithms on Strings, Trees and Sequences by DanGusfield, Cambridge University Press.
3. Biological Sequence Analysis Probabilistic Models of proteins and nucleic acids by R.Durbin, S.Eddy, A.Krogh, G.Mitchison.
4. Bioinformatics Sequence and Genome Analysis by David W. Mount, Cold Spring Harbor Laboratory Press.
5. Beginning Perl for Bioinformatics: An introduction to Perl for Biologists by James Tindall, O'Reilley Media

COURSE OUTCOMES

Upon completion of the course, the students will gain knowledge on

CO1	Understand the fundamentals of operating system and gain knowledge in programming language and to develop bioinformatics related tools with programming skils.
CO2	Gain knowledge about the biological sequences and sequence databases.
CO3	Understand the sequence alignment programs and its importance in Bioinformatics.
CO4	Modelling the structure of proteins.
CO5	Screen drug likeliness of molecules using in-silico techniques.

BY1108	**PREPARATIVE AND ANALYTICAL TECHNIQUES IN BIOTECHNOLOGY**	**L**	**T**	**P**	**C**
		0	**0**	**4**	**2**

OBJECTIVES:

· To learn and understand the principles behind the qualitative and quantitative estimation of biomolecules and laboratory analysis of the same in the body fluids
· To have a practical hands on experience on Absorption Spectroscopic methods and to validate spectrometric and microscopic techniques
· To acquire experience in the purification by performing chromatography
· To design processes for the recovery and subsequent purification of target biological products.

LIST OF EXPERIMENTS

1. Estimation of amino acids by ninhydrin method
2. Estimation of total sugars by phenol sulphuric acid method
3. Estimations of carbohydrates – reducing vs non-reducing, polymeric vs oligomeric, hexose vs pentose.
4. Estimation of protein concentration using Lowry's and Bradford method.
5. DNA determination by UV-visible spectrophotometer – hyperchromic effect.
6. Separation of amino acids and lipids by TLC.
7. Enzyme kinetics: Determination of Km, Vmax and Kcat, Kcat/ Km.
8. Restriction enzyme – Enrichment and unit calculation.

9. Ion-exchange chromatography – Purification of IgG and Albumin.
10. Gel filtration – Size based separation of proteins.
11. Affinity chromatography – IMAC purification of His-tagged recombinant protein.
12. Extraction and characterization of photochemical using UV-visible spectrophotometer.
13. Separation of compounds using Column chromatography.

Requirements:

UV-visible spectrophotometer, Hot air oven, Incubator, Chromatography column, required glasswares, chemicals & kits

TOTAL PERIODS: 60

SEMESTER II

BY1201	BIOSEPARATION TECHNOLOGY	L	T	P	C
		3	0	0	3

OBJECTIVES:

To enable the students to

- Understand the methods to obtain pure proteins, enzymes and bioproducts in general.
- Have depth knowledge on downstream processes required in multi-factorial manufacturing environment in a structured and logical fashion.

UNIT I: DOWNSTREAM PROCESSING IN BIOTECHNOLOGY 9

Role and importance of downstream processing in biotechnological processes – Problems and requirements of bioproduct purification – Economics of downstream processing in Biotechnology, cost-cutting strategies – Separation characteristics of proteins and enzymes – size, stability, properties – Flocculation and conditioning of broth – Process design criteria for various classes of bioproducts (high volume, low value products and low volume, high value products) – Upstream production methods affect downstream purification strategies. Purification of inclusion bodies.

UNIT II: PHYSICO-CHEMICAL BASIS OF BIO-SEPARATION PROCESSES 9

Cell disruption methods for intracellular products – Physical, chemical, mechanical – Removal of insoluble, biomass and particulate debris separation techniques – Filtration at constant pressure and at constant rate – Empirical equations for batch and continuous filtration – Types of filtration - Centrifugal and cross – flow filtration – Types of filtration equipments – Centrifugation – Basic principles, design characteristics – Types of centrifuges and applications.

UNIT III: MEMBRANE SEPARATIONS AND ENRICHMENT OPERATIONS 9

Theory, Design consideration and configuration of membrane separation processes – Types membrane separation processes - Reverse osmosis, microfiltration, ultrafiltration, dialysis – Membrane modules – Enrichment Operations – Extraction–equipment for extraction – Aqueous two-phase extraction process –Adsorption isotherms and techniques – Protein precipitation – Methods of precipitation.

UNIT IV: MECHANISM AND MODES OF CHROMATOGRAPHIC SEPARATION 9

Chromatography – Classification of chromatographic techniques – General description of column chromatography – Chromatographic terms and parameters – Practice of chromatography – adsorption, Partition, normal-phase, reversed-phase, size exclusion, ion exchange, hydrophobic, affinity chromatography – Scale-up of chromatography.

UNIT V: FINISHING OPERATIONS AND FORMULATIONS 9

Drying – Mechanism, methods and applications, Types of dryers – Tray, spray, rotary, belt – Crystallization – Nucleation , growth – Types of crystallizers – Tank, Oslo, Circulating-magma evaporator – Freeze drying – Principle, process, applications – Case studies - Purification of Citric acid, Penicillin, Cephalosporin, Recombinant Streptokinase, and Interferon.

COURSE OUTCOMES

Upon completion of the course, the students will gain knowledge on

CO1	The product recovery, unit operations involved and factors affecting bioseparation of bioproducts and recombinant products.
CO2	Selection and design of cell disruption methods, filtration and centrifugation operation for bioseparation.
CO3	To identify a suitable unit operation for isolation and concentration for the given bioproduct.
CO4	To select a suitable chromatographic operation for purification of given bioproducts.
CO5	Design various bioproducts polishing methods and purification of various bioproducts/recombinant products.

COs	PROGRAM OUTCOMES(POs)										PROGRAMSPECIFIC OUCOMES

BY1202	BIOPROCESS ENGINEERING	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To impart knowledge on design and operation of fermentation processes with all its prerequisites
- To endow the students with the basics of microbial kinetics, metabolic stoichiometry and energetics
- To develop bioengineering skills for the production of biochemical products using integrated biochemical processes.

UNIT I: METABOLIC STOICHIOMETRY AND ENERGETICS 9

Outline of Stoichiometry and energetics – Growth yields, Growth yields based on total energy andATP generation – Conservation of mass principles - Carbon and oxygen balances, ATP generation during growth – Relationship between substrate consumption, growth, respiration and noncellular products – Growth energetics of aerobic and anaerobic process – Case studies on mass and energy balance for Embden–Meyerhoff–Parnas pathway, continuous ethanol fermentation,penicillin production.

UNIT II: MICROBIAL GROWTH, KINETICS, MAINTENANCE AND PRODUCT FORMATION 9

Establishment of growth kinetic equations for batch, fed batch and continuous culture – Basic unstructured kinetic models of growth and product substrate utilization – Negative biokinetic rates– Multisubstrate kinetics – Mixed population kinetics - Kinetic models for microbial product formation - Kinetic model equations for inhibition by substrates and products.

UNIT III: STRUCTURED MODELS 9

Structured models for growth and product formation – Compartmental and metabolic models – Mechanistic models - Product formation kinetics – Gaden's and Deindoerfer's classifications – Chemically and genetically structured models – Kinetics models of heterogeneous bioprocesses – Biofilm kinetics, Unstructured models of pellet growth – Considerations for the production of r-DNA products.

UNIT IV: MASS TRANSFER IN BIOLOGICAL SYSTEMS 9

Interphase Gas-Liquid mass transfer – General oxygen balances for Gas-Liquid transfer – Models for oxygen transfer in large scale bioreactors – Case studies for large scale bioreactors – Model for oxygen gradients in a bubble column bioreactor, air lift bioreactor – Model for a multiple impeller fermenter – Gas-liquid mass transfer of components other than oxygen.

UNIT V: DIFFUSION AND BIOLOGICAL REACTION IN IMMOBILIZED BIOCATALYST 9

External mass transfer – Internal diffusion and reaction within biocatalysts – Derivation of finite difference model for diffusion – Reaction systems – Dimensionless parameters from diffusion – Reaction models – Effectiveness factor concept – Case study for diffusion with biological reaction– Estimation of oxygen diffusion effects in a biofilm.

COURSE OUTCOMES

Upon completion of the course, the students will gain knowledge on

CO1	The principles behind the metabolic stoichiometry and its importance in the designing of engineered microorganisms.
CO2	The kinetics of living cells and to develop a strategy to solve the issues emerging during fermentation processes.
CO3	The develop new biochemical models in optimizing the production of biochemical products
CO4	The models derived for external factors supporting fermentation process (Mass transfer - internal & external)
CO5	The engineering principles to systems containing biological catalysts to meet the needs of the society.

BY1203	BIOREACTOR DESIGN & ANALYSIS	L	T	P	C
		3	0	0	3

OBJECTIVES:

The course will enable the students

- To understand and develop mathematical models for batch, fedbatch and Continuous reactors.
- To apply the transport phenomena principles to bioreactoR
- To frame the requirements for the design of a reactor.
- To apply the sterilisation principles, the techniques in scale up and scale down of a process.
- To understand the importance of instrumentation, measure and control of process variables involved in the process.

UNIT - I BASIC BIOREACTOR CONCEPTS 12

Bioreactor Operation – Batch operation, semi-continuous and fed-batch operation, Continuous Operation – Chemostat, turbidostat – Microbiological reactors, enzyme reactors – Tank-type, Column-type biological reactors – Case studies – Continuous Fermentation with Biomass Recycle, residence time distribution, Tanks-in-series, Tubular plug flow bioreactors.

UNIT - II AERATION & AGITATION IN BIOPROCESS SYSTEMS 12

Mass transfer in agitated tanks – Effect of agitation on dissolved oxygen - Correlations with kLa in Newtonian and non Newtonian liquid – Power number, Power requirement for mixing in aerated and non aerated tanks for Newtonian and non Newtonian liquids – Agitation rate studies - Mixing time in agitated reactor,– Shear damage, bubble damage, Methods of minimizing cell damage – Laminar and Turbulent flow in stirred tank bioreactors.

UNIT - III SELECTION & DESIGN OF BIOPROCESS EQUIPMENT 12

Materials of construction for bioprocess plants – Design considerations for maintaining sterility of process streams processing equipments, selection, specification – Design of heat and mass transfer equipment used in bioprocess industries – Requirements, design and operation of bioreactor for microbial, plant cell and animal cell.

UNIT - IV SCALE UP AND SCALE DOWN ISSUES 12

Effect of scale on oxygenation, mixing, sterilization, pH, temperature, inoculum development,nutrient availability and supply – Bioreactor scale-up based on constant power consumption per volume, mixing time, impeller tip speed (shear), mass transfer co-efficients – Scale up of downstream processes – Adsorption (LUB method), Chromatography (constant resolution etc.), Filtration (constant resistance etc.), Centrifugation (equivalent times etc.), Extractors (geometry based rules) – Scale–down related aspects.

UNIT V BIOREACTOR INSTRUMENTATION AND CONTROL 12

Bioreactor controlling probes – Characteristics of bioreactor sensors - Methods of measuring process variables –Temperature – Flow measurement and control – Pressure measurement and control – Agitation – shaft power, rate of stirring – Detection and prevention of foam –
Measurement of Microbial biomass – Measurement and control of Dissolved oxygen – Inlet and outlet gas analysis – pH measurement and control - Biosensors.

COURSE OUTCOMES

Upon completion of the course, the students will be able

CO1	To select appropriate bioreactor configuration and operation mode based on the nature of bioproduct and cell lines and other process criteria.
CO2	To apply the knowledge of transport phenomena in the design of reactors.
CO3	To frame the requirements for the design of a reactor.
CO4	To analyse the techniques involved in the scale up and scale down of a process.
CO5	Integrate research lab and Industry; identify problems and seek practical solutions for large scale implementation of Biotechnology.

BY1204	IMMUNOTECHNOLOGY	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To understand the structure, functions and integration of immune system.
- To explain the antigen-antibody interactions that offers defence mechanism
- To explain various techniques of therapeutically significant monoclonal and engineered antibodies production

UNIT I: IMMUNE SYSTEM AND ITS RESPONSE 9

Cells of the immune system and their development – Primary and secondary lymphoid organs – Humoral immune response – Cell mediated immune responses – T lymphocyte and B lymphocyteTolerance – Homeostasis in immune system – Complement.

UNIT II: ANTIGEN AND ANTIBODY 9

Production of antibodies – Polyclonal, monoclonal – Hybridoma technology – Antibody – Isolationand identification – Validation and their use – Agglutination and precipitation tests – Coomb's test– ELISA types – ELISPOT– Plaque forming cell assay, Epitope mapping, Antigen detection assay,SDS-PAGE-immunoblotting and immunoprecipitation – Immunofluorescence andimmunohistochemistry – Measurement of Ag-Ab interaction.

UNIT III: CELLULAR IMMUNOLOGICAL TECHNIQUES 9

PBMC separation from the blood – Ficoll-hypaque method – Identification of lymphocytes basedon CD markers – FACS – Lymphoproliferation assay – Cr5I release assay – Macrophage culturesdetection assays – Rosette assay – Cytokine bioassays: IL2, IFNγ, TNFα – Mixed lymphocytereaction – HLA typing.

UNIT IV: VACCINE TECHNOLOGY 9

Principles in vaccine development – Adjuvant, Immunization (Active and Passive immunization) – Vaccine validation – Protein based vaccines – DNA vaccines – Plant based vaccines – Ediblevaccine – Recombinant antigens as vaccines – Multivalent subunit vaccine – Reverse vaccinology– New Types of Replicating vaccines.

UNIT V: IMMUNOTHERAPEUTICS 9

Engineered antibodies – Catalytic antibodies, idiotypic antibodies, plantibodies – Combinatoriallibraries for antibody isolation. Cancer immunotheraphy and Immunosuprressive therapy –Cytokine therapy – Immunoglobulin therapy: Replacement and immunomodulators – Genetransfer techniques for immunological diseases.

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course,

CO1	Students would have a fundamental knowledge about the various organs involving in immune response, immune resopones and complement systems.
CO2	Students would have developed knowledge about the production and application of producing monoclonal antibodies and will have knowledge in various immunological techniques.
CO3	Students would have gained knowledge in the separation and identification of lymphocytes and various CD markers. They also gain knowledge in cytokine assay.
CO4	After completing this course, students get familiar about the basic principles and application of various vaccine development
CO5	At the end of the course the student would acquire knowledge on development aspects in engineering antibodies and gain knowledge in combinational libraries for antibody isolation.

BY1205	**ADVANCED GENOMICS AND PROTEOMICS**	**L**	**T**	**P**	**C**
		3	**0**	**0**	**3**

OBJECTIVES:

- To understand the gene cloning methods, tools and techniques involved in gene cloning, genome analysis and genomics.
- To explain the heterologous expression of cloned genes in different hosts, production of recombinant proteins and PCR techniques.
- To identify the importance of protein bio molecules and the structure-function relationships in proteins.
- To understand comparative genomics and proteomics

UNIT I: GENE AND GENOME ANALYSIS 9

Gene prediction in prokaryotes and eukaryotes - Genome-wide association (GWA) analysis - Massively parallel Signature sequencing (MPSS), Whole genome Shotgun sequencing, Next Generation Sequencing (NGS) - Cytogenetic and physical mapping - GDB, NCBI, OMIM, NGI/MGD - Structural annotation - Functional annotation - Limitation of genomics

UNIT II: GENOME INFORMATICS 9

Functional genomics: Developmental biology and Differential gene expression, Microarray analysis - Epigenomics: Histone modification assays-ChIP-Chip and ChIP-Seq, DNA Methylation assays-DNA hybridization technique - Metagenomics: *de novo* transcriptome assembly

UNIT III: GENOMIC DIVERSITY 9

Study systems: Cyanobacteria, Plasmodium, Yeast, Virus, *Arabidopsis thaliana*, *Homo sapiens*, Worm, Zebra fish - Comparative databases: COG, KEGG, MBGD, PEDANT, Organism Specific databases

UNIT IV: PROTEOME INFORMATICS 9

2D Electrophoresis - Spot visualization and picking - Database for 2D gel - Tryptic digestion of protein - Peptide fingerprinting - Data analysis: Mass spectrometry; ion source (MALDI, spray sources); analyzer (ToF, quadrupole, quadrupole ion trap) and detectors - Ramachandran plot - Post-translational modifications of proteins - Limitation of proteomics

UNIT V: APPLICATIONS OF GENOMICS AND PROTEOMICS 9

Genomic Medicine - Synthetic biology and bioengineering - Conservation genomics - Interaction proteomics - Protein networks - Expression proteomics – Biomarkers - Proteogenomics.

COURSE OUTCOMES

Upon completion of the course, the students will gain knowledge on

CO1 Genome sequencing techniques currently used for gene and genome analysis.

CO2 Microarrays, Analysis of Gene expression and proteomics.

CO3 Genomic diversity and organism specific databases

CO4 2D Gel electrophoresis and Mass spectrometry analysis for any proteome

CO5 Applications of Genomics and proteomics in Biomedicine

COs	PROGRAM OUTCOMES(POs)										PROGRAMSPECIFIC OUCOMES

BY1208	IMMUNOTECHNOLOGY LABORATORY	L	T	P	C
		0	0	6	3

OBJECTIVES:

- To give practical exposure in the clinical diagnosis.
- To give laboratory training in different immunotechnological techniques.

EXPERIMENTS

1. Preparation of antigen and Routes of immunization (Intra-peritonial, Sub-cutaneous,Intramuscular, Intra- nasal, Oral)
2. Methods of bleeding (Eg. Tail bleeding, Intravenous, intraorbital)
3. Collection of serum, storage and purification of total IgG (salt precipitation).
4. Evaluation of Antibody titre by direct ELISA
5. Evaluation of Antigen by Sandwich ELISA
6. Characterization of antigens by native and SDS-PAGE
7. Characterizations of antigens by Western blot analysis – Wet and semi dry transfer
8. Conjugation of Immunoglobins (Streptavidin, colloidal gold)
9. Methods for prototype development of Immunodiagnostics (ICT card)
10. Blood smear identification of leucocytes by Giemsa stain
11. Separation of mononuclear cells by Ficoll-Hypaque
12. Separation of spleenocytes and proliferation against mitogens

TOTAL PERIODS: 90

Equipment Needed

Microscopes, restainer (mouse, rat, rabbit), Restrainers, purification columns, microplate reader, UV spectrometer, PAGE apparatus, Western blot apparatus (dry/semi-dry/wet), centrifuge, Haemocytometer, required strains & consumables

REFERENCE:

1.Antibodies: A Laboratory Manual, Edward A. Greenfield, Cold Spring Harbor Laboratory Press, 2nd Edition, 2014

3.Practical Immunology Frank C. Hay and Olwyn M.R. Westwood, Blackwell Science Ltd., 4th ed, 2002

COURSE OUTCOMES

Upon completion of the course, the students will

CO1 Handle animals for immunological experiments, prepare and isolate antigens from animals.

CO2 Prepare, quantify and purify antibodies.

CO3 Evaluate antigens and antibodies using ELISA, Blotting and characterise protein by SDS-PAGE.

CO4 Perform experiments to identify and isolate different cells in a blood sample.

SEMESTER III

BY1308	**ADVANCED MOLECULAR BIOLOGY AND GENETIC ENGINEERING LAB**	**L**	**T**	**P**	**C**
		0	**0**	**6**	**3**

OBJECTIVES:

- Provide hands-on experience in performing basic recombinant DNA techniques
- To understand the principle behind each techniques and applications of each methodology in applied biological research.

LIST OF EXPERIMENTS

1.Isolation of DNA
2. Electroporation to Yeast
3. Isolation of RNA
4. cDNA synthesis
5. Primer designing
6. Real-time PCR
7. Plasmid isolation and confirming recombinant by PCR and RE digestion.
8. Confirmation of the presence of insert by colony PCR
9. Induction and expression of recombinant protein
10. Western blot with ECL detection
11. Site directed mutagenesis
12. Southern blot (Non-radioactive)
13. RFLP analysis of the recombinant DNA

Required Equipments:

PCR, purification columns, micro plate reader, UV spectrometer, SDS- PAGE apparatus, Western blot apparatus (dry/semi-dry/wet), Southern blot apparatus, Cooling centrifuge, Haemocytometer, Gel Documentation, Gel rocker

TOTAL PERIODS: 90

REFERENCES:

1.Sambrook, J. and Russsel, D.W., “Molecular cloning – A laboratory manual”, Third edition, Cold Spring Harbor Laboratory Press, Cold Spring harbor, New York, USA, 2001.

COURSE OUTCOMES

Upon completion of the course, the students will gain knowledge on

CO1	Describe the main principles, methods for preparation and cloning of DNA in various organisms.
CO2	Express clearly about the gene amplification and methods for analysis of DNA such as hybridization, restriction analysis and gene expressions.
CO3	Use genetic and biotechnological techniques to manipulate genetic materials and develops new and improved living organisms.

COs	PROGRAM OUTCOMES(POs)										PROGRAMSPECIFIC OUCOMES

BY1309	**BIOPROCESS AND DOWNSTREAM PROCESSING LABORATORY**	**L**	**T**	**P**	**C**
		0	**0**	**6**	**3**

OBJECTIVES:

The course applies earlier learned knowledge on bioreactors and sterilization kinetics.

- To provide hands-on training in downstream processing through simple experimentation in the laboratory.
- To understand the nature of the end product, its concentration, stability and degree of purification required for targeted biological products.
- Skills and knowledge gained are useful by analogy when solving problems typical for the bioindustry or for research.

LIST OF EXPERIMENTS:

1. Enzyme immobilization studies – Gel entrapment, adsorption and cross linking immobilisation.
2. Batch cultivation – *E.coli*– growth rate, substrate utilization kinetics, product analysis.
3. Fed batch cultivation - *E.coli*- growth rate, substrate utilization kinetics, product analysis.
4. Continuous cultivation – x - D construction, kinetic parameter evaluation, gas analysis, carbon balancing.
5. Optimization techniques – PlackettBurman, Response surface methodology.
6. Bioreactor studies: Sterilization kinetics, kLa determination, residence time distribution.
7. Cell separation methods-Centrifugation and microfiltration
8. Cell disruption methods- ultrasonicator, homogeniser.
9. Aqueous two phase extraction of biologicals.

10. Protein precipitation by salting-out method (ammonium sulphate).
11. Protein purification method- Column chromatography.
12. Product polishing- dryers, crystallizers.

TOTAL PERIODS: 90

REQUIRED EQUIPMENTS:

Centrifuge, Column for purification, Ultrasonicator, Homogeniser, Microfiltration,Hot air oven, Incubator, Laminar air flow chamber, freeze dryer, required chemicals & strains

PROFESSIONAL ELECTIVES I

BY1001	**MOLECULAR CONCEPTS IN BIOTECHNOLOGY (FOR ENGINEERING STREAM)**	**L**	**T**	**P**	**C**
		3	**0**	**0**	**3**

OBJECTIVES:

1. Familiarize students with the cell and molecular biology of both Prokaryotes and Eukaryotes
2. By doing this course students wil lacquire basic fundamental knowledge and explore skills in molecular biology and become aware of the complexity of the cells.
3. This course will emphasize the molecular mechanism of DNA replication, repair, transcription, protein synthesis and gene regulation in various organisms.

UNIT I DNA, RNA AND PROTEIN SYNTHESIS 9

Concept and organization of genetic materials – Types of DNA & RNA – DNA replication, Decoding genetic information – Regulation of gene expression – Protein synthesis, Transcription and translation. Regulation of transcription in bacteria and eukaryotes – Non-coding RNAs – DNA repair mechanism

UNIT II MANIPULATION OF GENE EXPRESSION IN PROKARYOTE 9

Prokaryotic genome organization - Regulatable promoters, fusion proteins – Construction, cleavage and use of fusion proteins – Unidirectional tandem gene arrays and translation expression vectors – Protein stability – Oxygen limitation, protease deficient host strains, bacterial hemoglobin *Vitreoscill* sp. – Increased protein secretion – Factor Xa and bacteriocin

UNIT III DIRECTED MUTAGENESIS AND PROTEIN ENGINEERING 9

Directed mutagenesis – Oligonucleotide-directed mutagenesis with M13 virus and plasmid DNA – PCR amplified oligonucleotide directed mutagenesis – Protein thermostability – Addition of disulfide bonds, reduction in free sulfhydryl residues – Increasing enzyme activity – Modifying the substrate binding specificity, modifying metal cofactor requirements – Restriction modification enzymes – Zinc finger proteins.

UNIT IV TRANSGENIC ANIMALS 9

Concept of genetic engineering – Techniques in genetic engineering - Transgenic animals – Gene transfer methods – Retroviral vector method, DNA microinjection, engineered embryonic stem cell, nuclear transfer, YAC –Applications of transgenic animals – Transgenic livestock – Production of donor organs, pharmaceuticals, disease resistant livestock – Improving milk quality and animal production traits

UNIT V HUMAN MOLECULAR GENETICS 9

Genetic linkage and gene mapping – Genetic polymorphism, RFLP, SNP, STRP – Physical mapping of the human genome – Sequence tagged site (STS) for constructing physical maps from YAC, BAC or PAC – Genomic libraries – Transcriptional mapping – Cloning human disease genes and methods – Human Genome Project.

COURSE OUTCOMES

Upon completion of the course, the students will be able to

CO1 Describe the Molecular mechanism of DNA Replication,Repair,Transcription, Protein synthesis and gene regulation in various organisms

CO2 Understand and Manipulation of Gene Expression in Prokaryote

CO3 Understand and Perform Directed Mutagenesis and Protein Engineering

CO4 Get Detailed Knowledge on Transgenic Animals and Its Applications

CO5 Understand The Overall View on Human Molecular Genetics

BY1002	PRINCIPLES OF CHEMICAL ENGINEERING (for Science Stream)	L	T	P	C
OBJECTIVES:		3	0	0	3

The course aims to develop skills of the students in the area of Chemical Engineering with emphasis in process calculations and fluid mechanics. The objectives are to enable the students

- To perform calculations pertaining to processes and operations.
- To apply fluid mechanics principles to applied problems

UNIT I FUNDAMENTALS OF CHEMICAL ENGINEERING 9

Concepts of unit operation and unit process with examples – Units and dimensions, conversion factors, dimensional analysis – Presentation and analysis of data – Mole, density, Specific gravity – Mass fraction, Mole fraction – Analysis of multicomponent system – Concentration.

UNIT II MATERIAL AND ENERGY BALANCES 9

Overall and component material balances – Material balances without chemical reactions – Chemical reactions, stoichiometry, conversion and yield – Material balance calculations with chemical reactions – Combustion calculations – Recycle operations – Energy balances – Entropy, latent heat – Concepts of chemical thermodynamics – Relation to VLE, solution thermodynamics and reaction thermodynamics.

UNIT III FLUID MECHANICS 9

Laminar and turbulent flow – Basic equations of fluid flow, continuity equations and Bernoulli's equation – Shear – Stress relationships – Non-Newtonian fluids, friction factor and its calculation in laminar and turbulent flow – Operational principles of different types of pumps, compressors and valves – Measurement of fluid flow using venturimeters, orifice meters – Rotameters, pivot tube.

UNIT IV MASS TRANSFER 9

Fick's law of diffusion – Analogy with momentum and heat transfer, diffusivities of gases and liquids, diffusion in binary mixtures, Interphase mass transfer – Film theory of mass transfer, determination of volumetric mass transfer coefficient – Overview of separation operations with examples, ideal stage concept – Mass transfer equipment – Distillation, liquid extraction, gas absorption, drying

Total periods 45

COURSE OUTCOMES

Upon completion of the course, the students will be able to

CO1	Solve problems related to units and conversions and fit the given data using the methodologies
CO2	Solve problems related to material and energy balance concepts and design reactors for biochemical processes
CO3	Understand Fluid Mechanics principles in biotechnology
CO4	Apply their knowledge in the field of biochemical engineering from the principles of thermodynamics.
CO5	Apply their knowledge in the field of biochemical engineering from the principles of conservation of mass

COs	PROGRAM OUTCOMES (POs)										PROGRAM SPECIFIC OUCOMES

BY1003 METABOLIC PROCESS AND ENGINEERING (for Biotechnology Stream)

L	T	P	C
3	0	0	3

OBJECTIVES:

- To provide a quantitative basis, enzyme kinetics, for the understanding of metabolic networks in single cells and at the organ level
- To enable the students to use organisms to produce valuable substances on an industrial scale in cost effective manner

UNIT I: CELLULAR METABOLISM 9

Transport Processes – Fueling reactions – Glycolysis, fermentative pathways – TCA cycle and oxidative phosphorylation, anaplerotic pathways –Catabolism of fats, organic acids, and amino acids - Biosynthesis of amino acids, nucleic acids, and fatty acids – Polymerization – Growth Energetics.

UNIT II: REGULATION, MANIPULATION AND SYNTHESIS OF METABOLIC PATHWAY 9

Regulation of enzyme activity – Regulation of enzyme concentration – Regulation of metabolic networks – Regulation at the whole cell level – Metabolic pathway manipulations – Enhancement of Product yield and productivity – Extension of substrate range, product spectrum and novel products (Antibiotics, Polyketides, Vitamins) – Improvement of cellular properties – Metabolicpathway synthesis algorithm – Lysine biosynthesis.

UNIT III: ANALYSIS AND METHODS FOR THE METABOLIC FLUX 9

Metabolic flux map – Fluxes through the catabolic pathways in microbes– Metabolic flux analysis for determined, overdetermined and under-determined systems –Sensitivity analysis – Direct flux determination from fractional label enrichment – Applications involving complete enumeration of metabolite isotopomers – Carbon metabolite balances.

UNIT IV: APPLICATION OF METABOLIC FLUX ANALYSIS 9

Amino acid production – Biochemistry and regulation– Metabolic flux analysis of lysine biosynthetic network and specific deletion mutants – Metabolic fluxes in mammalian cell cultures –Intracellular fluxes, validation of flux estimates by ^{13}C labeling studies – Design of cell culture media.

UNIT V: ANALYSIS OF METABOLIC CONTROL AND INDUSTRIAL CASE STUDIES 9

Fundamental of Metabolic Control Analysis (MCA), MFA, and MPA and their application, relating system variables to enzyme kinetics, Multi-substrate enzyme kinetics, Metabolic engineering examples for bio-fuel, bio-plastic and green chemical synthesis and industrial case studies.

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course,

CO1	Students would have a fundamental knowledge about the cellular metabolism and biosynthesis and catabolism of various biomolecules.
CO2	Students would have gained knowledge on regulation, manipulation and synthesis of metabolic pathways
CO3	Students would have developed knowledge about analysis and methods for the metabolic flux
CO4	After completing this course, students get familiar with the application of metabolic flux analysis.
CO5	At the end of the course the student would acquire knowledge in analysis of metabolic control and industrial case studies

PROFESSIONAL ELECTIVES II

BY1004	ANIMAL BIOTECHNOLOGY	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To provide the fundamentals of animal cell culture,diseases and therapy
- To offer the knowledge about the micromanipulation and transgenic animals

UNIT I INTRODUCTION 4

cope of Animal Biotechnology, Animal Biotechnology for production of regulatory proteins, blood products, vaccines, hormones and other therapeutic proteins – Significance of animal based products.

UNIT II MOLECULAR BIOLOGY 9

Biology of animal viral vectors- SV40, adeno virus, retrovirus, vaccinia virus, herpes virus, adeno associated virus and baculo virus.

UNIT III CELL CULTURE TECHNOLOGY 11

Culturing of cells, primary and secondary cell lines, Analysis of cell energitics - Cell culture - Scaling up of animal cell culture-monolayer culture, suspension culture; Various bio-reactors used for animal cell culture-Roller bottle culture; Bioreactor process control, stirred animal cell culture, Air-lift fermentor, Chemostat/Turbidostat; High technology vaccines: Hybridoma technology; Cell lines and their applications

UNIT IV GENETIC ENGINEERING 11

Gene therapy-prospects and problems; Knock out mice and mice model for human genetic disorder; Baculo virus in biocontrol; Enzymes technology, Somatic manipulation of DNA, Nucleic acid hybridization and probes in diagnosis- preparation of probes, evaluation and applications.

UNIT V APPLICATIONS 10

Rumen manipulation- probiotics embryo transfer technology, invitro fertilization, transgenesis- methods of transferring genes into animal oocytes, eggs, embryos and specific tissues by physical, chemical and biological methods; Biopharming - Transgenic animals (Mice, Cows, Pigs, Sheep, Goat, Birds and Insects); Artificial insemination and embryo transfer.

BY1005	COMPUTER AIDED LEARNING OF STRUCTURE AND FUNCTION OF PROTEINS	L	T	P	C
		2	2	0	3

OBJECTIVES:

To enable the students

- To identify the importance of protein biomolecules.
- To realize the structure-function relationships in proteins

UNIT I AMINO ACIDS AND 3D STRUCTURE 9

Amino acids – Acid-base properties – Stereo chemical representations – Chemical and Physical properties – Primary structure – Secondary structure and motifs – Tertiary structures and domains – Quaternary structures – Classifications – CATH, SCOP – Protein Data Base analysis.

UNIT II FIBROUS AND MEMBRANE PROTEINS 9

Amino acid composition and organization of fibrous proteins – Keratins – Fibroin – Collagen – Molecular organization of membranes – Bacteriorhodopsin – Structure of the Bacterial reaction centre – Oxygenic photosynthesis – Membrane proteins based on transmembrane beta barrels – Structure of ATP synthetase.

UNIT III FUNCTION AND CONTROL OF FUNCTION 9

Protein flexibility – Hydrogen exchange – Rotations of side chains – Enzyme Catalysis – Steady state kinetics – Transition state stabilization – Allostery – Multiple binding sites and interactions – Allosteric properties of Hemoglobin – Negative Cooperativity.

UNIT IV BIOSYNTHESIS AND DEGRADATION 9

Post translational covalent modifications – Proteolytic processing – Alteration of the chain Termini – Glycosylation – Lipid attachment – Hydroxylation – Phosporylation – Disulphide bond formation – Chemical aging – Factors determine the rate of degradation – Proteases – Lysosomes – Ubiquitin mediated pathway.

UNIT V DETERMINATION AND PREDICTION OF 3D STRUCTURE 9

Experimental physical methods – X-Ray crystallography, NMR, Cryo-EM, Neutron diffraction – Vibrational spectroscopy – Raman spectroscopy – Computational methods – Homology modeling – Fold recognition and Threading.

3. Bujnicki, J.M., "Prediction of Protein Structures, Functions, and Interactions", John Wiley & Sons Ltd., 2009.

COURSE OUTCOMES

Upon completion of the course, the students will be able to gain knowledge on

CO1 Various Interactions In Protein Makeup.

CO2 Different Levels Of Protein Structure.

CO3 Role Of Functional Proteins In Various Field Of Study.

CO4 Biosynthesis And Degradation of Proteolytic Process

CO5 Latest Application Of Protein Science In Their Research

BY1006	ANALYTICAL TECHNIQUES IN BIOTECHNOLOGY	L	T	P	C
		3	0	0	3

OBJECTIVES:

To enable the students

- To have a fundamental knowledge about the Light spectrum, Absorption, Fluorescence, NMR, Mass spectroscopy
- To acquire knowledge on the different chromatographic methods for separation of biological products.
- Understand the methods to obtain pure proteins, enzymes and in general about product development R & D

UNIT I: PROTEIN CRYSTALLOGRAPHY 9

Biological macromolecules – Principle of protein crystallization – Method – Testing – Cryotechniques – Influence of heterogeneity on crystallization – Progress in structural genomics – Micro crystallization – Utility of micro fluidics for crystallization.

UNIT II: PROTEIN AND PEPTIDE PURIFICATION 9

Chromatographic methods for protein and peptide purification – Multidimensional chromatography – High throughput screening of soluble recombinant proteins – Immunoprecipitation – Affinity chromatography for antibody purification – Role of reverse phase HPLC in proteomic research.

UNIT III: ELECTROPHORETIC TECHNIQUES 9

Strategies – Separation of proteins using 2D gel electrophoresis – Electrophoresis method for purifying proteins – *in situ* enzyme detection – Staining method – Separation of peptide mixture – Pulse field gel electrophoresis – Denaturing gradient gel electrophoresis.

UNIT IV: MICROSCOPY 9

Microscopy with light and electrons – Electrons and their interaction with the specimen – Electron diffraction – Instrument, specimen preparation and application of TEM and SEM – Fluorescence microscopy – Laser confocal microscopy – Phase contrast – Video microscopy – Scanning probe microscopy.

UNIT V: SPECTROSCOPY 9

Methods for characterizing purified proteins – IR absorption process, IR spectrometer and sample preparation – Instrumentation and applications of UV – Overview of mass spectrometry, ionization methods, mass analysis, detection and quantitation – Circular dichroism (CD) spectroscopy – NMR – Fourier transform infrared spectroscopy (FTIR).

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course,

CO1 Students would have a fundamental knowledge about the various methods to obtain pure proteins and protein crystallization.

CO2 Students would have gained knowledge on the different chromatographic methods for separation of biological products.

CO3 Students would have developed knowledge about electrophoretic techniques for the separation of proteins.

CO4 Students get familiar with the Microscopic techniques.

CO5 Students would have acquired knowledge about the light spectrum, Absorption, Fluorescence, NMR, Mass spectroscopy.

BY1007	BIOTHERMODYNAMICS	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To enable the students to learn about basic concepts of classical and statistical thermodynamics
- To demonstrate the capability to analyze the energy conversion performance in a variety of modern applications in biological systems.

UNIT I CONCEPTS AND LAWS OF THERMODYNAMICS 9

Basic concepts of thermodynamics – First Law of Thermodynamics – Second law of thermodynamics – Zeroth Law and Third Law of thermodynamics – Laws of thermodynamics and biology – Thermodynamics of equilibrium – Behavior of systems far from equilibrium – Dissipative structures in non-equilibrium systems – Thermodynamic features of small systems – Thermodynamics of macromolecular processes in cells – Thermodynamics of energy interactions in ecosystems – Conservation of energy.

UNIT II ENERGY TRANSFORMATION AND BIOENERGETICS 9

Distribution of energy – Carbon, energy and life – Molecular level energy storage – Biothermodynamics of energy use by plant and animals – Methods for measuring the thermodynamic stability of membrane proteins – Protein folding – Modeling the native state ensemble of proteins using statistical thermodynamics – Energetic profiles of proteins derived from thermodynamics of the native state ensemble – Principle of components analysis of energetic profile space – Energetic profiles are conserved between homologus proteins

UNIT II GIBB'S FREE ENERGY AND ITS APPLICATIONS 9

Theory and derivation of Gibbs free energy – Free energy of reactions –Lipid membrane phase transitions – Thermodynamics of cellular metabolism – Sugar metabolism – Energy transport in ATP and NAD – Substrate recycling – Donnan Equilibrium – Enzyme-substrate interaction – Free energy of transfer of amino acids – Differences between heat engines and biological energy processes – Temperature regulation in organisms – Humidity and temperature effects on organisms – Non-equilibrium thermodynamics and life.

UNIT IV STASTICAL THERMODYNAMICS AND BINDING EQUILIBRIA 9

Diffusion – Boltzman distribution – Partition function – Analysis of thermodynamic data – Multi-state equlibria – Protein heat capacity functions – Cooperative transitions – Interaction free energy – Helix coil transition theory – Binding equlibria – Single site model – Multiple independent sites – Oxygen transport – Scatchard plots and Hill plots – Ligand binding in macromolecules.

UNIT V REACTION KINETICS TO BIOLOGICAL SYSTEM 9

Free energy analysis of chemical reactions – Chemical coupling to drive reactions in biological systems – First order and second order reactions – Collision theory – Transition state theory – Free energy of activation – Arrhenius rate constant equation – Applications – Temperature and concentration effects on enzyme kinetics – Reaction mechanism of lysozyme – Kinetic identification of reaction intermediates – Sequential enzyme reactions in metabolism and analysis.

TOTAL PERIODS: 60

Text Books

Johnson, M.L., Holt, J.M. and Ackers, G.K., "Biothermodynamics", Part 1, Academic Press, 2009.

COURSE OUTCOMES

Upon completion of the course, the students will be able to

CO1 Explain the theoretical concepts of thermodynamics and how it applies to energy

CO2 Understand Conversion in technological applications and biological systems.

CO3 Design and carryout bioprocess engineering experiments, and analyze and Interpret fundamental data to do the design and operationof bioprocesses.

CO4 Describe the criteria when two phases coexist in equilibrium and the vapour liquid equilibrium calculations, microbial growth and productformation.

CO5 Gain knowledge on Chemical reaction kinetics to biological system

BY1008	PLANT BIOTECHNOLOGY	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To give the details of plant cells and its functions
- To provide the basics of agro bacterium and applications of plant biotechnology

UNIT I PLANT TISSUE CULTURE 9

Concept of cellular totipotency– Cytodifferentiation– Organogenic differentiation – Nutritional requirements – Seed culture, embryo culture, Protoplast culture, Micropropagation, Cell suspension –*Invitro* production of haploids–Somaclonal variation –Germplasm storage and cryopreservation.

UNIT II CHLOROPLAST AND MITOCHONDRIA 9

Structure, function –Light and dark reaction and genetic material –Rubisco synthesis and assembly, coordination, regulation and transport of proteins– Mitochondria: Genome – Cytoplasmic male sterility and import of proteins – Comparison and differences between mitochondrial and chloroplast genome – Chloroplast transformation.

UNIT III **PLANT METABOLISM AND METABOLIC ENGINEERING** **9**

Nitrogen fixation – Nitrogenase activity – Nod genes, nif genes, bacteroids – Plant nodulins. Production of secondary metabolites – Flavanoid synthesis and metabolic engineering.

UNIT IV **GENE TRANSFER IN PLANTS** **9**

Tranisent and stable gene expression –Marker genes –Vector mediated gene transfer, *Agrobacterium* mediated DNA transformation–Tumor inducing principle, Ti plasmid – TDNA transfer – Transformation techniques using *Agrobacterium,*importance in genetic engineering–Agrobacterium vectors – Viruses mediated gene transfer, status and expression of transferred genes.

UNIT V **TRANSGENICS IN CROP IMPROVEMENT** **9**

Resistance to biotic stresses and abiotic stresses – Herbicide resistance –Transgenics for quality – Transgenics plants as bioreactors – commercial transgenic crops and impact of recombinant DNA technology–Molecular Pharming – Therapeutic products –Transgene silencing and ethical issues.

5. Heldt, Hans-Walter, Plant Biochemistry & Molecular Biology, 1stEditionOxford University Press,1997

COURSE OUTCOMES

Upon completion of the course, the students will gain knowledge on

CO1 The fundamentals of plant cells, structure and functions.

CO2 The regulation and transport of proteins.

CO3 The Nitrogen fixation mechanism and significance of viral vectors.

CO4 Plant tissue culture and transgenic plants

CO5 Transgenic crops and development of therapeutic products.

PROFESSIONAL ELECTIVES III

BY1009	ENVIRONMENTAL BIOTECHNOLOGY	L	T	P	C
		3	0	0	3

OBJECTIVES:

The proposed course is designed

- To understand the scientific and engineering principles of microbiological treatment technologies to clean up contaminated environments
- To replace of conventional treatment methodologies by molecular biology and genetic engineering strategies
- To seek the way for the alternate sources of energy to avoid environmental issues

UNIT I: BIODEGRADATION AND BIOREMEDIATION 9

Bioremediation technologies – Biostimulation, Bioaugmentation, Bioventing, biosparging and Phytoremediation – Bioleaching, bioprecipitation, bioaccumulation and biosorption of heavy metals. Aerobic and Anaerobic degradation of aliphatic and aromatic compounds – Biodegradation of herbicides and pesticides.

UNIT II: MICROBIAL METABOLISM IN WASTEWATER TREATMENT 9

Decomposition of organic compounds in natural ecosystems – Co-metabolic degradation of organo-pollutants - Hydrolysis of biopolymers by aerobic and anaerobic microorganisms – Anaerobic degradation of carbohydrates, proteins, lipids – Nitrogen removal – Ammonification, nitrification, denitrification

UNIT III: BIOLOGICAL TREATMENT OF WASTEWATER 9

Physico-chemical characteristics of wastewater – Overview of aerobic and anaerobic treatment processes, Process design of aerobic and anaerobic system – Activated sludge process – Trickling filter – Rotating biological contactors – Fluidized bed reactor – Upflow anaerobic sludge blanket reactor (UASB) – Membrane bioreactors – Algal photosynthesis in wastewater treatment.

UNIT IV: BIOTECHNOLOGY FOR AIR POLLUTION AND WASTE MANAGEMENT 9

Biotechnology for treating Air pollutants – Biofilters and Bioscrubbers – Biotechnology for the management of agricultural, plastic, dairy, paper and pulp, textile, leather, hospital and pharmaceutical industrial wastes.

UNIT V: BIOPRODUCTS FROM RENEWABLE SOURCES 9

Overview of renewable sources, Production of vermicompost, Production of biofertilizers and biopesticides, Production of biomethane, bioethanol, biohydrogen, biodiesel – Production of bioplastics and biopolymers – Bioelectricity generation and value added products from renewable sources

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, the students will gain knowledge on

CO1	Understand the scientific & engineering principles of microbial technologies to clean up polluted ecosystems
CO2	Replace of conventional treatment methodologies by molecular biology and genetic engineering strategies
CO3	Improve the sources of energy for aerobic and anaerobic treatment methods
CO4	Design Scientific solutions and participation can be served for the environmental Protection.
CO5	Seek the way for alternate sources of energy to avoid environmental issues.

BY1010	CANCER BIOLOGY	L	T	P	C
		3	0	0	3

OBJECTIVES:

To enable the students to understand

- Basic biology of cancer
- Impact of antibodies against cancer in the human body leading to more effective treatments
- Enhanced immunology based detection methods and imaging techniques
- Development of cell based and cytokine based immunotherapy against cancer

UNIT I PRINCIPLES OF CANCER BIOLOGY 9

Cancer: Definition, causes, properties, classification, clonal nature – Cell Cycle: Regulation of cell cycle, cell proliferation and apoptosis – Signal transduction pathways – Apoptosis: apoptotic pathways, signal molecules, effects on receptor, signal switches – Modulation of cell cycle in cancer – Mechanism of spread.

UNIT II PRINCIPLES OF CARCINOGENESIS 9

Cancer risk factors – Theory of carcinogenesis – Chemical carcinogenesis – Physical carcinogenesis: x-ray radiation – mechanisms of radiation carcinogenesis – Stages of cancer: initiation, promotion, progression.

UNIT III MOLECULAR BIOLOGY OF CANCER 9

Signal targets and cancer – Growth factors – Transformation – Activation of kinases – Oncogenes: c-Myc, Ras, Bcl-2 family – Mechanism of oncogene activation – Retroviruses and oncogenes – Detection of oncogenes – Oncogenes/proto oncogene activity – Tumor suppressor genes: Rb, p53, APC, BRCA paradigms – Telomerases

UNIT IV CANCER METASTASIS 9

Clinical significances of invasion – Heterogeneity of metastatic phenotype – Metastatic cascade: basement membrane disruption, invasion – Recent approach to identify key factors controlling metastasis – Angiogenesis

UNIT V CANCER THERAPY 9

Therapy forms – Surgery, chemotherapy, radiation therapy - Detection of cancers – Prediction of aggressiveness of cancer – Advances in cancer detection – Tumor markers; New approaches of cancer therapy – mAbs, vaccines, gene therapy, stem cell therapy.

TOTAL PERIODS: 45

Text Books

3. Fialho, A. and Chakrabarty, A., "Emerging Cancer Therapy: Microbial Approaches and Biotechnological Tools" 1st Edition, Wiley, 2010.

COURSE OUTCOMES

Upon completion of the course, the students will gain knowledge on

CO1 Concepts of cell cycle, cell regulation, proliferation & apoptosis.

CO2 Principles of carcinogenesis and stages of cancer.

CO3 Signal targets, growth factors & Mechanism of oncogene activation and detection.

CO4 Cancer metastatis, clinical significances and factors that can control metastatis.

CO5 Detection of cancer & Advancements in cancer detection.

BY1011	TECHNOLOGY MANAGEMENT	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To impart the knowledge of various aspects of Creativity, Innovation and New Product Development

UNIT I TECHNOLOGY MANAGEMENT 9

Concept and meaning of technology – Evolution and growth of technology – Role and significance of management of technology – Impact of technology on society and business – Process and product technology. Competitive advantages through new technologies: product development from scientific breakthrough to marketable product – Role of Government in Technology Development – Managing Intellectual Property

UNIT II TECHNOLOGICAL FORECASTING & ASSESSMENT 9

Intuitive – Extrapolation – Growth Curves – Technology Monitoring. Normative: Relevance Tree – Morphological Analysis – Mission Flow Diagram - Technology Choice –Technological Leadership and Followership – Technology Acquisition. Meaning of Innovation and creativity – Innovation management

UNIT III TECHNOLOGY STRATEGY 9

Strategy concept – Types – Key principles – Framework for formulating technology strategy - Technology forecasting: techniques and application – Technology diffusion and absorption: Rate of Diffusion – Innovation Time and Innovation Cost – Speed of Diffusion – Project management in adoption and implementation of new technologies

UNIT IV TECHNOLOGY TRANSFER MANAGEMENT 9

Technology transfer process – Outsourcing strategic issues – Joint ventures – Technology sourcing. Integration of People and Technology – Organizational and Psychological Factors –Organizational Structure – Social Issues in Technology Management: Technological Change and Industrial Relations – Technology Assessment – Environmental Impact Analysis.

UNIT V TECHNOLOGY TRANSFER AND ACQUISITION 9

Import regulations – Implications of "Uruguay Round" and WTO – Bargaining process –Transfer option – MOU. Adopting technology – Human interactions – Organizational redesign and re-engineering – Technology productivity. Technology Absorption and Innovation: present status in India – Need for new outlook – Absorption strategies for acquired technology – Creating new/improved technologies – Innovations – Technology Measurement – Technology Audit

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, the students will gain knowledge on

CO1 Evolution , significance & impact of technology on society & business.

CO2 Morphological analysis, mission flow diagram leading to innovation & creativity.

CO3 Principles, framework in formulating a strategy- its adoption & implementation

CO4 Technology assessment & environment impact analysis.

CO5 Human interaction, organisational design leading to productivity.

BY1012	COMPUTATIONAL FLUID DYNAMICS	L	T	P	C
		3	0	0	3

OBJECTIVES:

The course aims to develop skills of the students in the area of Chemical Engineering with emphasis in process calculations and fluid mechanics. The objectives are to enable the students

- To perform calculations pertaining to processes and operations.
- To apply fluid mechanics principles to applied problems

UNIT I GOVERNING EQUATIONS 9

Fluid flow and its mathematical descriptions; conservation laws – Continuity equations – Momentum equation, energy equation – Navier-Stokes equations – Boundary conditions, Solutions of Governing Equations – Finite difference method, Finite element method, Finite Volume Method, Euler's Equations – Non-Newtonian Constitutive Equations – Curvilinear coordinates and Transformed equations – CFD as Research tool and Design tool – Validation Strategies.

UNIT II NUMERICAL ANALYSIS 9

Solving System of Algebraic equations – Gauss Elimination, Gauss-Seidel – LU-Decomposition – Jacobi – Simpson Rule – Laplace solution – Euler's method – R-K method – Fourier analysis of first and second upwind

UNIT III COMPRESSIBLE FLOW COMPUTATION 9

Euler equations – Conservative and non-conservative from thermodynamics of compressible flow – Scalar conservations laws – Conservation – Weak solutions – Non-uniqueness – Entropy conditions – Godunov methods – Flux vector splitting Method – Reconstruction of dependent variables – Fluxes – Preconditioning of low speed Flows – Projection methods

UNIT IV TURBULENT FLOW COMPUTATION 9

Physical Considerations – Survey of theory and models – Relation of High – Resolution Methods and Flow Physics – Large Eddy Simulation – Standard and Implicit – Numerical Analysis of Sub grid Models – ILES Analysis – Explicit Modeling – Implicit Modeling – Limiters – Energy Analysis – Computational Examples – Burgers' Turbulence – Convective Planetary Boundary Layer.

UNIT V FINITE ELEMENT METHOD 9

Finite Element formulation – Errors, Solutions of Finite difference equations – Elliptic equations – Parabolic Equations – Hyperbolic Equations – Burger's Equations – Nonlinear Wave equation (Convection Equation) – Primitive Variable method for Incompressible viscous flows; Taylor-Galerkin Method and Pertov-Galerkin Method for Compressible Flows.

TOTAL PERIODS: 45

Text Books

1. Drikakis, D. and Rider, W.J., "High - Resolution Methods for Incompressible and Low-Speed Flows", Springer-Verlag Berlin Heidelberg, 2005.

3. Warsi, Z.U.A., "Fluid dynamics: Theoretical and Computational approaches", CRC Press, 1999.

COURSE OUTCOMES

Upon completion of the course, the students will gain knowledge on

CO1 Solving problems related to units and conversions and fit the given data using the methodologies

CO2 Solving problems related to material & energy balance, application of algebraic expressions, Laplace & Fourier analysis

CO3 Application of knowledge from the principles of thermodynamics to biochemical engg.

CO4 Computational modelling methods and its application in fluid dynamics.

CO5 Fluid statics & dynamics and the application of finite element methods.

BY1013	BIOTECHNOLOGY IN FOOD PROCESSING	L	T	P	C
		3	0	0	3

OBJECTIVES:

To enable the students

- To know about the constituents and additives present in the food.
- To gain knowledge about the microorganisms,foodspoilage diseases.
- To know different techniques used for the preservation of foods.

UNIT I FOOD PROCESSING 9

Heat Processing using steam or water (Blanching, Pasteurization) – Heat sterilization (Evaporation and distillation) – Heat processing using hot air (Dehydration, baking and roasting) – Heat processing using hot oils – Processing by the removal of heat (chilling , Freezing) – High pressure processing of foods – Pulsed electric field processing of liquids and beverages – Non-thermal processing by radiofrequency electric fields

UNIT II FOOD FERMENTATION 9

Fermentative production of foods – Single cell protein (yeast, mushroom) – Microorganisms responsible for production of fermented foods – Enzyme in bakery and cereal products – Enzymes in fat/oil industries – Protease in cheese making and beverage production – Production of Pectinases and Utilization in Food Processing – Food Flavour Production – Utilization of food waste for production of valuables.

UNIT III FERMENTED FOODS 9

Overview of fermented foods – Bean-based – Grain-based – Vegetable-based – Fruit-based – Honey-based – Dairy-based – Fish-based – Meat-based – Tea-based – Advantages of fermented foods Health benefits of fermented foods – Nutritive value of fermented food – Biotechnological approaches to improve nutritional quality – Microbial changes in fermented food.

UNIT IV FOOD PRESERVATION TECHNIQUES 9

Spoilage of food - Microbiology of water, meat, milk, vegetables – Food poisoning – Cold preservation – Heat conservation – Ionizing radiation – High pressure – Electric field – Chemical food preservation – Combination of techniques for food preservation – Natural antioxidants – Antimicrobial enzymes – Edible coatings – Control of pH and water activity.

UNIT V FOOD QUALITY AND CONTROL 9

Analysis of food – Major ingredients present in different product – Food additives, vitamins – Analysis of heavy metal, fungal toxins, pesticide and herbicide contamination in food – Microbial safety of food products – Chemical safety of food products – Good manufacturing practice

4. Da-Wen S., "Emerging Technologies for Food Processing", Academic Press, 2005.

COURSE OUTCOMES

Upon completion of the course, the students will gain knowledge on

CO1 Sterilisation methods and processing methods of foods & beverages.

CO2 Production of fermented foods and use of food waste for production of value added products

CO3 Nutritive & health benefits of fermented foods.

CO4 Food preservation techniques and edible coatings

CO5 Analysis of contaminants in food, safety and GMP.

PROFESSIONAL ELECTIVES IV

BY1014	BIO NANOTECHNOLOGY	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To enable the students to learn about basis of nanomaterial science
- To make them ready to prepare nanoparticles in different routes
  - Capable of characterising nano-scale materials
  - Apply nano materials in nano device fabrications
- To equip them in targeted drug design area

UNIT I: NANOSCALE PROCESSES AND NANOMATERIALS 9

Overview of nanoscale processes of nanomaterials – Physicochemical properties of nanomaterials – Concepts in nanotechnology – Natural nanomaterials –Types of Nanomaterials (Quantum dots, Nanoparticles, Nanocrystals, Dendrimers, Polymeric nanoparticles, Buckyballs, Nanotubes) – Interaction between biomolecules and nanoparticle surface –Synthesis and assembly of nanoparticles and nanostructures using bio-derived templates.

UNIT II: STRUCTURAL AND FUNCTIONAL PRINCIPLES OF BIONANOTECHNOLOGY AND CHARACTERISATION 9

Biomolecular structure and stability – Biomolecular Self-assembly – Self-organization – Molecular recognition –Chemical transformation – Regulation – Biomaterials –– Traffic across membranes – Biomolecular sensing – Self-replication – Characterisation techniques - X-ray diffraction technique, Scanning Electron Microscopy, Transmission Electron Microscopy including high-resolution imaging, Surface Analysis techniques AFM, SPM, STM, and VSM.

UNIT III: PROTEIN-BASED NANOTECHNOLOGY 9

Overview of protein nanotechnology – Nanotechnology with S-Layer protein – Engineered nanopores – Bacteriorhodopsin and its potential – Protein assisted synthesis of metal nanoparticles – Synthesis of protein-based nanoparticles – Protein nanopaticle-hybrids – Biomolecular motors and motor proteins - Covalent and non-covalent protein nanoparticle conjugates – Protein-carbon nanotube conjugates.

UNIT IV: DNA-BASED NANOTECHNOLOGY 9

DNA-based nanostructures – Biomimetic fabrication of DNA based metallic nanowires and networks – Self assembling DNA structures – DNA-nanoparticle conjugates – DNA-carbon nanotube conjugates – DNA templated electronics – DNA nanostructures for mechanics and computing – DNA nanomachine.

UNIT V: NANOMEDICINE AND NANOSENSING 9

Promising nanobiotechnologies for applications in medicine – Role of nanotechnology in methods of treatment – Liposomes in nanomedicine – Therapeutic applications of nanomedicine – NanoSized carriers for drug delivery and drug carrier systems – Protein and peptide nanoparticles, DNA based nanoparticles, Lipid matrix nanoparticles for drug delivery – Design and development of bionanosensors using DNA, enzymes – Nanobiosensors for imaging and diagnosis.

TOTAL PERIODS: 45

Text Books

1. Gamburg OL, Philips GC, Plant Tissue & Organ Culture fundamental Methods, Narosa Publications. 1995.
2. Singh BD. Text Book of Biotechnology, Kalyani Publishers. 1998

REFERENCES:

1. Heldt HW. Plant Biochemistry & Molecular Biology, Oxford University Press. 1997.
2. Ignacimuthu .S, Applied Plant Biotechnology, Tata McGraw Hill. 1996.

COURSE OUTCOMES

Upon completion of the course, the students will gain knowledge on

CO1	Understand the fundamental concepts, physiochemical properties and the types of nanoscale materials.
CO2	Gain knowledge about the structure and function of different types of nanomaterials and the machines used in bionanotechnology.
CO3	Understand the involvement of protein in bionanotechnology and its role.
CO4	Gain knowledge about the DNA based nano structures and its application various areas of nanobiotechnology.
CO5	Understand the principle behind targeted drug delivery and the usage of nano carriers in nanomedicine.

BY1015	**PHYTOCHEMISTRY**	**L**	**T**	**P**	**C**
		3	**0**	**0**	**3**

OBJECTIVES:

- To give the details of plant derived value added compounds and its functions
- To provide knowledge on biotech based production of agro medicines

UNIT I INTRODUCTION OF PHYTOCHEMICALS 9

Categories of phytochemicals and their classification (carbohydrates, tannins, alkaloids, glycosides, steroids, saponins, terpenoids, flavonoids, coumarins, mucilage's xanthine) – Phytochemical screening: Physiochemical tests – Moisture content, total ash, water-soluble ash, acid-insoluble ash, sulphate ash, alcohol and water-soluble extractive values – Heavy metal detection by atomic spectroscopy. Macroscopic studies –Shape, apex, base, margin, taste and odour Microscopic-stomatal number, stomatal index, vein islet number and vein termination number.

UNIT II THERAPEUTIC EFFECT OF PLANT PRODUCTS 9

Anti-tumor activity – Anti-coagulation – Anti-bacterial – Anti-inflammatory– Anti-MRSA and Anti-VRE activities of Phytoalexins and Phytoncides. Screening of Plant extracts for antiparasitic activity.

UNIT III BIOACTIVITY STUDIES 9

Screening of drugs for biological activity – Antidiabetic, antinflammatory, antihepatotoxic, antifertility, diuretic, anticancer, antihepatotoxic, antimalarial, antihypertensive and hypolipedemic and adoplogenic agents

UNIT IV SEPARATION TECHNIQUES AND STRUCTURE ELUCIDATION 9

Thin layer chromatography – HPTLC – Column chromatography – GC-MS – LC-MS – HPLC – Partition chromatography – Gas chromatography – FT-IR – UV- NMR (1D&2D) – X-ray diffraction.

UNIT V LARGE SCALE PRODUCTION OF BIOACTIVE PRODUCTS 9

Secondary metabolite production through cell culture system – Hairy root induction –Methods of gene transfer – Chemical methods – PEG – dextran – Physical method – Electroporation – Microinjection – Lipofection agrobacterium based vector mediated gene transfer – Particle bombardment.

Bidlack, W.R., Omaye, S.T., Meskin, M.S. and Topham, D.K.W.,” Phytochemicals as Bioactive Agents”, 1St Edition, CRC Press, 2000.

COURSE OUTCOMES

Upon completion of the course, the students will gain knowledge on

CO1 Category and classification of phytochemicals
CO2 Therapeutic effect of plant products.
CO3 The screening of drugs for biological activity.
CO4 The separation techniques that can be used for plant derived products
CO5 The production of various bioactive products

		L	T	P	C
BY1016	**ADVANCES IN MOLECULAR PATHOGENESIS**	**L**	**T**	**P**	**C**
		3	**0**	**0**	**3**

OBJECTIVES:

To enable the students

- To understand about the microbial toxins and modern molecular pathogenesis
- To know about the host pathogen interaction and identifying virulence factors
- To control pathogens by modern approaches.

UNIT I VIRAL PATHOGENESIS 9

Various pathogen types and modes of entry – Viral dissemination in the host – Viral virulence – Injury induced by virus – Host susceptibility of viral disease – Pattern of infection - Acute infection – Persistant infection – Latent infection – Slow infection – Methods for the study of pathogenesis – Foot and mouth disease virus, Pestiviruses, Arteriviruses, Blue tongue virus and Animal herpesviruses

UNIT II FUNGAL PATHOGENESIS 9

Innate humoral immunity to fungi – Acquired cellular immunity – Mucosal immunity – Intracellular pathogenesis of *Histoplasma capsulatum* – Facultative intracellular pathogen of *Cryptococcus neoformans* – Fungal interaction with leukocytes – Fungal vaccine development – Host defence against chronic disseminated *Candidiasis* – Study fungal virulence by using Genomics – Functional genomic approaches to fungal pathogenesis.

UNIT III BACTERIAL PATHOGENESIS 9

Epidemology and Clinical disease – Clinical course and basic immunology – *In vitro* models of *Salmonella* virulence – Antibiotic resistant *Salmonella* – *Salmonella* based vaccines – *Shigella* cellular models of infection – Influenza virus – Pathogenic *Escherichia coli* – *Vibrio cholerae* – Streptococcal disease – *Haemophilus influenzae* infection

UNIT IV MANIPULATION OF HOST CELLS AND IMMUNE FUNCTION BY VIRAL PROTEINS 9

Clinical importance of understanding host defence – Interference with cytokine and Chemokine function – impairment of host mediated killing of infected cells – inhibition of apoptosis – Immunological structure of proteins – Class I and II MHC mediated antigen – Evasion from natural killer cells.

UNIT V MOLECULAR APPROACHES TO CONTROL 9

Classical approaches based on serotyping – Modern diagnosis based on highly conserved virulence factors, immune and DNA based techniques – New therapeutic strategies based on recent findings on molecular pathogenesis – Viral Vaccines – Immune modulators – New vaccine technology

TOTAL PERIODS: 45

3. Mettenleitter, T.C. and Sobrino, F.,"Animal Viruses: Molecular Biology", Caister Academic Press, 2008.

COURSE OUTCOMES

Upon completion of the course, the students will gain knowledge on

CO1 Fundamentals of modern molecular pathogenesis of Virus

CO2 Fundamentals of modern molecular pathogenesis of Fungus

CO3 Fundamentals of modern molecular pathogenesis of Bacteria

CO4 Host pathogen interaction and identifying virulence factors

CO5 Control of pathogens by modern approaches

COs	PROGRAM OUTCOMES(POs)										PROGRAM SPECIFIC OUCOMES

BY1017	SPECTROSCOPY FOR BIOTECHNOLOGY	L	T	P	C
		3	0	0	3

OBJECTIVES:

To enable the students

- To have a fundamental knowledge about the Light spectrum, Absoprtion, Fluorescence,NMR, Mass spectroscopy

- To deliver the knowledge of spectroscopic techniques and its functions
- To provide the technical information of spectroscopy for biological applications

UNIT I ELECTRONIC SPECTRA 9

Overview of electronic spectra – Absorption spectra – Ultraviolet spectra of proteins – Nucleic acid spectra – Prosthetic groups – Difference spectroscopy – X-ray absorption spectroscopy – Fluorescence and phosphorescence – Helicase activity monitored by fluorescence – Fluorescence energy transfer – Molecular ruler-application of energy transfer to biological systems.

UNIT II CIRCULAR DICHROISM, OPTICAL ROTARY DISPERSION AND FLUORESCENCE POLARIZATION 9

Optical rotary dispersion – Circular dichroism – Optical rotary dispersion and circular dichroism of proteins – Optical rotation and circular dichroism of nucleic acids – Small molecule binding to DNA – Protein folding – Interaction of DNA with zinc finger proteins – Fluorescence polarization – Integration of HIV genome into host genome and alpha – Ketoglutarate.

UNIT III IR AND RAMAN SPECTROSCOPY 9

Infrared spectroscopy – Raman spectroscopy – IR and Raman spectroscopy of biological materials – Structure determination with vibrational spectroscopy – Structure of enzyme-substrate complexes – Biological vibrational spectroscopic imaging – FT-IR and FT-Raman in biomedical research.

UNIT IV NUCLEAR MAGNETIC RESONANCE AND ELECTRON SPIN RESONANCE 9

NMR spectrometers – Chemical shifts – Spin-spin splitting – Relaxation times –Multidimensional NMR – Magnetic resonance imaging – Electron spin resonance – Regulation of DNA transcription – Protein – DNA interactions – Dynamics of protein folding – RNA folding – Lactose permease.

UNIT V MASS SPECTROMETRY 9

Mass analysis – Tandem Mass Spectrometry – Ion detectors – Ionization of the sample – Sample preparation/analysis – Proteins and peptides – Protein folding – Mass spectrometry of biomolecules

TOTAL PERIODS: 45

TEXT BOOKS

3. Greve, J., Puppels, G.J. and Otto, C., “Spectroscopy of Biological Molecules: New Directions 1st Edition, Springer”, 1999.

COURSE OUTCOMES

Upon completion of the course, the students will gain knowledge on

CO1 Basics of Electronic spectra and its various biological applications

CO2	Basics of Circular Dichroism, Optical Rotary Dispersion And Fluorescence Polarization and its various biological applications
CO3	Basics of IR And Raman Spectroscopy and its various biological applications
CO4	Basics of NMR and Electron Spin Resonance and its various biological applications
CO5	Basics of Mass Spectrometry and its various biological applications

BY1018	IPR AND BIOSAFETY	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To create awareness about IPR and engineering ethics
- To follow professional ethics and practices in their careers
- To create awareness and responsibilities about the environment and society

UNIT I AGREEMENTS, TREATIES AND CONCEPT OF PRIOR ACT 9

History of GATT Agreement – Madrid Agreement – Hague Agreement – WIPO Treaties –Budapest Treaty – PCT – Indian Patent Act 1970 & recent amendments Ordinary – PCT – Conventional – Divisional and Patent of Addition – Specifications – Provisional and complete – Forms and fees Invention in context of "prior art" – Patent databases – Searching International Databases – Country-wise patent searches (USPTO,esp@cenet(EPO) – PATENT Scope (WIPO) – IPO, etc.

UNIT II IPR 9

Intellectual property rights – Origin of the patent regime – Early patents act & Indian pharmaceutical industry – Types of patents – Patent Requirements – Application preparation filing and prosecution – Patentable subject matter – Industrial design, Protection of GMO's IP as a factor in R&D,IP's of relevance to biotechnology and few case studies.

UNIT III PATENT FILING PROCEDURES 9

National & PCT filing procedure – Time frame and cost – Status of the patent applications filed – Precautions while patenting – disclosure/non-disclosure – Financial assistance for patenting – Introduction to existing schemes. Patent licensing and agreement Patent infringement – Meaning, scope, litigation, case studies

UNIT IV BIOSAFETY 9

Introduction – Historical Backround – Introduction to Biological Safety Cabinets – Primary Containment for Biohazards – Biosafety Levels – Biosafety Levels of Specific Microorganisms – Recommended

Biosafety Levels for Infectious Agents and Infected Animals – Biosafety guidelines – Government of India.

UNIT V GENETICALLY MODIFIED ORGANISMS 9

Definition of GMOs & LMOs – Roles of Institutional Biosafety Committee – RCGM – GEAC etc. for GMO applications in food and agriculture – Environmental release of GMOs – Risk Analysis – Risk Assessment – Risk management and communication – Overview of National Regulations and relevant International Agreements including Cartegana Protocol

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, the students will gain knowledge on

CO1 Various Laws, Rules and Regulations of Patents
CO2 Various forms of Intellectual Property Rights
CO3 Patent filing procedures and types of infringement
CO4 Different Biosafety Levels and its Guidelines
CO5 Fundamentals of GMO, its regulations and agreements

PROFESSIONAL ELECTIVE V

BY1019	BIOPHARMACEUTICALS AND BIOSIMILARS	L	T	P	C
		3	0	0	3

OBJECTIVES:

The aim of the course is to give strong foundation and advanced information on

- Core responsibilities for the development and monitoring of the drug and the preparation of medicines according to the no the norms.
- To gain knowledge in physicochemical properties, pharmacology and the formulation of commonly used biopharmaceuticals.

UNIT I: INTRODUCTION 9

Drug sources – Discovery and Development phases – Drugs and Cosmetics Act and regulatory aspects – Role of patents in the drug industry – Biopharmaceutical classification system – Drug Target – Drug metabolism – Pharmacokinetics – Pharmacodynamics – Bioavailability – Bioequivalence – Toxicity studies – Pharmacogenomics.

UNIT II: DOSAGE FORMS 9

Classification of dosage forms – Excipients – Formulation – Tablets, Capsules, Emulsion, Suspension, Lotion, Liniments, Ointments, Cream, Paste, Suppositories, Parenterals – Pressurized dosage forms – Packaging techniques.

UNIT III: ADVANCED DRUG DELIVERY SYSTEMS 9

Controlled release dosage forms – Rationale – Principle and factor influencing – Design and Fabrication – Microencapsulation – Liposomes – Niosomes – Transdermal drug delivery – Ocular, Vaginal and Uterine controlled release.

UNIT IV: BIOSIMILARS 9

Biosimilar medicine – Importance – INN nomenclature system – Key trends in biosimilar product development – Production of biosimilar products – Difficulties with biosimilar drugs – Non clinical and clinical study – Regulation and approval process – Future prospects.

UNIT V: CASE STUDIES ON BIOPHARMACEUTICALS 9

Erythropoietin – Insulin – Somatotropin – Interleukin – Interferon – GM-CSF – Blood clotting factors – Tissue plasminogen activator – Monoclonal antibodies and engineered antibodies.

TOTAL PERIODS: 45

REFERENCES:

5. Shein-Chung Chow, “Biosimilars: Design and Analysis of Follow-on Biologics”, CRC Press, 3rd Edition, 2013.

COURSE OUTCOMES

Upon completion of the course,

CO1	Students would have a fundamental knowledge about the various phases and the regulatory aspects involved in the drug development and on pharmacokinetics & dynamics.
CO2	Students will get familiar with the preparation of various dosage forms of drug and its quality control.
CO3	Students would have developed knowledge about advanced drug delivery systems.
CO4	Students would have gained knowledge about biosimilars and its regulation and approval process.
CO5	At the end of the course the student would acquire knowledge on different types of biopharmaceuticals.

BY1020	**BIOPROCESS MODELING AND SIMULATION**	**L**	**T**	**P**	**C**
		3	**0**	**0**	**3**

OBJECTIVES:

- To make the students aware of the overall industrial bioprocess so as to help them to manipulate the process to the requirement of the industrial needs.
- To impart knowledge on design and operation of fermentation processes with all its prerequisites.
- Provide the students with the basics of bioreactor engineering.
- To develop bioengineering skills for the production of biochemical product using integrated biochemical processes.

UNIT I CONCEPTS AND PRINCIPLES 9

Introduction to modelling – Systematic approach to model building – Material and energy balance – Classification of models – General form of dynamic models dimensionless models – General form of linear systems of equations nonlinear function – Conservation principles thermodynamic principles of process systems

UNIT II MODELS 9

Structured kinetic models – Compartmental models (two and three) – Product formation Unstructured models – Genetically structured models – Stochastic model for thermal sterilization of the medium –

Modelling for activated sludge process – Model for anaerobic digestion – Models for lactic fermentation and antibiotic production

UNIT III MODELLING OF BIOREACTORS 9

Modelling of non-ideal behaviour in Bioreactors – Tanks-in-series and Dispersion models – Modelling of
PFR and other first order processes – Analysis of packed bed and membrane bioreactors
Recombinant Cell Culture Processes – Plasmid stability in recombinant Cell Culture limits to over-expression

UNIT IV MONITORING OF BIOPROCESSES 9

On-line data analysis for measurement of important physico-chemical and biochemical parameters – State and parameter estimation techniques for biochemical processes – Biochemical reactors-model equations – Steady-state function – Dynamic behaviour – Linearization – Phase plane analysis – Multiple steady state – Bifurcation behaviour

UNIT V SOLUTION STRATEGIES 9

Solution strategies for lumped parameter models – Stiff differential equations – Solution methods for initial value and boundary value problems – Euler's method – R-K method – shooting method – Finite difference methods – Solving the problems using MATLAB/SCILAB –ISIM-Simulation of bioprocesses using models from literature sources.

3. Bailey, J.A. and Ollis, D. F., Fundamentals of Biochemical Engineering", McGraw Hill –1986

COURSE OUTCOMES

Upon completion of the course, the students will gain knowledge on

CO1	Systematic approach to model building & thermodynamic principles of model systems
CO2	Various types of models and its application in bioprocess
CO3	Modelling of non ideal behaviour in reactors
CO4	Measurement of important parameters in bioprocessing operation
CO5	Simulation of bioprocess using various models.

BY1021	TISSUE ENGINEERING	L	T	P	C
		3	0	0	3

OBJECTIVES:

To enable the students

- To learn the fundamentals of tissue engineering and tissue repairing
- To acquire knowledge on clinical applications of tissue engineering
- To understand the basic concept behind tissue engineering focusing on the stemcells, biomaterials and its applications

UNIT I FUNDAMENTAL OF TISSUE ENGINEERING 9

Cells and tissue grade organization in living system - Cell cycle – Stem cells – Types, factors influencing stem cells – Mechanical properties of cells and tissues, cell adhesion – Extracellular matrix – Glycans, laminin, fibronectin, collagen, elastin, extracellular matrix functions – Signalling – Mechanics and receptors – Ligand diffusion and binding, trafficking and signal transduction – *In vitro* cell proliferation – Scope of tissue engineering

UNIT II BIOMATERIALS FOR TISSUE ENGINEERING 9

Preparation of biomaterials and their types - Measurement of protein adsorption – Direct and indirect methods, fibrinogen adsorption –Displaceable and non-displaceable – Changes in protein conformation upon adsorption – Vroman effect principle to maximize the amount of fibrinogen adsorption – Devices for tissue engineering transplant cells.

UNIT III DELIVERY OF MOLECULAR AGENTS AND CELL INTERACTIONS WITH POLYMERS 9

Molecular agents in tissue engineering – Controlled released of agents – Methods, in time and space – Future applications of controlled delivery – Microfluidic systems – Microfluidics and microfluidic devices – Cell interactions – Factors influencing cell interactions – Cell interactions with polymer surfaces and suspension – Cell interactions with three-dimensional polymer

UNIT IV POLYMERS AND CONTROLLED DRUG DELIVERY 9

Natural and synthetic biodegradable Polymers – Engineered tissues – Skin regeneration – Nerve regeneration – Liver, cartilage, bone – Biodegradable polymers in drug delivery –Polymeric drug delivery systems – Applications of biodegradable polymers.

UNIT V BIOPOLYMER-BASED BIOMATERIALS AS SCAFFOLDS AND STEM CELLS

Synthesis of bio polymer - Natural polymers – Structural and chemical properties, scaffold processing, mechanical properties and biodegradability – Biocompatibility and host response – Application of scaffolds in tissue engineering. Use of stem cells in tissue engineering – Embryonic stem cells, mesenchymal stem cells (MSC), adult stem cells, markers for detection of stem cells – Risks with the use of stem cells – Application of stem cells in tissue engineering.

TOTAL PERIODS: 45

3. Scheper, T., Lee, K. and Kaplan, D., "Advances in Biochemical Engineering / Biotechnology – Tissue Engineering I", Volume 102, Springer-Verlag Berlin Heidelberg, 2006.

COURSE OUTCOMES

Upon completion of the course, the students will gain knowledge on

CO1 Components of tissue architecture
CO2 Preparation of various types of biomaterials
CO3 Delivery of molecular agents and cell interactions with polymers
CO4 Different types of polymers and their role in Drug delivery
CO5 Biopolymer-based biomaterials as scaffolds and Stem cells in organogenesis

BY1022 RESEARCH METHODOLOGY IN BIOTECHNOLOGY

	L	T	P	C
	3	0	0	3

OBJECTIVES:

- To impart the knowledge of various methods of research strategy
- To understand Biotech research constraints and its analysis
- To emphasise the Creativity, Innovation and New Product Development

UNIT I RESEARCH AND ITS METHODOLOGIES 9

Motivation – Objective and significance of research – Research process – Observation – Axiom – Theory – Experimentation – Types of research (basic, applied, qualitative, quantitative, analytical etc). Features of translational research – Concept of laboratory to market (bench to public) – Industrial R&D.

UNIT II RESEARCH IN BIOTECHNOLOGY 9

Laboratory policy and procedure of academic research – Types of expertise and facilities required. Technology and product transfer research – Grant funding – Sources of literature – Interdisciplinary nature – Collaboration based research.

UNIT III EXPERIMENTAL RESEARCH 9

Research direction – Understanding biotechnology research by experimentation – Strategies for experimentation – Selecting an experimental design – Sample size – Enzymes and enzymatic analysis – Antibodies and immunoassays – Instrumental methods – Bioinformatics and computation

UNIT IV RESULTS AND ANALYSIS 9

Scientific methodology in recording results – Importance of negative results – Ways of recording – Industrial requirement – Artifacts versus true results – Types of analysis (analytical, objective, subjective) and cross verification – Correlation with published results – Discussion – Hypothesis – Concept – Theory and model.

UNIT V PUBLISHING SCIENTIFIC AND TECHNICAL PAPERS 9

Guide to publishing scientific papers – Types of scientific and technical publications in biotechnology – Specifications – Ways to protect intellectual property – Patents – Technical writing skills – Importance of impact factor and citation index.

TOTAL PERIODS: 45

TEXT BOOKS

1. Marczyk, G.R., DeMatteo, D. & Festinger, D. Essentials of Research Design and Methodology, John Wiley & Sons Publishers Inc, 2005.
2. Segel, I.H. Biochemical Calculations: How to Solve Mathematical Problems in General Biochemistry, 2nd Ed., John Wiley & Sons Publishers Inc, 1976.
3. Korner, A.M. Guide to Publishing a Scientific paper, Bioscript Press, 2004.
4. Marczyk,G.R., DeMatteo, D. and Festinger, D., “Essentials of Research Design and Methodology”, John Wiley & Sons Publishers, Inc., 2005.
5. Korner, A.M., “Guide to Publishing a Scientific paper”, Taylor & Francis group, 2008.

REFERENCES:

1. Kothari, C.R., “Research Methodology: Methods and Techniques”, New Age Publications, 2008.
2. Malinowski, M.J. and Arnold, B.E., “Biotechnology: Law, Business and Regulation”, Aspen Publishers, 2004.
3. Haaland, P.D., “Experimental Design in Biotechnology”, Marcel Dekker, 1989.

COURSE OUTCOMES

Upon completion of the course, the students will gain knowledge on

CO1 Types of research and research process

CO2 Biotechnology research planning and execution and result analysis

CO3 Design and Experimentation of Biochemical assays

CO4 Ways of recording, interpreting and analysing results

CO5 Fundamentals of writing and publishing scientific and technical papers

COs	PROGRAM OUTCOMES(POs)										PROGRAMSPECIFIC OUCOMES		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PSO1	PSO2	PSO3
CO1	1	2	2	1	-	-	3	1	3	3	1	2	1
CO2	1	2	2	1	-	-	3	1	3	3	1	2	1
CO3	1	2	2	1	-	-	3	1	3	3	1	2	1
CO4	1	2	2	1	-	-	3	1	3	3	1	2	1
CO5	1	2	2	1	-	-	3	1	3	3	1	2	1

BY1023	BIOFUELS AND PLATFORM CHEMICALS	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To impart the knowledge of Bioconversion of renewable lignocelluloses biomass to biofuel and value added products
- To demonstrate a drive towards products benign to natural environment increasing the importance of renewable materials
- To emphasise the development of Biomass an inexpensive feedstock considered sustainable and renewable to replace a wide diversity of fossil based products

UNIT I INTRODUCTION 9

Cellulosic Biomass availability and its contents. Lignocellulose as a chemical resource. Physical and chemical pretreatment of lignocellulosic biomass. Cellulases and lignin degrading enzymes.

UNIT II ETHANOL 9

Ethanol as transportation fuel and additive; bioethanol production from carbohydrates; engineering strains for ethanol production from variety of carbon sources to improved productivity.

UNIT III BIODIESEL 9

Chemistry and Production Processes; Vegetable oils and chemically processed biofuels; Biodiesel composition and production processes; Biodiesel economics; Energetics of biodiesel production and effects on greenhouse gas emissions. Issues of ecotoxicity and sustainability with ; expanding biodiesel production

UNIT IV OTHER BIOFUELS 9

Biodiesel from microalgae and microbes; biohydrogen production; biorefinery concepts

UNIT V PLATFORM CHEMICALS 9

Case studies on production of C3 to C6 chemicals such as Hydroxy propionic acid, 1,3 propanediol, propionic acid, succinic acid, glucaric acid, cis-cis muconic acid.

TOTAL PERIODS: 45

REFERENCES:

1. Lee, Sunggyu; Shah, Y.T. “Biofuels and Bioenergy”. CRC / Taylor & Francis, 2013

COURSE OUTCOMES

Upon completion of the course, the students will gain knowledge on

CO1 Bioconversion of renewable lignocelluloses biomass to biofuel and value added products

CO2 Production of Biothanol as sustainable and renewable energy

CO3 Production of Biodiesel and its economics

CO4 Other alternate energy sources such as biohydrogen and bio refinery

CO5 Synthesis of various Platform chemicals

OPEN ELECTIVES COURSES (OEC)

OCP101	BUSINESS DATA ANALYTICS	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To understand the basics of business analytics and its life cycle.
- To gain knowledge about fundamental business analytics.
- To learn modeling for uncertainty and statistical inference.
- To understand analytics using Hadoop and Map Reduce frameworks.
- To acquire insight on other analytical frameworks.

UNIT - I OVERVIEW OF BUSINESS ANALYTICS 9

Introduction – Drivers for Business Analytics – Applications of Business Analytics: Marketing and Sales, Human Resource, Healthcare, Product Design, Service Design, Customer Service and Support – Skills Required for a Business Analyst – Framework for Business Analytics Life Cycle for Business Analytics Process.

Suggested Activities:

- Case studies on applications involving business analytics.
- Converting real–time decision–making problems into hypothesis.
- Group discussion on entrepreneurial opportunities in Business Analytics.

Suggested Evaluation Methods:

- Assignment on business scenario and business analytical life cycle process.
- Group presentation on big data applications with societal need.
- Quiz on case studies.

UNIT - II ESSENTIALS OF BUSINESS ANALYTICS 9

Descriptive Statistics – Using Data – Types of Data – Data Distribution Metrics: Frequency, Mean, Median, Mode, Range, Variance, Standard Deviation, Percentile, Quartile, Z–Score, Covariance, Correlation – Data Visualization: Tables, Charts, Line Charts, Bar and Column Chart, Bubble Chart, Heat Map – Data Dashboards.

Suggested Activities:

- Solve numerical problems on basic statistics.
- Explore chart wizard in MS Excel Case using sample real time data for data visualization.
- Use R tool for data visualization.

Suggested Evaluation Methods:

- Assignment on descriptive analytics using benchmark data.
- Quiz on data visualization for univariate, bivariate data.
-

UNIT - III MODELING UNCERTAINTY AND STATISTICAL INFERENCE 9

Modeling Uncertainty: Events and Probabilities – Conditional Probability – Random Variables – Discrete Probability Distributions – Continuous Probability Distribution – Statistical Inference: Data Sampling – Selecting a Sample – Point Estimation – Sampling Distributions – Interval Estimation – Hypothesis Testing.

Suggested Activities:

- Solving numerical problems in sampling, probability, probability distributions and

- Hypothesis testing.
- Converting real–time decision–making problems into hypothesis.

Suggested Evaluation Methods:

- Assignments on hypothesis testing.
- Group presentation on real time applications involving data sampling and hypothesis testing.
- Quizzes on topics like sampling and probability.

UNIT - IV ANALYTICS USING HADOOP AND MAPREDUCE FRAMEWORK 9

Introducing Hadoop – RDBMS versus Hadoop – Hadoop Overview – HDFS (Hadoop Distributed File System) – Processing Data with Hadoop – Introduction to MapReduce – Features of MapReduce – Algorithms Using Map–Reduce: Matrix–Vector Multiplication, Relational Algebra Operations, Grouping and Aggregation – Extensions to MapReduce.

Suggested Activities:

- Practical – Install and configure Hadoop.
- Practical – Use web–based tools to monitor Hadoop setup.
- Practical – Design and develop MapReduce tasks for word count, searching involving text corpus etc.

Suggested Evaluation Methods:

- Evaluation of the practical implementations.
- Quizzes on topics like HDFS and extensions to MapReduce.

UNIT - V OTHER DATA ANALYTICAL FRAMEWORKS 9

Overview of Application development Languages for Hadoop – PigLatin – Hive – Hive Query Language (HQL) – Introduction to Pentaho, JAQL – Introduction to Apache: Sqoop, Drill and Spark, Cloudera Impala – Introduction to NoSQL Databases – Hbase and MongoDB.

Suggested Activities:

- Practical – Installation of NoSQL database like MongoDB.
- Practical – Demonstration on Sharding in MongoDB.
- Practical – Install and run Pig
- Practical – Write PigLatin scripts to sort, group, join, project, and filter data.
- Design and develop algorithms to be executed in MapReduce involving numerical methods for analytics.

Suggested Evaluation Methods:

Mini Project (Group) – Real time data collection, saving in NoSQL, implement analytical techniques using Map–Reduce Tasks and Result Projection

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, the students will gain knowledge on

CO1	Identify the real–world business problems and model with analytical solutions.
CO2	Solve analytical problem with relevant mathematics background knowledge.
CO3	Convert any real–world decision–making problem to hypothesis and apply suitable statistical testing.
CO4	Write and demonstrate simple applications involving analytics using Hadoop and MapReduce
CO5	Use open–source frameworks for modeling and storing data and apply suitable visualization technique using R for visualizing voluminous data

COs	PROGRAM OUTCOMES(POs)										PROGRAMSPECIFIC OUCOMES

OMF101	INDUSTRIAL SAFETY	L	T	P	C
		3	0	0	3

OBJECTIVES:

- Summarize basics of industrial safety
- Describe fundamentals of maintenance engineering
- Explain wear and corrosion
- Illustrate fault tracing
- Identify preventive and periodic maintenance

UNIT - I INTRODUCTION 9

Accident, causes, types, results and control, mechanical and electrical hazards, types, causes and preventive steps/procedure, describe salient points of factories act 1948 for health and safety, wash rooms, drinking water layouts, light, cleanliness, fire, guarding, pressure vessels, etc, Safety color codes. Fire prevention and firefighting, equipment and methods.

UNIT - II FUNDAMENTALS OF MAINTENANCE ENGINEERING 9

Definition and aim of maintenance engineering, Primary and secondary functions and responsibility of maintenance department, Types of maintenance, Types and applications of tools used for maintenance, Maintenance cost & its relation with replacement economy, Service life of equipment

UNIT - III **WEAR AND CORROSION AND THEIR PREVENTION** **9**

Wear- types, causes, effects, wear reduction methods, lubricants-types and applications, Lubrication methods, general sketch, working and applications, i. Screw down grease cup, ii. Pressure grease gun, iii. Splash lubrication, iv. Gravity lubrication, v. Wick feed lubrication vi. Side feed lubrication, vii. Ring lubrication, Definition, principle and factors affecting the corrosion. Types of corrosion, corrosion prevention methods.

UNIT - IV **FAULT TRACING** **9**

Fault tracing-concept and importance, decision tree concept, need and applications, sequence of fault finding activities, show as decision tree, draw decision tree for problems in machine tools, hydraulic, pneumatic, automotive, thermal and electrical equipment's like, i. Any one machine tool, ii. Pump iii. Air compressor, iv. Internal combustion engine, v. Boiler, vi. Electrical motors, Types of faults in machine tools and their general causes.

UNIT - V **PERIODIC AND PREVENTIVE MAINTENANCE** **9**

Periodic inspection-concept and need, degreasing, cleaning and repairing schemes, overhauling of mechanical components, overhauling of electrical motor, common troubles and remedies of electric motor, repair complexities and its use, definition, need, steps and advantages of preventive maintenance. Steps/procedure for periodic and preventive maintenance of: i. Machine tools, ii. Pumps, iii. Air compressors, iv. Diesel generating (DG) sets, Program and schedule of preventive maintenance of mechanical and electrical equipment, advantages of preventive maintenance. Repair cycle concept and importance

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, the students will gain knowledge on

CO1 Basics of industrial safety

CO2 Fundamentals of maintenance engineering and its tools and applications

CO3 Wear and corrosion, its types and preventive methods

CO4 Illustration of fault tracing and its concepts

CO5 Identification of preventive and periodic maintenance of various equipments

OPE101	RENEWABLE SOURCES OF ELECTRICAL ENERGY	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To understand the energy scenario and various energy sources.
- To learn the solar photovoltaic and solar thermal systems.
- To impart knowledge on wind energy and bio-mass energy conversion systems.
- To provide knowledge about the Geothermal and Ocean energy conversion system.
- To design and implement hybrid energy conversion system.

UNIT I INTRODUCTION 9

Renewable energy sources and its energy scenario - global and Indian; Environmental aspects and impacts of renewable energy generation on environment; Types of Renewable energy sources: solar - wind - Biomass - Ocean - Tidal - Geothermal and Fuel cell.

UNIT II SOLAR ENERGY SYSTEMS 9

Solar radiation at the earth's surface - solar radiation measurements - estimation of average solar radiation - Introduction to Solar photo-voltaic (PV) system and Solar - thermal system; Equivalent circuit of a solar cell, solar array and its sizing. Solar thermal collectors: flat plate collectors - concentrating collectors; solar thermal applications - heating, cooling, desalination, drying, cooking - solar thermal electric power plant.

UNIT III WIND ENERGY AND BIO-MASS ENERGY 9

Wind Sources: horizontal and vertical axis wind turbine - performance characteristics - types of wind turbine generators - Betz criteria; Bio-mass: Principles of Bio-Conversion - Anaerobic/aerobic digestion - types of Bio-gas digesters - gas yield - combustion characteristics of bio-gas - utilization for cooking.

UNIT IV GEOTHERMAL AND OCEAN ENERGY 9

Geothermal: Resources - types of wells - methods of harnessing the energy. Ocean Energy: OTEC-Principles, utilization - setting of OTEC plants - thermodynamic cycles. Tidal and wave energy: Potential and conversion techniques - mini-hydro power plants and their economics.

UNIT V HYBRID RENEWABLE ENERGY SYSTEMS 9

Need for Hybrid Systems - Types of Hybrid systems - Case studies of solar and Wind.

TOTAL PERIODS: 45

7. J. A. Duffie and W. A. Beckman, Solar Engineering of Thermal Processes‟, Wiley & Sons, 1990

COURSE OUTCOMES

Upon completion of the course, the students will

CO1	Understand the energy scenario and the various sources of non-conventional energy sources.
CO2	Learn the physics of solar energy and to understand the solar photovoltaic, solar-thermal energy conversion system.
CO3	Acquire knowledge in wind and bio-mass energy conversion system.
CO4	Acquire knowledge in Geothermal and Ocean energy conversion system.
CO5	Design and implement hybrid energy systems.

OMB103 COST MANAGEMENT OF ENGINEERING PROJECTS

	L	T	P	C
	3	0	0	3

OBJECTIVES:

- Summarize the costing concepts and their role in decision making
- Infer the project management concepts and their various aspects in selection
- Interpret costing concepts with project execution
- Develop knowledge of costing techniques in service sector and various budgetary control techniques
- Illustrate with quantitative techniques in cost management

UNIT - I INTRODUCTION TO COSTING CONCEPTS 9

Objectives of a Costing System; Cost concepts in decision-making; Relevant cost, Differential cost, Incremental cost and Opportunity cost; Creation of a Database for operational control.

UNIT - II INTRODUCTION TO PROJECT MANAGEMENT 9

Project: meaning, Different types, why to manage, cost overruns centres, various stages of project execution: conception to commissioning. Project execution as conglomeration of technical and nontechnical activities, Detailed Engineering activities, Pre project execution main clearances and documents, Project team: Role of each member, Importance Project site: Data required with significance, Project contracts.

UNIT - III PROJECT EXECUTION AND COSTING CONCEPTS 9

Project execution Project cost control, Bar charts and Network diagram, Project commissioning: mechanical and process, Cost Behavior and Profit Planning Marginal Costing; Distinction between Marginal Costing and Absorption Costing; Break-even Analysis, Cost-Volume-Profit Analysis, Various decision-making problems, Pricing strategies: Pareto Analysis, Target costing, Life Cycle Costing.

UNIT - IV COSTING OF SERVICE SECTOR AND BUDGETERY CONTROL 9

Just-in-time approach, Material Requirement Planning, Enterprise Resource Planning, Activity- Based Cost Management, Bench Marking; Balanced Score Card and Value-Chain Analysis, Budgetary Control: Flexible Budgets; Performance budgets; Zero-based budgets.

UNIT - V QUANTITATIVE TECHNIQUES FOR COST MANAGEMENT 9

Linear Programming, PERT/CPM, Transportation problems, Assignment problems, Learning Curve Theory

TOTAL PERIODS: 45

REFERENCES:

1. Ashish K. Bhattacharya, Principles & Practices of Cost Accounting A. H. Wheeler publisher, 1991
2. Charles T. Horngren and George Foster, Advanced Management Accounting, 1988

4. Robert S Kaplan Anthony A. Alkinson, Management & Cost Accounting, 2003

5. Vohra N.D., Quantitative Techniques in Management, Tata McGraw Hill Book Co. Ltd, 2007

COURSE OUTCOMES

Upon completion of the course, the students will gain knowledge on

CO1	Understand the costing concepts and their role in decision making
CO2	Understand the project management concepts and their various aspects in selection
CO3	Interpret costing concepts with project execution
CO4	Gain knowledge of costing techniques in service sector and various budgetary control techniques
CO5	Become familiar with quantitative techniques in cost management

COs	PROGRAM OUTCOMES(POs)										PROGRAMSPECIFIC OUCOMES

CO5	1	2	-	1	-	1	1	1	1	1	1	1	2

OMF102	COMPOSITE MATERIALS	L	T	P	C
		3	0	0	3

OBJECTIVES:

- Summarize the characteristics of composite materials and effect of reinforcement in composite materials.
- Identify the various reinforcements used in composite materials.
- Compare the manufacturing process of metal matrix composites.
- Understand the manufacturing processes of polymer matrix composites.
- Analyze the strength of composite materials

UNIT - I INTRODUCTION 9

Definition – Classification and characteristics of Composite materials - Advantages and application of composites - Functional requirements of reinforcement and matrix - Effect of reinforcement (size, shape, distribution, volume fraction) on overall composite performance.

UNIT - II REINFORCEMENTS 9

Preparation-layup, curing, properties and applications of glass fibers, carbon fibers, Kevlar fibers and Boron fibers - Properties and applications of whiskers, particle reinforcements - Mechanical Behavior of composites: Rule of mixtures, Inverse rule of mixtures - Isostrain and Isostress conditions.

UNIT - III MANUFACTURING OF METAL MATRIX COMPOSITES 9

Casting – Solid State diffusion technique - Cladding – Hot isostatic pressing - Properties and applications. Manufacturing of Ceramic Matrix Composites: Liquid Metal Infiltration – Liquid phase sintering. Manufacturing of Carbon – Carbon composites: Knitting, Braiding, Weaving - Properties and applications

UNIT - IV MANUFACTURING OF POLYMER MATRIX COMPOSITES 9

Preparation of Moulding compounds and prepregs – hand layup method – Autoclave method –Filament winding method – Compression moulding – Reaction injection moulding - Properties and applications

UNIT – V STRENGTH 9

Laminar Failure Criteria-strength ratio, maximum stress criteria, maximum strain criteria, interacting failure criteria, hygrothermal failure. Laminate first play failure-insight strength; Laminate strength-ply discount truncated maximum strain criterion; strength design using caplet plots; stress concentrations

TOTAL PERIODS: 45

3. Chawla K.K., Composite Materials, 2013.
4. Lubin.G, Hand Book of Composite Materials, 2013.

COURSE OUTCOMES

Upon completion of the course, the students will

CO1	Know the characteristics of composite materials and effect of reinforcement in composite materials.
CO2	Know the various reinforcements used in composite materials.
CO3	Understand the manufacturing processes of metal matrix composites.
CO4	Understand the manufacturing processes of polymer matrix composites.
CO5	Analyze the strength of composite materials.

OCH105 **WASTE TO ENERGY**

L	T	P	C
3	0	0	3

OBJECTIVES:

- Interpret the various types of wastes from which energy can be generated
- Develop knowledge on biomass pyrolysis process and its applications
- Develop knowledge on various types of biomass gasifiers and their operations
- Invent knowledge on biomass combustors and its applications on generating energy
- Summarize the principles of bio-energy systems and their features

UNIT - I INTRODUCTION TO EXTRACTION OF ENERGY FROM WASTE 9

Classification of waste as fuel – Agro based, Forest residue, Industrial waste - MSW – Conversion devices – Incinerators, gasifiers, digestors

UNIT - II BIOMASS PYROLYSIS 9

Pyrolysis – Types, slow fast – Manufacture of charcoal – Methods - Yields and application – Manufacture of pyrolytic oils and gases, yields and applications.

UNIT - III BIOMASS GASIFICATION 9

Biomass stoves – Improved chullahs, types, some exotic designs, Fixed bed combustors, Types, inclined grate combustors, Fluidized bed combustors, Design, construction and operation - Operation of all the above biomass combustors

UNIT - IV BIOMASS COMBUSTION 9

Biomass stoves – Improved chullahs, types, some exotic designs, Fixed bed combustors, Types, inclined grate combustors, Fluidized bed combustors, Design, construction and operation - Operation of all the above biomass combustors.

UNIT - V BIO ENERGY 9

Properties of biogas (Calorific value and composition), Biogas plant technology and status - Bio energy system - Design and constructional features - Biomass resources and their classification - Biomass conversion processes - Thermo chemical conversion - Direct combustion - biomass gasification - pyrolysis and liquefaction - biochemical conversion - anaerobic digestion - Types of biogas Plants – Applications - Alcohol production from biomass - Bio diesel production -Urban waste to energy conversion - Biomass energy programme in India.

TOTAL PERIODS: 45

TEXT BOOKS

1. Biogas Technology - A Practical Hand Book - Khandelwal, K. C. and Mahdi, S. S., Vol. I & II, Tata McGraw Hill Publishing Co. Ltd., 1983.
2. Biomass Conversion and Technology, C. Y. WereKo-Brobby and E. B. Hagan, John Wiley & Sons, 1996.

1. Food, Feed and Fuel from Biomass, Challal, D. S., IBH Publishing Co. Pvt. Ltd., 1991.
2. Non-Conventional Energy, Desai, Ashok V., Wiley Eastern Ltd., 1990.

COURSE OUTCOMES

Upon completion of the course, the students will be able

CO1 To understand the various types of wastes from which energy can be generated

CO2 To gain knowledge on biomass pyrolysis process and its applications

CO3 To develop knowledge on various types of biomass gasifiers and their operations

CO4 To gain knowledge on biomass combustors and its applications on generating energy

CO5 To understand the principles of bio-energy systems and their features

AUDIT COURSES

AX1001	**ENGLISH FOR RESEARCH PAPER WRITING**	**L**	**T**	**P**	**C**
		2	**0**	**0**	**0**

OBJECTIVES:

- Teach how to improve writing skills and level of readability
- Tell about what to write in each section
- Summarize the skills needed when writing a Title
- Infer the skills needed when writing the Conclusion
- Ensure the quality of paper at very first-time submission.

UNIT I: INTRODUCTION TO RESEARCH PAPER WRITING 6

Planning and Preparation, Word Order, Breaking up long sentences, Structuring Paragraphs and Sentences, Being Concise and Removing Redundancy, Avoiding Ambiguity and Vagueness.

UNIT II: PRESENTATION SKILLS 6

Clarifying Who Did What, Highlighting Your Findings, Hedging and Criticizing, Paraphrasing and Plagiarism, Sections of a Paper, Abstracts, Introduction.

UNIT III: TITLE WRITING SKILLS 6

Key skills are needed when writing a Title, key skills are needed when writing an Abstract, key skills are needed when writing an Introduction, skills needed when writing a Review of the Literature, Methods, Results, Discussion, Conclusions, The Final Check.

UNIT IV: RESULT WRITING SKILLS 6

Skills are needed when writing the Methods, skills needed when writing the Results, skills are needed when writing the Discussion, skills are needed when writing the Conclusions.

UNIT V: VERIFICATION SKILLS 6

Useful phrases, checking Plagiarism, how to ensure paper is as good as it could possibly be the first- time submission.

TOTAL PERIODS: 30

REFERENCES:

1. Adrian Wallwork , English for Writing Research Papers, Springer New York Dordrecht Heidelberg London,2011
2. Day R How to Write and Publish a Scientific Paper, Cambridge University Press2006
3. Goldbort R Writing for Science, Yale University Press (available on Google Books)2006.
4. Highman N, Handbook of Writing for the Mathematical Sciences, SIAM. Highman's book1998.

COURSE OUTCOMES

Upon completion of the course, the students will gain knowledge on

CO1 Understand that how to improve your writing skills and level of readability

CO2 Learn about what to write in each section

CO3 Understand the skills needed when writing a Title

CO4 Understand the skills needed when writing the Conclusion

CO5 Ensure the good quality of paper at very first-time submission

AX1002	**DISASTER MANAGEMENT**	**L**	**T**	**P**	**C**
		2	**0**	**0**	**0**

OBJECTIVES:

- Summarize basics of disaster
- Explain a critical understanding of key concepts in disaster risk reduction and humanitarian response.
- Illustrate disaster risk reduction and humanitarian response policy and practice from multiple perspectives.
- Describe an understanding of standards of humanitarian response and practical relevance in specific types of disasters and conflictsituations.
- Develop the strengths and weaknesses of disaster managementapproaches

UNIT I: INTRODUCTION 6

Disaster: Definition, Factors and Significance; Difference between Hazard And Disaster; Natural and Manmade Disasters: Difference, Nature, Types and Magnitude.

UNIT II: REPERCUSSIONS OF DISASTERS AND HAZARDS 6

Economic Damage, Loss of Human and Animal Life, Destruction Of Ecosystem. Natural Disasters: Earthquakes, Volcanisms, Cyclones, Tsunamis, Floods, Droughts And Famines, Landslides And Avalanches, Man-made disaster: Nuclear Reactor Meltdown, Industrial Accidents, Oil Slicks And Spills, Outbreaks Of Disease And Epidemics, War And Conflicts.

UNIT III: DISASTER PRONE AREAS IN INDIA 6

Study of Seismic Zones; Areas Prone To Floods and Droughts, Landslides And Avalanches; Areas Prone To Cyclonic and Coastal Hazards with Special Reference To Tsunami; Post-Disaster Diseases and Epidemics

UNIT IV: DISASTER PREPAREDNESS AND MANAGEMENT 6

Preparedness: Monitoring Of Phenomena Triggering a Disaster or Hazard; Evaluation of Risk: Application of Remote Sensing, Data from Meteorological And Other Agencies, Media Reports: Governmental and Community Preparedness.

UNIT V: RISK ASSESSMENT 6

Disaster Risk: Concept and Elements, Disaster Risk Reduction, Global and National Disaster Risk Situation. Techniques of Risk Assessment, Global Co-Operation in Risk Assessment and Warning, People's Participation in Risk Assessment. Strategies for Survival.

TOTAL PERIODS: 30

3. Sahni, PardeepEt.Al. ," Disaster Mitigation Experiences And Reflections", Prentice Hall OfIndia, New Delhi,2001.

COURSE OUTCOMES

Upon completion of the course, the students will have an

CO1	Ability to summarize basics of disaster
CO2	Ability to explain a critical understanding of key concepts in disaster risk reduction and humanitarian response.
CO3	Ability to describe an understanding of standards of humanitarian response and practical relevance in specific types of disasters and conflict situations.
CO4	Ability to describe an understanding of standards of humanitarian response and practical relevance in specific types of disasters and conflict situations.
CO5	Ability to develop the strengths and weaknesses of disaster management approaches

AX1003	**VALUE EDUCATION**	**L**	**T**	**P**	**C**
		2	**0**	**0**	**0**

OBJECTIVES:

Students will be able to

- Understand value of education and self-development
- Imbibe good values in students
- Let the should know about the importance of character

UNIT I:

Values and self-development–Social values and individual attitudes. Work ethics, Indian vision of humanism. Moral and non-moral valuation. Standards and principles. Value judgements

UNIT II:

Importance of cultivation of values. Sense of duty. Devotion, Self-reliance. Confidence, Concentration. Truthfulness, Cleanliness. Honesty, Humanity. Power of faith, National Unity. Patriotism. Love for nature, Discipline

UNIT III:

Personality and Behavior Development-Soul and Scientific attitude. Positive Thinking. Integrity and discipline. Punctuality, Love and Kindness. Avoid fault Thinking. Free from anger, Dignity of labour.Universal brother hood and religious tolerance. True friendship. Happiness Vs suffering, love for truth. Aware of self-destructive habits. Association and Cooperation. Doing best for saving nature

UNIT IV:

Character and Competence–Holy books vs Blind faith. Self-management and Good health. Science of reincarnation. Equality, Nonviolence, Humility, Role of Women. All religions and same message. Mind your Mind, Self-control. Honesty, Studying effectively.

TOTAL PERIODS: 30

REFERENCES:

1. Chakroborty, S.K.“Values and Ethics for organizations Theory and practice”, Oxford University Press, NewDelhI

COURSE OUTCOMES

Upon completion of the course, the students will

CO1 Knowledge of self-development.

CO2 Learn the importance of Human values.

CO3 Developing the overall personality

AX1004	**CONSTITUTION OF INDIA**	**L**	**T**	**P**	**C**
		2	**0**	**0**	**0**

OBJECTIVES:

Students will be able to:

- Understand the premises informing the twin themes of liberty and freedom from a civil rights perspective.
- To address the growth of Indian opinion regarding modern Indian intellectuals’ constitutional
- Role and entitlement to civil and economic rights as well as the emergence nation hood in the early years of Indian nationalism.
- To address the role of socialism in India after the commencement of the Bolshevik revolution in 1917and its impact on the initial drafting of the Indian Constitution.

UNIT I: HISTORY OF MAKING OF THE INDIAN CONSTITUTION

History, Drafting Committee, (Composition & Working).

UNIT II: PHILOSOPHY OF THE INDIAN CONSTITUTION

Preamble, Salient Features.

UNIT III: CONTOURS OF CONSTITUTIONAL RIGHTS AND DUTIES

Fundamental Rights, Right to Equality, Right to Freedom, Right against Exploitation, Right to Freedom of Religion, Cultural and Educational Rights, Right to Constitutional Remedies, Directive Principles of State Policy, Fundamental Duties

UNIT IV: ORGANS OF GOVERNANCE

Parliament, Composition, Qualifications and Disqualifications, Powers and Functions, Executive, President, Governor, Council of Ministers, Judiciary, Appointment and Transfer of Judges, Qualifications, Powers and Functions.

UNIT V: LOCAL ADMINISTRATION

District's Administration head: Role and Importance Municipalities: Introduction, Mayor and role of Elected Representative, CEO, Municipal Corporation. Pachayati raj: Introduction, PRI: Zila Pachayat. Elected officials and their roles, CEO Zila Pachayat: Position and role. Block level: Organizational Hierarchy(Different departments), Village level:Role of Elected and Appointed officials, Importance of grass root democracy.

UNIT VI: ELECTION COMMISSION

Election Commission: Role and Functioning. Chief Election Commissioner and ElectionCommissioners - Institute and Bodies for the welfare of SC/ST/OBC and women

TOTAL PERIODS 30

REFERENCES:

1. The Constitution of India,1950(Bare Act),GovernmentPublication.
2. Dr.S.N.Busi, Dr.B. R.Ambedkar framing of Indian Constitution,1st Edition,2015.
3. M.P. Jain, Indian Constitution Law, 7th Edn., LexisNexis,2014.
4. D.D. Basu, Introduction to the Constitution of India, Lexis Nexis,2015.

COURSE OUTCOMES

Upon completion of the course, the students will gain knowledge on

CO1	Discuss the growth of the demand for civil rights in India for the bulk of Indians before the arrival of Gandhi in Indian politics.
CO2	Discuss the intellectual origins of the framework of argument that informed the conceptualizationof social reforms leading to revolution in India..
CO3	Discuss the circumstances surrounding the foundation of the Congress Socialist Party[CSP] under the leadership of Jawaharlal Nehru and the eventual failure of the proposal of direct elections through adult suffrage in the Indian Constitution.
CO4	Discuss the passage of the Hindu Code Bill of 1956.

AX1005 **PEDAGOGY STUDIES**

	L	T	P	C
	2	0	0	0

OBJECTIVES:

Students will be able to:

- Review existing evidence on there view topic to inform programme design and policy
- Making under taken by the DfID, other agencies and researchers.
- Identify critical evidence gaps to guide the development

UNIT I: INTRODUCTION AND METHODOLOGY **9**

Aims and rationale, Policy background, Conceptual framework and terminology - Theories of learning, Curriculum, Teacher education - Conceptual framework, Research questions **-** Overview of methodology and Searching.

UNIT II: THEMATIC OVERVIEW **9**

Pedagogical practices are being used by teachers in formal and informal classrooms in developing countries - Curriculum, Teacher education.

UNIT III: EVIDENCE ON THE EFFECTIVENESS OF PEDAGOGICAL PRACTICES **9**

Study of Seismic Zones; Areas Prone To Floods and Droughts, Landslides And Avalanches; Areas Prone To Cyclonic and Coastal Hazards with Special Reference To Tsunami; Post-Disaster Diseases and Epidemics

UNIT IV: PROFESSIONAL DEVELOPMENT **9**

Professional development: alignment with classroom practices and follow up support - Peer support - Support from the head teacher and the community - Curriculum and assessment - Barriers to learning: limited resources and large class sizes.

UNIT V: RESEARCH GAPS AND FUTURE DIRECTIONS **9**

Research design – Contexts – Pedagogy - Teacher education - Curriculum and assessment - Dissemination and research impact.

COURSE OUTCOMES

Upon completion of the course, the students will gain knowledge on

CO1	What pedagogical practices are being used by teachers informal and informal classrooms in developing countries?
CO2	What is the evidence on the effectiveness of these pedagogical practices, in what conditions, and with what population oflearners?
CO3	How can teacher education (curriculum and practicum) and the school curriculum and guidance materials best support effectivepedagogy?

AX1006	**STRESS MANAGEMENT BY YOGA**	**L**	**T**	**P**	**C**
		2	**0**	**0**	**0**

OBJECTIVES:

- To achieve overall health of body and mind
- To overcome stress

UNIT I: 10

Definitions of Eight parts of yoga.(Ashtanga)

UNIT II: 10

Yam and Niyam - Do`s and Don't's in life - i) Ahinsa, satya, astheya, bramhacharya and aparigraha, ii) Ahinsa, satya, astheya, bramhacharya and aparigraha.

UNIT III: 10

Asan and Pranayam - Various yog poses and their benefits for mind & body - Regularization of breathing techniques and its effects-Types of pranayam

TOTAL PERIODS: 30

REFERENCES:

1. Yogic Asanas for Group Tarining-Part-I":Janardan Swami Yoga bhyasi Mandal, Nagpur
2. "Rajayoga or conquering the Internal Nature" by Swami Vivekananda, Advaita Ashrama (Publication Department), Kolkata

COURSE OUTCOMES

Upon completion of the course, the students will gain knowledge on

CO1	Develop healthy mind in a healthy body thus improving social health
CO2	Also Improve efficiency.

AX1007	**PERSONALITY DEVELOPMENT THROUGHLIFE ENLIGHTENMENT SKILLS**	**L**	**T**	**P**	**C**
		2	**0**	**0**	**0**

OBJECTIVES:

- To learn to achieve the highest goalhappily
- To become a person with stable mind, pleasing personality and determination
- To awaken wisdom instudents

UNIT I: 10

Neetisatakam-holistic development of personality - Verses- 19,20,21,22 (wisdom) - Verses- 29,31,32 (pride & heroism) – Verses- 26,28,63,65 (virtue) - Verses- 52,53,59 (dont's) - Verses- 71,73,75,78 (do's)

UNIT II: 10

Approach to day to day work and duties - Shrimad Bhagwad Geeta: Chapter 2-Verses 41, 47,48 - Chapter 3-Verses 13, 21, 27, 35 Chapter 6-Verses 5,13,17,23, 35 - Chapter 18-Verses 45, 46, 48.

UNIT III: 10

Statements of basic knowledge - Shrimad Bhagwad Geeta: Chapter2-Verses 56, 62, 68Chapter 12 - Verses 13, 14, 15, 16,17, 18 - Personality of role model - shrimad bhagwad geeta - Chapter2-Verses 17,Chapter 3-Verses 36,37,42 - Chapter 4-Verses 18, 38,39 Chapter18 – Verses 37,38,63.

2. Swami Swarupananda , Srimad Bhagavad Gita, Advaita Ashram, Publication Department, Kolkata, 2016.

COURSE OUTCOMES

Upon completion of the course, the students will gain knowledge on

CO1	Study of Shrimad-Bhagwad-Geeta will help the student in developing his personality and achieve the highest goal in life
CO2	The person who has studied Geeta will lead the nation and mankind to peace and prosperity
CO3	Study of Neet is hatakam will help in developing versatile personality of students.

AX1008 **UNNAT BHARAT ABHIYAN**

L	T	P	C
2	0	0	0

Objectives

- To engage the students in understanding rural realities
- To identify and select existing innovative technologies, enable customization of technologies, or devise implementation method for innovative solutions, as per the local needs.
- To leverage the knowledge base of the institutions to devise processes for effective implementation of various government programmes
- To understand causes for rural distress and poverty and explore solutions for the same
- To apply classroom knowledge of courses to field realities and thereby improve quality of learning

UNIT - I QUALITY OF RURAL LIFE IN VILLAGES AND UNNAT BHARAT ABHIYAN 9

Introduction to Unnat Bharat Abhiyan - concept, scope and objectives, rural life, rural society, cast and gender relations, rural values with respect to community, nature and resources, elaboration of "Soul of India lies in villages" – (Gandhi Ji), Rural infrastructure, problems in rural area.

Assignment: Prepare a map (Physical , visual and digital) of the village you visited and write an essay about inter-family relation in that village.

UNIT - II RURAL ECONOMY AND LIVELIHOOD 9

Agriculture, farming, land ownership pattern, water management, animal husbandry, non-farm livelihoods and artisans, rural entrepreneurs, rural market .

Assignment: Describe your analysis of rural household economy, it's challenges and possible pathways to address them. Group discussion in class- (4) Field visit 3.

UNIT - III RURAL INSTITUTIONS 9

History of Rural Development, Traditional rural organizations, Self Help Groups, Gram Swaraj and 3- Tier Panchayat Raj Institutions (Gram Sabha, Gram Panchayat, Standing Committee), local civil society, local administration. Introduction to Constitution, Constitutional Amendments in Panchayati Raj – Fundamental Rights and Directive Principles.

Assignment: Panchayati Raj institutions in villages? What would you suggest to improve their effectiveness? Present a case study (written or audio-visual). Field Visit – 4.

UNIT - IV RURAL DEVELOPMENT PROGRAMMES 9

National programmes - Sarva Shiksha Abhiyan, Beti Bachao, Beti Padhao, Ayushman Bharat, Swatchh Bharat, PM Awass Yojana, Skill India, Gram Panchayat Decentralised Planning, NRLM, MNREGA, etc.

Written Assignment: Describe the benefits received and challenges faced in the delivery of one of these programmes in the rural community, give suggestions about improving implementation of the programme for the rural poor.

UNIT - V FIELD WORK **9**

Each student selects one programme for field visit Field based practical activities:

- Interaction with SHG women members, and study of their functions and challenges; planning for their skill building and livelihood activities
- Visit MGNREGS project sites, interact with beneficiaries and interview functionaries at the work site
- Field visit to Swachh Bharat project sites, conduct analysis and initiate problem solving measures
- Conduct Mission Antyodaya surveys to support under Gram Panchayat Development Plan(GPDP)
- Interactive community exercise with local leaders, panchayat functionaries, grass-root officials and local institutions regarding village development plan preparation and resource mobilization
- Visit Rural Schools I mid-day meal centres, study Academic and infrastructural resources and gaps
- Participate in Gram Sabha meetings, and study community participation
- Associate with Social audit exercises at the Gram Panchayat level, and interact with programme beneficiaries
- Attend Parent Teacher Association meetings, and interview school drop outs
- Visit local Anganwadi Centre and observe the services being provided
- Visit local NGOs, civil society organisations and interact with their staff and beneficiaries.
- Organize awareness programmes, health camps, Disability camps and cleanliness camps o Conduct soil health test, drinking water analysis, energy use and fuel efficiency surveys
- Raise understanding of people's impacts of climate change, building up community's disaster preparedness
- Organise orientation programmes for farmers regarding organic cultivation, rational use of irrigation and fertilizers and promotion of traditional species of crops and plants
- Formation of committees for common property resource management, village pond maintenance and fishing.

Total Periods: 45

TEXT BOOKS:

1. Singh, Katar, Rural Development Principles, Policies and Management, Sage Publications, New Delhi, 2015
2. A Hand book on Village Panchayat Administration, Rajiv Gandhi Chair for Panchayati Raj Studies, 2002
3. United Nations, Sustainable Development Goals, 2015 un.org/sdgs

REFERENCE BOOKS:

1. M.P.Boraian, Best Practices in Rural Development, Shanlax Publishers
2. Unnat Bharat Abhiyan Website : www.unnatbharatabhiyan.gov.in

COURSE OUTCOMES

Upon completion of the course, the students will be able to

CO1 Understand of rural life, culture and social realities

CO2 Understand the concept of measurement by comparison or balance of parameters.

CO3 Develop a sense of empathy and bonds of mutuality with local community

CO4 Appreciate significant contributions of local communities to Indian society and economy

CO5 Value the local knowledge and wisdom of the community

CO6 Understand of rural life, culture and social realities

St. JOSEPH'S COLLEGE OF ENGINEERING

(An Autonomous Institution)

St. Joseph's Group of Institutions

OMR, Chennai - 119

DEPARTMENT OF BIOTECHNOLOGY

REGULATIONS 2021

(Approved for the students admitted in the Batch 2021 – 2025)

B.TECH BIOTECHNOLOGY

CHOICE BASED CREDIT SYSTEM

VISION AND MISSION OF THE DEPARTMENT

Vision of the Department

- To provide a world class department to facilitate learning, training, and research in Biotechnology by providing infrastructural facilities and competent faculty leading to technological innovations to serve the global society.

Mission of the Department

- The Mission of the Department is to provide quality education to students and to produce competent Biotechnologists to meet the challenges faced by industry and mankind.
- To inculcate high moral, ethical & professional standards among our students.
- To develop the overall personality of the students.

PROGRAM EDUCATIONAL OBJECTIVES (PEOs)

The primary objective of the Bachelor of Biotechnology program is to prepare professionals with the skills required to work in the Biotechnology industry with particular emphasis on the engineering aspects of manufacturing and design.

Biotech Graduates are trained to

I. To provide the necessary background in basic sciences like physics, chemistry, Computers, and advanced mathematics and to provide opportunities for students to gain knowledge in multidisciplinary subjects and labs.

II. To provide training to design and solve problems relevant to the general practice of Biotechnological process development, product optimization, commercialization, and social application taking into account their impacts on the environment.

III. To impart job-related skills in the field of biotechnology with an awareness of professional codes and bioethical practices.

IV. To promote a life-long learning process for a successful professional career in industries and research organizations leading to successful employability.

The Overall objective of the Program is to promote education and research in biotechnology and provide academic and professional excellence for immediate productivity in industrial, governmental, or clinical settings for an ultimate benefit of society and environment.

PROGRAM OUTCOMES(POs)

As a result of this program, the student will be able to:

1. **Engineering Knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

2. **Problem analysis:** Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

3. **Design/development of solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for public health and safety, and cultural, societal, and environmental considerations.

4. **Conduct investigations of complex problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to proceed to valid conclusions.

5. **Modern tool usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

6. **The engineer and society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal, and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

7. **Environment and sustainability:** Understand the impact of professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of and need for sustainable development.

8. **Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

9. **Individual and team work:** Function effectively as an individual and as a member or leader in diverse teams, and in multidisciplinary settings.

10. **Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

11. **Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects in multidisciplinary environments.

12. **Life-long learning:** Recognize the need for, and have the preparation and ability to engage in independent and lifelong learning in the broadest context of technological change.

PROGRAMME SPECIFIC OUTCOMES (PSOs)

1. Our Biotech graduates shall possess strong knowledge in the field of biotechnology and applied sciences.

2. Our Biotech graduates shall be able to design and conduct experiments in biotechnology as well as analyze and interpret data.

3. Our Biotech graduates shall be able to use current techniques, skills and modern tools necessary for modelling and design of bioprocesses.

I SEMESTER

HS1101	COMMUNICATIVE ENGLISH	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To develop the basic reading and writing skills of first year engineering and technology students.
- To help learners develop their listening skills, which will enable them listen to lectures and comprehend them by asking questions; seeking clarifications.
- To help learners develop their speaking skills and speak fluently in real contexts.
- To help learners develop vocabulary of a general kind by developing their reading skills.

UNIT I: SHARING INFORMATION RELATED TO ONESELF/FAMILY& FRIENDS 9

Reading – critical reading – finding key information in a given text – shifting facts from opinions - Writing - autobiographical writing - developing hints. Listening- short texts- short formal and informal conversations. Speaking- basics in speaking - introducing oneself - exchanging personal information- speaking on given topics & situations Language development– voices- Wh-Questions- asking and answering-yes or no questions– parts of speech. Vocabulary development-- prefixes- suffixes- articles - Polite Expressions. **CO1**

UNIT II GENERAL READING AND FREE WRITING 9

Reading: Short narratives and descriptions from newspapers (including dialogues and conversations ; Reading Comprehension Texts with varied question types - Writing – paragraph writing- topic sentence- main ideas- free writing, short narrative descriptions using some suggested vocabulary and structures –. Listening - long texts - TED talks - extensive speech on current affairs and discussions Speaking – describing a simple process – asking and answering questions - Language development – prepositions, clauses. Vocabulary development- guessing meanings of words in context – use of sequence words. **CO2**

UNIT III GRAMMAR AND LANGUAGE DEVELOPMENT 9

Reading- short texts and longer passages (close reading) & making a critical analysis of the given text Writing – types of paragraph and writing essays – rearrangement of jumbled sentences. Listening: Listening to ted talks and long speeches for comprehension. Speaking- role plays - asking about routine actions and expressing opinions. Language development- degrees of comparison- pronouns- Direct vs. Indirect Questions. Vocabulary development – idioms and phrases- cause & effect expressions, adverbs. **CO3**

UNIT IV READING AND LANGUAGE DEVELOPMENT 9

Reading- comprehension-reading longer texts- reading different types of texts- magazines. Writing- letter writing, informal or personal letters-e-mails-conventions of personal email- Listening: Listening comprehension (IELTS, TOEFL and others). Speaking -Speaking about friends/places/hobbies - Language development- Tenses- simple present-simple past- present continuous and past continuous- conditionals – if, unless, in case, when and others Vocabulary development- synonyms-antonyms- Single word substitutes- Collocations. **CO4**

UNIT V EXTENDED WRITING 9

Reading: Reading for comparisons and contrast and other deeper levels of meaning –Writing- brainstorming -writing short essays – developing an outline- identifying main and subordinate ideas- dialogue writing- Listening - popular speeches and presentations - Speaking - impromptu **CO5** speeches & debates Language development-modal verbs- present/ past perfect tense - Vocabulary development-Phrasal verbs- fixed and semi-fixed expressions.

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, the students will be able to

CO1	Speak clearly, confidently, comprehensibly, and communicate with one or many listeners using appropriate communicative strategies.
CO2	Write cohesively and coherently and flawlessly avoiding grammatical errors, using a wide vocabulary range, organizing their ideas logically on a topic.
CO3	Read different genres of texts adopting various reading strategies.
CO4	Listen/view and comprehend different spoken discourses/excerpts in different accents
CO5	Identify topics and formulate questions for productive inquiry

MA1102 **ENGINEERING MATHEMATICS –I**

L	T	P	C
3	1	0	4

OBJECTIVES:

- The goal of this course is to achieve conceptual understanding and to retain the best traditions of traditional calculus.
- The syllabus is designed to provide the basic tools of calculus mainly for the purpose of modeling the engineering problems mathematically and obtaining solutions.
- Matrix Algebra is one of the powerful tools to handle practical problems arising in the field of engineering.
- This is a foundation course of Single Variable and multivariable calculus plays an important role in the understanding of science, engineering, economics and computer science, among other disciplines.

UNIT I: MATRICES **12**

Eigenvalues and Eigenvectors of a real matrix – Characteristic equation – Properties of Eigenvalues and Eigenvectors – Cayley-Hamilton theorem – Diagonalization of matrices – Reduction of a quadratic form to canonical form by orthogonal transformation – Nature of quadratic forms **CO1**

UNIT II: CALCULUS OF ONE VARIABLE **12**

Limit of a function - Continuity - Derivatives - Differentiation rules – Interval of increasing and decreasing functions – Maxima and Minima - Intervals of concavity and convexity. **CO2**

UNIT III: CALCULUS OF SEVERAL VARIABLES **12**

Partial differentiation – Homogeneous functions and Euler‘s theorem – Total derivative – Change of variables – Jacobians – Partial differentiation of implicit functions – Taylor‘s series for functions of two variables – Maxima and minima of functions of two variables – Lagrange‘s method of undetermined multipliers. **CO3**

UNIT IV: INTEGRAL CALCULUS **12**

Definite and Indefinite integrals - Substitution rule - Techniques of Integration - Integration by parts, Trigonometric integrals, Trigonometric substitutions, Integration of rational functions by partial fraction, Integration of irrational functions - Improper integrals. **CO4**

UNIT V: MULTIPLE INTEGRALS **12**

Double integrals – Change of order of integration – Double integrals in polar coordinates – Area enclosed by plane curves – Change of variables from Cartesian to polar in double integrals-Triple integrals – Volume of solids **CO5**

TOTAL PERIODS: 60

TEXT BOOKS:

5. T. Veerarajan. Engineering Mathematics – I, McGraw Hill Education; First edition 2017.

COURSE OUTCOMES

Upon completion of the course, the students will be able to

CO1	Have a clear idea of matrix algebra pertaining Eigenvalues and Eigenvectors in addition dealing with quadratic forms.
CO2	Understand the concept of limit of a function and apply the same to deal with continuity and derivative of a given function. Apply differentiation to solve maxima and minima problems, which are related to real world problems.
CO3	Have the idea of extension of a function of one variable to several variables. Multivariable functions of real variables are inevitable in engineering.
CO4	Understand the concept of integration through fundamental theorem of calculus. Also acquire skills to evaluate the integrals using the techniques of substitution, partial fraction and integration by parts along with the knowledge of improper integrals.
CO5	Do double and triple integration so that they can handle integrals of higher order which are applied in engineering field.

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

CO4	3	3	3	2	2	1	-	-	-	-	1	2	2	3	1
CO5	3	3	3	2	1	1	-	-	-	-	1	2	2	3	1

PH1103	ENGINEERING PHYSICS	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To make the students to understand about the elastic property and stress strain diagram.
- To educate the students about principle of laser and its role in optical fibers and its applications as sensors and communication.
- To teach the students about the heat transfer through solids and liquids.
- To educate the students about the quantum concepts and its use to explain black body radiation, Compton effect, tunnelling electron microscopy and its applications.
- To make the students to understand the importance of various crystal structures and various growth techniques.

UNIT I: PROPERTIES OF MATTER **9**

Elasticity – Stress-strain diagram and its uses - factors affecting elastic modulus and tensile strength – torsional stress and deformations – twisting couple - torsion pendulum: theory and experiment - bending of beams - bending moment – cantilever: theory and experiment – uniform and non-uniform bending: theory and experiment – Practical applications of modulus of elasticity-I-shaped girders - stress due to bending in beams. **CO1**

UNIT II: LASER AND FIBER OPTICS **9**

Lasers : population of energy levels, Einstein’s A and B coefficients derivation – resonant cavity, optical amplification (qualitative) – Nd-YAG Laser-Semiconductor lasers: homojunction and heterojunction – Industrial and medical applications of Laser– Fiber optics: principle, numerical aperture and acceptance angle - types of optical fibres (material, refractive index, mode) – losses associated with optical fibers – Fabrication of Optical fiber-Double crucible method-fibre optic sensors: pressure and displacement-Industrial and medical applications of optical fiber-Endoscopy-Fiber optic communication system. **CO2**

UNIT III: THERMAL PHYSICS **9**

Transfer of heat energy – thermal expansion of solids and liquids – expansion joints - bimetallic strips - thermal conduction, convection and radiation – heat conductions in solids – thermal conductivity –Rectilinear flow of heat- Lee’s disc method: theory and experiment - conduction through compound media (series and parallel)-Radial flow of heat– thermal insulation – applications: heat exchangers, refrigerators, oven, Induction furnace and solar water heaters. **CO3**

UNIT IV: QUANTUM PHYSICS **9**

Black body radiation – Planck’s theory (derivation) – Compton effect: theory and experimental verification – wave particle duality – electron diffraction – concept of wave function and its physical significance – Schrödinger’s wave equation – time independent and time dependent equations – particle in a one-dimensional rigid box – Electron microscope-tunnelling (qualitative) - scanning tunnelling microscope-Applications of electron microscopy. **CO4**

UNIT V: CRYSTAL PHYSICS **9**

Single crystalline, polycrystalline and amorphous materials – single crystals: unit cell, crystal systems, Bravais lattices, directions and planes in a crystal, Miller indices – inter-planar distances coordination number and packing factor for SC, BCC, FCC, HCP and diamond structures – Graphite structure-crystal imperfections: point defects, line defects – Burger vectors, stacking faults – growth of single crystals: solution and melt growth techniques-Epitaxial growth-Applications of Single crystal (Qualitative). **CO5**

TOTAL PERIODS: 45

3. Tipler, P.A. & Mosca, G. “Physics for Scientists and Engineers with Modern Physics’. W.H.Freeman, 2007.

COURSE OUTCOMES

Upon completion of the course,

CO1	Gain knowledge on the basics of properties of matter and its applications,
CO2	Acquire knowledge on the concepts of waves and optical devices and their applications in fibre optics.
CO3	Have adequate knowledge on the concepts of thermal properties of materials and their applications in expansion joints and heat exchangers.
CO4	Get knowledge on advanced physics concepts of quantum theory and its applications in tunneling microscopes, and
CO5	Understand the basics of crystals, their structures and different crystal growth techniques.

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

CO2	2	2	1	3	2	1	-	-	-	1	1	2	2	2	3
CO3	2	2	1	3	2	1	-	-	-	1	1	2	2	2	3
CO4	2	2	1	3	3	1	2	-	-	1	1	2	2	2	3
CO5	2	2	2	3	3	2	-	1	-	2	1	2	2	2	3

CY1104	ENGINEERING CHEMISTRY	L	T	P	C
		3	0	0	3

OBJECTIVES:

- Principles of water characterization and treatment for industrial purposes.
- Principles and applications of surface chemistry and catalysis.
- Phase rule and various types of alloys.
- Various types of fuels, applications and combustion.
- Conventional and non–conventional energy sources and energy storage device.

UNIT I:	**WATER AND ITS TREATMENT**		**9**
Hardness of water – Types – Expression of hardness – Units – Estimation of hardness by EDTA method – Numerical problems on EDTA method – Boiler troubles (scale and sludge, caustic embrittlement , boiler corrosion, priming and foaming) – Treatment of boiler feed water – Internal treatment (carbonate, phosphate, colloidal, sodium aluminate and calgon conditioning) – External treatment – Ion exchange process, Zeolite process – Desalination of brackish water by reverse Osmosis.		**CO1**	
UNIT II:	**SURFACE CHEMISTRY AND CATALYSIS**		**9**
Surface chemistry: Types of adsorption – Adsorption of gases on solids – Adsorption of solute from solutions – Adsorption isotherms – Freundlich's adsorption isotherm – Langmuir's adsorption isotherm – Kinetics of uni-molecular surface reactions – Adsorption in chromatography – Applications of adsorption in pollution abatement using PAC. **Catalysis:** Catalyst – Types of catalysis – Criteria – Contact theory – Catalytic poisoning and catalytic promoters – Industrial applications of catalysts – Catalytic convertor – Auto catalysis – Enzyme catalysis – Michaelis-Menten equation.		**CO2**	
UNIT III:	**PHASE RULE AND ALLOYS**		**9**
Phase rule: Introduction – Definition of terms with examples – One component system – Water system – Reduced phase rule – Thermal analysis and cooling curves – Two component systems – Lead-silver system – Pattinson process. **Alloys:** Introduction – Definition – Properties of alloys – Significance of alloying – Functions and effect of alloying elements – Nichrome, Alnico, Stainless steel (18/8) – Heat treatment of steel – Non-ferrous alloys – Brass and bronze.		**CO3**	
UNIT IV:	**FUELS AND COMBUSTION**		**9**
Fuels: Introduction – classification of fuels – Comparison of solid, liquid, gaseous fuels – Coal – Analysis of coal (proximate and ultimate). – Carbonization – Manufacture of metallurgical coke (Otto Hoffmann method) – Petroleum – Cracking – Manufacture of synthetic petrol (Bergius process, Fischer Tropsch Process) – Knocking – Octane number – Diesel oil – Cetane number – Compressed natural gas (CNG) – Liquefied petroleum gases (LPG) – Power alcohol and biodiesel. **Combustion of fuels:** Introduction – Calorific value – Higher and lower calorific values – Theoretical calculation of calorific value – Ignition temperature – Spontaneous ignition temperature – Explosive range – Flue gas analysis by Orsat Method.		**CO4**	
UNIT V:	**NON–CONVENTIONAL ENERGY SOURCES AND STORAGE DEVICES**		**9**
Nuclear energy – Fission and fusion reactions – Differences – Chain reactions – Nuclear reactors – Classification of reactors – Light water nuclear reactor for power generation – Breeder reactor – Solar energy conversion – Solar cells – Wind energy – Fuel cells – Hydrogen-oxygen fuel cell . Batteries – Types of batteries - Alkaline batteries – Lead-acid, Nickel-cadmium and Lithium batteries.		**CO5**	
		TOTAL PERIODS:	**45**

COURSE OUTCOMES

Upon completion of the course,

CO1	Able to understand impurities in industrial water, boiler troubles, internal and external treatment methods of purifying water.
CO2	Able to understand concepts of absorption, adsorption, adsorption isotherms, application of adsorption for pollution abatement, catalysis and enzyme kinetics.
CO3	Able to recognize significance of alloying, functions of alloying elements and types of alloys, uses of alloys. They should be acquainted with phase rule and reduced phase and its applications in alloying.
CO4	Able to identify various types of fuels, properties, uses and analysis of fuels. They should be able to understand combustion of fuels, method of preparation of bio-diesel, synthetic petrol.
CO5	Able to understand conventional, non–conventional energy sources, nuclear fission and fusion, power generation by nuclear reactor, wind, solar energy and preparation, uses of various batteries.

GE1105	PROBLEM SOLVING AND PYTHON PROGRAMMING	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To know the basics of algorithmic problem solving
- To write simple python programs
- To develop python program by using control structures and functions
- To use python predefined data structures
- To write file-based program

UNIT I: ALGORITHMIC PROBLEM SOLVING **9**

Algorithms, Building blocks of algorithms: statements, state, control flow, functions, Notation: pseudo code, flow chart, programming language, Algorithmic problem solving: Basic algorithms, flowcharts and pseudocode for sequential, decision processing and iterative processing strategies, Illustrative problems: find minimum in a list, insert a card in a list of sorted cards, guess an integer number in a range, Towers of Hanoi. **CO1**

UNIT II: INTRODUCTION TO PYTHON **9**

Python Introduction, Technical Strength of Python, Python interpreter and interactive mode, Introduction to colab , pycharm and jupyter idle(s) ,Values and types: int, float, boolean, string, and list; Built-in data types, variables, Literals, Constants, statements, Operators: Assignment, Arithmetic, Relational, Logical, Bitwise operators and their precedence, Expressions, tuple assignment, Accepting input from Console, printing statements, Simple Python programs. **CO2**

UNIT III: CONTROL FLOW, FUNCTIONS AND STRINGS **9**

Conditionals: Boolean values and operators, conditional (if), alternative (if-else), chained conditional (if-elif-else); Iteration: while, for; Loop manipulation using pass, break, continue, and else; Modules and Functions: function definition and use, flow of execution, parameters and arguments, local and global scope, return values, function composition, recursion. Strings: string slices, immutability, string functions and methods, string module; Illustrative programs: square root, gcd, exponentiation, sum an array of numbers, linear search, binary search. **CO3**

UNIT IV: LISTS, TUPLES, DICTIONARIES **9**

Lists: Defining list and list slicing, list operations, list slices, list methods, list loop, list Manipulation, mutability, aliasing, cloning lists, list parameters, lists as arrays. Tuples: tuple assignment, tuple as return value, tuple Manipulation; Dictionaries: operations and methods; advanced list processing – list comprehension; Illustrative programs: selection sort, insertion sort, merge sort, histogram. **CO4**

UNIT V: FILES, MODULES, PACKAGES **5**

Files and exception: Concept of Files, Text Files; File opening in various modes and closing of a file, Format Operators, Reading from a file, Writing onto a file, File functions- open(), close(), read(),readline(), readlines(),write(), writelines(),tell(),seek(), Command Line arguments; Errors and exceptions: handling exceptions; modules, packages; introduction to numpy, matplotlib. Illustrative programs: word count, copy a file. **CO5**

COURSE OUTCOMES

Upon completion of the course,

CO1 Develop algorithmic solutions to simple computational problems

CO2 Develop simple console application in python

CO3 Develop python program by applying control structure and decompose program into functions.

CO4 Represent compound data using python lists, tuples, and dictionaries.

CO5 Read and write data from/to files in Python.

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

CO4	3	3	3	3	2	-	-	-	-	2	2	2	3	3	2
CO5	3	3	3	3	2	-	-	-	-	2	2	2	3	3	2

GE1106	ENGINEERING GRAPHICS	L	T	P	C
		2	0	4	4

OBJECTIVES:

- To develop in students, graphic skills for communication of concepts, ideas and design of Engineering products
- To expose them to existing national standards related to technical drawings.

CONCEPTS AND CONVENTIONS (Not for Examination) **1**

Importance of graphics in engineering applications – Use of drafting instruments – BIS conventions and specifications – Size, layout and folding of drawing sheets – Lettering and dimensioning.

UNIT I: PLANE CURVES AND FREEHAND SKETCHING **7+12**

Basic Geometrical constructions, Curves used in engineering practices: Conics – Construction of ellipse, parabola and hyperbola by eccentricity method – Construction of cycloid – construction of involutes of square and circle – Drawing of tangents and normal to the above curves.
Visualization concepts and Free Hand sketching: Visualization principles –Representation of Three-Dimensional objects – Layout of views- Freehand sketching of multiple views from pictorial views of objects **CO1**

UNIT II: PROJECTION OF POINTS, LINES AND PLANE SURFACE **6+12**

Orthographic projection- principles-Principal Planes-First angle projection-projection of points. Projection of straight lines (only First angle projections) inclined to both the principal planes - Determination of true lengths and true inclinations by rotating line method and traces Projection of planes (polygonal and circular surfaces) inclined to both the principal planes by rotating object method. **CO2**

UNIT III: PROJECTION OF SOLIDS **5+12**

Projection of simple solids like prisms, pyramids, cylinder, cone and truncated solids when the axis is inclined to one of the principal planes by rotating object method. **CO3**

UNIT IV: PROJECTION OF SECTIONED SOLIDS AND DEVELOPMENT OF SURFACES **5+12**

Sectioning of above solids in simple vertical position when the cutting plane is inclined to the one of the principal planes and perpendicular to the other – obtaining true shape of section. Development of lateral surfaces of simple and sectioned solids – Prisms, pyramids cylinders and cones. **CO4**

UNIT V: ISOMETRIC AND PERSPECTIVE PROJECTIONS **6+12**

Principles of isometric projection – isometric scale –Isometric projections of simple solids and truncated solids - Prisms, pyramids, cylinders, cones- combination of two solid objects in simple vertical positions - Perspective projection of simple solids-Prisms, pyramids and cylinders by visual ray method. **CO5**

6. Shah M.B., and Rana B.C., "Engineering Drawing", Pearson, 2nd Edition, 2009.

COURSE OUTCOMES

Upon completion of the course, the students will

CO1 Understand the fundamentals and standards of Engineering graphics

CO2 Perform freehand sketching of basic geometrical constructions and multiple views of objects

CO3 Understand the concept of orthographic projections of lines and plane surfaces

CO4 Draw the projections of section of solids and development of surfaces

CO5 Visualize and to project isometric and perspective sections of simple solids

GE1107 PYTHON PROGRAMMING LABORATORY

L	T	P	C
0	0	4	2

OBJECTIVES

- To write, test, and debug simple Python programs.
- To implement Python programs with conditionals and loops.
- Use functions for structuring Python programs.
- Represent compound data using Python lists, tuples, and dictionaries.
- Read and write data from/to files in Python.

LIST OF EXPERIMENTS

1. Write an algorithm and draw flowchart illustrating mail merge concept.
2. Write an algorithm, draw flowchart and write pseudo code for a real life or scientific or technical problems
3. Scientific problem-solving using decision making and looping.
    - Armstrong number, palindrome of a number, Perfect number.

CO1

4. Simple programming for one dimensional and two-dimensional arrays.
    - Transpose, addition, multiplication, scalar, determinant of a matrix
5. Program to explore string functions and recursive functions.
6. Utilizing 'Functions' in Python
    - Find mean, median, mode for the given set of numbers in a list.
    - Write a function dups to find all duplicates in the list.
    - Write a function unique to find all the unique elements of a list.
    - Write function to compute gcd, lcm of two numbers.

CO2

7. Demonstrate the use of Dictionaries and tuples with sample programs.
8. Implement Searching Operations: Linear and Binary Search.
9. To sort the 'n' numbers using: Selection, Merge sort and Insertion Sort.
10. Find the most frequent words in a text of file using command line arguments.
11. Demonstrate Exceptions in Python.
12. Applications**:** Implementing GUI using turtle, pygame.

COURSE OUTCOMES

Upon completion of the course,

CO1	Develop simple console applications through python with control structure and functions
CO2	Use python built in data structures like lists, tuples, and dictionaries for representing compound data.
CO3	Read and write data from/to files in Python and applications of python.

BS1108	**PHYSICS AND CHEMISTRY LABORATORY**	**L**	**T**	**P**	**C**
		0	**0**	**4**	**2**

OBJECTIVES

The students will be trained to perform experiments to study the following.

- ❖ The Properties of Matter
- ❖ The Optical properties, Characteristics of Lasers & Optical Fibre
- ❖ Electrical & Thermal properties of Materials
- ❖ Enable the students to enhance accuracy in experimental measurements.
- ❖ To make the student to acquire practical skills in the determination of water quality parameters through volumetric analysis
- ❖ Instrumental method of analysis such as potentiometry, conductometry and pHmetry

LIST OF EXPERIMENTS– PHYSICS

(A minimum of 5 experiments to be performed from the given list)

1. Determination of Young’s modulus of the material of the given beam by Non-uniform bending method. **CO1**

2.	Determination of rigidity modulus of the material of the given wire using torsion pendulum.	**CO1**
3.	Determination of wavelength of mercury spectra using Spectrometer and grating.	**CO2**
4.	Determination of dispersive power of prism using Spectrometer.	**CO2**
5.	(a) Determination of wavelength and particle size using a laser.	**CO2**
	(b) Determination of numerical aperture and acceptance angle of an optical fibre.	**CO1**
	(c) Determination of width of the groove of compact disc using laser	**CO2**
6.	Determination of Young's modulus of the material of the given beam by uniform bending method.	**CO2**
7.	Determination of energy band gap of the semiconductor.	
8.	Determination of coefficient of thermal conductivity of the given bad conductor using Lee's disc.	**CO1**

DEMONSTRATION EXPERIMENT

1. Determination of thickness of a thin sheet / wire – Air wedge method

LIST OF EXPERIMENTS – CHEMISTRY

(A minimum of 6 experiments to be performed from the given list)

1.	Estimation of HCl using Na_2CO_3 as primary standard and determination of alkalinity in water sample.	**CO5**
2.	Determination of total, temporary & permanent hardness of water by EDTA method.	**CO5**
3.	Determination of DO content of water sample by Winkler's method.	**CO5**
4.	Determination of chloride content of water sample by argentometric method.	**CO3**
5.	Estimation of copper content of the given solution by Iodometry.	**CO3**
6.	Determination of strength of given hydrochloric acid using pH meter.	**CO3**
7.	Determination of strength of acids in a mixture of acids using conductivity meter.	**CO4**
8.	Estimation of iron content of the given solution using potentiometer.	**CO4**
9.	Determination of molecular weight of polyvinyl alcohol using Ostwald viscometer.	**CO4**
10.	Conductometric titration of strong acid vs strong base.	**CO4**
		CO3
		CO5

DEMONSTRATION EXPERIMENTS

1. Estimation of iron content of the water sample using spectrophotometer (1, 10-Phenanthroline / thiocyanate method).
2. Estimation of sodium and potassium present in water using flame photometer.

TOTAL: 60 PERIODS

COURSE OUTCOMES

Upon completion of the course, the students will be

CO1	Able to understand the concept about the basic properties of matter like stress, strain and types of moduli. Able to understand the concept of optics like reflection, refraction, diffraction by using spectrometer grating.
CO2	Able to understand the thermal properties of solids, specific heat and some models for specific heat calculation. Able to understand the working principle of laser components and working of different laser system. Able to understand the phenomenon of light, applications of fibre optics.
CO3	Able to understand the concept of determining the pH value by using pH meter. Able to understand the concept about the amount of chloride present in the given sample of water.
CO4	Able to understand the concept of determining the emf values by using potentiometer Able to understand the concept about the measurement of conductance of strong acid and strong base by using conductivity meter.
CO5	Able to understand the amount of dissolved oxygen present in the water. Able to understand the concept of estimation of hardness of water by EDTA method. Able to understand the concept of estimation of alkalinity in water sample.

II SEMESTER

HS1201 **PROFESSIONAL ENGLISH**

L	T	P	C
3	0	0	3

OBJECTIVES:

- The Course prepares second semester engineering and Technology students to:
- Develop strategies and skills to enhance their ability to read and comprehend Engineering and technology texts.
- Foster their ability to write convincing job applications and effective reports.
- Develop their speaking skills to make technical presentations, participate in group discussions.
- Strengthen their listening skill which will help them comprehend lectures and talks in their areas of specialization.

UNIT I: INTRODUCTION TO PROFESSIONAL ENGLISH **9**

Listening: Listening to technical talks with comprehension tasks - Speaking – conversation methods in real life occurrences using expressions of different emotions and imperative usages - Reading – reading short technical texts from journals- newspapers- Writing- purpose statements – extended definitions – writing instructions – checklists-recommendations-Vocabulary Development- technical vocabulary Language Development – tenses- subject verb agreement - compound words. **CO1**

UNIT II: READING AND STUDY SKILLS **9**

Listening-Listening Comprehension of a discussion on a technical topic of common interest by three or four participants (real life as well as online videos). -Speaking – describing a process- Reading: Practice in chunking and speed reading - Paragraphing- Writing- interpreting charts, graphs- Vocabulary Development: Important foreign expressions in Use, homonyms, homophones, homographs- easily confused words Language Development- impersonal passive voice, numerical adjectives. **CO2**

UNIT III: TECHNICAL WRITING AND GRAMMAR **9**

Listening – listening to conversation – effective use of words and their sound aspects, stress, intonation & pronunciation - Speaking – mechanics of presentations -Reading: Reading longer texts for detailed understanding. (GRE/IELTS practice tests); Writing-Describing a process, use of sequence words- Vocabulary Development- sequence words- Informal vocabulary and formal substitutes-Misspelled words. Language Development- embedded sentences and Ellipsis. **CO3**

UNIT IV: REPORT WRITING **9**

Listening – Model debates & documentaries and making notes. Speaking – expressing agreement/disagreement, assertiveness in expressing opinions-Reading: Technical reports, advertisements and minutes of meeting - Writing- email etiquette- job application – cover letter – Résumé preparation(via email and hard copy)- analytical essays and issue based essays-- Vocabulary Development- finding suitable synonyms-paraphrasing- Language Development- clauses- if conditionals. **CO4**

UNIT V: GROUP DISCUSSION AND JOB APPLICATIONS **9**

Listening: Extensive Listening. (radio plays, rendering of poems, audio books and others) Speaking –participating in a group discussion - Reading: Extensive Reading (short stories, novels, poetry and others)– Writing reports- minutes of a meeting- accident and survey- Writing a letter/ sending an email to the Editor - cause and effect sentences -Vocabulary Development- verbal analogies. Language Development- reported speech. **CO5**

COURSE OUTCOMES

Upon completion of the course, the students will be able to

CO1	Speak clearly, confidently, comprehensibly, and communicate with one or many listeners using appropriate communicative strategies.
CO2	Write cohesively and coherently and flawlessly avoiding grammatical errors, using a wide vocabulary range, organizing their ideas logically on a topic.
CO3	Read different genres of texts adopting various reading strategies.
CO4	Listen/view and comprehend different spoken discourses/excerpts in different accents
CO5	Identify topics and formulate questions for productive inquiry

MA1202 **ENGINEERING MATHEMATICS - II**

L	T	P	C
3	1	0	4

OBJECTIVES:

- This course is designed to cover topics such as Differential Equations, Vector Calculus, Complex Analysis and Laplace Transform.
- The various methods of complex analysis and Laplace transforms can be used for efficiently solving the problems that occur in various branches of engineering disciplines

UNIT I: ORDINARY DIFFERENTIAL EQUATIONS **12**

Higher order linear differential equations with constant coefficients - Method of variation of parameters– Homogenous equation of Euler‘s and Legendre‘s type – System of simultaneous first order linear differential equations with constant coefficients **CO1**

UNIT II: VECTOR CALCULUS **12**

Gradient and directional derivative – Divergence and curl - Vector identities – Irrotational and Solenoidal vector fields – Line integral over a plane curve – Surface integral - Volume integral - Green‘s, Gauss divergence and Stoke‘s theorems – Verification and simple application in evaluating line, surface and volume integrals. **CO2**

UNIT III: COMPLEX VARIABLES **12**

Analytic functions – Necessary and sufficient conditions for analyticity in Cartesian and polar coordinates (C-R equations) - Properties – Harmonic conjugates – Construction of analytic function (Milne-Thomson method) – Conformal mapping – Standard transformations W = Z + C, CZ, 1/Z - Bilinear transformation. **CO3**

UNIT IV: COMPLEX INTEGRATION **12**

Cauchy’s integral theorem –Cauchy’s integral formula – Taylor’s and Laurent’s series – Singularities – Residues – Cauchy’s Residue theorem – Application of residue theorem for evaluation of real integrals – Use of circular contour and semi-circular contour(excluding poles on the real line). **CO4**

UNIT V: LAPLACE TRANSFORMS **12**

Existence conditions – Transforms of elementary functions – Transform of unit step function and unit impulse function - Basic properties - Shifting theorems – transforms of derivatives and integrals –Transform of periodic functions - Inverse transforms using properties, partial fractions and Convolution theorem – Application to solution of linear second order ordinary differential equations with constant coefficients. **CO5**

COURSE OUTCOMES

Upon completion of the course,

CO1	The students will be imbibed with techniques in solving ordinary differential equations that arises in most of the engineering problems
CO2	The students will be acquainted with the concepts of vector calculus like Gradient, Divergence, Curl, Directional derivative, Irrotational vector and Solenoidal vector. The course gives an understanding of Vector integration, needed for problems in all engineering disciplines.
CO3	The students will develop an understanding of the standard techniques of complex variable and mapping so as to enable the student to apply them with confidence, in application areas such as heat conduction, elasticity, fluid dynamics and flow of electric current.
CO4	The student will be exposed to the concept of Cauchy's integral theorem, Taylor and Laurent expansions, Singular points, Application of residue theorem to evaluate complex integrals.
CO5	Students will understand the purpose of using transforms to create new domain which can give easier ways to handle the problem that is being investigated.

PH1255 **PHYSICS OF MATERIALS**

L	T	P	C
3	0	0	3

OBJECTIVES:

To make the student conversant with the

- Electronic properties in metals, properties of superconductors and its applications.
- Intrinsic and extrinsic semi conductors, Hall effect, LED, organic LED and solar cells.
- Types of magnetic materials and their applications, types of polarization and application
- Types, synthesis, properties and applications of nanostructured materials.
- Importance of various new engineering materials like ceramics, SMA, metallic glasses and biomaterials.

UNIT I: CONDUCTING AND SUPERCONDUCTING MATERIALS **9**

Classical free electron theory – expression for electrical conductivity – thermal conductivity, Wiedemann-Franz law – electrons in metals: particle in a three-dimensional box (Qualitative) – degenerate states – Fermi-Dirac statistics – density of energy states – electron in periodic potential (concept only) – electron effective mass – concept of hole – Superconducting phenomena, properties of superconductors – Meissner effect and isotope effect. Type I and Type II superconductors, High Tc superconductors – Magnetic levitation and SQUIDS. **CO1**

UNIT II: SEMICONDUCTING MATERIALS **9**

Elemental Semiconductors – Compound semiconductors – Origin of band gap in solids (qualitative) – carrier concentration in an intrinsic semiconductor (derivation) – Fermi level –variation of Fermi level with temperature – electrical conductivity – band gap determination – carrier concentration in n-type and p-type semiconductors (derivation) – variation of Fermi level with temperature and impurity concentration – Hall effect – determination of Hall coefficient – LED – Organic LED-Solar cells. **CO2**

UNIT III: DIELECTRIC AND MAGNETIC MATERIALS **9**

Dielectric materials – Electronic, Ionic, Orientational and space charge polarization –Internal field and deduction of Clausius Mosotti equation –Frequency and temperature variation of dielectric materials- dielectric loss – different types of dielectric breakdown – classification of insulating materials and their applications - Introduction to magnetic materials - Domain theory of ferromagnetism, Hysteresis, Soft and Hard magnetic materials – Anti-ferromagnetic materials – Ferrites - magnetoresistance - Giant magnetoresistance - Introduction to spintronics. **CO3**

UNIT IV: NANO MATERIALS **9**

Nanoscience and technology – Surface to volume ratio – Classifications of nanostructured materials – nano particles – quantum dots, nanowires, ultra-thin films-multilayered materials. Bottom-up Synthesis –Top-down Approach: Co-Precipitation, Ultrasonication, ball Milling, sol-gel method-Properties: electrical, magnetic, catalytic and antimicrobial resistance – Applications of nanomaterials in agriculture and medicine. **CO4**

UNIT V: NEW MATERIALS AND APPLICATIONS **9**

Metallic glasses – Shape memory alloys: Copper, Nickel and Titanium based alloys – graphene, graphene oxide and its properties – Ceramics: types and applications – Composites:classification, role of matrix and reinforcement – processing of fibre reinforced plastics and fibre reinforced metals – Biomaterials: hydroxyapatite – PMMA – Silicone – Sensors: Chemical Sensors - Bio-sensors – conducting and semiconducting polymers – Nano fluids-Electro and magneto rheological fluids.. **CO5**

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course,

CO1	Have the knowledge about carrier density calculation in metals, properties of superconductors and its applications.
CO2	Have the knowledge about carrier density calculation in intrinsic and extrinsic semiconductors, Hall effect, LED, OLED and solar cells
CO3	Obtain the knowledge about magnetic and dielectric materials and their applications.
CO4	Explore the knowledge about types, synthesis, properties and applications of nanostructured materials.
CO5	Understand the importance, properties and applications of various new engineering materials like ceramics, SMA, metallic glasses and biomaterials.

GE1204	ENVIRONMENTAL SCIENCE AND ENGINEERING	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To study the inter relationship between living organism and environment.
- To appreciate the importance of environment by assessing its impact on the human world; envision the surrounding environment, its functions and its value.
- To find and implement scientific, technological, economic and political solutions to environmental problems.
- To study the integrated themes and biodiversity, natural resources, pollution control and waste management.
- To study the dynamic processes and understand the features of the earth's interior and surface.

UNIT I: ENVIRONMENT, ECOSYSTEM AND BIODIVERSITY **9**

Definition, scope and importance of environment – Need for public awareness – Role of Individual in Environmental protection – Concept of an ecosystem – Structure and function of an ecosystem – Producers, consumers and decomposers – Energy flow in the ecosystem – Food chains, food webs and ecological pyramids – Ecological succession – Types, characteristic features, structure and function of forest, grass land, desert and aquatic (ponds, lakes, rivers, oceans, estuaries) ecosystem. Biodiversity – Definition – Genetic, species and ecosystem diversity – Value of biodiversity – Consumptive use, productive use, social, ethical, aesthetic and option values – Biodiversity at global, national and local levels – India as a mega–diversity nation – Hot spots of biodiversity – Threats to biodiversity– Habitat loss, poaching of wild life, human-wildlife conflicts – Wildlife protection act and forest conservation act –Endangered and endemic species – Conservation of biodiversity – In-situ and ex–situ conservation of biodiversity. **CO1**

UNIT II: ENVIRONMENTAL POLLUTION **9**

Definition – Causes, effects and control measures of: (a) Air pollution (b) Water pollution (c) Soil pollution (d) Marine pollution (e) Noise pollution (f) Thermal pollution (g) Nuclear hazards – Solid waste management: causes, effects and control measures of municipal solid wastes – Problems of e-waste – Role of an individual in prevention of pollution – Pollution case studies – Disaster management – Floods, earthquake, cyclone, tsunami and landslides – Field study of local polluted site – Urban / Rural / Industrial / Agricultural. **CO2**

UNIT III: NATURAL RESOURCES **9**

Forest resources: Use and over-exploitation – Deforestation – Case studies – Timber extraction, mining, dams and their effects on forests and tribal people – Water resources – Use and overutilization of surface and ground water, floods, drought, conflicts over water – Dams: benefits and problems – Mineral resources: Use and exploitation – Environmental effects of extracting and using mineral resources – Case studies – Food resources: World food problems – Changes caused by agriculture and overgrazing – Effects of modern agriculture: fertilizer–pesticide problems, water logging, salinity – Case studies – Energy resources: Growing energy needs – Renewable and non renewable energy sources – Use of alternate energy sources – Case studies – Land resources: Land as a resource – Land degradation, man induced landslides, soil erosion and desertification – Role of an individual in conservation of natural resources – Equitable use of resources for sustainable lifestyles – Field study of local area to document environmental assets – River / Forest / Grassland / Hill / Mountain. **CO3**

UNIT IV: SOCIAL ISSUES AND THE ENVIRONMENT **9**

From unsustainable to sustainable development – Urban problems related to energy – Water conservation, rain water harvesting, watershed management – Resettlement and rehabilitation of people; its problems and concerns, case studies – Role of non-governmental organization – Environmental ethics – Issues and possible solutions – Climate change – Global warming – Acid rain, Ozone layer depletion –Nuclear accidents and holocaust – Case studies – Wasteland reclamation – Consumerism and waste products – Principles of Green Chemistry – Environment protection act – Air (Prevention and Control of Pollution) Act – Water (Prevention and control of Pollution) Act – Wildlife protection Act – Forest conservation act – Enforcement machinery involved in environmental legislation– Central and state pollution control boards– National Green Tribunal – Public awareness. **CO4**

UNIT V: HUMAN POPULATION AND THE ENVIRONMENT **9**

Population growth – Variation among nations – Population explosion – Family welfare programme – Environment and human health – Human rights – Value education – HIV / AIDS – COVID 19 – Women and child welfare – Role of information technology in environment and human health – Case studies. **CO5**

COURSE OUTCOMES

Upon completion of the course,

CO1	Obtain knowledge about environment, ecosystems and biodiversity.
CO2	Take measures to control environmental pollution.
CO3	Gain knowledge about natural resources and energy sources.
CO4	Find and implement scientific, technological, economic and political solutions to environmental problems.
CO5	Understand the impact of environment on human population.

GE1205 BASIC CIVIL AND MECHANICAL ENGINEERING

L	T	P	C
3	0	0	3

OBJECTIVES:

- The objective of this course is to introduce basic knowledge on Civil Engineering Materials, Surveying, Foundations, Civil Engineering Structures, IC Engine, Working Principle of Power Plant, Accessories Of Power Plant, Refrigeration And Air Conditioning System

UNIT I: SCOPE OF CIVIL AND MECHANICAL ENGINEERING **6**

Overview of Civil Engineering - Civil Engineering contributions to the welfare of Society – Specialized sub disciplines in Civil Engineering – Structural, Construction, Geotechnical, Environmental, Transportation and Water Resources Engineering
Overview of Mechanical Engineering - Mechanical Engineering contributions to the welfare of Society –Specialized sub disciplines in Mechanical Engineering - Production, Automobile, Energy Engineering - Interdisciplinary concepts in Civil and Mechanical Engineering **CO1**

UNIT II: SURVEYING AND CIVIL ENGINEERING MATERIALS **9**

Surveying: Objects – classification – principles – measurements of distances – angles – leveling – determination of areas– contours - examples.
Civil Engineering Materials: Bricks – stones – sand – cement – concrete – steel – timber - modern materials **CO2**

UNIT III: BUILDING COMPONENTS AND STRUCTURES **12**

Foundations: Types of foundations - Bearing capacity and settlement – Requirement of good foundations. Civil Engineering Structures: Brick masonry – stonemasonry – beams – columns – lintels – roofing flooring – plastering – floor area, carpet area and floor space index – Types of Bridges and Dams – water supply - sources and quality of water - Rain water harvesting - introduction to high way and rail way. **CO3**

UNIT IV: INTERNAL COMBUSTION ENGINES AND POWER PLANTS 12

Classification of Power Plants - Internal combustion engines as automobile power plant – Working principle of Petrol and Diesel Engines – Four stroke and two stroke cycles – Comparison of four stroke and two stroke engines – Working principle of steam, Gas, Diesel, Hydro - electric and Nuclear Power plants –- working principle of Boilers, Turbines, Reciprocating Pumps (single acting and double acting) and Centrifugal Pumps. **CO4**

UNIT V: REFRIGERATION AND AIR CONDITIONING SYSTEM 6

Terminology of Refrigeration and Air Conditioning. Principle of vapour compression and absorption system–Layout of typical domestic refrigerator–Window and Split type room Air conditioner. **CO5**

TOTAL PERIODS: 45

5. Venugopal K. and Prahu Raja V., “Basic Mechanical Engineering”, Anuradha Publishers, Kumbakonam,2000.

COURSE OUTCOMES

Upon completion of the course, students will be able

CO1	To impart basic knowledge on Civil and Mechanical Engineering
CO2	To familiarize the materials and measurements used in Civil Engineering.
CO3	To provide the exposure on the fundamental elements of civil engineering
CO4	To enable the students to distinguish the components and working principle of power plant, IC engines
CO5	To provide the exposure on the fundamental elements of R & AC system.

BT1206	CELL BIOLOGY	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To provide knowledge on the fundamentals of cell biology
- To help students understand the signaling mechanisms

UNIT I: CELL STRUCTURE AND FUNCTION OF THE ORGANELLES **9**

Prokaryotic, Eukaryotic cells, Sub-cellular organelles and functions. Principles of membrane organization membrane proteins, cyto-skeletal proteins. Extra cellular matrix, cell-cell junctions **CO1**

UNIT II: CELL DIVISION, CANCER, APOPTOSIS AND IMMORTALIZATION OF CELLS **9**

Cell cycle – Mitosis, Meiosis, Molecules controlling cell cycle, cancer, role of Ras and Raf in oncogenesis and apoptosis. Stem cells, Cell culture and immortalization of cells and its applications. **CO2**

UNIT III: TRANSPORT ACROSS CELL MEMBRANE **9**

Passive and Active Transport, Permeases, Ion channels, ATP pumps. Na+ / K+ / Ca+ 2Tpumps, uniport, symport antiporter system. Ligand gated / voltage gated channels, Agonists and Antagonists. **CO3**

UNIT IV: SIGNAL TRANSDUCTION **9**

Receptors – extracellular signaling, Cell surface / cytosolic receptors and examples, Different classes of receptors antocrine / paracrine / endocrine models, Secondary messengers molecules **CO4**

UNIT V: TECHNIQUES USED TO STUDY CELLS **9**

Cell fractionation and flow cytometry, Morphology and identification of cells using microscopic studies like SEM, TEM and Confocal Microscopy. Localization of proteins in cells – Immuno staining. **CO5**

TOTAL PERIODS: 45

TEXT BOOKS:

1. Lodish, Harvey etal., “Molecular Cell Biology”, 7th Edition, W.H.Freeman, 2005.

REFERENCES:

1. Alberts, Bruce etal., “Molecular Biology of the Cell”, IVth Edition, Garland Science (Taylors Francis), 2002.

COURSE OUTCOMES

Upon completion of the course, the students would have

CO1 Deeper understanding of cell at structural and functional level

CO2 Broad knowledge on the Cell division, and cell culturing methods

CO3 Deep knowledge on Cell transport mechanism and molecular interaction between cells.

CO4 Clear understanding of the signal transduction, secondary messengers.

CO5 Skill on working principles of microscopy and identification of cell types.

GE 1207	ENGINEERING PRACTICES LABORATORY	L	P	T	C
		0	0	4	2

OBJECTIVES

- ❖ To provide exposure to the students with hands on experience on various basic engineering practices in Civil, Mechanical, Electrical and Electronics Engineering

LIST OF EXPERIMENTS

GROUP A (CIVIL & MECHANICAL)

I CIVIL ENGINEERING PRACTICE **13**

Buildings:

(a) Study of plumbing and carpentry components of residential and industrial buildings. Safety aspects.

Plumbing Works:

(a) Study of pipeline joints, its location and functions: valves, taps, couplings, unions, reducers, elbows in household fittings.
(b) Study of pipe connections requirements for pumps and turbines.
(c) Preparation of plumbing line sketches for water supply and sewage works. **CO1**
(d) **Hands-on-exercise:**
Basic pipe connections – Mixed pipe material connection – Pipe connections with different joining components.
(e) Demonstration of plumbing requirements of high-rise buildings.

Carpentry using Power Tools only:

(a) Study of the joints in roofs, doors, windows and furniture.
(b) Hands-on-exercise:
Wood work, joints by sawing, planing and cutting.

II MECHANICAL ENGINEERING PRACTICE **18**

Welding:

(a) Preparation of butt joints, lap joints and T- joints by Shielded metal arc welding.
(b) Gas welding practice **CO2**

Basic Machining:

(a) Simple Turning and Taper turning
(b) Drilling Practice

Sheet Metal Work:

(a) Forming & Bending:
(b) Model making – Trays and funnels.
(c) Different type of joints.

Machine assembly practice:

(a) Study of centrifugal pump
(b) Study of air conditioner

Demonstration on:

(a) Smithy operations, upsetting, swaging, setting down and bending. Example –Exercise – Production of hexagonal headed bolt.
(b) Foundry operations like mould preparation for gear and step cone pulley.
(c) Fitting – Exercises – Preparation of square fitting and V – fitting models.

GROUP B (ELECTRICAL & ELECTRONICS)

III ELECTRICAL ENGINEERING PRACTICE 13

1. Residential house wiring using switches, fuse, indicator, lamp and energy meter.
2. Fluorescent lamp wiring.
3. Stair case wiring

CO3

4. Measurement of electrical quantities – voltage, current, power & power factor in RLC circuit.
5. Measurement of energy using single phase energy meter.
6. Measurement of resistance to earth of an electrical equipment.

CO4

IV ELECTRONICS ENGINEERING PRACTICE 16

1. Study of electronic components and equipment's – Resistor, colour coding measurement of AC signal parameter (peak-peak, rms period, frequency) using CR.
2. Study of logic gates AND, OR, EX-OR and NOT.
3. Generation of Clock Signal.
4. Soldering practice – Components Devices and Circuits – Using general purpose PCB. Measurement of ripple factor of HWR and FWR.

CO5

TOTAL: 60 PERIODS

LIST OF EQUIPMENT FOR A BATCH OF 30 STUDENTS

S.No.	Description of Equipment	Quantity required
	CIVIL	
1.	Assorted components for plumbing consisting of metallic pipes, plastic pipes, flexible pipes, couplings, unions, elbows, plugs and other fittings.	**15 sets**
2.	Carpentry vice (fitted to work bench)	**15 Nos**
3.	Standard woodworking tools 15 Sets.	**15 Sets.**

4.	Models of industrial trusses, door joints, furniture joints	**5 each**
5.	**Power Tools:** (a) Rotary Hammer (b) Demolition Hammer (c) Circular Saw (d) Planer (e) Hand Drilling Machine (f) Jigsaw	**2 Nos**

MECHANICAL

1.	Arc welding transformer with cables and holders.	**5 Nos**
2.	Welding booth with exhaust facility.	**5 Nos**
3.	Welding accessories like welding shield, chipping hammer, wire brush, etc.	**5 Sets**
4.	Oxygen and acetylene gas cylinders, blow pipe and other welding outfit.	**2 Nos**
5.	Centre lathe.	**2 Nos**
6.	Hearth furnace, anvil and smithy tools.	**2 Sets**
7.	Moulding table, foundry tools.	**2 Sets**
8.	Power Tool: Angle Grinder.	**2 Nos**
9.	Study-purpose items: centrifugal pump, air-conditioner.	**1 each**

ELECTRICAL

1.	Assorted electrical components for house wiring.	**15 Sets**
2.	Electrical measuring instruments.	**10 Sets**
3.	**Study purpose items:** Iron box, fan and regulator, emergency lamp.	**1 each**
4.	Megger (250V/500V).	**1 No.**
5.	**Power Tools:** (a) Range Finder (b) Digital Live-wire detector	**2 Nos**

ELECTRONICS

1.	Soldering guns 10 Nos.	**10 Nos.**
2.	Assorted electronic components for making circuits 50 Nos.	**50 Nos.**
3.	Small PCBs.	**10 Nos.**
4.	Multimeters	**10 Nos.**
5.	**Study purpose items:** Telephone, FM radio, low-voltage power supply	**1 each**

COURSE OUTCOMES

Upon completion of the course, students will be

CO1	Able to fabricate carpentry components and pipe connections including plumbing works.
CO2	Able to use welding equipment to join the structures, carry out the basic machining operations, and make the models using sheet metal works.
CO3	Students will be able to isolate, grow and study the effect of external parameters on the microbial growth in batch culture.Able to illustrate on centrifugal pump, air conditioner, operations of smithy, foundry and fittings.
CO4	Able to carry out basic home electrical works and appliances, measure the electrical quantities.
CO5	Able to elaborate on the electronic components and gates, soldering practices.

BT1208	**CELL BIOLOGY LAB**	**L**	**T**	**P**	**C**
		0	**0**	**4**	**2**

OBJECTIVES:

- To demonstrate various techniques to learn the morphology, identification and propagation

LIST OF EXPERIMENTS

1. Introduction to principles of sterile techniques and cell propagation
2. Principles of microscopy, phase contrast and fluorescent microscopy
3. Identification of plant, animal and bacterial cells by microscopy
4. Gram's Staining
5. Leishman Staining
6. Giemsa Staining
7. Thin Layer Chromatography
8. Separation of Peripheral Blood Mononuclear Cells from blood
9. Osmosis and Tonicity
10. Trypan Blue Assay
11. Staining for different stages of mitosis in Allium Cepa (Onion)

TOTAL PERIODS: 60

Equipment Needed for 20 Students

1. Hot Air Oven -1
2. Incubators -2
3. Light Microscopes -4
4. Incubator Shaker -1
5. Laminar Flow Chamber -2
6. Glassware, Chemicals as required

REFERENCE:

1. Rickwood, D. and J.R. Harris "Cell Biology : Essential Techniques",

COURSE OUTCOMES

Upon completion of the course, the students will be able

CO1 To understand the basic techniques to work with cells

CO2 To demonstrate working principles of Microscopy

CO3 To understand and perform cell staining techniques

CO4 To identify the various stages of mitosis

MAPPING OF COs WITH POs AND PSOs

SEMESTER III

MA1301 **TRANSFORMS AND PARTIAL DIFFERENTIAL EQUATIONS**

L	T	P	C
3	1	0	4

OBJECTIVES:

- To introduce the basic concepts of Partial differential equation and to find its solutions.
- To introduce Fourier series analysis which is vital to many applications in engineering apart from its use in solving boundary value problems.
- To acquaint the student with Fourier series techniques to solve heat and wave flow problems in engineering.
- To familiarize the student with Fourier transform techniques used in solving various practical engineering problems.
- To introduce the effective mathematical tools for the solutions of difference equations that model several physical processes and to develop transform techniques for discrete time systems.

UNIT I: PARTIAL DIFFERENTIAL EQUATIONS **12**

Formation of partial differential equations – Singular integrals – Solutions of standard types of first order partial differential equations (except $f(x^m z^k p, y^n z^k q) = 0$) – Lagrange's linear equation – Linear partial differential equations of second and higher order with constant coefficients of both homogeneous and non-homogeneous types **CO1**

UNIT II: FOURIER SERIES **12**

Dirichlet's conditions -Necessary and sufficient condition for existence of Fourier series – General Fourier series – Odd and even functions – Half range sine series –Half range cosine series – Complex form of Fourier series – Parseval's identity – Harmonic analysis. **CO2**

UNIT III: APPLICATIONS OF PARTIAL DIFFERENTIAL EQUATIONS **12**

Classification of PDE – Method of separation of variables – Fourier Series Solutions of one-dimensional wave equation – One dimensional equation of heat conduction – Steady state solution of two dimensional equation of heat conduction. **CO3**

UNIT IV: FOURIER TRANSFORMS **12**

Statement of Fourier integral theorem – Fourier transform pair – Fourier sine and Cosine transforms – Properties – Transforms of simple functions – Convolution theorem – Parseval's identity. **CO4**

UNIT V: Z - TRANSFORMS AND DIFFERENCE EQUATIONS **12**

Z-transforms – Elementary properties – Inverse Z-transform (using partial fraction and residues) – Initial and final value theorems – Convolution theorem – Formation of difference equations – Solution of difference equations using Z – transform. **CO5**

TOTAL PERIODS: 60

COURSE OUTCOMES

Upon completion of the course, the students will be able to

CO1	Understand how to solve the partial differential equations and apply these concepts in the field of engineering.
CO2	Learn Fourier series analysis which plays a vital role in the application of electrical engineering, vibration analysis, acoustics, optics, signal and image processing.
CO3	Appreciate the physical significance of Fourier series techniques in solving one and two-dimensional heat flow problems and one dimensional wave equations and this concept is applied in the fields like elasticity, heat transfer ,quantum mechanics and also extensively in physical phenomenon.
CO4	Understand the mathematical principles on transforms and gain the ability to formulate and solve some of the physical problems like designing electrical circuits, signal processing, signal analysis, image processing etc.
CO5	Learn to use the effective mathematical tools like Z- transform for the solving difference equations in discrete time signals etc.

BT1301 **PROCESS CALCULATIONS**

L	T	P	C
3	0	0	3

OBJECTIVES:

- The course aims to develop skills of the students in the area of Chemical Engineering with emphasis in process calculations and fluid mechanics.
- This will enable the students to perform calculations pertaining to processes and operations.

UNIT I: BASIC CHEMICAL CALCULATIONS **9**

Dimension – Systems of units esp. engineering FPS, Engineering MKS & SI systems – Conversion from one system to the other – composition of mixtures and solutions – mass fraction, mass %, mole fraction, mole %, mass ratios, molarity, molality, normality, ppm, composition by density. **CO1**

UNIT II: IDEAL AND ACTUAL GAS EQUATIONS **9**

Ideal and actual gas equations, Vander Walls, compressibility factor equations, Application to pure gas & gas mixtures – partial pressures, partial volumes – Air-water vapour systems, Humidity, Molar Humidity, Relative Humidity, % Saturation, humid Volume – Humidity chart – wet, Dry bulb, Dew point temperatures, pH of solutions, Vapour pressure. **CO2**

UNIT III: MATERIAL BALANCE WITHOUT CHEMICAL REACTIONS **9**

Material balance concept – overall & component – material balance applications for evaporator, gas absorber without reaction, Distillation (Binary system), Liquid extraction, solid-liquid extraction, drying, crystallization, Humidification, Reverse Osmosis separation and Mixing Recycle and Bypass illustration **CO3**

UNIT IV: ENERGY BALANCE **9**

General energy balance equation for open systems, closed system sensible heat calculation, Heat required for phase change thermo chemistry, application of steam tables, Saturated and superheated steam application in bioprocess **CO4**

UNIT V: MATERIAL BALANCE WITH CHEMICAL REACTION **9**

Chemical Reaction-Limiting, excess component, Fractional conversion, Percent conversion, Fractional yield in multiple reactions. Simple problems, Combustion Reactions **CO5**

TOTAL PERIODS: 45

TEXT BOOKS:

3. Himmelblau D.M “Basic principles & Calculations in Chemical Engineering” 6th edn PHI 2006.

COURSE OUTCOMES

Upon completion of the course, the students will be able

CO1	Tosolve problems related to units and conversions and fit the given data using the methodologies
CO2	Toapply their knowledge in the field of biochemical engineering from the principles of thermodynamics
CO3	Tosolve problems related to material balance concepts & design reactors for biochemical processes
CO4	To solve problems related to energy balance concepts & perform calculations pertaining to processes and operations.
CO5	To gain extensive knowledge on Conversion and Percent Yield for single and multiple chemical reactions.

BT1302	**BASIC INDUSTRIAL BIOTECHNOLOGY**	**L**	**T**	**P**	**C**
		3	**0**	**0**	**3**

OBJECTIVES:

- To make the students aware of the overall industrial bioprocess so as to help them to manipulate the process to the requirement of the industrial needs.
- The course prepares the students for the bulk production of commercially important modern Bioproducts, Industrial Enzymes, Products of plant and animal cell cultures

UNIT I: INTRODUCTION TO INDUSTRIAL BIOPROCESS 9

Introduction to fermentation, Biochemistry of fermentation. Traditional and Modern Biotechnology- A brief survey of organisms, processes, products. Basic concepts of Upstream and Downstream processing in Bioprocess, Process flow sheeting – block diagrams, pictorial representation. **CO1**

UNIT II: PRODUCTION OF PRIMARY METABOLITES 9

Primary Metabolites- Production of commercially important primary metabolites like organic acids, amino acids and alcohols. **CO2**

UNIT III: PRODUCTION OF SECONDARY METABOLITES 9

Secondary Metabolites- Production processes for various classes of secondary metabolites: Antibiotics, Vitamins and Steroids. **CO3**

UNIT IV: PRODUCTION OF ENZYMES AND OTHER BIOPRODUCTS 9

Production of Industrial Enzymes, Biopesticides, Biofertilizer, Biopreservatives, Biopolymers Biodiesel. Beer, Cheese, SCP & Mushroom culture **CO4**

UNIT V: PRODUCTION OF MODERN BIOTECHNOLOGY PRODUCTS 9

Production of recombinant proteins having therapeutic and diagnostic applications, vaccines. **CO5**
Bioprocess strategies in Plant Cell and Animal Cell culture.

7. K.G.Ramawat & Shaily Goyal, Comprehensive Biotechnology, 2009, S.Chand publications.

COURSE OUTCOMES

Upon completion of the course,

CO1	Students will be able to learn, define and understand the basics in industrial bioprocess and to explain the steps involved in the production of bioproducts and methods to improve modern biotechnology.
CO2	Students will be able to measure and manufacture the primary metabolites of commercial importance and apply basic biotechnological principles, methods and models to solve biotechnological tasks.
CO3	Students will be able to measure, manufacture and formulate the secondary metabolites of commercial importance.
CO4	Students will be able to isolate, identify, characterize and apply in the production of enzymes and bioproducts.
CO5	Students will be able to estimate, evaluate and express the production of therapeutic and diagnostic products and design and deliver useful modern biotechnology products to the Society

BT1303 **MICROBIOLOGY** **L T P C**
3 0 0 3

OBJECTIVES:

- TointroducestudentstotheprinciplesofMicrobiologytoemphasizestructure, multiplication and biochemical aspects of various microbes
- To solve the problems in microbial infection and their control
- To Apply the knowledge in Industrial and environmental Biotechnology using microorganism

UNIT I: INTRODUCTION **9**

Basics of microbial existence; history of microbiology, classification and nomenclature of microorganisms, microscopic examination of microorganisms, light and electron microscopy; principles of different staining techniques like gram staining, acid fast, capsular staining, flagellar staining. **CO1**

UNIT II: MICROBES- STRUCTURE AND MULTIPLICATION **9**

Structural organization and multiplication of bacteria, viruses, algae and fungi, with special mention of life history of actinomycetes, yeast, mycoplasma and bacteriophages. **CO2**

UNIT III: MICROBIAL NUTRITION, GROWTHANDMETABOLISM **9**

Nutritional requirements of bacteria; different media used for bacterial culture; growth curve and different methods to quantify bacterial growth; aerobic (Glycolysis, Pentose pathway) and anaerobic bioenergetics (TCA cycle and Glyoxylate cycle) and utilization of energy for biosynthesis of important molecules (Synthesis of amino acid, protein, peptidoglycan and nucleotides) **CO3**

UNIT IV: CONTROL OF MICROORGANISMS **9**

Physical and chemical control of microorganisms; host-microbe interactions; anti-bacterial, anti-fungal and anti-viral agents; mode of action and resistance to antibiotics; clinically important microorganisms. **CO4**

UNIT V: INDUSTRIAL AND ENVIRONMENTAL MICROBIOLOGY **9**

Primary metabolites; secondary metabolites and their applications; preservation of food; productionof penicillin, alcohol, vitamin B-12; biogas; bioremediation; leaching of ores by microorganisms; biofertilizers and biopesticides; microorganisms and pollution control; biosensors	**CO5**

7. PrescottL.M.,HarleyJ.P.,KleinDA,Microbiology,3rdEdition,Wm.C.BrownPublishers,1996

COURSE OUTCOMES

Upon completion of the course,

CO1	Students will develop skills in the identification and grouping of different microbes using staining and microscopic techniques.
CO2	Students will gain the ability to define the structural features of microbes through microscopy by structure and biochemical aspects of various microbes.
CO3	Students will be able to understand the microbial metabolism and nutritional requirements of various microbes.
CO4	Students will be able to select a suitable method for the control of microbes and design of antimicrobial agents to prevent microbial infection.
CO5	Students will be able to realize and identify various micro organism for industrial and environmental applications

BT1304	BIOCHEMISTRY - I	L	T	P	C
		3	0	0	3

OBJECTIVES:

To enable the students

- To know in detail about the elements of atom, charges and their bonding rule.
- To understand the fundamentals of biomolecules and biochemical process.
- To understand the reactions of intermediate metabolism and regulations

UNIT I: INTRODUCTION TO ORGANIC CHEMISTRY **9**

Basic principles of organic chemistry- Atoms, Electrons and Orbitals - Covalent Bonds - Octet rule - Polar covalent Bonds -Electronegativity- formal charges, Isomers-Structural and Stereoisomers. Acids and Bases - Arrhenius and Bronsted Lowry Theories, Lewis acid and base. Role of carbon, types of functional groups, chemical nature of water, pH and biological buffers- Types of buffers. **CO1**

UNIT II: STRUCTURE AND PROPERTIES OF CARBOHYDRATES **9**

Structure, Types and properties of Monosaccharides, Oligosaccharides and Polysaccharides. Chemical reaction of monosaccharides, Isomers- D and L configurations, epimers, anomers. Optical activity of Carbohydrates- Dextro and Levorotatory- Mutarotation. Proteoglycans, glucosaminoglycans. mutarotation, glycosidic bond, reducing sugars. Starch, glycogen, cellulose and chitin. Proteoglycans, glycosaminoglycans. Hyaluronic acid, chondroitin sulfate. **CO2**

UNIT III: STRUCTURE AND PROPERTIES OF PROTEIN **9**

Amino Acids and their types, Peptides, Proteins, measurement, structures, hierarchy of organization primary, secondary, tertiary and quaternary structures, glycoproteins, lipoproteins. Determine of primary structure. Strategy of Peptide Synthesis-Merrifield state peptide synthesis – Sequencing of Proteins- Sanger’s and Edman’s Method. **CO3**

UNIT IV: STRUCTURE AND PROPERTIES OF LIPIDS AND NUCLEIC ACIDS **9**

Lipids: fatty acids, glycerol-simple lipids: fats, oils and waxes-complex lipids: phospholipids, glycolipids, sphingolipids - derived lipids: steroids, terpenoids and carotenoids - Functions of lipids -saponification, iodination and hydrogenation. **CO4**
Nucleic acids: purines, pyrimidines, nucleoside, nucleotide, structure and function of RNA-mRNA, tRNA, rRNA and Watson and Crick structure of DNA. Sangers method of DNA Sequencing.

UNIT V: INTERMEDIARY METABOLISM AND REGULATION **9**

Glycolysis, TCA cycle, gluconeogenesis, pentose phosphate shunt & glyoxalate shunt. Fatty acid biosynthesis and oxidation, Cholesterol synthesis, Terpenes Biosynthesis. Amino acid degradation-deamination, transamination and decarboxylation, urea cycle. Electron transport chain- ATP cycle, calculation of ATP yield during oxidation of glucose and fatty acids. **CO5**

TOTAL PERIODS: 45

TEXT BOOKS:

1. Lehninger Principles of Biochemistry 6th Edition by David L. Nelson, Michael M. Cox
2. Satyanarayana, U. and U. Chakerapani, “Biochemistry” 3rd Rev. Edition, Books & Allied (P) Ltd., 2006.

3. Voet, D. and Voet, J.G., “Biochemistry”, 3rd Edition, John Wiley & Sons Inc.,2004.

COURSE OUTCOMES

Upon completion of the course,

CO1	Students will be able to outline the basics of organic chemistry.
CO2	Students will be able to describe the basic structure, types and function of carbohydrates.
CO3	Students will be able to gain extensive knowledge on amino acids and protein.
CO4	Students will be able to gain extensive knowledge on Lipids and nucleic acids.
CO5	Students will be able to gain knowledge in intermediate metabolism and to consolidate the energy yield from different metabolic pathway

BT1305	**MOLECULAR BIOLOGY**	**L**	**T**	**P**	**C**
		3	**0**	**0**	**3**

OBJECTIVES:
- Familiarize students with the cell and molecular biology of both Prokaryotes and Eukaryotes.
- This will be needed for any project work in modern biotechnology.
- By doing this course students will acquire basic fundamental knowledge and explore skills in molecular biology and become aware of the complexity and harmony of the cells.
- This course will emphasize the molecular mechanism of DNA replication, repair,transcription, protein synthesis and gene regulation in various organisms.

UNIT I: CHEMISTRY OF NUCLEIC ACIDS **9**

Introduction to nucleic acids: Nucleic acids as genetic material, Structure and physicochemical properties of elements in DNA and RNA, Biological significance of differences in DNA and RNA. Primary structure of DNA: Chemical and structural qualities of 3’,5’-Phosphodiester bond. Secondary Structure of DNA: Watson & Crick model, Chargaff’s rule, X–ray diffraction analysis of DNA, Forces stabilizes DNA structure, Conformational variants of double helical DNA, Hogsteen base pairing, Triple helix, Quadruple helix, Reversible denaturation and hyperchromic effect. Tertiary structure of DNA: DNA supercoiling. **CO1**

UNIT II: DNA REPLICATION & REPAIR		**9**
Overview of Central dogma. Organization of prokaryotic and eukaryotic chromosomes. DNA replication: Meselson& Stahl experiment, bi–directional DNA replication, Okazaki fragments, Proteomics of DNA replication, Fidelity of DNA replication, Inhibitors of DNA replication, Overview of differences in prokaryotic and eukaryotic DNA replication, Telomere replication in eukaryotes. D-loop and rolling circle mode of replication. Mutagens, DNA mutations and their mechanism, various types of repair mechanisms.	**CO2**	
UNIT III: TRANSCRIPTION		**9**
Structure and function of mRNA, rRNA and tRNA. Characteristics of promoter and enhancer sequences. RNA synthesis: Initiation, elongation and termination of RNA synthesis, Proteins of RNA synthesis, Fidelity of RNA synthesis, Inhibitors of transcription, Differences in prokaryotic and eukaryotic transcription. Basic concepts in RNA world: Ribozymes, RNA processing: 5'-Capping, Splicing-Alternative splicing, Poly 'A' tail addition and base modification.	**CO3**	
UNIT IV: TRANSLATION		**9**
Introduction to Genetic code: Elucidation of genetic code, Codon degeneracy, Wobble hypothesis and its importance, Prokaryotic and eukaryotic ribosomes. Steps in translation: Initiation, Elongation and termination of protein synthesis. Inhibitors of protein synthesis. Posttranslational modifications and its importance.	**CO4**	
UNIT V: REGULATION OF GENE EXPRESSION		**9**
Organization of genes in prokaryotic and eukaryotic chromosomes, Hierarchical levels of gene regulation, Prokaryotic gene regulation –lac and trp operon, Regulation of gene expression with reference to λ phage life cycle.	**CO5**	

TOTAL PERIODS: 45

TEXT BOOKS:

1. Friefelder, David. "Molecular Biology." Narosa Publications, 1999
2. Weaver, Robert F. "Molecular Biology" IInd Edition, Tata McGraw-Hill, 2003.
3. Karp, Gerald "Cell and Molecular Biology: Concepts and Experiments" IVth Edition, John Wiley, 2005.
4. Friefelder, David and George M. Malacinski "Essentials of Molecular Biology" IInd Edition, Panima Publishing, 1993.

2. Glick , B.R. and J.J. Pasternak. "Molecular Biotechnology: Principles and Applications of Recombinant DNA" 4th Edition. ASM, 2010.

COURSE OUTCOMES

Upon completion of the course, the students will

CO1	Understand the basic structure and physicochemical properties of elements in DNA and RNA.
CO2	Understand the Central dogma of life and identify the principle and differences between the DNA replication of prokaryotes and eukaryotes.
CO3	Gain knowledge about the mechanism behind prokaryotic and eukaryotic transcription. They also additionally understand the basic concepts in RNA world: Ribozymes and RNA processing.
CO4	Know how to elucidate the genetic code and understand the mechanism and differences between prokaryotes and eukaryotes translation.
CO5	Gain knowledge about gene organization and mechanism of gene expression in various organisms.

BT1307	MICROBIOLOGY LABORATORY	L	T	P	C
		0	0	4	2

OBJECTIVES:

- To demonstrate various techniques to learn the morphology, identification and propagation of microbes
- The course prepares the students to have an idea in growth kinetics and behaviour of organism with antibiotic treatments

Exp No : 1 Introduction, Laboratory Safety, Use of Equipment; Sterilization Techniques
Exp No : 2 Culture Media-Types and Use; Preparation of Nutrient broth and agar
Exp No : 3 Culture Techniques, Isolation and Preservation of Cultures- Broth: flask, test tubes; Solid:Pour plates, streak plates, slants, stabs
Exp No : 4 Microscopy – Working and care of Microscope
Exp No : 5 Microscopic Methods in the Study of Microorganisms., Microscopic identification of yeast/mould
Exp No : 6 Staining Techniques Simple, Differential- Gram's Staining, spore /capsule staining
Exp No : 7 Quantification of Microbes: Sampling and Serial Dilution; Bacterial count in Soil – TVC
Exp No : 8 Effect of Disinfectants- Phenol Coefficient
Exp No : 9 Antibiotic Sensitivity Assay
Exp No : 10 Growth Curve in Bacteria and Yeast

Exp No : 11 Effect of pH, Temperature, UV radiation on Growth Bacteria

TOTAL PERIODS: 60

EQUIPMENT NEEDED FOR 30 STUDENTS

1. Autoclave - 1,
2. Hot Air Oven - 1,
3. Incubators - 2 ,
4. Light Microscopes - 4,
5. Incubator Shaker - 1,
6. Colorimeter - 2,
7. Lamina Flow Chamber - 2 ,
8. Glassware, Chemicals, Media as required.

TEXT BOOKS:

2. Collee, J.G. etal., "Mackie & McCartney Practical Medical Microbiology" 4th Edition, ChurchillLivingstone, 1996.

COURSE OUTCOMES

Upon completion of the course,

CO1	Students will be able to culture and grow microbes on media.
CO2	Students will gain knowledge on identification and quantification of microbes.
CO3	Students will be able to isolate, grow and study the effect of external parameters on the microbial growth in batch culture.
CO4	Students will also study the effect of disinfectant and antibiotics on microbes.
CO5	Students will gain knowledge on radiation impacts on the microbes

BT1308	**BIOCHEMISTRY LABORATORY**	**L**	**T**	**P**	**C**
		0	**0**	**4**	**2**

AIM:
- To learn and understand the principles behind the qualitative and quantitative estimation of biomolecules (proteins, carbohydrates, lipids, metabolites etc.,) and laboratory analysis of the same in the body fluids.

EXPERIMENTS
1. General guidelines for working in biochemistry lab (theory)
2. Units of volume, weight, density and concentration measurements and their range in biological measurements. Demonstration of proper use of volume and weight measurement devices.
3. Accuracy, precision, sensitivity and specificity (theory)
4. Preparation of buffer –titration of a weak acid and a weak base.
5. Qualitative tests for carbohydrates – distinguishing reducing from non-reducing sugars and keto from aldo sugars.
6. Quantitative method for amino acid estimation using ninhydrin – distinguishing amino from imino acid.
7. Protein estimation by Biuret and Lowry's methods.
8. Protein estimation by Bradford and spectroscopic methods.
9. Extraction of lipids and analysis by TLC.

10. Estimation of nucleic acids by absorbance at 260 nm and hyperchromic effect (demo).
11. Enzymatic assay: phosphatase from potato.
12. Enzymatic assay: estimation of glucose by GOD-POD method after hydrolysis of starch with acid and specificity of the enzymatic method.

TOTAL PERIODS: 60

Equipment Needed for 20 Students

1. Autocalve-1
2. Hot Air Oven -1
3. Incubators -2
4. Light Microscopes -4
5. Incubator Shaker -1
6. Colorimeter -2
7. Laminar Flow Chamber -2
8. Glassware, Chemicals, Media asrequired

TEXT BOOKS

1. Practical Biochemistry by R.C. Gupta and S. Bhargavan.
2. Introduction of Practical Biochemistry by David T. Phummer. (II Edition)

REFERENCE:

2. Harpers Biochemistry Ed. R.K. Murray , D.K. Granner, P.A. Mayes and V.W.Rodwell,Appleton and Lange ,Stanford ,Conneticut.
3. Textbook of Biochemistry with clinical correlations. Ed. Thomas M. Devlin. Wiley LissPublishers

COURSE OUTCOMES

Upon completion of the course, the students will gain knowledge on

CO1	The basic guidelines in laboratory and gain knowledge in fundamentals of units, measurements, accuracy and precision
CO2	The basic principles behind the qualitative analysis of carbohydrates and amino acids
CO3	Extraction and analysis of lipids
CO4	Different biochemical estimation methods of biomolecules and will be able to carry out both qualitative and quantitative analyses of the same.
CO5	Estimation of enzymatic activity and perform titrations using acids and bases.

HS1310 PROFESSIONAL SKILLS LABORATORY

L	P	T	C
0	0	2	1

OBJECTIVES

- Enhance the Employability and Career Skills of students
- Orient the students towards grooming as a professional
- Make them Employable Graduates
- Develop their confidence and help them attend interviews successfully.

LIST OF EXPERIMENTS

UNIT I **6**

Introduction to Soft Skills- Hard skills & soft skills - employability and career Skills—Grooming as a professional with values—Making an Oral Presentation–Planning and preparing a model presentation; Organizing the presentation to suit the audience and context; Connecting with the audience during presentation; Projecting a positive image while speaking; Emphasis on effective body language-General awareness of Current Affairs. **CO1**

UNIT II **6**

Self-Introduction-organizing the material - Introducing oneself to the audience – introducing the topic – answering questions – individual presentation practice—– Making a Power Point Presentation -- Structure and format; Covering elements of an effective presentation; Body language dynamics. Making an Oral Presentation–Planning and preparing a model presentation; Organizing the presentation to suit the audience and context; Connecting with the audience during presentation; Projecting a positive image while speaking; Emphasis on effective body language **CO2**

UNIT III **6**

Introduction to Group Discussion— Participating in group discussions – understanding group dynamics - brainstorming the topic -– questioning and clarifying –GD strategies- Structure and dynamics of a GD; Techniques of effective participation in group discussion; Preparing for group discussion; Accepting others' views / ideas; Arguing against others' views or ideas, etc **CO3**

UNIT IV **6**

Basics of public speaking; Preparing for a speech; Features of a good speech; Speaking with a microphone. (Famous speeches may be played as model speeches for learning the art of public speaking). Interview etiquette – dress code – body language – attending job interviews–telephone/skype interview -one to one interview &panel interview –Job Interviews: purpose and process; How to prepare for an interview; Language and style to be used in an interview; Types of interview questions and how to answer them. **CO4**

UNIT V **6**

Recognizing differences between groups and teams- managing time managing stress-networking professionally- respecting social protocols understanding career management-developing a long- term career plan making career changes **CO5**

TOTAL : 30 PERIODS

LIST OF EQUIPMENT FOR A BATCH OF 30 STUDENTS

One Server
30 Desktop Computers
One Hand Mike
One LCD Projector

REFERENCE BOOKS

1. Butterfield, Jeff Soft Skills for Everyone. Cengage Learning: New Delhi, 2015
2. E. Suresh Kumar et al. Communication for Professional Success. Orient Blackswan: Hyderabad, 2015

5. Interact English Lab Manual for Undergraduate Students, Orient BalckSwan: Hyderabad, 2016.

COURSE OUTCOMES

Upon completion of the course, the students will be able to

CO1 Make effective presentations

CO2 Participate confidently in Group Discussions

CO3 Attend job interviews and be successful in them.

CO4 Develop adequate Soft Skills required for the workplace

CO5 Develop their speaking skills to enable them speak fluently in real contexts

IV SEMESTER

MA1452 APPLIED PROBABILITY AND STATISTICS

L	T	P	C
3	1	0	4

OBJECTIVES:

- This course aims at providing the required skill to apply the statistical tools in engineering problems.
- To introduce the basic concepts of probability and random variables.
- To introduce the basic concepts of two dimensional random variables.
- To acquaint the knowledge of testing of hypothesis for small and large samples which plays an important role in real life problems.
- To introduce the basic concepts of classifications of design of experiments which plays very important roles in the field of agriculture and statistical quality control.

UNIT I: PROBABILITY AND RANDOM VARIABLES 12

Probability – The axioms of probability – Conditional probability – Baye's theorem - Discrete and continuous random variables – Moments – Moment generating functions – Binomial, Poisson, Geometric, Uniform, Exponential and Normal distributions. **CO1**

UNIT II: TWO - DIMENSIONAL RANDOM VARIABLES 12

Joint distributions – Marginal and conditional distributions – Covariance – Correlation and linear regression – Central limit theorem (for independent and identically distributed random variables). **CO2**

UNIT III: TESTING OF HYPOTHESIS 12

Sampling distributions - Estimation of parameters - Statistical hypothesis - Large sample tests based on Normal distribution for single mean and difference of means -Tests based on t, Chi-square and F distributions for mean, variance and proportion - Contingency table (test for independent) – Goodness of fit. **CO3**

UNIT IV: DESIGN OF EXPERIMENTS 12

One way and Two way classifications - Completely randomized design – Randomized block design –Latin square design **CO4**

UNIT V: STATISTICAL QUALITY CONTROL 12

Control charts for measurements (and R charts) – Control charts for attributes (p, c and np charts) –Tolerance limits - Acceptance sampling. **CO5**

TOTAL PERIODS: 60

TEXT BOOKS:

5. Walpole. R.E., Myers. R.H., Myers. S.L. and Ye. K., "Probability and Statistics for Engineersand Scientists", Pearson Education, Asia, 9th Edition, 2012.

COURSE OUTCOMES

Upon completion of the course, the students will be able

CO1	Get exposure to random variables and well-founded knowledge of standard distributions which can describe real life phenomena.
CO2	Get ideas to handle situations involving more than one random variable
CO3	Gain the knowledge on Large Samples and Small Samples. These concepts are very useful in biological, economical and social experiments and all kinds of generalizations based on information about a smaller sample and larger samples. Apply the appropriate test in the problems related with sampling.
CO4	Apply the basic concepts of design of experiments and handle the same.
CO5	Understand the concept of the Control charts to apply in the field of quality assessment, Production processes, to monitor process stability and control of the manufacturing product.

BT1401 **BIOCHEMISTRY-II**

L	T	P	C
3	0	0	3

OBJECTIVES:

- To orient towards the application of knowledge acquired in solving clinical problems.
- To provide a base for molecular modelling and drug designing

UNIT I: METABOLISM OF AMINO ACIDS **9**

Biosynthesis of Gly, Ser and Cys; Biosynthesis of six essential amino acids (Met, Thr, Lys, Ile,Val, Leu) and regulation of branched chain amino acids (concerted inhibition, allosteric regulation and enzyme multiplicity, sequential feedback) from oxaloacetate and pyruvate; Biosynthesis of aromatic amino acids. Metabolic disorders associated with branched chain and aromatic amino acid degradation. Important molecules derived from amino acids (auxins, DOPA, Serotonin, porphyrins, T3, T4, Adrenaline, Noradrenaline, histamine, GABA, polyamines etc) **CO1**

UNIT II: PROTEIN TRANSPORT AND DEGRADATION **9**

Protein targeting, signal sequence, secretion; Folding, Chaperons and targeting of organelle proteins, Protein degradation, receptor-mediated endocytosis, turnover. **CO2**

UNIT III: BIOCHEMISTRY OF MUSCLE CONTRACTION **9**

Contractile proteins, Actin, Myosin, Actin Polymerization, acto-myosin complexes, mechanism of myosin ATPase activity, excitation – contraction coupling nad relaxation, microtubules, microfilaments and their role in organelle movements. **CO3**

UNIT IV: VITAMINS AND COENZYMES **9**

Fat Soluble Vitamins, provitamins (A, D, E and K). Structure, physiological significance and deficiency symptoms. Water soluble vitamins, structure, coenzyme role and deficiency symptoms. Thiamine, riboflavin, pyridoxine, niacin, folic acid, biotin and Vitamin B12. Recommended dietary intake. Coenzymes: Their role in metabolic pathways. NAD, FAD, TPP, PLP, carboxy biotin. **CO4**

UNIT V: HORMONES **9**

Introduction. Effects of Hormones. Chemical classification of hormones. Peptide hormone vasopressin, protein hormone- insulin. Lipid and phospholipid derived hormones prostaglandin and phospholipids. Steroid hormones-testosterone, estrogen, cortisol. Monoamines: thyroxine, adrenaline. Mechanism of action of the different classes of hormones. **CO5**

TOTAL PERIODS: 45

TEXT BOOKS:

1. Nelson, D.L et al., "Lehninger's Principles of Biochemistry" Stryer, Lubert.
2. "Biochemistry".IVth Edition, W.H Freeman & Co., 2000.
3. Voet, D.J and J.G. Voet and C.W. Pratt "Principles of Biochemistry" IIIrd Edition, John Wiley & Sons Inc., 2008.
4. Murray, R.K., et al., "Harper's Illustrated Biochemistry". XXVIIth Edition. McGraw-Hill,2006..

REFERENCE:

1. Creighton. T.E., "Proteins: Structure and Molecular Properties" IInd Edition, W.H. Freeman and Co.,1993.
2. Salway, J.G., "Metabolism at a Glance". IInd Edition, Blackwell Science Ltd., 2000.

COURSE OUTCOMES

Upon completion of the course,

CO1 Student will gain knowledge on the reaction involve in amino acid synthesis

CO2 Students will have knowledge on protein transport and degradation

CO3 Students will gain knowledge in biochemistry of muscle contraction

CO4 Student will gain knowledge on the role of vitamins and co-enzymes in metabolic pathway

CO5 Students will gain knowledge on biomembranes, transport and electrical conductivity.

BT1402	**ENZYME ENGINEERING**	**L**	**T**	**P**	**C**
		3	**0**	**0**	**3**

OBJECTIVES:

To enable the students

- To learn enzyme reactions and its characteristics along with the production and purification process
- To give the student a basic knowledge concerning biotransformation reactions with the usage of enzymes

UNIT I: INTRODUCTION TO ENZYMES **9**

Classification of enzymes. Mechanisms of enzyme action; concept of active site and energetics of enzyme substrate complex formation; specificity of enzyme action; principles of catalysis – collision theory, transition state theory; role of entropy in catalysis. **CO1**

UNIT II: KINETICS OF ENZYME ACTION **9**

Kinetics of single substrate reactions; estimation of Michelis – Menten parameters, multisubstrate reactions - mechanisms and kinetics; turnover number; types of inhibition & models –substrate, product. Allosteric regulation of enzymes, Monod Changeux Wyman model, pH and temperature effect on enzymes & deactivation kinetics. **CO2**

UNIT III: ENZYME IMMOBILIZATION AND BIOSENSORS 9

Physical and chemical techniques for enzyme immobilization – adsorption, matrix entrapment, encapsulation, cross-linking, covalent binding etc., - examples, advantages and disadvantages, design of enzyme electrodes and their application as biosensors in industry, healthcare and environment. **CO3**

UNIT IV: PURIFICATION AND CHARACTERIZATION OF ENZYMES FROM NATURAL SOURCES 9

Production and purification of crude enzyme extracts from plant, animal and microbial sources; methods of characterization of enzymes; development of enzymatic assays. **CO4**

UNIT V: INDUSTRIAL APPLICATIONS OF ENZYMES 9

Enzymes in organic synthesis – Enzymes for food, pharmaceutical, tannery, textile, paper and pulp industries – Enzyme for environmental applications- Enzymes for analytical and diagnostic applications – Enzymes for molecular biology research. **CO5**

TOTAL PERIODS: 45

TEXT BOOKS:

1. Trevor Palmer , Enzymes IInd Horwood Publishing Ltd

4. Wiseman, Enzyme Biotechnology, Ellis Horwood Pub.

COURSE OUTCOMES

Upon completion of the course, the students will be able

CO1	To gain knowledge on enzyme and enzyme reactions which will be the key step to proceed towards various concepts in biotechnology
CO2	To understand theoretical and practical aspects of kinetics which will deliver the importance and utility of enzyme kinetics towards research.
CO3	To know the process of immobilization which enables them to apply its techniques in food, pharmaceutical and chemical industries.
CO4	To technologically work on processing, production and purification of enzymes at an industrial scale.
CO5	To receive theoretical knowledge on biotransformation and industrial, health care and research application of enzymes.

BT1403 FLUID MECHANICS AND HEAT TRANSFER OPERATIONS

L	T	P	C
3	0	0	3

OBJECTIVES:

- To introduce the students to the mechanics of fluids through a thorough understanding of the properties of the fluids, behaviour of fluids under static conditions.
- The dynamics of fluids is introduced through the control volume approach which gives an integrated understanding of the transport of mass, momentum and energy and flow measurements.
- To enable the students to understand the fundamental principles and concepts of heat transfer by conduction, convection and radiation.
- The course will develop skills in the design and application of heat exchangers.
- This course will be a prerequisite for certain engineering subjects offered in the subsequent semesters.

UNIT I: FLUID PROPERTIES & FLUID MECHANICS 9

Fluid definition- compressible, in compressible fluids – coefficient of isothermal compressibility, Density, specific gravity, specific weight, surface tension, vapour pressure, viscosity. Newtonian and Non-newtonian fluids. Fluid statics – Barometric equation – application for incompressible and compressible fluids. Pressure changes in atmospheric air – Gauge and absolute pressure – pressure measurement with Bourdon gauge & manometers. Fluid Dynamics – equation of continuity – Bernoulli's equation – pressure loss in straight pipes – in fittings – expansion and contraction losses (applied to Newtonian Fluids only) Fluid flow measurement, Orifice, venturimeter & Rotameter for Newtonian fluids. **CO1**

UNIT II: FLOW OF FLUID THROUGH PACKINGS 9

Fluidization, Fluid transport -Industrial application of fluid flow through packing-characteristics of packed bed-Bed surface area-void fraction-Laminar flow and turbulent flow through packed bed - pressure drop experienced by the fluid-equations and application problems. Fluidization phenomena-Industrial application - minimum fluidization velocities. Industrial pipes and fittingsFluid moving machinery-pumps centrifugal, Reciprocating-gear, Peristaltic pumps, Introduction togas moving machinery-Fans, blowers, compressors. **CO2**

UNIT III:	**CONDUCTION HEAT TRANSFER**	**9**

Heat transfer phenomena-thermodynamics & heat transfer. Heat conduction – Fourier's equation – steady state conduction in planar and radial systems – Resistance concept – series and–and parallel resistances in conduction – unsteady state conduction – lumped capacity model – extended surfaces (Fins) –combined conduction & convection – 2 dimensional conduction. **CO3**

UNIT IV:	**CONVECTION HEAT TRANSFER**	**9**

Forced and natural convection – Dimensional analysis- Dimensional numbers- Convection heat transfer coefficient- Correlations for flow over plate, through tubes, over spheres and cylinders- Agitated systems- Packed columns- condensation phenomena- Film and drop wise condensation over tubes- Boiling phenomena- heat transfer coefficient. **CO4**

UNIT V:	**RADIATION HEAT TRANSFER AND HEAT TRANNSFER EQUIPMENTS**	**9**

Electromagnetic waves- energy of radiation- Planck's equation-Blackbody- Radiation exchange. Kirchhoff's law, Stefan Boltzmann equation of radiant energy – Wien's law- Radiation exchange between surfaces – black- gray bodies- view factors-sample problems. Concept of overall heat transfer coefficient- Heat exchangers- types, boilers- Kettles- Heat exchanger Design concept- NTU concept. **CO5**

TOTAL PERIODS: 45

TEXT BOOKS:

1. Geamkoplis. C.J "Transport Process & separation Process Principles" IVth Edition Prentice Hall of India,2005.
2.Heat & Mass Transfer by P. K. Nag, Tata McGraw Hill – IIIrd Edition 2003

REFERENCES:

1. Principles of Heat Transfer Frank Kreith, Raj M. ManglikVIIth edition Cenage Learning Inc Mark S. Bohn

COURSE OUTCOMES

Upon completion of the course, the students will gain knowledge on

CO1	The basic understanding of the properties and behaviour of fluids, static and dynamic equilibrium .
CO2	The dynamics of fluids and integrated understanding of transport of mass, momentum and energy.
CO3	The process of Heat transfer through different bodies by means of conduction, convection and radiation.
CO4	The concept of heat flow over surfaces by natural and forced convection, phenomena of boiling and condensation heat transfer , estimation of heat transfer coefficient.
CO5	The basic laws, concept and mechanism of thermal radiation , types of heat exchangers and the design of heat exchangers for various bioprocesses.

BT1404	**BIOPROCESS PRINCIPLES**	**L**	**T**	**P**	**C**
		3	**0**	**0**	**3**

OBJECTIVES:

- To impart knowledge on design and operation of fermentation processes with all its prerequisites.
- To endow the students with the basics of microbial kinetics, metabolic Stoichiometry and energetics.

UNIT I: OVERVIEW OF FERMENTATION PROCESSES **9**

Overview of fermentation industry, general requirements of fermentation processes, basic configuration of fermentor (CSTR) and ancillaries, main parameters to be monitored and controlled in fermentation processes **CO1**

UNIT II: RAW MATERIALS AND MEDIA DESIGN FOR FERMENTATION PROCESS **9**

Criteria for good medium, medium requirements for fermentation processes, carbon, nitrogen, minerals, vitamins and other complex nutrients, oxygen requirements, medium formulation of optimal growth and product formation, examples of simple and complex media, design of various commercial media for industrial fermentations – medium optimization methods **CO2**

UNIT III: STERILIZATION KINETICS **9**

Thermal death kinetics of microorganisms, batch and continuous heat sterilization of liquid media, filter sterilization of liquid media, air sterilization and design of sterilization equipment - batch and continuous. **CO3**

UNIT IV: METABOLIC STOICHIOMETRY AND ENERGETICS **9**

Stoichiometry of cell growth and product formation, elemental balances, degrees of reduction of substrate and biomass, available electron balances, yield coefficients of biomass and product formation, maintenance coefficients energetic analysis of microbial growth and product formation, oxygen consumption and heat evolution in aerobic cultures, thermodynamic efficiency of growth. **CO4**

UNIT V: KINETICS OF MICROBIAL GROWTH AND PRODUCT FORMATION 9

Batch cultivation and continuous cultivation. Simple unstructured models for microbial growth, Monod model, product formation kinetics - Leudeking- Piret models, substrate and product inhibition on cell growth and product formation. Biomass estimation – Direct and Indirect methods. **CO5**

TOTAL PERIODS: 45

3. Harvey W. Blanch, Douglas S. Clark, Biochemical Engineering, Marcel Dekker, Inc.

COURSE OUTCOMES

Upon completion of the course, the students will

CO1	Understand about the assembly and functioning of Bioreactors and its utilities
CO2	Gain knowledge on media components, perform scientific media design and optimize its concentrations
CO3	Analyze the various sterilization methods and its Kinetics and solve the problems associated with it.
CO4	Understand the concepts of Metabolic stoichiometry, Energetics of cell growth and product formation
CO5	Gain knowledge on kinetics of Microbial growth and Product formation

BT1405 **APPLIED THERMODYNAMICS FOR BIOTECHNOLOGISTS**

L	T	P	C
3	0	0	3

OBJECTIVES:

- To enable the students to learn about basic concepts of classical and statistical thermodynamics

UNIT I: THERMODYNAMIC LAW AND PROPERTIES OF FLUIDS **9**

First Law of thermodynamics, a generalized balance equation and conserved quantities, Volumetric properties of fluids exhibiting non ideal behavior; residual properties; estimation of thermodynamic properties using equations of state; calculations involving actual property exchanges; Maxwell's relations and applications. **CO1**

UNIT II: SOLUTION THERMODYNAMICS **9**

Partial molar properties; concepts of chemical potential and fugacity; ideal and non-ideal solutions; concepts and applications of excess properties of mixtures; activity coefficient; composition models; Gibbs Duhem equation. **CO2**

UNIT III: PHASE EQUILIBRIA **9**

Criteria for phase equilibria; VLE calculations for binary and multi component systems; liquid-liquid equilibria and solid-solid equilibria. **CO3**

UNIT IV: CHEMICAL REACTION EQUILIBRIA **9**

Equilibrium criteria for homogeneous chemical reactions; evaluation of equilibrium constant; effect of temperature and pressure on equilibrium constant; calculation of equilibrium conversion and yields for single and multiple reactions. **CO4**

UNIT V: THERMODYNAMIC DESCRIPTION OF MICROBIAL GROWTH AND PRODUCT FORMATION **9**

Thermodynamics of microbial growth stoichiometry thermodynamics of maintenance, Calculation of the Operational Stoichiometry of a growth process at Different growth rates, Including Heat using the Herbert –Pirt Relation for Electron Donor, thermodynamics and stoichiometry of Product Formation. **CO5**

TOTAL PERIODS: 45

TEXT BOOKS:

1. Smith J.M., Van Ness H.C., and Abbot M.M. "Introduction to Chemical Engineering Thermodynamics", VI Edition. Tata McGraw-Hill, 2003.
2. Narayanan K.V. "A Text Book of Chemical Engineering Thermodynamics", PHI, 2003.
3. Christiana D. Smolke, "The Metabolic Pathway Engineering Handbook Fundamentals", CRC Press Taylor & Francis Group, 2010.

REFERENCES:

1.Sandler S.I. "Chemical and Engineering Thermodynamics", John Wiley,1989.

COURSE OUTCOMES

Upon completion of the course, the students will

CO1	Explain the theoretical concepts of thermodynamics and how it applies to energy conversion in technological applications and biological systems.
CO2	Demonstrate the capability to analyze the energy conversion performance in a variety of modern applications in biological systems.
CO3	Design and carry out bioprocess engineering experiments, and analyze and interpret fundamental data to do the design and operation of bioprocesses.
CO4	Describe the criteria when two phases coexist in equilibrium and the vapour liquid equilibrium calculations microbial growth and product formation.
CO5	Apply their knowledge in the field of biochemical engineering from the principles of thermodynamics.

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

BT1407 CHEMICAL ENGINEERING LAB

L	T	P	C
0	0	4	2

OBJECTIVES:

- To provide basic understanding of chemical engineering principles and operations
- To course will enable the students to apply the principles in other chemical engineering and biotechnology subjects offered in higher semesters

LIST OF EXPERIMENTS

1.Flow measurement - Orifice meter
2. Flow measurement - Venturimeter,
3. Flow measurement - Rotameter
4. Pressure drop in flow through pipes
5. Pressure drop in flow through packed column
6. Pressure drop in flow through fluidized beds
7. Characteristics of centrifuge pump
8. Filtration through plate and frame filter press
9. Filtration in leaf filter
10. Simple and steam distillation
11. Adsorption phenomenon
12. Drying characteristics

TOTAL PERIODS: 60

COURSE OUTCOMES

Upon completion of the course, the students will gain knowledge on

CO1	To have knowledge on the basic principles of chemical engineering.
CO2	To apply the skill of material balance and energy balance in unit operations and unit process of chemical engineering and biotechnology.
CO3	To analyze the principles of chemical engineering and its applications in chemical, mechanical and biological perspectives.
CO4	To understand and analyze the mass transfer process and apply its knowledge in an industrial perspective.
CO5	To understand the design and working principles of fluid moving machinery and transport phenomena

BT1408	MOLECULAR BIOLOGY LABORATORY	L	T	P	C
		0	0	4	2

OBJECTIVES:

- Provide hands-on experience in performing basic molecular biology techniques.
- Introduce students to the theory behind in each technique and to describe common applications of each methodology in biological research. This will facilitate the students to take up specialized project in Molecular biology and will be a pre-requisite for research work

LIST OF EXPERIMENTS

1. Electrophoresis _-Agarose and Polyacrylamide Gel
2. Isolation of microbial DNA
3. Isolation of genomic DNA
4. Quantification of DNA (UV/ Vis) and analysis of purity
5. Restriction enzyme digestion& Ligation
6. Competent cells preparation & Transformation
8. Selection of recombinants – Antibiotic sensitivity assay
9. Plating of λ phage
10. Lambda phage lysis of liquid cultures

Requirements:
Equipment Needed for 30 Students

1. Electrophoresis Kit 1
2. PCR 1
3. Incubators 2
4. Light Microscopes 4
5. Incubator Shaker 1
6. Spectrophotometer 2
7. Laminar Flow Chamber 2
8. Glassware, Chemicals, Media as required

TOTAL PERIODS: 60

REFERENCES:

1. Sambrook, Joseph and David W. Russell " The Condensed Protocols: From Molecular Cloning: A Laboratory Manual" Cold Spring Harbor , 2006.

COURSE OUTCOMES

Upon completion of the course,

CO1	Students will be aware of the hazardous chemicals and safety precautions in case of emergency.
CO2	Students will learn to isolate nucleic acids from biological samples.
CO3	Demonstrate knowledge and understanding of the principles underpinning important techniques in molecular biology.

V SEMESTER

BT1501	MASS TRANSFER OPERATIONS	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To define the principles of adsorption, absorption, leaching and drying extraction, distillation crystallization operations.
- To begin the concept of membrane separation process and develop skills of the students in the area of mass transfer operations with emphasis on separation and purification of products.

UNIT I: DIFFUSION AND MASS TRANSFER **9**

Molecular diffusion in fluids and solids; Interphase Mass Transfer; Mass Transfer coefficients; Analogies in Transport Phenomenon. **CO1**

UNIT II: GAS LIQUID OPERATIONS **9**

Principles of gas absorption; Single and Multi component absorption; Absorption with Chemical Reaction; Design principles of absorbers; Industrial absorbers; HTU, NTU concepts. **CO2**

UNIT III: VAPOUR LIQUID OPERATIONS **9**

V-L Equilibria; Simple, Steam and Flash Distillation; Continuous distillation; McCABE-THIELE & PONCHON-SAVARIT Principles; Industrial distillation equipments, HETP, HTU and NTU concepts. **CO3**

UNIT IV: EXTRACTION OPERATIONS **9**

L-L equilibria, Staged and continuous extraction, Solid-liquid equilibria, Leaching Principles. **CO4**

UNIT V: SOLID FLUID OPERATIONS **9**

Adsorption equilibria – Batch and fixed bed adsorption-Drying-Mechanism-Drying curves- Time of Drying; Batch and continuous dryers. **CO5**

TOTAL PERIODS: 45

TEXT BOOKS:

1. Treybal R.E. Mass Transfer Operations.IIIrd edition. Mcgraw Hill, 1981.

REFERENCES:

1.Coulson and Richardson's Chemical Engineering. Vol I & II, Asian Books Pvt Ltd, 1998.

COURSE OUTCOMES

Upon completion of the course, the students will gain knowledge on

CO1	Gas -liquid, vapour- liquid and solid- liquid and liquid–liquid equilibrium.
CO2	Classify and use the accurate engineering correlations of diffusion and mass transfer coefficients to model a separation process.
CO3	Investigate multi-stage equilibrium separation processes, simultaneous phase equilibrium and mass balances in continuous separation processes
CO4	Design and understand operating principles of extraction and leaching
CO5	Design and construction with operating principles of process economics of separating equipments (Dryers and Adsorbers)

BT1502 BIOPROCESS ENGINEERING

L	T	P	C
3	0	0	3

OBJECTIVES: The course will enable the students

- To impart knowledge about bioreactor configuration and their application in processes.
- To understand the regime analysis of bioprocesses in reactor design.
- To learn about kinetics and applications of immobilised systems.
- To develop skills in modelling and simulation of bioprocessses.
- To understand the requirements of recombinant cell cultivation and bioreactor considerations.

UNIT - I CONFIGURATION OF BIOREACTORS

Ideal reactors and its characteristics, Fed batch cultivation, Cell recycle cultivation, Cell recycle cultivation in waste water treatment, two stage cultivation, Packed bed reactor, airlift reactor, introduction to fluidized bed reactor, bubble column reactors. **CO1**

UNIT - II BIOREACTOR SCALE – UP **9**

Regime analysis of bioreactor processes, oxygen mass transfer in bioreactors – microbial oxygen demands; methods for the determination of mass transfer coefficients; mass transfer correlations. Scale up criteria for bioreactors based on oxygen transfer, power consumption and impeller tip speed. **CO2**

UNIT - III BIOREACTOR CONSIDERATION IN ENZYME SYSTEMS **9**

Analysis of film and pore diffusion effects on kinetics of immobilized enzyme reactions; formulation of dimensionless groups and calculation of effectiveness factors. Design of immobilized enzyme reactors – packed bed, fluidized bed and membrane reactors **CO3**

UNIT - IV MODELLING AND SIMULATION OF BIOPROCESSES **9**

Study of structured models for analysis of various bioprocess – compartmental models, models of cellular energetics and metabolism, single cell models, plasmid replication and plasmid stability model. Dynamic simulation of batch, fed batch, steady and transient culture metabolism. **CO4**

UNIT V RECOMBINANT CELL CULTIVATION 9

Different host vector system for recombinant cell cultivation strategies and advantages. E.coli, yeast Pichiapastoris / Saccharomyces cereviseae, Animal cell cultivation, plant cell cultivation, Insect cell cultivation. High cell density cultivation, process strategies, reactor considerations in the above system **CO5**

TOTAL PERIODS: 45

TEXT BOOKS:

1. Michael L. Shuler and FikretKargi, Bioprocess Engineering, Basic Concept, 2nd Edition Prentice Hall PTR, 2002.

3. James M. Lee, Biochemical Engineering, PHI, USA.
4. Atkinson, Handbook of Bioreactors,

COURSE OUTCOMES

Upon completion of the course, the students will be able

CO1	To select appropriate bioreactor configurations and operation modes based on the nature of bio products and other criteria.
CO2	To analyse the regime analysis and hydrodynamics of bioprocesses and apply the criteria in the design of bioreactors.
CO3	To apply and analyse diffusion effects and kinetics of immobilized enzyme systems and the design of immobilized enzyme reactors.
CO4	To develop skills in modelling and simulation of bioprocesses so as to reduce costs and to enhance the quality of products and systems.
CO5	To plan a research career or to work in the biotechnology industry with strong foundation about bioreactor processes and design considerations.

BT1503	ANALYTICAL METHODS AND INSTRUMENTATION	L	T	P	C
		3	0	0	3

OBJECTIVES:

To enable the students

- To have a fundamental knowledge about the Light spectrum, Absorption, Fluorescence, NMR, Mass spectroscopy
- To acquire knowledge on the different chromatographic methods for separation of biological products.

UNIT I: INTRODUCTION TO SPECTROMETRY **9**

Properties of electromagnetic radiation- wave properties – components of optical instruments – Sources of radiation – wavelength selectors – sample containers – radiation transducers – Signal process and read outs – signal to noise ratio - sources of noise – Enhancement of signal to noise - types of optical instruments – Principle of Fourier Transform optical Measurements. **CO1**

UNIT II: MOLECULAR SPECTROSCOPY **9**

Molecular absorption spectrometry – Measurement of Transmittance and Absorbance – Beer's law – Instrumentation - Applications -Theory of fluorescence and Phosphorescence – Instrumentation – Applications – Theory of Infrared absorption spectrometry – IR instrumentation – Applications – Theory of Raman spectroscopy – Instrumentation – applications. **CO2**

UNIT III: MAGNETIC RESONANCE SPECTROSCOPY AND MASS SPECTROMETRY **9**

Theory of NMR – environmental effects on NMR spectra – chemical shift- NMR-spectrometers – applications of 1H and 13C NMR- Molecular mass spectra – ion sources – Mass spectrometer. Applications of molecular mass - Electron paramagnetic resonance- g values – instrumentation **CO3**

UNIT IV: SEPARATION METHODS **9**

General description of chromatography – Band broadening and optimization of column performance- Liquid chromatography – Partition chromatography – Adsorption chromatography – Ion exchange chromatography -size exclusion chromatography- Affinity chromatography principles of GC and applications – HPLC- Capillary electrophoresis – Applications. **CO4**

UNIT V: ELECTRO ANALYSIS AND SURFACE MICROSCOPY **9**

Electrochemical cells- Electrode potential cell potentials – Potentiometry- reference electrode – ion selective and molecular selective electrodes – Instrument for potentiometric studies – Voltammetry – Cyclic and pulse voltammetry- Applications of voltammetry . Study of surfaces – Scanning probe microscopes – AFM and STM. **CO5**

TOTAL PERIODS: 45

TEXT BOOKS:

2.Haven, Mary C., etal., “Laboratory Instrumentation “. 4th Edition, John Wiley, 1995.

COURSE OUTCOMES

Upon completion of the course, the students will gain knowledge on

CO1	Students would have a fundamental knowledge about the light spectrum and basics of measurement.
CO2	Students would have gained knowledge about the working principle of optical methods and working principle of spectroscopic techniques.
CO3	Students would have developed knowledge about the working principle of resonance and mass spectrometry.
CO4	At the end of the course the student would acquire knowledge on different types of chromatographic methods for separation of biological products
CO5	At the end of the course the student would acquire knowledge on different types of electroanalytical methods and electron microscopes.

BT1504	**PROTEIN ENGINEERING**	**L**	**T**	**P**	**C**
		3	**0**	**0**	**3**

OBJECTIVES:

- To make the students identify the importance of protein biomolecules.
- The course prepares the students to realize the structure-function relationships in proteins.

UNIT I: BONDS, ENERGIES, BUILDING BLOCKS OF PROTEINS **9**

Covalent, Ionic, Hydrogen, Coordinate, hydrophobic and Vander walls interactions in protein structure. Interaction with electromagnetic radiation (radio, X-ray) and elucidation of protein structure. Amino acids (the students should be thorough with three and single letter codes) and their molecular properties (size, solubility, charge, pKa), Chemical reactivity in relation to post-translational modification (involving amino, carboxyl, hydroxyl, thiol, imidazole groups). **CO1**

UNIT II: PROTEIN ARCHITECTURE **9**

Primary structure: peptide mapping, peptide sequencing - automated Edman method & mass spec. High-throughput protein sequencing setup Secondary structure: Alpha, beta and loop structures and methods to determine Super-secondary structure: Alpha-turn-alpha, beta-turn beta (hairpin), beta-sheets, alpha-beta-alpha, topology diagrams, up and down & TIM barrel structures nucleotide binding folds, prediction of substrate binding sites. **CO2**

UNIT III: TERTIARY STRUCTURE **9**

Tertiary structure: Domains, folding, denaturation and renaturation, overview of methods to determine 3D structures. Quaternary structure: Modular nature, formation of complexes. Computer exercise on the above aspects. **CO3**

UNIT IV: STRUCTURE-FUNCTION RELATIONSHIP **9**

DNA-binding proteins: prokaryotic transcription factors, Helix-turn-Helix motif in DNA binding, Trp Repressor, Eukaryotic transcription factors, Zn fingers, helix-turn helix motifs in homeodomain, Leucine zippers. Membrane proteins: General characteristics, Transmembrane segments, prediction, bacteriorhodopsin and Photosynthetic reaction center, Immunoglobulins: IgG Light chain and heavy chain architecture, abzymes and Enzymes: Serine proteases, understanding catalytic design by engineering trypsin, chymotrypsin and elastase, substrate-assisted catalysis other commercial applications. Computer exercise on the above aspects. **CO4**

UNIT V: PROTEOMICS **9**

Introduction to the concept of proteome, components of proteomics, proteomic analysis, importance of proteomics in biological functions, protein-protein interactions and methods to study it: protein arrays, cross linking methods, affinity methods, yeast hybrid systems and protein arrays. Computer exercise on the above aspects. **CO5**

TOTAL PERIODS: 45

TEXT BOOKS:

1. Branden C. and Tooze J., "Introduction to Protein Structured" 2nd Edition, Garland Publishing, 1999.
2. Creighton T.E. "Proteins" 2nd Edition. W.H. Freeman, 1993.
3. Pennington, S.R and M.J. Dunn, "Proteomics: Protein Sequence to Function". Viva Books, 2002.
4. Liebler, "Introduction to Proteomics" Humana Press, 2002.

REFERENCES:

1. Voet D. and Voet G., "Biochemistry". 3rd Edition. John Wiley and Sons, 2008.
2. Haggerty, Lauren M."Protein Structure: Protein Science and Engineering". Nova Science Publications, 2011. 3. Williamson, Mike "How Proteins Work". Garland Science, 2012.

COURSE OUTCOMES

Upon completion of the course,

CO1	Students will learn and understand about the basic of protein architecture in a protein molecule.
CO2	Students will educate about the structural fold and basic tools used to identify the protein sequence & structure.
CO3	Students will know how to identify the higher hierarchy of protein fold with the advanced tools & also to know the protein – protein interaction
CO4	Students will know about the basic structural & functional relationship to gain a knowledge on protein utilisation for modern applications.
CO5	Students will understand the various advancement and wide requirement of informatics tools towards the medical diagnostic purposes.

BT1507 BIOPROCESS LABORATORY I

L	T	P	C
0	0	4	2

OBJECTIVES:

- To train the students on enzyme kinetics and parameters which influence enzyme activity.
- To train the students on enzyme immobilization and medium optimization methods.
- To train on methods to investigate the growth of microorganisms in different systems under different conditions.

LIST OF EXPERIMENTS

1.Enzyme kinetics – Determination of Michaelis - Menten parameters
2. Enzyme activity – Effect of Temperature and Deactivation Kinetics
3. Enzyme activity – Effect of pH
4. Enzyme inhibition kinetics
5. Enzyme immobilization – Gel entrapment method
6. Enzyme immobilization –Cross-linking method
7. Enzymatic conversion in Packed bed Column Reactor
8. Growth of Bacteria – Estimation of Biomass, Calculation of Specific Growth Rate and Yield Coefficient
9. Optimization of medium by Plackett Burman Design
10. Optimization by of medium Response Surface Methodology

Required Equipment:

1. Autoclave,
2. Hot Air Oven,
3. Incubators,
4. Light Microscopes,
5. Incubator Shaker,
6. Colorimeter,
7. Laminar Flow Chamber

TOTAL PERIODS: 60

REFERENCES:

4. Peter F. Stanbury, Stephen J. Hall & A. Whitaker, Principles of Fermentation Technology,
5. Science & Technology Books.

COURSE OUTCOMES

Upon completion of the course, the students will gain knowledge on

CO1	Explain about Enzyme kinetics and parameters involved in enzyme activities.
CO2	Understand and have thorough knowledge in methods adopted for enzyme immobilization
CO3	Evaluate the growth kinetics of microorganisms and become adept with medium optimization techniques
CO4	Understand about the fundamentals involved in operation a reactor system
CO5	Evaluate the value of inhibition kinetics and their effect on enzyme activities

BT1508 **ANALYTICAL METHODS AND INSTRUMENTATION LAB**

L	T	P	C
0	**0**	**4**	**2**

OBJECTIVES:
To train the students

- To have a practical hands on experience on Absoprtion Spectroscopic methods
- To acquire experience in the purification by performing chromatography
- To validate and analysis using spectrometric and microscopic techniques

LIST OF EXPERIMENTS
1. Precision and validity in an experiment using absorption spectroscopy .
2. Validating Lambert-Beer's law using $KMnO_4$
3. Finding the molar absorbtivity and stoichiometry of the Fe (1,10 phenanthroline)3 using absorption spectrometry.
4. Finding the pKa of 4-nitrophenol using absorption spectroscopy.
5. UV spectra of nucleic acids.

6. Chemical actinometry using potassium ferrioxolate.
7. Estimation of SO_4^{2--} by nephelometry.
8. Estimation of Al^{3+} by Flourimetry.
9. Limits of detection using aluminium alizarin complex.
10. Chromatography analysis using TLC.
11. Chromatography analysis using column chromatography.

Requirements:
Equipment Needed for 20 Students

1. Colorimeter 2,
2. Glassware,
3. Chemicals as required

TOTAL PERIODS: 60

REFERENCES:

1. Skoog, D.A. F. James Holler, and Stanky, R.Crouch “Instrumental Methods of Analysis”. 6th Edition, Cengage Learning , 2016.

3. Braun, Robert D. “Introduction to Instrumental Analysis”. Pharma Book Syndicate, 1987.
4. Ewing,G.W. “Instrumental Methods of Chemical Analysis”, 5th Edition, McGraw-Hill, 1985.

COURSE OUTCOMES

Upon completion of the course, the students

CO1	Would have a fundamental knowledge on the principles and types of bioanalytical instruments.
CO2	Would have gained knowledge about the use of the instrumental methods (spectroscopy) in biological sample analysis.
CO3	Would have developed knowledge about the chromatographic method principle and resolving a compound using it.

VI SEMESTER

BT1601	COMPUTATIONAL BIOLOGY	L	T	P	C
		3	0	2	4

OBJECTIVES:

- To improve the programming skills of the student
- To let the students know the recent evolution in biological science

UNIT I: INTRODUCTION **9+6**

Introduction to Operating systems, Linux commands, File transfer protocols ftp and telnet, Introduction to Bioinformatics and Computational Biology, Biological sequences, Biological databases, Genome specific databases, Data file formats, Data life cycle, Database management system models, Basics of Structured Query Language (SQL). **CO1**

UNIT II: SEQUENCE ALIGNMENT **9+6**

Sequence Analysis, Pair wise alignment, Dynamic programming algorithms for computing edit distance, string similarity, shotgun DNA sequencing, end space free alignment. Multiple sequence alignment, Algorithms for Multiple sequence alignment, Generating motifs and profiles, Local and Global alignment, Needleman and Wunsch algorithm, Smith Waterman algorithm, BLAST, PSIBLAST and PHIBLAST algorithms. **CO2**

UNIT III: PHYLOGENETIC METHODS **9+6**

Introduction to phylogenetics, Distance based trees UPGMA trees, Molecular clock theory, Ultrametric trees, Parsimonious trees, Neighbour joining trees, trees based on morphological traits, Bootstrapping. Structural genomics. Applications of informatics techniques in genomics and proteomics: Assembling the genome, STS content mapping for clone contigs and other mapping techniques. **CO3**

UNIT IV: PROTEIN STRUCTURE ANALYSIS **9+6**

Protein Secondary structure and tertiary structure prediction methods, Homology modeling, ab initio approaches, Threading, Critical Assessment of Structure Prediction. Machine learning techniques: Artificial Neural Networks in protein secondary structure prediction, Hidden Markov Models for gene finding, Decision trees, Support Vector Machines. Introduction to Systems Biology and Synthetic Biology, Microarray analysis, DNA computing, Bioinformatics approaches for drug discovery. Functional annotation, Peptide mass fingerprinting. **CO4**

UNIT V: PERL PROGRAMMING **9+6**

Basics of PERL programming for Bioinformatics: Data types: scalars and collections, operators, Program control flow constructs, Library Functions: String specific functions, User defined functions, File handling. **CO5**

TOTAL PERIODS: 45+30 = 75

TEXT BOOKS:

1. Introduction to Bioinformatics by Arthur K. Lesk , Oxford University Press.
2. Algorithms on Strings, Trees and Sequences by Dan Gusfield, Cambridge University Press.
3. Biological Sequence Analysis Probabilistic Models of proteins and nucleic acids by R.Durbin, S.Eddy, A.Krogh, G.Mitchison.
4. Bioinformatics Sequence and Genome Analysis by David W. Mount, Cold Spring HarborLaboratory Press.

5. Beginning Perl for Bioinformatics: An introduction to Perl for Biologists by James Tindall, O'Reilley Media

REFERENCES:

1. Bioinformatics The Machine Learning Approach by Pierre Baldi and Soren Brunak.

COURSE OUTCOMES

Upon completion of the course, the students will

CO1	Understand the fundamentals of operating systems, biological sequences and sequence databases.
CO2	Gain knowledge about the sequence alignment programs and its importance in Bioinformatics.
CO3	Understand about phylogenetic trees and mapping techniques.
CO4	Understand the principle behind molecular modelling and drug designing related advanced techniques.
CO5	Gain knowledge in programming language and to develop bioinformatics related tools with programming skills.

BT1602	APPLIED CHEMICAL REACTION ENGINEERING	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To provide the basic concepts of types of reactions, variable affecting the rate of reaction, predicting the rate equations for different types of reactions.
- To provide the information about different reactor systems, deriving the performance equations and predicting the rate equations in chemical reaction engineering system.

UNIT I: SCOPE OF CHEMICAL KINETICS & CHEMICAL REACTION ENGINEERING **9**

Broad outline of chemical reactors, rate equations; concentration and temperature dependence; development of rate equations for different homogeneous reactions. Industrial scale reactors. **CO1**

UNIT II:	**IDEAL REACTORS**		**9**
Isothermal batch, flow, semi-batch reactors; performance equations for single reactors; multiple reactor systems; multiple reactions.		**CO2**	
UNIT III:	**GAS-SOLID, GAS-LIQUID REACTIONS**		**9**
RTD in non-ideal flow; non-ideal flow models; reactor performance with non-ideal flow.		**CO3**	
UNIT IV:	**GAS-SOLID, GAS-LIQUID REACTIONS**		**9**
Resistances and rate equations; heterogeneous catalysis; reactions steps; resistances and rate equations.		**CO4**	
UNIT V:	**FIXED BED AND FLUID BED REACTORS**		**9**
G/L reactions on solid catalysis; trickle bed, slurry reactors; three phase-fluidized beds; reactors for fluid-fluid reactions; tank reactors.		**CO5**	

TOTAL PERIODS: 45

TEXT BOOKS:

1. Levenspiel O. Chemical Reaction Engineering. IIIrd Edition. John Wiley.2006.
2. Fogler H.S. Elements Of Chemical Reaction Engineering. Prentice Hall India.2002.

3. Richardson, J.F. and Peacock, D.G., "Coulson Richardson - Chemical Engineering",Vol.III, IIIrd Edition, Butterworth- Heinemann- Elsevier, 2006.

COURSE OUTCOMES

Upon completion of the course, the students will gain knowledge on

CO1	Calculating the conversions, concentrations and rates in a reaction and identify, formulate and solve chemical engineering problems.
CO2	Designing reactors for heterogeneous reactions and optimizing operating conditions.
CO3	Demonstrating experimental data using standard statistical methods to establish quantitative results.
CO4	Understanding fluid – solid reactions and the resistances encountered during reactions.
CO5	Designing a reactor for bio based products to achieve production and yield specifications.

BT1603	GENETIC ENGINEERING	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To discuss the gene cloning methods, tools and techniques involved in gene cloning, genome analysis and genomics.
- To explain the heterologous expression of cloned genes in different hosts.

UNIT I: BASICS OF RECOMBINANT DNA TECHNOLOGY — 9

Manipulation of DNA – Restriction and Modification enzymes, Design of linkers and adaptors. Characteristics of cloning and expression vectors based on plasmid and bacteriophage, Vectors for insect, yeast and mammalian system, Prokaryotic and eukaryotic host systems, Introduction of recombinant DNA in to host cells and selection methods. **CO1**

UNIT II: DNA LIBRARIES — 9

Construction of genomic and cDNA libraries, Artificial chromosomes – BACs and YACs,Chromosomal walking and jumping, Screening of DNA libraries using nucleic acid probes and antisera. **CO2**

UNIT III: SEQUENCING AND AMPLIFICATION OF DNA — 9

Maxam Gilbert's and Sanger's methods of DNA sequencing. PCR & Variants of PCR: Inverse PCR, Nested PCR, AFLP PCR, Allele specific PCR, Assembly PCR, Asymmetric PCR, Hot start PCR, inverse PCR, Colony PCR, single cell PCR, Real-time PCR/qPCR – SYBR green assay, Taqman assay, Molecular beacons. Site directed mutagenesis. **CO3**

UNIT IV: ORGANIZATION AND STRUCTURE OF GENOMES — 9

Organization and structure of genomes, Genome sequencing methods, Conventional and shotgun genome sequencing methods, Next generation sequencing technologies , Ordering the genome sequence, Genetic maps and Physical maps, STS content based mapping, Restriction Enzyme Finger Printing, Hybridization mapping, Radiation Hybrid Maps, Optical mapping. ORF finding and functional annotation. **CO4**

UNIT V: CURRENT STATUS OF GENOME SEQUENCING PROJECTS 9

Current status of genome sequencing projects, Introduction to Functional genomics, Microarrays,Serial Analysis of Gene expression (SAGE), Subtractive hybridization, DIGE, TOGA, Yeast Twohybrid System, Comparative Genomics, Proteogenomics, Web resources for Genomics,Applications of genome analysis and genomics. **CO5**

TOTAL PERIODS: 45

TEXT BOOKS:

1. Old RW, Primrose SB, "Principles Of Gene Manipulation, An Introduction To GeneticEngineering ", Blackwell Science Publications, 1993.
2. Principles of Genome Analysis and Genomics by S.B.Primrose and R.M.Twyman, 3rd Ed.(Blackwell Publishing)

2.Berger SI, Kimmer AR, "Methods In Enzymology", Vol 152, Academic Press

COURSE OUTCOMES

Upon completion of the course, the students will gain knowledge on

CO1	Cloning aspects and enzymes involved in creating rDNA for producing commercially important genes.
CO2	Knowledge about library creation and current techniques used for screening of libraries
CO3	Knowledge about recent PCR techniques used in amplification of DNA
CO4	Awareness of current techniques used in gene and genome sequencing.
CO5	Awareness about microarrays, Analysis of Gene expression and proteomics.

BT1607 **BIOPROCESS LABORATORY II**

L	T	P	C
0	0	4	2

OBJECTIVES:

- The course applies earlier learned knowledge on bioreactors and sterilization kinetics.
- Skills and knowledge gained is useful by analogy when solving problems typical for the bioindustry or for research

LIST OF EXPERIMENTS:

1. Estimation of Mixing Time in reactor
2. Residence time distribution
3. Estimation of K_La – Power Correlation Method
4. Estimation of K_La – Sulphite Oxidation Method
5. Estimation of K_La – Dynamic Gassing-out method,
6. Estimation of Overall Heat Transfer Coefficient
7. Batch Sterilization kinetics
8. Batch cultivation with exhaust gas analysis.
9. Fed batch cultivation and Total cell retention cultivation
10. Photo bioreactor

TOTAL PERIODS: 60

EQUIPMENT NEEDED FOR 30 STUDENTS

1. Reactors 6
2. Incubators 1
3. Incubator Shaker 1
4. Spectrophotometer 1
5. Laminar Flow Chamber 1
6. Glassware, Chemicals, Media as required

REFERENCES:

1. Anton Moser, "Bioprocess Technology, Kinetics and Reactors", , Springer Verlag.
2. James E. Bailey & David F. Ollis, Biochemical Engineering Fundamentals, McGraw Hill.
3. James M. Lee, Biochemical Engineering, PHI, USA.
4. Atkinson, Handbook of Bioreactors,
5. Harvey W. Blanch, Douglas S. Clark, BiochemicalEngineering, Marcel Decker Inc.

COURSE OUTCOMES

Upon completion of the course, the students will be able

CO1 To understand and design the different modes of bioreactor

CO2 To estimate the heat transfer and oxygen transfer coefficient

CO3 To estimate the residence time and the mixing time in the bioreactor

MAPPING OF COs WITH POs AND PSOs

BT1608 **GENETIC ENGINEERING LABORATORY** **L T P C**

0 0 4 2

OBJECTIVES:

- Provide hands-on experience in performing basic recombinant DNA techniques.
- Introduce students to the theory behind in each techniques and to describe common applications of each methodology in biological research.

LIST OF EXPERIMENTS

1.Preparation of plasmid DNA
2. Elution of DNA from agarose gels
3. Restriction digestion
4. Ligation of DNA into expression vectors
5. Transformation & Selection of recombinants – Blue white screening assay
6. Optimisation of time of inducer for recombinant protein expression
7. Expression of protein profiling by SDS - PAGE
8. Blotting Techniques : Western and Southern blotting methods
9. PCR - Amplification of genes
10. Colony lysate PCR.

Required Equipments:

1. Electrophoresis Unit, Glassware , PCR, Laminar Flow Chamber, Incubators and Incubator Shaker, Gel Documentation, Spectrophotometer, Cooling Centrifuge and Gel Rocker

TOTAL PERIODS: 60

4. Berger SI, Kimmer AR, “Methods In Enzymology”, Vol 152, Academic Press, 1987

COURSE OUTCOMES

Upon completion of the course, the students will be able

CO1	Describe the main principles, methods for preparation and cloning of DNA in various organisms.
CO2	Express clearly about the gene amplification and methods for analysis of DNA, such as hybridization,restriction analysis and gene expressions.
CO3	Use genetic and biotechnological techniques to manipulate genetic materials and develops new and improved living organisms.

BVA001 **ADVANCEMENTS IN DRUG DESIGNING**

L	T	P	C
1	0	2	2

OBJECTIVES:

- To understand the basics of drug designing
- To understand genetic makeup of the individual to have better approach on health care
- To characterize a drug for its pharmacokinetics and metabolism
- To understand advanced drug designing techniques
- To understand the methods to immunize test animals and to raise anti-sera

UNIT I: FUNDAMENTALS OF DRUG DESIGNING **3+6**

Introduction to bioinformatics and understanding of biological databases; Introduction to pharmacogenomics and their applications in drug discovery research **CO1**

UNIT II: PERSONALIZED MEDICINES **3+6**

Omics and personalized medicine; Pharmacist role and their new challenges in personalized medicine; Ethical, legal, economical and social issues in pharmacogenomics **CO2**

UNIT III: PHARMACEUTICAL ANALYSIS AND MODELLING **3+6**

Protein modelling; Protein databank; Alignment of protein sequences; Mutational analysis using multiple sequence alignment; Gene expression using genome scan and gene mark **CO3**

UNIT IV: ADVANCED DRUG DESIGNING TECHNIQUES **3+6**

Secondary structure prediction – hydropathic index; Active site prediction – activity pockets; Ligand modelling – pharmacophore redesigning; Denova designing; Virtual screening – drug likeness and toxicology **CO4**

UNIT V: TARGETED DELIVERY AND CANCER TREATMENT **3+6**

Lecture on raising and harvesting monoclonal antibodies; biomarkers screening for cancer – targeted delivery and bioimaging; commercial products and research application in cancer therapy **CO5**

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, the students will be able to

CO1 Understand the basics of drug designing.

CO2 Understand the importance of personalized medicine and its futuristic applications.

CO3 Characterize a drug for its pharmacokinetics and metabolism.

CO4 Understand the mechanism behind drug designing using online tools.

CO5 Understand the product development and bioimaging for targeted delivery.

VII SEMESTER

BT1701 TOTAL QUALITY MANAGEMENT FOR BIOTECHNOLOGISTS

L	T	P	C
3	0	0	3

OBJECTIVES:

- To facilitate the understanding of Quality Management principles and process.
- To apply the tools and techniques in bioproduct industry for product quality improvement
- To familiarize with the concepts of quality management system and Biosafety levels

UNIT I: INTRODUCTION **9**

Introduction - Need for quality - Evolution of quality - Definitions of quality - Dimensions of product and service quality - Basic concepts of TQM - TQM Framework - Contributions of Deming, Juran and Crosby - Barriers to TQM - Customer focus - Customer orientation, Customer satisfaction, Customer complaints, Customer retention. **CO1**

UNIT II: TQM PRINCIPLES **9**

Leadership - Quality Statements, Strategic quality planning, Quality Councils - Employee involvement - Motivation, Empowerment, Team and Teamwork, Recognition and Reward, Performance appraisal - Continuous process improvement - PDCA cycle, 5S, Kaizen - Supplier partnership - Partnering, Supplier selection, Supplier Rating. **CO2**

UNIT III: TQM TOOLS AND TECHNIQUES I **9**

The seven traditional tools of quality - New management tools - Six sigma: Concepts, Methodology, applications to manufacturing, service sector including Bioproduct industries - Bench marking - Reason to bench mark, Bench marking process - FMEA - Stages, Types. **CO3**

UNIT IV: TQM TOOLS AND TECHNIQUES II **9**

Quality Circles - Cost of Quality - Quality Function Deployment (QFD) - Taguchi quality loss function - TPM - Concepts, improvement needs - Performance measures **CO4**

UNIT V: QUALITY MANAGEMENT SYSTEM **9**

Introduction—to ISO 9000 Series of Standards—Benefits of ISO Registration- Internal audits Sector Specific Standards—Requirements and benefits -ISO 22000- Food safety Management - HACCP and Elements of Biosafety Levels **CO5**

TOTAL PERIODS: 45

TEXT BOOKS:

1. Dale H.Besterfiled, Carol B.Michna,Glen H. Besterfield,Mary B.Sacre,Hemant Urdhwareshe and Rashmi Urdhwareshe, “Total Quality Management”, Pearson Education Asia, Revised Third Edition, Indian Reprint, Sixth Impression, 2013.

4. https://www.researchgate.net/publication/339711956
5. ISO9001-2015 standards - https://www.iso.org/standards.html

COURSE OUTCOMES

Upon completion of the course, the students will be able

CO1	To understand the basic concepts of total quality management principles and importance of customer
CO2	To comprehend the knowledge on principles and philosophies of quality management
CO3	To realize the importance in applying the tools and techniques in bioproduct industries
CO4	To apply the tools and techniques of quality management to manufacturing and services processes.
CO5	To understand the importance of ISO and safety level regulations in Bioproduct industries

BT1702 DOWNSTREAM PROCESSING

L	T	P	C
3	0	0	3

OBJECTIVES:

- To enable the students to understand the methods to obtain pure proteins, enzymes and bioproducts in general.
- Have depth knowledge on downstream processes required in multi-factorial manufacturing environment in a structured and logical fashion.

UNIT I: INTRODUCTION **9**

Introduction to downstream processing, principles, characteristics of bio-molecules and bioprocesses. Cell disruption for product release – mechanical, enzymatic and chemical methods. Pretreatment and stabilisation of bioproducts. **CO1**

UNIT II: PHYSICAL METHODS OF SEPARATION **9**

Unit operations for solid-liquid separation: Filtration - types of filtration, constant rate and constant pressure filtration, filtration equipments. Centrifugation – types of centrifugation, centrifugation equipment, scale-up of centrifuges. **CO2**

UNIT III: ISOLATION OF PRODUCTS **9**

Precipitation of proteins,adsorption, liquid-liquid extraction, aqueous two-phase extraction, membrane separation operations for product isolation. **CO3**

UNIT IV: PRODUCT PURIFICATION **9**

Chromatography – principles, instruments and practice. Adsorption, reverse phase, ion exchange, size exclusion, hydrophobic interaction, and affinity chromatographic techniques. **CO4**

UNIT V: PRODUCT POLISHING AND FORMULATION **9**

Drying, lyophilization and Crystallization in final product formulation. **CO5**

TOTAL PERIODS: 45

TEXT BOOKS:

1. Belter, P.A., E.L. Cussler and Wei-Houhu "Bioseparations – Downstream Processing for Biotechnology", John Wiley, 1988.
2. Sivasankar, B. "Bioseparations: Principles and Techniques". PHI, 2005.
3. Asenjo, Juan A. "Separation Processes in Biotechnology". CRC / Taylor & Francis, 1990.

REFERENCES:

1. Ghosh, Raja "Principles of Bioseparations Engineering". World Scientific, 2006
2. "Product Recovery in Bioprocess Technology". (BIOTOL – Biotechnology by Open Learning Series). Butterworth – Heinmann / Elsevier, 2004.

COURSE OUTCOMES

Upon completion of the course, the students will gain knowledge on

CO1	The product recovery, unit operations involved and factors affecting bioseparation of bioproducts and recombinant products.
CO2	Selection and design of filtration and centrifugation operation for bioseparation.
CO3	To identify a suitable unit operation for isolation and concentration for the given bioproduct.
CO4	To select a suitable chromatographic operation for purification of given bioproducts.
CO5	Design of various bioproducts polishing methods and purification of various bioproducts/recombinant products.

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)

BT1703	IMMUNOLOGY	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To discuss the structure, functions and integration of immune system.
- To explain the antigen-antibody interactions and how the immune system is protecting the body from foreign pathogens/germs.
- To explain various techniques of monoclonal and engineered antibodies (important therapeutic molecules) production, for treating most of the human diseases.

UNIT I: INTRODUCTION TO IMMUNE SYSTEM **9**

Organisation and classification of immune system – immune cells and organs; innate and acquired immunity; classification of antigens – chemical and molecular nature; haptens, adjuvants; antigen presenting cells **CO1**

UNIT II: HUMORAL AND CELLULAR IMMUNITY **9**

Development, maturation, activation, regulation, differentiation and classification of T-cells and B-cells, antigen processing and presentation, theory of clonal selection, TCR; antibodies: structure and functions; antibodies: genes and generation of diversity; antigen-antibody reactions **CO2**

UNIT III: IMMUNITY AGAINST PATHOGENS AND TUMORS **9**

Inflammation; protective immune responses to virus, bacteria, fungi and parasites; cytokines; complement pathway, tumor antigens, tumor immune response, tumor diagnosis, tumor immunotherapy **CO3**

UNIT IV: IMMUNE TOLERANCE AND HYPERSENSITIVITY **9**

Immune tolerance, Immunodeficiencies; Major Histocompatibility Complex; Transplantation – genetics of transplantation; laws of transplantation; Allergy and hypersensitivity – Types of hypersensitivity, Autoimmunity, Autoimmune disorders and diagnosis **CO4**

UNIT V: APPLIED IMMUNOLOGY **9**

Monoclonal antibodies, engineering of antibodies; Classification of Vaccines-Active and Passive immunization, protein based vaccine, DNA vaccine, edible vaccine, immunodiagnostic methods (Immuno diffusion, ELISA, FACS, Cr5I release assay) **CO5**

TOTAL PERIODS: 45

TEXT BOOKS:

1. Peter J Delves, Seamus J Martin, Dennis R Burtn and Ivan M Roitt., Roitts Essentia lImmunology, 13th Edition, Wiley –Blackwell, 2016.
2. Judith a Owen, Jenni Punt and Sharon A Stranford, Kuby Immunology, Macmillan Internation, 7th Edition, 2012
3. Ashim K. Chakravarthy, Immunology, Tata McGraw-Hill, 2006

REFERENCE:

1. Coico, Richard “Immunology: A Short Course” VIth Edition. John Wiley, 2008.
2. Khan, Fahim Halim “Elements of Immunology” Pearson Education, 2009.

COURSE OUTCOMES

Upon completion of the course,

CO1	Students would have a fundamental knowledge about the various organs involved in immune response and the types of antigen invading the immune system.
CO2	Students would have developed knowledge about development, maturation, activation and regulation of T cells, B cells and also about the application of antigen-antibody reaction.
CO3	Students would have gained knowledge about the mechanism by which the body interacts with pathogenic microorganisms and in tumor immunology.
CO4	After completing this course, students get familiar about the laws of transplantation, autoimmunity, allergy and have gained the knowledge in immunodeficiency disorders
CO5	At the end of the course the student would acquire knowledge on various techniques of monoclonal, engineered antibodies, immunodiagnostic method and have gained the knowledge about the basic criteria for designing a vaccine

BT1707	DOWNSTREAM PROCESSING LABORATORY	L	T	P	C
		0	0	4	2

OBJECTIVES:

- To provide hands on training in downstream processing through simple experimentations in the laboratory. This will be a pre-requisite for project work.
  The objectives of this course is to practice the students
- To understand various methods for end product isolation, concentration, purification and stabilization.
- To design processes for the recovery and subsequent purification of target biological products.

LIST OF EXPERIMENTS:

1. Solid liquid separation – centrifugation
2. Solid liquid separation - microfiltration
3. Cell disruption techniques –ultrasonication
4. Cell disruption techniques –French press or Dynomill
5. Precipitation – ammonium sulphite precipitation
6. Aqueous two phase extraction of biological product
7. Adsorption of protein
8. High resolution purification – affinity chromatography
9. High resolution purification – ion exchange chromatography
10. Product polishing – spray drying or freeze drying

TOTAL PERIODS: 60

LIST OF EQUIPMENT FOR 30 STUDENTS

1. Centrifuge 1
2. Microfiltration set up 1
3. Sonicator 1
4. French press or Dynomill 1
5. Spray dryer or Freeze dryer 1
6. Chromatography kits and other class wares and chemicals.

3. J.C. Janson And L. Ryden, (Ed.) – Protein Purification – Principles, High ResolutionMethods And Applications, VCH Pub. 1989.

COURSE OUTCOMES

Upon completion of the course, the students will gain knowledge on

CO1	The separation of whole cells and other insoluble ingredients from the culture broth.
CO2	Cell disruption techniques to release intracellular products
CO3	Various techniques like evaporation, extraction, precipitation, membrane separation for concentrating biological products
CO4	Basic principles and techniques of chromatography to purify the biological products
CO5	The methods of formulation of biological products for end uses

BT1708 **IMMUNOLOGY LABORATORY**

L	T	P	C
0	0	4	2

OBJECTIVES:

- To give practical training in the functioning of immune system.
- To give laboratory training in different immunological and immunotechnological techniques.

EXPERIMENTS

1. Identification of immune cells in a blood smear
2. Identification of blood group
3. Testing for typhoid antigens by Widal test
4. Immunodiffusion – Ouchterlony Double Diffusion
5. Immunoelectrophoresis – Rocket or Counter Current immune electrophoresis
6. Enzyme Linked ImmunoSorbent Assay (ELISA)
7. Isolation of peripheral blood mononuclear cells
8. Isolation of monocytes from blood
9. Immunofluorescence
10. Identification of t cells by T-cell rossetting using sheep RBC.

TOTAL PERIODS: 60

Equipment Needed for 20 Students

1. Elisa reader -1
2. Microscopes -8
3. Microwave owen-1
4. Hot plate -4
5. Vortex mixer -4
6. Table top refrigerated Centrifuge- 1
7. Fluorescent microsope- 1

2. Kuby J, Immunology, WH Freeman & Co., 2000.
3. Ashim K. Chakravarthy, Immunology, TataMcGraw-Hill, 1998.

COURSE OUTCOMES

Upon completion of the course, the students will be able to

CO1 Handle different types of animals and to immunize the animals and raise antisera.

CO2 Identify the blood grouping, cells and to isolate the mononuclear cells.

CO3 Identify the Typhoid antigen

CO4 Determine the antigen and antibody concentration.

CO5 Identify and analyse the antigen.

SEMESTER VIII

BT1807 **PROJECT WORK**

L	T	P	C
0	0	20	10

COURSE OUTCOMES

Upon completion of the course, the students will be able to

CO1 Identify their field of interest

CO2 Search and think about logical solutions

CO3 Formulate and analyze a problem

CO4 Plan experiments to find solutions in a logical manner

CO5 Analyze the results, interpret and communicate in an effective manner

PROFESSIONAL ELECTIVE - I

BT1001	BIOPHYSICS	L	T	P	C
		3	0	0	3

OBJECTIVES:

To enable the students

- To gain structural knowledge of biological systems.
- To understand transport and dynamic properties of biological systems.

UNIT I: MOLECULAR STRUCTURE OF BIOLOGICAL SYSTEMS **9**

Intramolecular bonds – covalent – ionic and hydrogen bonds – biological structures –general features – water structure – hydration – interfacial phenomena and membranes – self assembly and molecular structure of membranes. **CO1**

UNIT II: CONFORMATION OF NUCLEIC ACIDS **9**

Primary structure – the bases – sugars and the phosphodiester bonds- double helical structure – the a b and z forms – properties of circular DNA – topology – polymorphism and flexibility of DNA – structure of ribonucleic acids – hydration of nucleic acids. **CO2**

UNIT III: CONFORMATION OF PROTEINS **9**

Conformation of the peptide bond – secondary structures – Ramachandran plots – use of potential functions – tertiary structure – folding – hydration of proteins – hydropathy index. **CO3**

UNIT IV: CELLULAR PERMEABILITY AND ION – TRANSPORT **9**

Ionic conductivity – transport across ion channels – mechanism - ion pumps- proton transfer – nerve conduction – techniques of studying ion transport and models. **CO4**

UNIT V: ENERGETICS & DYNAMICS OF BIOLOGICAL SYSTEMS **9**

Concepts in thermodynamics – force and motion – entropy and stability – analyses of fluxes – diffusion potential – basic properties of fluids and biomaterials – laminar and turbulent flows. **CO5**

TOTAL PERIODS: 45

TEXT BOOKS:

1. Biophysics ; R. Glaser, Springer Verlag , 2000.
2. Biophysics: Molecules In Motion ; R. Duane. Academic Press , 1999

REFERENCES:

1. Cantror, Charles R. and Paul R. Schimmel "Biophysical Chemistry" . 1-3 Vols. W.H.Freeman& Co.,1980

COURSE OUTCOMES

Upon completion of the course, the students will be able to

CO1 Understand the forces in biomolecules.

CO2 Understand configurational determinants and stabilizing factors of nucleic acids.

CO3 Understand configurational determinants and stabilizing factors of proteins.

CO4 Gain the knowledge of cellular permeability and ion transport.

CO5 Understand the energetics and dynamics of biological systems.

BT1002	**PRINCIPLES OF FOOD PROCESSING**	**L**	**T**	**P**	**C**
		3	**0**	**0**	**3**

OBJECTIVES:

To enable the students

- To know about the constituents and additives present in the food.
- To gain knowledge about the microorganisms, which spoil food and food borne diseases.
- To know different techniques used for the preservation of foods.

UNIT I: FOOD AND ENERGY 9

Constituents of food – carbohydrates, lipids, proteins, water, vitamins and minerals, dietarysources, role and functional properties in food, contribution to organoleptic and textural characteristics.

UNIT II: FOOD ADDITIVES 9

Classification, intentional and non-intentional additives, functional role in food processing and preservation; food colourants – natural and artificial; food flavours; enzymes as food processing aids.

UNIT III: MICROORGANISMS ASSOCIATED WITH FOOD 9

Bacteria, yeasts and molds – sources, types and species of importance in food processing and preservation; fermented foods and food chemicals, single cell protein.

UNIT IV: FOOD BORNE DISEASES 9

Classification – food infections – bacterial and other types; food intoxications and poisonings –bacterial and non-bacterial; food spoilage – factors responsible for spoilage, spoilage of vegetable, fruit, meat, poultry, beverage and other food products

UNIT V: FOOD PRESERVATION 9

Principles involved in the use of sterilization, pasteurization and blanching, thermal death curves of microorganisms, canning; frozen storage-freezing characteristics of foods, microbial activity at low temperatures, factors affecting quality of foods in frozen storage; irradiation preservation of foods.

TOTAL PERIODS: 45

4. J.M. Jay – Modern Food Microbiology, Cbs Pub. New Delhi, 1987.

COURSE OUTCOMES

Upon completion of the course, the students will be able to

CO1	Know different constituents present in food and microorganisms involved in processing of food.
CO2	Understand Roles and regulatory levels of food additives during food processing.
CO3	Gain knowledge on principles and different preservations techniques of food can also be known.
CO4	Know about diseases associated with the toxic effects of spoiled food.
CO5	Know the importance of Unit operations in modern food processing and impact of the process on food quality

CE1025	**DISASTER MANAGEMENT**	**L**	**T**	**P**	**C**
		3	**0**	**0**	**3**

OBJECTIVES:

- To provide students an exposure to disasters, their significance and types.
- To ensure that students begin to understand the relationship between vulnerability, disasters, disaster prevention and risk reduction
- To gain a preliminary understanding of approaches of Disaster Risk Reduction (DRR)
- To enhance awareness of institutional processes in the country
- To develop rudimentary ability to respond to their surroundings with potential disaster response in areas where they live, with due sensitivity

UNIT I: INTRODUCTION TO DISASTERS **9**

Definition: Disaster, Hazard, Vulnerability, Resilience, Risks – Disasters: Types of disasters – Earthquake, Landslide, Flood, Drought, Fire etc – Classification, Causes, Impacts including social, economic, political, environmental, health, psychosocial, etc.- Differential impacts- in terms of caste, class, gender, age, location, disability – Global trends in disasters: urban disasters, pandemics, complex emergencies, Climate change- Dos and Don‘ts during various types of Disasters. **CO1**

UNIT II:	**APPROACHES TO DISASTER RISK REDUCTION (DRR)**		**9**
	Disaster cycle – Phases, Culture of safety, prevention, mitigation and preparedness community based DRR, Structural- nonstructural measures, Roles and responsibilities of- community, Panchayati Raj Institutions/Urban Local Bodies (PRIs/ULBs), States, Centre, and other stake-holders- Institutional Processess and Framework at State and Central Level- State Disaster Management Authority(SDMA) – Early Warning System – Advisories from Appropriate Agencies.	**CO2**	
UNIT III:	**INTER-RELATIONSHIP BETWEEN DISASTERS AND DEVELOPMENT**		**9**
	Factors affecting Vulnerabilities, differential impacts, impact of Development projects such as dams, embankments, changes in Land-use etc.- Climate Change Adaptation- IPCC Scenario and Scenarios in the context of India – Relevance of indigenous knowledge, appropriate technology and local resources.	**CO3**	
UNIT IV:	**DISASTER RISK MANAGEMENT IN INDIA**		**9**
	Hazard and Vulnerability profile of India, Components of Disaster Relief: Water, Food, Sanitation, Shelter, Health, Waste Management, Institutional arrangements (Mitigation, Response and Preparedness, Disaster Management Act and Policy – Other related policies, plans, programmes and legislation – Role of GIS and Information Technology Components in Preparedness, Risk Assessment, Response and Recovery Phases of Disaster – Disaster Damage Assessment.	**CO4**	
UNIT V:	**DISASTER MANAGEMENT: APPLICATIONS AND CASE STUDIES AND FIELD WORKS**		**9**
	Landslide Hazard Zonation: Case Studies, Earthquake Vulnerability Assessment of Buildings and Infrastructure: Case Studies, Drought Assessment: Case Studies, Coastal Flooding: Storm Surge Assessment, Floods: Fluvial and Pluvial Flooding: Case Studies; Forest Fire: Case Studies, Man Made disasters: Case Studies, Space Based Inputs for Disaster Mitigation and Management and field works related to disaster management.	**CO5**	

TOTAL PERIODS: 45

TEXT BOOKS:

1. Singhal J.P. Disaster Management, Laxmi Publications, 2010.
2. Tushar Bhattacharya, Disaster Science and Management, McGraw Hill India Education Pvt. Ltd., 2012.
3. Gupta Anil K, Sreeja S. Nair. Environmental Knowledge for Disaster Risk Management, NIDM, New Delhi, 2011
4. Kapur Anu Vulnerable India: A Geographical Study of Disasters, IIAS and Sage Publishers, New Delhi, 2010.

REFERENCES:

1. Govt. of India: Disaster Management Act , Government of India, New Delhi, 2005
2. Government of India, National Disaster Management Policy,2009.

COURSE OUTCOMES

Upon completion of the course, the students will be able to

CO1	Differentiate the types of disasters, causes and their impact on environment and society
CO2	Assess vulnerability and various methods of risk reduction measures as well as mitigation
CO3	Enhance awareness of institutional processes in the country
CO4	Develop rudimentary ability to respond to their surroundings with potential disaster response in areas where they live, with due sensitivity

CO5	Draw the hazard and vulnerability profile of India, Scenarios in the Indian context, Disaster damage assessment and management.

BT1004	**MARINE BIOTECHNOLOGY**	**L**	**T**	**P**	**C**
		3	**0**	**0**	**3**

UNIT I: INTRODUCTION TO MARINE ENVIRONMENT **9**

World oceans and seas – ocean currents – physical and chemical properties of sea water –abiotic and biotic factors of the sea – ecological divisons of the sea – history of marine biology – bioecochemical cycles – food chain and food web. **CO1**

UNIT II: IMPORTANT MARINE ORGANISMS **9**

Phytoplanktons – zooplantons – nektons – benthos – marine mammals – marine algae – mangroves – coral reefs – deep sea animals and adaptation – intertidal zone – fauna and flora. **CO2**

UNIT III: MARINE ENVIRONMENTAL BIOTECHNOLOGY **9**

Marine pollution – biology indicators (marine micro , algae) – biodegradation and bioremediation – marine fouling and corrosion. **CO3**

UNIT IV: MARINE PHARMACOLOGY **9**

Medicinal compound from marine flora and fauna – marine toxins , antiviral and antimicrobial agents. **CO4**

UNIT V: AQUACULTURE TECHNOLOGY **9**

Important of coastal aquaculture – marine fishery resources – common fishing crafts and gears – aquafarm design and construction **CO5**

TOTAL PERIODS: 45

TEXT BOOKS:
1. Recent advances in marine biotechnology volume 3 – M.Fingerman , R . Nagabhushanam Mary – Frances Thomson.
2. Recent advances marine biotechnology volume 2 – M.Fingerman , R .Nagabhushanam Mary – Frances Thomson

COURSE OUTCOMES

Upon completion of the course,

CO1	Students will be able to study the interrelationship between marine organism and its environment
CO2	Students will be able to classify various marine organisms and their adaptations
CO3	Students will acquire knowledge about combating environmental issues using marine organisms as indicators
CO4	Students will be able to formulate medicinal components derived from marine organisms
CO5	Students will gain knowledge about design and construction of aquaculture and usage of its technology

PROFESSIONAL ELECTIVE –II

BT1005 **ANIMAL BIOTECHNOLOGY**

L	T	P	C
3	0	0	3

OBJECTIVES:

- To provide the fundamentals of animal cell culture, details of the diseases and therapy
- To offer the knowledge about the micromanipulation and transgenic animals

UNIT I: ANIMAL CELL CULTURE **9**

Introduction to basic tissue culture techniques; chemically defined and serum free media; animal cell cultures, their maintenance and preservation; various types of cultures suspension cultures, continuous flow cultures, immobilized cultures; somatic cell fusion; cell cultures as a source of valuable products; organ cultures. **CO1**

UNIT II: ANIMAL DISEASES AND THEIR DIAGNOSIS **9**

Bacterial and viral diseases in animals; monoclonal antibodies and their use in diagnosis; molecular diagnostic techniques like PCR, in-situ hybridization; northern and southern blotting; RFLP. **CO2**

UNIT III: THERAPY OF ANIMAL DISEASES **9**

Recombinant cytokines and their use in the treatment of animal infections; monoclonal antibodies in therapy; vaccines and their applications in animal infections; gene therapy for animal diseases. **CO3**

UNIT IV: MICROMANIPULATION OF EMBRYO'S **9**

What is micromanipulation technology; equipments used in micromanipulation; enrichment of x and y bearing sperms from semen samples of animals; artificial insemination and germ cell manipulations; in vitro fertilization and embryo transfer; micromanipulation technology and breeding of farm animals. **CO4**

UNIT V: TRANSGENIC ANIMALS **9**

Concepts of transgenic animal technology; strategies for the production of transgenic animals and their importance in biotechnology; stem cell cultures in the production of transgenic animals **CO5**

TOTAL PERIODS: 45

TEXT BOOKS:

1. Ranga M.M. Animal Biotechnology. Agrobios India Limited, 2002
2. Ramadass P, Meera Rani S. Text Book Of Animal Biotechnology. Akshara Printers, 1997.

REFERENCE:

1. Masters J.R.W. Animal Cell Culture: Practical Approach. Oxford University Press.2000

COURSE OUTCOMES

Upon completion of the course, the students will be able to

CO1	Understand the basic of animal Tissue culture, Maintenance and its preservation along with different culture techniques
CO2	Learn various viral and bacterial disease and different molecular biology Techniques.
CO3	Develop vaccines by understanding the Recombinant cytokines and their use in the treatment of animal infections.

CO4	Learn about micromanipulation technology of Embryos for the enrichment of X and Y bearing sperms for artificial insemination and embryo transfer
CO5	Appreciate the concepts of transgenic animal technology and choose among the strategies for the production of transgenic animals

BT1006 SYSTEMS BIOLOGY

L	T	P	C
3	0	0	3

OBJECTIVES:

- To provide a quantitative basis, based on thermodynamics, enzyme kinetics, for the understanding of metabolic networks in single cells and at the organ level.
- To enable the students to utilize the bioinformatic tools to design and develop biological complex data models.

UNIT I: INTRODUCTION **9**

Introduction to Systems Biology, Systems level understanding of biological systems. Basic concepts in Systems modeling: Model Scope, Model Statements, System state, Variables, parameters and constants, Model behavior, classification and steady state. Merits of computational modeling **CO1**

UNIT II: KINETIC MODELING **9**

Kinetic modeling of biochemical reactions, describing dynamics with ODEs, rate equations, deriving a rate equation, incorporating regulation of enzyme activity by effectors, E-cell platform and erythrocyte modeling. **CO2**

UNIT III: FLUX BALANCE ANALYSIS **9**

Introduction to Flux balance analysis, Construction of stoichiometric matrices, Constraint based models. Network basics, examples of mathematical reconstruction of transcriptional networks and signal transduction networks. **CO3**

UNIT IV: NETWORK MOTIFS AND MODELS **9**

Network motifs, Feed forward loop network motif. Gene circuits, robustness of models, Chemotaxis model, Integration of data from multiple sources: Building genome scale models. **CO4**

UNIT V: RESOURCES AND SBML 9

Tools and databases for modeling: Pathway databases KEGG, EMP, Metacyc, Enzyme kinetics database BRENDA, Gene expression databases, Biomodels database, Basics of Systems Biology Markup Language (SBML), SBML editors. **CO5**

TOTAL PERIODS: 45

TEXT BOOKS:

1. EddaKlipp, Wolfram Liebermeister, ChristophWierling ,Systems Biology a Textbook by Wiley-BlackWell Publications (2009 Edition).
2. Uri Alon , An introduction to Systems Biology: Design Principles of Biological Circuits, (Chapman and Hall / CRC 2007 Edition)
3. EddaKlipp, Ralf Herwig, Axel kowald, ChristophWierling, Hans Lehrach ,Systems Biology in practice: concepts, implementation and application. (Wiley – VCH 2005)

REFERENCES:

1. Foundations of Systems Biology Edited by Hiroaki Kitano (MIT Press)
2. Systems Biology: Definitions and perspectives by Lilia Albhergina (Springer Publications 2008)

COURSE OUTCOMES

Upon completion of the course, the students will be able to

CO1 Understand basic, advanced principles of systems biology and biological networks

CO2 Apply kinetics principles to develop systems level mathematical models in biology

CO3 Learn stoichiometry and energetics of metabolism.

CO4 Understand networks behaviour and emergent properties of biological networks/ systems

CO5 Apply computational based solutions for modeling biological perspectives

MAPPING OF COs WITH POs AND PSOs

BT1007 BIOLOGICAL SPECTROSCOPY

L	T	P	C
3	0	0	3

OBJECTIVES:

- To deliver the knowledge of spectroscopic techniques and its functions
- To provide the technical information of spectroscopy for biological applications.

UNIT I: OPTICAL ROTATORY DISPERSION **9**

Polarized light – optical rotation – circular dichroism – circular dichroism of nucleic acids and proteins. **CO1**

UNIT II: TYPES OF NUCLEAR MAGNETIC RESONANCE **9**

Chemical shifts – spin – spin coupling – relaxation mechanisms – nuclear overhauser effect – ESR multidimensional nmr spectroscopy – determination of macromolecular structure by NMR – magnetic resonance imaging. **CO2**

UNIT III: TYPES OF MASS SPECTROMETRY **9**

Introduction on sources sample introduction – mass analyzers and ion detectors – bimolecular mass spectrometry – peptide and protein analysis – carbohydrates and small molecules – specific applications. **CO3**

UNIT IV: X-RAY DIFFRACTION **9**

Scattering by x- rays – diffraction by a crystal – measuring diffraction pattern – Bragg reflection – unit cell – phase problem – anomalous diffraction – determination of crystal structure – electron and neutron diffraction. **CO4**

UNIT V: SPECIAL TOPICS AND APPLICATIONS **9**

Electron microscopy – transmission and scanning electron microscopy – scanning tunnelling and atomic force microscopy – combinatorial chemistry and high throughput screening methods. **CO5**

TOTAL PERIODS: 45

TEXT BOOKS:

4. Atkins P.W., "Physical Chemistry ",10th Edition, Oxford University Press India, 2014.

COURSE OUTCOMES

Upon completion of the course, the students will be able to

CO1 Know the basics and biological applications of optical rotatory dispersion methods.

CO2 Predict the structure of biological macromolecule using nuclear magnetic resonance spectroscopy.

CO3 Analyze the peptide and protein molecules by mass spectrometry.

CO4 Understand the principle of X-ray diffraction and its applications.

CO5 Gain knowledge on advanced microscopic techniques and its applications.

GE1001	**INTELLECTUAL PROPERTY RIGHTS**	**L**	**T**	**P**	**C**
		3	**0**	**0**	**3**

OBJECTIVES:

- To introduce fundamental aspects of Intellectual Property Rights (IPR) and its components.
- To disseminate knowledge on patents, patent regime in India and abroad and registration aspects
- To disseminate knowledge on copyrights, trademarks and registration aspects
- To disseminate knowledge on Design, Geographical Indication (GI), Plant Variety and Layout Design Protection and their registration aspects
- To aware about enforcement in IPR and government steps in fostering IPR

UNIT I: INTRODUCTION **9**

Introduction to IPRs: Basic concepts and need for Intellectual Property, Patents, Copyrights, Geographical Indications, IPR in India and Abroad – Genesis and Development – The way from WTO to WIPO –TRIPS, Nature of Intellectual Property, Industrial Property, Technological Research, Inventions and Innovations – Important examples of IPR. **CO1**

UNIT II: REGISTRATION OF IPRs **10**

Meaning and practical aspects of registration of Copy Rights, Trademarks, Patents, Geographical Indications, Trade Secrets and Industrial Design registration in India and Abroad **CO2**

UNIT III: AGREEMENTS AND LEGISLATIONS **10**

International Treaties and Conventions on IPRs, TRIPS Agreement, PCT Agreement, Patent Act of India, Patent Amendment Act, Design Act, Trademark Act, Geographical Indication Act. **CO3**

UNIT IV: DIGITAL PRODUCTS AND LAW **9**

Digital Innovations and Developments as Knowledge Assets – IP Laws, Cyber Law and Digital Content Protection – Unfair Competition – Meaning and Relationship between Unfair Competition and IP Laws – Case Studies. **CO4**

UNIT V: ENFORCEMENT OF IPRs **7**

Infringement of IPRs, Enforcement Measures, Emerging issues – Case Studies. **CO5**

TOTAL PERIODS: 45

3. Edited by Derek Bosworth and Elizabeth Webster, The Management of Intellectual Property, Edward Elgar Publishing Ltd., 2013.

COURSE OUTCOMES

Upon completion of the course, the students will be able to

CO1 Get an adequate knowledge on patent and copyright for their innovative research works

CO2 Get idea about the registration process of IPR

CO3 Study various agreements and Acts regarding IPR

CO4 Inculcate the knowledge on innovations, developments and IP laws

CO5 Gain awareness about the knowledge of enforcement and current issues

PROFESSIONAL ELECTIVE – III

BT1009 CANCER BIOLOGY

L	T	P	C
3	0	0	3

OBJECTIVES:

To enable the students to understand

- Basic biology of cancer
- Impact of antibodies against cancer in the human body leading to more effective treatments
- Enhanced immunology based detection methods and imaging technique

Development of cell based and cytokine based immunotherapy against cancer.

UNIT I: FUNDAMENTALS OF CANCER BIOLOGY 9

Regulation of cell cycle, mutations that cause changes in signal molecules, effects on receptor, signal switches, tumour suppressor genes, modulation of cell cycle in cancer, different forms of cancers, diet and cancer. Cancer screening and early detection, Detection using biochemical assays, tumor markers, molecular tools for early diagnosis of cancer. **CO1**

UNIT II: PRINCIPLES OF CARCINOGENESIS 9

Theory of carcinogenesis, Chemical carcinogenesis, metabolism of carcinogenesis, principles of physical carcinogenesis, x-ray radiation-mechanisms of radiation carcinogenesis. **CO2**

UNIT III: PRINCIPLES OF MOLECULAR CELL BIOLOGY OF CANCER 9

Signal targets and cancer, activation of kinases; Oncogenes, identification of oncogenes, retroviruses and oncogenes, detection of oncogenes. Oncogenes/proto oncogene activity. Growth factors related to transformation. Telomerases. **CO3**

UNIT IV: PRINCIPLES OF CANCER METASTASIS 9

Clinical significances of invasion, heterogeneity of metastatic phenotype, metastatic cascade, basement membrane disruption, three step theory of invasion, proteinases and tumour cell invasion. **CO4**

UNIT V: NEW MOLECULES FOR CANCER THERAPY 9

Different forms of therapy, chemotherapy, radiation therapy, detection of cancers, prediction of aggressiveness of cancer, advances in cancer detection. Use of signal targets towards therapy of cancer; Gene therapy. **CO5**

TOTAL PERIODS: 45

TEXT BOOKS:

1. Weinberg, R.A. “The Biology of Cancer” Garland Science, 2007
2. McDonald, F etal., “ Molecular Biology of Cancer” IInd Edition. Taylor & Francis, 2004.

REFERENCES:

1. King, Roger J.B. “Cancer Biology” Addison Wesley Longman, 1996.
2. Ruddon, Raymond W. “ Cancer Biology” IIIrd Edition . Oxford University Press, 1995.

COURSE OUTCOMES

Upon completion of the course, the students will be able to

CO1	Understand the fundamentals of cancer biology such as cell cycle, molecular diagnostic assays and molecular markers.
CO2	Understand the basic principles involved in creating carcinogenesis and mechanism of carcinogenesis.
CO3	Have depth knowledge in Oncogenic genes molecular mechanism and importance of growth factors
CO4	Have awareness on cancer metastasis and its clinical significance
CO5	Have awareness on medical applications of cytokines and immune cells against cancer

BT1010 BIOPHARMACEUTICAL TECHNOLOGY

L	T	P	C
3	0	0	3

OBJECTIVES:

- The aim of the course is to give strong foundation and advanced information on biopharmaceutical aspects in relation to drug development.
- This course provides core responsibilities for the development and monitoring of the drug and the preparation of medicines according to the norms.
- To gain knowledge in physicochemical properties, pharmacology and the formulation of commonly used biopharmaceuticals.

UNIT I: INTRODUCTION 9

Pharmaceutical industry & development of drugs ; types of therapeutic agents and their uses; economics and regulatory aspects . **CO1**

UNIT II: DRUG ACTION, METABOLISM AND PHARMACOKINETICS 9

Mechanism of drug action; physico-chemical principles of drug metabolism; radioactivity; pharmacokinetics. **CO2**

UNIT III: MANUFACTURE OF DRUGS, PROCESS AND APPLICATIONS 9

Types of reaction process and special requirements for bulk drug manufacture. **CO3**

UNIT IV: PRINCIPLES OF DRUG MANUFACTURE 9

Compressed tablets; dry and wet granulation; slugging or direct compression; tablet presses; coating of tablets; capsule preparation; oval liquids – vegetable drugs – topical applications; preservation of drugs; analytical methods and other tests used in drug manufacture; packing techniques; quality management; GMP. **CO4**

UNIT V: BIOPHARMACEUTICALS 9

Various categories of therapeutics like vitamins, laxatives, analgesics, contraceptives, antibiotics, hormones and biologicals. **CO5**

TOTAL PERIODS: 45

TEXT BOOKS:

1. Finkel, Richard, etal., "Lippincott's Illustrated Reviews Pharmacology" IVth Edition. Wolters Kluwer / Lippincott Williams & Wilkins, 2009.

1. Gareth Thomas. Medicinal Chemistry. An introduction. John Wiley. 2000.
2. Katzung B.G. Basic and Clinical Pharmacology, Prentice Hall of Intl. 1995.
3. Ansel's Pharmaceutical Dosage Forms and Drug Delivery Systems, Eleventh Edition .Loyd V. Allen, Jr. ,Wolters Kluwer, 2017.

COURSE OUTCOMES

Upon completion of the course

CO1	Students would have a fundamental knowledge about the various phases and the regulatory aspects involved in the drug development.
CO2	Students would have gained knowledge about mechanism of action of drug on a human body and how a body responds to a drug.
CO3	Students would have developed knowledge about chemical reactions and processes involved in manufacturing a drug product.
CO4	Students get familiar about the preparation of various dosage forms of drug and its quality control.
CO5	Student would acquire knowledge on different types of biopharmaceuticals.

BT1011 **MOLECULAR PATHOGENESIS OF DISEASES**

L	T	P	C
3	0	0	3

OBJECTIVES:

To enable the students

- To understand about the microbial toxins and modern molecular pathogenesis
- To know about the host pathogen interaction and identifying virulence factors
- To control pathogens by modern approaches.

UNIT I: OVERVIEW **5**

Historical perspective - discovery of microscope, Louis Pasteur's contributions, Robert Koch's postulates, early discoveries of microbial toxins, toxic assays, vaccines, antibiotics and birth of molecular genetics and modern molecular pathogenesis studies, Various pathogen types and modes of entry. **CO1**

UNIT II: HOST-DEFENSE AGAINST PATHOGENS AND PATHOGENIC STRATEGIES **8**

Attributes & components of microbial pathogenesis, Host defense: skin, mucosa, cilia, secretions, physical movements, limitation of free iron, antimicrobial compounds, mechanism of killing by humoral and cellular defense mechanisms, complements, inflammation process, general disease symptoms, Pathogenic adaptations to overcome the above defenses. **CO2**

UNIT III: MOLECULAR PATHOGENESIS (WITH SPECIFIC EXAMPLES) **16**

Virulence, virulence factors, virulence- associated factors and virulence lifestyle factors, molecular genetics and gene regulation in virulence of pathogens, Vibrio Cholerae: Cholera toxin, co-regulated pili, filamentous phage, survival E.coli pathogens: EnterotoxigenicE.coli (ETEC), labile & stable toxins, Entero- pathogenic E.coli (EPEC), type III secretion, cytoskeletal changes, intimate attachment; EnterohaemerrohogicE.coli (EHEC), mechanism of bloody diarrhoea and Hemolytic Uremic Syndrome, EnteroaggregativeE.coli (EAEC). Shigella: Entry, macrophage apoptosis, induction of macropinocytosis, uptake by epithelial cells, intracellular spread, inflammatory response, tissue damage Plasmodium: Life cycle, erythrocyte stages, transport mechanism and processes to support the rapidly growing schizont, parasitiparous vacuoles, and knob protein transport, Antimalarials based on transport processes. Influenza virus: Intracellular stages, Neuraminidase & Haemagglutinin in entry, M1 & M2 proteins in assembly and disassembly, action of amantidine. **CO3**

UNIT IV: EXPERIMENTAL STUDIES ON HOST-PATHOGEN INTERACTIONS **8**

Virulence assays: adherence, invasion, cytopathic, cytotoxic effects. Criteria & tests in identifying virulence factors, attenuated mutants, molecular characterization of virulence factors, signal transduction & host responses **CO4**

UNIT V: APPROACHES TO CONTROL PATHOGENS **8**

Classical approaches based on serotyping. Modern diagnosis based on highly conserved virulence factors, immune & DNA-based techniques. New therapeutic strategies based on recent findings on molecular pathogenesis of a variety of pathogens, Vaccines - DNA, subunit and cocktail vaccines. **CO5**

TOTAL PERIODS: 45

5. Eduardo A. Groisman, Principles of Bacterial Pathogenesis, Academic Press, 2001.

COURSE OUTCOMES

Upon completion of the course, the students will be able to

CO1	Gain knowledge in understanding the basic about the historical perspective in molecular Pathogenesis and various pathogen types and mode of entry
CO2	Develop knowledge in host-defense mechanism against pathogen and pathogenic strategy
CO3	Gain knowledge in various bacterial and viral pathogens along with their virulence factor and gene regulation
CO4	Develop knowledge in various virulence assay and understand molecular characterization of virulence factor
CO5	Acquire knowledge to control the pathogens and to diagnose various pathogens in immunological and molecular level

BT1012	BIO-ENTREPRENEURSHIP	L	T	P	C
		3	0	0	3

OBJECTIVES:
- To learn the basics of entrepreneur skills and apply in developing business plan
- To identify suitable locations and market in the business
- To understand the basics of finance and its management, legal, social aspect of business

UNIT I: **9**

Should You Become an Entrepreneur? What Skills Do Entrepreneurs Need?, Identify and Meet a Market Need, Entrepreneurs in a Market Economy, Select a Type of Ownership **CO1**

UNIT II: **9**

Develop a Business Plan **CO2**

UNIT III: **9**

Choose Your Location and Set Up for Business, Market Your Business, Hire and Manage a Staff **CO3**

UNIT IV: **9**

Finance, Protect and Insure Your Business, Record Keeping and Accounting, Financial Management **CO4**

UNIT V: **9**

Meet Your Legal, Ethical, Social Obligations, Growth in Today's Marketplace. **CO5**

TOTAL PERIODS: 45

TEXT BOOKS:

Entrepreneurship Ideas in Action—South-Western, 2000.

REFERENCES:

Handbook of Bioentrepreneurship: 4 (International Handbook Series on Entrepreneurship), by Holger Patzelt , Thomas Brenner

COURSE OUTCOMES

Upon completion of the course,

CO1	Students will be able to understand the fundamentals of Entrepreneurship and will be able to understand and analyze Market.
CO2	Students will be able to plan and develop a Business plan.
CO3	Students will be able to learn, understand setting up a business and also the basics of leadership quality, customer relationship and team work.
CO4	Students will be able to learn, understand, calculate and analyze finance.
CO5	Students will be able to define and apply the ethical rights and also forecast and estimate the global issues.

PROFESSIONAL ELECTIVE – IV

BT1013	BIOETHICS	L	T	P	C
		3	0	0	3

OBJECTIVES:

- The course will provide Fundamental ethical to Advanced clinical trial management including drug development and trial planning; Project management in clinical trials; Consent and data protection; Quality assurance and governance.

UNIT I: INTRODUCTION TO CLINICAL TRIALS 9

Fundamentals of clinical trials; Basic statistics for clinical trials; Clinical trials in practice; Reporting and reviewing clinical trials; Legislation and good clinical practice - overview of the European directives and legislation governing clinical trials in the 21stcentury; International perspectives; Principles of the International Committee on Harmonisation (ICH)-GCP. **CO1**

UNIT II: REGULATIONS OF CLINICAL TRIALS 9

Drug development and trial planning - pre-study requirements for clinical trials; Regulatory approvals for clinical trials; Consort statement; Trial responsibilities and protocols - roles and responsibilities of investigators, sponsors and others; Requirements of clinical trials protocols; Legislative requirements for investigational medicinal products. **CO2**

UNIT III: MANAGEMENT AND ETHICS OF CLINICAL TRIALS 9

Project management in clinical trials - principles of project management; Application in clinical trial management; Risk assessment; Research ethics and Bioethics - Principles of research ethics; Ethical issues in clinical trials; Use of humans in Scientific Experiments; Ethical committee system including ahistorical overview; the informed consent; Introduction to ethical codes and conduct; Introduction to animal ethics; Animal rights and use of animals in the advancement of medical technology; Introduction to laws and regulation regarding use of animals in research. **CO3**

UNIT IV: INFORMED CONSENT 9

Consent and data protection- the principles of informed consent; Consent processes; Data protection; Legislation and its application; Data management – Introduction to trial master files and essential documents; Data management. **CO4**

UNIT V: QUALITY CONTROL AND GUIDELINES 9

Quality assurance and governance - quality control in clinical trials; Monitoring and audit; Inspections; Pharmacovigilance; Research governance; Trial closure and pitfalls-trial closure; Reporting and legal requirements; Common pitfalls in clinical trial management. **CO5**

TOTAL PERIODS: 45

REFERENCES:

1. Lee, Chi-Jen; etal., “Clinical Trials or Drugs and Biopharmaceuticals.” CRC / Taylor &Francis,2011.
2. Matoren, Gary M. “The Clinical Research Process in the Pharmaceutical Industry.”Marcel Dekker,1984.

COURSE OUTCOMES

Upon completion of the course, the students will be able to

CO1	Gain knowledge on the fundamental aspects of clinical trials, legal standards and GCP.
CO2	Acquire knowledge on the regulatory approvals and legislative requirements of clinical trials.
CO3	Understand the principles of project management , ethical system in clinical trials and research.
CO4	Understand the perspectives of informed consent , data protection and management systems.
CO5	Understand and appreciate the procedures of quality control assurance & governance in clinical trials.

GE1004	**FUNDAMENTALS OF NANOSCIENCE**	**L**	**T**	**P**	**C**
		3	**0**	**0**	**3**

OBJECTIVES:

- To learn about basis of nanomaterial science, preparation method, types and application

UNIT I: INTRODUCTION **8**

Nanoscale Science and Technology- Implications for Physics, Chemistry, Biology and Engineering-Classifications of nanostructured materials- quantum dots, nano wires-ultra-thin films multi layered materials. Length Scales involved and effect on properties: Mechanical, Electronic, Optical, Magnetic and Thermal properties. Introduction to properties and motivation for study (qualitative only). **CO1**

UNIT II: GENERAL METHODS OF PREPARATION **9**

Bottom-up Synthesis-Top-down Approach: Co-Precipitation, Ultrasonication, Mechanical Milling, Colloidal routes, Self-assembly, Vapour phase deposition, MOCVD, Sputtering, Evaporation, Molecular Beam Epitaxy, Atomic Layer Epitaxy, MOMBE. **CO2**

UNIT III: NANOMATERIALS **12**

Nanoforms of Carbon - Buckminster fullerene- graphene and carbon nanotube, Single wall carbon Nanotubes (SWCNT) and Multi wall carbon nanotubes (MWCNT)- methods of synthesis(arc-growth, laser ablation, CVD routes, Plasma CVD), structure-property Relationships applications-Nanometal oxides-ZnO, TiO_2,MgO, ZrO_2, NiO, nanoalumina, CaO, $AgTiO_2$, Ferrites, Nanoclays functionalization and applications-Quantum wires, Quantum dots-preparation, properties and applications. **CO3**

UNIT IV: CHARACTERIZATION TECHNIQUES **9**

Nano InfoTech: Information storage- nanocomputer, molecular switch, super chip, nanocrystal, Nano biotechlogy: nanoprobes in medical diagnostics and biotechnology, Nano medicines, Targetted drug delivery, Bioimaging - Micro Electro Mechanical Systems (MEMS), Nano Electro Mechanical Systems (NEMS)- Nanosensors, nano crystalline silver for bacterial inhibition, Nanoparticles for sunbarrier products - In Photostat, printing, solar cell, battery. **CO4**

UNIT V: APPLICATIONS **7**

NanoInfoTech: Information storage- nanocomputer, molecular switch, super chip, nanocrystal, Nanobiotechlogy: nanoprobes in medical diagnostics and biotechnology, Nano medicines, Targetted drug delivery, Bioimaging - Micro Electro Mechanical Systems (MEMS), Nano Electro Mechanical Systems (NEMS)- Nanosensors, nano crystalline silver for bacterial inhibition, Nanoparticles for sunbarrier products - In Photostat, printing, solar cell, battery. **CO5**

TOTAL PERIODS: 45

TEXT BOOKS:

1. A.S. Edelstein and R.C. Cammearata, eds., “Nanomaterials: Synthesis, Properties and Applications”, Institute of Physics Publishing, Bristol and Philadelphia, 1996.
2. N John Dinardo, “Nanoscale Charecterisation of surfaces & Interfaces”, 2nd edition, Weinheim Cambridge, Wiley-VCH, 2000.

2. Akhlesh Lakhtakia,“The Hand Book of Nano Technology, Nanometer Structure, Theory, Modeling and Simulations”. Prentice-Hall of India (P) Ltd, New Delhi, 2007.

COURSE OUTCOMES

Upon completion of the course, the students will be able to

CO1	Understand the concept of Nano scale Science and Technology and various types of nano materials.
CO2	Acquire knowledge in general methods of preparation of nano materials.
CO3	Understand the Nano forms of Carbon and methods of synthesis
CO4	Acquire knowledge in characteristic nanomaterial on various technique.
CO5	Gain knowledge on various application of nano materials.

BT1015 **GENOMICS AND PROTEOMICS**

L	T	P	C
3	0	0	3

OBJECTIVES:

- To provide the students a broader knowledge on the structure and function of genomes, the technologies developed for genomics, functional genomics and proteomics.

UNIT I: INTRODUCTION **9**

Introduction to genome, transcriptome, and proteome; Overview of genomes of bacteria, archae, and eukaryote; Genomes of organelles. **CO1**

UNIT II: GENOME MAPPING AND SEQUENCING **9**

Genetic and physical mapping, Linkage analysis, RFLP, SNP, SSLP, Restriction mapping, STS mapping, FISH, Top-down and bottom-up sequencing strategies, Whole genome sequencing, Gap closure, Pooling strategies. **CO2**

UNIT III: FUNCTIONAL GENOMICS **9**

Genome annotation, ORF and functional prediction, Gene finding, Substractive DNA library screening, Differential display and Representational difference analysis, SAGE,TOGA, Introduction to DNA microarray. **CO3**

UNIT IV: TECHNIQUES IN PROTEOMICS **9**

In-vitro and in vivo-labeling of proteins, One and two-dimensional gel electrophoresis, Detection of proteins on SDS gels, Protein cleavage, Edman protein microsequencing, Mass spectrometry-principles of MALDI-TOF, Peptide mass fingerprinting. **CO4**

UNIT V: PROTEIN PROFILING **9**

Large-scale protein profiling using proteomics, Post-translational modifications, Phosphoprotein and glycoprotein analyses; Analysis of protein-protein interactions, Protein microarrays. **CO5**

TOTAL PERIODS: 45

TEXT BOOKS:

1. Suhai, Sandor "Genomics and Proteomics: Functional and Computational Aspects". Springer, 2000

3. Hunt, Stephen P. and Frederick J. Livesey. "Functional Genomics". Oxford University Press,2000.
4. Conard, Edward. "Genomics". Apple Academics, 2010

COURSE OUTCOMES

Upon completion of the course, the students will be able to

CO1 Understand the fundamentals of Genomics and Proteomics

CO2 Acquire knowledge on various genome mapping and sequencing methods and genomic markers

CO3 Gain knowledge about microarray technology and methods used in functional genomics

CO4 Gain knowledge about current techniques involved in protein analysis

CO5 Acquire knowledge on various techniques used for protein filing and post translational modification

BT1016	LIFESTYLE DISEASES	L	T	P	C
		3	0	0	3

UNIT I: INTRODUCTION **9**

Lifestyle diseases – Definition ; Risk factors – Eating, smoking, drinking, stress, physical activity, illicit drug use ; Obesity, diabetes, cardiovascular diseases, respiratory diseases, cancer; Prevention – Diet and exercise. **CO1**

UNIT II: CANCER **9**

Types - Lung cancer, Mouth cancer, Skin cancer, Cervical cancer, Carcinoma oesophagus; Causes Tobacco usage, Diagnosis – Biomarkers, Treatment **CO2**

UNIT III: CARDIOVASCULAR DISEASES **9**

Coronoary atherosclerosis – Coronary artery disease; Causes -Fat and lipids, Alcohol abuse – Diagnosis - Electrocardiograph, echocardiograph, Treatment, Exercise and Cardiac rehabilitation **CO3**

UNIT IV: DIABETES AND OBESITY **9**

Types of Diabetes mellitus; Blood glucose regulation; Complications of diabetes – Paediatric and adolescent obesity – Weight control and BMI **CO4**

UNIT V: RESPIRATORY DISEASES 9

Chronic lung disease, Asthma, COPD; Causes - Breathing pattern (Nasal vs mouth), Smoking – Diagnosis - Pulmonary function testing **CO5**

TOTAL PERIODS: 45

TEXT BOOKS:

1. R.Kumar&Meenal Kumar, "Guide to Prevention of Lifestyle Diseases", Deep & Deep Publications, 2003
2. Gary Eggar et al, "Lifestyle Medicine", 3rd Edition, Academic Press, 2017

REFERENCES:

1. James M.R, "Lifestyle Medicine", 2nd Edition, CRC Press, 2013
2. Akira Miyazaki et al, "New Frontiers in Lifestyle-Related Disease", Springer, 2008

COURSE OUTCOME

Upon completion of the course,

CO1	Students would have a fundamental knowledge about the various diseases related to their lifestyle and methods to prevent through diet and exercise
CO2	After completing this course, students get familiar about the various forms of cancer and methods to diagnose and treat
CO3	Students will be able to gain extensive knowledge on cardiovascular diseases and know the usage of diagnose these diseases
CO4	Students would have gained knowledge and the various types of diabetes and know about the consequence of obesity
CO5	At the end of the course the student would acquire knowledge on respiratory diseases and the effect of smoking and tobacco usage

PROFESSIONAL ELECTIVE - V

BT1017 **Plant Biotechnology**

L	T	P	C
3	0	0	3

OBJECTIVES:

- To give the details of plant cells and its functions
- To provide the basics of Agrobacterium and applications of plant biotechnology

UNIT I: ORGANIZATION OF GENETIC MATERIAL **9**

Genetic material of plant cells – nucleosome structure and its biological significance; junk and repeat sequences; outline of transcription and translation. **CO1**

UNIT II: CHLOROPLAST & MITOCHONDRIA **9**

Structure, function and genetic material; rubisco synthesis and assembly, coordination, regulation and transport of proteins. Mitochondria: Genome, cytoplasmic male sterility and import of proteins. **CO2**

UNIT III: NITROGEN FIXATION **9**

Nitrogen cycle, importance of symbiotic and nonsymbiotic organisms, nodulation- bacteroids, nod genes, nod factors, Nitrogenase activity, and nif genes. **CO3**

UNIT IV: AGROBACTERIUM & VIRAL VECTORS **9**

Pathogenesis, crown gall disease, genes involved in the pathogenesis, Ti plasmid – t-DNA, importance in genetic engineering. Viral Vectors: Gemini virus, cauliflower mosaic virus, viral vectors and its benefits. **CO4**

UNIT V: APPLICATION OF PLANT BIOTECHNOLOGY **9**

Outline of plant tissue culture, transgenic plants, herbicide and pest resistant plants, molecular pharming, therapeutic products. **CO5**

TOTAL PERIODS: 45

TEXT BOOKS:

1.Gamburg OL, Philips GC, Plant Tissue & Organ Culture fundamental Methods, Narosa Publications. 1995.
2. Singh BD. Text Book of Biotechnology, Kalyani Publishers. 1998

REFERENCES:

1. Heldt HW. Plant Biochemistry & Molecular Biology, Oxford University Press. 1997.
2. Ignacimuthu .S, Applied Plant Biotechnology, Tata McGraw Hill. 1996.

COURSE OUTCOMES

Upon completion of the course, the students will be able

CO1	To understand the fundamentals of plant cells, structure and functions
CO2	To know the importance of chloroplast and mitochondria & its function
CO3	To learn the nitrogen fixation mechanism and significance of viral vectors
CO4	To gain the knowledge about the plant tissue culture and transgenic plants
CO5	To develop therapeutic products using plants

MAPPING OF COs WITH POs AND PSOs

BT1018 METABOLIC ENGINEERING

L	T	P	C
3	0	0	3

OBJECTIVES:

- To provide a quantitative basis, based on thermodynamics, enzyme kinetics, for the understanding of metabolic networks in single cells and at the organ level.
- To enable the students to use organisms to produce valuable substances on an industrial scale in cost effective manner.

UNIT I: INTRODUCTION TO EXAMPLES OF PATHWAY MANIPULATION - QUALITATIVE TREATMENT **9**

Enhancement of Product Yield and Productivity, Extension of substrate Range, Extension of Product spectrum and Novel products, Improvement of Cellular properties, Xenobiotic degradation. **CO1**

UNIT II: MATERIAL BALANCES AND DATA CONSISTENCY **9**

Comprehensive models of cellular reactions; stoichiometry of cellular reactions, reaction rates, dynamic mass balances, yield coefficients and linear rate equations, analysis of over determined systems- identification of gross measurement errors. Introduction to MATLAB® **CO2**

UNIT III: METABOLIC FLUX ANALYSIS **9**

Theory, overdetermined systems, underdetermined systems- linear programming, sensitivity analysis, methods for the experimental determination of metabolic fluxes by isotope labeling, applications of metabolic flux analysis **CO3**

UNIT IV: METABOLIC CONTROL ANALYSIS **9**

Fundamentals of Metabolic Control Analysis, control coefficients and the summation theorems, Determination of flux control coefficients, MCA of linear pathways, branched pathways, theory of large deviations **CO4**

UNIT V: ANALYSIS OF METABOLIC NETWORKS **9**

Control of flux distribution at a single branch point, Grouping of reactions, case studies, extension of control analysis to intermetabolite, optimization of flux amplifications, consistency tests and experimental validation. **CO5**

TOTAL PERIODS: 45

TEXT BOOKS:

1. Gregory N. Stephanopoulos ,Aristos A. Aristidou, Jens Nielsen, Metabolic Engineering: Principles and Methodologies ,Academic Press 1998.
2. Sang Yup Lee E. Terry Papoutsakis Marcel Dekker, Metabolic Engineering.inc 1998
3. Nielsen J and Villadsen J. (1994) Bioreaction Engineering Principles. New york: Plenum Press

REFERENCES:

1. Computational Analysis of Biochemical Systems: A Practical Guide for Biochemists and Molecular Biologists by Eberhard O. Voit Cambridge University Press 2000
2. Applications of Plant Metabolic Engineering. R. Verpoorte, A. W. Alfermann and T. S. Johnson (eds). Springer, P.O. Box 17, 3300 AA Dordrecht, The Netherlands. 2007.
3. Systems Modeling in Cellular Biology: From Concepts to Nuts and Bolts Edited by ZoltanSzallasi, JorgStelling and VipulPeriwal MIT Press Cambridge 2006

COURSE OUTCOMES

Upon completion of the course,

CO1	Students would have gained knowledge on regulation, manipulation and synthesis of metabolic pathways
CO2	Students would have acquired knowledge on data consistency and how to solve material balances
CO3	Students would have developed knowledge about analysis and methods for the metabolic flux
CO4	After completing this course, students get familiar with the application of metabolic flux analysis.
CO5	Students would have learnt to analyse and optimise metabolic flux networks.

BT1019	**GENETICS**	**L**	**T**	**P**	**C**
		3	**0**	**0**	**3**

OBJECTIVES:

- To give an understanding on the fundamentals of conventional genetics and its relevance in disease and therapy
- To describe various genetic laws, learn the chromosome structure function and understand methodologies for cytogenetic applications

UNIT I: BACTERIAL GENETICS 9

Transformation, Transduction, Conjugation – mapping, fine structure mapping in merozygotes-plasmids and episomes **CO1**

UNIT II: CLASSICAL GENETICS **9**

Mendel's principles and experiments, segregation, multiple alleles – Independent Assortments, Genotypic interactions, epistasis and Sex chromosomes, Sex determination, Dosage compensation, sex linkage and pedigree analysis **CO2**

UNIT III: APPLIED GENETICS **9**

Chromosome organization, structure and variation in prokaryotes and eukaryotes, Giant chromosomes – polytene and lampbrush, deletion, inversion, translocation, duplication. variation in chromosomal numbers – aneuploidy, euploidy, polyploidy, Ames test, karyotyping, Linkage, Crossing over – cytological basis of crossing over, chromosome mapping – two and three factor cross – interference, somatic cell hybridization **CO3**

UNIT IV: POPULATION GENETICS **9**

Hardy-Weinberg equilibrium, Extensions of Hardy- Weinberg equilibrium, non random mating, population analysis, Models for population genetics. Mutation and Migration size, Genetic variation and Sociobiology **CO4**

UNIT V: GENETIC DISEASES **9**

Inborn errors of metabolism, Sickle cell, hemochromatosis, cystic fibrosis, hypogonadotropichypogonadism, Gaucher's disease, achondroplasia, phenylketonuria, Huntington's Disease, Cystic fibrosis, hemoglobinopathies, Age-related macular degeneration, Obesity, Type 2 diabetes, Psychiatric disease, including missing heritability, autism **CO5**

TOTAL PERIODS: 45

TEXT BOOKS:

1. Tamarin, R.H., "Principles of Genetics", Tata McGraw Hill, New Delhi, 2002
2. De Robertis, E. D. P. and De Robertis, E. M. F., "Cell and Molecular Biology", 8th Edition,Lippincott Williams & Wilkins, New York, USA, 2001.

3. Klug, W.S. and Cummings, M.R., "Concepts of Genetics", Pearson Education, New Delhi 2003.

COURSE OUTCOMES

Upon completion of the course, the students will be able to

CO1	Gain knowledge about basic techniques involved in Gene transfer methods
CO2	Gain depth knowledge about principles involved in Classical genetics
CO3	Understand about the methods involved in mapping and hybridisation
CO4	Familiar with population genetics and genetic variations
CO5	Have awareness about genetically transferred diseases and its analysis

BT1020 CLINICAL TRIALS

L	T	P	C
3	0	0	3

OBJECTIVES:

- To highlight the epidemiologic methods, study design, protocol preparation
- To gain knowledge in the basic bio-statistical techniques involved in clinical research.
- To describe the principles involved in ethical, legal and regulatory issues in clinical trials.

UNIT I: ROLE OF CLINICAL TRIALS IN NEW DRUG DEVELOPMENT 9

Drug Discovery, regulatory guidance and governance, pharmaceutical manufacturing, nonclinical research, clinical trials, post-marketing surveillance, ethical conduct during clinical trials. **CO1**

UNIT II: FUNDAMENTALS OF TRIAL DESIGN 9

Randomised clinical trials, uncontrolled trials. Protocol development, endpoints, patient selection, source and control of bias, randomization, blinding, sample size and power. **CO2**

UNIT III: ALTERNATE TRIAL DESIGNS 9

Crossover design, factorial design, equivalence trials, bioequivalence trials, non-inferiority trials, cluster randomized trials, multi-center trials. **CO3**

UNIT IV: BASICS OF STATISTICAL ANALYSIS 9

Types of data and normal distribution, significance tests and confidence intervals, comparison of means, comparison of proportions, analysis of survival data, subgroup analysis, regression analysis, missing data. **CO4**

UNIT V: REPORTING OF TRIALS 9

Overview of reporting, trial profile, presenting baseline data, use of tables, figures, critical appraisal of report, meta-analysis. **CO5**

TOTAL PERIODS: 45

TEXT BOOKS:

1. Fundamentals of Clinical Trials, Lawrence M. Friedman, Springer Science & Business Media, 2010
2. Textbook of Clinical Trials, David Machin, Simon Day, Sylvan Green, John Wiley & Sons, 2007
3. Clinical Trials: A Practical Approach, Stuart J. Pocock, John Wiley & Sons, 17-Jul-2013

3. Clinical Trials: Study Design, Endpoints and Biomarkers, Drug Safety, and FDA and ICH Guidelines, Tom Brody, Academic Press, 2016.

COURSE OUTCOMES

Upon completion of the course, the students will be able to

CO1	The student will be able to study the epidemiologic methods, study design, protocol preparation
CO2	To gain knowledge in the basics of fundamentals of trial design
CO3	The student will be able to explain key concepts in the design of clinical trials.
CO4	The student will be able to study designs used, identify key issues in data management for clinical trials.
CO5	The student will be able to describe the roles of regulatory affairs in clinical trials.

PROFESSIONAL ELECTIVE – VI

BT1021	TISSUE ENGINEERING	L	T	P	C
		3	0	0	3

OBJECTIVES:

To enable the students

- To learn the fundamentals of tissue engineering and tissue repairing
- To acquire knowledge on clinical applications of tissue engineering
- To understand the basic concept behind tissue engineering focusing on the stem cells, biomaterials and its applications

UNIT I: INTRODUCTION **9**

Introduction to tissue engineering: Basic definition; current scope of development; use intherapeutics, cells as therapeutic agents, cell numbers and growth rates, measurement of cellcharacteristics morphology, number viability, motility and functions. Measurement of tissue characteristics, appearance, cellular component, ECM component, mechanical measurements and physical properties. **CO1**

UNIT II: TISSUE ARCHITECTURE **9**

Tissue types and Tissue components, Tissue repair, Basic events of wound healing, Engineering wound healing and its sequential events. Applications of growth factors: VEGF/angiogenesis, Basic properties,Cell-Matrix& Cell-Cell Interactions, telomeres and Self-renewal, Control of cell migration in tissue engineering. **CO2**

UNIT III: BIOMATERIALS **9**

Biomaterials: Types of biomaterials, biological and synthetic materials,Biopolymers, Properties of biomaterials ,Surface, bulk, mechanical and biological properties.Scaffolds & tissue engineering, Applications of biomaterials, Modifications of Biomaterials, Role of Nanotechnology. **CO3**

UNIT IV: BASIC BIOLOGY OF STEM CELLS **9**

Stem Cells: Introduction, hematopoietic differentiation pathway,Potency and plasticity of stemcells, sources, embryonic stem cells, hematopoietic and mesenchymal stem cells, Stem Cellmarkers, FACS analysis, Differentiation,Stem cell systems- Liver, neuronal stem cells, Types &sources of stem cell with characteristics: embryonic, adult, haematopoetic, fetal, cord blood,placenta, bone marrow, primordial germ cells, cancer stem cells induced pleuripotent stem cells. **CO4**

UNIT V: CLINICAL APPLICATIONS **9**

Stem cell therapy, Molecular therapy, In vitro organogenesis, Neurodegenrative diseases, spinalcord injury, heart disease, diabetes, burns and skin ulcers, muscular dystrophy,orthopedicapplications, Stem cells and Gene therapy. Physiological models, tissue engineeredtherapies, product characterization, components, safety, efficacy. Preservation – freezing anddrying. Patent protection and regulation of tissue-engineered products, ethical issues. **CO5**

TOTAL PERIODS: 45

TEXT BOOKS:

1.Bernhard O.Palsson, SangeetaN.Bhatia, ”Tissue Engineering” Pearson Publishers 2009.

2. Meyer, U.; Meyer, Th.; Handschel, J.; Wiesmann, H.P. .Fundamentals of TissueEngineering and Regenerative Medicine.2009.

6. Naggy N. Habib, M.Y. Levicar, , L. G. Jiao,.andN. Fisk, Stem Cell Repair andRegeneration, volume-2, Imperial College Press,2007.

COURSE OUTCOMES

Upon completion of the course, the students will be able to

CO1	Understand the components of the tissue architecture and fundamental properties of cells and tissues
CO2	Gain depth knowledge in wound healing and growth factors
CO3	Be Aware about the properties and broad applications of biomaterials
CO4	Opportunity to get familiarized with the stem cell characteristics and their relevance in medicine
CO5	Overall exposure to the role of tissue engineering and stem cell therapy in Organogenesis

BT1022	**BIOSAFETY AND HAZARD MANAGEMENT**	**L**	**T**	**P**	**C**
		3	**0**	**0**	**3**

OBJECTIVES:
- To introduce awareness on the importance of plant safety and risk analysis
- Students learn about implementation of safety procedures, risk analysis and assessment, hazard identification

UNIT I: INTRODUCTION **9**

Need for safety in industries; Safety Programmes – components and realization; Potential hazards-extreme operating conditions, toxic chemicals; safe handling **CO1**

UNIT II: QUALITY CHECKS **9**

Implementation of safety procedures – periodic inspection and replacement; Accidents – identification and prevention; promotion of industrial safety **CO2**

UNIT III: RISK ANALYSIS **9**

Overall risk analysis--emergency planning-on site & off site emergency planning, risk management ISO 14000, EMS models case studies. Quantitative risk assessment – rapid and comprehensive risk analysis; Risk due to Radiation, explosion due to over pressure, jet fire-fire ball. **CO3**

UNIT IV: SAFETY AUDITS **9**

Hazard identification safety audits, checklist, what if analysis, vulnerability models event tree analysis fault tree analysis, Hazan past accident analysis Fixborough-Mexico-Madras-VizagBopal analysis. **CO4**

UNIT V: HAZARDOUS OPERATIONS **9**

Hazop-guide words, parameters, derivation-causes-consequences-recommendation-coarse Hazop study-case studies-pumping system-reactor-mass transfer system. **CO5**

TOTAL PERIODS: 45

2. Heinrich, H.W. Dan Peterson, P.E. and Rood, N., “Industrial Accident Prevention“, McGraw-Hill Book Co., 1980.
3. Chemical Process Safety: Fundamentals with Applications, Daniel A. Crowl, J.F. Louvar, Prentice Hall, NJ, 1990.
4. Taylor, J.R., Risk analysis for process plant, pipelines and transport, Chapman and Hall, London, 1994.

COURSE OUTCOMES

Upon completion of the course, the students will be able

CO1 To understand the need for safety programmes and potential hazards in industries.

CO2 To know and implement the safety procedures and quality checks in industries.

CO3 To perform risk assessment and emergency planning in industries.

CO4 To carry out safety audit- Hazid and event /fault tree analysis.

CO5 To perform Hazop - Hazan and identify the consequences.

BT1023 STEM CELL TECHNOLOGY

L	T	P	C
3	0	0	3

OBJECTIVES:

- The course objectives are imparting the basic knowledge of students about stem cell, culturing and its clinical applications.

UNIT I: STEM CELLS AND TYPES **9**

Stem cells: Definition, Classification, Sources and Properties –Types of stem cells: methods of isolation, study of stem cells and their viability IPSCs, embryonic stem cells, cancer stem cells. – Preservations of Stem cell. Embryonic stem cell: Isolation, Culturing, Differentiation, Properties – Adult stem cell: Isolation, Culturing, Differentiation, Trans-differentiation, Plasticity, and Properties **CO1**

UNIT II: STEM CELLS IN PLANTS AND ANIMALS **9**

Stem cell and founder zones in plants –particulary their roots – stem cells of shoot meristems of higher plants. Skeletal muscle stem cell – Mammary stem cells – intestinal stem cells – keratinocyte stem cells of cornea – skin and hair follicles –tumour stem cells. **CO2**

UNIT III: STEM CELLS DIFFERENTIATION **9**

Factors influencing proliferation, physical, chemical and molecular methods for differentiation of stem cells – hormonal role in differentiation. **CO3**

UNIT IV: REGENERATION AND EXPERIMENTAL METHODS **9**

Germ cells, hematopoietic organs, and kidney, cord blood transplantation, donor selection, HLA matching, patient selection, peripheral blood and bone marrow transplantation, - Stem cell Techniques: fluorescence activated cell sorting (FACS), time lapse video, green fluorescent protein tagging **CO4**

UNIT V: APPLICATION AND ETHICAL ISSUES **9**

Stem cell Therapy for neurodegenerative diseases, spinal cord injury, heart disease, diabetes, burns, skin ulcers, muscular dystrophy and orthopaedic applications. Stem cell policy and ethics, stem cell research: Hype, hope and controversy. **CO5**

TOTAL PERIODS: 45

TEXT BOOKS:

1. Stem cells by C.S Potten., Elsevier, 2006.
2. Essentials of Stem Cell Biology by Robert Lanza., fourth edition. Elsevier 2014.

REFERENCES:

1. Stem cell biology and Gene Therapy by Peter Quesenberry., First Edition, Wiley-Liss, 1998.

3. Stem Cells: From Bench to Bedside by AriffBongso, EngHinLee., World Scientific Publishing Company, 2005.
4. Stem cells in clinic and Research by Ali Gholamrezanezhad., Intech, 2013

COURSE OUTCOMES

Upon completion of the course, the students will be able to

CO1	Understand the cell sources and basic properties involved stem cells isolation and development
CO2	Understand the role and applications of stem cells plants and animals
CO3	Understand the fundamental properties of stem cells differentiation
CO4	Gain knowledge about the current techniques used in characterization of stem cells
CO5	Gain knowledge about the applications of stems cells and moral ethics involved in implementation of the technology

BT1024	**IMMUNOTECHNOLOGY**	**L**	**T**	**P**	**C**
		3	**0**	**0**	**3**

OBJECTIVES:

The students who would have learnt the science of immunology will now be able to apply the science for the development of relevant immunotechnology.

UNIT I: INTRODUCTION **9**

Cells of the immune system and their development; primary and secondary lymphoid organs; humoral immune response; cell mediated immune responses; complement. **CO1**

UNIT II: ANTIBODIES **10**

Monoclonal antibodies and their use in diagnostics; ELISA; Agglutination tests; Antigen detection assay; Plaque Forming Cell Assay. **CO2**

UNIT III: CELLULAR IMMUNOLOGY **12**

PBMC seperation from the blood; identification of lymphocytes based on CD markers; FACS; Lymphoproliferation assay; Mixed lymphocyte reaction; Cr51 release assay; macrophage cultures; cytokine bioassays- IL2, gamma IFN, TNF alpha.; HLA typing. **CO3**

UNIT IV: VACCINE TECHNOLOGY **6**

Basic principles of vaccine development; protein based vaccines; DNA vaccines; Plant based vaccines; recombinant antigens as vaccines; reverse vaccinology **CO4**

UNIT V: DEVELOPMENT OF IMMUNOTHERAPEUTICS **5**

Engineered antibodies; catalytic antibodies; idiotypic antibodies; combinatorial libraries for antibody isolation. **CO5**

TOTAL PERIODS: 45

REFERENCES:

4. Weir, D.M. and Stewart, J. Immunology, 8th ed., Cheerchill, Linvstone, 1997

COURSE OUTCOMES

Upon completion of the course, the students will be able to

CO1	Understand fundamental knowledge about the various organs involved in immune response, immune responses and complement systems.
CO2	Developed knowledge about the production and application of producing monoclonal antibodies and will have knowledge in various immunological techniques.
CO3	Gain knowledge in the separation and identification of lymphocytes and various CD markers. They also gain knowledge in cytokine assay.
CO4	Gain the knowledge about the basic principles and application of various vaccine development
CO5	Acquire knowledge on development aspects in engineering antibodies and gain knowledge in combinatorial libraries for antibody isolation.

OPEN ELECTIVE - I

OCE101 **AIR POLLUTION AND CONTROL** **L T P C**
3 0 0 3

OBJECTIVES:

- To impart knowledge on the principle and design of control of Indoor/ particulate/ gaseous air pollutant and its emerging trends.

UNIT I: AIR QULALITY MONITORING **9**

Structure and composition of Atmosphere – Definition, Scope and Scales of Air Pollution – Sources and classification of air pollutants and their effect on human health, vegetation, animals, property, aesthetic value and visibility- Ambient Air Quality and Emission standards – Analysis of Particulate and Gaseous Pollutants. **CO1**

UNIT II: EFFECT OF ATMOSPHERIC DISPERSION **9**

Effects of meteorology on Air Pollution - Fundamentals, Atmospheric stability, Inversion, Wind profiles and stack plume patterns- Atmospheric Diffusion Theories – Dispersion models, Plume rise **CO2**

UNIT III: PARTICULATE CONTAMINANTS **9**

Gas Particle Interaction – Working principle, Gravity Separators, Centrifugal separators Fabric filters, Particulate Scrubbers, Electrostatic Precipitators – Operational Considerations- Factors affecting Selection of Control Equipment. **CO3**

UNIT IV: GASEOUS CONTAMINANTS **9**

Working principle, Adsorption, condensation, Incineration, Bio scrubbers, Bio filters – Process control and Monitoring – Operational Considerations- Factors affecting Selection of Control Equipment –CO2 capturing. **CO4**

UNIT V: INDOOR AIR QUALITY MONITORING **9**

Sources types and control of indoor air pollutants, sick building syndrome types –Sources and Effects of Noise Pollution– Standards–Control and Preventive measures. **CO5**

2. Arthur C.Stern, „Air Pollution (Vol.I – Vol.VIII)‟ , Academic Press, 2006.
3. Wayne T.Davis, „Air Pollution Engineering Manual‟ , John Wiley & Sons, Inc.,2000

COURSE OUTCOMES

Upon completion of the course, the students will be able to

CO1	Understand the chemistry of atmosphere, characterize the air pollutants , know the effects of air pollution, identify the criteria air pollutants and know about NAAQS
CO2	Apply the knowledge of mathematics and science fundamentals to understand the concept of meteorology, air pollution dispersion and Gaussian plume dispersion model
CO3	Select suitable method and design the particulate pollutant control equipment
CO4	Select appropriate method for control of gaseous pollutant by due consideration of sources of emission
CO5	Understand the source of indoor air pollution, effects and control methods as well as to identify the source of noise, and select suitable method for control of noise pollution

		L	T	P	C
OME101	**AUTOMOTIVE SYSTEMS**	**3**	**0**	**0**	**3**

OBJECTIVES:

- To understand the construction and working principle of various parts of an automobile.
- To have the practice for assembling and dismantling of engine parts and transmission system

UNIT I: AUTOMOTIVE ENGINE AUXILIARY SYSTEMS **9**

Automotive engines- External combustion engines –Internal combustion engines -classification of engines- SI Engines- CI Engines- two stroke engines -four stroke engines- construction and working principles - IC engine components- functions and materials -valve timing –port timing diagram- Injection system -Unit injector system- Rotary distributor type - Electronically controlled injection system for SI engines-CI engines-Ignition system - Electronic ignition system -Transistorized ignition system, capacitive discharge ignition system. **CO1**

UNIT II: VEHICLE FRAMES AND STEERING SYSTEM **9**

Vehicle construction and different Chassis layouts –classifications of chassis- types of frames-frameless chassis construction –articulated vehicles- vehicle body - Vehicle aerodynamics-various resistances and its effects - steering system –conventional – sophisticated vehicle- and types of steering gear box-Power Steering- Steering geometry-condition for true rolling motion-Ackermann's-Devi's steering system - types of stub axle – Types of rear axles. **CO2**

UNIT III: TRANSMISSION SYSTEMS **9**

Clutch-types and construction, gear boxes- manual and automatic, gear shift mechanisms, Over drive, transfer box, fluid flywheel, torque converter, propeller shaft, slip joints, universal joints –- Hotchkiss Drive and Torque Tube Drive- rear axle- Differential-wheels and tyres. **CO3**

UNIT IV: SUSPENSION AND BRAKES SYSTEMS **9**

Suspension Systems- conventional Suspension Systems -independent Suspension Systems – leaf spring – coil spring –taper-lite - eligo,s spring Types of brakes -Pneumatic and Hydraulic Braking Systems, Antilock Braking System (ABS), electronic brake force distribution (EBD) and Traction Control. Derive the equation of Forces acting while applying a brakes on plain surface - inclined road-gradient. **CO4**

UNIT V: ALTERNATIVE ENERGY SOURCES **9**

Use of Natural Gas, Liquefied Petroleum Gas, Bio-diesel, Bio-ethanol, Gasohol and Hydrogen in Automobiles- Engine modifications required –Performance, Combustion and Emission Characteristics of SI and CI engines with these alternate fuels - Electric and Hybrid Vehicles, Fuel Cell. Turbo chargers -Engine emission control by three way catalytic converter system. Note: Practical Training in dismantling and assembling of Engine parts and Transmission Systems should be given to the students. **CO5**

TOTAL PERIODS: 45

TEXT BOOKS:

4. Newton, Steeds and Garrett, "Motor Vehicles", Butterworth Publishers, 2001.

COURSE OUTCOMES

Upon completion of the course, the students will be able

CO1 To identify the different components in automobile Engineering.

CO2 To understand the different types of vehicle frames and steering mechanism.

CO3 To have clear understanding on different auxiliary and transmission systems usual.

CO4 To understand the vehicle suspension and different types of brakes systems.

CO5 To understand the alternative energy used for vehicle.

OEI103	**BASICS OF BIOMEDICAL INSTRUMENTATION**	**L**	**T**	**P**	**C**
		3	**0**	**0**	**3**

OBJECTIVES:

- To Introduce Fundamentals of Biomedical Engineering
- To study the communication mechanics in a biomedical system with few examples
- To study measurement of certain important electrical and non-electrical parameters
- To understand the basic principles in imaging techniques
- To have a basic knowledge in life assisting and therapeutic devices

UNIT I: HUMAN BODY SUBSYSTEM AND TRANSDUCERS **9**

Brief description of muscular, cardiovascular and respiratory systems; their electrical, mechanical and chemical activities. Principles and classification of transducers for Bio-medical applications. Electrode theory, different types of electrodes; Selection criteria for transducers and electrodes **CO1**

UNIT II: NON ELECTRICAL PARAMETERS MEASUREMENT **9**

Measurement of blood pressure - Cardiac output - Heart rate - Heart sound - Pulmonary function measurements – spirometer – Blood Gas analysers, pH of blood – Measurement of blood pCO2, pO2. **CO2**

UNIT III: ELECTRICAL PARAMETERS MEASUREMENT AND ELECTRICAL SAFETY **9**

ECG – EEG – EMG – ERG – Lead systems and recording methods – Typical waveforms - Electrical safety in medical environment, shock hazards – leakage current - Instruments for checking safety parameters of biomedical equipments. **CO3**

UNIT IV: IMAGING MODALITIES AND BIO-TELEMETRY **9**

Diagnostic X-rays - Computer tomography – MRI – Ultrasonography – Endoscopy – Thermography – Different types of biotelemetry systems. **CO4**

UNIT V: LIFE ASSISTING AND THERAPEUTIC DEVICES **9**

Pacemakers – Defibrillators – Ventilators – Nerve and muscle stimulators - Heart Lung machine – Dialysers - Diathermy – Lithotripsy. **CO5**

5.M.Arumugam, 'Bio-Medical Instrumentation', Anuradha Agencies, 2003

COURSE OUTCOMES

Upon completion of the course, the students will gain knowledge on

CO1	Understand the physiological systems and the various components of a biomedical system.
CO2	Understand the techniques and instruments used to measure blood pressure, cardiac output, blood pH and various pulmonary function measurements.
CO3	Understand the working of different electrodes used to sense bio signals; know about the electrical safety in biomedical measurement, and about electrical parameter acquisition.
CO4	Understand the techniques for imaging such as CT scan, MRI, Ultrasonography, fluoroscopic, and radiographic techniques.
CO5	Understand the working of various life assisting, therapeutic and robotic devices.

OCS103 **INTRODUCTION TO CLOUD COMPUTING**

L	T	P	C
3	0	0	3

OBJECTIVES

- To have the fundamental ideas behind Cloud Computing, the evolution of the paradigm, its applicability, benefits, as well as current and future challenges
- To have knowledge on the various virtualization techniques that serve in computation and storage services on the cloud
- To understand the technologies, architecture and applications of cloud computing
- To understand the key security and compliance challenges of cloud computing

UNIT I INTRODUCTION 9

Introduction to Cloud Computing – Roots of Cloud Computing- Parallel and Distributed Computing, Mainframe and Grid Computing, Desired Features and benefits of Cloud Computing – Challenges and Risks of Cloud Computing **CO1**

UNIT II VIRTUALIZATION 9

Introduction to Virtualization Technology – Load Balancing and Virtualization – Understanding Hypervisor and its types, Types of Virtualizations – Hardware, OS, Memory, Application Virtualization, Levels of Virtualization **CO2**

UNIT III CLOUD ARCHITECTURE, SERVICES AND STORAGE 9

NIST Cloud Computing Reference Architecture, Layered Cloud Architecture, Architectural Design Challenges – Deployment models of cloud, Services of cloud – Cloud Storage. **CO3**

UNIT IV RESOURCE MANAGEMENT AND SECURITY IN CLOUD 9

Inter Cloud Resource Management – Resource Provisioning Methods – Security Overview – Cloud Security Architecture-Cloud Security Challenges – Data Security –Application Security – Virtual Machine Security. **CO4**

UNIT V CASE STUDIES 9

CO5

Google App Engine (GAE) – GAE Architecture – Functional Modules of GAE – Amazon Web Services (AWS) – GAE Applications – Cloud Software Environments – Bio-data Platform & Bio Cloud

TOTAL : 45 PERIODS

TEXT BOOKS

1. Buyya R., Broberg J., Goscinski A., “Cloud Computing: Principles and Paradigm”, First Edition, John Wiley & Sons, 2011.
2. Kai Hwang, Geoffrey C. Fox, Jack G. Dongarra, "Distributed and Cloud Computing, From Parallel Processing to the Internet of Things", Morgan Kaufmann Publishers, 2012.
3. Rittinghouse, John W., and James F. Ransome, “Cloud Computing: Implementation, Management, And Security”, CRC Press, 2017.

REFERENCE BOOKS

1. Rajkumar Buyya, Christian Vecchiola, S. ThamaraiSelvi, “Mastering Cloud Computing”, Tata Mcgraw Hill, 2013.
2. Toby Velte, Anthony Velte, Robert Elsenpeter, "Cloud Computing - A Practical Approach”, Tata Mcgraw Hill, 2009.
3. George Reese, "Cloud Application Architectures: Building Applications and Infrastructure in the Cloud: Transactional Systems for EC2 and Beyond (Theory in Practice)”, O'Reilly, 2009.

COURSE OUTCOMES

Upon completion of the course, the students will

CO1	Articulate the main concepts, key technologies, strengths, and limitations of cloud computing and the possible applications for state-of-the-art cloud computing
CO2	Understanding of fundamentals and technological aspects of virtualization along with various terminologies used in Cloud Computing
CO3	Identify the architecture and infrastructure of cloud computing, including SaaS, PaaS, IaaS, public cloud, private cloud, hybrid cloud, etc.
CO4	Enlighten the core issues of cloud computing such as security, privacy, and interoperability.
CO5	Be familiarization with areas of cloud technologies and working experience in several of them

OCH103	ENVIRONMENT AND AGRICULTURE	L	T	P	C
		3	0	0	3

OBJECTIVES:

To emphasize on the importance of environment and agriculture on changing global scenario and the emerging issues connected to it.

UNIT I: ENVIRONMENTAL CONCERNS **8**

Environmental basis for agriculture and food – Land use and landscape changes – Water quality issues – Changing social structure and economic focus – Globalization and its impacts – Agro ecosystems. **CO1**

UNIT II: ENVIRONMENTAL IMPACTS **9**

Irrigation development and watersheds – mechanized agriculture and soil cover impacts – Erosion and problems of deposition in irrigation systems – Agricultural drainage and downstream impacts – Agriculture versus urban impacts. **CO2**

UNIT III: CLIMATE CHANGE **8**

Global warming and changing environment – Ecosystem changes – Changing blue-green-grey water cycles – Water scarcity and water shortages – Desertification. **CO3**

UNIT IV: ECOLOGICAL DIVERSITY AND AGRICULTURE **10**

Ecological diversity, wild life and agriculture – GM crops and their impacts on the environment – Insets and agriculture – Pollination crisis – Ecological farming principles – Forest fragmentation and agriculture – Agricultural biotechnology concerns. **CO4**

UNIT V: EMERGING ISSUES **10**

Global environmental governance – alternate culture systems – Mega farms and vertical farms – Virtual water trade and its impacts on local environment – Agricultural environment policies and its impacts – Sustainable agriculture. **CO5**

TOTAL PERIODS: 45

TEXT BOOKS:

1. M.Lakshmi Narasaiah, Environment and Agriculture, Discovery Pub. House, 2006.
2. Arvind Kumar, Environment and Agriculture, ABH Publications, New Delhi, 2005.

2. Robert D. Havener, Steven A. Breth, Environment and agriculture: rethinking development issues for the 21st century : proceedings of a symposium, Winrock International Institute for Agricultural Development, 1994
3. Environment and agriculture: environmental problems affecting agriculture in the Asia and Pacific region; World Food Day Symposium, Bangkok, Thailand. 1989

COURSE OUTCOMES

Upon completion of the course, the students will be able to

CO1 To gain knowledge on the issues of environmental concerns

CO2 To understand the environmental impacts on agriculture and watershed.

CO3 To gain knowledge on the basic concepts of Climate Change, Water scarcity and water knowledge

CO4 To understand the ecosystem, ecological diversity

CO5 To understand the global and local emerging issues on agriculture and biotechnology

OEI101 **SENSORS AND TRANSDUCERS**

L	T	P	C
3	0	0	3

OBJECTIVES:

- To understand the concepts of measurement technology.
- To learn the various sensors used to measure various physical parameters.
- To learn the fundamentals of signal conditioning, data acquisition and communication systems used in mechatronics system development.

UNIT I: INTRODUCTION **9**

Basics of Measurement – Classification of errors – Error analysis – Static and dynamic characteristics of transducers – Performance measures of sensors – Classification of sensors – Sensor calibration techniques – Sensor Output Signal Types. **CO1**

UNIT II: MOTION, PROXIMITY AND RANGING SENSORS **9**

Motion Sensors – Potentiometers, Resolver, Encoders – Optical, Magnetic, Inductive, Capacitive, LVDT – RVDT – Synchro, Accelerometer.,– GPS, Bluetooth, Range Sensors – RF beacons, Ultrasonic Ranging, Reflective beacons, Laser Range Sensor (LIDAR). **CO2**

UNIT III: FORCE, MAGNETIC AND HEADING SENSORS **9**

Strain Gage, Load Cell, Magnetic Sensors –types, principle, requirement and advantages: Variable reluctance transducers, Magneto resistive – Hall Effect – Current sensor Heading Sensors – Compass, Gyroscope, Inclinometers **CO3**

UNIT IV: OPTICAL, PRESSURE AND TEMPERATURE SENSORS **9**

Photo conductive cell, photo voltaic, Photo resistive, LDR – Fiber optic sensors – Pressure – Diaphragm, Bellows, Piezoelectric – Tactile sensors, Temperature – IC, Thermistor, RTD, Thermocouple. Acoustic Sensors – flow and level measurement, Radiation Sensors - Smart Sensors-Film sensor, MEMS & Nano Sensors, LASER sensors. **CO4**

UNIT V: SIGNAL CONDITIONING and DAQ SYSTEMS **9**

Amplification – Filtering – A/D converter - Sample and Hold circuits – Data Acquisition: Single channel and multi channel data acquisition – Digital recording systems - Data logging - applications - Automobile, Aerospace, Home appliances, Manufacturing, Environmental monitoring. **CO5**

TOTAL PERIODS: 45

TEXT BOOKS:

1. Ernest O Doebelin, “Measurement Systems – Applications and Design”, Tata McGraw-Hill, 2009.
2. Sawney A K and Puneet Sawney, “A Course in Mechanical Measurements and Instrumentation and Control”, 12th edition, Dhanpat Rai & Co, New Delhi, 2013.

3. Richard Zurawski, “Industrial Communication Technology Handbook” 2nd edition, CRC Press, 2015.

4. Ian Sinclair, Sensors and Transducers, 3rd Edition, Elsevier, 2012

COURSE OUTCOMES

Upon completion of the course, the students will gain knowledge on

CO1 Understand various calibration techniques, error analysis and signal types for sensors.

CO2 Gain knowledge about motion, proximity and ranging sensors.

CO3 Ability to understand force, magnetic and heading sensors.

CO4 Study the basic principles of optical, pressure and temperature sensors.

CO5 Implement the DAQ systems along with signal conditioning circuits.

OPEN ELECTIVE - II

OME102	DESIGN OF EXPERIMENTS	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To demonstrate knowledge and understanding of Classical Design of Experiments (DOE).
- To demonstrate knowledge and understanding of Taguchi's approach.
- To develop skills to design and conduct experiments using DOE and Taguchi's approach.
- To develop competency for analysing the data to determine the optimal process parameters that optimize the process.

UNIT I: FUNDAMENTALS OF EXPERIMENTAL DESIGNS **9**

Hypothesis testing – single mean, two means, dependant/ correlated samples – confidence intervals, Experimentation – need, Conventional test strategies, Analysis of variance, F-test, terminology, basic principles of design, steps in experimentation – choice of sample size – Normal and half normal probability plot – simple linear and multiple linear regression, testing using Analysis of variance. **CO1**

UNIT II: SINGLE FACTOR EXPERIMENTS **9**

Completely Randomized Design- effect of coding the observations- model adequacy checking - estimation of model parameters, residuals analysis- treatment comparison methods- Duncan's multiple range test, Newman- Keuel's test, Fisher's LSD test, Tukey's test- testing using contrasts- Randomized Block Design – Latin Square Design- Graeco Latin Square Design – Applications. **CO2**

UNIT III: FACTORIAL DESIGNS **9**

Main and Interaction effects - Two and three factor full factorial designs- Fixed effects and random effects model - Rule for sum of squares and Expected Mean Squares- 2K Design with two and three factors- Yate's Algorithm- fitting regression model- Randomized Block Factorial Design - Practical applications. **CO3**

UNIT IV: SPECIAL EXPERIMENTAL DESIGN **9**

Blocking and Confounding in 2K Designs- blocking in replicated design- 2K Factorial Design in two blocks- Complete and partial confounding- Confounding 2K Design in four blocks- Two level Fractional Factorial Designs- one-half fraction of 2K Design, design resolution, Construction of one-half fraction with highest design resolution, one-quarter fraction of 2K Design- introduction to response surface methods, central composite design. **CO4**

UNIT V: TAGUCHI METHODS **9**

Design of experiments using Orthogonal Arrays, Data analysis from Orthogonal experiments- Response Graph Method, ANOVA- attribute data analysis- Robust design- noise factors, Signal to noise ratios, Inner/outer OA design- case studies. **CO5**

TOTAL PERIODS: 45

TEXT BOOKS:

1. Douglas C. Montgomery, “Design and Analysis of Experiments”, John Wiley & sons, 2012.

3. Phillip J. Ross, “Taguchi Techniques for Quality Engineering”, Tata McGraw-Hill, India, 2005.

COURSE OUTCOMES

Upon completion of the course, the students will be able to

CO1 Understand the basic principle of DOEs and ANOVA.
CO2 Understand the various single factor experiments
CO3 Learn full and fraction factorial experiment design.
CO4 Design various resolution using 2^k.
CO5 Understand the Taguchi Orthogonal Arrays.

OCE104	GREEN BUILDING DESIGN	L	T	P	C
		3	0	0	3

OBJECTIVES

- The course aims to develop skills of the students in the area of Civil Engineering with emphasis in environmental implications of buildings and comforts in building
- This will enable the students to perform calculations pertaining to processes and operations.

UNIT I ENVIRONMENTAL IMPLICATIONS OF BUILDINGS **9**

Energy use, carbon emissions, water use, waste disposal; Building materials: sources, methods of production and environmental Implications. Embodied Energy in Building Materials: Transportation Energy for Building Materials; Maintenance Energy for Buildings. **CO1**

UNIT II IMPLICATIONS OF BUILDING TECHNOLOGIES EMBODIED ENERGY OF BUILDINGS **9**

Framed Construction, Masonry Construction. Resources for Building Materials, Alternative concepts. Recycling of Industrial and Buildings Wastes. Biomass Resources for buildings. **CO2**

UNIT III COMFORTS IN BUILDING **9**

Thermal Comfort in Buildings- Issues; Heat Transfer Characteristic of Building Materials and Building Techniques. Incidence of Solar Heat on Buildings-Implications of Geographical Locations **CO3**

UNIT IV UTILITY OF SOLAR ENERGY IN BUILDINGS **9**

Utility of Solar energy in buildings concepts of Solar Passive Cooling and Heating of Buildings. Low Energy Cooling. Case studies of Solar Passive Cooled and Heated Buildings. **CO4**

UNIT V GREEN COMPOSITES FOR BUILDINGS **9**

Concepts of Green Composites. Water Utilization in Buildings, Low Energy Approaches to Water Management. Management of Solid Wastes. Management of Sullage Water and Sewage. Urban Environment and Green Buildings. Green Cover and Built Environment. **CO5**

TOTAL : 45 PERIODS

COURSE OUTCOMES

Upon completion of the course, the students will be able to

CO1 Understand core building science fundamentals

CO2 Perform some building sustainability concepts

CO3 Understand energy efficiency in relation to cost performance, ROI, etc

CO4 Understand and perform some building performance testing and be exposed to different agencies involved in the testing.

CO5 Understand and perform some weatherization fundamentals.

OCH101	HOSPITAL MANAGEMENT	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To understand the fundamentals of hospital administration and management.
- To know the market related research process
- To explore various information management systems and relative supportive services.
- To learn the quality and safety aspects in hospital.

UNIT I: OVERVIEW OF HOSPITAL ADMINISTRATION 9

Distinction between Hospital and Industry, Challenges in Hospital Administration – Hospital Planning- Equipment Planning – Functional Planning **CO1**

UNIT II: HUMAN RESOURCE MANAGEMENT IN HOSPITAL 9

Principles of HRM – Functions of HRM – Profile of HRD Manager –Human Resource Inventory – Manpower Planning. **CO2**

UNIT III: RECRUITMENT AND TRAINING 9

Different Departments of Hospital, Recruitment, Selection, Training Guidelines – Methods of Training – Evaluation of Training – Leadership grooming and Training, Promotion – Transfer. **CO3**

UNIT IV: SUPPORTIVE SERVICES 9

Medical Records Department – Central Sterilization and Supply Department – Pharmacy – Food Services - Laundry Services **CO4**

UNIT V: COMMUNICATION AND SAFETY ASPECTS IN HOSPITAL 9

Purposes – Planning of Communication, Modes of Communication – Telephone, ISDN, Public Address and Piped Music – CCTV.Security – Loss Prevention – Fire Safety – Alarm System – Safety Rules. **CO5**

TOTAL PERIODS: 45

TEXT BOOKS:

1. R.C.Goyal, “Hospital Administration and Human Resource Management”, PHI – Fourth Edition, 2006.
2. G.D.Kunders, “Hospitals – Facilities Planning and Management – TMH, New Delhi – Fifth Reprint 2007.

6. Arnold D. Kalcizony & Stephen M. Shortell, “Health Care Management”, 6th Edition Cengage Learning, 2011.

COURSE OUTCOMES

Upon completion of the course, the students will be able to

CO1 To explain the principles of hospital administration.

CO2 To identify the importance of human resource management.

CO3 To list various marketing research techniques.

CO4 To identify information management systems and its uses.

CO5 To understand safety procedures followed in hospitals

OIE102	ROBOTICS	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To understand the functions of the basic components of a Robot.
- To study the use of various types of End of Effectors and Sensors
- To impart knowledge in Robot Kinematics and Programming
- To learn Robot safety issues and economics.

UNIT I: FUNDAMENTALS OF ROBOT **6**

Robot - Definition - Robot Anatomy - Co ordinate Systems, Work Envelope Types and Classification- Specifications-Pitch, Yaw, Roll, Joint Notations, Speed of Motion, Pay Load- Robot Parts and their Functions-Need for Robots-Different Applications. **CO1**

UNIT II: ROBOT DRIVE SYSTEMS AND END EFFECTORS **9**

Pneumatic Drives-Hydraulic Drives-Mechanical Drives-Electrical Drives-D.C. Servo Motors, Stepper Motors, A.C. Servo Motors-Salient Features, Applications and Comparison of all these Drives, End Effectors-Grippers-Mechanical Grippers, Pneumatic and Hydraulic- Grippers, Magnetic Grippers, Vacuum Grippers; Two Fingered and Three Fingered Grippers; Internal Grippers and External Grippers; Selection and Design Considerations. **CO2**

UNIT III: SENSORS AND MACHINE VISION 12

Requirements of a sensor, Principles and Applications of the following types of sensors- Position sensors - Piezo Electric Sensor, LVDT, Resolvers, Optical Encoders, pneumatic Position Sensors, Range Sensors Triangulations Principles, Structured, Lighting Approach, Time of Flight, Range Finders, Laser Range Meters, Touch Sensors ,binary Sensors., Analog Sensors, Wrist Sensors, Compliance Sensors, Slip Sensors, Camera, Frame Grabber, Sensing and Digitizing Image Data- Signal Conversion, Image Storage, Lighting Techniques, Image Processing and Analysis-Data Reduction, Segmentation, Feature Extraction, Object Recognition, Other Algorithms, Applications- Inspection, Identification, Visual Serving and Navigation. **CO3**

UNIT IV: ROBOT KINEMATICS AND ROBOT PROGRAMMING 13

Forward Kinematics, Inverse Kinematics and Difference; Forward Kinematics and Reverse Kinematics of manipulators with Two, Three Degrees of Freedom (in 2 Dimension), Four Degrees of freedom (in 3 Dimension) Jacobians, Velocity and Forces-Manipulator Dynamics, Trajectory Generator, Manipulator Mechanism Design-Derivations and problems. Lead through Programming, Robot programming Languages-VAL Programming-Motion Commands, Sensor Commands, End Effector commands and simple Programs. **CO4**

UNIT V: IMPLEMENTATION AND ROBOT ECONOMICS 5

RGV (Rail Guided Vehicle), AGV (Automatic Guided Vehicle); Implementation of Robots in Industries-Various Steps; Safety Considerations for Robot Operations, Hazards of robot, Economic Analysis of Robots- Payback, EUAC, ROI Method. **CO5**

TOTAL PERIODS: 45

TEXT BOOKS:

1. Klafter R.D., Chmielewski T.A and Negin M., "Robotic Engineering - An Integrated Approach", Prentice Hall, 2003.
2. Groover M.P., "Industrial Robotics -Technology Programming and Applications", McGraw Hill, 2001.

REFERENCES:

1. Craig J.J., "Introduction to Robotics Mechanics and Control", Pearson Education, 2008.
2. Deb S.R., "Robotics Technology and Flexible Automation" Tata McGraw Hill Book Co., 1994.
3. Koren Y., "Robotics for Engineers", Mc Graw Hill Book Co., 1992.
4. Fu.K.S.,Gonzalz R.C. and Lee C.S.G., "Robotics Control, Sensing, Vision and Intelligence", McGraw Hill Book Co., 1987.
5. Janakiraman P.A., "Robotics and Image Processing", Tata McGraw Hill, 1995.
6. Rajput R.K., "Robotics and Industrial Automation", S.Chand and Company, 2008.
7. Surender Kumar, "Industrial Robots and Computer Integrated Manufacturing", Oxford and IBH Publishing Co. Pvt. Ltd., 1991.

COURSE OUTCOMES

Upon completion of the course, the students will gain knowledge on

CO1	To learn concepts of Robotic system, its components and instrumentation and control related to robotics.
CO2	To improve skills on hardware drives and interfacing aspects.
CO3	To enhance basics of different sensors and machine vision interaction.
CO4	To develop student's skills in performing kinematics analysis of robot systems.
CO5	To provide the student with some knowledge and skills associated with robot economics control.

OCS101	**INTRODUCTION TO C PROGRAMMING**	**L**	**T**	**P**	**C**
		3	**0**	**0**	**3**

OBJECTIVES

- To understand the basic concepts in C Programming Language.
- To understand Input and Output Statements.
- To enhance analyzing and problem solving skills and use the same for writing programs in C.
- To familiarize the basic syntax in arrays and pointers
- To provide exposure to problem-solving through programming

UNIT I INTRODUCTORY CONCEPTS & C FUNDAMENTALS 9

Introduction to Computers - Computer Characteristics - Modes of Operation - Types of Programming Languages - Introduction to C - Some Simple C Programs - Desirable Program Characteristics - The C Character Set - Identifiers and Keywords - Data Types - Constants - Variables and Arrays - Declarations - Expressions - Statements - Symbolic Constants. **CO1**

UNIT II OPERATORS, EXPRESSIONS, DATA INPUT & OUTPUT AND CONTROL STATEMENTS **9**

Arithmetic Operators - Unary Operators - Relational and Logical Operators - Assignment Operators - The Conditional Operator - Library Functions - getchar, putchar, scanf, printf, gets and puts Functions - Preliminaries - Branching: The if else Statement - Looping: The while Statement - do while Statement - for Statement - Nested Control Structures - The switch Statement - The break Statement - The continue Statement - The Comma Operator - The goto Statement **CO2**

UNIT III FUNCTIONS & PROGRAM STRUCTURE **9** **CO3**

Defining a Function - Accessing a Function - Function Prototypes - Passing Arguments to a Function – Recursion - Storage Classes - Automatic Variables - External (Global) Variables - Static Variables - Multifile Programs - More About Library Functions

UNIT IV ARRAYS & POINTERS **9** **CO4**

Defining an Array - Processing an Array - Passing Arrays to Functions - Multidimensional Arrays - Arrays and Strings - Fundamentals - Pointer Declarations - Passing Pointers to Functions - Pointers and One-Dimensional Arrays - Dynamic Memory Allocation - Operations on Pointers - Pointers and Multidimensional Arrays - Arrays of Pointers - Passing Functions to Other Functions

UNIT V STRUCTURES, UNIONS & DATA FILES **9** **CO5**

Defining a Structure - Processing a Structure - User-Defined Data Types (typedef) - Structures and Pointers - Passing Structures to Functions - Self-Referential Structures – Unions - Opening and Closing a Data File - Creating a Data File - Processing a Data File - Unformatted Data Files

TOTAL : 45 PERIODS

TEXT BOOKS

1. Byron Gottfried - Schaum's Outline of Programming with C, 2nd Edition, McGraw-Hill, 1996.

REFERENCE BOOKS

1. The C Programming Language by Brian Kernighan and Dennis Ritchie 2nd Edition.
2. Let Us C Yashavant kanetkar, BPB

COURSE OUTCOMES

Upon completion of the course, the students will be able to

CO1	Identify situations where computational methods and computers would be useful.
CO2	Demonstrate the use of operators, input and output statements and control statements
CO3	Identify solution to a problem and apply control structures and user defined functions for solving the problem
CO4	Demonstrate the use of numeric arrays and pointers
CO5	Demonstrate the ability to design creative solutions to real life problems faced by the industry.

OMB102 LOGISTICS AND SUPPLY CHAIN MANAGEMENT

L	T	P	C
3	0	0	3

OBJECTIVES:

- To provide an insight on the fundamentals of supply chain networks, tools and techniques.

UNIT I: INTRODUCTION **9**

Role of Logistics and Supply chain Management: Scope and Importance- Evolution of Supply Chain - Decision Phases in Supply Chain - Supply chain and competitive Strategies – Drivers of Supply Chain Performance and Obstacles. **CO1**

UNIT II: SOURCING AND NETWORK DESIGN **9**

Role of sourcing supply chain - Outsourcing – Make Vs buy -Sourcing strategy - Supplier Selection and Contract Negotiation. Building strategic partnerships and trust within a supply chain -Role of Distribution in Supply Chain – Factors influencing Distribution network design – Design options for Distribution Network Distribution Network in Practice-Role of network Design in Supply Chain – Framework for network Decisions. **CO2**

UNIT III: LOGISTICS IN SUPPLY CHAIN **9**

Introduction to logistics – Role of logistics in Competitive strategy– Value added logistics services – Roleof transportation in supply chain – factors affecting transportations decision – Design option for transportation network – Tailored transportation – Routing and scheduling in transportation **CO3**

UNIT IV: TRANSPORTATON AND PACKAGING **9**

Transportation System – Evolution, Infrastructure and Networks. Freight Management–Containerization; Modal Characteristics - Inter-modal Operators and Transport Economies; International Logistics-objectives, importance in global economy, Characteristics of global supply chains; Packaging - Design considerations – Logistics outsourcing **CO4**

UNIT V: IT IN SUPPLY CHAIN 9

The role IT in supply chain- Supply Chain Integration – Agile Supply chain – Green Supply chain – Reverse Supply chain – E-logistics –future of IT in supply chain – E-Business in supply chain – Supply chain analytics - Blockchain **CO5**

TOTAL PERIODS: 45

TEXT BOOKS:

1. Sunil Chopra, Peter Meindl and Kalra, "Supply Chain Management, Strategy, Planning, and Operation", Pearson Education, 2010.

REFERENCES:

1. Jeremy F.Shapiro, "Modeling the Supply Chain", Thomson Duxbury, 2002.
2. Srinivasan G.S, "Quantitative models in Operations and Supply Chain Management, PHI, 2010
3. David J.Bloomberg , Stephen Lemay and Joe B.Hanna, "Logistics", PHI 2002.
4. James B.Ayers, "Handbook of Supply Chain Management", St.Lucle press, 2000.

COURSE OUTCOMES

Upon completion of the course, the students will be able

CO1	To understand the basics of Supply chain, the strategic role of SCM and the drivers of supply chain performance.
CO2	To understand the different distribution networks in Supply chain, the factors influencing design of these networks and to develop a framework of network for distribution.
CO3	To understand about the logistic part of supply chain management and the methods to identify the optimized route for transportation.
CO4	To understand about sourcing, selection of suppliers and supply chain coordination
CO5	To understand the role of IT in Supply chain management.

AUDIT COURSES

AD1001	CONSTITUTION OF INDIA	L	T	P	C
		2	0	0	0

OBJECTIVES:

- Teach history and philosophy of Indian Constitution.
- Describe the premises informing the twin themes of liberty and freedom from a civil rights perspective.
- Summarize powers and functions of Indian government.
- Explain emergency rule.
- Explain structure and functions of local administration.

UNIT I: INTRODUCTION 9

History of Making of the Indian Constitution-Drafting Committee- (Composition & Working) - Philosophy of the Indian Constitution-Preamble-Salient Features **CO1**

UNIT II: CONTOURS OF CONSTITUTIONAL RIGHTS & DUTIES 9

Fundamental Rights-Right to Equality-Right to Freedom-Right against Exploitation Right to Freedom of Religion-Cultural and Educational Rights-Right to Constitutional Remedies Directive Principles of State Policy-Fundamental Duties **CO2**

UNIT III: ORGANS OF GOVERNANCE 9

Parliament-Composition-Qualifications and Disqualifications-Powers and Functions-Executive President-Governor-Council of Ministers-Judiciary, Appointment and Transfer of Judges, Qualifications Powers and Functions **CO3**

UNIT IV: EMERGENCY PROVISIONS 9

Emergency Provisions - National Emergency, President Rule, Financial Emergency **CO4**

UNIT V: LOCAL ADMINISTRATION 9

District's Administration head- Role and Importance-Municipalities- Introduction- Mayor and role of Elected Representative-CEO of Municipal Corporation-Pachayati raj- Introduction- PRI- Zila Pachayat-Elected officials and their roles- CEO ZilaPachayat- Position and role-Block levelOrganizational Hierarchy (Different departments)-Village level- Role of Elected and Appointed officials-Importance of grass root democracy **CO5**

TOTAL PERIODS: 45

TEXT BOOKS:

1. Basu D D, Introduction to the Constitution of India, Lexis Nexis, 2015.
2. Busi S N, Ambedkar B R framing of Indian Constitution, 1st Edition, 2015.
3. Jain M P, Indian Constitution Law, 7th Edn., Lexis Nexis, 2014.
4. The Constitution of India (Bare Act), Government Publication,1950

COURSE OUTCOMES

Upon completion of the course, the students will be

CO1 Able to understand history and philosophy of Indian Constitution.

CO2 Able to understand the premises informing the twin themes of liberty and freedom from a civil rights perspective.

CO3 Able to understand powers and functions of Indian government.

CO4 Able to understand emergency rule.

CO5 Able to understand structure and functions of local administration.

CO5	-	-	-	-	-	-	-	-	1	-	-	1	-	-	-

AD1002	VALUE EDUCATION	L	T	P	C
		2	0	0	0

OBJECTIVES:

- Develop knowledge of self-development
- Explain the importance of Human values
- Develop the overall personality through value education
- Overcome the self destructive habits with value education
- Interpret social empowerment with value education

UNIT I: INTRODUCTION TO VALUE EDUCATION 9

Values and self-development –Social values and individual attitudes, Work ethics, Indian vision of humanism, Moral and non- moral valuation, Standards and principles, Value judgments **CO1**

UNIT II: IMPORTANCE OF VALUES 9

Importance of cultivation of values, Sense of duty, Devotion, Self-reliance, Confidence, Concentration, Truthfulness, Cleanliness. Honesty, Humanity, Power of faith, National Unity,Patriotism, Love for nature, Discipline **CO2**

UNIT III: INFLUENCE OF VALUE EDUCATION **9**

Personality and Behaviour development - Soul and Scientific attitude. Positive Thinking, Integrityand discipline, Punctuality, Love and Kindness, Avoid fault Thinking, Free from anger, Dignity of labour, Universal brotherhood and religious tolerance, True friendship Happiness Vs suffering,love for truth. **CO3**

UNIT IV: REINCARNATION THROUGH VALUE EDUCATION **9**

Aware of self-destructive habits, Association and Cooperation, Doing best for saving natureCharacter and Competence –Holy books vs Blind faith, Self-management and Good health,Science of reincarnation **CO4**

UNIT V: VALUE EDUCATION IN SOCIAL EMPOWERMENT **9**

Equality, Non violence, Humility, Role of Women, All religions and same message,Mind your Mind, Self-control, Honesty, Studying effectively **CO5**

TOTAL PERIODS: 45

REFERENCE:

Chakroborty , S.K. "Values and Ethics for organizations Theory and practice", Oxford University Press ,New Delhi

COURSE OUTCOMES

Upon completion of the course, the students will be

CO1 Gain knowledge of self-development

CO2 Learn the importance of Human values

CO3 Develop the overall personality through value education

CO4 Overcome the self destructive habits with value education

CO5 Interpret social empowerment with value education

MAPPING OF COs WITH POs AND PSOs

AD1003 **PEDAGOGY STUDIES**

L	T	P	C
2	0	0	0

OBJECTIVES:

- Understand the methodology of pedagogy.
- Compare pedagogical practices used by teachers in formal and informal classrooms in developing countries.
- Infer how can teacher education (curriculum and practicum) and the school curriculum and guidance materials best support effective pedagogy.
- Illustrate the factors necessary for professional development.
- Identify the Research gaps in pedagogy.

UNIT I: INTRODUCTION AND METHODOLOGY **9**

Aims and rationale, Policy background, Conceptual framework and terminology - Theories oflearning, Curriculum, Teacher education - Conceptual framework, Research questions - Overviewof methodology and Searching. **CO1**

UNIT II: THEMATIC OVERVIEW **9**

Pedagogical practices are being used by teachers in formal and informal classrooms in developingcountries - Curriculum, Teacher education. **CO2**

UNIT III: EVIDENCE ON THE EFFECTIVENESS OF PEDAGOGICAL PRACTICES **9**

Methodology for the in depth stage: quality assessment of included studies - How can teacher education (curriculum and practicum) and the school curriculum and guidance materials best support effective pedagogy? - Theory of change - Strength and nature of the body of evidence for effective pedagogical practices - Pedagogic theory and pedagogical approaches - Teachers' attitudes and beliefs and Pedagogic strategies. **CO3**

UNIT IV: PROFESSIONAL DEVELOPMENT **9**

Professional development: alignment with classroom practices and follow up support - Peersupport - Support from the head teacher and the community - Curriculum and assessment – Barriers to learning: limited resources and large class sizes **CO4**

UNIT V: RESEARCH GAPS AND FUTURE DIRECTIONS **9**

Research design – Contexts – Pedagogy - Teacher education - Curriculum and assessment - Dissemination and research impact. **CO5**

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, the students will be able to

CO1	Understand the methodology of pedagogy
CO2	Understand Pedagogical practices used by teachers in formal and informal classrooms in developing countries.
CO3	Find how can teacher education (curriculum and practicum) and the school curriculum and guidance materials best support effective pedagogy.
CO4	Know the factors necessary for professional development.
CO5	Identify the Research gaps in pedagogy.

AD1004	**STRESS MANAGEMENT BY YOGA**	**L**	**T**	**P**	**C**
		2	**0**	**0**	**0**

OBJECTIVES:

- Develop healthy mind in a healthy body thus improving social health also improve efficiency
- Invent Do’s and Don’t’s in life through Yam
- Categorize Do’s and Don’t’s in life through Niyam
- Develop a healthy mind and body through Yog Asans
- Invent breathing techniques through Pranayam

UNIT I: INTRODUCTION TO YOGA **9**

Definitions of Eight parts of yog.(Ashtanga) **CO1**

UNIT II: YAM **9**

Do`s and Don’t’s in life.Shaucha, santosh, tapa, swadhyay, ishwarpranidhan **CO2**

UNIT III: NIYAM **9**

Do`s and Don’t’s in life. Ahinsa, satya, astheya, bramhacharya and aparigraha **CO3**

UNIT IV: ASAN 9

Various yog poses and their benefits for mind & body **CO4**

UNIT V: PRANAYAM 9

Regularization of breathing techniques and its effects-Types of pranayam **CO5**

TOTAL PERIODS: 45

REFERENCES:

1. “Rajayoga or conquering the Internal Nature” by Swami Vivekananda, Advaita Ashrama (Publication Department), Kolkata
2. ‘Yogic Asanas for Group Tarining-Part-I” : Janardan Swami Yogabhyasi Mandal, Nagpur

COURSE OUTCOMES

Upon completion of the course, the students will be able to

CO1 Develop healthy mind in a healthy body thus improving social health also improve efficiency

CO2 Learn Do’s and Don’t’s in life through Yam

CO3 Learn Do’s and Don’t’s in life through Niyam

CO4 Develop a healthy mind and body through Yog Asans

CO5 Learn breathing techniques through Pranayam

AD1005	PERSONALITY DEVELOPMENT THROUGH LIFE ENLIGHTENMENT SKILLS	L	T	P	C
		2	0	0	0

OBJECTIVES:

- Develop basic personality skills holistically
- Develop deep personality skills holistically to achieve happy goals
- Rewrite the responsibilities
- Reframe a person with stable mind

UNIT I: NEETISATAKAM-HOLISTIC DEVELOPMENT OF PERSONALITY - I **9**

Verses- 19,20,21,22 (wisdom) - Verses- 29,31,32 (pride & heroism) – Verses- 26,28,63,65 (virtue) **CO1**

UNIT II: NEETISATAKAM-HOLISTIC DEVELOPMENT OF PERSONALITY - II **9**

Verses- 52,53,59 (dont's) - Verses- 71,73,75,78 (do's) **CO2**

UNIT III: ORGANS OF GOVERNANCE **9**

Shrimad Bhagwad Geeta: Chapter 2-Verses 41, 47,48 - Chapter 3-Verses 13, 21, 27, 35 Chapter6-Verses 5,13,17,23, 35 - Chapter 18-Verses 45, 46, 48 **CO3**

UNIT IV: EMERGENCY PROVISIONS **9**

Statements of basic knowledge - Shrimad Bhagwad Geeta: Chapter2-Verses 56, 62, 68 Chapter12 -Verses 13, 14, 15, 16,17, 18 **CO4**

UNIT V: LOCAL ADMINISTRATION **9**

Chapter2-Verses 17, Chapter 3-Verses 36,37,42 - Chapter 4-Verses 18, 38,39 Chapter18 –Verses 37,38,63 **CO5**

AD1006 **UNNAT BHARAT ABHIYAN**

L	T	P	C
2	0	0	0

Objectives

- To engage the students in understanding rural realities
- To identify and select existing innovative technologies, enable customization of technologies, or devise implementation method for innovative solutions, as per the local needs.
- To leverage the knowledge base of the institutions to devise processes for effective implementation of various government programmes
- To understand causes for rural distress and poverty and explore solutions for the same
- To apply classroom knowledge of courses to field realities and thereby improve quality of learning

UNIT - I QUALITY OF RURAL LIFE IN VILLAGES AND UNNAT BHARAT ABHIYAN **9**

Introduction to Unnat Bharat Abhiyan - concept, scope and objectives, rural life, rural society, cast and gender relations, rural values with respect to community, nature and resources, elaboration of “Soul of India lies in villages” – (Gandhi Ji), Rural infrastructure, problems in rural area. **CO1**

Assignment: Prepare a map (Physical , visual and digital) of the village you visited and write an essay about inter-family relation in that village.

UNIT - II RURAL ECONOMY AND LIVELIHOOD **9**

Agriculture, farming, land ownership pattern, water management, animal husbandry, non-farm livelihoods and artisans, rural entrepreneurs, rural market . **CO2**

Assignment: Describe your analysis of rural household economy, it’s challenges and possible pathways to address them. Group discussion in class- (4) Field visit 3.

UNIT - III RURAL INSTITUTIONS **9**

History of Rural Development, Traditional rural organizations, Self Help Groups, Gram Swaraj and 3-Tier Panchayat Raj Institutions (Gram Sabha, Gram Panchayat, Standing Committee), local civil society, local administration. Introduction to Constitution, Constitutional Amendments in Panchayati Raj – Fundamental Rights and Directive Principles. **CO3**

Assignment: Panchayati Raj institutions in villages? What would you suggest to improve their effectiveness? Present a case study (written or audio-visual). Field Visit – 4.

UNIT - IV RURAL DEVELOPMENT PROGRAMMES **9**

National programmes - Sarva Shiksha Abhiyan, Beti Bachao, Beti Padhao, Ayushman Bharat, Swatchh Bharat, PM Awass Yojana, Skill India, Gram Panchayat Decentralised Planning, NRLM, MNREGA, etc.

Written Assignment: Describe the benefits received and challenges faced in the delivery of one of these programmes in the rural community, give suggestions about improving implementation of the programme for the rural poor. **CO4**

UNIT - V FIELD WORK **9**

Each student selects one programme for field visit Field based practical activities:

• Interaction with SHG women members, and study of their functions and challenges; planning for their skill building and livelihood activities

• Visit MGNREGS project sites, interact with beneficiaries and interview functionaries at the work site

• Field visit to Swachh Bharat project sites, conduct analysis and initiate problem solving measures

• Conduct Mission Antyodaya surveys to support under Gram Panchayat Development Plan(GPDP)

• Interactive community exercise with local leaders, panchayat functionaries, grass-root officials and local institutions regarding village development plan preparation and resource mobilization

• Visit Rural Schools I mid-day meal centres, study Academic and infrastructural resources and gaps

• Participate in Gram Sabha meetings, and study community participation

• Associate with Social audit exercises at the Gram Panchayat level, and interact with programme beneficiaries

CO5

• Attend Parent Teacher Association meetings, and interview school drop outs

• Visit local Anganwadi Centre and observe the services being provided

• Visit local NGOs, civil society organisations and interact with their staff and beneficiaries.

• Organize awareness programmes, health camps, Disability camps and cleanliness camps o Conduct soil health test, drinking water analysis, energy use and fuel efficiency surveys

• Raise understanding of people's impacts of climate change, building up community's disaster preparedness

• Organise orientation programmes for farmers regarding organic cultivation, rational use of irrigation and fertilizers and promotion of traditional species of crops and plants

• Formation of committees for common property resource management, village pond maintenance and fishing.

Total Periods: 45

Text Books:

1. Singh, Katar, Rural Development Principles, Policies and Management, Sage Publications, New Delhi, 2015
2. A Hand book on Village Panchayat Administration, Rajiv Gandhi Chair for Panchayati Raj Studies, 2002
3. United Nations, Sustainable Development Goals, 2015 un.org/sdgs

Reference Books:

1. M.P.Boraian, Best Practices in Rural Development, Shanlax Publishers
2. Unnat Bharat Abhiyan Website : www.unnatbharatabhiyan.gov.in

COURSE OUTCOMES

Upon completion of the course, the students will be able to

- **CO1** Understand of rural life, culture and social realities
- **CO2** Understand the concept of measurement by comparison or balance of parameters.
- **CO3** Develop a sense of empathy and bonds of mutuality with local community
- **CO4** Appreciate significant contributions of local communities to Indian society and economy
- **CO5** Value the local knowledge and wisdom of the community
- **CO6** Understand of rural life, culture and social realities

AD1007	ESSENCE OF INDIAN KNOWLEDGE TRADITION	L	T	P	C
		2	0	0	0

OBJECTIVES:

The course will introduce the students to

- Get a knowledge about Indian Culture
- Know Indian Languages and Literature religion and philosophy and the fine arts in India
- Explore the Science and Scientists of Ancient, Medieval and Modern India
- Understand education systems in India

UNIT I: INTRODUCTION TO CULTURE **9**

Culture, civilization, culture and heritage, general characteristics of culture, importance of culture in human literature, Indian Culture, Ancient India, Medieval India, Modern India **CO1**

UNIT II: INDIAN LANGUAGES AND LITERATURE **9**

Indian Languages and Literature – I: Languages and Literature of South India, – Indian Languagesand Literature – II: Northern Indian Languages & Literature **CO2**

UNIT III: RELIGION AND PHILOSOPHY **9**

Major religions practiced in India and Understanding their Philosophy – religious movements in Modern India (Selected movements only) **CO3**

UNIT IV: FINE ARTS IN INDIA (ART, TECHNOLOGY& ENGINEERING) 9

Indian Painting, Indian handicrafts, Music, divisions of Indian classic music, modern Indian music, Dance and Drama, Indian Architecture (ancient, medieval and modern), Science and Technology in India, development of science in ancient, medieval and modern India **CO4**

UNIT V: EDUCATION SYSTEM IN INDIA 9

Education in ancient, medieval and modern India, aims of education, subjects, languages, Scienceand Scientists of Ancient India, Science and Scientists of Medieval India, Scientists of Modern India **CO5**

COURSE OUTCOMES

Upon completion of the course, the students will be able to

CO1 Understand philosophy of Indian culture.

CO2 Distinguish the Indian languages and literature.

CO3 Learn the philosophy of ancient, medieval and modern India.

CO4 Acquire the information about the fine arts in India.

CO5 Know the contribution of scientists of different eras.

CO6 Understand education systems in India

AD1008 SANGA TAMIL LITERATURE APPRECIATION

L	T	P	C
2	0	0	0

OBJECTIVES:

The main learning objective of this course is to make the students an appreciation for:

1. Introduction to Sanga Tamil Literature.
2. ‘Agathinai’ and‘Purathinai’ in SangaTamil Literature.
3. ‘Attruppadai’ in SangaTamil Literature.
4. ‘Puranaanuru’ in SangaTamil Literature.
5. ‘Pathitrupaththu’ in SangaTamil Literature.

UNIT I: SANGA TAMIL LITERATURE – AN INTRODUCTION **9 CO1**

Introduction to Tamil Sangam–History of Tamil Three Sangams–Introduction to Tamil SangamLiterature–Special Branches in Tamil Sangam Literature- Tamil Sangam Literature’s GrammarTamil Sangam Literature’s parables.

UNIT II: ‘AGATHINAI’AND‘PURATHINAI’ **9 CO2**

Tholkappiyar’s Meaningful Verses–Three literature materials–Agathinai’s message- History of Culture from Agathinai– Purathinai–Classification–Mesaage to Society from Purathinai.

UNIT III: ‘ATTRUPPADAI’. **9 CO3**

AttruppadaiLiterature–Attruppadaiin‘Puranaanuru’-Attruppadaiin‘Pathitrupaththu’-Attruppadaiin ‘Paththupaattu’.

UNIT IV: ‘PURANAANURU’ **9 CO4**

Puranaanuru on Good Administration, Ruler and Subjects–Emotion & its Effect in Puranaanuru.

UNIT V: ‘PATHITRUPATHTHU’ **9 CO5**

Pathitrupaththuin‘Ettuthogai’–Pathitrupaththu’sParables–Tamildynasty:Valor,Administration,Charity in Pathitrupaththu- Mesaage to Society from Pathitrupaththu.

TOTAL PERIODS: 45

COURSE OUTCOMES

Upon completion of the course, the students will be able to

CO1 Appreciate and apply the messages in Sanga Tamil Literature in their life.

CO2 Differentiate ‘Agathinai’ and ‘Purathinai’in their personal and societal life.

CO3 Appreciate and apply the messages in‘ Attruppadai’ in their personal and societal life.

CO4 Appreciate and apply the messages in‘ Puranaanuru’ in their personal and societal life.

CO5 Appreciate and apply the messages in‘ Pathitrupaththu’ in their personal and societal life.

REGULATION - 2021

CHOICE BASED CREDIT SYSTEM

I TO VIII SEMESTERS CURRICULAM AND SYLLABUS

BATCH – (2021 – 2025)

PROGRAM EDUCATIONAL OBJECTIVES (PEOs)

PEO 1: To demonstrate technical skills, competency in fundamentals of Mathematics, Programming and Artificial Intelligence in modelling, designing and conducting of experiments to provide solutions for industry's complex technological problems.

PEO 2: To enrich graduates with creativity that applies the concepts of Machine Learning to create, build and deploy solutions for various business problems

PEO 3: To build graduates with potential and ability to engage in continuous professional development and life-long learning.

PEO 4: To train graduates to work in multi-disciplinary teams with superior work ethics and build innovative solutions to serve the needs of the society.

PEO 5: To enable graduates to research, design and implement AI/ML products and services with effective Communication and Entrepreneurial Skills.

PROGRAM OUTCOMES POs:

Engineering Graduates will be able to:

1. **Engineering knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals and an engineering specialization to the solution of complex engineering problems.
2. **Problem analysis:** Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
3. **Design/development of solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
4. **Conduct investigations of complex problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
5. **Modern tool usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

6. **The engineer and society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
7. **Environment and sustainability:** Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
8. **Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
9. **Individual and team work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
10. **Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend andwrite effective reports and design documentation, make effective presentations, and give and receive clear instructions.
11. **Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
12. **Life-long learning:** Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PROGRAM SPECIFIC OUTCOMES (PSOs)

PSO 1: Graduates should be able to acquire and apply practical competency with engineering knowledge in the field of artificial intelligence for efficient design of intelligent systems of varying complexity.

PSO 2: Graduates should be able to contribute constructive ideas and innovative Machine learning solutions for multi-disciplinary problems.

PSO 3: Graduates should be able to build systems by applying AI/ML methods, techniques and tools for solving engineering problems.

MAPPING OF PROGRAM EDUCATIONAL OBJECTIVES WITH PROGRAM OUTCOMES

A broad relation between the Program objective and the outcomes is given in the following table

PROGRAM EDUCATIONAL OBJECTIVES	PROGRAM OUTCOMES											
	1	2	3	4	5	6	7	8	9	10	11	12
1	3	2

B. TECH ARTIFICIAL INTELLIGENCE AND MACHINE LEARNING

REGULATION – 2021

CHOICE BASED CREDIT SYSTEM

I - VIII SEMESTERS SYLLABUS

HS1101	COMMUNICATIVE ENGLISH	L	T	P	C
	(Common for all Branches of B.E. /B. Tech Programmes)	3	0	0	3

OBJECTIVES

- To develop the basic reading and writing skills of first year engineering and technology students.
- To help learners develop their listening skills, which will, enable them listen to lectures and comprehend them by asking questions; seeking clarifications.
- To help learners develop their speaking skills and speak fluently in real contexts.
- To help learners develop vocabulary of a general kind by developing their reading skills.

UNIT I	SHARING INFORMATION RELATED TO ONESELF/FAMILY& FRIENDS	9
Reading-critical reading-finding key information in a given text – shifting facts from opinions - Writing -autobiographical writing - developing hints. Listening- short texts- short formal and informal conversations. Speaking- basics in speaking - introducing oneself - exchanging personal information- speaking on given topics & situations Language development-voices-Wh- Questions- asking and answering-yes or no questions-parts of speech. Vocabulary development-- prefixes- suffixes- articles - Polite Expressions.		CO1
UNIT II	GENERAL READING AND FREE WRITING	9
Reading: Short narratives and descriptions from newspapers (including dialogues and conversations ; Reading Comprehension Texts with varied question types - Writing – paragraph writing- topic sentence- main ideas- free writing, short narrative descriptions using some suggested vocabulary and structures –. Listening-long texts-TED talks- extensive speech on current affairs and discussions Speaking-describing a simple process- Asking and answering questions - Language development – prepositions, clauses. Vocabulary development- guessing meanings of words in context –use of sequence words.		CO2
UNIT III	GRAMMAR AND LANGUAGE DEVELOPMENT	9
Reading- short texts and longer passages (close reading) & making a critical analysis of the given text Writing-types of paragraph and writing essays – rearrangement of jumbled sentences. Listening: Listening to ted talks and long speeches for comprehension. Speaking- role plays - asking about routine actions and expressing opinions. Language development- degrees of comparison- pronouns- Direct vs. Indirect Questions. Vocabulary development – idioms and phrases- cause & effect expressions, adverbs.		CO3
UNIT IV	READING AND LANGUAGE DEVELOPMENT	9
Reading- comprehension-reading longer texts- reading different types of texts- magazines. Writing- letter writing, informal or personal letters-e-mails-conventions of personal email- Listening: Listening comprehension (IELTS, TOEFL and others). Speaking -Speaking about friends/places/hobbies - Language development- Tenses- simple present-simple past- present continuous and past continuous- conditionals – if, unless, in case, when and others Vocabulary development- synonyms-antonyms- Single word substitutes- Collocations.		CO4

UNIT V	**EXTENDED WRITING**	**9**
Reading: Reading for comparisons and contrast and other deeper levels of meaning -Writing- brainstorming -writing short essays – developing an outline- identifying main and subordinate ideas- dialogue writing-Listening - popular speeches and presentations - Speaking- impromptu speeches & debates Language development-modal verbs- present/ past perfect tense - Vocabulary development-Phrasal verbs- fixed and semi-fixed expressions.		**CO5**
		TOTAL : 45 PERIODS

6. John Eastwood et al : Be Grammar Ready: The Ultimate Guide to English Grammar, Oxford University Press: 2020. .

COURSE OUTCOMES
Upon completion of the course, students will be able to

CO1	Speak clearly, confidently, comprehensibly, and communicate with one or many listeners using appropriate communicative strategies.
CO2	Write cohesively and coherently and flawlessly avoiding grammatical errors, using a wide vocabulary range, organizing their ideas logically on a topic.
CO3	Read different genres of texts adopting various reading strategies.
CO4	Listen/view and comprehend different spoken discourses/excerpts in different accents
CO5	Identify topics and formulate questions for productive inquiry

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO1	PSO2	PSO3

MA1102	ENGINEERING MATHEMATICS –I	L	T	P	C
(Common for all Branches of B.E. /B. TECH Programmes)		3	1	0	4

OBJECTIVES

- The goal of this course is to achieve conceptual understanding and to retain the best traditions of traditional calculus.
- The syllabus is designed to provide the basic tools of calculus mainly for the purpose of modeling the engineering problems mathematically and obtaining solutions.
- Matrix algebra is one of the powerful tools to handle practical problems arising in the field of engineering.
- This is a foundation course of single variable and multivariable calculus plays an important role in the understanding of science, engineering, economics and computer science, among other disciplines.

UNIT I	MATRICES	12
Eigenvalues and Eigenvectors of a real matrix – Characteristic equation – Properties of Eigenvalues and Eigenvectors – Cayley-Hamilton theorem – Diagonalization of matrices – Reduction of a quadratic form to canonical form by orthogonal transformation - Nature of quadratic forms		CO1
UNIT II	CALCULUS OF ONE VARIABLE	12
Limit of a function - Continuity - Derivatives - Differentiation rules – Interval of increasing and decreasing functions – Maxima and Minima - Intervals of concavity and convexity.		CO2
UNIT III	CALCULUS OF SEVERAL VARIABLES	12
Partial differentiation – Homogeneous functions and Euler's theorem – Total derivative – Change of variables – Jacobians – Partial differentiation of implicit functions – Taylor's series for functions of two variables – Maxima and minima of functions of two variables – Lagrange's method of undetermined multipliers.		CO3
UNIT IV	INTEGRAL CALCULUS	12
Definite and Indefinite integrals - Substitution rule - Techniques of Integration - Integration by parts, Trigonometric integrals, Trigonometric substitutions, Integration of rational functions by partial fraction, Integration of irrational functions - Improper integrals.		CO4
UNIT V	MULTIPLE INTEGRALS	12
Double integrals – Change of order of integration – Double integrals in polar coordinates – Area enclosed by plane curves – Change of variables from Cartesian to polar in double integrals-Triple integrals – Volume of solids		CO5
		TOTAL : 60 PERIODS

TEXT BOOKS

1. Grewal B.S., Higher Engineering Mathematics‖, Khanna Publishers, New Delhi, 43rd Edition, 2014.
2. James Stewart, "Calculus: Early Transcendental", Cengage Learning, 7th Edition, New Delhi,2015. [For Units I & III - Sections 2.2, 2.3, 2.5, 2.7(Tangents problems only), 2.8, 3.1 to 3.6, 3.11, 4.1, 4.3, 5.1(Area problems only), 5.2, 5.3, 5.4 (excluding net change theorem), 5.5, 7.2 - 7.4 and 7.8].

REFERENCE BOOKS

1. Anton, H, Bivens, I and Davis, S, "Calculus", Wiley, 10th Edition, 2016.
2. Jain R.K. and Iyengar S.R.K., ―Advanced Engineering Mathematics‖, Narosa Publications, New Delhi, 3rd Edition, 2007.
3. Narayanan, S. and Manicavachagom Pillai, T. K., ―Calculus" Volume I and II, S. Viswanathan Publishers Pvt. Ltd., Chennai, 2007.
4. Srimantha Pal and Bhunia, S.C, "Engineering Mathematics" Oxford University Press, 2015.
5. T. Veerarajan. Engineering Mathematics – I, McGraw Hill Education; First edition 2017.

COURSE OUTCOMES

UPON COMPLETION OF THE COURSE, STUDENTS WILL BE ABLE TO

CO1	Have a clear idea of matrix algebra pertaining Eigen values and Eigenvectors in addition dealing with quadratic forms.
CO2	Understand the concept of limit of a function and apply the same to deal with continuity and derivative of a given function. Apply differentiation to solve maxima and minima problems, which are related to real world problems.
CO3	Have the idea of extension of a function of one variable to several variables. Multivariable functions of real variables are inevitable in engineering.
CO4	Understand the concept of integration through fundamental theorem of calculus. Also acquire skills to evaluate the integrals using the techniques of substitution, partial fraction and integration by parts along with the knowledge of improper integrals.
CO5	Do double and triple integration so that they can handle integrals of higher order which are applied in engineering field.

PH1103	ENGINEERING PHYSICS	L	T	P	C
(Common for all branches of B.E. /B. Tech Programmes)		3	0	0	3

OBJECTIVES

To make the students conversant with

- Elastic properties of materials and various moduli of elasticity.
- Principles of laser and fiber optics and its various technological applications.
- Thermal conduction in solids, heat exchangers and its applications in various devices.
- Quantum concepts to explain black body radiation, Compton effect and matter waves.
- Various crystal structures, Miller indices and crystal growth techniques.

UNIT I	PROPERTIES OF MATTER	9
Elasticity - Stress-strain diagram and its uses - factors affecting elastic modulus and tensile strength - torsional stress and deformations - twisting couple - torsion pendulum: theory and experiment - bending of beams - bending moment - cantilever: theory and experiment - uniform and non-uniform bending: theory and experiment - Practical applications of modulus of elasticity- I shaped girders - stress due to bending in beams.		CO1
UNIT II	**LASER AND FIBER OPTICS**	**9**
Lasers : population of energy levels, Einstein's A and B coefficients derivation - resonant cavity optical amplification (qualitative) – Nd-YAG Laser-Semiconductor lasers: homojunction and heterojunction – Industrial and medical applications of Laser- Fiber optics: principle, numerical aperture and acceptance angle - types of optical fibres (material, refractive index, mode) - losses associated with optical fibers – Fabrication of Optical fiber-Double crucible method-fibre optic sensors: pressure and displacement-Industrial and medical applications of optical fiber-Endoscopy-Fiber optic communication system.		CO2
UNIT III	**THERMAL PHYSICS**	**9**
Transfer of heat energy – thermal expansion of solids and liquids – expansion joints - bimetallic strips - thermal conduction, convection and radiation – heat conductions in solids – thermal conductivity -Rectilinear flow of heat- conduction through compound media (series and parallel)- Lee's disc method: theory and experiment - Radial flow of heat- thermal insulation - applications: heat exchangers, refrigerators, oven, Induction furnace and solar water heaters.		CO3
UNIT IV	**QUANTUM PHYSICS**	**9**
Black body radiation – Planck's theory (derivation) – Compton effect: theory and experimental verification – wave particle duality – electron diffraction – concept of wave function and its physical significance – Schrödinger's wave equation – time independent and time dependent equations – particle in a one-dimensional rigid box – Electron microscope- tunnelling (qualitative) - scanning tunnelling microscope-Applications of electron microscopy.		CO4
UNIT V	**CRYSTAL PHYSICS**	**9**
Single crystalline, polycrystalline and amorphous materials – single crystals: unit cell, crystal		CO5

systems, Bravais lattices, directions and planes in a crystal, Miller indices – inter-planar distances coordination number and packing factor for SC, BCC, FCC, HCP and diamond structures – Graphite structure-crystal imperfections: point defects, line defects – Burger vectors, stacking faults - growth of single crystals: solution and melt growth techniques-Epitaxial growth-Applications of Single crystal (Qualitative).

TOTAL : 45 PERIODS

TEXT BOOKS

1. Bhattacharya, D.K. & Poonam, T. "Engineering Physics". Oxford University Press,2017.
2. Gaur, R.K. & Gupta, S.L. "Engineering Physics". Dhanpat Rai Publishers,2012.
3. Pandey, B.K. & Chaturvedi, S. "Engineering Physics". Cengage Learning India,2013.

REFERENCE BOOKS

1. Halliday, D., Resnick, R. & Walker, J. "Principles of Physics". Wiley,2015.
2. Serway, R.A. & Jewett, J.W. "Physics for Scientists and Engineers". Cengage Learning, 2019.
3. Tipler, P.A. & Mosca, G. "Physics for Scientists and Engineers with Modern Physics'. W.H.Freeman,2014.

COURSE OUTCOMES

Upon completion of the course, the students will gain knowledge on

CO1	The elastic property and stress strain diagram, determination of rigidity modulus by torsional pendulum and Young's modulus by various methods.
CO2	Principle of laser, Einstein's coefficients of laser action, semiconductor laser and its applications, optical fibers and their applications in sensors and communication system.
CO3	The heat transfer through solids and the determination of thermal conductivity in a bad conductor by Lee's disc method and radial flow of heat.
CO4	The quantum concepts and its use to explain black body radiation, Compton effect and wave equation for matter waves, tunnelling electron microscopy and its applications.
CO5	The importance of various crystal structures, Miller indices and various growth techniques.

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUCOMES

CY1104	ENGINEERING CHEMISTRY	L	T	P	C
	(Common for all branches of B.E. /B. Tech Programmes)	3	0	0	3

OBJECTIVES

To make the student conversant with the

- Principles of water characterization and treatment for industrial purposes.
- Principles and applications of surface chemistry and catalysis.
- Phase rule and various types of alloys
- Various types of fuels, applications and combustion
- Conventional and non-conventional energy sources and energy storage device

UNIT I	**WATER AND ITS TREATMENT**	**9**
Hardness of water – Types – Expression of hardness – Units – Estimation of hardness by EDTA method – Numerical problems on EDTA method – Boiler troubles (scale and sludge, caustic embrittlement , boiler corrosion, priming and foaming) - Treatment of boiler feed water - Internal treatment (carbonate, phosphate, colloidal, sodium aluminate and calgon conditioning) - External treatment - Ion exchange process, Zeolite process - Desalination of brackish water by reverse Osmosis.		**CO1**
UNIT II	**SURFACE CHEMISTRY AND CATALYSIS**	**9**
Surface chemistry : Types of adsorption - Adsorption of gases on solids - Adsorption of solute from solutions – Adsorption isotherms – Freundlich's adsorption isotherm – Langmuir's adsorption isotherm – Kinetics of uni-molecular surface reactions – Adsorption in chromatography - Applications of adsorption in pollution abatement using PAC. **Catalysis**: Catalyst - Types of catalysis - Criteria - Contact theory - Catalytic poisoning and catalytic promoters - Industrial applications of catalysts - Catalytic convertor - Auto catalysis - Enzyme catalysis - Michaelis-Menten equation.		**CO2**
UNIT III	**PHASE RULE AND ALLOYS**	**9**
Phase rule: Introduction - Definition of terms with examples - One component system - Water system – Reduced phase rule – Thermal analysis and cooling curves – Two component systems - Lead-silver system - Pattinson process. **Alloys**: Introduction - Definition - Properties of alloys - Significance of alloying - Functions and effect of alloying elements - Nichrome, Alnico, Stainless steel (18/8) - Heat treatment of steel - Non-ferrous alloys - Brass and bronze.		CO3
UNIT IV	**FUELS AND COMBUSTION**	**9**
Fuels: Introduction - classification of fuels - Comparison of solid, liquid, gaseous fuels - Coal - Analysis of coal (proximate and ultimate) - Carbonization - Manufacture of metallurgical coke (Otto Hoffmann method) - Petroleum - Cracking - Manufacture of synthetic petrol (Bergius process, Fischer Tropsch Process) - Knocking - Octane number - Diesel oil - Cetane number - Compressed natural gas (CNG) - Liquefied petroleum gases (LPG) - Power alcohol and biodiesel. **Combustion of fuels**: Introduction - Calorific value - Higher and lower calorific values - Theoretical calculation of calorific value – Ignition temperature – Spontaneous ignition temperature - Explosive range - Flue gas analysis by Orsat Method.		CO4
UNIT V	**NON-CONVENTIONAL ENERGY SOURCES AND STORAGE DEVICES**	**9**
Nuclear energy - Fission and fusion reactions - Differences - Chain reactions - Nuclear reactors - Classification of reactors - Light water nuclear reactor for power generation - Breeder reactor - Solar energy conversion - Solar cells - Wind energy - Fuel cells - Hydrogen-oxygen fuel cell . Batteries - Types of batteries - Alkaline batteries - Lead-acid, Nickel-cadmium and Lithium batteries.		CO5
		TOTAL : 45 PERIODS

TEXT BOOKS

1. P.C.Jain, Monica Jain, "Engineering Chemistry" 17th Ed., Dhanpat Rai Pub. Co., New Delhi, (2015).
2. S.S. Dara, S.S. Umare, "A text book of Engineering Chemistry" S.Chand & Co.Ltd., New Delhi (2020).

3. S. Vairam, P. Kalyani and Suba Ramesh, “Engineering Chemistry”, Wiley India (P) Ltd. New Delhi, (2018).
4. P. Kannan, A. Ravikrishnan, “Engineering Chemistry”, Sri Krishna Hi-tech Publishing Company (P) Ltd., Chennai, (2009).

REFERENCE BOOKS

1. B.K.Sharma “Engineering Chemistry” Krishna Prakasan Media (P) Ltd., Meerut (2001).
2. B. Sivasankar “Engineering Chemistry” Tata McGraw-Hill Pub.Co.Ltd, New Delhi (2008).
3. Prasanta Rath, “Engineering Chemistry”, Cengage Learning India (P) Ltd., Delhi, (2015).
4. Shikha Agarwal, “Engineering Chemistry-Fundamentals and Applications”, Cambridge University Press, Delhi, (2015).
5. A. Pahari, B. Chauhan, “Engineering Chemistry”, Firewall Media, New Delhi., (2010).
6. A. Sheik Mideen, Engineering Chemistry, Airwalk Publications, Chennai (2018)

COURSE OUTCOMES

Upon completion of the course, the students should be

CO1	Able to understand impurities in industrial water, boiler troubles, internal and external treatment methods of purifying water.
CO2	Able to understand concepts of absorption, adsorption, adsorption isotherms, application of adsorption for pollution abatement, catalysis and enzyme kinetics.
CO3	Able to recognize significance of alloying, functions of alloying elements and types of alloys, uses of alloys, phase rule, reduced phase and its applications in alloying.
CO4	Able to identify various types of fuels, properties, uses and analysis of fuels. They should be able to understand combustion of fuels, method of preparation of bio-diesel, synthetic petrol.
CO5	Able to understand conventional, non-conventional energy sources, nuclear fission and fusion, power generation by nuclear reactor, wind, solar energy and preparation, uses of various batteries.

MAPPING OF COs WITH POs AND PSOs

GE1105	PROBLEM SOLVING AND PYTHON PROGRAMMING	L	T	P	C
	(Common for all branches of B.E. /B. Tech Programmes)	3	0	0	3

OBJECTIVES

- To know the basics of algorithmic problem solving
- To write simple python programs
- To develop python program by using control structures and functions
- To use python predefined data structures
- To write file based program

UNIT I	**ALGORITHMIC PROBLEM SOLVING**	**9**
Algorithms, building blocks of algorithms (statements, state, control flow, functions), notation (pseudo code, flow chart, programming language), algorithmic problem solving, Basic algorithms, flowcharts and pseudocode for sequential, decision processing and iterative processing strategies, Illustrative problems: find minimum in a list, insert a card in a list of sorted cards, guess an integer number in a range, Towers of Hanoi.		**CO1**
UNIT II	**INTRODUCTION TO PYTHON**	**9**
Python Introduction, Technical Strength of Python, Python interpreter and interactive mode; Introduction to colab , pycharm and jupyter idle(s) ,values and types: int, float, boolean, string, and list; Built-in data types, variables, Literals, Constants, statements, Operators; Assignment, Arithmetic, Relational, Logical, Bitwise operators and their precedence, , expressions, tuple assignment; Accepting input from Console, printing statements, Simple 'Python' programs.		**CO2**
UNIT III	**CONTROL FLOW, FUNCTIONS AND STRINGS**	**9**
Conditionals: Boolean values and operators, conditional (if), alternative (if-else), chained conditional (if-elif-else); Iteration: while, for; Loop manipulation using pass, break, continue, and else; Modules and Functions, function definition and use, flow of execution, parameters and arguments; local and global scope, return values, function composition, recursion; Strings: string slices, immutability, string functions and methods, string module; Illustrative programs: square root, gcd, exponentiation, sum an array of numbers, linear search, binary search.		**CO3**
UNIT IV	**LISTS, TUPLES, DICTIONARIES**	**9**
Lists: Defining list and list slicing, list operations, list slices, list methods, list loop, List Manipulation, mutability, aliasing, cloning lists, list parameters; Lists as arrays, Tuples: tuple assignment, tuple as return value, Tuple Manipulation; Dictionaries: operations and methods; advanced list processing – list comprehension; Illustrative programs: selection sort, insertion sort, mergesort, histogram.		**CO4**
UNIT V	**FILES, MODULES, PACKAGES**	**9**
Files and exception: Concept of Files, Text Files; File opening in various modes and closing of a file, Format Operators, Reading from a file, Writing onto a file, File functions-open(), close(), read(), readline(), readlines(),write(), writelines(),tell(),seek(), Command Line arguments. Errors and exceptions, handling exceptions, modules, packages; introduction to numpy, matplotlib. Illustrative programs: word count, copy file.		**CO5**
		TOTAL : 45 PERIODS

6. Paul Gries, Jennifer Campbell and Jason Montojo, ―Practical Programming: An Introduction.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Develop algorithmic solutions to simple computational problems
CO2	Develop simple console application in python
CO3	Develop python program by applying control structure and decompose program into functions.
CO4	Represent compound data using python lists, tuples, and dictionaries.
CO5	Read and write data from/to files in Python.

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

GE1106	ENGINEERING GRAPHICS	L	T	P	C
	(Common for all branches of B.E. /B. Tech Programmes)	2	0	4	4

OBJECTIVES

- To develop in students, graphic skills for communication of concepts, ideas and design of Engineering products
- To expose them to existing national standards related to technical drawings.

CONCEPTS AND CONVENTIONS (Not for Examination)		1
Importance of graphics in engineering applications – Use of drafting instruments – BIS conventions and specifications – Size, layout and folding of drawing sheets – Lettering and dimensioning.		
UNIT I	**PLANE CURVES AND FREEHAND SKETCHING**	**7+12**
Basic Geometrical constructions, Curves used in engineering practices: Conics – Construction of ellipse, parabola and hyperbola by eccentricity method – Construction of cycloid – construction of involutes of square and circle – Drawing of tangents and normal to the above curves. Visualization concepts and Free Hand sketching: Visualization principles –Representation of Three-Dimensional objects – Layout of views- Freehand sketching of multiple views from pictorial views of objects		**CO1**
UNIT II	**PROJECTION OF POINTS, LINES AND PLANE SURFACE**	**6+12**
Orthographic projection- principles-Principal planes-First angle projection-projection of points. Projection of straight lines (only First angle projections) inclined to both the principal planes - Determination of true lengths and true inclinations by rotating line method and traces Projection of planes (polygonal and circular surfaces) inclined to both the principal planes by rotating object method.		**CO2**
UNIT III	**PROJECTION OF SOLIDS**	**5+12**
Projection of simple solids like prisms, pyramids, cylinder, cone and truncated solids when the axis is inclined to one of the principal planes by rotating object method.		**CO3**
UNIT IV	**PROJECTION OF SECTIONED SOLIDS AND DEVELOPMENT OFSURFACES**	**6+12**
Sectioning of above solids in simple vertical position when the cutting plane is inclined to the one of the principal planes and perpendicular to the other – obtaining true shape of section. Development of lateral surfaces of simple and sectioned solids – Prisms, pyramids cylinders and cones.		**CO4**
UNIT V	**ISOMETRIC AND PERSPECTIVE PROJECTIONS**	**6+12**
Principles of isometric projection – isometric scale -Isometric projections of simple solids and truncated solids - Prisms, pyramids, cylinders, cones- combination of two solid objects in simple vertical positions - Perspective projection of simple solids-Prisms, pyramids and cylinders by visual ray method.		**CO5**

6. Shah M.B., and Rana B.C., "Engineering Drawing", Pearson, 2nd Edition, 2009.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Understand the fundamentals and standards of Engineering graphics
CO2	Perform freehand sketching of basic geometrical constructions and multiple views of objects
CO3	Understand the concept of orthographic projections of lines and plane surfaces
CO4	Draw the projections of section of solids and development of surfaces
CO5	Visualize and to project isometric and perspective sections of simple solids

GE1107	PYTHON PROGRAMMING LABORATORY	L	T	P	C
	(Common for all branches of B.E. /B. Tech Programmes)	0	0	4	2

OBJECTIVES

- To write, test, and debug simple Python programs.
- To implement Python programs with conditionals and loops.
- Use functions for structuring Python programs.
- Represent compound data using Python lists, tuples, and dictionaries.
- Read and write data from/to files in Python.

LIST OF EXPERIMENTS

1. Write an algorithm, draw flowchart illustrating mail merge concept.	CO1
2. Write an algorithm , draw flowchart and write pseudo code for a real life or scientific or technical problems	
3. Scientific problem solving using decision making and looping. • Armstrong number, palindrome of a number, Perfect number.	
4. Simple programming for one dimensional and two dimensional arrays. • Transpose, addition, multiplication, scalar , determinant of a matrix	
5. Program to explore string functions and recursive functions.	CO2
6. Utilizing 'Functions' in Python • Find mean, median, mode for the given set of numbers in a list. • Write a function dups to find all duplicates in the list. • Write a function unique to find all the unique elements of a list. • Write function to compute gcd, lcm of two numbers.	
7. Demonstrate the use of Dictionaries and tuples with sample programs.	
8. Implement Searching Operations: Linear and Binary Search.	
9. To sort the 'n' numbers using: Selection, Merge sort and Insertion Sort.	
10. Find the most frequent words in a text of file using command line arguments.	CO3
11. Demonstrate Exceptions in Python.	
12. Applications: Implementing GUI using turtle, pygame.	

TOTAL : 60 PERIODS

LIST OF EQUIPMENT FOR A BATCH OF 30 STUDENTS

Python 3 interpreter for Windows/Linux

1. http://www.edx.org

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Develop simple console applications through python with control structure and functions
CO2	Use python built in data structures like lists, tuples, and dictionaries for representing compound data.
CO3	Read and write data from/to files in Python and applications of python.

BS1108	PHYSICS AND CHEMISTRY LABORATORY	L	T	P	C
	(Common for all branches of B.E. /B. Tech Programmes)	0	0	4	2

OBJECTIVES

The students will be trained to perform experiments to study the following.

- The Properties of Matter
- The Optical properties , Characteristics of Lasers & Optical Fibre
- Electrical & Thermal properties of Materials
- Enable the students to enhance accuracy in experimental measurements.
- To make the student to acquire practical skills in the determination of water quality parameters through volumetric analysis
- Instrumental method of analysis such as potentiometry, conductometry and pHmetry

LIST OF EXPERIMENTS - PHYSICS

Experiment	CO
(A minimum of 5 experiments to be performed from the given list)	
1. Determination of Young's modulus of the material of the given beam by Non-uniform bending method.	CO1
2. Determination of rigidity modulus of the material of the given wire using torsion pendulum.	CO1
3. Determination of wavelength of mercury spectra using Spectrometer and grating.	CO2
4. Determination of dispersive power of prism using Spectrometer.	CO2
5. (a) Determination of wavelength and particle size using a laser. (b) Determination of numerical aperture and acceptance angle of an optical fibre. (c) Determination of width of the groove of compact disc using laser.	CO2
6. Determination of Young's modulus of the material of the given beam by uniform bending method.	CO1
7. Determination of energy band gap of the semiconductor.	CO2
8. Determination of coefficient of thermal conductivity of the given bad conductor using Lee's disc.	CO2
DEMONSTRATION EXPERIMENT	
1. Determination of thickness of a thin sheet / wire – Air wedge method	CO1

LIST OF EXPERIMENTS - CHEMISTRY

Experiment	CO
(A minimum of 6 experiments to be performed from the given list)	
1. Estimation of HCl using Na_2CO_3 as primary standard and determination of alkalinity in water sample.	CO5
2. Determination of total, temporary & permanent hardness of water by EDTA method.	CO5
3. Determination of DO content of water sample by Winkler's method.	CO5
4. Determination of chloride content of water sample by argentometric method.	CO3
5. Estimation of copper content of the given solution by Iodometry.	CO3
6. Determination of strength of given hydrochloric acid using pH meter.	CO3
7. Determination of strength of acids in a mixture of acids using conductivity meter.	CO4
8. Estimation of iron content of the given solution using potentiometer.	CO4
9. Determination of molecular weight of polyvinyl alcohol using Ostwald viscometer.	CO4
10. Conductometric titration of strong acid vs strong base.	CO4
DEMONSTRATION EXPERIMENTS	
1. Estimation of iron content of the water sample using spectrophotometer (1,10- Phenanthroline / thiocyanate method).	CO3
2. Estimation of sodium and potassium present in water using flame	CO5

COURSE OUTCOMES **Upon completion of the course, the students should be**	
CO1	Able to understand the concept about the basic properties of matter like stress, strain and types of moduli. Able to understand the procedure to estimate the amount of dissolved oxygen present in the water.
CO2	Able to understand the concept of optics like reflection, refraction, diffraction by using spectrometer grating. Able to understand the concept about measuring the conductance of strong acid and strong base and mixture of acids by using conductivity meter.
CO3	Able to understand the thermal properties of solids and to calculate thermal conductivity of a bad conductor. Able to understand the principle and procedure involved in the amount of chloride present in the given sample of water.
CO4	Able to understand the concept of microscope and its applications in determining the moduli. Able to understand the concept of determining the emf values by using potentiometer.
CO5	Able to calculate the particle size of poly crystalline solids. Able to understand the concept of determining the pH value and strength of a given acid sample by using pH meter.

HS1201	PROFESSIONAL ENGLISH	L	T	P	C
(Common for all branches of B.E. /B. Tech Programmes)		3	0	0	3

OBJECTIVES

- Develop strategies and skills to enhance their ability to read and comprehend engineering and technology texts.
- Foster their ability to write convincing job applications and effective reports.
- Develop their speaking skills to make technical presentations, participate in group discussions.
- Strengthen their listening skill which will help them comprehend lectures and talks in their areas of specialization.

UNIT I	READING AND STUDY SKILLS	9
Listening-Listening Comprehension of a discussion on a technical topic of common interest by three or four participants (real life as well as online videos). -Speaking – describing a process-Reading: Practice in chunking and speed reading - Paragraphing- Writing- interpreting charts, graphs- Vocabulary Development: Important foreign expressions in Use, homonyms, homophones, homographs - easily confused words Language Development-impersonal passive voice, numerical adjectives.		CO1
UNIT II	**READING AND STUDY SKILLS**	**9**
Listening-Listening Comprehension of a discussion on a technical topic of common interest by three or four participants (real life as well as online videos). -Speaking – describing a process-Reading: Practice in chunking and speed reading - Paragraphing- Writing- interpreting charts, graphs- Vocabulary Development: Important foreign expressions in Use, homonyms, homophones, homographs – easily confused words Language Development- impersonal passive voice, numerical adjectives.		CO2
UNIT III	**TECHNICAL WRITING AND GRAMMAR**	**9**
Listening-listening to conversation-effective use of words and their sound aspects, stress, intonation & pronunciation- Speaking – mechanics of presentations -Reading: Reading longer texts for detailed understanding. (GRE/IELTS practice tests); Writing- Describing a process, use of sequence words- Vocabulary Development- sequence words- Informal vocabulary and formal substitutes-Misspelled words. Language Development- embedded sentences and Ellipsis.		CO3
UNIT IV	**REPORT WRITING**	**9**
Listening – Model debates & documentaries and making notes. Speaking- expressing agreement/disagreement, assertiveness in expressing opinions-Reading: Technical reports, advertisements and minutes of meeting - Writing- email etiquette- job application - cover letter -Résumé preparation(via email and hard copy)- analytical essays and issue based essays--Vocabulary Development- finding suitable synonyms-paraphrasing- Language Development- clauses- if conditionals.		CO4
UNIT V	**GROUP DISCUSSION AND JOB APPLICATIONS**	**9**
Listening: Extensive Listening. (radio plays, rendering of poems, audio books and others) Speaking -participating in a group discussion - Reading: Extensive Reading (short stories, novels, poetry and others)- Writing reports- minutes of a meeting- accident and survey-Writing a letter/ sending an email to the Editor - cause and effect sentences -Vocabulary Development- verbal analogies. Language Development- reported speech.		CO5
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Board of editors. Fluency in English A Course book for Engineering and Technology. Orient Blackswan, Hyderabad: 2020.
2. Barun K Mitra, Effective Technical Communication Oxford University Press : 2006.
3. Sudharshana.N.P and Saveetha. C. English for Technical Communication. Cambridge University Press: New Delhi, 2016.

7. Aruna Koneru, Professional Speaking Skills, Oxford University Press :2015.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Speak clearly, confidently, comprehensibly, and communicate with one or many listeners using appropriate communicative strategies.
CO2	Write cohesively and coherently and flawlessly avoiding grammatical errors, using a wide vocabulary range, organizing their ideas logically on a topic.
CO3	Read different genres of texts adopting various reading strategies.
CO4	Listen/view and comprehend different spoken discourses/excerpts in different accents
CO5	Identify topics and formulate questions for productive inquiry

MAPPING OF COs WITH POs AND PSOs

MA1251	LINEAR ALGEBRA	L	T	P	C
	(Common to AI-DS)	3	1	0	4

OBJECTIVES

- To test the consistency and solve the system of linear equations
- To find the basis and dimension of vector space
- To obtain the matrix of linear transformation and its eigenvalues and eigenvectors
- To find orthonormal basis of inner product space and find least square approximation
- To find eigenvalues of a matrix using numerical techniques and perform matrix decomposition.

UNIT I	**MATRICES AND SYSTEM OF LINEAR EQUATIONS**	**12**
Matrices - Row echelon form - Rank - System of linear equations - Consistency - Gauss elimination method - Gauss Jordon method.		**CO1**
UNIT II	**VECTOR SPACES**	**12**
Vector spaces, Subspaces, Linear combinations, Linear independence and linear dependence, Bases and dimensions.		**CO2**
UNIT III	**LINEAR TRANSFORMATION**	**12**
Linear transformation - Rank space and null space - Rank and nullity - Dimension theorem - Matrix representation of linear transformation - Eigenvalues and eigenvectors of linear transformation.		**CO3**
UNIT IV	**INNER PRODUCT SPACES**	**12**
INNER product and norms - Properties - Orthogonal, Orthonormal vectors - Gram Schmidt orthonormalization process - Least square approximation		**CO4**
UNIT V	**EIGEN VALUE PROBLEMS AND MATRIX DECOMPOSITION**	**12**
Eigen value Problems: Power method, Jacobi rotation method - Singular value decomposition - QR decomposition.		**CO5**
		TOTAL : 60 PERIODS

PH1252	PHYSICS FOR INFORMATION SCIENCE	L	T	P	C
	(Common to CSE, AI-DS & IT)	3	0	0	3

OBJECTIVES

To make the student

- To acquire knowledge on the electron transport properties
- To understand the essential principles of semiconductor device
- To have the necessary understanding in optical properties of materials.
- To grasp the principles of magnetic materials and its applications.
- To understand the basics of Nano-electronic devices.

UNIT I	ELECTRICAL PROPERTIES OF MATERIALS	9
	Classical free electron theory - Expression for electrical conductivity - Thermal conductivity, expression - Wiedemann-Franz law - Success and failures - electrons in metals - Particle in a three dimensional box - degenerate states - Fermi- Dirac statistics - Density of energy states - Electron in periodic potential - Energy bands in solids - Electron effective mass - concept of hole - Applications of low resistive and high resistive materials.	CO1
UNIT II	**SEMICONDUCTOR PHYSICS**	**9**
	Intrinsic semiconductors - Energy band diagram - direct and indirect band gap semiconductors - carrier concentration in intrinsic semiconductors - extrinsic semiconductors - carrier concentration in n-type & p-type semiconductors - variation of carrier concentration with temperature - variation of Fermi level with temperature and impurity concentration - carrier transport in semiconductors - Hall effect and devices - Ohmic contacts – Schottky diode - Semiconducting polymers.	CO2
UNIT III	**MAGNETIC PROPERTIES OF MATERIALS**	**9**
	Magnetism in materials - magnetic dipole moment - magnetic permeability and susceptibility - Microscopic classification of magnetic materials : diamagnetism - paramagnetism - ferromagnetism - antiferromagnetism - ferrimagnetism - Curie temperature - Domain Theory - M versus H behaviour - Hard and soft magnetic materials - examples and uses - Magnetic principle in computer data storage - Magnetic hard disc - Spintronics - GMR Sensor (Giant Magnetoresistance) - TMR (Tunnel Magnetoresistance)	CO3
UNIT IV	**OPTICAL PROPERTIES OF MATERIALS**	**9**
	Classification of optical materials - carrier generation and recombination processes - Absorption emission and scattering of light in metals, insulators and semiconductors (concepts only) - photo current in a P-N diode - solar cell - LED - Organic LED - p-i-n Photodiodes - Avalanche Photodiodes -Optical data storage techniques- Holography - applications.	CO4
UNIT V	**NANO DEVICES**	**9**
	Electron density in bulk material - Size dependence of Fermi energy - Quantum confinement - Quantum structures - Density of states in quantum well, quantum wire and quantum dot structure - Band gap of nanomaterials - Tunneling: single electron phenomena and single electron transistor - Quantum dot laser - Ballistic transport - Carbon nanotubes: properties and applications - Material Processing by chemical vapour deposition and Laser ablation method - Graphene: properties and applications.	CO5

COURSE OUTCOMES

Upon completion of the course, the students will be able to

CO1	Gain knowledge on classical and quantum electron theories and energy band structures.
CO2	Acquire knowledge on basics of semiconductor physics and its applications in various devices.
CO3	Get knowledge on magnetic properties of materials and their applications in data storage.
CO4	Have the necessary understanding on the functioning of optical materials for Optoelectronics.
CO5	Understand the basics of quantum structures and their applications in nano electronic devices.

GE1204	ENVIRONMENTAL SCIENCE AND ENGINEERING	L	T	P	C
	(Common for all branches of B.E. /B. Tech Programmes)	3	0	0	3

OBJECTIVES

- To study the inter relationship between living organisms and environment.
- To appreciate the importance of environment by assessing its impact on the human world; envision the surrounding environment, its functions and its value.
- To find and implement scientific, technological, economic and political solutions to environmental problems.
- To study the integrated themes and biodiversity, natural resources, pollution control and waste management.
- To study the dynamic processes and understand the features of the earth's interior and surface.

UNIT I	ENVIRONMENT, ECOSYSTEM AND BIODIVERSITY	11
Definition, scope and importance of environment – Need for public awareness – Role of Individual in Environmental protection - Concept of an ecosystem - Structure and function of an ecosystem – Producers, consumers and decomposers – Energy flow in the ecosystem – Food chains, food webs and ecological pyramids – Ecological succession – Types, characteristic features, structure and function of forest, grass land, desert and aquatic (ponds, lakes, rivers, oceans, estuaries) ecosystem. Biodiversity – Definition – Genetic, species and ecosystem diversity – Value of biodiversity -Consumptive use, productive use, social, ethical, aesthetic and option values - Biodiversity at global, national and local levels – India as a mega diversity nation – Hot spots of biodiversity -Threats to biodiversity– Habitat loss, poaching of wild life, human-wildlife conflicts – Wildlife protection act and forest conservation act - Endangered and endemic species - Conservation of biodiversity – In-situ and ex-situ conservation of biodiversity.		CO1
UNIT II	**ENVIRONMENTAL POLLUTION**	**9**
Definition – Causes, effects and control measures of: (a) Air pollution (b) Water pollution (c) Soil pollution (d) Marine pollution (e) Noise pollution (f) Thermal pollution (g) Nuclear hazards - Solid waste management: causes, effects and control measures of municipal solid wastes - Problems of e-waste - Role of an individual in prevention of pollution - Pollution case studies - Disaster management - Floods, earthquake, cyclone, tsunami and landslides - Field study of local polluted site – Urban / Rural / Industrial / Agricultural.		CO2
UNIT III	**NATURAL RESOURCES**	**9**
Forest resources: Uses and over-exploitation – Deforestation – Case studies – Timber extraction, mining, dams and their effects on forests and tribal people – Water resources – Use and overutilization of surface and ground water, floods, drought, conflicts over water - Dams: benefits and problems - Mineral resources: Uses and exploitation - Environmental effects of extracting and using mineral resources - Case studies - Food resources: World food problems - Changes caused by agriculture and overgrazing - Effects of modern agriculture: fertilizer-pesticide problems, water logging, salinity - Case studies - Energy resources: Growing energy needs – Renewable and non renewable energy sources – Use of alternate energy sources -Case studies – Land resources: Land as a resource – Land degradation, man induced landslides, soil erosion and desertification – Role of an individual in conservation of natural resources – Equitable use of resources for sustainable lifestyles - Field study of local area to document environmental assets – River / Forest / Grassland / Hill / Mountain.		CO3
UNIT IV	**SOCIAL ISSUES AND THE ENVIRONMENT**	**8**
From unsustainable to sustainable development - Urban problems related to energy - Water conservation, rain water harvesting, watershed management - Resettlement and rehabilitation of people; its problems and concerns, case studies - Role of non-governmental organization - Environmental ethics - Issues and possible solutions - Climate change - Global warming -		CO4

Acid rain, Ozone layer depletion -Nuclear accidents and holocaust – Case studies – Wasteland reclamation – Consumerism and waste products – Principles of Green Chemistry – Environment protection act – Air (Prevention and Control of Pollution) Act – Water (Prevention and control of Pollution) Act – Wildlife protection Act – Forest conservation Act – Enforcement machinery involved in environmental legislation- Central and state pollution control boards- National Green Tribunal – Public awareness.	
UNIT V — **HUMAN POPULATION AND THE ENVIRONMENT**	**8**
Population growth – Variation among nations – Population explosion – Family welfare programme – Environment and human health – Human rights – Value education – HIV / AIDS -COVID 19 – Women and child welfare – Role of information technology in environment and human health – Case studies	CO5

BE1251	BASIC ELECTRICAL, ELECTRONICS AND MEASUREMENT ENGINEERING	L	T	P	C
	(Common to CSE, AI-DS & IT)	3	0	0	3

OBJECTIVES

- To learn the fundamental laws, network theorems and analyse the electric circuits.
- To study the basic principles of electrical machines and their performance.
- To study the fundamentals of power systems.
- To learn the characteristics of various electron devices and Op Amp integrated circuit.
- To understand the principle and operation of measuring instruments and transducers.

UNIT I	ELECTRIC CIRCUITS ANALYSIS	9
Ohms Law, Kirchhoff's Law-Instantaneous power - Series and parallel circuit: analysis of resistive, capacitive and inductive network, star delta conversion, Nodal analysis and mesh analysis. Network theorems: Thevenin's theorem, Norton's theorem, superposition theorem and maximum power transfer theorem. Three phase ac supply -Instantaneous power, Reactive power and apparent power.		CO1
UNIT II	ELECTRICAL MACHINES	9
DC and AC ROTATING MACHINES: Types, Construction, principle, EMF and torque equation, application, Speed Control. Basics of Stepper Motor and Brushless DC motors. Transformers-Introduction, types and construction, working principle of Ideal transformer, EMF equation, All day efficiency calculation.		CO2
UNIT III	FUNDAMENTALS OF POWER SYSTEM	9
Structure of power system. Sources of electrical energy – Non-renewable, Renewable-Storage systems: Batteries-Ni-Cd, Pb -Acid and Li-ion, SOC (State of Charge), DOD (Depth of Discharge) Characteristics. Utilization of electrical power - DC and AC load applications. - Electric circuit Protection-need for earthing, fuses and circuit breakers.		CO3
UNIT IV	ELECTRON DEVICES AND INTEGRATED CIRCUITS	9
PN Junction-VI Characteristics of Diode, Zener diode, Rectifiers, Zener voltage regulator. Transistor configurations – CE amplifier - RC and LC oscillators. Op Amps – Basic characteristics and its applications.		CO4
UNIT V	MEASURING INSTRUMENTS AND TRANSDUCERS	9
Characteristic of measurement-errors in measurement – Principle and working of indicting instrument- Moving Coil meter, Moving Iron meter, Energy meter and watt meter, Cathode Ray Oscilloscope -- Transducers, thermo-electric, RTD, Strain gauge, LVDT, LDR, and piezoelectric transducer.		CO5
		TOTAL : 45 PERIODS

6. C.L.Wadhwa, ―Generation, Distribution and Utilisation of Electrical Energy‖, New Age international pvt.ltd.,2003

COURSE OUTCOMES
Upon completion of the course, students will be able to

CO1	Ability to learn the fundamental laws, theorems of electrical circuits and to analyze them
CO2	Ability to understand the basic construction and operating principle of dc and ac machines.
CO3	Ability to understand the electrical power generation, energy storage and utilization of electric power.
CO4	Ability to understand the characteristics of various electronic devices and Op Amp integrated circuit
CO5	Ability to understand the principles and operation of measuring instruments and transducers.

CS1206	PROGRAMMING IN C	L	T	P	C
	(Common to CSE, AI-DS & IT)	3	0	0	3

OBJECTIVES

- To develop C Programs using basic programming constructs
- To develop C programs using arrays, strings and functions
- To develop applications in C using pointers
- To develop applications in C using structures and union
- To develop applications using sequential and random-access file processing.

UNIT I	BASICS OF C PROGRAMMING	9
An overview of C: History of C; Compiler Vs. Interpreter, Structure of a C Program, Library and Linking, Compiling a C Program; Basic data types , Modifying the basic data types, Variables: Type qualifiers, Storage class specifiers; Constants: Enumeration Constants; Keywords; Operators: Precedence and Associativity; Expressions: Order of evaluation, Type conversion in expression, Casts; Input/Output statements; Assignment statements, Selection statements; Iteration statements; Jump statements; Expression statements; Pre-processor directives: Compilation process		CO1
UNIT II	**ARRAYS, STRINGS AND FUNCTIONS**	**9**
Introduction to Arrays: Declaration, Initialization, Single dimensional array, Two dimensional arrays, Array Manipulations; String operations: length, compare, concatenate, copy; Functions: General form of a function, Function Arguments, Built-in functions, return statement, Recursion		CO2
UNIT III	**POINTERS**	**9**
Pointers: Declaring and defining pointers, Pointer operators, Pointer expression; Pointer Assignment, Pointer Conversions, Pointer arithmetic, Pointer Comparisons; Pointers and Arrays: Array of pointers; Multiple Indirection; Pointers to function; Problems with Pointers; Parameter passing: Pass by value, Pass by reference.		CO3
UNIT IV	**STRUCTURES AND UNIONS**	**9**
Structure: Accessing Structure members, Structure Assignments; Nested structures; Pointer and Structures; Array of structures; Passing Structures to Functions: Passing structure member to function, Passing entire structure to functions; Arrays in Structures; Self-referential structures; Dynamic memory allocation ; typedef statement, , Union and Enumeration		CO4
UNIT V	**FILE PROCESSING**	**9**
File System Basics: File Pointer, Opening and Closing a File; Reading and Writing Character; Working with String: fputs() and fgets(); rewind(); ferror(); fread() and fwrite(); Erasing files; Types of file processing: Sequential access; Random access: fprintf() and fscanf(), fseek() and ftell(); Command line arguments.		CO5
		TOTAL : 45 PERIODS

GE1207	ENGINEERING PRACTICES LABORATORY	L	T	P	C
	(Common for all branches of B.E. /B. Tech Programmes)	0	0	4	2

OBJECTIVES:

- To provide exposure to the students with hands on experience on various basic engineering practices in Civil, Mechanical, Electrical and Electronics Engineering

LIST OF EXPERIMENTS

GROUP A (CIVIL & MECHANICAL)

I CIVIL ENGINEERING PRACTICE 13 **Buildings:** (a) Study of plumbing and carpentry components of residential and industrial buildings. Safety aspects. **Plumbing Works:** (a) Study of pipeline joints, its location and functions: valves, taps, couplings, unions, reducers, elbows in household fittings. (b) Study of pipe connections requirements for pumps and turbines. (c) Preparation of plumbing line sketches for water supply and sewage works. **(d) Hands-on-exercise:** Basic pipe connections - Mixed pipe material connection - Pipe connections with different joining components. (e) Demonstration of plumbing requirements of high-rise buildings. **Carpentry using Power Tools only:** (a) Study of the joints in roofs, doors, windows and furniture. (b) Hands-on-exercise: Wood work, joints by sawing, planing and cutting.	**CO1**
II MECHANICAL ENGINEERING PRACTICE 18 **Welding:** (a) Preparation of butt joints, lap joints and T- joints by Shielded metal arc welding. (b) Gas welding practice **Basic Machining:** (a) Simple Turning and Taper turning (b) Drilling Practice **Sheet Metal Work:** (a) Forming & Bending: (b) Model making - Trays and funnels. (c) Different type of joints. **Machine assembly practice:** (a) Study of centrifugal pump (b) Study of air conditioner **Demonstration on:** (a) Smithy operations, upsetting, swaging, setting down and bending. Example -Exercise – Production of hexagonal headed bolt. (b) Foundry operations like mould preparation for gear and step cone pulley. (c) Fitting - Exercises - Preparation of square fitting and V - fitting models.	**CO2**

GROUP B (ELECTRICAL & ELECTRONICS)

III ELECTRICAL ENGINEERING PRACTICE 13 1. Residential house wiring using switches, fuse, indicator, lamp and energy meter. 2. Fluorescent lamp wiring. 3. Stair case wiring 4. Measurement of electrical quantities - voltage, current, power & power factor in RLC circuit.	**CO3**

5. Measurement of energy using single phase energy meter. 6. Measurement of resistance to earth of an electrical equipment.	CO4
IV ELECTRONICS ENGINEERING PRACTICE 16 1. Study of electronic components and equipments – Resistor, colour coding measurement of AC signal parameter (peak-peak, rms period, frequency) using CR. 2. Study of logic gates AND, OR, EX-OR and NOT. 3. Generation of Clock Signal. 4. Soldering practice – Components Devices and Circuits – Using general purpose PCB. Measurement of ripple factor of HWR and FWR.	CO5
	TOTAL : 60 PERIODS

LIST OF EQUIPMENT FOR A BATCH OF 30 STUDENTS

Sl.No.	Description of Equipment	Quantity required
	CIVIL	
1.	Assorted components for plumbing consisting of metallic pipes, plastic pipes, flexible pipes, couplings, unions, elbows, plugs and other fittings.	15 sets
2.	Carpentry vice (fitted to work bench)	15 Nos
3.	Standard woodworking tools 15 Sets.	15 Sets.
4.	Models of industrial trusses, door joints, furniture joints	5 each
5.	**Power Tools:** (a) Rotary Hammer (b) Demolition Hammer (c) Circular Saw (d) Planer (e) Hand Drilling Machine (f) Jigsaw	2 Nos
	MECHANICAL	
1.	Arc welding transformer with cables and holders.	5 Nos
2.	Welding booth with exhaust facility.	5 Nos
3.	Welding accessories like welding shield, chipping hammer, wire brush, etc.	5 Sets
4.	Oxygen and acetylene gas cylinders, blow pipe and other welding outfit.	2 Nos
5.	Centre lathe.	2 Nos
6.	Hearth furnace, anvil and smithy tools.	2 Sets
7.	Moulding table, foundry tools.	2 Sets
8.	Power Tool: Angle Grinder.	2 Nos
9.	**Study-purpose items:** centrifugal pump, air-conditioner.	1 each
	ELECTRICAL	
1.	Assorted electrical components for house wiring.	15 Sets
2.	Electrical measuring instruments.	10 Sets
3.	**Study purpose items:** Iron box, fan and regulator, emergency lamp.	1 each
4.	Megger (250V/500V).	1 No.
5.	**Power Tools:** (a) Range Finder (b) Digital Live-wire detector	2 Nos
	ELECTRONICS	
1.	Soldering guns 10 Nos.	10 Nos.
2.	Assorted electronic components for making circuits 50 Nos.	50 Nos.

3.	Small PCBs.	**10 Nos.**
4.	Multimeters	**10 Nos.**
5.	**Study purpose items:** Telephone, FM radio, low-voltage power supply	**1 each**

COURSE OUTCOMES
Upon completion of the course, students will be able to

CO1	Fabricate carpentry components and pipe connections including plumbing works. Use welding equipments to join the structures.
CO2	Carry out the basic machining operations Make the models using sheet metal works
CO3	Carry out basic home electrical works and appliances.
CO4	Measure the electrical quantities
CO5	Elaborate on the components, gates, soldering practices

CS1208	PROGRAMMING IN C LABORATORY	L	T	P	C
	(Common to CSE, AI-DS & IT)	0	0	4	2

OBJECTIVES

- To develop programs in C using basicconstructs.
- To develop applications in C using strings, pointers, functions,structures.
- To develop applications in C using fileprocessing

LIST OF EXPERIMENTS

Experiment	CO
1. C programming using simple statements and expressions.	CO1
2. Scientific problem-solving using decision making and looping.	
3. Generating different patterns using multiple control statements.	
4. Problems solving using one dimensional array.	
5. Mathematical problem solving using two dimensional arrays.	
6. Solving problems using string functions.	CO2
7. Solving problems with user defined functions.	
8. Solving problems using recursive function.	
9. Solving problems with dynamic memory allocation.	
10. Realtime application using structures and unions.	
11. Realtime problem solving using sequential and random-access file.	CO3
12. Solving problems with command line argument.	

TOTAL : 60 PERIODS

LIST OF EQUIPMENT FOR A BATCH OF 30 STUDENTS

Standalone desktops with C compiler 30 Nos.

(or)

Server with C compiler supporting 30 terminals or more.

REFERENCE BOOKS

1. Problem Solving and Program Design in C, 4th edition, by jeri R. Hanly and Elli B.Koffman.
2. Reema Thareja, “Programming in C”, Oxford University Press, Second Edition, 2016.
3. Programming in C by Pradip Dey, Manas Ghosh 2nd edition Oxford University Press. E.Balaguruswamy, Programming in ANSI C 5th Edition McGraw-Hill.
4. A first book of ANSI C by Gray J.Brosin 3rd edition Cengagedelmer Learning India P.Ltd.
5. AL Kelly, Iraphol,Programming in C,4th edition Addison-Wesley – Professional.
1. Brain W.Kernighan & Dennis Ritchie, C Programming Language, 2nd edition, PHI.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Develop C programs for simple applications making use of basic constructs.
CO2	Develop C programs involving string, functions, recursion, pointers, andstructures.
CO3	Design applications using sequential and random-access fileprocessing.

MA1354	PROBABILITY AND BAYESIAN INFERENCE	L	T	P	C
		3	1	0	4

OBJECTIVES

- To understand the basic concepts of probability, one and two dimensional random variables and to introduce some standard distributions applicable to engineering which can describe real life phenomenon.
- To understand the basic concepts of random processes which are widely used in engineering applications.
- To acquaint the knowledge of testing of hypothesis for small and large samples, which plays an important role in real life problems.
- To introduce the basic concepts of classifications of design of experiments which plays very important roles in the field of agriculture and statistical quality control.

UNIT	TITLE	PERIODS / CO
UNIT I	**PROBABILITY AND RANDOM VARIABLES**	**12**
Probability – The axioms of probability – Conditional probability – Baye's theorem - Discrete and continuous random variables – Moments – Moment generating functions – Binomial, Poisson, Geometric, Uniform, Exponential and Normal distributions.		**CO1**
UNIT II	**TWO - DIMENSIONAL RANDOM VARIABLES**	**12**
Joint distributions – Marginal and conditional distributions – Covariance – Correlation and linear regression – Central limit theorem (for independent and identically distributed random variables).		**CO2**
UNIT III	**RANDOM PROCESSES**	**12**
Classification - Stationary process - Markov process - Poisson process - Discrete parameter Markov chain – Chapman Kolmogorov equations – Limiting distributions.		**CO3**
UNIT IV	**TESTING OF HYPOTHESIS**	**12**
Sampling distributions - Estimation of parameters - Statistical hypothesis - Large sample tests based on Normal distribution for single mean and difference of means -Tests based on t, Chi-square and F distributions for mean, variance and proportion - Contingency table (test for independent) - Goodness of fit.		**CO4**
UNIT V	**BAYESIAN INFERENCE**	**12**
Bayesian Inference for Discrete random variables - Bayesian Inference for Continous random variables – Bayesian Inference for Binomial proportions - Comparing Bayesian and Frequentist inferences for proportion.		**CO5**

TOTAL : 60 PERIODS

TEXT BOOKS

1. Johnson, R.A., Miller, I and Freund J., "Miller and Freund's Probability and Statistics for Engineers", Pearson Education, Asia, 9th Edition, 2017.
2. Ibe, O.C., ¯Fundamentals of Applied Probability and Random Processes", Elsevier, 2nd Indian Reprint, 2014.
3. Bolstad, W. M., Curran, J. M. Introduction to Bayesian Statistics. : Wiley. (Unit V Chapter 6, 7, 8 and 9) , Wiley , 2016

REFERENCE BOOKS

1. Hwei Hsu, "Schaum's Outline of Theory and Problems of Probability, Random Variables and Random Processes", Tata McGraw Hill Edition, New Delhi, 2017.
2. Yates, R.D. and Goodman. D. J., "Probability and Stochastic Processes", 2nd Edition, Wiley India Pvt. Ltd., Bangalore, 2014.
3. Papoulis, A. and Unnikrishna pillai, S., "Probability, Random Variables and Stochastic Processes", McGraw Hill Education India, 4th Edition, New Delhi, 2017.

4. Ross, S.M., "Introduction to Probability and Statistics for Engineers and Scientists", 4thEdition, Elsevier, 2009.
5. Spiegel. M.R., Schiller. J. and Srinivasan, R.A., "Schaum's Outline of Theory and Problems of Probability and Statistics", Tata McGraw Hill Edition, 2008.

COURSE OUTCOMES
Upon completion of the course, students will be able to

CO1	The course gives exposure to random variables and well-founded knowledge of standard distributions which can describe real life phenomena.
CO2	The course paves ideas to handle situations involving more than one random variable and functions of random variables.
CO3	The course gives an understanding and characterizes phenomena which evolve with respect to time in a probabilistic manner and modelling the real life phenomena.
CO4	Students will gain the knowledge on Large Samples and Samples. These concepts are very useful in biological, economical and social experiments and all kinds of generalizations based on information about a smaller sample and larger samples. Apply the appropriate test in the problems related with sampling.
CO5	Students will be able to do design of experiments, carry them out, and analyze the data.

MAPPING OF COs WITH POs AND PSOs

CS1302	DATA STRUCTURES	L	T	P	C
(Common to CSE, AI-DS & IT)		3	0	0	3

OBJECTIVES

- To understand the concepts of ADTs.
- To learn linear data structures like lists, stacks, and queues.
- To learn Non-linear tree data structures.
- To apply Graph structures
- To understand sorting, searching and hashing algorithms

UNIT I	**LINEAR DATA STRUCTURES – LIST**	**9**
Abstract Data Types (ADTs) – List ADT – array-based implementation – linked list implementation — singly linked lists- circularly linked lists- doubly-linked lists - applications of lists -Polynomial Manipulation – All operations (Insertion, Deletion, Merge, Traversal).		**CO1**
UNIT II	**LINEAR DATA STRUCTURES – STACKS, QUEUES**	**9**
Stack ADT - Operations - Applications - Evaluating arithmetic expressions- Conversion of Infix to postfix expression - Queue ADT - Operations - Circular Queue - Priority Queue - deQueue - applications of queues.		**CO2**
UNIT III	**NON LINEAR DATA STRUCTURES – TREES**	**9**
Tree ADT – tree traversals – Binary Tree ADT – expression trees – applications of trees – binary search tree ADT -Threaded Binary Trees- AVL Trees - B-Tree - B+ Tree - Heap - Applications of heap.		**CO3**
UNIT IV	**NON LINEAR DATA STRUCTURES – GRAPHS**	**9**
Definition – Representation of Graph – Types of graph – Breadth-first traversal – Depth-first traversal - Topological Sort - Bi-connectivity -Graph Algorithms - Shortest Path Algorithms: Dijkstra's Algorithm - All pair shortest Path Algorithms: Floyds warshall Algorithm – Minimum Spanning Tree: Prim's Algorithm – Kruskal's Algorithm – Applications of Graph.		**CO4**
UNIT V	**SEARCHING, SORTING AND HASHING TECHNIQUES**	**9**
Searching- Linear Search - Binary Search. Sorting - Bubble sort - Selection sort - Insertion sort – Shell sort – Radix sort. Hashing- Hash Functions – Separate Chaining – Open Addressing – Rehashing – Extendible Hashing.		**CO5**

TOTAL : 45 PERIODS

TEXT BOOKS

1. Mark Allen Weiss, Data Structures and Algorithm Analysis in C, 2nd Edition, Pearson Education,1997.
2. Reema Thareja, Data Structures Using C , Second Edition, Oxford University Press, 2011.
3. Michael T. Goodrich, Roberto Tamassia, Michael H. Goldwasser, Data Structures and Algorithms in Python, Wiley,2013.
4. Bradley N. Miller, David L. Ranum, " Problem Solving with Algorithms and Data Structures using Python " , Second Edition, 2013.
5. Rance D. Necaise, Data Structures and Algorithms Using Python, John Wiley & Sons, 2011.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Implement abstract data types for linear data structures.
CO2	Apply the different linear data structures to problem solutions.
CO3	Implement abstract data types for non-linear data structures.
CO4	Apply Graph data structure for the real world problems.
CO5	Critically analyze the various sorting, searching algorithms and hash functions that result in a collision free scenario for data storage and retrieval.

MAPPING OF COs WITH POs AND PSOs

DS1303	INTRODUCTION TO ARTIFICIAL INTELLIGENCE	L	T	P	C
	Common to AI & DS	3	0	0	3

OBJECTIVES

- To impart basic knowledge about Artificial Intelligence
- To learn the methods of solving problems using Artificial Intelligence
- To learn to represent knowledge in solving AI problems
- To understand the concept of Planning in various situations
- To understand the application of AI namely Expert Systems

UNIT I	INTRODUCTION	9
Introduction–Definition - Foundation and History of AI - Future of Artificial Intelligence - Intelligent Agents- Environments - Structure of Agents - Typical Intelligent Agents		CO1

UNIT II	PROBLEM SOLVING METHODS	9
Problem solving Methods - Search Strategies- Uninformed - Informed - Heuristics - Local Search Algorithms and Optimization Problems - Searching with Partial Observations - Constraint Satisfaction Problems – Constraint Propagation - Backtracking Search - Game Playing - Optimal Decisions in Games - Alpha - Beta Pruning		CO2

UNIT III	KNOWLEDGE REPRESENTATION	9
First Order Predicate Logic - Prolog Programming - Unification - Forward Chaining-Backward Chaining - Resolution - Knowledge Representation - Ontological Engineering-Categories and Objects - Time and Event Calculus - Mental Events and Mental Objects - Reasoning Systems for categories - Reasoning with Default Information		CO3

UNIT IV	PLANNING	9
Planning - Introduction - Planning Problem - Planning with State Space Search - Partial Order planning - Construction and Use of Planning Graphs - Conditional Planning - Continuous Planning - Multi Agent Planning		CO4

UNIT V	EXPERT SYSTEMS	9
Expert systems - Architecture of expert systems, Roles of expert systems - Knowledge Acquisition - Meta knowledge, Heuristics. Typical expert systems - MYCIN, DART, XOON, Expert systems shells.		CO5

TOTAL : 45 PERIODS

TEXT BOOKS

1. S. Russell and P. Norvig, "Artificial Intelligence: A Modern Approach, Prentice Hall, Third Edition, 2009.
2. Dan W. Patterson - Introduction to Artificial Intelligence and Expert Systems, PHI, New Delhi, 2006.

REFERENCE BOOKS

1. M. Tim Jones - Artificial Intelligence: A Systems Approach (Computer Science), Jones and Bartlett Publishers, Inc.; First Edition, 2008.
2. Nils J. Nilsson - The Quest for Artificial Intelligence, Cambridge University Press,2009.
3. I. Bratko - Prolog: Programming for Artificial Intelligence, Fourth edition, Addison-Wesley Educational Publishers Inc., 2011.
4. Peter Jackson, “Introduction to Expert Systems”, 3rd Edition, Pearson Education, 2007.

COURSE OUTCOMES **Upon completion of the course, students will be able to**	
CO1	Implement basic AI Algorithms
CO2	Use appropriate search algorithms to solve AI based problems
CO3	Represent a problem using first order and predicate logic
CO4	Design a simple agent system with associated planning technique.
CO5	Apply AI techniques to real-world problems to develop expert system

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES(PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

CO4	3	3	3	3	3	2	-	-	2	2	2	3	3	3	3
CO5	3	3	3	3	3	2	-	-	2	2	2	3	3	3	3

ML1301	DATA FOUNDATION	L	T	P	C
		3	0	0	3

OBJECTIVES

- To acquire knowledge on Data science and its Foundations.
- To explore about the various data process and evaluation methods.
- To understand distinct analysis tools and practice ethical decision and actions.

UNIT I	INTRODUCTION	9
Overview of Data: Definition - Types of data – Quantitative and Qualitative (Nominal, Ordinal, Discrete and Continuous) Big Data: Structured, Unstructured and semi-structured - Metadata: Concepts of metadata – Types of metadata – Uses Data Source: Enterprise Data Source, Social Media Data Source, Public Data Source – Web Scrapping- Basic Concepts of Data Warehouse and Data Mining – Distributed File System		CO1

UNIT II	DATA PROCESS OVERVIEW	9
Defining Goals- Data Acquisition – Sources of acquiring the data - Data preprocessing- Imputation of Missing values - Data cleaning - Data Reduction, Data Transformation and Data Discretization. Exploratory Data Analysis (EDA) – Philosophy of EDA - The Data Science Process. Significance of EDA in data science - Basic tools (plots, graphs and summary statistics) of EDA.		CO2

UNIT III	DATA ORGANIZATION	9
Data Structures: Basics – stack, Queue, Linked List, Tree, Graph - Data Organizational Models- Centralized Model-Embedded Model- Hybrid Model-The Three-Layered structure- Centre of Excellence Model - Roles and Responsibilities- Data Governance Data Privacy-Data Quality- Data Extraction-Extraction and ETL (Extract, Load, Transform)-Types- Physical -Logical- Data extraction with SQL.		CO3

UNIT IV	DATA ANALYSIS AND VISUALIZATION	9
Spreadsheets: Data Manipulations- Sort, filter, remove duplicates-text and math functions-pivot table-lookup functions-Data visualizations for quantitative and qualitative data- charts-Excel Modelling- forecast models using advanced lookup and data validation tools. Tableau: Creating Visualizations in Tableau-Data hierarchies, filters, groups, sets, calculated fields-Map based visualizations-Build interactive dashboards-Data Stories.		CO4

UNIT V	ETHICS AND RECENT TRENDS	9
Data and Business Insights- Data Science Engineering: - Need of Data Science - Ethics – Doing good data science – Natural Language Processing – Machine Learning Model- Valuing Data privacy – Getting informed consent - The Five Cs - Diversity – Inclusion – Future Trends		CO5

TOTAL : 45 PERIODS

TEXT BOOKS

1. Introducing Data Science, Davy Cielen, Arno D. B. Meysman, Mohamed Ali, Manning Publications Co., 1st edition,2016.
2. 2. Ethics and Data Science, D J Patil, Hilary Mason, Mike Loukides, O' Reilly, 1st edition, 2018

REFERENCE BOOKS

1. Introduction to Machine Learning with Python-A Guide for Data Scientists, by Andreas C. Mueller, Sarah Guido, O'Reilly; 1st edition, October 2016.
2. Getting Started with Tableau 2019.2 (Second Edition), Tristan Guillevin, Packt Publishing; 2nd edition June, 2019

COURSE OUTCOMES **Upon completion of the course, students will be able to**	
CO1	Explore the fundamental concepts of Data science
CO2	Understand Data Science Process and Tools of EDA
CO3	Address how Organizational structure's influence efficiency and effectiveness.
CO4	Analyse and Validate data using Spreadsheets and Tableau.
CO5	Think through the ethics incorporating privacy, data sharing and decision-making and Build interactive dashboards for Business

<table>
<tr><td>ML1302</td><td colspan="2">OBJECT ORIENTED SOFTWARE ENGINEERING
(Lab Integrated)</td><td>L</td><td>T</td><td>P</td><td>C</td></tr>
<tr><td colspan="3"></td><td>3</td><td>0</td><td>2</td><td>4</td></tr>
<tr><td colspan="7">OBJECTIVES
• Analyze the necessity for Object Oriented Programming paradigm over structured programming and become familiar with the fundamental concepts in OOP like encapsulation, Inheritance and Polymorphism
• Design an object-oriented system, GUI components and multithreaded processes as per needs and specifications
• To provide a Strong foundation for advanced programming using Object Oriented Programming Concepts.</td></tr>
<tr><td>UNIT I</td><td>JAVA FUNDAMENTALS-OBJECTS, CLASSES AND INTERFACES</td><td colspan="5">9+6</td></tr>
<tr><td colspan="2">Programming Language types and paradigms – Object Oriented Programming Concepts-History of Java - Java buzzwords- JVM architecture – Data Types and Literals in Java-Operators and Control Statements in Java - Array List - Strings and String Buffer - Working with Objects - Implementing Classes - Static Variables and Methods – Packages - Nested Classes – Abstract Class- Interfaces -Local and Anonymous Classes – Inheritance – Extending a class - Object: The Cosmic Superclass – Wrapper classes - Object Cloning.

LAB COMPONENT:

• Create an abstract class Shape with a abstract method area() to find the area of different shapes and a instance variable radius. Extends the Shape class by Cylinder and Cone class with appropriate members and methods to find the volume of cylinder and cone. Write a driver class ShapeDemo with main method in JAVA to implement the abstraction and display the volume of the shapes.
• Create a class named 'Rectangle' with two data members 'length' and 'breadth' and two methods to print the area and perimeter of the rectangle respectively. Its constructor having parameters for length and breadth is used to initialize length and breadth of the rectangle. Let class 'Square' inherit the 'Rectangle' class with its constructor having a parameter for its side (suppose s) calling the constructor of its parent class as 'super(s,s)'. Print the area and perimeter of a rectangle and a square. And repeat the above example to print the area of 10 squares.</td><td colspan="5">CO1</td></tr>
<tr><td>UNIT II</td><td>EXCEPTION, IO STREAMS AND CONCURRENT PROGRAMMING</td><td colspan="5">9+6</td></tr>
<tr><td colspan="2">Exception Handling - The Exception Hierarchy – Keywords – Checked and unchecked Exceptions – User defined Exceptions - Input/Output Streams- Byte Streams, Character Streams- Threads – Multithreaded Programming – Thread Creation – Life Cycle – Thread Priorities - Synchronization of Threads.

LAB COMPONENT:

• Write a Java program to count the number of characters, count, sentences, paragraphs, whitespaces in a file
• Deduce a Java program to perform the following tasks using three different threads. Each thread will be responsible for its own task only. Among these three threads one will find the average number of the input numbers, one will be responsible for finding the Maximum number from the input array of numbers, and one will be responsible for finding the Minimum number from the input array of numbers.</td><td colspan="5">CO2</td></tr>

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Understand the fundamental ideas behind the object oriented approach to programming .
CO2	A modern coverage of concurrent programming that focuses on high-level synchronization Constructs.
CO3	Understand software development process models
CO4	Perform overall design using various UML diagrams
CO5	Recognize the knowledge about testing methods and comparison of various testing techniques

ML1303	OPTIMIZATION FOR MACHINE LEARNING	L	T	P	C
		3	0	0	3

OBJECTIVES

- To cover the core concepts of continuous optimization
- To learn about unconstrained and constrained optimization problems.
- To learn methods and algorithms for both convex and non-convex optimization settings

UNIT I	**INTRODUCTION TO OPTIMIZATION**	**9**
Mathematical optimization - Least-squares problem – Linear programming - Role of optimization, Convex optimization - Non-linear optimization - Local and global optimization - Convexity, Examples		**CO1**
UNIT II	**CONVEX SETS AND FUNCTIONS**	**9**
Affine and Convex sets - Operations that preserve convexity – Generalized inequalities - Separating hyper-plane theorem - Convex functions – Basic properties and examples - Conjugate function, conjugate sets.		**CO2**
UNIT III	**CONVEX OPTIMIZATION PROBLEMS**	**9**
Definition and examples - Optimization problems - Convex optimization - Linear optimization - Quadratic optimization problems - Geometric programming - Semi-definite programming - Generalized inequality constraints - Vector optimization.		**CO3**
UNIT IV	**DUALITY**	**9**
Duality theory - Lagrange dual function - Lagrange dual problem – Geometric Interpretation - Weak and strong duality – Saddle point interpretation- Interpretation of dual variables - KKT optimality conditions for non-convex and convex problems.		**CO4**
UNIT V	**METHODS AND ALGORITHMS**	**9**
Unconstrained minimization: Descent methods -Gradient descent method - Steepest descent method - Newton methods - Convergence Analysis.		**CO5**

TOTAL : 45 PERIODS

TEXT BOOKS

1. Guanghui Lan, Lectures on Optimization - Methods for Machine Learning, 2019.

4. E.K.P Chong and S.H.Zak, An Introduction to Optimization, 2013.

COURSE OUTCOMES **Upon completion of the course, students will be able to**	
CO1	Know basic terminology and concepts in convex optimization.
CO2	Understand the foundations of classic continuous optimization problems, in particular identifying convexity, smoothness, feasible region, and dual reformulation.
CO3	Design and analyze optimization algorithms for convex optimization problems.
CO4	Use duality and decomposition for parallelization of optimization algorithms.
CO5	Solve standard convex optimization problems arising in various scientific and engineering applications.

MAPPING OF COs WITH POs AND PSOs

DS1307	DATA STRUCTURES LABORATORY USING PYTHON	L	T	P	C
Common for AI-DS		0	0	4	2

OBJECTIVES

- To introduce the concepts of primitive data structures.
- To understand the process in linear and non-linear data structures.
- To introduce the concepts of sorting, searching and hashing.

LIST OF EXPERIMENTS

Experiment	CO
1. IMPLIMENTATION OF LIST Write Python programs to a) Array implementation of Stack ADTs. b) Array implementation of Queue ADTs.	CO1
2. **LIST ADT** Array implementation of List ADT.	
3. IMPLEMENTATION OF STACK AND QUEUE Write Python programs to a) Design and implement Single Linked List. b) Design and implement Stack and its operations using List. c) Design and implement Queue and its operations using List.	
4. APPLICATIONS OF LINEAR DATA STRUCTURE Write Python programs for the following: a) Design and implement polynomial ADT using list b) Uses Stack operations to convert infix expression into postfix expression. c) Uses Stack operations for evaluating the postfix expression.	CO2
5. APPLICATIONS OF TREE a) Write a Python program to Design and implement binary tree. b) Traverse the above binary tree recursively in pre-order, post-order & in-order.	
6. **IMPLEMENTATION OF TREE** Write a Python program to Design and implement binary search tree.	
7. IMPLEMENTATION OF ADVANCED TREE a) Design and Implement AVL tree using Templates. b) Design and Implement heap tree using Templates.	CO3
8. IMPLEMENTATION OF SHORTEST PATH ALGORITHMS Write Python programs for the following: a) Design and Implement Dijkstra's algorithm b) Design and Implement Floyd Warshall algorithm.	CO3
9. IMPLEMENTATION OF MINIMUM SPANNING TREE Write Python programs for the following: a) Design and Implement Kruskal's algorithm. b) Design and Implement Prim's algorithm.	
10. GRAPH TRAVERSAL & APPLICATIONS Write Python programs to implement the following algorithms: a) Depth first search. b) Breadth first search. c) Topological Sorting.	

11. SORTING &SEARCHING AND HASH TABLE IMPLEMENTATION a) Write Python programs for implementing the following sorting techniques to arrange a list of integers in ascending order. i. Insertion sort ii. Selection sort iii. Quick sort iv. Merge sort b) Write Python programs for implement linear search and binary search. c) Write Python programs for implement Hashing – any two collision techniques	

TOTAL : 60 PERIODS

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Write functions to implement linear and non-linear data structure operations
CO2	Suggest appropriate linear / non-linear data structure operations for solving a given problem
CO3	Apply appropriate hash functions that result in a collision free scenario for data storage and retrieval

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)

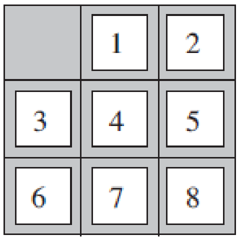
DS1308	ARTIFICIAL INTELLIGENCE LABORATORY	L	T	P	C
	Common to AI & DS	0	0	4	2

OBJECTIVES

- To get familiarized with the structure of agents
- To solve simple toy world problems
- To understand and develop solutions through search strategies.
- To develop solutions for constraint satisfaction problems.
- To increase the knowledge about real-world problems and how to plan and act in the real world and to get familiarized with expert systems

LIST OF EXPERIMENTS

1. Developed a simple reflex agent program in Python for the vacuum-cleaner world problem. This particular world has just two locations: squares A and B. The vacuum agent perceives which square it is in and whether there is dirt in the square. It can choose to move left, move right, suck up the dirt, or do nothing.
2. Solve the 8-puzzle problem, which consists of a 3×3 board with eight numbered tiles and a blank space. A tile adjacent to the blank space can slide into the space. The objective is to reach a specified goal state as given below. Find minimum number of steps required to reach the goal.



Goal State

3. Write a Python program to solve N Queen Problem using backtracking. The N Queen is the problem of placing N chess queens on an N×N chessboard so that no two queens attack each other.

CO1

4. Write a Python program for a path search problem to find a path from point A to point B using A* Search Algorithm.
5. Using Hill Climbing Search Algorithm, find the solution for a Travelling Salesman Problem, which has to find the shortest route from a starting location and back to the starting location after visiting all the other cities.
6. Given an undirected graph and a number m, determine if the graph can be coloured with at most m colours such that no two adjacent vertices of the graph are colored with the same color. Here coloring of a graph means the assignment of colors to all vertices.
7. Solve the cryptarithmetic puzzle SEND+MORE=MONEY using a Python program. Find digits that replace letters to make a mathematical statement true. Each letter in the problem represents one digit (0-9). No two letters can represent the same digit. When a letter repeats, it means a digit repeats in the solution.
8. Write a Python program to solve Sudoko. Given an initial 9x9 grid of cells containing numbers between 1 and 9 or blanks, all blanks must be filled with numbers. You win Sudoko if you find all values such that every row, column, and 3x3 sub square contains the numbers 1-9, each with a single occurrence.

CO2

9. A job shop consists of a set of distinct machines that process jobs. Each job is a series of tasks that require use of particular machines for known durations, and which must be completed in specified order. Implement the job shop scheduling problem to schedule the jobs on the machines to minimize the time necessary to process all jobs.
10. Demonstrate the use of MYCIN: a medical expert system. Implement a small example of an expert system; which defines a few contexts, parameters, and rules, and presents a rudimentary user interface to collect data about an infection in order to determine the identity of the infecting organism.

CO3

TOTAL : 60 PERIODS

LIST OF EQUIPMENT FOR A BATCH OF 30 STUDENTS
Standalone desktops with Python 3 Interpreter for Windows/Linux 30 Nos.

COURSE OUTCOMES
Upon completion of the course, students will be able to

CO1	Familiarized with the structure of agents, implement simple agents and develop solutions for simple toy world problems.
CO2	Implement and develop solutions for problems through different search strategies. Identify constraints of problems and develop solutions for constraint satisfaction problems.
CO3	Approach a real world problem, develop a plan and then solve those problems and use expert systems.

HS1310	PROFESSIONAL SKILLS LAB	L	T	P	C
	(Common to IT)	0	0	2	1

OBJECTIVES

- Enhance the Employability and Career Skills of students
- Orient the students towards grooming as a professional
- Make them Employable Graduates
- Develop their confidence and help them attend interviews successfully.

LIST OF EXPERIMENTS

UNIT I	6
Introduction to Soft Skills- Hard skills & soft skills - employability and career Skills–Grooming as a professional with values–Making an Oral Presentation–Planning and preparing a model presentation; Organizing the presentation to suit the audience and context; Connecting with the audience during presentation; Projecting a positive image while speaking; Emphasis on effective body language-General awareness of Current Affairs.	CO1
UNIT II	6
Self-Introduction-organizing the material - Introducing oneself to the audience - introducing the topic – answering questions – individual presentation practice–– Making a Power Point Presentation -- Structure and format; Covering elements of an effective presentation; Body language dynamics. Making an Oral Presentation–Planning and preparing a model presentation; Organizing the presentation to suit the audience and context; Connecting with the audience during presentation; Projecting a positive image while speaking; Emphasis on effective body language	CO2
UNIT III	6
Introduction to Group Discussion– Participating in group discussions - understanding group dynamics - brainstorming the topic -- questioning and clarifying -GD strategies- Structure and dynamics of a GD; Techniques of effective participation in group discussion; Preparing for group discussion; Accepting others' views / ideas; Arguing against others' views or ideas, etc	CO3
UNIT IV	6
Basics of public speaking; Preparing for a speech; Features of a good speech; Speaking with a microphone. (Famous speeches may be played as model speeches for learning the art of public speaking). Interview etiquette – dress code – body language – attending job interviews-telephone/skype interview -one to one interview &panel interview -Job Interviews: purpose and process; How to prepare for an interview; Language and style to be used in an interview; Types of interview questions and how to answer them.	CO4
UNIT V	6
Recognizing differences between groups and teams- managing time managing stress-networking professionally- respecting social protocols understanding career management-developing a long- term career plan making career changes	CO5

TOTAL : 30 PERIODS

LIST OF EQUIPMENT FOR A BATCH OF 30 STUDENTS

One Server
30 Desktop Computers
One Hand Mike
One LCD Projector

5. Interact English Lab Manual for Undergraduate Students, OrientBalckSwan: Hyderabad, 2016.

COURSE OUTCOMES
Upon completion of the course, students will be able to

CO1	Make effective presentations
CO2	Participate confidently in Group Discussions
CO3	Attend job interviews and be successful in them.
CO4	Develop adequate Soft Skills required for the workplace
CO5	Develop their speaking skills to enable them speak fluently in real contexts

MA1454	DISCRETE MATHEMATICS AND GRAPH THEORY	L	T	P	C
		3	1	0	4

OBJECTIVES

- To introduce Mathematical Logic, Inference Theory and proof methods.
- To provide fundamental principles on combinatorial counting techniques.
- To Demonstrate an understanding of relations and functions
- Be familiar with the most fundamental Graph Theory topics and results

UNIT I	LOGIC AND PROOFS	12
Propositional Logic - Propositional Equivalences - Normal Forms - Predicates and Quantifiers – Nested Quantifiers – Rules of Inference – Introduction to Proofs – Proof Methods and Strategy.		CO1
UNIT II	COMBINATORICS	12
Mathematical Induction - Strong Induction and Well Ordering - The Basics of Counting - The Pigeonhole Principle - Permutations and Combinations - Recurrence Relations -Generating Functions - Solving Linear Recurrence Relations Using Generating Functions- Inclusion - Exclusion - Principle and Its Applications.		CO2
UNIT III	SETS AND FUNCTIONS	12
Set -Relations on sets – Types of relations and their properties – Partitions – Equivalence relations – Partial ordering – Poset – Hasse diagram. Functions: Characteristic function of a set – Hashing functions – Recursive functions – Permutation functions.		CO3
UNIT IV	GRAPHS	12
Graphs - Introduction - Isomorphism - Sub graphs – Walks, Paths, Circuits -Connectedness - Components – Euler graphs – Hamiltonian paths and circuits		CO4
UNIT V	TREES	12
Trees – Properties of trees – Distance and centers in tree – Rooted and binary trees. - Spanning and Minimal spanning trees.		CO5
		TOTAL : 60 PERIODS

TEXT BOOKS

1. Kenneth H. Rosen, “Discrete Mathematics and its Applications”, Tata McGraw Hill Pub. Co.Ltd., Seventh Edition, Special Indian Edition, New Delhi, 2011.

5. Liu C.L., “Elements of Discrete Mathematics”, Mc Graw Hill, 1985.

COURSE OUTCOMES **Upon completion of the course, students will be able to**	
CO1	Construct proofs by using direct proof, proof by contraposition, proof by contradiction. Construct mathematical arguments using logical connectives and quantifiers and verify the correctness of an argument using propositions. Logic helps in arriving inferences for any problem.
CO2	Solve problems such as permutation and combination and in generating functions. Prove mathematical theorems using mathematical induction. Demonstrate basic counting principles, compute and interpret the meaning in the context of the particular application. Helps to apply the combinatorial techniques in Algorithms and Data structure for analysis and design.
CO3	Specify and manipulate basic mathematical objects such as sets, functions, and relations verify simple mathematical properties.
CO4	Apply the graph theory concepts in data structures, data mining, image segmentation and in clustering
CO5	Analyze trees and spanning trees, Minimal Spanning Trees which are helpful in analysis of algorithms, compilation of algebraic expressions, theoretical models of computation.

MAPPING OF COs WITH POs AND PSOs

CS1401	DESIGN AND ANALYSIS OF ALGORITHMS	L	T	P	C
	Common for CSE, IT, AI-DS and AI-ML	3	0	0	3

OBJECTIVES

- To learn the general framework for analyzing algorithm efficiency
- To be conversant with algorithms for common problems.
- To analyse the algorithms for time/space complexity.
- To write algorithms for a given problem using different design paradigms.
- To understand computational complexity of problems

UNIT I	**INTRODUCTION**	**9**
Algorithm – Fundamentals of Algorithmic Problem Solving – Important Problem Types – The Analysis Framework – Asymptotic Notations and Basic Efficiency Classes – Mathematical Analysis of Non recursive and Recursive Algorithms – Empirical Analysis of Algorithms.		**CO1**
UNIT II	**DECREASE AND CONQUER AND DIVIDE-AND-CONQUER**	**9**
Decrease-and-Conquer- Insertion Sort – Binary Search – Computing a Median and the Selection Problem - Divide-and-Conquer - Merge Sort - Quicksort - The Closest -Pair and Convex -Hull Problems by Divide-and-Conquer.		**CO2**
UNIT III	**DYNAMIC PROGRAMMING AND GREEDY TECHNIQUE**	**9**
The Knapsack Problem and Memory Functions - Optimal Binary Search Trees - Warshall's Algorithm - Floyd's Algorithm - Greedy Technique - Prim's Algorithm - Kruskal's Algorithm - Dijkstra'sAlgorithm – Huffman Trees and Codes.		**CO3**
UNIT IV	**ITERATIVE IMPROVEMENT**	**9**
Graphical Method - The Simplex Method - The maximum Flow Problem - Maximum Matching in Bipartite Graphs – The Stable Marriage Problem.		**CO4**
UNIT V	**BACKTRACKING, BRANCH-AND-BOUND AND APPROXIMATION ALGORITHMS**	**9**
P, NP, and NP- Complete Problems - Backtracking - n-Queens Problem - Hamiltonian Circuit Problem – Subset-Sum Problem – Branch-and-Bound – Assignment Problem – Knapsack Problem - TravelingSalesman Problem - Approximation Algorithms for the Traveling Salesman Problem and the KnapsackProblem.		**CO5**
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Anany Levitin, "Introduction to the Design and Analysis of Algorithms", Third Edition, Pearson Education, 2012.
2. Thomas H. Cormen, Charles E. Leiserson, Ronald L. Rivest, Clifford Stein, "Introduction to Algorithms", Third Edition, McGraw Hill, 2009.

2. Robert Sedgewick, Kevin Wayne, “Algorithms”, Fourth Edition, Pearson Education, 2011.
3. Donald E. Knuth, “Art of Computer Programming, Volume I - Fundamental Algorithms”, Third Edition, Addison Wesley, 1997.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Ability to investigate an algorithm’s efficiency with respect to running time
CO2	Design and implement problems using algorithmic design techniques such as decrease and conquer and divide and conquer
CO3	Ability to understand the design techniques such as Dynamic programming and Greedy technique
CO4	Ability to understand the iterative design techniques
CO5	Understand the variations among tractable and intractable problems

MAPPING OF COs WITH POs AND PSOs

CS1402	OPERATING SYSTEMS	L	T	P	C
	(Common to CSE, AI-DS & IT)	3	0	0	3

OBJECTIVES

- To understand the basic concepts and functions of operating systems.
- To understand Processes and Threads
- To analyze Scheduling algorithms.
- To understand the concept of Deadlocks.
- To analyze various memory management schemes.
- To understand I/O management and File systems.
- To be familiar with the basics of Linux system and Mobile OS like iOS and Android

UNIT I	OPERATING SYSTEM OVERVIEW	9
Computer System Overview-Basic Elements, Instruction Execution, Interrupts, Memory Hierarchy, Cache Memory, Direct Memory Access, Multiprocessor and Multicore Organization. Operating system overview-objectives and functions, Evolution of Operating System.- Computer System Organization Operating System Structure and Operations- System Calls, System Programs, OS Generation and System Boot.		CO1
UNIT II	**PROCESS MANAGEMENT**	**9**
Processes – Process Concept, Process Scheduling, Operations on Processes, Inter-process Communication; CPU Scheduling – Scheduling criteria, Scheduling algorithms, Multiple-processor scheduling; Threads- Overview, Multithreading models, Threading issues; Process Synchronization – The critical-section problem, Semaphores, Classical problems of synchronization, Monitors; Deadlock - System model, Deadlock characterization, Methods for handling deadlocks, Deadlock prevention, Deadlock avoidance, Deadlock detection, Recovery from deadlock.		CO2
UNIT III	**STORAGE MANAGEMENT**	**9**
Main Memory – Background, Swapping, Contiguous Memory Allocation, Paging, Segmentation, Segmentation with paging, 32 and 64 bit architecture Examples; Virtual Memory – Background, Demand Paging, Need for Page Replacement, Page Replacement Algorithm, Allocation, Thrashing; Allocating Kernel Memory, OS Examples.		CO3
UNIT IV	**FILE SYSTEMS AND I/O SYSTEMS**	**9**
Mass Storage system – Overview of Mass Storage Structure, Disk Structure, Disk Scheduling and Management, swap space management; File-System Interface - File concept, Access methods, Directory Structure, Directory organization, File Sharing and Protection; File System Implementation- File System Structure, Directory implementation, Allocation Methods, Free Space Management, Efficiency and Performance, Recovery; I/O Systems – I/O Hardware, Application I/O interface, Kernel I/O subsystem, Streams, Performance.		CO4
UNIT V	**CASE STUDY**	**9**
Linux System - Design Principles, Kernel Modules, Process Management, Scheduling, Memory Management, Input-Output Management, File System, Inter-process Communication; Mobile OS - iOS and Android - Architecture and SDK Framework, Media Layer, Services Layer, Core OS Layer, File System.		CO5

CS1403	DATABASE DESIGN AND MANAGEMENT (Lab Integrated)	L	T	P	C
	(Common to CSE, AI-DS & IT)	3	0	2	4

OBJECTIVES

- To learn the fundamentals of data models, ER diagrams and to study SQL and relational database design.
- To familiarize relational model with Relational Database design and Normal Forms.
- To understand the fundamental concepts of transaction processing- concurrency control techniques and recovery procedures.
- To understand the implementation techniques by learning file organization and Query Optimization.
- To understand the concepts of distributed databases, Object Oriented databases and XML databases.

UNIT I	INTRODUCTION TO RELATIONAL DATABASES	9 + 6
	Purpose of Database System – Views of data – Data Models – Database System Architecture Entity-Relationship model - E-R Diagrams - Enhanced-ER Model - ER-to-Relational Mapping- Introduction to relational databases – Relational Model – Keys – Relational Algebra – SQL fundamentals – Advanced SQL features **Lab Component** • Data Definition Commands, Data Manipulation Commands for inserting, deleting, updating and retrieving Tables and Transaction Control statements .Database Querying – Simple queries, Nested queries, Sub queries and Joins • Queries using Aggregate functions (COUNT, SUM, AVG, MAX and MIN), GROUP BY, HAVING and Creation and dropping of Views, Synonyms, Sequences. • Conceptual Designing using ER Diagrams (Identifying entities, attributes, keys and relationships between entities, cardinalities, generalization, specialization etc.)	CO1
UNIT II	ER MODEL AND RELATIONAL DATABASE DESIGN	9 + 6
	Embedded SQL- Dynamic SQL - Functional Dependencies - Non-loss Decomposition - First, Second, Third Normal Forms, Dependency Preservation – Boyce/Codd Normal Form - Multi-valued Dependencies and Fourth Normal Form – Join Dependencies and Fifth Normal Form **Lab Component** • Simple Embedded SQL Program to demonstrate the concepts. • Database Design using normalization and Implementation for any application.	CO2
UNIT III	TRANSACTIONS	9 + 6
	Transaction Concepts - ACID Properties – Schedules – Serializability – Concurrency Control - Need for Concurrency – Locking Protocols – Two Phase Locking – Deadlock – Transaction Recovery – Save Points – Isolation Levels – SQL Facilities for Concurrency and Recovery. **Lab Component** • Usage of Transaction control language commands like commit, rollback and save point. • Develop Programs using BEFORE and AFTER Triggers for INSERT,DELETE and UPDATE statements	CO3
UNIT IV	IMPLEMENTATION TECHNIQUES	9 + 6
	RAID – File Organization – Organization of Records in Files – Indexing and Hashing -Ordered Indices – B+ tree Index Files – B tree Index Files - Static Hashing – Dynamic Hashing. Query Processing Overview - Algorithms for SELECT and JOIN operations – Query optimization using Heuristics and Cost Estimation. **Lab Component** • Implementation of B tree and B+ Tree. • Develop programs to demonstrate hashing techniques.	CO4
UNIT V	ADVANCED TOPICS	9 + 6
	Distributed Databases: Architecture, Data Storage, Data Fragmentation - Replication and Allocation Techniques for Distributed Database Design. Distributed Databases: Architecture,	CO5

Data Storage, Transaction Processing - Object-based Databases: Object Database Concepts, Object-Relational features, ODMG Object Model, ODL, OQL - XML Databases: XML Hierarchical Model, DTD, XML Schema, XQuery.

Lab Component

- Database Connectivity with Front End Tools
- Case Study using real life database applications.

PRACTICALS: 30 PERIODS	THEORY: 45 PERIODS	TOTAL : 75 PERIODS

TEXT BOOKS

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Map ER model to Relational model to perform database design effectively
CO2	Able to understand the various normal forms and to minimize the redundancy in the relations
CO3	Able to know the logic behind the transaction processing, concurrency control and to recover system from failures.
CO4	Able to organize, index the files and to optimize the given queries
CO5	Able to know the concepts of distributed databases, Object Oriented databases and XML databases

ML1401	FOUNDATIONS OF MACHINE LEARNING	L	T	P	C
	Common for IT, AI-DS & CSE	3	0	0	3

OBJECTIVES

- To understand the basic concepts of machine learning and probability theory.
- To appreciate supervised learning and their applications.
- To understand unsupervised learning like clustering and EM algorithms.
- To understand the theoretical and practical aspects of probabilistic graphical models.
- To learn other learning aspects such as reinforcement learning, representation learning, deep learning, neural networks and other technologies.

UNIT I	**INTRODUCTION**	**9**
Machine Learning – Types of Machine Learning – Supervised Learning – Unsupervised Learning – Basic Concepts in Machine Learning – Machine Learning Process – Weight Space – Testing Machine Learning Algorithms – A Brief Review of Probability Theory -Turning Data into Probabilities – The Bias-Variance Trade-off, FIND-S Algorithm, Candidate Elimination Algorithm		**CO1**
UNIT II	**SUPERVISED LEARNING**	**9**
Linear Models for Regression – Linear Basis Function Models – The Bias-Variance Decomposition – Bayesian Linear Regression – Common Regression Algorithms – Simple Linear Regression – Multiple Linear Regression – Linear Models for Classification – Discriminant Functions – Probabilistic Generative Models – Probabilistic Discriminative Models – Laplace Approximation – Bayesian Logistic Regression – Common Classification Algorithms – k-Nearest Neighbors – Decision Trees – Random Forest model – Support Vector Machines		**CO2**
UNIT III	**UNSUPERVISED LEARNING**	**9**
Mixture Models and EM – K-Means Clustering – Dirichlet Process Mixture Models – Spectral Clustering – Hierarchical Clustering – The Curse of Dimensionality – Dimensionality Reduction – Principal Component Analysis – Latent Variable Models (LVM) – Latent Dirichlet Allocation (LDA)		**CO3**
UNIT IV	**GRAPHICAL MODELS**	**9**
Bayesian Networks – Conditional Independence – Markov Random Fields – Learning – Naive Bayes Classifiers – Markov Model – Hidden Markov Model.		**CO4**
UNIT V	**ADVANCED LEARNING**	**9**
Reinforcement Learning – Representation Learning – Neural Networks – Active Learning – Ensemble Learning – Bootstrap Aggregation – Boosting – Gradient Boosting Machines – Deep Learning		**CO5**
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Ethem Alpaydin, “Introduction to Machine Learning”, Third Edition, Prentice Hall of India, 2015.

REFERENCE BOOKS

1. Christopher Bishop, “Pattern Recognition and Machine Learning”, Springer, 2006.
2. Kevin P. Murphy, “Machine Learning: A Probabilistic Perspective”, MIT Press, 2012.
3. Stephen Marsland, “Machine Learning – An Algorithmic Perspective”, Second Edition, CRC Press, 2014.
4. Tom Mitchell, “Machine Learning”, McGraw-Hill, 2017.
5. Trevor Hastie, Robert Tibshirani, Jerome Friedman, “The Elements of Statistical Learning”, Second Edition, Springer, 2008.
6. Fabio Nelli, “Python Data Analytics with Pandas, Numpy, and Matplotlib”, Second Edition, Apress, 2018.

COURSE OUTCOMES
Upon completion of the course, students will be able to

CO1	Gain knowledge about basic concepts of machine learning techniques
CO2	Develop predictive model based on both input and output data
CO3	Ability to understand the unsupervised learning algorithm and dimensionality reduction techniques
CO4	Design systems that use the appropriate graphical models of machine learning
CO5	Ability to address the problem of learning control strategies for autonomous agents

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

ML1402	STATISTICS FOR MACHINE LEARNING	L	T	P	C
		3	0	0	3

OBJECTIVES

- Be familiar with estimation theory and related concepts.
- Be provide basic applications of testing of hypothesis.
- To introduce correlation functions and ARIMA models.
- To provide fundamental applications on fourier analysis and SARIMA models.
- To demonstrate VC dimension

UNIT I	ESTIMATION THEORY	9
Introduction to estimation theory-Goodness of estimators-Fishers information -Properties of estimators; bias, variance, efficiency- C-R bound- consistency		CO1
UNIT II	BAYESIAN LEARNING	9
Regression -Maximum Likelihood Estimator-MAP Estimator -Evidence Function and Laplacian Approximator-Latent Variables-EM Algorithm.		CO2
UNIT III	ARMA MODELS	9
Auto- and cross-correlation functions- Partial correlation functions -Linear random processes-Auto-regressive-Moving average and ARMA models.		CO3
UNIT IV	ARIMA MODELS AND FOURIER ANALYSIS	9
Models for non-stationary processes-Trends, heteroskedasticity and ARIMA models -Fourier analysis of deterministic signals- DFT and periodogram.		CO4
UNIT V	STATISTICAL LEARNING THEORY	9
Computational Learning Theory-Introduction-General Framework for Concept Learning-PAC Learning Model-VC Dimension-Learning in the presence of noise.		CO5
		TOTAL : 45 PERIODS

2. Kukar, M., Kononenko, I, Machine Learning and Data Mining. United Kingdom: ElsevierScience,2007.
3. Jonathan D.Cryer,Kung Sik Chan,Time Series Analysis,Springer,Second Edition,2008.
4. Robert H.Shumway,Time Series Analysis and its Applications,Springer,Fourth Edition,2016.
5. Jerome H.Friedman,Robert Tibshirani,The Elements of Statistical Learning,Springer.

REFERENCE BOOKS

1. Kevin Murphy,Machine Learning: A probabilistic perspective,MIT Press,2012
2. Spiegel. M.R., Schiller. J. and Srinivasan, R.A.,Schaum's Outline of Theory and Problems of Probability and Statistics, Tata McGraw Hill Edition, 2008.

COURSE OUTCOMES Upon completion of the course, students will be able to

CO1	Analyze estimation theory and different types of estimators.
CO2	Apply testing of hypothesis related concepts.
CO3	Apply the cross-correlation functions and ARIMA models.
CO4	Specify and manipulate non-stationary processes and SARIMA models.
CO5	Apply the VC dimension in different problems

CS1407	OPERATING SYSTEMS LABORATORY	L	T	P	C
	Common to CSE & IT	0	0	4	2

OBJECTIVES

- To learn basic Unix commands, shell programming and to implement various Process Management functions such as IPC and Scheduling.
- To implement Process Synchronization, Deadlock Detection and Avoidance and Memory Allocation methods.
- To implement Paging Techniques and File Management Techniques.

LIST OF EXPERIMENTS

Experiment	CO
1. Simulation of Unix Commands like cp, ls, grep, cd, mkdir, cat, rm etc.,	CO1
2. Implementation of Shell Programs.	
3. Implementation of CPU Scheduling Algorithms.	
4. Implementation of Producer Consumer problem using Semaphore.	
5. Implementation of Inter-process Communication using Shared memory.	
6. Implementation of Threading and Synchronization Applications.	CO2
7. Implementation of Bankers Algorithm for Deadlock Avoidance.	
8. Implementation of Deadlock Detection Algorithm.	
9. Implementation of Contiguous Memory Allocation.	
10. Implementation of Memory Management scheme using Paging.	CO3
11. Implementation of Page Replacement Algorithms.	
12. Implementation of Directory Structures.	
13. Implementation of File Allocation Strategies.	

TOTAL : 60 PERIODS

REFERENCE BOOKS

1. Abraham Silberschatz, Peter Baer Galvin and Greg Gagne, ―Operating System Concepts‖, 9th Edition, John Wiley and Sons Inc., 2012.
2. William Stallings, "Operating Systems – Internals and Design Principles", 7 th Edition, Prentice Hall, 2011.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Develop simple applications with shell programming and Scheduling mechanisms.
CO2	Design and develop applications for synchronization, deadlock avoidance and detection.
CO3	Develop applications for implementing Paging and File management concepts.

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

ML1408	MACHINE LEARNING LABORATORY	L	T	P	C
Common for IT, AI-DS & AI-ML		0	0	4	2

OBJECTIVES

- To make use of Data sets in implementing the machine learning algorithms
- To implement the machine learning concepts and algorithms in any suitable language of choice
- To understand the practical aspects of probabilistic graphical models.

LIST OF EXPERIMENTS

1. Implement and demonstrate the FIND-S algorithm for finding the most specific hypothesis based on a given set of training data samples. Read the training data from a .CSV File	CO1
2. For a given set of training data examples stored in a .CSV file, implement and demonstrate the Candidate-Elimination algorithm. Output a description of the set of all hypotheses consistent with the training examples.	CO1
3. Write a program to demonstrate the working of the decision tree based ID3 algorithm. Use an appropriate data set for building the decision tree and apply this knowledge to classify a new sample	CO2
4. Build an Artificial Neural Network by implementing the Back propagation algorithm and test the same using appropriate data sets	CO2
5. Write a program to implement the naïve Bayesian classifier for a sample training data set stored as a .CSV file. Compute the accuracy of the classifier, considering few test data sets.	CO2
6. Assuming a set of documents that need to be classified, use the naïve Bayesian Classifier model to perform this task. Built-in Java classes/API can be used to write the program. Calculate the accuracy, precision, and recall for your data set.	CO3
7. Write a program to construct a Bayesian network considering medical data. Use this model to demonstrate the diagnosis of heart patients using standard Heart Disease Data Set. You can useJava/Python ML library lasses/API	CO3
8. Apply EM algorithm to cluster a set of data stored in a .CSV file. Use the same data set for clustering using k-Means algorithm. Compare the results of these two algorithms and comment on the quality of clustering. You can add Java/Python ML library lasses/API in the program.	CO3
9. Write a program to implement k-Nearest Neighbor algorithm to classify the iris data set. Print both correct and wrong predictions. Java/Python ML library classes can be used for this problem.	CO3
10. Implement the non-parametric Locally Weighted Regression algorithm in order to fit data points. Select appropriate data set for your experiment and draw graphs	CO3

TOTAL : 60 PERIODS

ML1501	REINFORCEMENT LEARNING	L	T	P	C
		3	0	0	3

OBJECTIVES

- This course provides an introduction to some of the foundational ideas on which modern reinforcement learning is built, including Markov decision processes, value functions, Monte Carlo estimation, temporal difference learning, eligibility traces, function approximation& Q Learning.
- This course will develop an intuitive understanding of these concepts (taking the agent's perspective), while also focusing on the mathematical theory of reinforcement learning.
- This course will develop Programming assignments and projects will require implementing and testing complete decision making systems.

UNIT I	**INTRODUCTION TO RL**	**9**
Bandwidth optimalities-Epsilon greedy theory- Concentration bounds-Probably approximate correct (PAC) -Upper confidence bound theory (UCB)-Medium Elimination-Thomson Sampling theory –Thomson sampling with Gaussian reward- Policy search- Gradient Bandwidths- Contextual Bandwidth –returns- value functions.		**CO1**
UNIT II	**MARKOV DECISION PROCESSES & DYNAMIC PROGRAMMING**	**9**
Markov Decision Processes (MDP)- Introduction-Markov Property-MDP modelling- Bellman Equations - Bellman optimality equation- Cauchy sequence- Green's equation- Convergence Proof- LPI Convergence- Value iterations- policy iterations- Dynamic Programming - Monte Carlo (MC)- MC policy evaluation- MC control.		**CO2**
UNIT III	**MONTE CARLO & TEMPORAL DIFFERENCE METHODS**	**9**
OFF Policy Monte Carlo control – Temporal difference- Optimality of TD(0)- State-action- reward-state-action (SARSA) - TD(0) Control- Q Learning – Eligibility traces-Backward View of Eligibility traces- Eligibility trace control.		**CO3**
UNIT IV	**DEEP Q LEARNING**	**9**
Function Approximation – Linear Parameterization- State aggregation methods- LSTD and LSTDQ- LSPI and Fitted Q - Deep Q Network (DQN) – Fitted Q- Iteration- Actor Critic- Reinforce – Policy gradient with function approximation		**CO4**
UNIT V	**HIERARCHICAL RL**	**9**
Introduction- Types of optimality- Semi MDP- Learning with options- Hierarchical abstract machines- MAXQ- MAXQ value function decomposition- option discovery.		**CO5**
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Richard S. Sutton and Andrew G. Barto. Introduction to Reinforcement Learning, 2nd Edition, MIT Press. 2017.
2. Neuro Dynamic Programming. Dimitri Bertsikas and John G. Tsitsiklis. Athena Scientific. 1996

REFERENCE BOOKS
1. Algorithms for Reinforcement Learning by Csaba Szepesvari, Morgan and Claypool, 1 edition (2010)
COURSE OUTCOMES **Upon completion of the course, students will be able to**

CO1	Build a Reinforcement Learning system for sequential decision making.
CO2	Understand the space of RL algorithms (Temporal- Difference learning, Monte Carlo, Sarsa, Q-learning, Policy Gradients, Dyna, and more).
CO3	Understand how to formalize your task as a Reinforcement Learning problem, and how to begin implementing a solution.
CO4	Understand how RL fits under the broader umbrella of machine learning, and how it complements deep learning, supervised and unsupervised learning
CO5	Understand a new perspective of Reinforcement Learning.

MAPPING OF COs WITH POs AND PSOs

DS1502	ADVANCED ARTIFICIAL INTELLIGENCE	L	T	P	C
	(Common to AI-DS)	3	1	0	3

OBJECTIVES

- To analyze Probabilistic Reasoning for knowledge
- To give understanding of main abstractions of decision making.
- To understand a wide variety of learning algorithms.
- To understand the different ways of designing software agents
- To understand the application of AI namely Robotics

UNIT I	UNCERTAINTY AND REASONING	9
Uncertainty - Basic Probability Notation - Axioms of Probability - Bayes Rule - Probabilistic Reasoning - Bayesian Networks - Semantics - Inference - Other Approaches to Uncertain Reasoning – Dempster Shafer Theory – Fuzzy sets and Fuzzy Logic		CO1
UNIT II	**DECISION MAKING**	**9**
Utility Theory - Utility Functions – Decision Networks – Value of Information – Decision Theoretic Expert Systems - Sequential Decision Problems – Value Iteration – Policy Iteration – Decision Theoretic Agents		CO2
UNIT III	**LEARNING METHODS**	**9**
Learning from Observations - Forms of Learning - Inductive Learning - Learning Decision Trees - Ensemble Learning - Explanation Based Learning - Learning with Complete Data - Naïve Bayes Models – Learning with Hidden Variables – The EM Algorithm – Neural Networks		CO3
UNIT IV	**SOFTWARE AGENTS**	**9**
Architecture for Intelligent Agents - Examples - Agent communication - KQML- KIF - FIPA ACL - Speech Acts - Argumentation among Agents - Trust and Reputation in Multi-agent systems		CO4
UNIT V	**ROBOTICS**	**9**
Robot Hardware - Robotic Perception - Planning to Move, Planning Uncertain Movements - Moving – Robotic Software Architectures – Application Domains		CO5
		TOTAL : 45 PERIODS

TEXT BOOKS

1. S. Russell and P. Norvig, "Artificial Intelligence: A Modern Approach, Prentice Hall, Third Edition, 2009.
2. Kevin Night and Elaine Rich, Nair B., “Artificial Intelligence (SIE)”, McGraw Hill- 2008.

REFERENCE BOOKS

1. Gerhard Weiss, - Multi Agent Systems , Second Edition, MIT Press, 2013
2. S. Kaushik, Artificial Intelligence, Cengage Learning, 1st Edition, 2011
3. David L. Poole and Alan K. Mackworth, - Artificial Intelligence: Foundations of Computational Agents ,Cambridge University Press, 2010.
4. Nils J. Nilsson,- The Quest for Artificial Intelligence, Cambridge University Press,2009

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Acquire theoretical knowledge about principles for logic-based representation and reasoning
CO2	Develop a decision making model that utilizes Artificial Intelligence.
CO3	Develop an understanding what is involved in learning models from data.
CO4	Select appropriately from a range of techniques when implementing intelligent systems
CO5	Gain knowledge on the functions of Robots

MAPPING OF COs WITH POs AND PSOs

Cos	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)

ML1502	NATURE INSPIRED COMPUTING TECHNIQUES	L	T	P	C
		3	0	0	3

OBJECTIVES

- To understand the fundamentals of nature inspired techniques which influence computing
- To study the Swarm Intelligence and Immuno computing techniques.
- To Learn fundamental concepts of fuzzy logic and artificial neural network

UNIT I	INTRODUCTION	9
From Nature to Nature Computing , Philosophy , Three Branches: A Brief Overview, Individuals, Entities and agents - Parallelism and Distributivity Interactivity ,Adaptation Feedback-Self-Organization-Complexity, Emergence and Reductionism, Bottom-up Vs Top-Down- Determination, Chaos and Fractals.		CO1
UNIT II	**SWARM INTELLIGENCE**	**9**
Introduction - Ant Colonies, Ant Foraging Behavior, Ant Colony Optimization, SACO and scope of ACO algorithms, Ant Colony Algorithm (ACA), Swarm Robotics, Foraging for food, Social Adaptation of Knowledge, Particle Swarm Optimization (PSO).		CO2
UNIT III	**IMMUNOCOMPUTING**	**9**
Introduction- Immune System, Physiology and main components, Pattern Recognition and Binding , Immune Network Theory- Danger Theory, Evaluation Interaction Immune Algorithms--Genetic Algorithms , Reproduction-Crossover, Mutation, Evolutionary Programming, Genetic Programming.		CO3
UNIT IV	**FUNDAMENTALS OF FUZZY LOGIC**	**9**
Basic concepts: fuzzy set theory- basic concept of crisp sets and fuzzy sets- complements-union intersection- combination of operation- general aggregation operations- fuzzy relations-compatibility relations-orderings- morphisms- fuzzy relational equations-fuzzy set and systems-Fuzzy inference.		CO4
UNIT V	**INTRODUCTION TO NEURAL NETWORKS**	**9**
Introduction – history-Applications-Biological inspiration -Neuron Model and Network Architecture: Objectives – notation – neuron model – Network Architectures – A layer of neurons – multiple layers of Neurons-recurrent networks – An Illustrative example - Perceptron Learning Rule Perceptron Learning Rule : Perceptron architecture -Perceptron learning rule - proof of convergence		CO5
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Leandro Nunes de Castro, " Fundamentals of Natural Computing, Basic Concepts, Algorithms and Applications", Chapman & Hall/ CRC, Taylor and Francis Group, 2007
2. George J Klir / Bo Yuan ," Fuzzy Sets and Fuzzy Logic Theory and Applications", Prentice Hall
3. Laurene Fausett- "Fundamentals of Neural Networks Architectures, Algorithms and Applications", Prentice Hall, First Edition.

REFERENCE BOOKS

ML1507	APPLIED REINFORCEMENT LABORATORY	L	T	P	C
		0	0	4	2

OBJECTIVES

Reinforcement learning is a paradigm that aims to model the trial-and-error learning process that is needed in many problem situations where explicit instructive signals are not available. It has roots in operations research, behavioral psychology and AI. The goal of the course is to introduce the basic mathematical foundations of reinforcement learning, as well as highlight some of the recent directions of research

LIST OF EXPERIMENTS

1. Implement Epsilon Greedy algorithm with python	CO1
2. Implement Upper confidence bound theory (UCB) algorithm with python	CO1
3. Implement Thomson sampling algorithm with python	CO1
4. Implement Policy iteration algorithm with python	CO1
5. Implement Value Iteration code algorithm with python	CO2
6. Implement Monte Carlo control & MC Policy Evaluation algorithm with python	CO2
7. Implement TD(0) Prediction algorithm with python	CO2
8. Implement SARSA algorithm with python	CO3
9. Implement Q Learning algorithm with python	CO3

TOTAL : 60 PERIODS

LIST OF EQUIPMENT FOR A BATCH OF 30 STUDENTS

Standalone desktops with Python 3 Interpreter for Windows/Linux 30 Nos

COURSE OUTCOMES
Upon completion of the course, students will be able to

CO1	Understand and apply basic RL algorithms for simple sequential decision making problems in uncertain conditions.
CO2	Evaluate the performance of the solution
CO3	Interpret state-of-the-art RL research and communicate their results

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO1	PSO2	PSO3

DS1508	ADVANCED ARTIFICIAL INTELLIGENCE LABORATORY	L	T	P	C
	(Common to AI-DS)	0	0	4	2

OBJECTIVES

- To be able to reason under uncertainty of the real-world.
- To understand supervised learning techniques.
- To increase knowledge about learning with hidden variables.
- To understand how to use natural language processing.
- To get familiarized with basics of robotics.

LIST OF EXPERIMENTS

Experiment	CO
1. Implement a Python program of automatic Tic Tac Toe game using random number.	CO1
2. Apply Bayes' Rule to a scenario of drug screening, which is a mandatory testing for federal or many other jobs which promise a drug-free work environment.	CO1
3. Demonstrate the application of Bayesian Network for the Monty Hall Problem. The Monty Hall problem is a brain teaser, in the form of a probability puzzle. Assume that you're on a game show, and you're given the choice of three doors: Behind one door is a car; behind the others, goats. You pick a door, say No. 1, and the host, who knows what's behind the doors, opens another door, say No. 3, which has a goat. He then says to you, "Do you want to pick door No. 2?" Is it to your advantage to switch your choice?	CO1
4. Write a Python program to create a fuzzy control system which models how you might choose to tip at a restaurant. When tipping, you consider the service and food quality, rated between 0 and 10. You use this to leave a tip of between 0 and 25%.	CO1
5. Formulate a decision tree, which is applicable in the field of medical sciences that will help predict whether or not a patient has diabetes.	CO2
6. Implement Adaptive Boosting in Python for a simple fruit classification problem. Consider classification of the fruits into oranges or apples. The characteristics that are provided for the fruits to be classified are weight and size (diameter). Classify a new fruit as either apple or orange just based on the data on the size and weights.	CO2
7. For a coin toss example with incomplete information, we have missing data and the problem of estimating θ, where θ is the probability of heads or tails is harder to solve. Apply Expectation Maximization (EM) Algorithm to start with a guess for θ, then calculate z, then update θ using this new value for z, and repeat till convergence. The label of the coin is indicated by z.	CO2
8. Perform text classification for a real-world example. Consider a model capable of predicting whether a given movie review is positive or negative. Use people's sentiments which are classified into different categories and based upon the text classification give either a positive review or a negative review.	CO3
9. Given a robot which can only move in four directions, UP (U), DOWN (D), LEFT (L), and RIGHT(R). Given a string consisting of instructions to move. Output the coordinates of a robot after executing the instructions. Initial position of robot is at origin (0, 0).	CO3
10. A robot moves in a plane starting from the original point (0, 0). The robot can move toward UP, DOWN, LEFT and RIGHT with a given steps. Write a program to compute the distance from current position after a sequence of movement and original point. If the distance is a float, then just print the nearest integer.	CO3

COURSE OUTCOMES
Upon completion of the course, students will be able to

CO1	Approach a real world problem, which is uncertain and provide appropriate reasoning.
CO2	Develop solutions using supervised learning techniques and know how to deal with problems with hidden variables.
CO3	Use natural language processing and program basics of robotics.

MAPPING OF COs WITH POs AND PSOs

ML1601	DEEP LEARNING	L	T	P	C
		3	0	0	3

OBJECTIVES

- To familiarize the fundamental concepts and principles of neural networks.
- To explore the basic concepts of deep learning.
- To familiarize with CNN and RNN models.
- To understand and develop deep learning architectures.
- To implement various applications using deep learning.

UNIT I	INTRODUCTION TO DEEP LEARNING	9
Basic Concept of Neurons - Perceptron Algorithm - Shallow Neural Networks - Non Linear Activation Functions - Gradient Descent and Backpropagation - Shallow and Deep Learning Networks		CO1
UNIT II	IMPROVING NEURAL NETWORKS	9
Overfitting – Regularization – Dropout – Vanishing and Exploding Gradients Problem - Mini Batch Gradient Descent - Weight Initialization Strategies - Nesterov Accelerated Gradient - Momentum – RMSProp – ADAM - Mitigation — Heuristics for Avoiding Bad Local Minima and Faster Training - Mini Batch Gradient Descent - Batch Normalization - Adversarial Training - Optimization for Training Deep Models.		CO2
UNIT III	CONVOLUTIONAL NEURAL NETWORKS	9
Convolution Operations – Pooling Layers – ResNets – CNN Architectures - Transfer Learning – Data Augmentation – Image Classification using Transfer Learning - Autoencoders – Deep Generative Models - Generative Adversarial Networks (GANs) - Evaluation GANs.		CO3
UNIT IV	SEQUENCE MODELS AND NATURAL LANGUAGE PROCESSING	9
Recurrent Neural Networks – Vanishing Gradients in RNNs - Gated Recurrent Units - Long Short Term Memory (LSTM) Networks – Bidirectional RNNs - Sequence Prediction – Transfer Learning – Language Models – Word Embeddings – Beam Search - Attention Models – Transformer Networks.		CO4
UNIT V	APPLICATIONS OF DEEP LEARNING	9
Image segmentation – Object Detection – Image Captioning – Image generation with Generative adversarial networks – Video to Text with LSTM models – Attention models for Computer Vision - Case Study: Named Entity Recognition – Opinion Mining using Recurrent Neural Networks - Parsing and Sentiment Analysis using Recursive Neural Networks - Sentence Classification using Convolutional Neural Networks.		CO5

TOTAL : 45 PERIODS

Lab Component
➢ Determine the DH parameters of Humanoid robot and develop its kinematics model using Corke MATLAB toolbox.</td><td>CO3</td></tr>
</table>

UNIT IV	LOCALIZATION AND MAPPING	9+6
Introduction- The Challenge of Localization- Localization-Based Navigation Versus Programmed Solutions- Belief Representation- Map Representation- Probabilistic Map Based Localization- Examples of Localization Systems- Autonomous Map Building. **Lab Component** ➢ Collect the components from Lego components trolley as required to develop the prototype of the robotic vehicle mechanism. i) List of the components used. ii) Show the build-up with images of each step. iii) Final assembly of developed prototype. iv) Write the applications related to mechanism developed.		CO4
UNIT V	**PLANNING AND NAVIGATION**	**9+6**
Introduction- Planning and Reacting- Path Planning behaviour - Avoid Obstacle behaviour- Bug algorithm Vector field histogram- The bubble band technique- Curvature velocity techniques- Dynamic window approaches- The Schlegel approach to obstacle avoidance- Nearness diagram Gradient method Adding dynamic constraints- Navigation Architects. **Lab Component** ➢ Identify, depict, assess, and get the data ready for robots. ➢ Build the obstacle avoidance/path planning robot by utilizing learning techniques.		CO5

PRACTICALS: 30 PERIODS	THEORY: 45 PERIODS	TOTAL : 75 PERIODS

TEXT BOOKS

1. Introduction to Autonomous Mobile Robots ,2nd edition 2011 Roland Siegwart, Illah R. Nourbakhsh, and DavideScaramuzza
2. Introduction to Autonomous Robots, 1stedition 2016 NikolausCorrell

REFERENCE BOOKS

1. Probabilistic robotics, MIT Press, Thrun, Burgards, and Fox. 2005
2. Computational Principles of Mobile Robotics. Gregory Dudek and Michael Jenkin. 2nd ed. Cambridge University Press, 2010.
3. Robot Modeling and Control. Mark W. Spong, Seth Hutchinson and M. Vidyasagar. John Wiley and Sons, 2006.
4. Computational Principles of Mobile Robotics, Gregory Dudek, Michael Jenkin, Cambridge University Press, 2010.
5. Autonomous Robots, George A. Bekey, MIT Press, 2005.

COURSE OUTCOMES
Upon completion of the course, students will be able to

CO1	• Identify, categorize, and evaluate the principles of mobile robotics. • Describe the design and operation of a mobile robot. • Acquire understanding of the principles governing the dynamics and motion control of robotic manipulators.
CO2	• Elucidate the functions of sensors, driving systems, and actuators in robotics. • Recognize, categorize, and evaluate the behaviour of various actuator and sensor types. • Apply computer vision control of robotic systems.
CO3	• Examine the dynamics and kinematics of the inverse manipulator. • Examine the approaches and hardware/software technologies for robotics applications and research. • Talk about the current state of the art in intelligent and cognitive robotics models and how it influences the creation of next robot applications.
CO4	• Examine the current status of the basic problem of mobile robot navigation. • Describe how a mobile robot can create a map of an unfamiliar place.

	• Examine the goal and put the localization and mapping method into practice
CO5	• Recognize the patterns in the planning and movement of robots. • Create controllers to monitor and manage mobile robots. • Tracking both stationary and moving objects.

ML1603	PROBABILISTIC GRAPHICAL MODELS	L	T	P	C
		3	0	0	3

OBJECTIVES

To develop the knowledge and skills necessary to design implement and apply probabilistic graphical models to solve real problems

- To understand Bayesian networks, undirected graphical models and their temporal extensions.
- To introduce exact and approximate inference methods
- To learn estimation of the parameters and the structure of graphical models.

UNIT I	**REPRESENTATION**	**9**
Representation - Bayesian network representation - independencies in graphs, distributions to graphs, Undirected Graphical Models - parameterization, Markov network independencies, Bayesian to Markov networks, partially directed models		**CO1**
UNIT II	**LOCAL PROBABILISTIC AND TEMPORAL MODELS**	**9**
Local probabilistic Models - Tabular conditional probability distributions (CPDs), deterministic CPDs, context specific CPDs, independence of causal influence, continuous variables, conditional Bayesian networks, Template based representations - temporal models, directed models, undirected models, structural uncertainty - Gaussian network models.		**CO2**
UNIT III	**INFERENCE**	**9**
Inference - Variable elimination, conditioning, inference with structured CPDs, exact inference - clique trees, message passing, inference as optimization, exact inference as optimization, propagation-based approximation, propagation with approximate messages, Particle-Based Approximate Inference - likelihood weighting and importance sampling, Markov chain Monte Carlo methods, collapsed particles, Deterministic search methods.		**CO3**
UNIT IV	**MAXIMUM A POSTERIORI(MAP)**	**9**
MAP Inference - variable elimination for MAP, Max product in clique trees, Max-product belief propagation in loopy cluster graphs, MAP as a linear optimization problem, graph cuts for MAP, Inference in temporal models - Inference in hybrid networks - variable elimination in Gaussian networks - non-linear dependencies - inference in temporal models		**CO4**
UNIT V	**LEARNING**	**9**
Learning - Learning Graphical Models - learning as optimization, learning tasks, Parameter estimation - learning with shared parameters, Bayesian networks, Structure learning in Bayesian network - constraint based approaches, structure scores, structure search.		**CO5**
		TOTAL : 45 PERIODS

TEXT BOOKS

ML1604	BIG DATA ANALYTICS	L	T	P	C
		3	0	0	3

OBJECTIVES

To understand the basics of big data and analytics.

- To explore the frameworks for working with big data
- To learn about stream computing.
- To learn about recommender systems and data analytics methods in R.

UNIT I	**INTRODUCTION TO BIG DATA AND HADOOP**	**9**
Types of Digital Data - Characteristics of Data - Evolution of Big Data - Definition of Big Data - Challenges with Big Data - Vs of Big Data - Non Definitional traits of Big Data - Business Intelligence vs. Big Data - Understanding Big Data Storage - Examples of Big Data in Real Life - Big Data Applications - History of Hadoop, Apache Hadoop, Analysing Data with Hadoop - Hadoop Streaming		**CO1**
UNIT II	**BIG DATA FRAMEWORK AND NOSQL**	**9**
Hadoop Ecosystem - Overview of: Apache Spark, Pig, Hive, HBase, Sqoop - What is NoSQL? NoSQL data architecture patterns: Key-value stores, Graph stores, Column family (Bigtable) stores, Document stores - Mongo DB: Introduction - Features - Data types - Mongo DB Query language - CRUD operations – Arrays - Functions: Count – Sort – Limit – Skip – Aggregate - Map Reduce. Cursors – Indexes - Mongo Import – Mongo Export.		**CO2**
UNIT III	**MAP REDUCE**	**9**
MapReduce: The Map Tasks - Grouping by Key - The Reduce Tasks – Combiners - Details of MapReduce Execution - Coping With Node Failures - Algorithms Using MapReduce: Matrix-Vector Multiplication by MapReduce – Relational Algebra Operations - Computing Selections by MapReduce - Computing Projections by MapReduce – Union – Intersection and Difference by MapReduce - Computing Natural Join by MapReduce - Grouping and Aggregation by MapReduce - Matrix Multiplication - Matrix Multiplication with One MapReduce Step - Illustrating use of MapReduce with use of real life databases and applications.		**CO3**
UNIT IV	**STREAM MEMORY**	**9**
Introduction to Streams Concepts - Stream Data Model and Architecture - Stream Computing, Sampling Data in a Stream – Filtering Streams – Counting Distinct Elements in a Stream – Estimating moments – Counting oneness in a Window – Decaying Window – Real time Analytics Platform(RTAP) applications - Case Studies - Real Time Sentiment Analysis, Stock Market Predictions. Using Graph Analytics for Big Data: Graph Analytics		**CO4**
UNIT V	**RECOMMENDATION SYSTEM AND REVIEW OF BASIC DATA ANALYTIC METHODS USING R**	**9**
Recommendation System: Collaborative Recommendation- Content Based Recommendation - Knowledge Based Recommendation - Hybrid Recommendation Approaches -Introduction to R - Exploratory Data Analysis – Statistical methods for evaluation.		**CO5**
		TOTAL : 45 PERIODS

ML1607	DEEP LEARNING LABORATORY	L	T	P	C
		0	0	4	2

OBJECTIVES

- Introduce major deep learning algorithms, the problem settings, and their applications to solve real world problems.
- Have a working knowledge of neural networks and deep learning
- Understand the characteristics and types of artificial neural network and remember working of Artificial Neural Network.
- Apply learning algorithms on perceptron and apply back propagation learning on Neural Network.
- Design Convolutional Neural Network and classification using Convolutional Neural Network.

LIST OF EXPERIMENTS

Experiment	CO
1. To write a program to implement Perceptron.	CO1
2. To write a program to implement Classification using Back propagation	
3. Create Simple Sequence Classification Network Using Deep Network Designer	
4. Implement and demonstrate the new deep neural network for classification and regression	
5. Write a program to Resize, rotate, or preprocess images for training or prediction	
6. Create deep learning networks for sequence and time series data.	CO2
7. Implement and demonstrate how to Detect and recognize objects in images	
8. Write a program to Classify text data using CNN	
9. Write a program to Train on CPU, GPU, multiple GPUs, in parallel on your desktop or on clusters in the cloud, and work with data sets too large to fit in memory	
10. Create a Deep Learning Toolbox Model for AlexNet Network, VGG, ResNet	
11. Create a Deep Learning Toolbox Model for ImageNet, GoogleNet, Recurrent Neural Network	CO3
12. Create Simple Sequence Classification Network Using Deep Network Designer	

TOTAL : 60 PERIODS

LIST OF EQUIPMENT FOR A BATCH OF 30 STUDENTS

Standalone desktops with Python 3 Interpreter for Windows/Linux 30 Nos.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Understand the implementation procedures for the Deep learning algorithms.
CO2	Design MatLab/Python programs for various Learning algorithms.
CO3	To learn data science and design and implement various convolutional Neural Networks

ML1701	STATISTICAL NATURAL LANGUAGE PROCESSING	L	T	P	C
		3	0	0	3

OBJECTIVES

- To learn the fundamentals of natural language processing
- To understand POS tagging and parsing.
- To understand the concepts of Information retrieval
- To understand the role of machine learning for natural language processing
- To acquire knowledge about applications in natural language processing

UNIT I	INTRODUCTION	9
What is NLP-History of NLP- Challenges and Applications of NLP - Ambiguity and Uncertainty in Language - NLP Phases - Language Modelling- Various Grammar-based Language Models- Statistical Language Model- N-gram Language Models – Markov Process- Estimating parameters and smoothing - Evaluating language models- Regular Expression-Text Normalization -Minimum Edit Distance.		CO1
UNIT II	**PART OF SPEECH TAGGING AND SYNTACTIC PARSING**	**9**
POS Tagging- Named Entities and Named Entity Tagging- Conditional Random Fields (CRFs)- Evaluation of Named Entity Recognition- HMM Part-of-Speech Tagging-Trigram Hidden Markov Models- Decoding with HMMs: the Viterbi Algorithm- Syntactic Parsing- Efficient parsing for context-free grammars (CFGs)- Semantic Parser - Semantic Role Labelling		CO2
UNIT III	**INFORMATION RETRIEVAL**	**9**
Design Features of Information Retrieval systems - Information Retrieval Models - Classical Information Retrieval Models - Non-classical models of IR -Alternative Models of IR - Evaluation of the IR System- Natural Language Processing in IR -Relation Matching - Knowledge-based Approaches - Conceptual Graphs in IR -Cross-lingual Information Retrieval.		CO3
UNIT IV	**MACHINE LEARNING FOR NLP**	**9**
Vocabulary & Feature Extraction - Bag of Words Model - ML for NLP: Logistic Regression, Naïve Bayes, Neural Networks - Error Analysis - Vector Space models - Language Modelling with Sequential Models - Embeddings for Words and Documents - Word2Vec - Cosine Similarity - 1D Convolutions - Attention Mechanism – Transformers – Recursive Neural Networks		CO4
UNIT V	**APPLICATIONS IN NLP**	**9**
Question Answering with SQuAD - Dependency Parsing - Machine Translation - Coreference Resolution – Text Summarization		CO5

TOTAL : 45 PERIODS

TEXT BOOKS

1. Daniel Jurafsky, James H. Martin, “Speech and Language Processing: An Introduction to Natural Language Processing, Computational Linguistics and Speech Recognition”, Second Edition, Pearson Publication, 2014
2. Christopher Manning, “Foundations of Statistical Natural Language Processing”, MIT Press, 2009
3. Nitin Indurkhya and Fred J. Damerau, “Handbook of Natural Language Processing”, Second Edition, Chapman & Hall/CRC Press, 2010.

REFERENCE BOOKS

1. Steven Bird, Ewan Klein and Edward Loper, “Natural Language Processing with Python”, First Edition, OReilly Media, 2009
2. Breck Baldwin, “Natural Language Processing with Java and LingPipe Cookbook”, Atlantic Publisher, 2015.
3. Richard M Reese, ”Natural Language Processing with Java”, First Edition, Packt Publishing,2015.

4. Yoav Goldberg, Graeme Hirst, “Neural Network Methods for Natural Language Processing - Synthesis Lectures on Human Language Technologies”, Morgan and Claypool Life Sciences, 2017.
5. DeeptiChopra, Nisheeth JoshiIti Mathur, “Mastering Natural Language Processing with Python”, First Edition, Packt Publishing Limited, 2016
6. Mohamed Zakaria Kurdi “Natural Language Processing and Computational Linguistics 1: Speech, Morphology and Syntax”, First Edition, ISTE Ltd. Wiley, 2016
7. Atefeh Farzindar, DianaInkpen, “Natural Language Processing for Social Media, Second Edition, Morgan and Claypool Life Sciences, 2015

COURSE OUTCOMES
Upon completion of the course, students will be able to

CO1	Understand the fundamentals of natural language processing
CO2	Understand POS tagging and parsing
CO3	Understand the concepts of Information retrieval
CO4	Understand the role of machine learning for natural language processing
CO5	know about applications involving natural language processing

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUCOMES		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

ML1702	FORMAL LANGUAGES AND AUTOMATA THEORY	L	T	P	C
		3	0	0	3

OBJECTIVES

- To understand a finite automaton for a given language.
- To understand the relation between grammar and language
- To understand the basic principles of working of a compiler
- To study about the Parsers during the compilation
- To understand the Storage Organization Code Generation

UNIT I	**AUTOMATA**	**9**
Alphabets, Strings and Languages - Regular expression (RE) Definition Automata and Grammars,-Finite Automata (FA) - Deterministic Finite Automata (DFA) - Non-deterministic Finite Automata (NFA) – Finite Automata with Epsilon transitions- Regular expression to FA, DFA to Regular expression- Equivalence and minimization of Automata		**CO1**
UNIT II	**CONTEXT FREE GRAMMAR AND PUSH DOWN AUTOMATA**	**9**
Context-Free Grammar (CFG) – Parse Trees – Ambiguity in grammars and languages – Definition of the Pushdown automata – Languages of a Pushdown Automata – Equivalence of Pushdown automata and CFG– Deterministic Pushdown Automata- Normal forms for CFG – simplification of CFG- Pumping Lemma for CFL – Closure Properties of CFL		**CO2**
UNIT III	**INTRODUCTION TO COMPILERS AND LEXICAL ANALYSIS**	**9**
Compilers – Translators – Compilation and Interpretation - Language processors - Analysis of source program – Phases of a compiler – Grouping of phases – Compiler construction tools – Lexical Analyzer : Token Specification – Token Recognition – A language for Specifying lexical analyzer		**CO3**
UNIT IV	**SYNTAX ANALYSIS**	**9**
Parsing-role of parser- classes of parsing, top down parsing - backtracking - recursive descent parsing - predictive parsers - LL(1) grammars - Top down parser- Table implementation of Predictive Parser – Bottom up Parser : SLR(1) Parser – Parser generators.		**CO4**
UNIT V	**RUN-TIME ENVIRONMENT AND CODE GENERATION**	**9**
Storage Organization, Stack Allocation Space, Access to Non-local Data on the Stack, Heap Management - Basic blocks and flow graphs - Issues in Code Generation - Design of a simple Code Generator.		**CO5**
		TOTAL : 45 PERIODS

TEXT BOOKS

1. J.E. Hopcroft, R. Motwani and J.D. Ullman, “Introduction to Automata Theory, Languages and Computations”, Second Edition, Pearson Education, 2007.
2. Alfred V. Aho, Monica S.Lam, Ravi Sethi, Jeffrey D.Ullman, “Compilers :Principles, Techniques and Tools”, Second Edition, Pearson Education,2008.

REFERENCE BOOKS

1. J.Martin, “Introduction to Languages and the Theory of computation” Third Edition, Tata Mc Graw Hill, 2007
2. Randy Allen, Ken Kennedy, “Optimizing Compilers for Modern Architectures: A Dependencebased Approach”, Morgan Kaufmann Publishers, 2002.
3. Steven S. Muchnick, “Advanced Compiler Design and Implementation”, Morgan Kaufmann Publishers - Elsevier Science, India, Indian Reprint 2003.
4. Muneeswaran. K, “Compiler Design”, Oxford University Press, 2012.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Design a finite automaton for a specific language.
CO2	Design context free grammar and Pushdown Automata.
CO3	Select appropriate grammar for the implementation of compiler phases and Design a lexical analyzer
CO4	Apply different parsing algorithms to develop the parsers for a given grammar.
CO5	Write a simple code generator

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO1	PSO2	PSO3

ML1703	IMAGE PROCESSING AND VISION TECHNIQUES	L	T	P	C
		3	0	0	3

OBJECTIVES

- To review image processing techniques for computer vision.
- To outline the image enhancement in the Spatial and Frequency Domain.
- To understand Image Restoration and Image Compression.
- To understand three-dimensional image analysis.
- To study some applications of computer vision algorithms

UNIT I	IMAGE PROCESSING FOUNDATION	9
Introduction- Components of Image Processing Systems-Image Processing Operations-Image Sensing and Acquisition- Elements of Visual Perception-Image Formation Model-Image Sampling and Quantization, Relationship between pixels		CO1
UNIT II	**IMAGE ENHANCEMENT**	**9**
Enhancement by point Processing-Histogram Processing- Arithmetic/ Logic Operations- Image Averaging-Spatial Filters for Smoothing and Sharpening-Frequency domain filters for Smoothing and Sharpening- Image Degradation & Restoration Model- Noise Models, Inverse Filtering-Geometric Mean Filter		CO2
UNIT III	**IMAGE SEGMENTATION AND COLOUR IMAGE PROCESSING**	**9**
Detection of Discontinuities-Edge Linking and boundary Detection, Threshold – Region Based Segmentation-Coding Redundancy-Inter pixel Redundancy-Image Compression model-Error Free Compression-Variable Length Coding-Lossy Compression- Colour Models-Pseudo Colour Image Processing-Colour Transformations-Smoothing and Sharpening-Segmentation based on Colour.		CO3
UNIT IV	**3D VISION**	**9**
Methods for 3D Vision - 3D reconstruction – Image based rendering, Image Recognition – Object Detection – Space, Instance and Category Recognition – Recognition Databases and test sets.		CO4
UNIT V	**APPLICATION**	**9**
Automated Visual Inspection: Process- Types- Application: Photo album – Face detection – Face recognition – Eigen faces – Active appearance and 3D shape models of faces Application- In-vehicle vision system: locating roadway – road markings – road signs – locating pedestrians		CO5

TOTAL: 45 PERIODS

TEXT BOOKS

1. Rafael C Gonzalez, Richard E Woods, “Digital Image Processing”, Pearson, 2nd Edition, 2022.
2. Anil K Jain, “Fundamentals of Digital Image Processing”, Pearson, 2022.

REFERENCE BOOKS

1. Kenneth R Castleman, “Digital Image Processing”, Pearson, 2006.
2. Rafael C Gonzalez, Richard E Woods, Steven Eddins, “Digital Image Processing Using MATLAB”, Pearson Education, Inc., 2011.
3. S Sridhar, “Digital Image Processing”, 2nd Edition, Oxford University, 2016.

5. Milan Sonka, Roger Boyle, Vaclav Hlavac, “Image Processing, Analysis and Machine Vision”, Brookes/Cole, Vikas Publishing House, 2nd edition, 1999.

COURSE OUTCOMES
Upon completion of the course, students will be able to

CO1	Explain the fundamentals of digital image processing, such as digitization, sampling, quantization
CO2	Apply the techniques of smoothing, sharpening domain and enhancement in both spatial and frequency
CO3	Identify the segmentation methods and apply in suitable image processing applications
CO4	Apply 3D vision for Image Rendering and Detection
CO5	Apply Visual Inspection for suitable applications

MAPPING OF COs WITH POs AND PSOs

ML1704	EDGE AI	L	T	P	C
		3	0	0	3

OBJECTIVES

- To learn the foundation of Edge Computing and AI
- To apply AI knowledge to develop Edge Artificial Intelligent Systems.
- To gain knowledge in Artificial Intelligence for Optimizing Edge
- To gain knowledge In Mobile Edge AI
- To understand the AI application on Edge

UNIT I	INTRODUCTION TO EDGE COMPUTING AND AI	9
Fundamentals of Edge Computing: Introduction, Need, Key Techniques, Benefits, Systems Paradigms of Edge computing, Edge Computing Frameworks, Value Scenarios for Edge Computing. Edge computing system architectures. Industrial Applications of Edge Computing, Intelligent Edge and Edge Intelligence, Challenges and opportunities in Edge Computing.: Case Study: Home Edge Computing architecture (HEC)		CO1
UNIT II	**INFERENCE AND TRAINING IN EDGE AI**	**9**
Artificial Intelligence Inference in Edge: Optimizing AI models in Edge: General method, Edge device, Overview of TensorFlow Lite (TFLite) format and its benefits, Introduction to Open Neural Network Exchange (ONNX) format and its advantages, Understanding NVIDIA TensorRT format and its optimizations for inference Segmentation of AI Model, Segmentation of AI Model, Early Exit of Inference (EEoI), Sharing of AI Computation. Artificial Intelligence Training at Edge: Distributed Training at Edge, Federated Learning (FL) at Edge, Security-Enhanced FL, Case Study: Machine Learning Inference at the Edge.		CO2
UNIT III	**ARTIFICIAL INTELLIGENCE FOR OPTIMIZING EDGE**	**9**
AI for Adaptive Edge Caching: use cases DNNs and DRL, Optimizing Edge Task Offloading, Edge Management and Maintenance: Communication, security, joint Edge optimization. Case Study: Artificial intelligence for edge service optimization in the Internet of Vehicles.		CO3
UNIT IV	**MOBILE EDGE AI**	**9**
Overview, Edge inference: On-device inference, Computation offloading, Server-based edge inference, Device-edge joint inference, Edge training: Data partition-based, Model partition-based, Coded computing Case Study: Energy-Efficient Mobile Edge Computing under Delay Constraints.		CO4
UNIT V	**ARTIFICIAL INTELLIGENCE APPLICATIONS ON EDGE**	**9**
Real-time Video Analytic, Autonomous Internet of Vehicles (IoVs), Intelligent Manufacturing, Smart Home and City, Urban Healthcare, Urban Energy Management, Manufacturing, Transportation and traffic. Case study: Edge AI solution for people's data privacy and security.		CO5
		TOTAL: 45 PERIODS

TEXT BOOKS

1. Wang, X., Han, Y., Leung, V. C., Niyato, D., Yan, X., & Chen, X.," Edge AI: Convergence of edge computing and artificial intelligence", Singapore: Springer,2020, ISBN 978-981-15-6185-6
2. Jie Cao, Quan Zhang, Weisong Shi "Edge Computing: A Primer", Springer International Publishing
3. "Mobile Edge Artificial Intelligence Opportunities and Challenges By Yuanming Shi, Kai Yang, Zhanpeng Yang, Yong Zhou 2021, ISBN - 9780128238172, 0128238178, Elsevier Science publication

REFERENCE BOOKS

1. Liu, Deyin; Chen, Xu; Zhou, Zhi; Ling, Qing (2020). HierTrain: Fast Hierarchical Edge AI Learning With Hybrid Parallelism in Mobile-Edge- Cloud Computing. IEEE Open Journal of the Communications Society, 1(), 634-645. doi:10.1109/OJCOMS.2020.2994737

COURSE OUTCOMES **Upon completion of the course, students will be able to**	
CO1	Understand the relation of AI and Edge Computing
CO2	Understand the computing tools and technologies of Edge AI
CO3	Apply segmentation techniques to improve efficiency of AI models and develop secured distributed Edge applications
CO4	Apply knowledge of AI for optimizing Edge application
CO5	Design and Develop edge application

ML1709	INDUSTRIAL AI APPLICATIONS LABORATORY	L	T	P	C
		0	0	4	2

OBJECTIVES

- To understand the ROS2 package.
- To understand the concepts of image and video processing.
- To gain the knowledge in speech recognition and computer vision

LIST OF EXPERIMENTS

Experiment	CO
1. To setup a basic ROS2 Package with a Node in python and execute it using ROS2 Command line tools.	CO1
2. To install the RoARM Manipulator ROS2 package and launch the Rviz and joint_state_publisher_gui tool to control the joints of the robot manipulator.	
3. To create a web-server using docker container, build it and instatiate the container	
4. To perform image processing operations such as converting to grayscale, blurring, and edge detection using OpenCV in Python.	
5. To perform video processing operations using OpenCV and apply simple filters or transformations to each frame of the video stream.	CO2
6. To write a python code to build a Multi-layer perceptron using Pytorch framework and train a model to perform image classification, convert the model into ONNX (Open-Neural Network) format.	
7. To perform Speech to Text conversion using Word2Vec and pytorch framework and input a .wav audio file to convert to text data.	
8. To perform Transfer Learning using Pytorch framework on ResNet18 pertained model to fit CIFAR-10 dataset and evaluate the model.	CO3
9. To perform Quantization on MobileNet V2 Model using fbgemm quantization method using Pytorch framework and evaluate.	
10. To perform L1 structured Pruning on ResNet18 model using pytorch framework and evaluate.	

TOTAL : 60 PERIODS

LIST OF EQUIPMENT FOR A BATCH OF 30 STUDENTS

- Python
- Google web speech API
- Make: HP 280G3MT Processor-Intel(R) Core i7-7700 @3.00 GHz RAM – 8GB RAM, HDD-1TB, Keyboard, Mouse, Monitor OS: Windows 10 Pro and Ubuntu.

REFERENCE BOOKS

1. Speech and Language Processing: An Introduction to Natural Language Processing, Computational Linguistics and Speech Recognition 2/e

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Gain the practical knowledge in ROS2 package.
CO2	Understand the real time implementation of image and video processing.
CO3	Identify and understand the concept of speech recognition and vision techniques.

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)

PROFESSIONAL ELECTIVE – I (SEMESTER V)

ML1511	ADVANCED DATABASES	L	T	P	C
		3	0	0	3

OBJECTIVES

- To explore the features of Parallel and Distributed databases
- Be familiar with a commercial relational database system (Oracle) by writing SQL using the system
- To provide knowledge about XML Databases
- To know about Temporal and Spatial Databases
- Be familiar with the relational database theory, and be able to write relational algebra expressions for queries

UNIT I	PARALLEL AND DISTRIBUTEDDATABASES :	9
Database System Architectures: Centralized and Client-Server Architectures-Server System Architectures -Parallel Systems Distributed Systems -Parallel Databases: I/O Parallelism -Interquery Parallelism - Intraquery Parallelism – Intraoperation Parallelism Interoperation Parallelism -Distributed Databases: -Homogeneous and Heterogeneous Databases - Distributed Data Storage -Distributed Transactions -Commit Protocols – Concurrency Control in Distributed Databases -Distributed Query Processing.		CO1
UNIT II	**OBJECTAND OBJECT RELATIONAL DATABASES**	**9**
Object-Based Databases: Complex Data Types-Structured Types and Inheritance in SQL - Table Inheritance -Array and Multiset Types in SQL -Object Identity and Reference Types in SQL -Implementing O-R Features – Persistent Programming Languages – Object-Oriented versus Object -Relational.		CO2
UNIT III	**ANALYTICAL MODELING OF PARALLEL PROGRAMS**	**9**
XML: Motivation -Structure of XML Data -XML Document Schema -Querying and Transformation – Application Program Interfaces to XML -Storage of XML Data -XML Applications.		CO3
UNIT IV	**SPATIAL AND TEMPORAL DATABASES**	**9**
Spatial and Temporal Data and Mobility: Time in Databases -Spatial and Geographic Data Mobility and Personal Databases.		CO4
UNIT V	**MULTIMEDIA DATABASES**	**9**
Multidimensional Data Structures: k-d Trees - Point Quadtrees - MXQuadtree - R-Tree - Image Databases: Representing Image DBs with Relations -Representing Image DBs with R-Trees -Text/Document Databases: TV Trees - Video Databases – Audi o Databases.		CO5
		TOTAL : 45 PERIODS

REFERENCE BOOKS
1. Abraham Silberschatz, Henry F. Korth, S. Sudarshan, “Database System Concepts”, McGraw-Hill International Edition, Sixth Edition, 2011. 2. V. S. Subramanian, “Principles of Multimedia Database Systems”, Elsevier Publishers, 2001 3. R. Elmasri, S. B. Navathe, “Fundamentals of Database Systems”, Pearson Education, Seventh Edition, 2016.

COURSE OUTCOMES Upon completion of the course, students will be able to	
CO1	Understand Parallel Databases and Distributed Databases
CO2	Apply query evaluation techniques and query optimization techniques
CO3	Develop transaction processing systems with concurrency control.
CO4	Understand Temporal and Spatial Databases
CO5	Design and develop a database application system as part of a team

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUCOMES

CO4	2	2	2	2	1	-	-	-	-	1	1	1	2	2	2
CO5	2	2	2	2	1	-	-	-	-	1	1	1	2	2	2

ML1512	SEMANTIC WEB	L	T	P	C
		3	0	0	3

OBJECTIVES

1. To understand the concepts of Semantic Web.
2. To build and implement a small ontology that is semantically descriptive of your chosen problem domain
3. To implement applications that can access, use and manipulate the ontology, represent data from a chosen problem in XML with appropriate semantic tags
4. To design and implement a web services application that "discovers" the data and/or other web services via the semantic web
5. To discover the capabilities and limitations of semantic web technology for different applications

UNIT I	Foundation of Semantic Web Technologies	9
Introduction to the Syntactic web and Semantic Web – Evolution of the Web – The visual and syntactic web - Levels of Semantics - Metadata for web information - The semantic web architecture and technologies –Contrasting Semantic with Conventional Technologies -Semantic Modeling -Potential of semantic web solutions and challenges of adoption		CO1
UNIT II	ONTOLOGICAL ENGINEERING	9
Ontologies – Taxonomies –Topic Maps – Classifying Ontologies - Terminological aspects: concepts, terms, relations between them - Complex Objects -Subclasses and Sub-properties definitions -Upper Ontologies - Quality - Uses - Types of terminological resources for ontology building - Methods and methodologies for building ontologies - Multilingual Ontologies -Ontology Development process and Life cycle - Methods for Ontology Learning - Ontology Evolution - Versioning		CO2
UNIT III	STRUCTURING AND DESCRIBING WEB RESOURCES	9
Structured Web Documents - XML – Structuring - Namespaces - Addressing - Querying - Processing - RDF - RDF Data Model - Serialization Formats- RDF Vocabulary - Inferencing -RDFS - basic Idea - Classes - Properties- Utility Properties - RDFS Modelling for Combinations and Patterns- Transitivity		CO3
UNIT IV	WEB ONTOLOGY LANGUAGE	9
OWL - Sub-Languages - Basic Notions -Classes- Defining and Using Properties - Domain and Range – Describing Properties - Data Types – Counting and Sets- Negative Property Assertions – Advanced Class Description - Equivalence – Owl Logic.		CO4
UNIT V	SEMANTIC WEB TOOLS AND APPLICATIONS	9
Development Tools for Semantic Web – Jena Framework – SPARL –Querying semantic web - Semantic Desktop - Semantic Wikis -Semantic Web Services - Application in Science – Business		CO5

TOTAL : 45 PERIODS

TEXT BOOKS

1. Liyang Yu, A Developer's Guide to the Semantic Web, Springer; 1st Edition. Edition,2011
2. John Hebeler, Matthew Fisher, Ryan Blace and Andrew Perez-Lopez, Semantic Web Programming, Wiley; 1 edition, 2009.
3. Grigoris Antoniou, Frank van Harmelen, A Semantic Web Primer, Second Edition (Cooperative Information Systems) (Hardcover), MIT Press, 2008

REFERENCE BOOKS

1. Robert M. Colomb, Ontology and the Semantic Web: Volume 156 Frontiers in Artificial Intelligence and Applications (Frontier in Artificial Intelligence and Applications), IOS Press, 2007.
2. Dean Allemang and James Hendler, Semantic Web for the Working Ontologist: Effective Modeling in RDFS and OWL, Morgan Kaufmann; 2 edition, 2011.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Discuss about basic of semantic web and search engine
CO2	Explain RDFS and its process
CO3	Explain owl and its operation
CO4	Explain semantic issue and prototype system.
CO5	Explain various semantic web services and its design

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO1 0	PO1 1	PO1 2	PSO 1	PSO 2	PSO 3

ML1513	ADVANCED DATA STRUCTURES	L	T	P	C
		3	0	0	3

OBJECTIVES

- To understand the usage of algorithms in computing.
- To learn and use hierarchical data structures and its operations
- To learn the usage of graphs and its applications.
- To select and design data structures and algorithms that is appropriate for problems.
- To study about NP Completeness of problems.

UNIT I	ROLE OF ALGORITHMS IN COMPUTING	9
Algorithms – Algorithms as a Technology- Insertion Sort – Analyzing Algorithms – Designing Algorithms- Growth of Functions: Asymptotic Notation - Standard Notations and Common Functions- Recurrences: The Substitution Method - The Recursion-Tree Method		CO 1
UNIT II	**HIERARCHICAL DATA STRUCTURES**	**9**
Binary Search Trees: Basics - Querying a Binary search tree - Insertion and Deletion-Red-Black trees: Properties of Red-Black Trees - Rotations - Insertion - Deletion -B-Trees: Definition of B-trees - Basic operations on B-Trees - Deleting a key from a B-Tree-Fibonacci Heaps: structure - Mergeable-heap operations- Decreasing a key and deleting a node-Bounding the maximum degree.		CO 2
UNIT III	**GRAPHS**	**9**
Elementary Graph Algorithms: Representations of Graphs – Breadth-First Search – Depth-First Search – Topological Sort – Strongly Connected Components- Minimum Spanning Trees: Growing a Minimum Spanning Tree - Kruskal and Prim- Single-Source Shortest Paths: The Bellman-Ford algorithm - Single-Source Shortest paths in Directed Acyclic Graphs - Dijkstra‘s Algorithm; All-Pairs Shortest Paths: Shortest Paths and Matrix Multiplication - The FloydWarshall Algorithm		CO 3
UNIT IV	**ALGORITHM DESIGN TECHNIQUES**	**9**
Dynamic Programming: Matrix-Chain Multiplication - Elements of Dynamic Programming - Longest Common Subsequence- Greedy Algorithms: An Activity-Selection Problem - Elements of the Greedy Strategy- Huffman Codes.		CO 4
UNIT V	**NP COMPLETE AND NP HARD**	**9**
NP-Completeness: Polynomial Time - Polynomial-Time Verification - NP- Completeness and Reducibility - NP-Completeness Proofs - NP-Complete Problems		CO 5

TOTAL : 45 PERIODS

TEXT BOOKS

1. Alfred V. Aho, John E. Hopcroft, Jeffrey D. Ullman, Data Structures and Algorithms‖, Pearson Education, Reprint 2006.
2. Robert Sedgewick and Kevin Wayne, ALGORITHMS, Fourth Edition, Pearson Education.
3. S.Sridhar, Design and Analysis of Algorithms, First Edition, Oxford University Press. 2014
4. Thomas H. Cormen, Charles E. Leiserson, Ronald L. Rivest, Clifford Stein, Introduction to Algorithms‖, Third Edition, Prentice-Hall, 2011.

REFERENCE BOOKS

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Upon the completion of the course the students should be able to:
CO2	Design data structures and algorithms to solve computing problems
CO3	Design algorithms using graph structure and various string matching algorithms to solve real-life problems
CO4	Apply suitable design strategy for problem solving
CO5	Understand the applications of NP Complete and NP Hard Concepts

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUCOMES		
	PO1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO1 0	PO1 1	PO1 2	PSO 1	PSO 2	PSO 3
CO1	2	2	2	2	2	-	-	-	-	2	2	2	3	3	3
CO2	3	3	3	3	2	-	-	-	-	2	2	2	3	3	3
CO3	3	3	3	3	2	-	-	-	-	2	2	2	3	3	3
CO4	2	2	3	3	2	-	-	-	-	2	2	2	3	3	3
CO5	2	2	2	2	2	-	-	-	-	2	2	2	3	3	3

ML1514	LOGIC PROGRAMMING	L	T	P	C
		3	0	0	3

OBJECTIVES

To impart knowledge on

- To learn the basics and advanced concepts of Prolog
- To explain the basic concepts of knowledge representation
- To explain the fundamentals of expert systems and knowledge representation with uncertainty
- To represent a problem using constraint and inductive logic programming.
- To understand the relation between prolog, modal and temporal logic.

UNIT I	THE PROLOG LANGUAGE	9
Introduction to Prolog : Defining Relations - facts - rules - Recursive Rules - Syntax and Meaning of Prolog Programs – Data Objects – Matching – Declarative meaning of Prolog programs – Procedural Meaning – Example – Order of clauses and goals – Relation between Prolog and logic - Lists - Operators - Arithmetic - Using Structures: Eight Queen Problems		CO1
UNIT II	PROGRAMMING STYLE AND TECHNIQUE	9
Input and Output: Communication with files – Processing files of terms – Manipulating characters – Constructing and decomposing atoms – Reading programs - Built-in Predicates: Terms - Testing – Constructing and decomposing – Equality and comparison -Database manipulation - control facilities - Operations on Data Structures: Sorting lists - Representing sets by binary trees - Binary Dictionary - Insertion and deletion-Displaying trees - Graphs		CO2
UNIT III	PROLOG IN ARTIFICIAL INTELLIGENCE	9
Basic Problem-Solving Strategies: Depth first search - Breadth first search - Analysis of basic search techniques - Best First Heuristic Search -Best first search - Eight Puzzle - Scheduling – Space saving techniques for best first search- Problem Decomposition and AND/OR Graphs		CO3
UNIT IV	CONSTRAINT AND INDUCTIVE LOGIC PROGRAMMING	9
Constraint satisfaction and logic programming – CLP - real numbers – Scheduling- A simulation programs-finite domains - Knowledge Representation and Expert Systems - Functions& structure: expert system -if then rules -Rule based system - Forward and backward chaining - An Expert System Shell- Knowledge representation format -Designing the inference engine – Inductive Logic Programming		CO4
UNIT V	MODAL AND TEMPORAL LOGIC	9
Modal logic – Basic Concepts – Relational Structures – Modal Languages -Models and frames – General Frames -Modal Consequence Relations – Normal Modal Logics - Temporal Logic - Basic concepts and notion of logics-Logical Languages - Semantics - Formal System - Creating AI Characters for Fighting Games Using Genetic Programming		CO5
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Ivan Bratko, “PROLOG Programming for Artificial Intelligence”, Addison -Wesley, Pearson Education, Third Edition, 2001
2. 2. Patrick Blackburn, Maarten de Rijke, Yde Venema, “Modal Logic “,Cambridge University Press 2001

REFERENCE BOOKS

1. Fred Kroger, Stephen Merz,“Temporal Logic and State Systems”, Springer 2008
2. I. Kononenko and N. Lavrac,”Prolog Through Examples”, Sigma press,1989
3. Ulf Nilsson and Jan Maluszynski,”Logic Programming and Prolog(2ED)”, John Wiley & Sons Ltd,2000
4. Stuart Russell and Peter Norvig, “Artificial Intelligence A Modern Approach”, Pearson Education, Third Edition,2010
5. Antoni Niederlinski,” A Quick and Gentle Guide to Constraint Logic Programming via Eclipse” ,Gliwice 2011

6. Svorenova, M; Cerna, I.; Belta, C, "Optimal Temporal Logic Control for Deterministic Transition Systems with Probabilistic Penalties", IEEE Trans. Autom. Control, vol. 60, issue: 6, pp.1528 - 1541 ,2015
7. Giovanna Martinez-Arellano, Richard Cant and David Woods, “Creating AI Characters for Fighting Games Using Genetic Programming”, IEEE Transactions on Computational Intelligence and AI in Games, vol. 9, No. 4,pp.423-434, 2017.

COURSE OUTCOMES
Upon completion of the course, students will be able to

CO1	Develop prolog programs for simple application
CO2	Implement control structures in Prolog programs
CO3	Use Prolog for problem solving in artificial intelligence
CO4	Implement the expert systems satisfying various constraints
CO5	Develop simple applications using modal and temporal logic

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)

ML1515	APPLICATIONS OF MACHINE LEARNING IN INDUSTRIES	L	T	P	C
		3	0	0	3

OBJECTIVES

- Understand the concept of Machine Learning.
- Familiarize with applications of Machine Learning in Banking sectors.
- Appreciate the various applications in Communication and Education sectors.
- Identify the applications in Health care and Government sectors.
- Recognize the applications in Manufacturing, Transportation and Logistics sectors.

UNIT I	**MACHINE LEARNING IN BANKING AND SECURITIES**	**9**
Introduction to Machine learning in banking sector- Use of AI in banking and finance- Fraud detection- Risk modelling- Customer data management - Machine learning algorithms in banking and security- ML based Fraud prevention and detection systems- Anomaly detection - Case study: Credit Card fraud prediction, Loan default prediction		**CO1**
UNIT II	**MACHINE LEARNING IN COMMUNICATION, MEDIA, HEALTHCARE AND LIFE SCIENCE**	**9**
Introduction to Machine learning in communication, media and entertainment: Real-time data analytics and its Usage- Machine learning techniques for customer sentiment analysis- Sentiment analysis with L S T M networks, Deep learning for social media analytics - Recommendations engines - Collaborative filtering- Deep learning techniques on recommender systems. Applications of ML in healthcare and life sciences - Role of Machine learning in genetics and genomics – Case Study: Pneumonia Segmentation, Genetic Variant Classification		**CO2**
UNIT III	**MACHINE LEARNING IN EDUCATION, MANUFACTURING AND PETROLEUM INDUSTRIES**	**9**
Introduction to Machine learning in education- Learning Analytics Process - Educational data mining - Personalized adaptive learning - Case study. Introduction to Applications of machine learning in manufacturing industry, Deep learning for smart manufacturing - Quality control in manufacturing, Case study: Predicting undesirable events in oil wells.		**CO3**
UNIT IV	**MACHINE LEARNING IN GOVERNMENT ADMINISTRATION AND INSURANCE INDUSTRIES**	**9**
Introduction to Risk and compliance- Type of government problems appropriate for AI applications- AI for citizen services use cases: Answering questions, Routing requests, Translation, Drafting documents, Chat bots for communication. Importance of machine learning in insurance- Personalized marketing in insurance industry, Predictive model for insurance underwriting- Case study: Travel insurance prediction, Chatbot with LLMs for Insurance		**CO4**
UNIT V	**MACHINE LEARNING IN RETAIL AND SUPPLY CHAIN, TRANSPORTATION AND LOGISTICS, ENERGY AND UTILITIES**	**9**
Introduction to Inventory management - Predictive analytics: Weathering demand, analysing buying patterns, Analysing traffic patterns, Assortment planning- Benefits of predictive analytics to retailers. Applications of machine learning in transport: aviation and public transportation, logistics. Predictive logistics, Predictive risk management, ML powered customer experience, Limitations of AI techniques in transportation- Computation complexity. Introduction, Smart grid, Smart grid technologies, Key characteristics of smart grid, Machine learning applications in smart grid: renewable energy generation, Forecasting. Case study: Demand Forecasting for retail, Energy usage forecasting.		**CO5**
		TOTAL : 45 PERIODS

TEXT BOOKS
Machine Learning Techniques and Industry Applications. IGI Global, 2024

COURSE OUTCOMES Upon completion of the course, students will be able to	
CO1	Understand the concept of Machine Learning.
CO2	Familiarize with applications of Machine Learning in Banking sectors.
CO3	Appreciate the various applications in Communication and Education sectors.
CO4	Identify the applications in Health care and Government sectors.
CO5	Recognize the applications in Manufacturing, Transportation and Logistics sectors.

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

PROFESSIONAL ELECTIVE – II (SEMESTER VI)

ML1611	GREEN COMPUTING	L	T	P	C
		3	0	0	3

OBJECTIVES

- To acquire knowledge to adopt green computing practices
- To minimize negative impacts on the environment, skill in energy saving practices in their use of hardware, examine technology tools that can reduce paper waste and carbon footprint by user
- To understand how to minimize equipment disposal requirements

UNIT I	**FUNDAMENTALS**	**9**
Green IT Fundamentals: Business, IT, and the Environment – Green computing: carbon foot print, scoop on power – Green IT Strategies: Drivers, Dimensions, and Goals – Environmentally Responsible Business: Policies, Practices, and Metrics.		**CO1**
UNIT II	**GREEN ASSETS AND MODELING**	**9**
Green Assets: Buildings, Data Centers, Networks, and Devices - Green Business Process Management: Modeling, Optimization, and Collaboration - Green Enterprise Architecture - Environmental Intelligence - Green Supply Chains - Green Information Systems: Design and Development Models.		**CO2**
UNIT III	**GRID FRAMEWORK**	**9**
Virtualizing of IT systems – Role of electric utilities, Telecommuting, teleconferencing and teleporting - Materials recycling - Best ways for Green PC - Green Data center - Green Grid framework.		**CO3**
UNIT IV	**GREEN COMPLIANCE**	**9**
Socio-cultural aspects of Green IT - Green Enterprise Transformation Roadmap - Green Compliance: Protocols, Standards, and Audits - Emergent Carbon Issues: Technologies and Future.		**CO4**
UNIT V	**CASE STUDIES**	**9**
The Environmentally Responsible Business Strategies (ERBS) - Case Study Scenarios for Trial Runs - Case Studies - Applying Green IT Strategies and Applications to a Home, Hospital, Packaging Industry and Telecom Sector.		**CO5**
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Bhuvan Unhelkar, “Green IT Strategies and Applications-Using Environmental Intelligence”, CRC Press, June 2011
2. Woody Leonhard, Katherrine Murray, “Green Home computing for dummies”, August 2009.

REFERENCE BOOKS

1. Alin Gales, Michael Schaefer, Mike Ebbers, "Green Data Center: steps for the Journey", Shoff/IBM rebook, 2011.
2. John Lamb, "The Greening of IT", Pearson Education, 2009.
3. Jason Harris, "Green Computing and Green IT- Best Practices on regulations & industry", Lulu.com, 2008.
4. Carl speshocky, "Empowering Green Initiatives with IT", John Wiley & Sons, 2010.
5. Wu Chun Feng (editor), "Green computing: Large Scale energy efficiency", CRC Press, 2012.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Acquire knowledge to adopt green computing practices to minimize negative impacts on the environment.
CO2	Enhance the skill in energy saving practices in their use of hardware.
CO3	Evaluate technology tools that can reduce paper waste and carbon footprint by the stakeholders.
CO4	Understand the ways to minimize equipment disposal requirements.
CO5	Learn about various case studies

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUCOMES		
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO1	PSO2	PSO3

CO2	3	3	3	1	1	1	1	1	2	1	1	2	3	2	2
CO3	3	3	3	1	1	1	1	1	2	1	1	2	3	2	2
CO4	3	3	3	1	1	1	1	1	2	1	1	2	3	2	2
CO5	3	3	3	1	1	1	1	1	2	1	1	2	3	2	2

ML1612	GAME PROGRAMMING	L	T	P	C
		3	0	0	3

OBJECTIVES

- Understand the concepts of Game design and development.
- Learn the processes, mechanics and issues in Game Design.
- Be exposed to the Core architectures of Game Programming.
- Know about Game programming platforms, frame works and engines.
- Learn to develop games.

UNIT I	3D GRAPHICS FOR GAME PROGRAMMING	9
3D Transformations, Quaternions, 3D Modeling And Rendering, Ray Tracing, Shader Models, Lighting, Color, Texturing, Camera And Projections, Culling And Clipping, Character Animation, Physics-Based Simulation, Scene Graphs.		CO1
UNIT II	**GAME ENGINE DESIGN**	**9**
Game Engine Architecture, Engine Support Systems, Resources And File Systems, Game Loop And Real-Time Simulation, Human Interface Devices, Collision And Rigid Body Dynamics, Game Profiling.		CO2
UNIT III	**GAME PROGRAMMING**	**9**
Application Layer, Game Logic, Game Views, Managing Memory, Controlling The Main Loop, Loading And Caching Game Data, User Interface Management, Game Event Management.		CO3
UNIT IV	**GAMING PLATFORMS AND FRAMEWORKS**	**9**
2D And 3D Game Development Using Flash, DirectX, Java, Python, Game Engines - DX Studio, Unity		CO4
UNIT V	**GAME DEVELOPMENT**	**9**
Developing 2D And 3D Interactive Games Using DirectX Or Python - Isometric And Tile Based Games, Puzzle Games, Single Player Games, Multi-Player Games.		CO5

TOTAL : 45 PERIODS

REFERENCE BOOKS

1. Mike Mc Shaffrfy And David Graham, “Game Coding Complete”, Fourth Edition, Cengage Learning, PTR, 2012.
2. Jason Gregory, “Game Engine Architecture”, CRC Press / A K Peters, 2009
3. David H. Eberly, “3D Game Engine Design, Second Edition: A Practical Approach toReal-Time Computer Graphics” 2nd Editions, Morgan Kaufmann, 2006.
4. Ernest Adams And Andrew Rollings, “Fundamentals of Game Design”, 2nd EditionPrentice Hall / New Riders, 2009.

5. Eric Lengyel, “Mathematics For 3D Game Programming and Computer Graphics”, 3rdEdition, Course Technology PTR, 2011.
6. Jesse Schell, The Art of Game Design: A Book Of Lenses, 1st Edition, CRC Press, 2008.

.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Discuss the concepts of Game design and development.
CO2	Design the processes, and use mechanics for game development.
CO3	Explain the Core architectures of Game Programming
CO4	Use Game programming platforms, frame works and engines
CO5	Create interactive Games.

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUCOMES		
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO1	PSO2	PSO3

ML1613	INTELLIGENT TRANSPORT SYSTEMS	L	T	P	C
		3	0	0	3

OBJECTIVES

To impart knowledge on

- Fundamentals of intelligent transport systems
- Concepts of ATIS and its operations
- Basics of predictive route guidance system
- Concepts of APTS and its operations
- General issues related to ITS and environment

UNIT I	**ITS FUNDAMENTALS**	**9**
Introduction to Intelligent Transportation Systems (ITS) - Definition of ITS and Identification of ITS Objectives - Historical Background - Benefits of ITS - ITS Data collection techniques – Detectors - Automatic Vehicle Location (AVL) - Automatic Vehicle Identification (AVI)		**CO1**
UNIT II	**ADVANCED TRAVELLER INFORMATION SYSTEMS**	**9**
Basic concepts - Models - Simulation - LOS of transportation systems - Static, real time and dynamic information - Value of information - Topology - Where and When to receive data - Information flows - Travel support – Dynamic routing.		**CO2**
UNIT III	**PREDICTIVE ROUTE GUIDANCE**	**9**
ITS - Applications - Issues- Information types - Impact on route guidance - Case studies.		**CO3**
UNIT IV	**ADVANCED PUBLIC TRANSPORTATION SYSTEMS (APTS)**	**9**
Scope - Components of APTS - Advantages- Limitations of APTS - Case studies - Issues		**CO4**
UNIT V	**ITS AND ENVIRONMENT**	**9**
ITS and Flexibility - ITS and Customer-centricity - ITS and the Environment - General issues and Case studies - Overview of ITS implementations in developed countries.		**CO5**

TOTAL : 45 PERIODS

TEXT BOOKS

1. Pradip Kumar Sarkar, Amit Kumar Jain, "Intelligent Transport Systems", Paperback, PHI Learning, 2018

REFERENCE BOOKS

1. Paolo Baggano, "Intelligent transport Systems Good practices to standards", CRC press,2016.
2. ITS Hand Book 2000: Recommendations for World Road Association (PIARC)by Kan Paul Chen, John Miles.
3. Sussman, J. M., Perspective on ITS, Artech House Publishers, 2005.
4. National ITS Architecture Documentation, US Department of Transportation, 2007

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Analyze the various types of traffic and suggesting ITS.
CO2	Plan and design the ATIS.
CO3	Plan the predictive route guidance system
CO4	Analyze the traffic data and able to suggest suitable APTS.
CO5	Manage the issues arising out of introduction of ITS.

MAPPING OF COs WITH POs AND PSOs															
COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUCOMES

ML1614	PARALLEL AND DISTRIBUTED COMPUTING	L	T	P	C
		3	0	0	3

OBJECTIVES

- To explore the features of Parallel Programming Platforms
- To learn the concepts of CUDA programming Model
- To provide knowledge about Analytical Modeling Of Parallel Programs
- To know about dense matrix algorithms
- To explore different search algorithms

UNIT I	**PARALLEL PROGRAMMING PLATFORMS**:	9
Introduction: Scope , issues, applications and challenges of Parallel and Distributed Computing Parallel Programming Platforms: Implicit Parallelism: Trends in Microprocessor Architectures, Dichotomy of Parallel Computing Platforms, Physical Organization, Communication Costs in Parallel Machines, Routing Mechanisms for Interconnection Networks, GPU, co-processing. Principles of Parallel Algorithm Design: Decomposition Techniques, Characteristics of Tasks and Interactions, Mapping Techniques for Load Balancing.		CO1
UNIT II	**CUDA PROGRAMMING MODEL**	9
Overview of CUDA, Isolating data to be used by parallelized code, API function to allocate memory on parallel computing device, to transfer data, Concepts of Threads, Blocks, Grids, Developing a kernel function to be executed by individual threads, Execution of kernel function by parallel threads, transferring data back to host processor with API function		CO2
UNIT III	**ANALYTICAL MODELING OF PARALLEL PROGRAMS**	9
Sources of Overhead in Parallel Programs, Performance Metrics for Parallel Systems, The Effect of Granularity on Performance, Scalability of Parallel Systems, Minimum Execution Time and Minimum Cost-Optimal Execution Time		CO3
UNIT IV	**DENSE MATRIX ALGORITHMS**	9
Matrix-Vector Multiplication, Matrix-Matrix Multiplication, Issues in Sorting on Parallel Computers, Bubble Sort and Variants, Quick Sort, Other Sorting Algorithms Graph Algorithms: Minimum Spanning Tree: Prim's Algorithm, Single-Source Shortest Paths: Dijkstra's Algorithm, All-Pairs Shortest Paths, Transitive Closure, Connected Components, Algorithms for Sparse Graph		CO4
UNIT V	**SEARCH ALGORITHMS FOR DISCRETE OPTIMIZATION PROBLEMS**	9
Sequential Search Algorithms, Parallel Depth-First Search, Parallel Best-First Search, Speedup Anomalies in Parallel Search Algorithms		CO5
		TOTAL : 45 PERIODS

REFERENCE BOOKS

1. A Grama, AGupra, G Karypis, V Kumar. Introduction to Parallel Computing (2nd ed.). Addison Wesley, 2003.
2. C Lin, L Snyder. Principles of Parallel Programming. USA: Addison-Wesley Publishing Company, 2008.
3. J Jeffers, J Reinders. Intel Xeon Phi Coprocessor High-Performance Programming. Morgan Kaufmann Publishing and Elsevier, 2013
4. T Mattson, B Sanders, B Massingill. Patterns for Parallel Programming. Addison-Wesley Professional, 2004.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Explore the features of Parallel Programming Platforms
CO2	Understand the concepts of CUDA programming Model
CO3	Analyze about Analytical Modeling Of Parallel Programs
CO4	Explore dense matrix algorithms
CO5	Explore different search algorithms for optimization problems

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUCOMES		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

CO3	2	2	2	2	1	-	-	1	1	1	1	1	2	2	2
CO4	2	2	2	2	1	-	-	1	1	1	1	1	2	2	2
CO5	2	2	2	2	1	-	-	1	1	1	1	1	2	2	2

ML1615	CASE BASED REASONING	L	T	P	C
		3	0	0	3

OBJECTIVES

- understand the basic elements of case based reasoning
- understand the case representation and similarity measures.
- understand apply case retrieval, indexing and adaptation process
- Develop case based reasoning systems.
- implement case based reasoning for managing complex knowledge sources

UNIT I	**BASIC CASE BASED REASONING ELEMENTS**	9
Case-Based Reasoning- Experiences and Cases -Parts of a Case -Problems - Solution Types – Case Representations - Case Bases - Similarity and Retrieval -Reuse and Adaptation -Models of CBR.		CO1
UNIT II	**CASE REPRESENTATION AND SIMILARITY MEASURES**	9
Representation Layers - Completeness and Efficiency -Flat Attribute-Value Representation-Complex Representations in General. Similarity and Case Representations -Types of Similarity Measures -The Local-Global Principle for Similarity Measures - Virtual Attributes- Similarity Measure to Use. Complex Similarities: Graph Representations and Graph Similarities- Largest Common Subgraphs Taxonomic Similarities- Similarities for Object-Oriented Representations- Many-Valued Attributes Similarity for Processes and Workflows		CO2
UNIT III	**CASE RETRIEVAL AND INDEXING**	9
The Retrieval Task - Retrieval Errors-Basic Retrieval Methods: Query Generation-Filtering Sequential Retrieval -Two-Level Retrieval -Geometric Methods - Voronoi Diagrams and k-Nearest Neighbours -Geometric Approximation - Geometric Filtering-Index-Based Retrieval - kd- Trees Integration with Decision Trees. Case Indexing- Traditional Indexing Method-Case Indexing Using a Bayesian Model, Prototype-Based Neural Network and Three-Layered Back Propagation Neural Network.		CO3
UNIT IV	**CASE ADAPTATION AND CASE-BASE DEVELOPMENT**	9
Rules - Adaptation Types -The Adaptation Process - Adaptation Using Several Cases – Adaptations Using the Solution Process - Quality Issues - Knowledge in the Adaptation Container. Case Based Development-Problem Formulation -Finding and Getting Data, Preprocessing - Case Acquisition Prototypes and Evaluation The Knowledge Containers - Systematic Development of CBR Systems Implementation Aspects -Combining CBR with Other Techniques-Maintenance		CO4
UNIT V	**COMPLEX KNOWLEDGE SOURCES AND KNOWLEDGE MANAGEMENT**	9
Textual CBR- Images- Sensor Data and Speech - Conversational CBR Knowledge Management Case-Based Reasoning and Knowledge Management- CBR ImplementingKM Cycles.		CO5

TOTAL : 45 PERIODS

TEXT BOOKS

1. Michael M. Richter and Rosina O. Weber, Case-based reasoning: a textbook, Springer, 2013.
2. S. Simon, P. Sankar, ¯Foundations of Soft Case-Based Reasoning, 1st ed. Wiley-Inderscience, 2004.

REFERENCE BOOKS
1. J. Kolodner, ¯Case-Based Reasoning, San Mateo, CA: Morgan Kaufmann Publishers; 1993 2. I.Watson, Applying Case-Based Reasoning: Techniques for Enterprise Systems. San Francisco, CA: Morgan Kaufmann Inc. 1997.

COURSE OUTCOMES
Upon completion of the course, students will be able to

CO1	Knowledge the basic elements of case based reasoning
CO2	Knowledge the case representation and similarity measures.
CO3	Ability to apply case retrieval, indexing and adaptation process
CO4	Ability to develop case based reasoning systems.
CO5	Ability to implement case based reasoning for managing complex knowledge sources

PROFESSIONAL ELECTIVE – III (SEMESTER VII)

ML1711	AI for CLINICAL INFORMATION SYSTEM	L	T	P	C
		3	0	0	3

OBJECTIVES

1. The objective of this course is to gain insight and situational experience with clinical information systems.
2. To examine the effective use of data and information technology to assist in the migration away from paper-based systems
3. To Explain the principles of health care data exchange and standards.
4. To understand Human interaction system in Health care
5. To gain insights and understanding of the impacts placed on patients and health care providers.

UNIT I	INTRODUCTION TO CLINICAL INFORMATION SYSTEM	9
Introduction to clinical information systems - contemporary issues in healthcare - workflow and related tools for workflow design - electronic health records databases - Healthcare IT & portable technology		CO1
UNIT II	ARTIFICIAL INTELLIGENCE IN HEALTH CARE	9
Artificial intelligence in health care: Use of AI, The healthcare industry, Electronic medical records,Clinical decision support systems		CO2
UNIT III	MACHINE LEARNING IN HEALTH CARE SYSTEM	9
Machine learning for natural language, Machine learning for vision, Human-computer interaction		CO3
UNIT IV	BIOETHICS AND CHALLENGES	9
Bioethics and challenges to deployment, Grand challenges in clinical decision support		CO4
UNIT V	BIG DATA ANALYTICS IN HEALTH CARE	9
Data mining in health care, Big data analytics in health care, IBM Watson, Issues in sustainability and interoperability		CO5
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Sittig & Ash, Clinical Information Systems – Overcoming Adverse Consequences, Jones &Bartlett Learning Publishers, 2009.
2. Edward H. Shortliffe; Leslie E. Perreault, Medical Informatics – Computer Applications in Healthcare and Biomedicine, Springer-Verlag New York Inc. Publishers, 2014.

REFERENCE BOOKS

1. Arnold, M. (2016). Digital health news update: Machine learning meets health search. Decision Resources Group.
2. Blenner, S. R., Kollmer, M., Rouse, A. J., Daneshvar, N., Williams, C., Andrews, L. B. (2016) Privacy Policies of Android Diabetes Apps and Sharing of Health Information. JAMA, 315(10), 1051

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	To understand the basics of clinical information systems.
CO2	To learn how to apply information technology and related tools in workflow design.
CO3	To explore the “benefits and barriers” associated with electronic health records.
CO4	Explain strategies to minimize major barriers to the adoption of electronic health records.
CO5	Capacity for applying Artificial Intelligence techniques in technological and industrial environments to improve quality and productivity

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	3	3	3	3	2	-	-	-	-	2	2	2	2	2	1
CO2	3	3	3	3	2	-	-	-	-	2	2	2	2	2	1
CO3	3	3	3	3	2	-	-	-	-	2	2	2	2	2	1
CO4	3	3	3	3	2	-	-	-	-	2	2	2	2	2	1
CO5	3	3	3	3	2	-	-	-	-	2	2	2	2	2	1

ML1712	GAME THEORY	L	T	P	C
		3	0	0	3

OBJECTIVES

- To understand the sequential moves.
- To familiarize with Simultaneous moves.
- To solve strategic games between two and more agents in non-cooperative scenario.
- To solve both simultaneous and sequential move games.
- To learn different methods to solve games

UNIT I	**INTRODUCTION AND GENERAL PRINCIPLES**	**9**
Basic Ideas and Examples- Decisions versus Games- Classifying games terminology and background assumptions the uses of game theory- Games with sequential moves - game trees solving games by using trees adding more players -Evidence concerning rollback-Strategies in the survivor game		**CO1**
UNIT II	**SIMULTANEOUS-MOVE GAMES**	**9**
Games with Simultaneous-Move Games with Pure Strategies : Nash Equilibrium - Dominance-Best-Response Analysis - The Minimax Method For Zero-Sum Games - Three Players - Multiple Equilibria In Pure Strategies -No Equilibrium In Pure Strategies-Discrete Strategies-Simultaneous-Move Games with Pure Strategies - Continuous Strategies Pure Strategies That Are Continuous Variables Requirements of Rationality for Nash Equilibrium - Rationalizability		**CO2**
UNIT III	**BROAD CLASSES OF GAMES AND STRATEGIES**	**9**
Uncertainty and Information -Imperfect Information: Dealing With Risk-Asymmetric Information: Basic Ideas-Direct Communication-Adverse Selection, Signaling and Screening -Equilibria In Signaling Games -The Prisoners' Dilemma And Repeated Games -The Basic Game - Solutions -Repetition -Penalties And Rewards - Leadership -Asymmetric Information -Experimental Evidence -Real-World Dilemmas		**CO3**
UNIT IV	**VARIANTS AND EXTENSIONS**	**9**
Strictly Competitive Games and Max minimization: Max Minimization-Max minimization and Nash Equilibrium-Strictly Competitive Games -Max minimization and Nash Equilibrium in Strictly Competitive Games-Max minimization: Some History-Empirical Tests: Experiments, Tennis, and Soccer. Rationalizability- Iterated Elimination of Strictly Dominated Actions- Iterated Elimination of Weakly Dominated Actions- Dominance		**CO4**
UNIT V	**APPLICATION**	**9**
Voting-Voting Rules, Paradoxes, Strategic Manipulation -Bidding strategy and Auction Design -Bargaining: Nash Bargaining Solution, Ultimatum game, Alternating- offers game, Threat Points, Bargaining Shares		**CO5**

TOTAL : 45 PERIODS

TEXT BOOKS

1. Avinash K. Dixit , David H. Reiley Jr. , Susan Skeath “Games of Strategy” , W. W. Norton & Company, Fourth International Student Edition, 2015.
2. Martin J. Osborne, “An Introduction to Game Theory”, Oxford University Press, Illustrated Reprint, 2003

REFERENCE BOOKS

1. Martin J. Osborne and Ariel Rubinstein, “A course in game theory”, MIT Press, 1994.
2. Joel Watson, “Strategy: An Introduction to Game Theory” Hardcover, W. W. Norton &Company, Third Edition,2013.

COURSE OUTCOMES
Upon completion of the course, students will be able to

CO1	Create game tree for any application.
CO2	Use different strategies for simultaneous-move games
CO3	Analyze strategic games between two and more agents in non - cooperative scenario
CO4	Apply Equilibrium and Rationalizability for games
CO5	Deploy game strategy in various applications

MAPPING OF COs WITH POs AND PSOs

ML1713	DATA MINING AND PREDICTIVE MODELLING	L	T	P	C
		3	0	0	3

OBJECTIVES

- Recognize the process of formulating business objectives, data selection/collection, preparation and process to successfully design, build, evaluate and implement predictive models for a various business application.
- Compare and contrast the underlying predictive modelling techniques.
- Select appropriate predictive modelling approaches to identify particular cases.
- Appreciate the nuances of Support Vector Machines and clustering techniques.
- Apply predictive modelling approaches using a suitable package such as SPSS Modeler

UNIT I	**DATA UNDERSTANDING & PREPARATION**	**9**
Identifying business objectives, translating business objectives to data mining goals, reading data from various sources – Database/ Excel/ Text/others, data visualization – tabular & graphic, distributions and summary statistics, field reordering, Reclassify data.		**CO1**
UNIT II	**DATA TRANSFORMATIONS**	9
Data quality issues, Data Audit, anomalies, relationships among variables, Extent of Missing Data, Segmentation, Outlier detection, Variable transformations, Variable derivation, Variable selection, Automated Data Preparation, combining data files, data restructuring, Aggregation, Duplicates removal, Sampling cases, Data Caching, Partitioning data, Missing Value replacement.		**CO2**
UNIT III	**MODELING TECHNIQUES – I**	**9**
Partitioning The Data - Training, Validation & Testing, Model selection, Model development techniques - Linear regression, Logistic regression, Discriminant analysis, Bayesian networks, Neural networks, Rule Induction.		**CO3**
UNIT IV	**MODELING TECHNIQUES – II**	**9**
Support vector machines, Cox regression, Time series analysis, Decision trees, Clustering, Association Rules, Sequence Detection, Which Technique to use when.		**CO4**
UNIT V	**MODEL EVALUATION & DEPLOYMENT**	**9**
Model Validation, Determining Model Accuracy, Rule Induction Using CHAID, Automating Models for Categorical Targets, Automating Models for Continuous Targets, Comparing and Combining Models, Evaluation Charts for Model Comparison, Using Propensity Scores, Meta-Level Modeling, Error Modeling, Deploying Model, Exporting Model Results, Assessing Model Performance, Updating A Model.		**CO5**
		TOTAL : 45 PERIODS

TEXT BOOKS

Data Mining & Predictive Modeling (IBM ICE Publications).

REFERENCE BOOKS
1. Data Mining and Predictive Analytics (Wiley Series on Methods and Applications in Data Mining) 2nd Edition, Kindle Edition

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Recognize the process of formulating business objectives, data selection/collection, preparation and process to successfully design, build, evaluate and implement predictive models for a various business application.
CO2	Compare and contrast the underlying predictive modeling techniques.
CO3	Select appropriate predictive modeling approaches to identify particular cases.
CO4	Appreciate the nuances of Support Vector Machines and clustering techniques.
CO5	Apply predictive modeling approaches using a suitable package such as SPSS Modeler

MAPPING OF COs WITH POs AND PSOs

ML1714	MACHINE INTELLIGENCE FOR NETWORK SCIENCES	L	T	P	C
		3	0	0	3

OBJECTIVES

- To understand the concept of web social networks.
- To learn visualization of social networks.
- To understand about graphs and node embeddings
- To learn the concepts in Graph Neural Networks models
- To understand the concepts in Generative Graph Models

UNIT I	WEB SOCIAL NETWORKS	9
Development of Social Network Analysis - Key concepts and measures in network analysis - Extracting evolution of Web Community from a Series of Web Archive – Detecting Communities in Social Networks – Evaluating Communities – Methods for Community Detection and Mining – Applications of Community Mining Algorithms – Tools for Detecting Communities – Social Network Infrastructure and Communities – Decentralized Online Social Networks – Multi-Relational Characterization of Dynamic Social Network Communities		CO1
UNIT II	**VISUALIZATION AND APPLICATIONS OF SOCIAL NETWORKS**	**9**
Graph theory - Centrality - Clustering - Node-Edge Diagrams - Matrix representation - Visualizing online social networks, Visualizing social networks with matrix-based representations - Matrix and Node-Link Diagrams - Hybrid representations - Applications - Covert networks - Community welfare - Collaboration networks - Co-Citation networks.		CO2
UNIT III	**MACHINE LEARNING ON GRAPHS**	**9**
Introduction - Machine Learning on Graphs - Traditional Approaches - Graphs Statistics and Kernal Methods - Node Embeddings - Encoder Decoder - Factorization based approaches - Random walk embeddings – Shallow Embeddings - Limitations		CO3
UNIT IV	**GRAPH NEURAL NETWORKS**	**9**
Graph Neural Network Model - Neural Message Passing – Generalized Neighborhood Aggregation – Generalized Update Methods – Edge Features and Multi-relational GNNs – Graph Pooling – Graph Neural Network in Practice		CO4
UNIT V	**GENERATIVE MODELLING**	**9**
Generative Graph Models - Traditional Generation Approaches - Deep Generative Models for Graphs- Machine Learning for Graph Generation - Graph RNN - Evaluating Graph Generation – Molecule Generation		CO5
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Network sciences by Albert-Laszlo Barabasi, Cambridge University Press
2. Graph Representation Learning Book by William L. Hamilton. McGill University
3. Networks, Crowds, and Markets: Reasoning About a Highly Connected World by David Easley and Jon Kleinberg, Cambridge University Press (2010)

REFERENCE BOOKS

1. Peter Mika, Social Networks and the Semantic Web, First Edition, Springer 2007.
2. Borko Furht, Handbook of Social Network Technologies and Applications, 1st Edition, Springer, 2010

COURSE OUTCOMES **Upon completion of the course, students will be able to**	
CO1	To know basic notation and terminology used in network science.
CO2	To visualize social networks and analyze their properties.
CO3	To understand node embeddings in graphs
CO4	To understand Graph Neural Network Models
CO5	To learn Generative Graph models and Deep Generative Models

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO1	PSO2	PSO3

CO4	1	1	2	2	2	1	1	1	1	1	1	1	2	2	2
CO5	2	2	2	2	1	1	1	1	1	1	1	1	2	2	2

ML1715	INTELLIGENT MACHINING	L	T	P	C
		3	0	0	3

OBJECTIVES

- To learn the basics of Artificial Intelligence
- To learn the fundamentals of Intelligent machining, sensors and machining process
- To understand the design and representation of Intelligent Systems and RTOS
- To understand the computational methods and optimization in machining
- To understand the impact of Artificial Intelligence in various real-time applications

UNIT I	INTRODUCTION	9
Introduction to Artificial Intelligence and it's techniques- Problem Solving with Artificial Intelligence - AI Models - Data acquisition and learning aspects of AI - Problem Solving - Problem Solving Process - Formulating Problems - Problem types and Characteristics Problem Space and Search - Agents - Types of Agents – Intelligent Agent		CO1

UNIT II	EVOLUTION AND COMPONENTS OF INTELLIGENT MACHINING SYSTEMS	9
Introduction Intelligent Machining – Basics - Open Architecture Machine Control - Manufacturing Automation Protocol - The Evolution of Intelligent Machining - MOSAIC - NGC - OSACA - SERCOS - Components of Intelligent Machining - Introduction sensors - Machining Process Sensing and Monitoring - Signal Processing - Transforming Data into Information - Examples Machining Process Control - Practical Uses of Machine Learning - Machine Learning Process Control – Strategies		CO2

UNIT III	INTELLIGENT SYSTEM REPRESENTATION AND RTOS FUNDAMENTALS	9
Representation of Intelligent systems - An Object-Oriented Approach - Tools and Techniques for Conceptual Design - Design Compilers - Labelled Interval Calculus - Knowledge Representations for Design Improvisation - A knowledge-based Framework for Design - Introduction to RTOS - Hardware Components - Design Principles of RTOS - Interrupt Processing - task Management		CO3

UNIT IV	COMPUTATIONAL METHODS AND OPTIMIZATION IN MACHINING	9
Computational methods and optimization - Neural Network Modelling - Fuzzy set theory - Machining Optimization - Objective Functions and Constraints - Optimization Techniques - Reasoning about physical system - Temporal Qualitative Analysis		CO4

UNIT V	CASE STUDIES	9
Autonomous Vehicle (Driver Less Car) - Defect Prediction - Wear and Tear Prediction in Mechanical devices - Flying Drones - Cogito - Alexa, SIRI - Smarter Home robots - Application of AI in CAD/CAM .		CO5

TOTAL: 45 PERIODS

TEXT BOOKS

1. Farid Meziane, Sunil Vadera, Khiary Kobbacy and Nathan Proudlove, "Intelligent Systems in Manufacturing: Current Developments and Future Prospects"
2. How Netflix Uses Analytics To Select Movies, Create Content, and Make Multimillion Dollar Decisions Author: Zach Bulygo
3. Digital Signal Processing: A Practical Guide for Engineers and Scientists, Steven Smith
4. Machining: Fundamentals and Recent Advances, J. Paulo Davim, Springer.
5. Artifical Intelligent in Engineering Design: Volume 2 , Gerard Meurant, Springer

REFERENCE BOOKS

1. Artifical Intelligent in Engineering Design: Volume 1, Gerard Meurant, Springer
2. K.C.Wang, " Embedded and Real-Time Operating Systems
3. Sam Siewert, John Pratt," Real-Time Embedded Components and Systems with Linux and RTOS", David Pallai Publisher, 2016.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Gain knowledge of the fundamentals of Artificial Intelligence and its problem-solving approaches
CO2	Gain knowledge of the fundamentals of Intelligent Machining and machining processes
CO3	Acquire knowledge on the design of Intelligent Systems and RTOS
CO4	Acquire knowledge on computational methods and optimization in machining
CO5	Apply knowledge to various AI based real-time applications

MAPPING OF COs WITH POs AND PSOs

PROFESSIONAL ELECTIVE – IV (SEMESTER VII)

ML1721	GENETIC ALGORITHM	L	T	P	C
		3	0	0	3

OBJECTIVES

1. To understand the concepts of Genetic algorithm scientific models
2. To build and implement a computer implementation of genetic algorithm
3. To survey of the many aspects of evolutionary algorithms (EAs), in particular GA,GP, ES, technique
4. To know about Advance operators and techniques in genetic Search
5. To understand data mining using genetic algorithm dearch in industrial application

UNIT I	INTRODUCTION TO GENETIC ALGORITHMS IN SCIENTIFIC MODELS	9
Introduction: A brief history of evolutionary computation, Elements of Genetic Algorithms, Asimple genetic algorithm, Applications of genetic algorithms **Genetic Algorithms in Scientific models:** Evolving computer programs, data analysis andprediction, evolving neural networks, Modelling interaction between learning and evolution, modelling sexual selection, measuring evolutionary activity.		CO1
UNIT II	THEORETICAL FOUNDATION OF GENETIC ALGORITHM	9
Theoretical Foundation of genetic algorithm: Schemas and Two-Armed and k-armed problem, royal roads, exact mathematical models of simple genetic algorithms, Statistical- Mechanics Approaches. Computer Implementation of Genetic Algorithm: Data structures, Reproduction, crossover and mutation, mapping objective functions to fitness form, fitness scaling, coding, a multiparameter, mapped, fixed point coding, discretization and constraints		CO2
UNIT III	APPLICATIONS OF GENETIC ALGORITHMS	9
Some applications of genetic algorithms: The risk of genetic algorithms, De Jong and function optimization, Improvement in basic techniques, current application of genetic algorithms		CO3
UNIT IV	ADVANCED OPERATORS AND TECHNIQUES IN GENETIC SEARCH	9
Advanced operators and techniques in genetic search: Dominance, duplicity, and abeyance, inversion and other reordering operators. Other micro operators, Niche and speciation, multi objective optimization, knowledge-based techniques, genetic algorithms and parallel processors.		CO4
UNIT V	INDUSTRIAL APPLICATION OF GENETIC ALGORITHMS	9
Industrial Application Of Genetic Algorithms: Data mining using genetic Algorithms Search in data mining Genetic algorithms for game playing eg TIC TAC TOE		CO5

TOTAL : 45 PERIODS

TEXT BOOKS

1. Genetic algorithms in search, optimization and Machine Learning by David E. Goldberg, Pearson Education

REFERENCE BOOKS
1. An introduction to genetic algorithms by Melanle Mitchell, PHI. 2. The simple genetic algorithm foundations and theory by Michael D. Vose, PHI

COURSE OUTCOMES Upon completion of the course, students will be able to	
CO1	Discuss about basic of Genetic algorithm
CO2	Apply Evolutionary Computation Methods to find solutions to complex problems
CO3	Analyze and experiment with parameter choices in the use of Evolutionary Computation
CO4	Summarize current research in Genetic Algorithms and Evolutionary Computing
CO5	Explain Industrial application of Genetic algorithm

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

CO4	3	3	3	3	2	-	-	2	-	2	2	2	2	2	1
CO5	3	3	3	3	2	-	-	2	-	2	2	2	2	2	1

ML1722	SPEECH PROCESSING	L	T	P	C
		3	0	0	3

OBJECTIVES

- To understand the fundamentals of the speech processing
- Explore the various speech models
- Gather knowledge about the phonetics and pronunciation processing
- Perform wavelet analysis of speech
- To understand the concepts of speech recognition

UNIT I	**INTRODUCTION**	**9**
Introduction - knowledge in speech and language processing - ambiguity - models and algorithms - language - thought - understanding - regular expression and automata - words & transducers - N grams		CO1
UNIT II	**SPEECH MODELLING**	**9**
Word classes and part of speech tagging - hidden markov model - computing likelihood: the forward algorithm - training hidden markov model - maximum entropy model - transformation-based tagging – evaluation and error analysis – issues in part of speech tagging – noisy channel model for spelling		CO2
UNIT III	**SPEECH PRONUNCIATION AND SIGNAL PROCESSING**	**9**
Phonetics - speech sounds and phonetic transcription - articulatory phonetics - phonological categories and pronunciation variation - acoustic phonetics and signals - phonetic resources - articulatory and gestural phonology		CO3
UNIT IV	**SPEECH IDENTIFICATION**	**9**
Speech synthesis - text normalization - phonetic analysis - prosodic analysis - diphone waveform synthesis - unit selection waveform synthesis - evaluation		CO4
UNIT V	**SPEECH RECOGNITION**	**9**
Automatic speech recognition – architecture – applying hidden markov model – feature extraction: mfcc vectors - computing acoustic likelihoods - search and decoding - embedded training – multipass decoding: n-best lists and lattices- a* (‗stack‘) decoding – context-dependent acoustic models: triphones - discriminative training - speech recognition by humans		CO5
		TOTAL : 45 PERIODS

REFERENCE BOOKS

1. Daniel Jurafsky and James H. Martin, ― Speech and Language Processing: An Introduction to Natural Language Processing, Computational Linguistics and Speech Recognition, Person education,2013.
2. Kai-Fu Lee, ―Automatic Speech Recognition, The Springer International Series in Engineering and Computer Science, 1999.

3. Himanshu Chaurasiya, Soft Computing Implementation of Automatic Speech Recognition, LAP Lambert Academic Publishing, 2010.
4. Claudio Becchetti, Klucio Prina Ricotti, ¯Speech Recognition: Theory and C++ implementation,Wiley publications 2008.
5. Ikrami Eldirawy , Wesam Ashour, ¯Visual Speech Recognition, Wiley publications , 2011

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Create new algorithms with speech processing
CO2	Derive new speech models
CO3	Perform various language phonetic analysis
CO4	Create a new speech identification system
CO5	Generate a new speech recognition system

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUCOMES		
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO1	PSO2	PSO3

CO5	2	2	2	2	1	-	-	1	1	1	1	1	2	2	2

ML1723	ADVANCED OPTIMIZATION TECHNIQUES	L	T	P	C
		3	0	0	3

OBJECTIVES

- Understand the nonlinear problem.
- Know about multi-objective problem.
- To create awareness of meta heuristic algorithms

UNIT I	DECISION ANALYSIS	9
Decision Trees, Utility theory, Game theory, MCDM – Goal programming, AHP and ANP; Markov Decision processes		CO1
UNIT II	**NON-LINEAR OPTIMIZATION - I**	**9**
Types of Non-linear programming problems, Unconstrained optimization, KKT conditions for constrained optimization, Quadratic programming		CO2
UNIT III	**NON-LINEAR OPTIMIZATION - II**	**9**
Separable programming, Convex programming, Non-convex programming, Geometric programming, Stochastic programming		CO3
UNIT IV	**META-HEURISTICS OPTIMIZATION**	**9**
Principles, Parameters, and working - Genetic Algorithms, Simulated annealing, Tabu search, Ant Colony Optimization – Particle swarm Optimization – Applications.		CO4
UNIT V	**NON-TRADITIONAL OPTIMIZATION**	**9**
Neural network based optimization, Optimization of Fuzzy systems		CO5

TOTAL : 45 PERIODS

REFERENCE BOOKS

2. Singiresu S Rao, "Engineering Optimization", Wiley, 1998.
3. Kalyanmoy Deb, "Optimization for Engineering Design", PHI, 2000.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Perform decision analysis
CO2	Solve a nonlinear problem through its linear approximation.
CO3	Solve a multi-objective problem through weighted and constrained methods.
CO4	Apply various direct and indirect search methods
CO5	Apply different techniques to solve various optimization problems arising from engineering areas.

CS1725	HUMAN COMPUTER INTERACTION	L	T	P	C
		3	0	0	3

OBJECTIVES

- To know how to analyze and consider user's need in the interaction system
- To understand various interaction design techniques and models
- To understand the theory and framework of HCI
- Understand and analyze the cognitive aspects of human - machine interaction

UNIT I	**INTRODUCTION**	**9**
Foundation – Human – Computer – Interaction – Paradigms – What is HCI – Components – Cognitive Framework - Perception and Representation - Attention and Memory Constraint - Knowledge and Mental Model - Interface Metaphors - Input - Output		**CO1**
UNIT II	**DESIGN PROCESS**	**9**
Interaction Styles – Interaction Design Basics – HCI in the Software Process – Design Rules - Designing Windowing Systems - User Support and On-Line Information - Designing For Collaborative Work and Virtual Environments - Principles and User-Centered Design - Methods for User-Centered Design		**CO2**
UNIT III	**IMPLEMENTATION AND EVALUATION PROCESS**	**9**
Implementation issues - Implementation Support - Evaluation techniques - Universal Design - User Support		**CO3**
UNIT IV	**MODELS**	**9**
Cognitive models - Communication and collaboration models: Models of the system - Models of the System - Modeling Rich Interaction		**CO4**
UNIT V	**APPLICATIONS**	**9**
Socio – organization issues and stakeholder requirements - Ubiquitous Computing - Context – aware User Interfaces - Hypertext, multimedia and the World Wide Web		**CO5**

TOTAL : 45 PERIODS

TEXT BOOKS

1. Alan Dix, Janet Finlay, Gregory D.Abowd, Russell Beale, ―Human Computer Interaction‖, Third Edition, Pearson Education, 2004
2. Dix, Finlay, Abowd and Beale. ―Human - Computer Interaction‖, Second edition, Prentice Hall,1998

REFERENCE BOOKS

2. John M.Carrol, ―Human Computer Interaction in the New Millenium, Pearson Education, 2002.

COURSE OUTCOMES **Upon completion of the course, students will be able to**	
CO1	To develop good design for human machine interaction system
CO2	Analyze the user's need in interaction system
CO3	To design new interaction model to satisfy all types of customers
CO4	Evaluate the usability and effectiveness of various products
CO5	To know how to apply interaction techniques for systems

MAPPING OF COs WITH POs AND PSOs

ML1726	CLOUD COMPUTING TECHNIQUES	L	T	P	C
		3	0	0	3

OBJECTIVES

On Completion of the course, the students should be able to:

- recognize the main concepts, types, deployment models, advantages and disadvantages of cloud computing.
- learn the cloud architecture and virtualization techniques
- appreciate the key concepts of cloud application programming.
- understand cloud resource management and security
- understand cloud platforms and new developments

UNIT I	INTRODUCTION TO CLOUD COMPUTING	9
Introduction to Cloud Computing – Move to Cloud Computing – Types of Cloud – Working of Cloud Computing - Cloud deployment models: public, private, hybrid, community –Types of Clouds, Public Clouds, Private Clouds, Hybrid Clouds, Community Clouds, Economics of the Cloud, Open Challenges, Cloud Interoperability and Standards, Scalability and Fault Tolerance – Pros and Cons of cloud computing		CO1
UNIT II	**CLOUD ARCHITECTURE AND VIRTUALIZATION**	**9**
Cloud Computing Architecture : The cloud reference model – Architecture, Infrastructure and hardware as a service, Platform as a service, Software as a service, Characteristics of virtualized environments – Increased security, Managed execution, Portability, Taxonomy, Virtualization and cloud computing, Pros and cons of virtualization, Technology examples – Xen, VMware, Microsoft Hyper-V		CO2
UNIT III	**CLOUD APPLICATION PROGRAMMING**	**9**
Aneka – Framework, Anatomy of Aneka container, building Aneka clouds, cloud programming and management, Programming applications with threads, Multithreading with Aneka, Programming applications with Aneka threads, Task computing, Task based application models, Aneka task-based programming		CO3
UNIT IV	**RESOURCE MANAGEMENT AND SECURITY IN CLOUD**	**9**
Inter Cloud Resource Management - Resource Provisioning and Resource Provisioning Methods - Global Exchange of Cloud Resources - Security Overview - Cloud Security Challenges –Software-as-a-Service Security – Security Governance – Virtual Machine Security – IAM –Security Standards		CO4
UNIT V	**CLOUD PLATFORMS AND DEVELOPMENTS**	**9**
Amazon web services – Compute, Storage, Communication and Additional services - Google App Engine – Architecture and core concepts, Application life cycle, Cost model – Microsoft Azure - SQL Azure, Windows Azure platform appliance, Scientific applications, - Healthcare, Biology, Geoscience, Business and consumer applications – CRM and ERP, Productivity, Social networking, Media applications, Multiplayer online gaming		CO5
		TOTAL : 45 PERIODS

COURSE OUTCOMES **Upon completion of the course, students will be able**	
CO1	To know basic concepts, types and deployment models of cloud computing.
CO2	To learn cloud architecture and virtualization techniques.
CO3	To understand the key concepts of cloud application programming
CO4	To understand cloud resource management and security
CO5	To learn cloud platforms and new developments

MAPPING OF COs WITH POs AND PSOs

PROFESSIONAL ELECTIVE – V (SEMESTER VIII)

ML1811	VIDEO ANALYTICS	L	T	P	C
		3	0	0	3

OBJECTIVES

To impart knowledge on

- To know the fundamental concepts of big data and analytics
- To learn various techniques for mining data streams
- To acquire the knowledge of extracting information from surveillance videos.
- To learn Event Modelling for different applications.
- To understand the models used for recognition of objects in videos

UNIT I	INTRODUCTION TO BIG DATA & DATA ANALYSIS	9
Introduction to Big Data Platform – Challenges of Conventional systems – Web data- Evolution of Analytic scalability- analytic processes and tools- Analysis Vs Reporting- Modern data analytic tools Data Analysis: Regression Modeling- Bayesian Modeling- Rule induction		CO1
UNIT II	**MINING DATA STREAMS**	**9**
Introduction to Stream concepts- Stream data model and architecture – Stream Computing-Sampling data in a Stream- Filtering Streams- Counting distinct elements in a Stream- Estimating moments Counting oneness in a window- Decaying window- Real time Analytics platform(RTAP) applications case studies.		CO2
UNIT III	**VIDEO ANALYTICS**	**9**
Introduction- Video Basics - Fundamentals for Video Surveillance- Scene Artifacts- Object Detection and Tracking: Adaptive Background Modelling and Subtraction- Pedestrian Detection and Tracking Vehicle Detection and Tracking- Articulated Human Motion Tracking in Low-Dimensional Latent Spaces.		CO3
UNIT IV	**BEHAVIOURAL ANALYSIS & ACTIVITY RECOGNITION**	**9**
Event Modelling- Behavioral Analysis- Human Activity Recognition-Complex Activity Recognition Activity modelling using 3D shape, Video summarization, shape-based activity models-Suspicious Activity Detection.		CO4
UNIT V	**HUMAN FACE RECOGNITION & GAIT ANALYSIS**	**9**
Introduction: Overview of Recognition algorithms – Human Recognition using Face: Face Recognition from still images, Face Recognition from video, Evaluation of Face Recognition Technologies- Human Recognition using gait: HMM Framework for Gait Recognition, View Invariant Gait Recognition, Role of Shape and Dynamics in Gait Recognition		CO5

TOTAL : 45 PERIODS

TEXT BOOKS

1. Anand Rajaraman and Jeffrey David Ullman, Mining of Massive Datasets, Cambridge University Press, 2012.
2. Michael Berthold, David J.Hand, Intelligent Data Analysis, Springer, 2007.

REFERENCE BOOKS

1. Rama Chellappa, Amit K.Roy-Chowdhury, Kevin Zhou.S, “Recognition of Humans and their Activities using Video”, Morgan & Claypool Publishers, 2005.
2. Yunqian Ma, Gang Qian, “Intelligent Video Surveillance: Systems and Technology”, CRC Press (Taylor and Francis Group), 2009.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Work with big data platform and its analysis techniques
CO2	Design efficient algorithms for mining the data from large volumes.
CO3	Work with surveillance videos for analytics.
CO4	Design of optimization algorithms for better analysis and recognition of objects in a scene.
CO5	Model a framework for Human Activity Recognition

MAPPING OF COs WITH POs AND PSOs

ML1812	BLOCKCHAIN ARCHITECTURE DESIGN	L	T	P	C
		3	0	0	3

OBJECTIVES

- To understand Blockchain's fundamental components, and examine decentralization using blockchain.
- To explain how cryptocurrency works, from when a transaction is created to when it is considered part of the Blockchain.
- To explain the components of Ethereum and Programming Languages for Ethereum.
- To study the basics of Hyperledger and Web
- To know about alternative Blockchains and Blockchain projects in different domains.

UNIT I	INTRODUCTION TO BLOCKCHAIN	9
Digital Money to Distributed Ledgers , Design Primitives: Protocols, Security, Consensus, Permissions, Privacy. Blockchain Architecture and Design: Basic crypto primitives: Hash, Signature, Hashchain to Blockchain, Basic consensus mechanisms		CO1
UNIT II	**CONSENSUS**	**9**
Requirements for the consensus protocols, Proof of Work (PoW), Scalability aspects of Block chain consensus protocols Permissioned Blockchains: Design goals, Consensus protocols for Permissioned Blockchains		CO2
UNIT III	**HYPERLEDGER FABRIC**	**9**
Hyperledger Fabric (A): Decomposing the consensus process , Hyperledger fabric components, Chaincode Design and Implementation Hyperledger Fabric (B): Beyond Chaincode: fabric SDK and Front End (b) Hyperledger composer tool		CO3
UNIT IV	**EXPLORING BLOCKCHAIN APPLICATIONS**	**9**
Use case 1: Blockchain in Financial Software and Systems (FSS): (i) Settlements, (ii) KYC, (iii) Capital markets, (iv) Insurance Use case 2: Blockchain in trade/supply chain: (i) Provenance of goods, visibility, trade/supply chain finance, invoice management discounting, etc		CO4
UNIT V	**BLOCKCHAIN SOLUTIONS FOR GOVERNMENT**	**9**
Use case 3: Blockchain for Government: (i) Digital identity, land records and other kinds of record keeping between government entities, (ii) public distribution system social welfare systems BlockchainCryptography, Privacy and Security on Blockchain		CO5
		TOTAL : 45 PERIODS

REFERENCE BOOKS

1. Mastering Bitcoin: Unlocking Digital Cryptocurrencies, by Andreas Antonopoulos
2. Blockchain by Melanie Swa, O'Reilly
3. Hyperledger Fabric - https://www.hyperledger.org/projects/fabric
4. Zero to Blockchain - An IBM Redbooks course, by Bob Dill, David Smits - https://www.redbooks.ibm.com/Redbooks.nsf/RedbookAbstracts/crse0401.html

COURSE OUTCOMES
Upon completion of the course, students will be able to

CO1	Understand the technology components of Blockchain and how it works behind the scenes.
CO2	Identify different approaches to developing decentralized applications.
CO3	Understand Bitcoin and its limitations by comparing with other alternative coins.
CO4	Understand and use Hyperledger and its development framework
CO5	Track alternative Blockchains and emerging trends in Blockchain.

ML1813	MICROSOFT BOTS FRAMEWORK	L	T	P	C
		3	0	0	3

OBJECTIVES

- Develop various real-world intelligent BOTs from scratch using Microsoft Bot Framework.
- Understand the components of Bot Architecture
- Build Bots to parse the text and voice
- Create intelligent Bots using APIs
- Integrate BOTSs with most popular conversation platforms

UNIT I	**BOT INTRODUCTION & BUILDING CONVERSATION**	**9**
Overview -Exploring BOT framework architecture -BOT chat benefits -Visualizing chatbots ,connector -overview of channels -Bot connector services-characteristics of chatbot- chatbot communication-steps to build chatbot creating Bot framework project -examining default code -initial testing with Emulator -Publishing and registering chatbot-Game Bot- conversation state Management -participating in conversations-using custom message activity - fine tuning chat bot -Handling activities -Advanced conversation messages		CO1
UNIT II	**BOT BUILDER**	**9**
Building dialogs -Introducing wine Bot -implementing dialog class -dialog conversation fl ow- dialog prompt options -calling dialog -- using Form Flow- basic form flow chat -enhancing form flow conversations - advanced templates and patterns -customizing Form Flow-configuring property -message method and common parameters.		CO2
UNIT III	**NATURAL LANGUAGE PROCESSING WITH LUIS**	**9**
Learning essential LUIS concepts -creating models -building intents -introducing winebotLuis -handling entities - Managing advanced conversation -managing dialog stack -navigating to other dialogs-managing conversations with chaining -wine bot chain program -LINQ to dialog -formatting text output		CO3
UNIT IV	**CHANNELS AND GUI**	**9**
Attaching cards -Music chat BOT overview -building blocks-working with attachments -displaying cards - adaptive cards -layout with containers -using controls -handling actions -configuring channels -creating email, SMS and Web Bots		CO4
UNIT V	**APIS INTEGRATION AND VOICE**	**9**
Coding custom channels - overview of console channel -starting conversation - sending activities - ending conversation - integrating cognitive services -searching with Bing-interpreting image -translating text – Bui l ding FAQ Chat Bots - adding voice services-adding speech to activities specifying input Hints.		CO5

TOTAL : 45 PERIODS

TEXT BOOK
1. Joe Mayo,"Programming the Microsoft BOTS framework : A multiple Approach to building chatbots" ,Pearson Education Inc.,2018
REFERENCE BOOKS
1. Kishore Gaddam, " Building bots with Microsoft BOTS framework" , 2017, Packt Publishing Ltd 2. Srikanth Machiraju, Ritesh Modi,"Developing Bots with Microsoft Bots Framework: Create Intelligent Bots using MS Bot Framework and Azure Cognitive Services",A Press,2017

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Understand the architecture of Bot and build the conversation
CO2	Build dialogs and form flow
CO3	Identify the intent of a text with the help of LUIS
CO4	Analyze the issues of channels and create Email , SMS and Web Bot
CO5	Understand the APIs and integrate cognitive services &voice services

ML1814	BUSINESS INTELLIGENCE	L	T	P	C
		3	0	0	3

OBJECTIVES

On Completion of the course, the students should be able to:

- Be exposed with the basic rudiments of business intelligence system
- understand the modeling aspects behind Business Intelligence
- understand of the business intelligence life cycle and the techniques used in it
- Be exposed with different data analysis tools and techniques

UNIT I	BUSINESS INTELLIGENCE	9
Business intelligence: Effective and timely decisions, Data, information and knowledge, The role of mathematical models, Business intelligence architectures, Ethics and business intelligence Decision support systems: Definition of system, Representation of the decision-making process, Evolution of information systems, Definition of decision support system, Development of a decision support system		CO1
UNIT II	**MATHEMATICAL MODELS FOR DECISION MAKING**	**9**
Mathematical models for decision making: Structure of mathematical models, Development of a model, Classes of models Data mining: Definition of data mining, Representation of input data , Data mining process, Analysis methodologies Data preparation: Data validation, Data transformation, Data reduction		CO2
UNIT III	**CLASSIFICATION**	**9**
Classification: Classification problems, Evaluation of classification models, Bayesian methods, Logistic regression, Neural networks, Support vector machines. Clustering: Clustering methods, Partition methods, Hierarchical methods, Evaluation of clustering models		CO3
UNIT IV	**BUSINESS INTELLIGENCE APPLICATIONS**	**9**
Business intelligence applications: Marketing models: Relational marketing, Sales force management Logistic and production models: Supply chain optimization, Optimization models for logistics planning, Revenue management systems. Data envelopment analysis: Efficiency measures, Efficient frontier, The CCR model, Identification of good operating practices		CO4
UNIT V	**KNOWLEDGE MANAGEMENT**	**9**
Knowledge Management: Introduction to Knowledge Management, Organizational Learning and Transformation, Knowledge Management Activities, Approaches to Knowledge Management, Information Technology (IT) In Knowledge Management, Knowledge Management Systems Implementation, Roles of People in Knowledge Management. Artificial Intelligence and Expert Systems: Concepts and Definitions of Artificial Intelligence, Artificial Intelligence Versus Natural Intelligence, Basic Concepts of Expert Systems, Applications of Expert Systems, Structure of Expert Systems, Knowledge Engineering, Development of Expert Systems		CO5

TOTAL : 45 PERIODS

TEXT BOOKS

1. Carlo Vercellis ,Business Intelligence: Data Mining and Optimization for Decision Making, Wiley 1st,2009

REFERENCE BOOKS

1. Efraim Turban, Ramesh Sharda, Dursun Delen ,Decision support and Business Intelligence Systems, Pearson,Edition 9th,2011
2. Grossmann W, Rinderle-Ma,Fundamental of Business Intelligence, Springer,Edition 1st, 2015

COURSE OUTCOMES **Upon completion of the course, students will be able to**	
CO1	Explain the fundamentals of business intelligence.
CO2	Link data mining with business intelligence And Apply various modeling techniques.
CO3	Explain the data analysis and knowledge delivery stages.
CO4	Apply business intelligence methods to various situations.
CO5	Decide on appropriate technique.

MG1815	SUPPLY CHAIN MANAGEMENT	L	T	P	C
		3	0	0	3

OBJECTIVES

- To help understand the importance of and major decisions in supply chain management for gaining competitive advantage.

UNIT I	INTRODUCTION	9
Supply Chain – Fundamentals, Evolution, Role in Economy, Importance, Decision Phases, Enablers & Drivers of Supply Chain Performance; Supply chain strategy; Supply Chain Performance Measures.		CO1
UNIT II	**SUPPLY CHAIN NETWORK**	**9**
Distribution Network Design – Role in supply chain, influencing factors, design options, online sales and distribution network, Distribution Strategies; Network Design in supply chain – Role, influencing factors, framework for network design, Impact of uncertainty on Network Design.		CO2
UNIT III	**PLANNING DEMAND, INVENTORY AND SUPPLY**	**9**
Managing supply chain cycle inventory and safety inventory - Uncertainty in the supply chain , Analyzing impact of supply chain redesign on the inventory, Risk Pooling, Managing inventory for short life-cycle products, multiple item -multiple location inventory management; Pricing and Revenue Management		CO3
UNIT IV	**LOGISTICS**	**9**
Transportation – Role, Modes and their characteristics, infrastructure and policies, transport documentation, design options, trade-offs in transportation design, intermodal transportation. Logistics outsourcing – catalysts, benefits, value proposition. 3PL, 4PL, 5PL, 6PL; International Logistics -objectives, importance in global economy, Characteristics of global supply chains, Incoterms		CO4
UNIT V	**SUPPLY CHAIN INNOVATIONS**	**9**
Supply Chain Integration, SC process restructuring, IT in Supply Chain; Agile Supply Chains, Legible supply chain, Green Supply Chain, Reverse Supply chain; Supply chain technology trends – AI, Advanced analytics, Internet of Things, Intelligent things, conversational systems, robotic process automation, immersive technologies, Block chain.		CO5
		TOTAL : 45 PERIODS

REFERENCE BOOKS

1. Sunil Chopra, Peter Meindl and DharamVirKalra, Supply Chain Management-Strategy Planning and Operation, Pearson Education, Sixth Edition, 2016.
2. Janat Shah, Supply Chain Management – Text and Cases, Pearson Education, 2009
3. Ballou Ronald H, Business Logistics and Supply Chain Management, Pearson Education, 5thEdition, 2007.

5. Pierre David, International Logistics, Biztantra, 2011.

COURSE OUTCOMES Upon completion of the course, students will be able to	
CO1	Understanding of supply chain fundamentals
CO2	Ability to design supply chain networks to enhance supply chain performance
CO3	Ability to plan demand based on inventory and supply
CO4	Understanding the role of logistics in supply chain performance
CO5	Awareness of innovations for sustainable supply chains

MAPPING OF COs WITH POs AND PSOs

PROFESSIONAL ELECTIVE – VI (SEMESTER VIII)

ML1821	INTERNET OF EVERYTHING	L	T	P	C
		3	0	0	3

OBJECTIVES

- To know the fundamental concepts and applications of IoT
- To enumerate the enabling technologies for IoT
- To study ,analyze and design evolving standards of IoT
- To explore IpV6 technologies for IoT
- To learn python programming for designing IoT applications

UNIT I	IOT INTRODUCTION AND APPLICATIONS	9
Overview and Motivations -IPv6 Role -IoT Definitions -Observations - ITU-T Views -Working Definition - IoT Frameworks - Basic Nodal Capabilities – Physical Design of IoT - Logical Design of IoT - Applications Examples -Smart Metering/Advanced Metering Infrastructure -e- Health/Body Area Networks - City Automation - Automotive Applications - Home Automation - Smart Cards -Tracking (Following and Monitoring Mobile Objects) - Over-The-AirPassive Surveillance/Ring of Steel -Control Application Examples		CO1
UNIT II	FUNDAMENTAL MECHANISMS AND KEY TECHNOLOGIES	9
Identification of IoT Objects and Services -Structural Aspects of the IoT - Environment Characteristics - Traffic Characteristics – Scalability – Interoperability -Security and Privacy - Open Architecture - Key IoT Technologies - Device Intelligence -Communication Capabilities - Mobility Support - Device Power - Sensor Technology - RFID Technology - Satellite Technology - IoT Enabling Technologies		CO2
UNIT III	EVOLVING IOT STANDARDS	9
IETF IPv6 Routing Protocol for RPL Roll – Constrained Application Protocol (CoAP) - Representational State Transfer (REST) - ETSI M2M - Third-Generation Partnership Project Service Requirements for Machine-Type Communications - CENELAC – IETF IPv6 Over Lowpower WPAN (6LoWPAN) - ZigBee IP (ZIP) - IP in Small Objects (IPSO) - WPAN Technologies for IoT/M2M -Cellular and Mobile Network Technologies for IoT/M2M		CO3
UNIT IV	IPV6 TECHNOLOGIES FOR THE IOT	9
Motivations - Address Capabilities -IPv6 Protocol Overview -IPv6 Tunneling - IPsec in IPv6 - Header Compression Schemes - Quality of Service in IPv6 - Migration Strategies to IPv6 - Protocol Details - Generic Mechanisms - New IPv6 Protocol - Message Types - Destination Option - Modifications to IPv6 Neighbor Discovery - Requirements for Various IPv6 Nodes - Correspondent Node Operation - HA Node Operation - Mobile Node Operation Relationship to IPV4 Mobile IPv4 (MIP) - IPv6 Over Low-Power WPAN - Goals - Transmission of IPv6 Packets Over IEEE 802.15.4		CO4
UNIT V	IPV6 DESIGN METHODOLOGY	9
Purpose and Requirements Specification - Process Specification - Domain Model Specification - Information Model Specification - Service Specifications - IoT Level Specification - Functional View Specification - Operational View Specification - Device & Component Integration - Application Development - Case Study on IoT System for Weather Monitoring – Logical Design using Python - Python Packages of Interest for IoT - IoT Physical Devices and Endpoints - Raspberry Pi - Linux on Raspberry Pi - Raspberry Pi Interfaces - Programming Raspberry Pi with Python - WAMP : AutoBahn for IoT - Xively Cloud for IoT - Python Web Application Framework (Django) - Designing a RESTful Web API - Amazon Web Services for IoT - SkyNet IoT Messaging Platform		CO5
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Daniel Minoli, Building the Internet of Things with IPv6 and MIPv6: The Evolving World of M2M Communications, Wiley Publications, First Edition, 2013.

REFERENCE BOOKS

Adrian McEwen, Hakim Cassimally, Designing the Internet of Things, Wiley Publications, First Edition, 2013

COURSE OUTCOMES **Upon completion of the course, students will be able to**	
CO1	Identify the applications of IoT
CO2	Apply key technologies for IoT objects and services
CO3	Interpret various IoT standards
CO4	Assemble IpV6 technologies that suits IoT applications
CO5	Design IoT applications using Python

ML1822	ETHICS AND AI	L	T	P	C
		3	0	0	3

OBJECTIVES

- Study the morality and ethics in AI
- Learn about the Ethical initiatives in the field of artificial intelligence
- Study about AI standards and Regulations
- Study about social and ethical issues of Robot Ethics
- Study about AI and Ethics- challenges and opportunities

UNIT I	**INTRODUCTION**	**9**
Definition of morality and ethics in AI-Impact on society-Impact on human psychology-Impact on the legal system-Impact on the environment and the planet- Impact on trust. Case Study of ethical initiatives in healthcare, autonomous vehicles and defense.		**CO1**
UNIT II	**ETHICAL INITIATIVES IN AI**	**9**
International ethical initiatives-Ethical harms and concerns-Case study: healthcare robots, Autonomous Vehicles. Warfare and weaponization. Identification on optimization in AI affecting ethics.		**CO2**
UNIT III	**AI STANDARDS AND REGULATION**	**9**
Model Process for Addressing Ethical Concerns During System Design Transparency of Autonomous Systems-Data Privacy Process- Algorithmic Bias Considerations - Ontological Standard for Ethically Driven Robotics and Automation Systems. Case study on ontology where ethics is at stake.		**CO3**
UNIT IV	**ROBOETHICS: SOCIAL AND ETHICAL IMPLICATION OF ROBOTICS**	**9**
Robot-Roboethics- Ethics and Morality- Moral Theories-Ethics in Science and Technology Ethical Issues in an ICT Society- Harmonization of Principles- Ethics and Professional Responsibility- Roboethics Taxonomy.		**CO4**
UNIT V	**AI AND ETHICS-CHALLENGES AND OPPORTUNITIES**	**9**
Challenges Opportunities- ethical issues in artificial intelligence- Societal Issues Concerning the Application of Artificial Intelligence in Medicine- decision-making role in industries-National and International Strategies on AI.		**CO5**

TOTAL : 45 PERIODS

TEXT BOOKS

1. Y. Eleanor Bird, Jasmin Fox-Skelly, Nicola Jenner. Ruth Larbey, Emma Weitkamp and Alan Winfield "The ethics of artificial intelligence: Issues and initiatives". EPRS | European Parliamentary Research Service Scientific Foresight Unit (STOA) PE 634.452 March 2020

2. Patrick Lin, Keith Abney, George A Bekey," Robot Ethics. The Ethical and Social Implications of Robotics", The MIT Press- January 2014.

REFERENCE BOOKS

1. Towards a Code of Ethics for Artificial Intelligence (Artificial Intelligence: Foundations. Theory, and Algorithms) by Paula Boddington, November 2017
2. Mark Coeckelbergh," AI Ethics", The MIT Press Essential Knowledge series, April 2020

COURSE OUTCOMES Upon completion of the course, students will be able to	
CO1	Learn about morality and ethics in AI
CO2	Acquire the knowledge of real time application ethics, issues and its challenges.
CO3	Learn about AI standards and Regulations like AI Agent, Safe Design of Autonomous and Semi-Autonomous Systems
CO4	Understand the concepts of Roboethics and Morality with professional responsibilities.
CO5	Learn about the societal issues in AI with National and International Strategies on AI

MAPPING OF COs WITH POs AND PSOs

ML1823	AGILE SOFTWARE DEVELOPMENT	L	T	P	C
		3	0	0	3

OBJECTIVES

- To provide students with a theoretical as well as practical understanding of agile software development practices and how small teams can apply them to create high-quality software.
- To provide a good understanding of software design and a set of software technologies and APIs.
- To do a detailed examination and demonstration of Agile development and testing techniques.
- To understand the benefits and pitfalls of working in an Agile team.
- To understand Agile development and testing.

UNIT I	**AGILE METHODOLOGY**	**9**
Theories for Agile Management - Agile Software Development - Traditional Model vs. Agile Model – Classification of Agile Methods – Agile Manifesto and Principles – Agile Project Management - Agile Team Interactions - Ethics in Agile Teams - Agility in Design, Testing - Agile Documentations - Agile Drivers, Capabilities and Values		**CO1**
UNIT II	**AGILE PROCESSES**	**9**
Lean Production - SCRUM, Crystal, Feature Driven Development- Adaptive Software Development - Extreme Programming: Method Overview - Lifecycle - Work Products, Roles and Practices.		**CO2**
UNIT III	**AGILITY AND KNOWLEDGE MANAGEMENT**	**9**
Agile Information Systems – Agile Decision Making – Earl_S Schools of KM – Institutional Knowledge Evolution Cycle - Development, Acquisition, Refinement, Distribution, Deployment , Leveraging - KM in Software Engineering - Managing Software Knowledge - Challenges of Migrating to Agile Methodologies - Agile Knowledge Sharing - Role of Story-Cards - Story-Card Maturity Model (SMM).		**CO3**
UNIT IV	**AGILITY AND REQUIREMENTS ENGINEERING**	**9**
Impact of Agile Processes in RE-Current Agile Practices - Variance - Overview of RE Using Agile - Managing Unstable Requirements - Requirements Elicitation - Agile Requirements Abstraction Model - Requirements Management in Agile Environment, Agile Requirements Prioritization - Agile Requirements Modeling and Generation - Concurrency in Agile Requirements Generation.		**CO4**
UNIT V	**AGILITY AND QUALITY ASSURANCE**	**9**
Agile Product Development - Agile Metrics - Feature Driven Development (FDD) - Financial and Production Metrics in FDD - Agile Approach to Quality Assurance - Test Driven Development - Agile Approach in Global Software Development.		**CO5**
		TOTAL : 45 PERIODS

REFERENCE BOOKS

1. David J. Anderson and Eli Schragenheim, "Agile Management for Software Engineering: Applying the Theory of Constraints for Business Results", Prentice Hall, 2003.
2. Hazza and Dubinsky, "Agile Software Engineering, Series: Undergraduate Topics in Computer Science", Springer, 2009.
3. Craig Larman, "Agile and Iterative Development: A Managers Guide", Addison-Wesley, 2004.
4. Kevin C. Desouza, "Agile Information Systems: Conceptualization, Construction, and Management", ButterworthHeinemann, 2007.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Realize the importance of interacting with business stakeholders in determining the requirements for a software system
CO2	Perform iterative software development processes: how to plan them, how to execute them.
CO3	Develop techniques and tools for improving team collaboration and software quality.
CO4	Perform Software process improvement as an ongoing task for development teams.
CO5	Show how agile approaches can be scaled up to the enterprise level.

MAPPING OF COs WITH POs AND PSOs

ML1824	BRAIN COMPUTER INTERFACE	L	T	P	C
		3	0	0	3

OBJECTIVES

- Understand the basic concepts of brain computer interface
- Study the various signal acquisition methods
- Learn about the signal processing methods used in BCI
- Understand the various machine learning methods of BCI.
- Learn the various applications of BCI

UNIT I	INTRODUCTION TO BCI	9
Introduction - Brain structure and function, Brain Computer Interface Types - Synchronous and Asynchronous -Invasive BCI -Partially Invasive BCI - Non Invasive BCI, Structure of BCI System, BCI Monitoring Hardware, EEG, ECoG, MEG, fMRI.		CO1
UNIT II	**BRAIN ACTIVATION**	**9**
Brain activation patterns – Spikes, Oscillatory potential and ERD, Slow cortical potentials, Movement related potentials-Mu rhythms, motor imagery, Stimulus related potentials – Visual Evoked Potentials – P300 and Auditory Evoked Potentials, Potentials related to cognitive tasks.		CO2
UNIT III	**FEATURE EXTRACTION METHODS**	**9**
Data Processing – Spike sorting, Frequency domain analysis, Wavelet analysis, Time domain analysis, Spatial filtering -Principal Component Analysis (PCA), Independent Component Analysis (ICA), Artefacts reduction, Feature Extraction – Phase synchronization and coherence		CO3
UNIT IV	**MACHINE LEARNING METHODS FOR BCI**	**9**
Classification techniques -Binary classification, Ensemble classification, Multiclass Classification, Evaluation of classification performance, Regression - Linear, Polynomial, RBF's, Perceptron's, Multilayer neural networks, Support vector machine, Graph theoretical functional connectivity analysis.		CO4
UNIT V	**APPLICATIONS OF BCI**	**9**
Case Studies – Invasive BCIs: decoding and tracking arm (hand) position, controlling prosthetic devices such as orthotic hands, Cursor and robotic control using multi electrode array implant, Cortical control of muscles via functional electrical stimulation. Noninvasive BCIs: P300 Mind Speller, Visual cognitive BCI, Emotion detection. Ethics of Brain Computer Interfacing.		CO5
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Rajesh.P.N.Rao, Brain-Computer Interfacing: An Introduction, Cambridge University Press, First edition, 2013.
2. Jonathan Wolpaw, Elizabeth Winter Wolpaw, Brain Computer Interfaces: Principles and practice, Oxford University Press, USA, Edition 1, January 2012.

2. Bernhard Graimann, Brendan Allison, Gert Pfurtscheller, "Brain-Computer Interfaces: Revolutionizing Human-Computer Interaction", Springer, 2010
3. Ali Bashashati, Mehrdad Fatourechi, Rabab K Ward, Gary E Birch, A survey of signal Processing algorithms in brain-computer interfaces based on electrical brain signals Journal of Neural Engineering, Vol.4, 2007, PP.32-57
4. Arnon Kohen, Biomedical Signal Processing, Vol I and II, CRC Press Inc, Boca Rato, Florida.
5. Bishop C.M., Neural networks for Pattern Recognition, Oxford, Clarendon Press, 1995.
6. Andrew Webb, Statistical Pattern Recognition, Wiley International, Second Edition, 2002.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Comprehend and appreciate the significance and role of this course in the present contemporary world.
CO2	Evaluate concept of BCI.
CO3	Assign functions appropriately to the human and to the machine.
CO4	Select appropriate feature extraction methods
CO5	Use machine learning algorithms for translation.

MAPPING OF COs WITH POs AND PSOs

DS1821	COGNITIVE SYSTEMS	L	T	P	C
		3	0	0	3

OBJECTIVES

- To provide an understanding of the central challenges in realizing aspects of human cognition.
- To provide a basic exposition to the goals and methods of human cognition.
- To develop algorithms that use AI and machine learning along with human interaction and feedback to help humans make choices/decisions.
- To support human reasoning by evaluating data in context and presenting relevant findings along with the evidence that justifies the answers.

UNIT I	**INTRODUCTION TO COGNITIVE SCIENCE**	**9**
Understanding Cognition, IBM's Watson, Design for Human Cognition, Augmented Intelligence, Cognition Modeling Paradigms: Declarative/ logic-based computational cognitive modeling, connectionist models of cognition, Bayesian models of cognition, a dynamical system approach to cognition.		**CO1**
UNIT II	**MODELS**	**9**
Cognitive Models of memory and language, computational models of episodic and semantic memory, modeling psycholinguistics.		**CO2**
UNIT III	**COGNITIVE MODELING**	**9**
modeling the interaction of language, memory and learning, Modeling select aspects of cognition classical models of rationality, symbolic reasoning and decision making.		**CO3**
UNIT IV	**INDUCTIVE GENERALIZATION**	**9**
Formal models of inductive generalization, causality, categorization and similarity, the role of analogy in problem solving, Cognitive Development Child concept acquisition. Cognition and Artificial cognitive architectures such as ACT-R, SOAR, OpenCog, CopyCat, Memory Networks.		**CO4**
UNIT V	**APPLICATION**	**9**
DeepQA Architecture, Unstructured Information Management Architecture (UIMA), Structured Knowledge, Business Implications, Building Cognitive Applications, Application of Cognitive Computing and Systems		**CO5**

TOTAL : 45 PERIODS

REFERENCE BOOKS

1. Formal Approaches in Categorization by Emmanuel M. Pothos, Andy J. Wills, Cambridge University Press,2012.
2. Cognition, Brain and Consciousness: Introduction to Cognitive Neuroscience by Bernard J. Bears, Nicole M. Gage, Academic Press,2013.
3. Cognitive Computing and Big Data Analytics by Hurwitz, Kaufman, and Bowles, Wiley,2012.
4. The Cambridge Handbook of Computational Psychology by Ron Sun (ed.), Cambridge University Press,2008.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Understand what cognitive computing and it's models
CO2	Understand how it differs from traditional approaches.
CO3	Plan and use the primary tools associated with cognitive computing.
CO4	Plan and execute a project that leverages cognitive computing.
CO5	Understand and develop the business implications of cognitive computing.

OPEN ELECTIVES – I& II

OBT101	INDUSTRIAL BIOTECHNOLOGY	L	T	P	C
		3	0	0	3

OBJECTIVE

- To motivate students to excel in research and to practice the technologies in the field of Industrial biotechnology. To provide students with a solid understanding of Biotechnology fundamentals and applications required to solve real life problems. To provide students with an academic environment that is aware of professional excellence and leadership through interaction with professional bodies

UNIT I	OVERVIEW OF THE CELL	9
Cell, structure and properties, prokaryotic and eukaryotic cells, structural organization and function of intracellular organelles; Cell wall, Nucleus, Mitochondria, Golgi bodies, Lysosomes, Endoplasmic reticulum, Peroxisomes and Chloroplast.		CO1
UNIT II	MICROBIAL GROWTH: PURE CULTURE TECHNIQUES	9
Enrichment culture techniques for isolation of chemoautotrophs, chemoheterotrophs and photosynthetic microorganisms. The definition of growth, mathematical expression of growth, Growth curve, availability of oxygen, culture collection and maintenance of cultures. Media formulation: principles of microbial nutrition, formulation of culture medium, selective media, factors influencing the choice of various carbon and nitrogen sources, vitamins, minerals, precursors and antifoam agents. Importance of pH.		CO2
UNIT III	MANAGEMENT OF WASTE	9
Management of Contaminated land, lake sediments and Solid Waste, Anaerobic digestion, Biostimulation, Bioaugmentation, Phytoremediation, Natural attenuation, Vermicomposting		CO3
UNIT IV	BIOREMEDIATION	9
Definition, constraints and priorities of Bioremediation, Types of bioremediation, In-situ and Ex- situ bioremediation techniques, Factors affecting bioremediation. Bioremediation of Hydrocarbons. Lignocellulosic Compounds.		CO4
UNIT V	BIOENERGY AND BIOMINING	9
Bio energy: Energy and Biomass Production from wastes, biofuels, bio hydrogen and biomass. Biomining: Bioleaching, monitoring of pollutants, microbially enhanced oil recovery, microbial fuel cells.		CO5
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Molecular Biology of cell, Alberts. B et al. Developmental Biology, SF Gilbert, Sinauer Associates Inc.
2. AVN Swamy, Industrial Pollution Control Engineering, 2006, Galgotia Publication,

REFERENCE BOOKS
1. Environmental Biotechnology - Allan Stagg.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Design, perform experiments, analyze and interpret data for investigating complex problems in Biotechnology, Engineering and related fields.
CO2	Decide and apply appropriate tools and techniques in biotechnological manipulation.
CO3	Justify societal, health, safety and legal issues
CO4	Understand his responsibilities in biotechnological engineering practices
CO5	Understand the need and impact of biotechnological solutions on environment and societal context keeping in view need for sustainable solution.

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	1	1	2	1	1	2	2	4	2	1	1	1	2	1	1
CO2	2	1	1	2	2	1	2	1	3	4	1	2	1	1	2
CO3	3	3	2	1	1	2	4	3	1	2	4	5	1	2	2
CO4	3	3	2	4	2	1	1	1	2	1	3	2	1	2	2
CO5	2	1	4	5	2	4	3	2	1	2	3	1	1	2	2

OBT104	BIOSENSORS	L	T	P	C
		3	0	0	3

OBJECTIVE

- Understand protein based biosensors and their enzyme reactivity, stability and their application

UNIT I	PROTEIN BASED BIOSENSORS	9
Nano structure for enzyme stabilization - Single enzyme nano particles - Nanotubes microporus silica - Protein based nanocrystalline Diamond thin film for processing		CO1
UNIT II	**DNA BASED BIOSENSOR**	**9**
Heavy metal complexing with DNA and its determination water and food samples - DNA zymo biosensors		CO2
UNIT III	**ELECTRO CHEMICAL APPLICATION**	**9**
Detection in biosensors - Fluorescence - Absorption - Electrochemical. Integration of various techniques - Fiber optic biosensors		CO3
UNIT IV	**FABRICATION OF BIOSENSORS**	**9**
Techniques used for microfabrication - Microfabrication of electrodes - On chip analysis		CO4
UNIT V	**BIOSENSORS IN RESEARCH**	**9**
Future direction in biosensor research - Designed protein pores-as components of biosensors - Molecular design -Bio nanotechnology for cellular biosensing - Biosensors for drug discovery - Nanoscale biosensors		CO5

TOTAL : 45 PERIODS

TEXT BOOKS

1. Biosensors: A Practical Approach, J. Cooper & C. Tass, Oxford University Press, 2004

REFERENCE BOOKS

1. Nanomaterials for Biosensors, Cs. Kumar, Willey - VCH, 2007
2. Smart Biosensor Technology, G.K. Knoff, A.S. Bassi, CRC Press, 2006.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	The students will able to understand protein based biosensors and their enzyme reactivity, stability and their application in protein based nano crystalline thin film processing
CO2	The students will able to describe DNA based biosensors to study the presence of heavy metals in the food products
CO3	The students will able to understand fluorescence, UV-Vis and electrochemical applications of biosensors
CO4	The students will able to study about the fabrication of biosensors and its application as nanochipanalyzer
CO5	To understand the Future direction in biosensor research

MAPPING OF COs WITH POs AND PSOs															
COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	2	1	3	2	1	2	2	4	2	1	1	1	2	1	1

CO3	1	2	4	3	1	2	4	3	1	2	4	5	1	2	2
CO4	1	2	2	4	2	1	1	1	2	1	3	2	1	2	2
CO5	2	1	3	1	2	4	3	2	1	2	3	1	1	2	2

OBT105	INTRODUCTION TO NANOSCIENCE AND NANOTECHNOLOGY	L	T	P	C
		3	0	0	3

OBJECTIVE

- Understand the principles of processing, manufacturing and characterization of nanomaterials and nanostructures.

UNIT I	BASICS OF NANOTECHNOLOGY	9
Introduction - Time and length scale in structures -Definition of a nanosystem -Dimensionality and size dependent phenomena -Surface to volume ratio -Fraction of surface atoms - Surface energy and surface stress- surface defects-Effect of nanoscale on various properties - Structural, thermal, mechanical, magnetic, optical and electronic properties.		CO1
UNIT II	**DIFFERENT CLASSES OF NANOMATERIALS**	**9**
Classification based on dimensionality-Quantum Dots, Wells and Wires- Carbon based nano materials (buckyballs, nanotubes, grapheme)- Metal based nanomaterials (nanogold, nanosilver and metal oxides) - Nanocomposites-Nanopolymers - Nano ceramics -Biological nanomaterials.		CO2
UNIT III	**SYNTHESIS OF NANOMATERIALS**	**9**
Chemical Methods: Metal Nanocrystals by Reduction -Sol - gel processing -Solvothermal Synthesis-Photochemical Synthesis - Chemical Vapor Deposition (CVD) - Metal Oxide - Chemical Vapor Deposition (MOCVD). Physical Methods: Ball Milling - Electrodeposition - Spray Pyrolysis - DC/RF Magnetron Sputtering - Molecular Beam Epitaxy (MBE).		CO3
UNIT IV	**CHARACTERIZATION OF NANOSTRUCTURES**	**9**
Introduction, structural characterization, X-ray diffraction (XRD-Powder/Single crystal), Small angle X-ray scattering (SAXS), Scanning Electron Microscopy (SEM) - Energy Dispersive X-ray analysis (EDAX)- Transmission Electron Microscope (TEM) - Scanning Tunneling Microscope (STM)- Atomic Force Microscopy (AFM), UV-vis spectroscopy (liquid and solid state) - Raman Spectroscopy -X-ray Photoelectron Spectroscopy (XPS) - Auger Electron spectroscopy (AES).		CO4
UNIT V	**APPLICATIONS**	**9**
Solar energy conversion and catalysis - Molecular electronics and printed electronics - Nanoelectronics -Polymers with a special architecture - Liquid crystalline systems - Applications in displays and other devices -Nanomaterials for data storage -Photonics, Plasmonics- Chemical and biosensors -Nanomedicine and Nanobiotechnology		CO5

TOTAL : 45 PERIODS

TEXT BOOKS

1. Nano Technology: Basic Science and Emerging Technologies, Mick Wilson, KamaliKannargare., Geoff Smith Overseas Press (2005)
2. A Textbook of Nanoscience and Nanotechnology,Pradeep T., Tata McGrawHill Education Pvt.Ltd., 2012.
3. Nanostructured Materials and Nanotechnology,Hari Singh Nalwa,Academic Press, 2002.
4. Introduction to Nanotechnology, Charles P.Poole, FrankJ.Owens, Wiley Interscience (2003)
5. Textbook of Nanoscience and Nanotechnology, B.S. Murty, P. Shankar, Baldev Raj, B BRath, James Murday, Springer Science & Business Media, 2013.

REFERENCE BOOKS

1. Nanotechnology: A gentle introduction to the next Big idea, Mark A.Ratner, Daniel Ratner, Mark Ratne, Prentice Hall P7R:1st Edition (2002)
2. Fundamental properties of nanostructed materials Ed D. Fioran, G.Sberveglier, World Scientific 1994
3. Nanoscience: Nanotechnologies and Nanophysics, Dupas C., Houdy P., Lahmani M., Springer-Verlag Berlin Heidelberg, 2007

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Demonstrate the understanding of length scales concepts, nanostructures and nanotechnology
CO2	Understand the different classes of nanomaterials.
CO3	Identify the CVD, MOCVD
CO4	Outline the applications of nanotechnology and
CO5	Develop an ability to critically evaluate the promise of a nanotechnology device.

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

CO2	3	2	1	2	2	1	2	1	3	4	1	2	1	1	2
CO3	1	2	4	3	1	2	4	3	1	2	4	5	1	2	2
CO4	1	2	2	4	2	1	1	1	2	1	3	2	1	2	2
CO5	2	1	3	1	2	4	3	2	1	2	3	1	1	2	1

OCE102	INTRODUCTION TO GEOGRAPHIC INFORMATION SYSTEM	L	T	P	C
	(COMMON TO AIDS, AIML, CSE, ECE, IT)	3	0	0	3

OBJECTIVES

- To introduce the fundamentals and components of Geographic Information System
- To provide details of spatial data models.
- To know the details of data input and topology
- To know the knowledge on data management and output processes
- To know the data quality and standards

UNIT I	FUNDAMENTALS OF GIS	9
Introduction to GIS - Basic spatial concepts - Coordinate Systems - GIS and Information Systems - Definitions - History of GIS - Components of a GIS - Hardware, Software, Data, People, Methods – Proprietary and open source Software - Types of data – Spatial, Attribute data- types of attributes – scales/ levels of measurements.		CO1
UNIT II	SPATIAL DATAMODELS	9
Database Structures - Relational, Object Oriented - ER diagram - spatial data models - Raster Data Structures – Raster Data Compression - Vector Data Structures - Raster vs Vector Models- TIN and GRID data models - OGC standards - Data Quality.		CO2
UNIT III	DATA INPUT AND TOPOLOGY	9
Scanner - Raster Data Input – Raster Data File Formats – Vector Data Input –Digitiser – Topology - Adjacency, connectivity and containment – Topological Consistency rules – Attribute Data linking – ODBC – GPS - Concept GPS based mapping		CO3
UNIT IV	DATA ANALYSIS	9
Vector Data Analysis tools - Data Analysis tools - Network Analysis - Digital Education models -3D data collection and utilization		CO4
UNIT V	APPLICATIONS	9
GIS Applicant – Natural Resource Management – Engineering – Navigation – Vehicle tracking and fleet management - Marketing and Business applications - Case studies.		CO5
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Kang - TsungChang, Introduction to Geographic Information Systems, McGraw Hill Publishing, 2nd Edition,2011.
2. Ian Heywood, Sarah Cornelius, SteveCarver,Srinivasa Raju, “An Introduction Geographical Information Systems, Pearson Education, 2ndEdition,2007.

REFERENCE BOOKS

1. Lo.C.P., Albert K.W. Yeung, Concepts and Techniques of Geographic Information Systems, Prentice-Hall India Publishers,2006

COURSE OUTCOMES **Upon completion of the course, students will be able to**	
CO1	Have basic idea about the fundamentals of GIS
CO2	Understand the types of data models.
CO3	Get knowledge about data input and topology.
CO4	Gain knowledge on data quality and standards.
CO5	Understand data management functions and data output

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

CO2	2	2	1	1	2	-	1	-	-	-	-	2	2	2	2
CO3	2	2	1	1	2	-	1	-	-	-	-	2	2	2	1
CO4	2	2	1	1	2	-	1	-	-	-	-	2	2	2	1
CO5	2	2	1	1	2	-	1	-	-	-	-	2	2	2	2

OCH101	HOSPITAL MANAGEMENT	L	T	P	C
		3	0	0	3

OBJECTIVES

- To understand the fundamentals of hospital administration and management.
- To know the market related research process and its HRM
- To understand the recruitment and training processes in hospitals
- To explore various information management systems and relative supportive services.
- To learn the quality and safety aspects in hospital.

UNIT I	OVERVIEW OF HOSPITAL ADMINISTRATION	9
Distinction between Hospital and Industry, Challenges in Hospital Administration – Hospital Planning- Equipment Planning – Functional Planning		CO1
UNIT II	**HUMAN RESOURCE MANAGEMENT IN HOSPITAL**	**9**
Principles of HRM – Functions of HRM – Profile of HRD Manager -Human Resource Inventory – Manpower Planning.		CO2
UNIT III	**RECRUITMENT AND TRAINING**	**9**
Different Departments of Hospital, Recruitment, Selection, Training Guidelines – Methods of Training – Evaluation of Training – Leadership grooming and Training, Promotion – Transfer.		CO3
UNIT IV	**SUPPORTIVE SERVICES**	**9**
Medical Records Department – Central Sterilization and Supply Department – Pharmacy – Food Services - Laundry Services.		CO4
UNIT V	**COMMUNICATION AND SAFETY ASPECTS IN HOSPITAL**	**9**
Purposes – Planning of Communication, Modes of Communication – Telephone, ISDN, Public Address and Piped Music – CCTV. Security – Loss Prevention – Fire Safety – Alarm System – Safety Rules.		CO5

TOTAL : 45 PERIODS

TEXT BOOKS

1. R.C.Goyal, “Hospital Administration and Human Resource Management”, PHI – Fourth Edition, 2006.
2. G.D.Kunders, “Hospitals – Facilities Planning and Management – TMH, New Delhi – Fifth Reprint 2007.

REFERENCE BOOKS

1. Cesar A.Caceres and Albert Zara, “The Practice of Clinical Engineering, Academic Press, New York, 1977.
2. Norman Metzger, “Handbook of Health Care Human Resources Management”, 2nd edition Aspen Publication Inc. Rockville, Maryland, USA, 1990.
3. Peter Berman “Health Sector Reform in Developing Countries” - Harvard University Press, 1995.
4. William A. Reinke “Health Planning For Effective Management” - Oxford University Press.1988
5. Blane, David, Brunner, “Health and SOCIAL Organization: Towards a Health Policy for the 21st Century”, Eric Calrendon Press 2002.
6. Arnold D. Kalcizony& Stephen M. Shortell, “Health Care Management”, 6th Edition Cengage Learning, 2011.

COURSE OUTCOMES **Upon completion of the course, students will be able to**	
CO1	Explain the principles of Hospital administration.
CO2	Identify the importance of Human resource management.
CO3	List various marketing research techniques.
CO4	Identify Information management systems and issues in supporting departments of hospitals
CO5	Understand safety procedures followed in hospitals

MAPPING OF COs WITH POs AND PSOs

OEC103	BASICS OF EMBEDDED SYSTEMS AND IOT	L	T	P	C
		3	0	0	3

OBJECTIVES:

- Understand the concepts of embedded system design and analysis
- Learn the architecture and programming of ARM processor
- Be exposed to the basic concepts of embedded programming
- Learn the concepts of IOT

UNIT I	**INTRODUCTION TO EMBEDDED SYSTEM**	**9**
Complex systems and microprocessors- Embedded system design process - Design methodologies- Design flows - Requirement Analysis – Specifications-System analysis and architecture design – Quality Assurance techniques-Design example: Model train controller.		**CO1**
UNIT II	**BASICS OF ARM ARCHITECTURE AND PERIPHERAL INTERFACING**	**9**
ARM Architecture Versions – ARM Architecture – Instruction Set – Stacks and Subroutines – Features of the LPC 214X Family – Peripherals – The Timer Unit – Pulse Width Modulation Unit – UART – Block Diagram of ARM9 and ARM Cortex M3 MCU		**CO2**
UNIT III	**EMBEDDED PROGRAMMING CONCEPTS**	**9**
Components for embedded programs- Models of programs- Assembly, linking and loading – compilation techniques- Program level performance analysis – Software performance optimization – Program level energy and power analysis and optimization – Analysis and optimization of program size- Program validation and testing		**CO3**
UNIT IV	**INTRODUCTION TO IOT**	**9**
Functional blocks of an IoT system - Basics of Physical and logical design of IoT - IoT enabled domains - Difference between IoT - Passive and active sensors - Different applications of sensors - IoT front-end hardware Case Studies – Smart Parking, Air Pollution Monitoring.		**CO4**
UNIT V	**COMMUNICATION PROTOCOLS FOR EMBEDDED AND IOT**	**9**
Embedded Networking: Introduction-Serial/Parallel Communication - Serial communication protocols- RS485 - Synchronous Serial Protocols - Serial Peripheral Interface (SPI) - Inter Integrated Circuits (I2C). IoT Infrastructure - 6LowPAN - IPv6 - Wi-Fi, Bluetooth, ZigBee.		**CO5**

TOTAL : 45 PERIODS

TEXT BOOKS:

1. Marilyn Wolf, ―Computers as Components - Principles of Embedded Computing System Design‖, Third Edition ―Morgan Kaufmann Publisher (An imprint from Elsevier), 2012. (UNIT I, II, III, IV)
2. ArshdeepBahga, Vijay Madisetti, "Internet of Things, A Hands-on-Approach", 1st Edition, Universities press Pvt. Ltd., India, 2015.
3. Daniel Minoli, "Building the Internet of Things with IPv6 and MIPv6, 1st Edition, John Wiley & Sons", Inc, USA, 2013

REFERENCES:

1. Adrian McEwen and Hakim Cassimally, "Designing the Internet of Things", 1st Edition, John Wiley & Sons Ltd, UK, 2014
2. Peter Waher, "Learning Internet of Things", 1st Edition, Packt Publishing Ltd, UK, 2015.
3. Charles Bell, "Beginning Sensor Networks with Arduino and Raspberry Pi" , 1st Edition, Apress Publishers, USA, 2013.
4. Raj Kamal, Internet of Things, Architecture and Design Principles, McGraw-Hill, 2017

COURSE OUTCOMES:
By the end of this course, the student should be able to:

CO1	Understand the Embedded System Design Process
CO2	Describe the architecture and programming of ARM processor
CO3	Outline the concepts of embedded system programming
CO4	Explain the basic concepts of IOT
CO5	Model Networked systems with basic protocols

MAPPING OF COs WITH POs AND PSOs

OEE101	BASIC CIRCUIT THEORY	L	T	P	C
		3	0	0	3

OBJECTIVES

- To introduce electric circuits and its analysis
- To impart knowledge on solving circuit equations using network theorems
- To introduce the phenomenon of resonance in coupled circuits.
- To introduce Phasor diagrams and analysis of three phase circuits

UNIT I	**BASIC CIRCUITS ANALYSIS**	**9**
Resistive elements - Resistors in series and parallel circuits; Ohm's Law; Kirchoffs laws – methods of analysis-Mesh current and node voltage.		**CO1**
UNIT II	**NETWORK REDUCTION AND THEOREMS FOR DC CIRCUITS**	**9**
Network reduction- voltage and current division, source transformation, star delta conversion; Network theorems- Thevenins and Norton Theorems, Superposition Theorem, Maximum power transfer theorem, Reciprocity Theorem, Millman's theorem.		**CO2**
UNIT III	**ANALYSIS OF AC CIRCUITS**	**9**
Introduction to AC circuits- Inductive reactance, Capacitive reactance, Phasor diagrams, real power, reactive power, apparent power, power factor; RL, RC , RLC networks; Network reductions- voltage and current division, source transformation; Mesh and node analysis; Network theorems- Thevenins and Norton Theorems, Superposition Theorem , Maximum power transfer theorem, Reciprocity Theorem, Millman's theorem.		**CO3**
UNIT IV	**THREE PHASE CIRCUITS**	**9**
A.C. circuits – Average and RMS value, Phasor Diagram, Power, Power Factor and Energy; Analysis of three phase 3-wire and 4-wire circuits with star and delta connected loads, balanced & un balanced; phasor diagram of voltages and currents; power measurement in three phase circuits.		**CO4**
UNIT V	**RESONANCE AND COUPLED CIRCUITS**	**9**
Series and parallel resonance – frequency response, Quality factor and Bandwidth; Self and mutual inductance; Coefficient of coupling; Tuned circuits – Single tuned circuits.		**CO5**
		TOTAL : 45 PERIODS

TEXT BOOKS

1. William H. Hayt Jr, Jack E. Kemmerly and Steven M. Durbin, "Engineering Circuits Analysis", McGraw Hill publishers, edition, New Delhi, 2013.
2. Charles K. Alexander, Mathew N.O. Sadiku, "Fundamentals of Electric Circuits",Second Edition, McGraw Hill, 2013.
3. Allan H. Robbins, Wilhelm C. Miller, "Circuit Analysis Theory and Practice", Cengage Learning India, 2013.

REFERENCE BOOKS

1. Chakrabarti A, "Circuits Theory (Analysis and synthesis), Dhanpath Rai & Sons, New Delhi, 1999.
2. Jegatheesan, R., "Analysis of Electric Circuits," McGraw Hill, 2015.
3. Joseph A. Edminister, Mahmood Nahri, "Electric circuits", Schaum's series, McGraw- Hill, New Delhi, 2010.
4. M E Van Valkenburg, "Network Analysis",Prentice-Hall of India Pvt Ltd, New Delhi, 2015.
5. Mahadevan, K., Chitra, C., "Electric Circuits Analysis," Prentice-Hall of India Pvt Ltd.,New Delhi, 2015.
6. Richard C. Dorf and James A. Svoboda, "Introduction to Electric Circuits", 7th Edition, John Wiley & Sons, Inc. 2015.
7. Sudhakar A and Shyam Mohan SP, "Circuits and Network Analysis and Synthesis",McGraw Hill, 2015.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Ability to introduce electric circuits and its analysis
CO2	Ability to impart knowledge on solving circuit equations using network theorems
CO3	Ability to introduce the phenomenon of resonance in coupled circuits.
CO4	Ability to introduce Phasor diagrams and analysis of three phase circuits
CO5	Ability to impart knowledge on resonance and coupled circuits

MAPPING OF COs WITH POs AND PSOs

OEE103	INTRODUCTION TO RENEWABLE ENERGY SYSTEMS	L	T	P	C
		3	0	0	3

OBJECTIVES

- About the stand alone and grid connected renewable energy systems.
- Design of power converters for renewable energy applications.
- Wind electrical generators and solar energy systems.
- Power converters used for renewable energy systems.

UNIT I	INTRODUCTION	9
Environmental aspects of electric energy conversion: impacts of renewable energy generation on environment (cost-GHG Emission) - Qualitative study of different renewable energy resources: Solar, wind, ocean, Biomass, Fuel cell, Hydrogen energy systems and hybrid renewable energy systems.		CO1
UNIT II	**ELECTRICAL MACHINES FOR RENEWABLE ENERGY CONVERSION**	**9**
Reference theory fundamentals-principle of operation and analysis: IG and PMSG		CO2
UNIT III	**POWER CONVERTERS**	**9**
Solar: Block diagram of solar photo voltaic system -Principle of operation: line commutated converters (inversion-mode) - Boost and buck-boost converters- selection of inverter, battery sizing, array sizing Wind: Three phase AC voltage controllers		CO3
UNIT IV	**ANALYSIS OF WIND AND PV SYSTEMS**	**9**
Standalone operation of fixed and variability speed wind energy conversion systems and solar system-Grid connection Issues -Grid integrated PMSG, SCIG Based WECS, grid Integrated solar system		CO4
UNIT V	**HYBRID RENEWABLE ENERGY SYSTEMS**	**9**
Need for Hybrid Systems- Range and type of Hybrid systems- Case studies of Wind-PV Maximum Power Point Tracking (MPPT).		CO5
		TOTAL : 45 PERIODS

TEXT BOOKS

1. S. N. Bhadra, D.Kastha, S.Banerjee, “Wind Electrical Systems”, Oxford University Press, 2005.
2. B.H.Khan, “Non-conventional Energy Sources”, Tata McGraw-hill Publishing Company, New Delhi, 2017.

REFERENCE BOOKS

1. Muhammad H. Rashid, "Power Electronics Hand Book", Third Edition, Butterworth-Heinemann, 2015.
2. Ion Boldea, "Variability Speed Generators", Second Edition, CRC Press, 2015.
3. Rai. G.D, "Non- conventional Energy Sources", Khanna Publishers, 2004.
4. Gray, L. Johnson, "Wind Energy Systems", Prentice Hall, 2006.
5. Andrzej M. Trzynnadlowski, "Introduction to Modern Power Electronics", Third Edition, WileyIndia Pvt. Ltd, 2016.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Ability to understand and analyze power system operation, stability, control and protection.
CO2	Ability to handle the engineering aspects of electrical energy generation and utilization.
CO3	Ability to understand the stand alone and grid connected renewable energy systems.
CO4	Ability to design of power converters for renewable energy applications.
CO5	Ability to acquire knowledge on wind electrical generators and solar energy systems.

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)

OEI102	ROBOTICS	L	T	P	C
		3	0	0	3

OBJECTIVE

- To understand the functions of the basic components of a Robot.
- To study the use of various types of End of Effectors and Sensors
- To impart knowledge in Robot Kinematics and Programming
- To learn Robot safety issues and economics.

UNIT I	FUNDAMENTALSOF ROBOT	9
Robot - Definition - Robot Anatomy - Coordinate Systems, Work Envelope Types and Classification- Specifications-Pitch, Yaw, Roll, Joint Notations, Speed of Motion, Pay Load-Robot Parts and their Functions-Need for Robots-Different Applications.		CO1
UNIT II	**ROBOT DRIVE SYSTEMS ANDEND EFFECTORS**	**9**
Pneumatic Drives-Hydraulic Drives-Mechanical Drives-Electrical Drives-D.C. Servo Motors, Stepper Motors, A.C. Servo Motors-Salient Features, Applications and Comparison of all these Drives, End Effectors-Grippers-Mechanical Grippers, Pneumatic and Hydraulic- Grippers,Magnetic Grippers, Vacuum Grippers; Two Fingered and Three Fingered Grippers; Internal Grippers and External Grippers; Selection and Design Considerations.		CO2
UNIT III	**SENSORS AND MACHINEVISION**	**9**
Requirements of a sensor, Principles and Applications of the following types of sensors- Position sensors - Piezo Electric Sensor, LVDT, Resolvers, Optical Encoders, pneumatic Position Sensors, Range Sensors Triangulations Principles, Structured, Lighting Approach, Time of Flight, Range Finders, Laser Range Meters, Touch Sensors ,binary Sensors., Analog Sensors, Wrist Sensors, Compliance Sensors, Slip Sensors, Camera, Frame Grabber, Sensing and Digitizing Image Data- Signal Conversion, Image Storage, Lighting Techniques, ImageProcessing and Analysis-Data Reduction, Segmentation, Feature Extraction, Object Recognition, Other Algorithms, Applications- Inspection, Identification, Visual Serving and Navigation.		CO3
UNIT IV	**ROBOT KINEMATICS AND ROBOTPROGRAMMING**	**9**
Forward Kinematics, Inverse Kinematics and Difference; Forward Kinematics and Reverse Kinematics of manipulators with Two, Three Degrees of Freedom (in 2 Dimension), Four Degrees of freedom (in 3 Dimension) Jacobians, Velocity and Forces-Manipulator Dynamics, Trajectory Generator, Manipulator Mechanism Design-Derivations and problems. Lead through Programming, Robot programming Languages-VAL Programming-Motion Commands, Sensor Commands, End Effector commands and simple Programs.		CO4
UNIT V	**IMPLEMENTATION ANDROBOTECONOMICS**	**9**
RGV, AGV; Implementation of Robots in Industries-Various Steps; Safety Considerations for Robot Operations - Economic Analysis of Robots.		CO5
		TOTAL : 45 PERIODS

TEXT BOOKS

1. Klafter R.D., Chmielewski T.A and Negin M., “Robotic Engineering - An Integrated Approach”, Prentice Hall, 2003.
2. Groover M.P., “Industrial Robotics -Technology Programming and Applications”, McGraw Hill,2001.

REFERENCE BOOKS

1. Craig J.J., “Introduction to Robotics Mechanics and Control”, Pearson Education,2008.
2. Deb S.R., “Robotics Technology and Flexible Automation” Tata McGraw Hill Book Co.,1994.
3. Koren Y., “Robotics for Engineers", Mc Graw Hill Book Co.,1992.
4. Fu.K.S., Gonzalz R.C. and Lee C.S.G., “Robotics Control, Sensing, Vision and Intelligence”, McGraw Hill Book Co., 1987.
5. Janakiraman P.A., “Robotics and Image Processing”, Tata McGraw Hill,1995.
6. Rajput R.K., “Robotics and Industrial Automation”, S.Chand and Company,2008.
7. Surender Kumar, “Industrial Robots and Computer Integrated Manufacturing”, Oxford and IBH Publishing Co. Pvt. Ltd.,1991.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Understand the functions of the basic components of a Robot.
CO2	Study the use of various types of End of Effectors and Sensors
CO3	Understand Sensors and Machine Vision of Robot
CO4	Understand Robot Kinematics and Robot Programming
CO5	Understand the Implementation of Robots in Industries

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)

OMB101	TOTAL QUALITY MANAGEMENT	L	T	P	C
		3	0	0	3

OBJECTIVES

- To learn the quality philosophies and tools in the managerial perspective.

UNIT I	INTRODUCTION	9
Quality – vision, mission and policy statements. Customer Focus – customer perception of quality, Translating needs into requirements, customer retention. Dimensions of product and service quality. Cost of quality.		CO1
UNIT II	**PRINCIPLES AND PHILOSOPHIES OF QUALITY MANAGEMENT**	**9**
Overview of the contributions of Deming, Juran Crosby, Masaaki Imai, Feigenbaum, Ishikawa, Taguchi techniques – introduction, loss function, parameter and tolerance design, signal to noise ratio. Concepts of Quality circle, Japanese 5S principles and 8D methodology		CO2
UNIT III	**STATISTICAL PROCESS CONTROL**	**9**
Meaning and significance of statistical process control (SPC) - construction of control charts for variables and attributed. Process capability – meaning, significance and measurement – Six sigma - concepts of process capability. Reliability concepts - definitions, reliability in series and parallel, product life characteristics curve.Total productive maintenance (TMP), Terotechnology. Business process Improvement (BPI) - principles, applications, reengineering process, benefits and limitations.		CO3
UNIT IV	**TOOLS AND TECHNIQUES FOR QUALITY MANAGEMENT**	**9**
Quality functions development (QFD) – Benefits, Voice of customer, information organization, House of quality (HOQ), building a HOQ, QFD process. Failure mode effect analysis (FMEA) - requirements of reliability, failure rate, FMEA stages, design, process and documentation. Seven Tools (old & new). Bench marking and POKA YOKE.		CO4
UNIT V	**QUALITY SYSTEMS ORGANIZING AND IMPLEMENTATION**	**9**
Introduction to IS/ISO 9004:2000 - quality management systems - guidelines for performance improvements. Quality Audits. TQM culture, Leadership – quality council, employee involvement, motivation, empowerment, recognition and reward - TQM framework, benefits, awareness and obstacles.		CO5

TOTAL : 45 PERIODS

TEXT BOOKS

1. Dale H.Besterfield, Carol Besterfield – Michna, Glen H. Besterfield, Mary Besterfield – SacreHermant – Urdhwareshe, Rashmi Urdhwareshe, Total Quality Management, Revised Third edition, Pearson Education, 2011
2. Shridhara Bhat K, Total Quality Management – Text and Cases, Himalaya Publishing House, First Edition 2002.

REFERENCE BOOKS

1. Douglas C. Montgomory, Introduction to Statistical Quality Control, Wiley Student Edition, 4th Edition, Wiley India Pvt Limited, 2008.
2. James R. Evans and William M. Lindsay, The Management and Control of Quality, Sixth Edition, Thomson, 2005.
3. PoornimaM.Charantimath, Total Quality Management, Pearson Education, First Indian Reprint 2003.
4. Indian standard – quality management systems – Guidelines for performance improvement (Fifth Revision), Bureau of Indian standards, New Delhi.

COURSE OUTCOMES

At the end of the course, the student should be able:

CO1	To apply quality philosophies and tools to facilitate continuous improvement and ensure customer delight.
CO2	To understand the principles of business process improvement
CO3	To understand and apply the concepts of statistical process control
CO4	To apply the tools and techniques used for quality management
CO5	To understand the methods in organizing and implementation of quality systems

OME104	INDUSTRIAL SAFETY ENGINEERING	L	T	P	C
		3	0	0	3

OBJECTIVES

- To provide exposure to the students about safety and health provisions related to hazardous processes as laid out in Factories act 1948
- To familiarize students with powers of inspectorate of factories
- To help students to learn about Environment act 1986 and rules framed under the act.
- To provide wide exposure to the students about various legislations applicable to an industrial unit.
- To prepare onsite and offsite emergency plan.

UNIT I	FACTORIES ACT – 1948	9
Statutory authorities – inspecting staff, health, safety, provisions relating to hazardous processes, welfare, working hours, employment of young persons – special provisions – penalties and procedures-Tamil Nadu Factories Rules 1950 under Safety and health chapters of Factories Act 1948		CO1
UNIT II	**ENVIRONMENT ACT – 1986**	**9**
General powers of the central government, prevention, control and abatement of environmental pollution-Biomedical waste (Management and handling Rules, 1989-The noise pollution (Regulation and control) Rules, 2000-The Batteries (Management and Handling Rules) 2001-No Objection certificate from statutory authorities like pollution control board. Air Act 1981 and Water Act 1974: Central and state boards for the prevention and control of air pollution-powers and functions of boards – prevention and control of air pollution and water pollution - fund - accounts and audit, penalties and procedures.		CO2
UNIT III	**MANUFACTURE, STORAGE AND IMPORT OF HAZARDOUS CHEMICAL RULES 1989**	**9**
Definitions - duties of authorities - responsibilities of occupier - notification of major accidents - information to be furnished - preparation of offsite and onsite plans - list of hazardous and toxic chemicals – safety reports – safety data sheets.		CO3
UNIT IV	**OTHER ACTS AND RULES**	**9**
Indian Boiler Act 1923, static and mobile pressure vessel rules (SMPV), motor vehicle rules, mines act 1952, workman compensation act, rules – electricity act and rules – hazardous wastes (management and handling) rules, 1989, with amendments in 2000- the building and other construction workers act 1996., Petroleum rules, Gas cylinder rules-Explosives Act 1983-Pesticides Act		CO4
UNIT V	**INTERNATIONAL ACTS AND STANDARDS**	**9**
Occupational Safety and Health act of USA (The Williames - Steiger Act of 1970) - Health and safety work act (HASAWA 1974, UK) - OSHAS 18000 - ISO 14000 - American National Standards Institute (ANSI).		CO5
		TOTAL : 45 PERIODS

TEXT BOOKS

1. The Factories Act 1948, Madras Book Agency, Chennai, 2000
2. The Environment Act (Protection) 1986, Commercial Law Publishers (India) Pvt.Ltd., New Delhi.
3. Water (Prevention and control of pollution) act 1974, Commercial Law publishers (India) Pvt.Ltd., New Delhi.

REFERENCE BOOKS

1. Air (Prevention and control of pollution) act 1981, Commercial Law Publishers (India) Pvt.Ltd., New Delhi.
2. The Indian boilers act 1923, Commercial Law Publishers (India) Pvt.Ltd., Allahabad.
3. The manufacture, storage and import of hazardous chemical rules 1989, Madras Book Agency, Chennai.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	To list out important legislations related to health, Safety and Environment.
CO2	To list out requirements mentioned in factories act for the prevention of accidents.
CO3	To understand the health and welfare provisions given in factories act.
CO4	To understand the statutory requirements for an Industry on registration, license and its renewal.
CO5	To prepare onsite and offsite emergency plan.

AUDIT COURSES

AD1001	CONSTITUTION OF INDIA	L	T	P	C
		2	0	0	2

OBJECTIVES

- Teach history and philosophy of Indian Constitution.
- Describe the premises informing the twin themes of liberty and freedom from a civil rights perspective.
- Summarize powers and functions of Indian government.
- Explain emergency rule.
- Explain structure and functions of local administration.

UNIT I	**INTRODUCTION**	6
History of Making of the Indian Constitution-Drafting Committee- (Composition & Working) - Philosophy of the Indian Constitution-Preamble-Salient Features		CO1
UNIT II	**CONTOURS OF CONSTITUTIONAL RIGHTS & DUTIES**	6
Fundamental Rights-Right to Equality-Right to Freedom-Right against Exploitation Right to Freedom of Religion-Cultural and Educational Rights-Right to Constitutional Remedies Directive Principles of State Policy-Fundamental Duties		CO2
UNIT III	**ORGANS OF GOVERNANCE**	6
Parliament-Composition-Qualifications and Disqualifications-Powers and Functions-Executive President-Governor-Council of Ministers-Judiciary, Appointment and Transfer of Judges, Qualifications Powers and Functions		CO3
UNIT IV	**EMERGENCY PROVISIONS**	6
Emergency Provisions - National Emergency, President Rule, Financial Emergency		CO4
UNIT V	**LOCAL ADMINISTRATION**	6
District's Administration head- Role and Importance-Municipalities- Introduction- Mayor and role of Elected Representative-CEO of Municipal Corporation-Panchayati raj- Introduction- PRI-Zila Panchayat-Elected officials and their roles- CEO ZilaPanchayat- Position and role-Block level Organizational Hierarchy (Different departments)-Village level- Role of Elected and Appointed officials-Importance of grass root democracy		CO5
		TOTAL : 30 PERIODS

TEXT BOOKS
1. Basu D D, Introduction to the Constitution of India, Lexis Nexis, 2015. 2. Busi S N, Ambedkar B R framing of Indian Constitution, 1st Edition, 2015. 3. Jain M P, Indian Constitution Law, 7th Edn., Lexis Nexis, 2014. 4. The Constitution of India (Bare Act), Government Publication,1950

COURSE OUTCOMES	
Upon completion of the course, students will be able to	
CO1	Able to understand history and philosophy of Indian Constitution.
CO2	Able to understand the premises informing the twin themes of liberty and freedom from a civil rights perspective.
CO3	Able to understand powers and functions of Indian government.
CO4	Able to understand emergency rule.
CO5	Able to understand structure and functions of local administration.

AD1002	VALUE EDUCATION	L	T	P	C
		2	0	0	2

OBJECTIVES

- Develop knowledge of self-development
- Explain the importance of Human values
- Develop the overall personality through value education
- Overcome the self-destructive habits with value education
- Interpret social empowerment with value education

UNIT I	**INTRODUCTION TO VALUE EDUCATION**	**6**
Values and self-development -Social values and individual attitudes, Work ethics, Indian vision of humanism, Moral and non- moral valuation, Standards and principles, Value judgments		**CO1**
UNIT II	**IMPORTANCE OF VALUES**	**6**
Importance of cultivation of values, Sense of duty, Devotion, Self-reliance, Confidence, Concentration, Truthfulness, Cleanliness. Honesty, Humanity, Power of faith, National Unity, Patriotism, Love for nature, Discipline		**CO2**
UNIT III	**INFLUENCE OF VALUE EDUCATION**	**6**
Personality and Behaviour development - Soul and Scientific attitude. Positive Thinking, Integrity and discipline, Punctuality, Love and Kindness, Avoid fault Thinking, Free from anger, Dignity of labour, Universal brotherhood and religious tolerance, True friendship Happiness Vs suffering, love for truth.		**CO3**
UNIT IV	**REINCARNATION THROUGH VALUE EDUCATION**	**6**
Aware of self-destructive habits, Association and Cooperation, Doing best for saving nature Character and Competence -Holy books vs Blind faith, Self-management and Good health, Science of reincarnation		**CO4**
UNIT V	**VALUE EDUCATION IN SOCIAL EMPOWERMENT**	**6**
Equality, Non-violence, Humility, Role of Women, All religions and same message, Mind your Mind, Self-control, Honesty, Studying effectively		**CO5**
		TOTAL : 30 PERIODS

REFERENCES

Chakroborty , S.K. “Values and Ethics for organizations Theory and practice”, Oxford University Press ,New Delhi

COURSE OUTCOMES

Upon completion of the course, students will be able to	
CO1	Gain knowledge of self-development
CO2	Learn the importance of Human values
CO3	Develop the overall personality through value education
CO4	Overcome the self-destructive habits with value education
CO5	Interpret social empowerment with value education

AD1003	PEDAGOGY STUDIES	L	T	P	C
		2	0	0	2

OBJECTIVES

- Understand the methodology of pedagogy.
- Compare pedagogical practices used by teachers in formal and informal classrooms in developing countries.
- Infer how can teacher education (curriculum and practicum) and the school curriculum and guidance materials best support effective pedagogy.
- Illustrate the factors necessary for professional development.
- Identify the Research gaps in pedagogy.

UNIT I	**INTRODUCTION AND METHODOLOGY**	**6**
Aims and rationale, Policy background, Conceptual framework and terminology - Theories of learning, Curriculum, Teacher education - Conceptual framework, Research questions - Overview of methodology and Searching.		**CO1**
UNIT II	**THEMATIC OVERVIEW**	**6**
Pedagogical practices are being used by teachers in formal and informal classrooms in developing countries - Curriculum, Teacher education.		**CO2**
UNIT III	**EVIDENCE ON THE EFFECTIVENESS OF PEDAGOGICAL PRACTICES**	**6**
Methodology for the in depth stage: quality assessment of included studies - How can teacher education (curriculum and practicum) and the school curriculum and guidance materials best support effective pedagogy? - Theory of change - Strength and nature of the body of evidence for effective pedagogical practices - Pedagogic theory and pedagogical approaches - Teachers' attitudes and beliefs and Pedagogic strategies.		**CO3**
UNIT IV	**REINCARNATION THROUGH VALUE EDUCATION**	**6**
Professional development: alignment with classroom practices and follow up support - Peer support - Support from the head teacher and the community - Curriculum and assessment - Barriers to learning: limited resources and large class sizes		**CO4**
UNIT V	**RESEARCH GAPS AND FUTURE DIRECTIONS**	**6**
Research design - Contexts - Pedagogy - Teacher education - Curriculum and assessment - Dissemination and research impact.		**CO5**
		TOTAL : 30 PERIODS

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Understand the methodology of pedagogy
CO2	Understand Pedagogical practices used by teachers in formal and informal classrooms in developing countries.
CO3	Find how can teacher education (curriculum and practicum) and the school curriculum and guidance materials best support effective pedagogy.
CO4	Know the factors necessary for professional development.
CO5	Identify the Research gaps in pedagogy.

AD1004	STRESS MANAGEMENT BY YOGA	L	T	P	C
		2	0	0	2

OBJECTIVES

- Develop healthy mind in a healthy body thus improving social health also improve efficiency
- Invent Do's and Don't's in life through Yam
- Categorize Do's and Don't's in life through Niyam
- Develop a healthy mind and body through Yog Asans
- Invent breathing techniques through Pranayam

UNIT I	**INTRODUCTION TO YOGA**	**6**
Definitions of Eight parts of yog.(Ashtanga)		**CO1**
UNIT II	**YAM**	**6**
Do`s and Don't's in life.Shaucha, santosh, tapa, swadhyay, ishwarpranidhan		**CO2**
UNIT III	**NIYAM**	**6**
Do`s and Don't's in life. Ahinsa, satya, astheya, bramhacharya and aparigraha		**CO3**
UNIT IV	**ASAN**	**6**
Professional development: alignment with classroom practices and follow up support - Peer support - Support from the head teacher and the community - Curriculum and assessment - Barriers to learning: limited resources and large class sizes		**CO4**
UNIT V	**RESEARCH GAPS AND FUTURE DIRECTIONS**	**6**
Research design - Contexts - Pedagogy - Teacher education - Curriculum and assessment - Dissemination and research impact.		**CO5**
		TOTAL : 30 PERIODS

REFERENCES

1. "Rajayoga or conquering the Internal Nature" by Swami Vivekananda, Advaita Ashrama (PublicationDepartment), Kolkata
2. 'Yogic Asanas for Group Tarining-Part-I" : Janardan Swami Yogabhyasi Mandal, Nagpur

COURSE OUTCOMES	
Upon completion of the course, students will be able to	
CO1	Develop healthy mind in a healthy body thus improving social health also improve efficiency
CO2	Learn Do's and Don't's in life through Yam
CO3	Learn Do's and Don't's in life through Niyam
CO4	Develop a healthy mind and body through Yog Asans
CO5	Learn breathing techniques through Pranayam

AD1005	PERSONALITY DEVELOPMENT THROUGH LIFE ENLIGHTENMENT SKILLS	L	T	P	C
		2	0	0	2

OBJECTIVES

- Develop basic personality skills holistically
- Develop deep personality skills holistically to achieve happy goals
- Rewrite the responsibilities
- Reframe a person with stable mind

UNIT I	**NEETISATAKAM-HOLISTIC DEVELOPMENT OF PERSONALITY - I**	**6**
Verses- 19,20,21,22 (wisdom) - Verses- 29,31,32 (pride & heroism) – Verses- 26,28,63,65 (virtue)		**CO1**
UNIT II	**NEETISATAKAM-HOLISTIC DEVELOPMENT OF PERSONALITY - II**	**6**
Verses- 52,53,59 (dont's) - Verses- 71,73,75,78 (do's)		**CO2**
UNIT III	**ORGANS OF GOVERNANCE**	**6**
Shrimad Bhagwad Geeta: Chapter 2-Verses 41, 47,48 - Chapter 3-Verses 13, 21, 27, 35 Chapter6-Verses 5,13,17,23, 35 - Chapter 18-Verses 45, 46, 48		**CO3**
UNIT IV	**EMERGENCY PROVISIONS**	**6**
Statements of basic knowledge - Shrimad Bhagwad Geeta: Chapter2-Verses 56, 62, 68 Chapter12 -Verses 13, 14, 15, 16,17, 18		**CO4**
UNIT V	**LOCAL ADMINISTRATION**	**6**
Chapter2-Verses 17, Chapter 3-Verses 36,37,42 - Chapter 4-Verses 18, 38,39 Chapter18 - Verses 37,38,63		**CO5**

COURSE OUTCOMES	
Upon completion of the course, students will be able to	
CO1	To develop basic personality skills holistically
CO2	To develop deep personality skills holistically to achieve happy goals
CO3	To rewrite the responsibilities
CO4	To reframe a person with stable mind, pleasing personality and determination
CO5	To awaken wisdom in students

AD1006	UNNAT BHARAT ABHIYAN	L	T	P	C
		2	0	0	2

OBJECTIVES

- To engage the students in understanding rural realities
- To identify and select existing innovative technologies, enable customization of technologies, or devise implementation method for innovative solutions, as per the local needs.
- To leverage the knowledge base of the institutions to devise processes for effective implementation of various government programmes
- To understand causes for rural distress and poverty and explore solutions for the same
- To apply classroom knowledge of courses to field realities and thereby improve quality of learning

UNIT I	QUALITY OF RURAL LIFE IN VILLAGES AND UNNAT BHARAT ABHIYAN	6
Introduction to Unnat Bharat Abhiyan - concept, scope and objectives, rural life, rural society, cast and gender relations, rural values with respect to community, nature and resources, elaboration of "Soul of India lies in villages" – (Gandhi Ji), Rural infrastructure, problems in rural area. Assignment: Prepare a map (Physical , visual and digital) of the village you visited and write an essay about inter-family relation in that village.		CO1
UNIT II	**RURAL ECONOMY AND LIVELIHOOD**	**6**
Agriculture, farming, land ownership pattern, water management, animal husbandry, non-farm livelihoods and artisans, rural entrepreneurs, rural market . Assignment: Describe your analysis of rural household economy, it's challenges and possible pathways to address them. Group discussion in class- (4) Field visit 3.		CO2
UNIT III	**RURAL INSTITUTIONS**	**6**
History of Rural Development, Traditional rural organizations, Self Help Groups, Gram Swaraj and 3- Tier Panchayat Raj Institutions (Gram Sabha, Gram Panchayat, Standing Committee), local civil society, local administration. Introduction to Constitution, Constitutional Amendments in Panchayati Raj – Fundamental Rights and Directive Principles. Assignment: Panchayati Raj institutions in villages? What would you suggest to improve their effectiveness? Present a case study (written or audio-visual). Field Visit – 4.		CO3

UNIT IV	RURAL DEVELOPMENT PROGRAMMES	6
National programmes - Sarva Shiksha Abhiyan, Beti Bachao, Beti Padhao, Ayushman Bharat, Swatchh Bharat, PM Awass Yojana, Skill India, Gram Panchayat Decentralised Planning, NRLM, MNREGA, etc. Written Assignment: Describe the benefits received and challenges faced in the delivery of one of these programmes in the rural community, give suggestions about improving implementation of the programme for the rural poor.		CO4
UNIT V	**FIELD WORK**	**6**
Each student selects one programme for field visit Field based practical activities: • Interaction with SHG women members, and study of their functions and challenges; planning for their skill building and livelihood activities • Visit MGNREGS project sites, interact with beneficiaries and interview functionaries at the work site • Field visit to Swachh Bharat project sites, conduct analysis and initiate problem solving measures • Conduct Mission Antyodaya surveys to support under Gram Panchayat Development Plan(GPDP) • Interactive community exercise with local leaders, panchayat functionaries, grass-root officials and local institutions regarding village development plan preparation and resource mobilization • Visit Rural Schools I mid-day meal centres, study Academic and infrastructural resources and gaps • Participate in Gram Sabha meetings, and study community participation • Associate with Social audit exercises at the Gram Panchayat level, and interact with programme beneficiaries • Attend Parent Teacher Association meetings, and interview school drop outs • Visit local Anganwadi Centre and observe the services being provided • Visit local NGOs, civil society organisations and interact with their staff and beneficiaries. • Organize awareness programmes, health camps, Disability camps and cleanliness camps o Conduct soil health test, drinking water analysis, energy use and fuel efficiency surveys • Raise understanding of people's impacts of climate change, building up community's disaster preparedness • Organise orientation programmes for farmers regarding organic cultivation, rational use of irrigation and fertilizers and promotion of traditional species of crops and plants • Formation of committees for common property resource management, village pond maintenance and fishing.		CO5
		TOTAL : 30 PERIODS

TEXT BOOKS:
1. Singh, Katar, Rural Development Principles, Policies and Management, Sage Publications, New Delhi, 2015 2. A Hand book on Village Panchayat Administration, Rajiv Gandhi Chair for Panchayati Raj Studies, 2002 3. United Nations, Sustainable Development Goals, 2015 un.org/sdgs
REFERENCE BOOKS:
1. M.P.Boraian, Best Practices in Rural Development, Shanlax Publishers 2. Unnat Bharat Abhiyan Website : www.unnatbharatabhiyan.gov.in

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Able to understand of rural life, culture and social realities
CO2	Able to understand the concept of measurement by comparison or balance of parameters.
CO3	Able to develop a sense of empathy and bonds of mutuality with local community
CO4	Able to appreciate significant contributions of local communities to Indian society and economy
CO5	Learned to value the local knowledge and wisdom of the community

AD1007	ESSENCE OF INDIAN KNOWLEDGE TRADITION	L	T	P	C
		2	0	0	2

OBJECTIVES

- Get a knowledge about Indian Culture
- Know Indian Languages and Literature religion and philosophy and the fine arts in India
- Explore the Science and Scientists of Ancient, Medieval and Modern India
- Understand education systems in India

UNIT I	**INTRODUCTION TO CULTURE**	**6**
Culture, civilization, culture and heritage, general characteristics of culture, importance of culture in human literature, Indian Culture, Ancient India, Medieval India, Modern India		CO1
UNIT II	**INDIAN LANGUAGES AND LITERATURE**	**6**
Indian Languages and Literature – I: Languages and Literature of South India, – Indian Languages and Literature – II: Northern Indian Languages & Literature		CO2
UNIT III	**RELIGION AND PHILOSOPHY**	**6**
Major religions practiced in India and Understanding their Philosophy – religious movements in Modern India (Selected movements only)		CO3
UNIT IV	**FINE ARTS IN INDIA (ART, TECHNOLOGY& ENGINEERING)**	**6**
Indian Painting, Indian handicrafts, Music, divisions of Indian classic music, modern Indian music, Dance and Drama, Indian Architecture (ancient, medieval and modern), Science and Technology in India, development of science in ancient, medieval and modern India		CO4
UNIT V	**EDUCATION SYSTEM IN INDIA**	**6**
Education in ancient, medieval and modern India, aims of education, subjects, languages, Science and Scientists of Ancient India, Science and Scientists of Medieval India, Scientists of Modern India		CO5
		TOTAL : 30 PERIODS

COURSE OUTCOMES	
Upon completion of the course, students will be able to	
CO1	Understand philosophy of Indian culture.
CO2	Distinguish the Indian languages and literature.
CO3	Learn the philosophy of ancient, medieval and modern India.
CO4	Acquire the information about the fine arts in India.
CO5	Know the contribution of scientists of different eras.

AD1008	SANGA TAMIL LITERATURE APPRECIATION	L	T	P	C
		2	0	0	2

OBJECTIVES

The main learning objective of this course is to make the students an appreciation for:

- 1. Introduction to Sanga Tamil Literature.
- 2.‘Agathinai’ and‘Purathinai’ in SangaTamil Literature.
- 3.‘Attruppadai’ in SangaTamil Literature.
- 4.‘Puranaanuru’ in SangaTamil Literature.
- 5.‘Pathitrupathuthu’ in SangaTamil Literature.

UNIT I	SANGA TAMIL LITERATURE – AN INTRODUCTION	6
Introduction to Tamil Sangam-History of Tamil Three Sangams-Introduction to Tamil Sangam Literature-Special Branches in Tamil Sangam Literature- Tamil Sangam Literature’s Grammar Tamil Sangam Literature’s parables.		CO1
UNIT II	**‘AGATHINAI’AND‘PURATHINAI’**	**6**
Tholkappiyar’s Meaningful Verses-Three literature materials-Agathinai’s message- History of Culture from Agathinai- Purathinai-Classification-Mesaage to Society from Purathinai.		CO2
UNIT III	**‘ATTRUPPADAI’.**	**6**
AttruppadaiLiterature-Attruppadaiin‘Puranaanuru’-Attruppadaiin‘Pathitrupaththu’-Attruppadaiin ‘Paththupaattu’.		CO3
UNIT IV	**‘PURANAANURU’**	**6**
Puranaanuru on Good Administration, Ruler and Subjects-Emotion & its Effect in Puranaanuru.		CO4
UNIT V	**‘PATHITRUPATHTHU’**	**6**
Pathitrupaththuin‘Ettuthogai’-Pathitrupaththu’sParables-Tamildynasty:Valor, Administration,Charity in Pathitrupaththu- Mesaage to Society from Pathitrupaththu		CO5
		TOTAL : 30 PERIODS

COURSE OUTCOMES	
Upon completion of the course, students will be able to	
CO1	Appreciate and apply the messages in Sanga Tamil Literature in their life.
CO2	Differentiate ‘Agathinai’ and ‘Purathinai’ in their personal and societal life.
CO3	Appreciate and apply the messages in‘ Attruppadai’ in their personal and societal life.
CO4	Appreciate and apply the messages in‘ Puranaanuru’ in their personal and societal life.
CO5	Appreciate and apply the messages in‘ Pathitrupaththu’ in their personal and societal life.

CT1701	ADVANCED DATA MANAGEMENT AND MACHINE INTELLIGENCE	L	T	P	C
		0	0	2	1

OBJECTIVES

- To recall data warehousing and business intelligence fundamentals with examples. State Data Lakehouse and its importance. Compare Data Lakehouse to the traditional SQL data warehouse.
- To write SQL queries to perform complex operations. Learn advanced SQL concept with examples and differentiate NO SQL with RDBMS (which uses SQL) by their advantages and disadvantages.
- To get clear understanding of AWS, Azure, GCP fundamentals. Cloud Computing- Benefits of it. Basic knowledge on few products and services provided by AWS, Azure, GCP.
- Be aware of advanced Python concepts programming with real-life examples.
- To gain insights of fundamental concepts of Artificial Intelligence (AI), Basics of Machine Learning and how to use concepts, Prompt Engineering.

UNIT I	MODERN DATA INTEGRATION	6
	Data Warehouse concepts: Need for BI, Data Warehouse, Key terminologies related to DWH Architecture -OLTP vs OLAP, ETL, Data Mart, Metadata, DWH Architecture. Data Lakehouse: Data Lake to Data Swamp, SQL Relational Databases, Transaction Processing, Relational Database Workload Types, Architectural Challenges, Databricks Evolution. ETL: Extract Data Dump from source, Data format consistency, Data Quality rules, Truncate & Load, Load strategies, Load Approach, Transform, Mapping, Enriching, Joins, filter, Remove Duplicates, Aggregation, Load, Dimension, Facts, EDW Tables, Data Marts. Variety of ETL Tools:Apache Airflow, Datastage,Oracle Data Integrator, SSIS, Talend, Hadoop, AWS Glue, Azure Data Factory, Google Cloud Dataflow, Stitch, SAP, Hevo, Qlik, Airbyte	CO1
UNIT II	**FOUNDATIONS OF DATA MANAGEMENT AND ANALYSIS**	**6**
	Informatica: Informatica Architecture, Informatica PowerCenter & Repository, Informatica PowerCenter Designer, Informatica Power Center workflow manager, Informatica PowerCenter workflow monitor, Run Mappings, Workflow creation & Deletion. SQL: DQL, DDL, DML, Filtering and sorting Data, Grouping and Aggregating Data, Joins and Subqueries, Window Functions, Optimizing SQL queries, Automation,Store Procedure, Trigger, Views, Functions. NoSQL: Fundamentals and Comparison with SQL,Connecting Data Sources and DataBases, Data Modeling, Creating Calculated Fields in Power BI.	CO2
UNIT III	**CLOUD COMPUTING PLATFORMS DEMYSTIFIED**	**6**
	Python: Variables, Operators, functions, Libraries, Methods, Refactoring, Enum, Tuples, Dictionaries, sets, Map, filter, reduce, Class & objects, Exceptions, Overloading ,Iterators, Modules, Packages, Generators, List, Comprehensions, Regular expressions, Serialization, Partial functions, closures, Decorators. AWS: Benefits of AWS, AWS Services - Computer, Storage, Database Service, NetworkingService, Security Service, Management tool Service, Developer tool Service. Azure: Cloud Computing, Services in Azure - Compute, Containers, Databases, Identity, Security, Networking, Storage. GCP: Cloud Computing, Benefits of GCP, GCP services, AWS vs Azure vs GCP	CO3

UNIT IV	PYTHON FOR DATA SCIENCE AND AI	6
	Python with Deep Learning: Python Data Science Libraries,Numpy, Scipy, Pandas, Matplotlib, Scikit-Learn, Statsmodels, Pandas, Sorting, Concatenate, Preprocessing - Time Series Data, Visualization Python with AI: Introduction, Demand of AI, What is AI, Types of AI, Why python for AI, Python Packages for AI Artificial Intelligence: Artificial intelligence and its types, AI Roadmap, Machine learning and its types, Linear regression Analysis, Classifications in Machine Learning.AI vs ML, Classification vs regression, Supervised learning, Unsupervised learning, Training Model, Preparing Data, K-Nearest Neighbors, Naive Bayes, Logistic Regression, Support Vector Machine, Neural Networks, Tensorflow, K-Means Clustering, Principal Component Analysis, KMeans and PCA Implementations .	CO4

UNIT V	EXPLORING AI FOUNDATIONS	6
	Prompt Engineering: Introduction to AI, Linguistics, Language Models, Prompt Engineering Mindset, Zero shot and few shot prompts, AI hallucinations, Vectors/text embeddings.Generative AI Fundamentals:Generative AI and its use cases, How do LLMS (Large Language Models) work, LLMs generates output for NLP task, LLM model decision criteria, Proprietary models, Fine tuned models, Mixing LLM flavors in workflow, Data privacy, Data security.	CO5

COURSE OUTCOMES **Upon completion of the course, students will be able to**	
CO1	Gain a solid understanding of AI fundamentals, including machine learning algorithms, natural language processing techniques, and data science libraries, enabling you to work on AI projects effectively.
CO2	Acquire skills in data warehousing, SQL and NoSQL databases, data modeling, and data integration, allowing you to efficiently manage and analyze large datasets.
CO3	Develop expertise in utilizing cloud computing platforms like AWS, Azure, and GCP, enabling you to deploy, scale, and manage applications and services in the cloud.
CO4	Learn advanced data analysis techniques, including sorting, preprocessing, visualization, and statistical modeling, empowering you to derive meaningful insights from complex datasets.
CO5	Understand the ethical implications of AI technologies, including data privacy, security, and bias mitigation, and learn how to implement responsible AI solutions in compliance with ethical standards and regulations

VAC001	INDUSTRIAL INTERNET OF THINGS	L	T	P	C
		1	0	2	2

OBJECTIVES

1.The main learning objective of this course is to make the students an appreciation for:

2. To provide students with good depth of knowledge of Designing Industrial IOT Systems for various application.

3. Knowledge for the design and analysis of Industry 4.0Systems for Electronics Engineering students

UNIT I	**INTRODUCTION TO INDUSTRIAL IOT (IIOT) SYSTEMS**	**9**
The Various Industrial Revolutions – Role of Internet of Things (IoT) & Industrial Internet of Things (IIoT) in Industry – Industry 4.0 revolutions – Support System for Industry 4.0 – Smart Factories.		**CO1**
UNIT II	**IMPLEMENTATION SYSTEMS FOR IIOT**	**9**
Sensors and Actuators for Industrial Processes, Sensor networks, Process automation and Data Acquisitions on IoT Platform, Microcontrollers and Embedded PC roles in IIoT, Wireless Sensor nodes with Bluetooth, WiFi, and LoRa Protocols and IoT Hub systems.		**CO2**
UNIT III	**IIOT DATA MONITORING & CONTROL**	**9**
IoT Gate way – IoT Edge Systems and It's Programming – Cloud computing – Real Time Dashboard for Data Monitoring – Data Analytics and Predictive Maintenance with IIoT technology		**CO3**
UNIT IV	**IIOT SENSORS & NETWORKS**	**9**
Next Generation Sensors – Collaborative Platform and Product Lifecycle Management – Industrial IoT- Layers – Software Defined Networks: IIoT Analytics – Security and Fog Computing – Fog Computing in IIoT – Emerging descriptive data standards for IIoT – Cloud data base.		**CO4**
UNIT V	**INDUSTRIAL IOT- APPLICATIONS**	**9**
Healthcare Power Plants – Inventory Management & Quality Control – Plant Safety and Security Oil – Chemical and Pharmaceutical industry – Applications of UAVs in Industries.		**CO5**

TOTAL : 45 PERIODS

REFERENCE:

1. Industry 4.0: The Industrial Internet of Things Alasdair Gilchrist Publications: Apress.

2. The Concept Industry 4.0 An Empirical Analysis of Technologies and Applications in Production Logistics Authors: Bartodziej, Christoph Jan Springer: Publication in the field of economic science.

3. Embedded System: Architecture, Programming and Design by Rajkamal, TMH3.

4. Dr. OvidiuVermesan, Dr. Peter Friess, "Internet of Things: Converging Technologies for Smart Environments and Integrated Ecosystems", River Publishers.

COURSE OUTCOMES	
Upon completion of the course, students will be able to	
CO1	Students can develop a comprehensive understanding of Internet of Things (IoT) technologies, including sensors, communication protocols, cloud computing, and data analytics.
CO2	The program can provide students with hands-on experience in designing, implementing, and managing IoT-based solutions for industrial applications.
CO3	The program can provide students with an understanding of IoT security and privacy issues, including data encryption, access control, and device authentication.
CO4	The program can help students develop effective communication and teamwork skills through group projects and case studies, which are essential for working in cross-functional teams in industrial IoT settings.
CO5	Graduates of the program can be better equipped to take on roles in IoT-based industrial applications and other areas of technology, due to their in-depth knowledge of IoT technologies and their practical experience in designing and implementing industrial IoT solutions.

VAC002	AUGMENTED REALITY & VIRTUAL REALITY	L	T	P	C
		1	0	2	2

OBJECTIVES

The main learning objective of this course is to make the students an appreciation for:

1. To provide students with good depth of knowledge of Augmented Reality and Virtual Reality
2. Knowledge on Tools and Applications of Augmented Reality and Virtual Reality

UNIT I	INTRODUCTION TO AUGMENTED REALITY AND VIRTUAL REALITY (VR)	9
History of AR - Augmented reality characteristics- Difference between Augmented Reality and Virtual Reality- AR technological components- Technologies used in AR- Feature Extraction - Hardware components - AR devices - Importance of AR - Real world uses of AR - AR types - Software tools available for AR.		CO1
UNIT II	COMPUTER GRAPHICS AND GEOMETRIC MODELING	9
The Virtual world space, positioning the virtual observer, the perspective projection, human vision, stereo perspective projection, Color theory, Conversion From 2D to 3D, 3D space curves, 3D boundary representation, Simple 3D modelling, 3D clipping, Illumination models, Reflection models, Shading algorithms, Geometrical Transformations: Introduction, Frames of reference.		CO2
UNIT III	NEED OF TECHNOLOGIES FOR AUGMENTED REALITY & VIRTUAL REALITY	9
Hardware technology- virtual scenes - 3D objects- AR & VR components Display - HMD - Eyeglasses- Contact Lenses - significance of AR - AR powered devices - Motion tracking -Virtual environment - VR technology, AR & VR application development drawbacks - Compatibility Performance.		CO3
UNIT IV	TOOLS AND APPLICATIONS OF AUGMENTED REALITY & VIRTUAL REALITY	9
Tools available for Augmented Reality and Recognition - Hardware: Introduction, sensor hardware, Head-coupled displays, Acoustic hardware, Integrated VR systems - Software: Introduction, Modelling virtual world, Physical simulation, VR toolkits, Introduction to VRML.		CO4
UNIT V	AUGMENTED REALITIES AND VIRTUAL REALITY FOR MICRO LEARNING	9
Micro learning techniques - Utilizing VR for learning - VR for Practical online assessment - VR info graphics - Virtual case considerations - Utilizing AR for learning - Accessible learning - sensible data - elevated learner engagement - Engineering, Entertainment, Science, Training, Game Development		CO5

TOTAL : 45 PERIODS

Dieter Schmalstieg, Tobias Hollerer, “Augmented Reality: Principles & Practice”, Addison Wesley, 2016

COURSE OUTCOMES	
Upon completion of the course, students will be able to	
CO1	Understand the importance of augmented reality in Industry 4.0 with real-time examples
CO2	To describe the history and recent developments of AR
CO3	To provide the need on emerging technologies AR and VR
CO4	To discuss the revolution and impact of AR
CO5	To understand the applications of AR and VR

MAPPING OF COs WITH POs AND PSOs

COs	PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	2	2	1	1	1	1	-	-	-	2	1	1	1	2	3
CO2	2	2	2	1	1	1	-	-	-	-	1	1	1	2	2
CO3	2	2	2	1	1	1	-	-	-	-	1	1	2	2	2
CO4	2	2	2	1	1	2	-	-	-	-	1	1	2	2	3
CO5	2	2	2	1	1	2	1	1	1	2	1	1	2	2	3

VAC003	ETHICAL HACKING - CYBER SECURITY	L	T	P	C
		1	0	2	2

OBJECTIVES:

- To learn the fundamentals of Cyber Security and Ethical Hacking
- To learn the Foot printing & Reconnaissance and Scanning Networks
- To understand Enumeration and Vulnerability Analysis
- To understand Exploitation on Network
- To learn the Web Attacks and Report Writing

UNIT I	FUNDAMENTALS OF CYBER SECURITY AND ETHICAL HACKING	9
Introduction to Cyber Security - Cyber Security & Ethical Hacking - Domains of Cyber Security - Principles of Cybersecurity (CIA Triad, Security Models, Principles of Privileges) - Offensive & Defensive Security - Cyber Kill Chain - Types of Security Teams (Red Team, Blue Team, Purple Team) - Cyber Security Frameworks (NIST, MITRE, ISO/IEC) Phases & Methodologies in Ethical Hacking - Introduction to Malware - Types of Malware		CO1

UNIT II	FOOTPRINTING RECONNAISSANCE AND SCANNING NETWORKS	9
Introduction to Foot printing Reconnaissance - Types of Reconnaissance (Passive & Active) - Active Reconnaissance (Ping, Traceroute, Telnet, Whatweb, Wappalyzer, Netcraft) - Passive Reconnaissance (nslookup, whois, dig, DNSDumpster, Shodan) - Introduction to OSINT (OSINT Framework, OSRFRAMEWORK, Social Searcher,) - Introduction to Scanning Networks - Types of Network Scanning (Port Scan, Service Scan, Vulnerability Scan) - Scanning Techniques - Port Scanning (TCP, UDP) - Host Discovery (ICMP, ARP) - Introduction to Wireshark - Capturing Data Packets - Packet Analysis.		CO2

UNIT III	ENUMERATION AND VULNERABILITY ANALYSIS	9
Internet of Things - Physical Design- Logical Design- IoT Enabling Technologies - IoT Levels & Deployment Templates - OGC architecture - IoT reference model - Domain model - information model - functional model - communication model - IoT reference architecture.		CO3

UNIT IV	EXPLOITATION ON NETWORK	9
Introduction to Exploitation - What is Shell - Types of Linux Shells (Bash, Csh/Tcsh, Ksh, Zsh, Fish) - What is Gaining Access & Maintaining Access - Reverse Shell & Bind Shell - Introduction to Metasploit Framework - Metasploit Modules - Staged Payload & Non-Staged Payload - Using Metasploit Framework Gaining the User Shell Acess - Gaining Root Shell Acess in Metasploit Framework - Introduction to Manual Exploitation - Gaining User Shell in Manual Exploitation - What is Privilege Escalation - Linux & Windows Privilege Escalation - Using Linpeass Script Finding Non-Privilege Path on Linux System - Using Winpeass Script Finding Non-Privilege Path on Windows System - Hands-on Windows & Linux Privilege Escalation - Introduction to Post Exploitation.		CO4

UNIT V	WEB ATTACKS AND REPORT DOCUMENTATION	9
Introduction to OWAP TOP 10 and SANS TOP 25 - Web Server & Web Application Attack Methodology - Indirect Object Reference (IDOR) - SQL Injection - Cross Site Scripting - XML Injection or XML External Internal - Account Hijacking - Sensitive Data Exposure - Server Side Forgery - Race Condition - Generate Proper Vulnerability Assessment Penetration Testing Report Document.		CO5
		TOTAL : 45 PERIODS

The Basics of Hacking and Penetration Testing - Patrick Engebretson, SYNGRESS, Elsevier, 2013. 3. The Web Application Hacker's Handbook: Finding and Exploiting Security Flaws, Dafydd Stuttard and Marcus Pinto, 2011.

COURSE OUTCOMES	
Upon completion of the course, students will be able to	
CO1	Understand the importance of fundamentals of cyber security and ethical hacking
CO2	To gain understanding on different foot printing, reconnaissance and scanning methods.
CO3	To demonstrate the enumeration and vulnerability analysis methods
CO4	To acquire knowledge on the options for network protection.
CO5	To gain knowledge on hacking options available in Web applications.
