St. JOSEPH'S COLLEGE OF ENGINEERING

(An Autonomous Institution)

St. Joseph's Group of Institutions
Jeppiaar Educational Trust
OMR, Chennai - 119.

B.TECH INFORMATION TECHNOLOGY REGULATION – 2021 CHOICE BASED CREDIT SYSTEM I - VIII SEMESTERS CURRICULA AND SYLLABI

St. JOSEPH'S COLLEGE OF ENGINEERING

(An Autonomous Institution)

St. Joseph's Group of Institutions
Jeppiaar Educational Trust

OMR, Chennai - 119.

B.Tech INFORMATION TECHNOLOGY REGULATION 2021 CHOICE BASED CREDIT SYSTEM I TO VIII SEMESTERS CURRICULAM AND SYLLABUS PROGRAM EDUCATIONAL OBJECTIVES (PEOS)

- **PEO 1:** To ensure graduates will be capable of applying the basic knowledge of physical sciences, mathematics and Information Technology for the applications pertinent to different fields of Engineering and Technology.
- **PEO 2:** To enhance graduates with the core capabilities important for applying information on computers and telecommunication systems, gear to send, store, recover, control and investigate information with regards to business undertaking.
- **PEO 3:** To enable graduates to think sensibly, pursue lifelong learning and will have the ability to comprehend technical issues related to computing systems and to come up with best possible solutions.
- **PEO 4:** To empower graduates to create equipment and programming frameworks by comprehending the values of social, business and ecological necessities in the human setting.
- **PEO 5:** To enable graduates to get placed in leading companies and develop themselves as professionals by applying their technological skills to real-world problems and meeting the diverse needs of business, education, and science.

COMPUTER COMMUNICATION PROGRAM OUTCOMES POS:

Engineering Graduates will be able to:

- **1. Engineering knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals and an engineering specialization to the solution of complex engineering problems.
- 2. Problem analysis: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

- 3. Design/development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- **4. Conduct investigations of complex problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- 5. Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.
- **6.** The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- 7. Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
- **8. Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
- **9. Individual and team work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
- **10. Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
- **11. Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
- **12. Life-long learning:** Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PROGRAM SPECIFIC OBJECTIVES (PSOs):

PSO1:To analyse and design an efficient information management system which uses the concepts of Information technology to deliver technological solutions and to analyse its impact in the societal and human context.

PSO2:To identify the resources needed for building complex IT projects with an understanding of risk management processes, operational and policy implications considering human, financial and ecological factors.

PSO3:To develop and test software projects by applying IT tools and techniques for the development of computational systems to serve the needs of the community at large.

MAPPING OF PROGRAMME EDUCATIONAL OBJECTIVES WITH PROGRAMME OUTCOMES

Abroad relation between the Programme objective and the outcomes is given in the following table

					PRO	GRA	AMM	EOU	JTC	OME	ES	
PROGRAMMEEDUCATIONALOBJECTIVES	Α	В	С	D	E	F	G	Н	_	7	K	L
1	3	3										
2	1		1		2							
3												3
4						2	1	3	2			
5			1	2	1					2	1	

MAPPING OF PROGRAM SPECIFIC OBJECTIVES WITH PROGRAMME OUTCOMES

Abroad relation between the Program Specific Objectives and the outcomes is given in the following table

PROGRAM				F	PROGRA	MMEO	UTCOM	ES				
SPECIFIC OBJECTIVES	Α	В	С	D	E	F	G	Н	I	J	к	L
1	3	2			3				2	2		
2				3			3	3			3	
3	1		2		3	2						

Contribution 1: Reasonable 2: Significant 3: Strong

MAPPING OF COURSE OUTCOMES WITH PROGRAM OUTCOMES

A broad relation between the Course Outcomes and Program Outcomes (POs) and Program Specific Outcomes (PSOs) are given in the following table

Som	Course Title				Pro	gran	n Out	com	es (P	Os)				I	PSO:	5
Sem	Course Title	1	2	3	4	5	6	7	8	9	10	11	12	1	2	3

B.Tech. INFORMATION TECHNOLOGY REGULATION - 2021 CHOICE BASED CREDIT SYSTEM I - VIII SEMESTERS SYLLABUS

HS1101	COMMUNICATIVE ENGLISH	L	Т	PC
	(Common for all Branches of B.E. /B. Tech Programmes)	3	0	0 3

OBJECTIVES

- To develop the basic reading and writing skills of first year engineering and technology students.
- To help learners develop their listening skills, which will, enable them listen to lectures and comprehend them by asking questions; seeking clarifications.
- To help learners develop their speaking skills and speak fluently in real contexts.
- To help learners develop vocabulary of a general kind by developing their reading skills.

UNIT I	SHARING INFORMATION RELATED TO ONESELF/FAMILY& FRIENDS	9
	cal reading – finding key information in a given text – shifting facts from	
opinions - Writi	ng - autobiographical writing - developing hints. Listening- short texts- short	
formal and info	rmal conversations. Speaking- basics in speaking - introducing oneself -	CO1
exchanging per	rsonal information- speaking on given topics & situations Language	COI
development- v	voices- Wh- Questions- asking and answering-yes or no questions- parts of	
speech. Vocabi	ulary development prefixes- suffixes- articles - Polite Expressions.	
_	GENERAL READING AND FREE WRITING	9
conversations ;	narratives and descriptions from newspapers (including dialogues and Reading Comprehension Texts with varied question types - Writing -	
· • •	ng- topic sentence- main ideas- free writing, short narrative descriptions using	
some suggested	d vocabulary and structures –. Listening - long texts - TED talks - extensive	CO2
speech on cur	rent affairs and discussions Speaking – describing a simple process –	
asking and a	nswering questions - Language development – prepositions, clauses.	
Vocabulary deve	elopment- guessing meanings of words in context – use of sequence words.	
_	GRAMMAR AND LANGUAGE DEVELOPMENT	9
	texts and longer passages (close reading) & making a critical analysis of the	
given text Writi	ing – types of paragraph and writing essays – rearrangement of jumbled	
sentences. List	ening: Listening to ted talks and long speeches for comprehension. Speaking-	CO3
role plays - ask	king about routine actions and expressing opinions. Language development-	CO3
degrees of com	parison- pronouns- Direct vs. Indirect Questions. Vocabulary development -	
idioms and phra	ses- cause & effect expressions, adverbs.	
UNIT IV	READING AND LANGUAGE DEVELOPMENT	9
Reading- comp	rehension-reading longer texts- reading different types of texts- magazines.	
Writing- letter v	writing, informal or personal letters-e-mails-conventions of personal email-	CO4
Listening: Lister	ning comprehension (IELTS, TOEFL and others). Speaking -Speaking about	CU4
friends/places/h	nobbies - Language development- Tenses- simple present-simple past- present	

	continuous and past continuous- conditionals - if, unless, in case, when and others							
	velopment- synonyms-antonyms- Single word substitutes- Collocations.	Vocabulary dev						
9	EXTENDED WRITING	UNIT V						
	Reading: Reading for comparisons and contrast and other deeper levels of meaning –Writing-							
	-writing short essays - developing an outline- identifying main and subordinate	brainstorming -						
CO5								
ı	impromptu speeches & debates Language development-modal verbs- present/ past perfect							
	ulary development-Phrasal verbs- fixed and semi-fixed expressions.	tense - Vocabu

COURSE OUTCOMES

Upon completion of the course, students will be able to

- CO1 Speak clearly, confidently, comprehensibly, and communicate with one or many listeners using appropriate communicative strategies.
- CO2 Write cohesively and coherently and flawlessly avoiding grammatical errors, using a wide vocabulary range, organizing their ideas logically on a topic.
- CO3 Read different genres of texts adopting various reading strategies.
- CO4 Listen/view and comprehend different spoken discourses/excerpts in different accents
- CO5 Identify topics and formulate questions for productive inquiry

MA1102	ENGINEERING MATHEMATICS –I	L	T	Р	С
	(Common for all branches of B.E. /B. Tech Programmes)	4	0	0	4

OBJECTIVES

- The goal of this course is to achieve conceptual understanding and to retain the best traditions of traditional calculus.
- The syllabus is designed to provide the basic tools of calculus mainly for the purpose of modeling the engineering problems mathematically and obtaining solutions.
- Matrix Algebra is one of the powerful tools to handle practical problems arising in the field of engineering.
- This is a foundation course of Single Variable and multivariable calculus plays an important role in the understanding of science, engineering, economics and computer science, among other disciplines.

UNIT I	MATRICES	12
Eigenvalues a	and Eigenvectors of a real matrix – Characteristic equation – Properties of	ı
Eigenvalues a	and Eigenvectors - Cayley-Hamilton theorem - Diagonalization of matrices -	004
Reduction of	a quadratic form to canonical form by orthogonal transformation - Nature of	CO1
quadratic form	S	İ
UNIT II	CALCULUS OF ONE VARIABLE	12
	ction - Continuity - Derivatives - Differentiation rules - Interval of increasing and	
	nctions – Maxima and Minima - Intervals of concavity and convexity.	CO2
UNIT III	CALCULUS OF SEVERAL VARIABLES	12
	ntiation – Homogeneous functions and Euler's theorem – Total derivative –	
Change of val	riables – Jacobians – Partial differentiation of implicit functions – Taylor's series	İ
· ·	·	CO3
	f two variables – Maxima and minima of functions of two variables – Lagrange's	ı
method of unc	letermined multipliers.	ı
UNIT IV	INTEGRAL CALCULUS	12
Definite and I	ndefinite integrals - Substitution rule - Techniques of Integration - Integration by	1
parts, Trigono	metric integrals, Trigonometric substitutions, Integration of rational functions by	CO4
partial fraction	, Integration of irrational functions - Improper integrals.	İ
UNIT V	MULTIPLE INTEGRALS	12
Double Integra	als - Change of order of integration - Double integrals in polar coordinates -	1
Area enclose	d by plane curves - Change of variables from Cartesian to polar in double	CO5
integrals-Triple	e integrals – Volume of solids	İ
	TOTAL : 60 PER	IODS

TEXT BOOKS

- 1. Grewal B.S., Higher Engineering Mathematicsll, Khanna Publishers, New Delhi, 43rd Edition, 2014.
- 2. James Stewart, "Calculus: Early Transcendental", Cengage Learning, 7th Edition, New Delhi,2015. [For Units I & III Sections 2.2, 2.3, 2.5, 2.7(Tangents problems only), 2.8, 3.1 to 3.6, 3.11, 4.1, 4.3, 5.1(Area problems only), 5.2, 5.3, 5.4 (excluding net change theorem), 5.5, 7.2 7.4 and 7.8].

REFERENCE BOOKS

- 1. Anton, H, Bivens, I and Davis, S, "Calculus", Wiley, 10th Edition, 2016.
- 2. Jain R.K. and Iyengar S.R.K., —Advanced Engineering MathematicsII, Narosa Publications, New Delhi, 3rd Edition, 2007.
- 3. Narayanan, S. and Manicavachagom Pillai, T. K., —Calculus" Volume I and II, S. Viswanathan Publishers Pvt. Ltd., Chennai, 2007.
- 4. Srimantha Pal and Bhunia, S.C, "Engineering Mathematics" Oxford University Press, 2015.
- 5. T. Veerarajan. Engineering Mathematics I, McGraw Hill Education; First edition 2017.

COURSE OUTCOMES

Upon completion of the course, students will be able to

- CO1 Have a clear idea of matrix algebra pertaining Eigenvalues and Eigenvectors in addition dealing with quadratic forms.
- CO2 Understand the concept of limit of a function and apply the same to deal with continuity and derivative of a given function. Apply differentiation to solve maxima and minima problems, which are related to real world problems.
- CO3 Have the idea of extension of a function of one variable to several variables. Multivariable functions of real variables are inevitable in engineering.
- CO4 Understand the concept of integration through fundamental theorem of calculus. Also acquire skills to evaluate the integrals using the techniques of substitution, partial fraction and integration by parts along with the knowledge of improper integrals.
- CO5 Do double and triple integration so that they can handle integrals of higher order which are applied in engineering field.

PH1103	ENGINEERING PHYSICS	L	Р	Т	С
	(Common for all branches of B.E. /B. Tech Programmes)	3	0	0	3

OBJECTIVES

To make the students conversant with

- Elastic properties of materials and various moduli of elasticity.
- Principles of laser and fiber optics and its various technological applications.
- Thermal conduction in solids, heat exchangers and its applications in various devices.
- Quantum concepts to explain black body radiation, Compton effect and matter waves.
- Various crystal structures, Miller indices and crystal growth techniques.

UNIT I PROPERTIES OF MATTER	9
Elasticity - Stress-strain diagram and its uses - factors affecting elastic modulus and tensile	
strength - torsional stress and deformations - twisting couple - torsion pendulum: theory and	
experiment - bending of beams - bending moment - cantilever: theory and experiment -	CO1
uniform and non-uniform bending: theory and experiment - Practical applications of modulus	
of elasticity- I shaped girders - stress due to bending in beams.	
UNIT II LASER AND FIBER OPTICS	9
Lasers : population of energy levels, Einstein's A and B coefficients derivation – resonant	
cavity, optical amplification (qualitative) - Nd-YAG Laser-Semiconductor lasers: homojunction	
and heterojunction - Industrial and medical applications of Laser- Fiber optics: principle,	
numerical aperture and acceptance angle - types of optical fibres (material, refractive index,	CO2
mode) - losses associated with optical fibers - Fabrication of Optical fiber-Double crucible	
method-fibre optic sensors: pressure and displacement-Industrial and medical applications of	
optical fiber- Endoscopy-Fiber optic communication system.	
UNIT III THERMAL PHYSICS	9
Transfer of heat energy - thermal expansion of solids and liquids - expansion joints -	
bimetallic strips - thermal conduction, convection and radiation - heat conductions in solids -	
thermal conductivity -Rectilinear flow of heat- conduction through compound media (series	CO3
and parallel)- Lee's disc method: theory and experiment - Radial flow of heat- thermal	CO3
insulation - applications: heat exchangers, refrigerators, oven, Induction furnace and solar	
water heaters.	
UNIT IV QUANTUM PHYSICS	9
Black body radiation – Planck's theory (derivation) – Compton effect: theory and experimental	
verification - wave particle duality - electron diffraction - concept of wave function and its	
physical significance – Schrödinger's wave equation – time independent and time dependent	CO4
equations - particle in a one-dimensional rigid box - Electron microscope- tunnelling	
(qualitative) - scanning tunnelling microscope-Applications of electron microscopy.	
UNIT V CRYSTAL PHYSICS	9

Single crystalline, polycrystalline and amorphous materials – single crystals: unit cell, crystal systems, Bravais lattices, directions and planes in a crystal, Miller indices – inter-planar distances coordination number and packing factor for SC, BCC, FCC, HCP and diamond structures – Graphite structure-crystal imperfections: point defects, line defects – Burger vectors, stacking faults – growth of single crystals: solution and melt growth techniques-Epitaxial growth-Applications of Single crystal (Qualitative).

COURSE OUTCOMES

CO₄

Upon completion of the course, the students will gain knowledge on

CO1	The elastic property and stress strain diagram, determination of rigidity modulus by torsional
	pendulum and Young's modulus by various methods.
	Delinated of Land Charles and the state of Land after a continuous fortunation and the

CO2 Principle of laser, Einstein's coefficients of laser action, semiconductor laser and its applications, optical fibers and their applications in sensors and communication system.

CO3 The heat transfer through solids and the determination of thermal conductivity in a bad conductor by Lee's disc method and radial flow of heat.

The quantum concepts and its use to explain black body radiation, Compton effect and wave equation for matter waves, tunnelling electron microscopy and its applications.

CO5 The importance of various crystal structures, Miller indices and various growth techniques.

- 5. A. Pahari, B. Chauhan, "Engineering Chemistry", Firewall Media, New Delhi., (2010).
- 6. A. Sheik Mideen, Engineering Chemistry, Airwalk Publications, Chennai (2018)

COURSE OUTCOMES

Upon completion of the course, the students should be

- Able to understand impurities in industrial water, boiler troubles, internal and external treatment methods of purifying water.
- Able to understand concepts of absorption, adsorption, adsorption isotherms, application of adsorption for pollution abatement, catalysis and enzyme kinetics.
- Able to recognize significance of alloying, functions of alloying elements and types of alloys, uses of alloys, phase rule, reduced phase and its applications in alloying.
- Able to identify various types of fuels, properties, uses and analysis of fuels. They should be able to understand combustion of fuels, method of preparation of bio-diesel, synthetic petrol.
- Able to understand conventional, non-conventional energy sources, nuclear fission and fusion, cost power generation by nuclear reactor, wind, solar energy and preparation, uses of various batteries.

GE1105	PROBLEM SOLVING AND PYTHON PROGRAMMING	L	Т	PC
	(Common for all branches of B.E. /B. Tech Programmes)	3	1	0 3

OBJECTIVES

- To know the basics of algorithmic problem solving
- To write simple python programs
- To develop python program by using control structures and functions
- To use python predefined data structures
- To write file based program

UNIT I	ALGORITHMIC PROBLEM SOLVING	9
Algorithms, but	uilding blocks of algorithms (statements, state, control flow, functions), notation	
(pseudo code	e, flow chart, programming language), algorithmic problem solving, Basic	
algorithms, flo	owcharts and pseudocode for sequential, decision processing and iterative	CO1
processing st	rategies, Illustrative problems: find minimum in a list, insert a card in a list of	
sorted cards,	guess an integer number in a range, Towers of Hanoi.	
UNIT II	INTRODUCTION TO PYTHON	9
Python Introd	uction, Technical Strength of Python, Python interpreter and interactive mode;	
Introduction to	o colab, pycharm and jupyter idle(s) ,values and types: int, float, boolean, string,	
and list; Built-	in data types, variables, Literals, Constants, statements, Operators; Assignment,	CO2
Arithmetic, Re	elational, Logical, Bitwise operators and their precedence, , expressions, tuple	
assignment; A	accepting input from Console, printing statements, Simple 'Python' programs.	
UNIT III	CONTROL FLOW, FUNCTIONS AND STRINGS	9
Conditionals:	Boolean values and operators, conditional (if), alternative (if-else), chained	
conditional (if-	elif-else); Iteration: while, for; Loop manipulation using pass, break, continue, and	
else; Modules	and Functions, function definition and use, flow of execution, parameters and	CO2
arguments; lo	ocal and global scope, return values, function composition, recursion; Strings:	CO3
string slices,	immutability, string functions and methods, string module; Illustrative programs:	
square root, g	cd, exponentiation, sum an array of numbers, linear search, binary search.	
UNIT IV	LISTS, TUPLES, DICTIONARIES	9
Lists: Defining	g list and list slicing, list operations, list slices, list methods, list loop, List	
Manipulation,	mutability, aliasing, cloning lists, list parameters; Lists as arrays, Tuples: tuple	
assignment, t	uple as return value, Tuple Manipulation; Dictionaries: operations and methods;	CO4
advanced list	processing - list comprehension; Illustrative programs: selection sort, insertion	
sort, mergeso	rt, histogram.	

UNIT V	FILES, MODULES, PACKAGES	9					
Files and exc	eption: Concept of Files, Text Files; File opening in various modes and closing of						
a file, Format	Operators, Reading from a file, Writing onto a file, File functions-open(), close(),

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Develop algorithmic solutions to simple computational problems
CO2	Develop simple console application in python
CO3	Develop python program by applying control structure and decompose program into functions.
CO4	Represent compound data using python lists, tuples, and dictionaries.
CO5	Read and write data from/to files in Python.

	(Common for all branches of B.E. /B. Tech Programmes)	0	0	4	2

The students will be trained to perform experiments to study the following.

- The Properties ofMatter
- The Optical properties , Characteristics of Lasers & Optical Fibre
- Electrical & Thermal properties of Materials
- Enable the students to enhance accuracy in experimentalmeasurements.
- To make the student to acquire practical skills in the determination of water quality parameters through volumetric analysis
- Instrumental method of analysis such as potentiometry, conductometry and pHmetry

COURSE OUTCOMES

Upon completion of the course, students will be able to

	·
CO1	Speak clearly, confidently, comprehensibly, and communicate with one or many listeners
	using appropriate communicative strategies.
CO2	Write cohesively and coherently and flawlessly avoiding grammatical errors, using a wide
	vocabulary range, organizing their ideas logically on a topic.
CO3	Read different genres of texts adopting various reading strategies.
CO4	Listen/view and comprehend different spoken discourses/excerpts in different accents
CO5	Identify topics and formulate questions for productive inquiry

- 3. Rogers, B., Adams, J. & Pennathur, S. —Nanotechnology: Understanding small systems, CRC press, 2014

COURSE OUTCOMES

Upon completion of the course, the students will be able to

 CO2 Acquire knowledge on basics of semiconductor physics and its applications in various devices. CO3 Get knowledge on magnetic properties of materials and their applications in data storage. CO4 Have the necessary understanding on the functioning of optical materials for Optoelectronics. CO5 Understand the basics of quantum structures and their applications in nano electronic devices. 	CO1	Gain knowledge on classical and quantum electron theories and energy band structures.
CO4 Have the necessary understanding on the functioning of optical materials for Optoelectronics.	CO2	Acquire knowledge on basics of semiconductor physics and its applications in various devices.
	CO3	Get knowledge on magnetic properties of materials and their applications in data storage.
CO5 Understand the basics of quantum structures and their applications in nano electronic devices.	CO4	Have the necessary understanding on the functioning of optical materials for Optoelectronics.
	CO5	Understand the basics of quantum structures and their applications in nano electronic devices.

GE1204	ENVIRONMENTAL SCIENCE AND ENGINEERING	L	Р	T	С
(C	ommon for all branches of B.E. /B. Tech Programmes)	3	0	0	3

- To study the inter relationship between living organisms and environment.
- To appreciate the importance of environment by assessing its impact on the human world; envision the surrounding environment, its functions and its value.
- To find and implement scientific, technological, economic and political solutions to environmental problems.
- To study the integrated themes and biodiversity, natural resources, pollution control and waste management.
- To study the dynamic processes and understand the features of the earth's interior and surface.

UNIT I ENVIRONMENT, ECOSYSTEM AND BIODIVERSITY	11				
Definition, scope and importance of environment – Need for public awareness – Role of Individual in Environmental protection – Concept of an ecosystem – Structure and function of an ecosystem – Producers, consumers and decomposers – Energy flow in the ecosystem – Food chains, food webs and ecological pyramids – Ecological succession – Types, characteristic features, structure and function of forest, grass land, desert and aquatic (ponds, lakes, rivers, oceans, estuaries) ecosystem. Biodiversity – Definition – Genetic, species and ecosystem diversity – Value of biodiversity – Consumptive use, productive use, social, ethical, aesthetic and option values – Biodiversity at global, national and local levels – India as a mega diversity nation – Hot spots of biodiversity – Threats to biodiversity – Habitat loss, poaching of wild life, human-wildlife conflicts – Wildlife protection act and forest conservation act – Endangered and endemic species – Conservation of biodiversity – In-situ and ex-situ conservation of biodiversity.	CO1				
UNIT II ENVIRONMENTAL POLLUTION	9				
Definition – Causes, effects and control measures of: (a) Air pollution (b) Water pollution (c) Soil pollution (d) Marine pollution (e) Noise pollution (f) Thermal pollution (g) Nuclear hazards – Solid waste management: causes, effects and control measures of municipal solid wastes – Problems of e-waste – Role of an individual in prevention of pollution – Pollution case studies – Disaster management – Floods, earthquake, cyclone, tsunami and landslides – Field study of local polluted site – Urban / Rural / Industrial / Agricultural.					
UNIT III NATURAL RESOURCES	9				
Forest resources: Uses and over-exploitation – Deforestation – Case studies – Timber extraction, mining, dams and their effects on forests and tribal people – Water resources – Use and overutilization of surface and ground water, floods, drought, conflicts over water – Dams: benefits and problems – Mineral resources: Uses and exploitation – Environmental effects of extracting and using mineral resources – Case studies – Food resources: World food problems – Changes caused by agriculture and overgrazing – Effects of modern agriculture: fertilizer–pesticide problems, water logging, salinity – Case studies – Energy resources: Growing energy needs – Renewable and non renewable energy sources – Use of alternate energy sources – Case studies – Land resources: Land as a resource – Land degradation, man induced landslides, soil erosion and desertification – Role of an individual in conservation of natural resources – Equitable use of resources for sustainable lifestyles – Field study of local area to document environmental assets – River / Forest / Grassland / Hill / Mountain.	CO3				
UNIT IV SOCIAL ISSUES AND THE ENVIRONMENT	8				
From unsustainable to sustainable development – Urban problems related to energy – Water conservation, rain water harvesting, watershed management – Resettlement and rehabilitation of people; its problems and concerns, case studies – Role of non-governmental organization – Environmental ethics – Issues and possible solutions – Climate change – Global warming – Acid					

rain, Ozone layer depletion –Nuclear accidents and holocaust – Case studies – Wasteland reclamation – Consumerism and waste products – Principles of Green Chemistry – Environment protection act – Air (Prevention and Control of Pollution) Act – Water (Prevention and control of Pollution) Act – Wildlife protection Act – Forest conservation Act – Enforcement machinery involved in environmental legislation– Central and state pollution control boards– National Green Tribunal – Public awareness.

UNIT V HUMAN POPULATION AND THE ENVIRONMENT

8

Population growth – Variation among nations – Population explosion – Family welfare programme – Environment and human health – Human rights – Value education – HIV / AIDS – COVID 19 – Women and child welfare – Role of information technology in environment and human health – Case studies

CO5

TOTAL: 45 PERIODS

TEXT BOOKS

- 1. Benny Joseph, 'Environmental Science and Engineering', Tata McGraw-Hill, New Delhi, (2014).
- 2. Gilbert M. Masters, 'Introduction to Environmental Engineering and Science', 2nd edition, Pearson Education, (2004).
- 3. Dr. A. Sheik Mideen and S.Izzat Fathima, "Environmental Science and Engineering", Airwalk Publications, Chennai, (2018).

REFERENCE BOOKS

- 1. Dharmendra S. Sengar, 'Environmental law', Prentice hall of India Pvt Ltd, New Delhi, (2007).
- 2. Erach Bharucha, "Textbook of Environmental Studies", Universities Press (I) Pvt, Ltd, Hyderabad, (2015).
- 3. G. Tyler Miller, Scott E. Spoolman, "Environmental Science", Cengage Learning India Pvt. Ltd, Delhi, (2014).
- 4. R. Rajagopalan, 'Environmental Studies From Crisis to Cure', Oxford University Press, (2005).
- 5. Anubha Kaushik, C.P. Kaushik, "Perspectives in Environmental Studies", New Age International Pvt. Ltd, New Delhi, (2004).
- 6. Frank R. Spellman, "Handbook of Environmental Engineering", CRC Press, (2015).

COURSE OUTCOMES

Upon completion of the course, the students should be able

- CO1 To obtain knowledge about environment, ecosystems and biodiversity.
- CO2 To take measures to control environmental pollution.
- CO3 To gain knowledge about natural resources and energy sources.
- To find and implement scientific, technological, economic and political solutions to the environmental problems.
- CO5 To understand the impact of environment on human population and human health.

BE1251	BASIC ELECTRICAL, ELECTRONICS AND	L	T	PC
	MEASUREMENT ENGINEERING			
	(Common to CSE, AI-DS & AI-ML)	3	0	0 3

- To learn the fundamental laws, network theorems and analyse the electric circuits.
- To study the basic principles of electrical machines and their performance.
- To study the fundamentals of power systems.
- To learn the characteristics of various electron devices and Op Amp integrated circuit.
- To understand the principle and operation of measuring instruments and transducers.

UNIT I	ELECTRIC CIRCUITS ANALYSIS	9
Ohms Law, K	irchhoff's Law-Instantaneous power - Series and parallel circuit: analysis of	
resistive, capa	citive and inductive network, star delta conversion, Nodal analysis and mesh	
analysis. Netw	ork theorems: Thevenin's theorem, Norton's theorem, superposition theorem	CO1
and maximum	power transfer theorem. Three phase ac supply –Instantaneous power, Reactive	
power and app	parent power.	
	ELECTRICAL MACUUNES	
UNIT II	ELECTRICAL MACHINES	9
DC and AC RO	OTATING MACHINES: Types, Construction, principle, EMF and torque equation,	
application, Sp	peed Control. Basics of Stepper Motor and Brushless DC motors. Transformers-	CO2
Introduction, ty	pes and construction, working principle of Ideal transformer, EMF equation, All	002
day efficiency	calculation.	
UNIT III	FUNDAMENTALS OF POWER SYSTEM	9
Structure of	power system. Sources of electrical energy – Non-renewable, Renewable-	
Storage syster	ms: Batteries-Ni-Cd, Pb -Acid and Li-ion, SOC (State of Charge), DOD (Depth of	CO2
Discharge)Cha	aracteristics. Utilization of electrical power - DC and AC load applications	CO3
Electric circuit	Protection-need for earthing, fuses and circuit breakers.	
UNIT IV	ELECTRON DEVICES AND INTEGRATED CIRCUITS	9
PN Junction-\	/I Characteristics of Diode, Zener diode, Rectifiers, Zener voltage regulator.	
Transistor con	nfigurations – CE amplifier - RC and LC oscillators. Op Amps – Basic	CO4
characteristics	and its applications.	
UNIT V	MEASURING INSTRUMENTS AND TRANSDUCERS	9
Characteristic	of measurement-errors in measurement - Principle and working of indicting	CO5
instrument- Mo	oving Coil meter, Moving Iron meter, Energy meter and watt meter, Cathode Ray	

Oscilloscope — Transducers, thermo-electric, RTD, Strain gauge, LVDT, LDR, and piezoelectric transducer.

CS1206	PROGRAMMING IN C	L	T	Р	С
	(Common to CSE, AI-DS & AI-ML)	3	1	0	3

- To develop C Programs using basic programming constructs
- To develop C programs using arrays, strings and functions
- To develop applications in C using pointers
- To develop applications in C using structures and union
- To develop applications using sequential and random-access file processing.

UNIT I	BASICS OF C PROGRAMMING	9
An overview of	C: History of C; Compiler Vs. Interpreter, Structure of a C Program, Library and	
Linking, Comp	ling a C Program; Basic data types, Modifying the basic data types, Variables:	
Type qualifiers	s, Storage class specifiers; Constants: Enumeration Constants; Keywords;	
Operators: Pre	cedence and Associativity; Expressions: Order of evaluation, Type conversion in	CO1
expression, Ca	asts; Input/Output statements; Assignment statements, Selection statements;	
Iteration state	ments; Jump statements; Expression statements; Pre-processor directives:	
Compilation pro	ocess	
UNIT II	ARRAYS, STRINGS AND FUNCTIONS	9
Introduction to	Arrays: Declaration, Initialization, Single dimensional array, Two dimensional	
arrays, Array N	fanipulations; String operations: length, compare, concatenate, copy; Functions:	CO2
General form of	f a function, Function Arguments, Built-in functions, return statement, Recursion	
UNIT III	POINTERS	9
Pointers: Decl	aring and defining pointers, Pointer operators, Pointer expression; Pointer	
Assignment, F	Pointer Conversions, Pointer arithmetic, Pointer Comparisons; Pointers and	CO3
Arrays: Array	of pointers; Multiple Indirection; Pointers to function; Problems with Pointers;	COS
	of pointers; Multiple Indirection; Pointers to function; Problems with Pointers; sing: Pass by value, Pass by reference.	003
		CO3
		9
Parameter pas	sing: Pass by value, Pass by reference.	
Parameter pas UNIT IV Structure: Acc	sing: Pass by value, Pass by reference. STRUCTURES AND UNIONS	9
Parameter pas UNIT IV Structure: Account and Structures	sing: Pass by value, Pass by reference. STRUCTURES AND UNIONS essing Structure members, Structure Assignments; Nested structures; Pointer	
Parameter pas UNIT IV Structure: Account and Structures to function, F	STRUCTURES AND UNIONS essing Structure members, Structure Assignments; Nested structures; Pointer Array of structures; Passing Structures to Functions: Passing structure member	9
Parameter pas UNIT IV Structure: Account and Structures to function, Fastructures; Dyn	STRUCTURES AND UNIONS essing Structure members, Structure Assignments; Nested structures; Pointer Array of structures; Passing Structures to Functions: Passing structure member Passing entire structure to functions; Arrays in Structures; Self-referential amic memory allocation; typedef statement, Union and Enumeration.	9
Parameter pas UNIT IV Structure: Account and Structures to function, F	STRUCTURES AND UNIONS essing Structure members, Structure Assignments; Nested structures; Pointer Array of structures; Passing Structures to Functions: Passing structure member Cassing entire structure to functions; Arrays in Structures; Self-referential	9

Working with String: fputs() and fgets(); rewind(); ferror(); fread() and fwrite(); Erasing files; Types of file processing: Sequential access; Random access: fprintf() and fscanf(), fseek() and ftell(); Command line arguments.

TOTAL: 45 PERIODS

TEXT BOOKS

- 1. Herbert Schildt, C The Complete Reference, Fourth Edition, McGraw-Hill.
- 2. Reema Thareja, "Programming in C", Oxford University Press, Second Edition, 2016.

CS1208	PROGRAMMING IN C LAB	L	T	Р	С
	(Common to CSE, AI-DS & AI-ML)	0	0	4	2

- To develop programs in C using basic constructs.
- To develop applications in C using strings, pointers, functions, structures.

11. Realtime problem solving using sequential and random-access file.

To develop applications in C using file processing

LIST OF EXPERIMENTS

C programming using simple statements and expressions.	
Scientific problem-solving using decision making and looping.	
Generating different patterns using multiple control statements.	CO1
4. Problems solving using one dimensional array.	
Mathematical problem solving using two dimensional arrays.	
Solving problems using string functions.	
7. Solving problems with user defined functions.	CO2
Solving problems using recursive function.	C02
Solving problems with dynamic memory allocation.	
10. Realtime application using structures and unions.	

TOTAL: 60 PERIODS

CO₃

LIST OF EQUIPMENT FOR A BATCH OF 30 STUDENTS

12. Solving problems with command line argument.

Standalone desktops with C compiler 30 Nos.

(or)

Server with C compiler supporting 30 terminals or more.

REFERENCE BOOKS

- 1. Problem Solving and Program Design in C, 4th edition, by jeri R. Hanly and Elli B.Koffman.
- 2. Reema Thareja, "Programming in C", Oxford University Press, Second Edition, 2016.
- 3. Programming in C by Pradip Dey, Manas Ghosh 2nd edition Oxford University Press. E.Balaguruswamy, Programming in ANSI C 5th Edition McGraw-Hill.
- 4. A first book of ANSI C by Gray J.Brosin 3rd edition Cengagedelmer Learning India P.Ltd.
- 5. AL Kelly, Iraphol, Programming in C,4th edition Addison-Wesley Professional.
- 6. Brain W.Kernighan & Dennis Ritchie, C Programming Language, 2nd edition, PHI.

COURSE OUTCOMES

Upon completion of the course, students will be able to

- CO1 Develop C programs for simple applications making use of basic constructs.
- CO2 Develop C programs involving string, functions, recursion, pointers, and structures.
- CO3 Design applications using sequential and random-access file processing.

MA1351	PROBABILITY AND STATISTICS	L	Т	Р	С
	Common to CSE, AI & DS	4	0	0	4

- To understand the basic concepts of probability, one and two dimensional random variables and to introduce some standard distributions applicable to engineering which can describe real life phenomenon.
- To understand the basic concepts of random processes which are widely used in engineering applications.
- To acquaint the knowledge of testing of hypothesis for small and large samples, which plays an important role in real life problems.
- To introduce the basic concepts of classifications of design of experiments which plays very important roles in the field of agriculture and statistical quality control.

UNIT I	PROBABILITY AND RANDOM VARIABLES	12
Probability -	The axioms of probability - Conditional probability - Baye's theorem - Discrete	
andcontinuou	s random variables - Moments - Moment generating functions - Binomial,	CO1
Poisson, Geo	metric, Uniform, Exponential and Normal distributions.	
	TWO DIMENSIONAL DANDOM VARIABLES	10
UNIT II	TWO - DIMENSIONAL RANDOM VARIABLES	12
Joint distribu	tions - Marginal and conditional distributions - Covariance - Correlation and	
•	on - Central limit theorem (for independent and identically distributed random	CO2
variables).		
UNIT III	RANDOM PROCESSES	12
Classification	- Stationary process - Markov process - Poisson process - Discrete parameter	
Markov chain	- Chapman Kolmogorov equations - Limiting distributions.	CO3
UNIT IV	TESTING OF HYPOTHESIS	12
Sampling dis	ributions - Estimation of parameters - Statistical hypothesis - Large sample tests	
	rmal distribution for single mean and difference of means -Tests based on t, Chi- distributions for mean, variance and proportion - Contingency table (test for	CO4
independent)	– Goodness of fit.	
UNIT V	DESIGN OF EXPERIMENTS	12
000 111011 000	Two way classifications - Completely randomized design - Randomized block	CO5
	square design - 2 ² factorial design.	LOS

TOTAL: 60 PERIODS

TEXT BOOKS

- 1. Johnson, R.A., Miller, I and Freund J., "Miller and Freund's Probability and Statistics for Engineers", Pearson Education, Asia, 9th Edition, 2017.
- 2. Ibe, O.C., —Fundamentals of Applied Probability and Random Processes", Elsevier, 2nd Indian Reprint, 2014.

REFERENCE BOOKS

- 1. Hwei Hsu, "Schaum's Outline of Theory and Problems of Probability, Random Variables and Random Processes", Tata McGraw Hill Edition, New Delhi, 2017.
- 2. Yates, R.D. and Goodman. D. J., "Probability and Stochastic Processes", 2nd Edition, Wiley India Pvt. Ltd., Bangalore, 2014.
- 3. Papoulis, A. and Unnikrishnapillai, S., "Probability, Random Variables and Stochastic Processes", McGraw Hill Education India, 4th Edition, New Delhi, 2017.
- 4. Ross, S.M., "Introduction to Probability and Statistics for Engineers and Scientists", 4thEdition,Elsevier, 2009.
- 5. Spiegel. M.R., Schiller. J. and Srinivasan, R.A., "Schaum's Outline of Theory and Problems of Probability and Statistics", Tata McGraw Hill Edition, 2008.

COURSE OUTCOMES

Upon completion of the course, students will be able to

- CO1 Give exposure to random variables and well-founded knowledge of standard distributions which can describe real life phenomena.
- CO2 Pave ideas to handle situations involving more than one random variable and functions of random variables.
- CO3 Give an understanding and characterizes phenomena which evolve with respect to time in a probabilistic manner and modelling the real life phenomena.
- Gain the knowledge on Large Samples and Samples. These concepts are very useful in biological, economical and social experiments and all kinds of generalizations based on information about a smaller sample and larger samples. Apply the appropriate test in the problems related with sampling.
- CO5 Design of experiments, carry them out, and analyze the data.

IT1301	JAVA PROGRAMMING	L	Т	Р	С
		3	0	0	3

- To understand Object Oriented Programming concepts and fundamentals of Java
- To know the principles of packages, inheritance and interfaces
- To define exceptions and use I/O streams
- To develop a java application with threads and generics classes
- To design and build simple Graphical User Interfaces with database connectivity

UNIT I INTRODUCTION TO OOP AND JAVA FUNDAMENTALS	9
Object Oriented Programming concepts - Abstraction - objects and classes - Encapsulation-	
Inheritance –Polymorphism- Characteristics of Java – The Java Environment Fundamental	
Programming Structures in Java - Defining classes in Java - constructors, methods -access	CO1
specifiers - static members -Comments, Data Types, Variables, Operators, Control Flow,	
Arrays - JavaDoc comments.	
UNIT II PACKAGES, INHERITANCE AND INTERFACES	9
Inheritance - Super classes- sub classes - constructors in sub classes- the Object class -	
abstract classes and methods- final methods and classes - Interfaces - defining an interface,	CO2
implementing interface - Object cloning -inner classes, ArrayLists - Strings, Packages	
UNIT III EXCEPTION HANDLING AND I/O CONCEPTS	9
Exceptions - exception hierarchy - throwing and catching exceptions - built-in exceptions,	
creating own exceptions, Stack Trace Elements. Input / Output Basics - Streams - Byte	CO3
streams and Character streams – Reading and Writing Console – Reading and Writing Files	
UNIT IV CONCURRENT AND GENERIC PROGRAMMING	9
Multi-threading and multitasking, thread life cycle, creating threads, synchronizing threads,	
Inter-thread communication, daemon threads, thread groups. Generic Programming – Generic	CO4
classes – generic methods – Bounded Types	
UNIT V EVENT DRIVEN PROGRAMMING AND DATABASE CONNECTIVITY	9 + 6
Graphics programming - Frame - Components - working with 2D shapes - Using color, fonts,	
and images - Basics of event handling - event handlers - adapter classes - actions - mouse	
events – AWT event hierarchy – layout management - Swing Components- JDBC Architecture	CO5
- Establishing Connectivity - Working with statements - Creating and executing SQL	
statements - Working with Result SetSimple Java Applications

CS1301	DIGITAL PRINCIPLES AND LOGIC DESIGN	L	Т	Р	С
	(Lab Integrated)				
	(Common to CSE)	3	0	2	4

- To learn Boolean algebra and simplification of Boolean functions.
- To learn to design and analyze different combinational circuits.
- To study the basics of synchronous sequential logic, analyze and design sequential circuits.
- To learn about basic memory devices and programmable logic devices to build simple digital systems.
- To learn to write code in Hardware Definition Language for designing larger digital systems

Number Systems: Binary, Octal, Hexadecimal – Representation of Negative Numbers – 1's and 2's Complements – Arithmetic Operations – Binary Codes – Boolean Algebra – Theorems and Postulates – Functions – Truth Table – Logic Gates – Universal gates—Canonical and Standard Forms – Minterms and Maxterms – Sum of Products and Product of Sum Lab component: • Verification of Boolean Theorems using basic gates UNIT II KARNAUGH MAP AND COMBINATIONAL LOGIC 9+6 Simplification of Boolean Functions – Karnaugh Map – 2, 3, 4 variables – NAND/NOR Implementations – Combinational Circuits – Arithmetic Circuits – Half and Full Adders – Subtractors – Introduction to HDL Lab component: • Design and implement Half/Full Adder and Subtractor. • Coding combinational circuits using HDL UNIT III COMBINATIONAL LOGIC 9+6 Binary Parallel Adder – Carry Look-ahead Adder – BCD Adder – Binary Multiplier – Magnitude Comparator – Code Converters – Decoder – Encoder – Priority Encoder – Mux/Demux – Applications Lab component: • Design and implement combinational circuits using MSI devices: • Parity generator / checker . • Magnitude Comparator • Application using multiplexers UNIT IV SEQUENTIAL LOGIC RS Latch – D Latch – Flip Flops – JK, T, D – Master/Slave Flip Flop – Flip flop excitation tables – Analysis of clocked sequential circuits – Moore /Mealy models – Registers: Shift Registers, Universal Shift Register – Counters – Asynchronous Ripple Counters, Synchronous Counters Lab component: • Design and implement shift-registers. • Design and implement shift-registers. • Design and implement shift-registers. • Design and implement Shift-registers. • Design and implement Shift-registers. TOTAL: 75 PERIODS

TEXT BOOKS

- 1. M. Morris Mano, Michael D. Ciletti, "Digital Design", Fifth Edition, Pearson Education, 2013.
- 2. David A. Patterson, John L. Hennessy, "Computer Organization and Design, The Hardware/Software Interface", Fifth Edition, Morgan Kaufmann/Elsevier, 2013.

REFERENCE BOOKS

- 1. Charles H. Roth Jr., "Fundamentals of Logic Design", Fifth Edition, Jaico Publishing House, 2003
- 2. John F. Wakerly, "Digital Design Principles and Practices", Fourth Edition, Pearson Education, 2007.
- 3. Donald D. Givone, "Digital Principles and Design", Tata McGraw Hill, 2003.
- 4. G. K. Kharate, "Digital Electronics", Oxford University Press, 2010.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Understand Boolean functions circuits using basic logic gates.
CO2	Simplify complex Boolean functions.
CO3	Implement digital circuits using combinational logic ICs and PLDs.
CO4	Understand the characteristics of various Flip-Flops.
CO5	Design digital circuits with combinational and sequential components

	(Common to CSE & AI-DS)	3	0	0 3

- To understand the concepts of ADTs
- To Learn linear data structures lists, stacks, and queues
- To Learn Non-linear data structures Trees
- To apply Graph structures
- To understand sorting, searching and hashing algorithms

UNIT I	LINEAR DATA STRUCTURES – LIST	9				
Abstract Data	Types (ADTs) - List ADT - array-based implementation - linked list					
implementation	n — singly linked lists- circularly linked lists- doubly-linked lists – applications of	CO1				
lists –Polynom	ial Manipulation – All operations (Insertion, Deletion, Merge, Traversal).					
UNIT II	LINEAR DATA STRUCTURES – STACKS, QUEUES	9				
Stack ADT – C	perations – Applications – Evaluating arithmetic expressions- Conversion of Infix					
to postfix expre	ession – Queue ADT – Operations – Circular Queue – Priority Queue – deQueue	CO2				
- applications	of queues.					
UNIT III	NON LINEAR DATA STRUCTURES – TREES	9				
Tree ADT - tr	ee traversals - Binary Tree ADT - expression trees - applications of trees -					
binary search	tree ADT -Threaded Binary Trees- AVL Trees - B-Tree - B+ Tree - Heap -	CO3				
Applications of	heap.					
UNIT IV	NON LINEAR DATA STRUCTURES – GRAPHS	9				
Definition – Re	epresentation of Graph - Types of graph - Breadth-first traversal - Depth-first					
traversal - To	pological Sort - Bi-connectivity - Cut vertex - Euler circuits - Applications of	CO4				
graphs.						
UNIT V	SEARCHING, SORTING AND HASHING TECHNIQUES	9				
Searching- Linear Search - Binary Search. Sorting - Bubble sort - Selection sort - Insertion						
sort - Shell :	sort – Radix sort. Hashing- Hash Functions – Separate Chaining – Open	CO5				
Addressing – F	Rehashing – Extendible Hashing.					
	TOTAL : 45 PER	RIODS				

TEXT BOOKS

- 1. Benjamin Baka, David Julian, "Python Data Structures and Algorithms", Packt Publishers, 2017.
- 2. Rance D. Necaise, Data Structures and Algorithms Using Python, Willy Student Edition, 2016.

3. Narasimha Karumanchi, Data Structure and Algorithmic Thinking with python, CareeMonk, 2015.

REFERENCE BOOKS

- 1. Mark Allen Weiss, "Data Structures and Algorithm Analysis in C++", Fourth Edition, Pearson Education, 2013.
- 2. Reema Thareja, —Data Structures Using CII, Second Edition, Oxford University Press, 2011.

COURSE OUTCOMES

Upon completion of the course, students will be able to

- CO1 Implement abstract data types for linear data structures.
- CO2 Apply the different linear data structures to problem solutions.
- CO3 Implement abstract data types for non-linear data structures.
- CO4 Apply Graph data structure for the real world problems.
- CO5 Critically analyze the various sorting, searching algorithms and hash functions that result in a collision free scenario for data storage and retrieval.

		0	0	4	2							
OBJE	CTIVES											
•	To build software development skills using java programming for real-world appl	icatio	ons									
•	 Implement Object Oriented programming concept using basic syntaxes of control Structures strings and function for developing skills of logic building activity. 											
•	• Identify classes, objects, members of a class and the relationships among them needed for a											
	finding the solution to specific problem											
•	 Identify and describe common abstract user interface components to design GUI in Java using the solution to specific problem. 											
Swing along with response to events and Database Connectivity using JDBC.												
LIST	OF EXPERIMENTS											
	Develop a java application to generate electricity bill. Create a class with the fe	ollow	vina	\top								
	Consumer no., consumer name, previous month reading, current month readi											
	·	_										
	type of EB connection (i.e. domestic or commercial) .Compute the bill amount u											
	following tariff. If the type of the EB connection is domestic. Calculate the amou	int to) be									
	pain follows.											
	First 100 units –Rs.1 per unit											
	101-200 units –Rs.2.50 per unit											
	201-500 units –Rs.4 per unit											
	>501 unit –Rs.6 per unit											
	If the type of the EB connection is commercial, calculate the amount to be paid for	ollow	٧S									
	First 100 units –Rs.2 per unit											
	101-200 units –Rs.4.50 per unit											
	201-500 units –Rs. 6 per unit											
	>501 units -Rs. 7 per unit											
2.												
	Address, Mail_id, Mobile_no as members. Inherit the classes, Programmer, Assista	ant										
	Professor, Associate Professor with Professor from employee class. Add basic F		3P)	C	01							
	as the member of all the inherited classes with 97% of BP as DA,10% of BP as		,	`	•							
	HRA,12% of BP as PF,0.1% of BP for staff club fund. Generate pay slips for the											
	employees with their gross and net salary.											
3	Write a Java program to make frequency count of words in a given text			-								
	Write a Java Program to create an abstract class named Shape that contains	ninc	two	-								
4.												
	integers and an empty method named print Area(). Provide three classes											
	Rectangle, Triangle and Circle such that each one of the classes extends the											
	Shape. Each one of the classes contains only the method print Area () that proceeds the classes of the classes contains only the method print Area () that proceeds the classes of the classes contains only the method print Area () that proceeds the classes contains only the method print Area () that proceeds the classes contains only the method print Area () that proceeds the classes contains only the method print Area () that proceeds the classes contains only the method print Area () that proceeds the classes contains only the method print Area () that proceeds the classes contains only the method print Area () that proceeds the classes contains only the method print Area () that proceeds the classes contains only the method print Area () that proceeds the classes contains t	rints	ıne									
	area of the given shape.			_								
5.	1 3 7	viae										
_	necessary exception handling in both the implementation			_								
6.	Complete the following:											
	Create a package named shape.											
	2. Create some classes in the package representing some common shapes like											
	Square,Triangle, and Circle.											
	3. Import and compile these classes in other program.											
7.	Write a Java program to implement user defined exception handling.											
	Write a java program to find the maximum value from the given type of elemen	ts us	sina	1								
	a generic function.		Э									
9	Write a program in Java for String handling which performs the following:			1								
5.	i) Checks the capacity of StringBuffer objects.				02							
		etrin	n C	"	JZ							
	ii) Reverses the contents of a string given on console and converts the resultant	อนแ	ı9									
	in upper case.											
	iii) Reads a string from console and appends it to the resultant string of ii.			4								
10	Write a program to perform string operations using ArrayList. Write functions for	the										
Ì	following a Append - add at end			1								

JAVA PROGRAMMING LABORATORY

following a. Append - add at end

IT1308

L P T C

- b. Insert add at particular index
- c. Search
- d. List all string starts with given letter
- **11.** Write a Java program to read copy content of one file to other by handling all file related exceptions
- **12.** Write a Java program that creates three threads. First thread displays "Good Morning" everyone second, the second thread displays "Hello" every two seconds and the third thread displays "Welcome" every three seconds.
- 13. Write a java Program to create a window when we press
 - a. M or m the window displays Good Morning
 - b. A or a the window displays Good After Noon
 - c. E or e the window displays Good Evening
 - d. N or n the window displays Good Night
- 14. Create a GUI program in java with the following components.
 - a. A frame with Flow layout.
 - b. Add the following components on to the frame.
 - i. Two Text Field
 - ii. A button with the label display
 - c. Allow the user to enter data into the JTextField
 - d. When the button is clicked paint the frame by displaying the data entered in the JTextField
 - e. Allow the user to properly close the frame
- 15. Design and Develop the GUI application with database connectivity of your choice

- To introduce Mathematical Logic, Inference Theory and proof methods.
- To provide fundamental principles on combinatorial counting techniques.
- To introduce graph models, their representation, connectivity and traverse ability.
- To explain the fundamental algebraic structures, groups and their algebraic properties.
- To introduce partial ordering and some functions on a set.

UNIT I	LOGIC AND PROOFS	12
Propositional	Logic – Propositional Equivalences – Normal Forms - Predicates and Quantifiers	
– Nested Qเ	uantifiers - Rules of Inference - Introduction to Proofs - Proof Methods and	CO1
Strategy.		
UNIT II	COMBINATORICS	12
Mathematical	Induction – Strong Induction and Well Ordering – The Basics of Counting - The	
Pigeonhole F	Principle - Permutations and Combinations - Recurrence Relations -Generating	CO2
Functions - 3	Solving Linear Recurrence Relations Using Generating Functions- Inclusion -	COZ
Exclusion – F	rinciple and Its Applications.	
UNIT III	SETS AND FUNCTIONS	12
Set -Relation	s on sets - Types of relations and their properties - Partitions - Equivalence	
relations – Pa	artial ordering – Poset – Hasse diagram. Functions: Characteristic function of a set	CO3
 Hashing fur 	nctions – Recursive functions – Permutation functions.	
UNIT IV	GRAPHS	12
Graphs and	Graph Models - Graph Terminology and Special Types of Graphs - Matrix	CO4
Representation	on of Graphs and Graph Isomorphism – Connectivity – Euler and Hamilton Paths.	
UNIT V	ALGEBRAIC STRUCTURES	12
Groups – Su Lagrange's T	ubgroups – Homomorphisms – Isomorphism - Normal Subgroup and Coset –	CO5

TEXT BOOKS

- 1. Kenneth H. Rosen, "Discrete Mathematics and its Applications", Tata McGraw Hill Pub. Co.Ltd., Seventh Edition, Special Indian Edition, New Delhi, 2012.
- 2. Tremblay J.P. and Manohar R, "Discrete Mathematical Structures with Applications to Computer Science", Tata McGraw Hill Pub. Co. Ltd, Thirtieth Reprint, New Delhi, 2011.

TOTAL: 60 PERIODS

REFERENCE BOOKS

- 1. Ralph. P. Grimaldi, "Discrete and Combinatorial Mathematics: An Applied Introduction", Pearson Education, Fifth Edition, New Delhi, 2014
- 2. Seymour Lipschutz and Mark Lipson," Discrete Mathematics", Schaum's Outlines, Tata McGraw Hill Pub. Co. Ltd., Third Edition, New Delhi, 2013.
- 3. Thomas Koshy," Discrete Mathematics with Applications", Elsevier Publications, Boston, 2004.

COURSE OUTCOMES

Upon completion of the course, students will be able to

- CO1 Construct proofs by using direct proof, proof by contraposition, proof by contradiction.

 Construct mathematical arguments using logical connectives and quantifiers and verify the correctness of an argument using propositions. Logic helps in arriving inferences for any problem.
- CO2 Solve problems such as permutation and combination and in generating functions. Prove mathematical theorems using mathematical induction. Demonstrate basic counting principles, compute and interpret the meaning in the context of the particular application. Helps to apply the combinatorial techniques in Algorithms and Data structure for analysis and design.
- CO3 Understand relations on a set and functions on a set
- CO4 Apply the concepts of graph theory in data structures, data mining, image segmentation and in clustering.
- CO5 Familiar with algebraic systems, groups, sub groups, Lagrange's theorem and normal subgroups. In Coding algorithms and in theoretical computer science algebraic structures are applied.

COs	PROGRAM OUTCOMES (POs)											PROGRAM SPECIFIC OUTCOMES (PSOs)				
COS	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO1	PSO2	PSO3

CS1401	DESIGN AND ANALYSIS OF ALGORITHMS	L	T	Р	С
	Common for CSE, AI-DS and AI-ML	3	0	0	3

- ❖ To learn the general framework for analyzing algorithm efficiency
- To be conversant with algorithms for common problems.
- To analyse the algorithms for time/space complexity.
- To write algorithms for a given problem using different design paradigms.
- To understand computational complexity of problems

UNIT I	INTRODUCTION	9
Algorithm – Fu	indamentals of Algorithmic Problem Solving – Important Problem Types – The	
Analysis Fram	ework - Asymptotic Notations and Basic Efficiency Classes - Mathematical	CO1
Analysis of Nor	nrecursive and Recursive Algorithms – Empirical Analysis of Algorithms.	
UNIT II	DECREASE AND CONQUER AND DIVIDE-AND-CONQUER	9
Decrease-and-	Conquer- Insertion Sort - Binary Search - Computing a Median and the	
Selection Prob	lem - Divide-and-Conquer - Merge Sort - Quicksort - The Closest -Pair and	CO2
Convex -Hull F	Problems by Divide-and-Conquer.	
UNIT III	DYMANIC PROGRAMMING AND GREEDY TECHNIQUE	9
The Knapsack	Problem and Memory Functions – Optimal Binary Search Trees – Warshall's	
Algorithm – Flo	byd's Algorithm – Greedy Technique – Prim's Algorithm – Kruskal's Algorithm –	CO3
Dijkstra's Algor	ithm – Huffman Trees and Codes.	
UNIT IV	ITERATIVE IMPROVEMENT	9
Graphical Meth	l nod – The Simplex Method – The maximum Flow Problem – Maximum Matching	_
in Bipartite Gra	phs – The Stable Marriage Problem.	CO4
UNIT V	BACKTRACKING, BRANCH-AND-BOUND AND APPROXIMATION	9
OMIT V	ALGORITHMS	
P NP and NP	- Complete Problems – Backtracking – n-Queens Problem – Hamiltonian Circuit	
i, ivi, and ivi		•
	bset-Sum Problem – Branch-and-Bound – Assignment Problem – Knapsack	005
Problem - Sul	bset-Sum Problem - Branch-and-Bound - Assignment Problem - Knapsack aveling Salesman Problem - Approximation Algorithms for the Traveling	CO5

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Ability to investigate an algorithm's efficiency with respect to running time											
CO2	Design and implement problems using algorithmic design techniques such as decrease and											
	conquer and divide and conquer											
CO3	Ability to understand the design techniques such as Dynamic programming and Greedy											
	technique											
CO4	Ability to understand the iterative design techniques											
CO5	Understand the variations among tractable and intractable problems											

COs		PROGRAM OUTCOMES (POs)													PROGRAM SPECIFIC OUTCOMES (PSOs)

CS1402	OPERATING SYSTEMS	L	Т	Р	С
	Common for CSE, AI-DS and AI-ML	3	0	0	3

- To understand the basic concepts and functions of operating systems.
- To understand Processes and Threads
- To analyze Scheduling algorithms.
- To understand the concept of Deadlocks.
- To analyze various memory management schemes.
- To understand I/O management and File systems.
- To be familiar with the basics of Linux system and Mobile OS like iOS and Android

UNIT I	OPERATING SYSTEM OVERVIEW	9			
Operating Sys	OS: - Functionality of OS - OS Design issues- Evolution of Operating System-tem Structuring methods(monolithic, layered, modular, micro-kernel models)and	CO1			
	tem calls-system/Application Call Interface ,system programs- Hardware er/kernel modes-interrupts-Memory Hierarchy, Cache Memory, Direct Memory	CO1			
	rocessor and Multicore Organization.				
UNIT II	PROCESS MANAGEMENT	9			
Communication processor schapprocessor schapprocessor schapprocessor synchronization synchronization	Process Concept, Process Scheduling, Operations on Processes, Inter-processin; CPU Scheduling – Scheduling criteria, Scheduling algorithms, Multiple-eduling; Threads- Overview, Multithreading models, Threading issues; Processon – The critical-section problem, Semaphores, Classical problems of n, Monitors; Deadlock – System model, Deadlock characterization, Methods for locks, Deadlock prevention, Deadlock avoidance, Deadlock detection, Recovery	CO2			
UNIT III	STORAGE MANAGEMENT	9			
Segmentation, – Background	y – Background, Swapping, Contiguous Memory Allocation, Paging, Segmentation with paging, 32 and 64 bit architecture Examples; Virtual Memory, Demand Paging, Need for Page Replacement, Page Replacement Algorithm, ashing; Allocating Kernel Memory, OS Examples.	CO3			
UNIT IV	FILE SYSTEMS AND I/O SYSTEMS	9			
management; Directory orga Structure, Dire	e Structure – Overview, Disk Scheduling and Management, swap space File-System Interface – File concept, Access methods, Directory Structure, nization, File Sharing and Protection; File System Implementation- File System ectory implementation, Allocation Methods, File system recovery, Free Space I/O Systems – I/O Hardware, Application I/O interface, Kernel I/O subsystem.	CO4			
UNIT V	CASE STUDY	9			
Linux System – Design Principles, Kernel Modules, Virtual Machines - Virtualization (Hardware/Software, Server, Service, Network - Hypervisors - Container virtualization - Cost of virtualization - Journaling - Soft updates - Log-structured file system - Distributed file system-Mobile OS – iOS and Android.					
	TOTAL : 45 PER	RIODS

IT1401	COMPUTER COMMUNICATION	L	T	Р	С
		3	0	0	3

- To understand the basics of communication
- To impart knowledge on basics of analog and digital communication.
- To understand the basics of data communication models
- To explore the various layers and its functionalities in data communication model

UNIT I	BASICS OF COMMUNICATION	9				
Introduction to	o Communication systems – basic model, point to point, broadcast					
communication	; modulation-need for modulation, types of modulation, Base band and Pass					
band transmiss	sion; Demodulation (detection) - Coherent and Non-coherent detection; Noise -	CO1				
types of noise	; Analog to Digital Conversion (ADC) process- Sampling , Quantization and	001				
Coding; Sample	ing theorem, types of sampling – ideal, natural and flat –top sampling; nyquist					
rate, Signal red	construction, types of quantization, Quantization noise, Aliasing.					
UNIT II	ANALOG AND DIGITAL COMMUNICATION	9				
Amplitude mo	dulation – types of amplitude modulation- Standard AM with Full Carrier					
,Comparison	of different amplitude modulations; Angle modulation (FM and PM), FM					
generation usir	ng PM, PM generation using FM, Comparison of Narrowband and Wideband FM,					
Comparison of	AM,FM and PM. Analog pulse modulation – PAM,PWM,PPM; Digital pulse	CO2				
modulation -	Pulse Code Modulation (PCM), Delta modulation (DM), Adaptive Delta					
modulation (A	DM), Multiplexing – Frequency Division Multiplexing (FDM), Time Division					
Multiplexing (T	DM).					
UNIT III	INTRODUCTION TO DATA COMMUNICATION AND OSI MODEL	9				
Introduction to	computer communication: Transmission modes - Switching: circuit switching					
and packet swi	tching, OSI model, Layers in OSI model, TCP/IP protocol suite. Physical Layer:					
Guided and ur	guided transmission media (Co-axial cable, UTP,STP, Fiber optic cable), Data	CO3				
Link Layer: Framing, Flow control (stop and wait , sliding window flow control) ,Error control,						
HDLC, Media access control: Ethernet (802.3), CSMA/CD, Logical link control, Wireless LAN						
(802.11), CSMA/CA.						
UNIT IV	NETWORK LAYER COMPONENTS AND FUNCTIONS	9				
Network Layer	Logical addressing: IPv4 & IPV6, Subnetting, DHCP, Virtual LAN, Networking	CO4				
devices (Hubs	s, Bridges & Switches), Network topologies. Routing: Routing and Forwarding,					

Static routing and Dynamic routing, Routing Algorithms: Distance vector routing algorithm, Link state routing (Dijkstra's algorithm), Routing Protocols: Routing Information protocol (RIP), Open Shortest Path First (OSPF), Border Gateway Protocol (BGP), MPLS.

UNIT V	TRANSPORT, SESSION AMD APPLICATION LAYER

Transport Layer –UDP, TCP, Congestion Control & Quality of Service – Data traffic, Congestion, Congestion Control, QoS and Flow Characteristics, Application Layer – DNS,

Remote Logging (Telnet), SMTP, FTP, WWW, HTTP, POP3, MIME, SNMP.

TOTAL: 45 PERIODS

CS1407	OPERATING SYSTEMS LABORATORY	L	Т	Р	C
	(Common to CSE, AI-DS & AI-ML)	0	0	4	2

- To learn basic Unix commands, shell programming and to implement various Process Management functions such as IPC and Scheduling.
- To implement Process Synchronization, Deadlock Detection and Avoidance and Memory Allocation methods.
- To implement Paging Techniques and File Management Techniques.

LIST OF EXPERIMENTS

1. Simulation of Unix Commands like cp, ls, grep, cd, mkdir, cat, rm etc.,	
2. a) Implementation of Shell Program for comparing two strings.	
b) Implementation of Shell Program for finding the greatest among three numbers.	
3. Implement the following CPU Scheduling Algorithms	CO1
a)FCFS b) SJF c) Priority d) Round Robin	
4. Implementation of Producer Consumer problem using Semaphore .	
5. Implementation of Inter-process Communication using Shared memory.	
6. Implementation of Threading and Synchronization Applications using pthread and	d
Mutex Variable	
7. Implementation of Bankers Algorithm for Deadlock Avoidance	CO2
8. Implementation of Deadlock Detection Algorithm.	
9. Implementation of Memory Allocation Methods for fixed partition	
a) First Fit b) Worst Fit c) Best Fit	
10. Implementation of Paging Techniques by constructing the page table and memor	у
mapping scheme in Memory Management.	
11. Implementation of the following Page Replacement Algorithms	
a) FIFO b) LRU c) LFU	CO3
12. Implementation of the various File Organization Techniques	
a) Single level directory b) Two level c) Hierarchical	
13. Implementation of the following File Allocation Strategies	
a) Sequential b) Indexed c) Linked	
TOTAL : 60 P	ERIODS

LIST OF EQUIPMENT FOR A BATCH OF 30 STUDENTS

Standalone desktops with C / C++/ Java compiler 30 Nos.

(or)

Server with C compiler supporting 30 terminals or more.

REFERENCE BOOKS

	.CSV le					:01							
2.	For a	given set of training data examples stored in a .CSV file, implem	ent	and	7	01							
	demon	strate the Candidate-Elimination algorithm. Output a description of the	set o	of all	ı								
	hypothe	eses consistent with the training examples.											
3.	Write a	a program to demonstrate the working of the decision tree based ID3 al	gori	thm.									
	Use an	appropriate data set for building the decision tree and apply this know	ledg	je to	,								
	classify	a new sample											
4.	Build a	n Artificial Neural Network by implementing the Back propagation algori	thm	and	C	02							
	test the	same using appropriate data sets											
5.	Write a	program to implement the naïve Bayesian classifier for a sample train	ing	data									
	set sto	red as a .CSV file. Compute the accuracy of the classifier, considering	few	test									
	data se	ets.											
6.	Assumi	ing a set of documents that need to be classified, use the naïve E	3aye	sian									
	Classifi	er model to perform this task. Built-in Java classes/API can be used to	write	the:									
	progran	m. Calculate the accuracy, precision, and recall for your data set.											
7.	Write a	program to construct a Bayesian network considering medical data. Use	this	,									
	model t	to demonstrate the diagnosis of heart patients using standard Heart Dise	ase										
	Data Set. You can use Java/Python ML library lasses/API												
8.	Apply E	EM algorithm to cluster a set of data stored in a .CSV file. Use the same	data	ı set									
	for clustering using k-Means algorithm. Compare the results of these two algorithms												
	and co	omment on the quality of clustering. You can add Java/Python MI	_ lib	rary									
		API in the program.											
9.	Write a	program to implement k-Nearest Neighbor algorithm to classify the iris of											

Print both correct and wrong predictions. Java/Python ML library classes can be used for this problem.

10. Implement the non-parametric Locally Weighted Regression algorithm in order to fit data points. Select appropriate data set for your experiment and draw graphs

TOTAL: 60 PERIODS

LIST OF EQUIPMENT FOR A BATCH OF 30 STUDENTS

Standalone desktops with Python 30 Nos.

(or)

Standalone desktops with JAVA 30 Nos.

COURSE OUTCOMES

Upon completion of the course, students will be able to

- CO1 Apply the basic notions of groups, rings, fields which will then be used to solve related problems.
- CO2 Explain the fundamental concepts of advanced algebra and their role in modern mathematics and applied contexts.
- CO3 | Demonstrate accurate and efficient use of advanced algebraic techniques.
- CO4 Demonstrate their mastery by solving non trivial problems related to the concepts, and by proving simple theorems about the, statements proven by the text.
- CO5 Apply integrated approach to number theory and abstract algebra, and provide a firm basis for further reading and study in the subject

		0	0	4	2
OBJECTIVES			-		

- To design dynamic websites with good aesthetic sense using HTML5, CSS3 and Javascript
- To work with Express, Node.js, Mongodb
- To practice AJAX framework and explore REST API

LIST OF EXPERIMENTS

- 1. Design a Webpage using all HTML elements
- 2. Create a web page with all types of Cascading style sheets and CSS Selectors
- 3. Write Client-Side Scripts for Validating Web Form Controls using DHTML
- 4. Design the following using JavaScript and DOM

a. Include Image Slide Show

- b. Digital clock
- 5. Develop a web application to implement online quiz system using HTML, CSS and Javascript
- 6. Design a shopping cart application using React. Your shopping webpage should have the provisions for selecting the list of items from different category, Once the items are selected on clicking the submit button the items in the cart with its price should be displayed.

CO₂

CO1

- 7. Design an online super market using ExpressJS and MongoDB database a) Perform a search based on product id or name b) On retrieving the results, display the product details of different brands in table format with the Price field in sorted order using React
- 8. Create a <Todoltem> component in React and reuse it inside a <TodoList> component
- CO₃ 9. Create a basic CRUD operation API by following REST syntax for a given model student with the following fields [field names]

10.To build an AJAX Application

TOTAL: 60 PERIODS

- To capture the requirements specification for an intended software system
- To draw the UML diagrams for the given specification
- To map the design properly to code
- To test the software system thoroughly for all scenarios
- To improve the design by applying appropriate design patterns.

LIST OF EXPERIMENTS

1.	Identify a software system that needs to be developed.	
2.	Document the Software Requirements Specification (SRS) for the identified system.	
3.	Identify use cases and develop the Use Case model.	CO1
4.	Identify the conceptual classes and develop a Domain Model and also derive a Class	
	Diagram from that.	
5.	Using the identified scenarios, find the interaction between objects and represent them	
	usingUML Sequence and Collaboration Diagrams	
6.	Draw relevant State Chart and Activity Diagrams for the same system.	CO2
7.	Implement the system as per the detailed design	
8.	Test the software system for all the scenarios identified as per the use case diagram	
9.	Improve the reusability and maintainability of the software system by applying	
	appropriate design patterns.	CO3
10.	Implement the modified system and test it for various scenarios	1

Suggested domain for mini project

- Passport automation system.
- Book bank
- Exam registration
- Stock maintenance system.
- Online course reservation system
- Airline/Railway reservation system
- Software personnel management system
- Credit card processing
- e-book management system
- Recruitment system
- Foreign trading system
- Conference management system
- BPO management system

- Library management system
- Student information system

TOTAL: 60 PERIODS

LIST OF EQUIPMENT FOR A BATCH OF 30 STUDENTS

Desktop or server with node of 30 systems

- 1. Windows 7 or higher
- 2. ArgoUML that supports UML 1.4 and higher
- 3. Selenium, JUnit or Apache JMeter

REFERENCE BOOKS

- 1. Martin Fowler, "UML Distilled: A Brief Guide to the Standard Object Modeling Language", Third Edition, Addison Wesley, 2003.
- 2. Erich Gamma, Richard Helm, Ralph Johnson, John Vlissides, "Design Patterns: Elements of Reusable Object-Oriented Software", Pearson, 2015.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Approach a real world problem, which is uncertain and provide appropriate reasoning.
CO2	Develop solutions using supervised learning techniques and know how to deal with problems
	with hidden variables.

CO3 Use natural language processing and program basics of robotics.

as a professional with values—Making an Oral Presentation-Planning and preparing a model	
presentation; Organizing the presentation to suit the audience and context; Connecting with the	CO1
audience during presentation; Projecting a positive image while speaking; Emphasis on	
effective body language-General awareness of Current Affairs.	
UNIT II	6
Self-Introduction-organizing the material - Introducing oneself to the audience - introducing the	
topic – answering questions – individual presentation practice— Making a Power Point	
Presentation Structure and format; Covering elements of an effective presentation; Body	
language dynamics. Making an Oral Presentation-Planning and preparing a model	CO2
presentation; Organizing the presentation to suit the audience and context; Connecting with the	
audience during presentation; Projecting a positive image while speaking; Emphasis on	
effective body language	
UNIT III	6
Introduction to Group Discussion— Participating in group discussions – understanding group	
dynamics - brainstorming the topic questioning and clarifying -GD strategies- Structure and	CO3
dynamics of a GD; Techniques of effective participation in group discussion; Preparing for	
group discussion; Accepting others' views / ideas; Arguing against others' views or ideas, etc	
UNIT IV	6
Basics of public speaking; Preparing for a speech; Features of a good speech; Speaking with a	CO4
microphone. (Famous speeches may be played as model speeches for learning the art of	004
public speaking). Interview etiquette – dress code – body language – attending job interviews–	

telephone/skype interview -one to one interview &panel interview -Job Interviews: purpose and	
process; How to prepare for an interview; Language and style to be used in an interview; Types	
of interview questions and how to answer them.	
UNIT V	6
Recognizing differences between groups and teams- managing time managing stress-	CO5

networking professionally- respecting social protocols understanding career management-

TOTAL: 30 PERIODS

LIST OF EQUIPMENT FOR A BATCH OF 30 STUDENTS

developing a long- term career plan making career changes

One Server

30 Desktop Computers

One Hand Mike

One LCD Projector

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Make effective presentations
CO2	Participate confidently in Group Discussions
CO3	Attend job interviews and be successful in them.
CO4	Develop adequate Soft Skills required for the workplace
CO5	Develop their speaking skills to enable them speak fluently in real contexts

COs				PROGRAM SPECIFIC OUTCOMES (PSOs)											
COS	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO1	PSO2	PSO3

IT1601	THEORY OF COMPUTATION AND COMPILER DESIGN	L	Т	Р	С
		3	0	0	3

- To explore the theoretical foundations of computer science from the perspective of formal languages and classify machines by their power to recognize languages.
- To explore the principles, algorithms, and data structures involved in the design and construction of compilers.

UNIT I	INTRODUCTION TO AUTOMATA	9
Formal Langu	age and Regular Expressions: Languages, DefinitionLanguages regular	
expressions, Fi	nite Automata – DFA,NFA.Conversion of a regular expression to NFA, NFA to	CO1
DFA.Application	ns of Finite Automata to lexical analysis, lex tools.	
UNIT II	AUTOMATA GRAMMAR AND PARSING	9
Context-Free g	rammars and parsing: Context-free grammars, derivation, parse trees, ambiguity	
LL(K) grammar	s and LL(1) parsing Bottom-upparsing, handle pruning, LR Grammar Parsing,	CO2
LALR parsing, p	parsingambiguous grammars, YACC programming specification.	
UNIT III	SEMANTIC AND CONTEXT-SENSITIVE FEATURES	9
Semantics: Syr	ntax directed translation, S-attributed, and L-attributedgrammars, Intermediate	
code - abst	ract syntax tree, translation of simplestatements, and control flow	
statements.Cor	ntext-Sensitive features – Chomsky hierarchy of languages andrecognizers.	CO3
Type checking,	type conversions, the equivalence of typeexpressions, overloading of functions	
and operations.		
UNIT IV	CODE OPTIMIZATION	9
The symbol tab	le, Storage organization, storage allocation strategies scopeaccess to now local	
names, param	eters, language facilities for dynamicsstorage allocation. Code optimization	004
Principal source	es of optimization, optimization of basic blocks, peephole optimization, flow	CO4
graphs,optimiza	ation techniques.	
UNIT V	CODE GENERATION	9
o	on: Machine-dependent code generation, object code forms, generic code rithm, Register allocation, and assignment. Using DAG representation of Block.	CO5

TEXT BOOKS

- 1. John E. Hopcroft, Rajeev M & J D Ullman: "Introduction to Automata Theory Languages & Computation", 3rd Edition, Pearson Education, 2007.
- 2. Aho, Ullman, Ravisethi: "Compilers Principles, Techniques, and Tools", 2nd Edition, Pearson Education, 2009.

REFERENCE BOOKS

- 1. Tremblay J P, Sorenson G P: "The Theory & Practice of Compiler writing", 1st Edition, BSP publication, 2010.
- 2. Appel W & Andrew G M: "Modern Compiler Implementation in C", 1st Edition, Cambridge University Press, 2003.
- 3. Louden: "Compiler Construction, Principles & Practice", 1st Edition, Thomson Press, 2006.
- 4. Sipser Michael: "Introduction to Theory of computation", 1st Edition, Thomson, 2009.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Explain deterministic and non-deterministic machines.
CO2	Comprehend the hierarchy of problems arising in the computer sciences.

CO3 Design a deterministic finite-state machine to accept a specified language.

CO4 Explain how a compiler can be constructed for a simple context-free language.

CO5 Determine a language's location in the Chomsky hierarchy (regular sets, context-free, context-sensitive, and recursively enumerable languages).

IT1602	MOBILE NETWORKS AND APPLICATION DEVELOPMENT	L	Т	P	С
		3	0	0	3

- To endow with the knowledge required to understand emerging communications networks
- To describe the basic concepts and principles in mobile computing
- To understand the concept of Wireless LANs, PAN, and Mobile Networks
- To explain the structure and components for Mobile IP and Mobility Management
- To familiarize with Mobile apps development aspects

UNIT I	WIRELESS COMMUNICATION SYSTEMS	9							
Cellular Networks - Types of handover - IEEE 802.11: System and Protocol Architecture -									
Bluetooth: User Scenarios- Architecture - GSM - Architecture - Location tracking and call									
setup - Mobility management - Handover- GSM SMS-International roaming for GSM - Mobile									
Number portability - VoIP service for Mobile Networks - GPRS -Architecture - Attach and									
detach proced	dures								
UNIT II	MOBILE NETWORK AND TRANSPORT LAYERS	9							
Mobile IP – Dy	namic Host Configuration Protocol-Mobile Ad Hoc Routing Protocols— Multicast								
routing-TCP o	verWireless Networks - Indirect TCP - Snooping TCP - Mobile TCP - Fast	CO2							
Retransmit /	Fast Recovery -Transmission/Timeout Freezing-Selective Retransmission -								
Transaction Or	iented TCP- TCP over 2.5 / 3G wirelessNetworks								
UNIT III	INTRODUCTION TO ANDROID	9							
Mobile Application development and trends – Android overview and Versions – Android open									
stack, features	s - Setting up Android environment (Eclipse, SDK, AVD)- Simple Android	CO3							
application development – Anatomy of Android applications – Activity and Life cycle – Intents,									
services and C	Content Providers								
UNIT IV ANDROID USER INTERFACE									
Android Archi	tecture - Activity life cycle - Android User Interface - Layouts: Linear, Absolute,								
Table, Relative, Frame, Scrollview, Resize and reposition - Screen orientation - Views:									
Textview, EditText, Button, ImageButton, Checkbox, ToggleButton, RadioButton, RadioGroup,									
ProgressBar, AutocompleteText, Picker, Listviews and Webview– Displaying pictures with									
views: Gallery and ImageView, ImageSwitcher, Gridview - Displaying Menus: Helper									
methods, Option and Context									
UNIT V NETWORKING SERVICES & APPLICATION COMPONENTS IN ANDROID									
SMS Messaging: Sending and Receiving - Sending email and networking - Downloading									

binary and text data files – Access Web services – Developing android services: create your own services, performing long running task in a serviceperforming repeated task in a service-Location based service - Display map, zoom control, view and change, Marking, Geocoding, Get location - Publish Android applications and Deployment

TOTAL: 45 PERIODS

- 5. ZigurdMednieks, Laird Dornin, Blake Meike G, Masumi Nakamura (2011), "Programming Android: Java Programming for the New Generation of Mobile Devices", OReilly Media, USA

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Identify the various types of handoff and Mobile Networks
CO2	Attain the knowledge to administrate and to maintain a Mobile Communication
CO3	Apply the network and transport layer protocols for mobile networks
CO4	Design and develop simple mobile applications with Android
CO5	Develop mobile applications using various components in Android

IT1603	COMPUTER GRAPHICS AND APPLICATIONS	L	T	Р	С
		3	0	0	3

- To learn the line, circle and ellipse drawing algorithms and to study the 2-D transformations
- To apply transformations and texture on the object
- To motivate the students to create the 3-D scenes by adding lighting and shades to the objects in the scene.
- To enable the students to perform modeling
- To have in-depth idea about advanced rendering.

Two dimensional geometric transformations – Matrix representations and homogeneous coordinates, composite transformations- Affine Transformations; Two dimensional viewing – viewing pipeline, viewing coordinate reference frame; widow-to-viewport coordinate transformation, Two dimensional viewing functions; clipping operations – point, line, and polygon clipping algorithms.	UNIT I ILLUMINATION MODELS & OUTPUT PRIMITIVES								
of light - Standard primaries and chromaticity diagram; Intuitive colour concepts - RGB colour model - YIQ colour model - CMY colour model - HSV colour model - HLS colour model; Colour selection. Overview of graphics systems – Video display devices, Raster scan systems, Random scan systems, Graphics Software-Application; Output primitives – points and lines, line drawing algorithms, line function; circle and ellipse generating algorithms; Pixel addressing and object geometry, filled area primitives. UNIT II 2D GRAPHICS Two dimensional geometric transformations – Matrix representations and homogeneous coordinates, composite transformations - Affine Transformations; Two dimensional viewing – viewing pipeline, viewing coordinate reference frame; widow-to-viewport coordinate transformation, Two dimensional viewing functions; clipping operations – point, line, and polygon clipping algorithms. UNIT III 3D GRAPHICS Three dimensional concepts; Three dimensional object representations – Polygon surfaces-Polygon tables- Plane equations - Polygon meshes; Curved Lines and surfaces, Quadratic surfaces; Blobby objects; Spline representations – Bezier curves and surfaces -B-Spline curves and surfaces. TRANSFORMATION AND VIEWING: Three dimensional geometric and modeling transformations – Translation, Rotation, Scaling, composite transformations; Three dimensional viewing – viewing pipeline, viewing coordinates, Projections, Clipping; Visible surface detection methods. UNIT IV FRACTALS AND ANIMATIONS Fractals and Self similarity – Peano curves – Creating image by iterated functions – Mandelbrot sets – Julia Sets – Random Fractals – Overview of Ray Tracing – Intersecting rays with other	Light sources - basic illumination models – halftone patterns and dithering techniques: Properties								
selection. Overview of graphics systems – Video display devices, Raster scan systems, Random scan systems, Graphics Software-Application; Output primitives – points and lines, line drawing algorithms, line function; circle and ellipse generating algorithms; Pixel addressing and object geometry, filled area primitives. UNIT II 2D GRAPHICS Two dimensional geometric transformations – Matrix representations and homogeneous coordinates, composite transformations- Affine Transformations; Two dimensional viewing – viewing pipeline, viewing coordinate reference frame; widow-to-viewport coordinate transformation, Two dimensional viewing functions; clipping operations – point, line, and polygon clipping algorithms. UNIT III 3D GRAPHICS Three dimensional concepts; Three dimensional object representations – Polygon surfaces-Polygon tables- Plane equations - Polygon meshes; Curved Lines and surfaces, Quadratic surfaces; Blobby objects; Spline representations – Bezier curves and surfaces -B-Spline curves and surfaces. TRANSFORMATION AND VIEWING: Three dimensional geometric and modeling transformations – Translation, Rotation, Scaling, composite transformations; Three dimensional viewing – viewing pipeline, viewing coordinates, Projections, Clipping; Visible surface detection methods. UNIT IV FRACTALS AND ANIMATIONS Fractals and Self similarity – Peano curves – Creating image by iterated functions – Mandelbrot sets – Julia Sets – Random Fractals – Overview of Ray Tracing – Intersecting rays with other									
scan systems, Graphics Software-Application; Output primitives – points and lines, line drawing algorithms, line function; circle and ellipse generating algorithms; Pixel addressing and object geometry, filled area primitives. - 2. Patrick Cozzi, "WebGL Insights", CRC Press
- 3. James D. Foley, Andries Van Dam, Steven K. Feiner, John F. Hughes, "Computer Graphics Principles and Practicein C", Pearson Education, Second Edition, 2007.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Develop the line, circle and ellipse drawing algorithms .
CO2	Design and Apply two dimensional objects & transformations
CO3	Design and Apply three dimensional objects & transformations
CO4	Design Animation Sequences
CO5	Create and Design objects using Graphics programming

IT1604	DATA SCIENCE AND BIG DATA ANALYTICS	L	Т	Р	С
		3	0	0	3

- To Introduce a data analytics problem solving framework
- To Develop technical skills in probability modeling and statistical inference for the practical application of statistical methods.
- To make Use of existing and develop new statistical tools for datascience problems across different applied domains.

UNIT I	Data Analytics Life Cycle	9					
Data Analyti	cs Life cycle Overview, Discovery, Data Preparation, Model Planning, Model						
Building, Co	ommunicate Results, Operationalise, Exploratory Data Analysis, Statistical	CO1					
Methods for	Evaluation, ANOVA						
UNIT II	Overview of Supervised Learning	9					
Variable Type	s and Terminology, Two Simple Approaches to Prediction: Least Squares and						
Nearest Neig	hbors, Model Selection and Bias-Variance Tradeoff. Association Analysis:	CO2					
Association ru	les, Apriori algorithm, FP-Growth Technique						
UNIT III	Time Series Analysis	9					
Overview of	Time Series Analysis, ARIMA Model; Text Analysis: Text Analysis Steps, Stop						
Word Removal, Tokenization, Stemming and Lemmatization, Representing Text: Term-							
Document Ma	trix, Term Frequency— Inverse Document Frequency (TFIDF).						
UNIT IV	Introduction to Big Data	9					
Defining big	data, 4 V's of big data, Big data types, Analytics, Examples of big data, Big data						
and Data Ris	k, Big data technologies, benefits of big data, Crowd sourcing analytics; Hadoop	004					
Distributed F	File Systems: Architecture of Apache Hadoop HDFS and other File Systems,	CO4					
HDFS File B	ocks, HDFS File Commands						
UNIT V	NoSQL Data Management	9					
Types of NOS	SQL data bases, Benefits of NO SQL, Map Reduce: Introduction, Map reduce						
example, Job	Tracker, Map Operations. Data Stream Mining: The stream data model,	CO5					
streaming ap	plications, continuous query processing and optimization, Distributed query	COS					
processing

- 3. Han, Kamber, and J Pei, "Data Mining Concepts and Techniques", 3rd edition, Morgan Kaufman, 2012.
- 4. Big Data Black Book, DT Editorial Services, Wiley India
- 5. V.K. Jain, "Data Science & Analytics", Khanna Publishing House Beginner's Guide for Data Analysis using R Programming, Jeeva Jose, ISBN: 978-93-86173454.
- 6. Montgomery, Douglas C., and George C. Runger John, "Applied statistics and probability for engineers", Wiley & Sons, 6th edition, 2013.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Understands various phases of the data analytics life cycle.
CO2	Apply statistical methods to data for inferences.
CO3	Analyze data using Classification, Graphical and computational methods
CO4	Understand Big Data technologies and NOSQL
CO5	Analyze various types of data using Data Analytics Techniques.

- 3. Simon O. Haykin, "Neural Networks and Learning Machines", 3rd Edition. Prentice Hall, 2008.

COURSE OUTCOMES

Upon completion of the course, students will be able to

	F
CO1	Identify the learning algorithms which are more appropriate for various types of learning tasks
	in various domains
CO2	Implement, train, and evaluate neural networks using existing software libraries.
CO3	Present and critically assess current research on neural networks and their applications.
CO4	Analyze and Predict various classification problem.
CO5	Apply neural networks to particular applications to know what steps to take to improve
	performance.

IT1702	PRINCIPLES OF CLOUD TECHNOLOGIES	L	T	Р	С
		3	0	0	3

- To have the fundamental ideas behind Cloud Computing, the evolution of the paradigm, its applicability; benefits, as well as current and future challenges;
- To have knowledge on the various virtualization techniques that serve in computation and storage services on the cloud.
- To understand the technologies, architecture and applications of cloud computing
- To understand the key security and compliance challenges of cloud computing

UNIT I	INTRODUCTION TO CLOUD COMPUTING	9						
Introduction to	Cloud Computing - Definition of Cloud - Evolution of Cloud Computing -							
Underlying Pring	nciples of Parallel and Distributed Computing – Cloud Characteristics – Elasticity	CO1						
in Cloud – On-demand Provisioning. Cloud Architectures – Basic Approach, NIST and Layered								
Cloud Architectures.								
UNIT II	CLOUD ENABLING TECHNOLOGIES	9						
Service Orient	ed Architecture - REST and Systems of Systems - Web Services - Publish							
Subscribe Mod	del – Basics of Virtualization – Types of Virtualization – Implementation Levels of	CO2						
Virtualization -	- Virtualization Structures - Tools and Mechanisms - Virtualization of CPU -	COZ						
Memory – I/O	Devices –Virtualization Support and Disaster Recovery.							
UNIT III	CLOUD SERVICES AND MODELS	9						
Layered Cloud	Architecture Design - NIST Cloud Computing Reference Architecture - Types							
of cloud - Pul	olic, Private and Hybrid Clouds; Cloud Services -Infrastructure as a Service							
(laaS), Platfo	orm as a Service (PaaS), - Software as a Service (SaaS), Storage-as-a-	CO2						
Service(SaaS)	- Architectural Design Challenges - Cloud Storage - Advantages of Cloud	CO3						
Storage – Clou	ud Storage Providers - S3. Service level agreements - Types of SLA - Lifecycle							
of SLA- SLA M	lanagement							
UNIT IV	RESOURCE MANAGEMENT AND SECURITY IN CLOUD	9						
Inter Cloud R	esource Management - Resource Provisioning and Resource Provisioning							
Methods - Gl	obal Exchange of Cloud Resources - Security Overview - Cloud Security	CO4						
Challenges –Software-as-a-Service Security – Security Governance – Virtual Machine Security								
– IAM –Securit	y Standards.							

UNIT V	CLOUD ADVANCEMENTS AND CASE STUDIES	9						
Hadoop – Map	Reduce – Virtual Box — Google App Engine – Programming Environment for							
Google App E	ngine — Open Stack - Cloud application development using third party APIs,							
Working with E	EC2 API – Facebook API, Twitter API. Federation in the Cloud – Four Levels of	CO5						
Federation –Federated Services and Applications – Future of Federation. A Case Study: The								
Grep TheWeb	Application.

IT1707	CLOUD APPLICATION DEVELOPMENT LAB	L	T	Р	С
		0	0	4	2

- ❖ Configure various virtualization tools such as Virtual Box, VMware workstation.
- ❖ Design and deploy a web application in a PaaS environment. How to Install and use a generic cloud environment that can be used as a private cloud.
- ❖ Learn how to simulate a cloud environment to implement new schedules.

Exp. No	Experiment	Course
Exp. No	Experiment	Outcomes
1	Use version control systems command to clone, commit, push, fetch, pull, checkout, reset, and delete repositories.	CO1
2	Install Virtualbox/VMware Workstation with different flavors of Linux or Windows OS on top of windows7 or 8.	CO1
3	Find a procedure to transfer the files from one virtual machine to another virtual machine	CO1
4	Install a C compiler in the virtual machine and execute simple programs	CO1
5	Use GCC to compile c-programs in Virtual Machine	CO1
6	Install Google App Engine. Create hello world app using Python/Java and launch the web applications.	CO2
7	DaaS – Deployment of a basic web app and add additional Functionality (Javascripts based)	CO2
8	Simulate a cloud scenario using CloudSim and run a scheduling algorithm	CO2
9	Experiment cloud load balancing algorithms using Cloud Sim	CO2
10	Find a procedure to launch a virtual machine using try stack (Online Openstack Demo Version)	CO3
11	Install Hadoop single node cluster and run simple applications like wordcount	CO3
12	Install the Hadoop framework and create an application using Map Reduce Programming Model	CO3

TOTAL: 30 PERIODS

COURSE OUTCOMES

- 1. Examine the installation and configuration of VM and simple GCC-based execution.
- 2. Analyze and understand the functioning of different components involved in the GAE Web services cloud platform.
- 3. Design & Synthesize new techniques and tools in own Cloud

		3	0	0	3

OBJECTIVES

- To introduce the basic concepts of linear programming
- To educate on the advancements in Linear programming techniques
- To introduce non-linear programming techniques
- To introduce the interior point methods of solving problems
- To introduce the dynamic programming method

UNIT I	LINEAR PROGRAMMING	9					
Introduction -	formulation of linear programming model-Graphical solution-solving LPP using						
simplex algorit	hm – Revised Simplex Method.	CO1					
UNIT II	ADVANCES IN LPP	9					
Dualit theory-	Dual simplex method - Sensitivity analysis—Transportation problems—						
Assignment pr	Assignment problems-Traveling sales man problem -Data Envelopment Analysis.						
LIMIT III	NON LINEAR RECORDANIMING						
UNIT III	NON LINEAR PROGRAMMING	9					
Classification	of Non Linear programming – Lagrange multiplier method – Karush – Kuhn						
Tucker conditi	ons-Reduced gradient algorithms-Quadratic programming method - Penalty						
and Barrier method.							
UNIT IV	INTERIOR POINT METHODS	9					
Karmarkar's al	gorithm-Projection Scaling method-Dual affine algorithm-Primal affine algorithm						
Barrier algorith	m.	CO4					
UNIT V	DYNAMIC PROGRAMMING	9					
Formulation of	Multi stage decision problem-Characteristics-Concept of sub-optimization and						
the principle	of optimality-Formulation of Dynamic programming-Backward and Forward	CO5					
recursion- Co	emputational procedure-Conversion offinal value problem in to Initial value						
problem.							
	TOTAL : 45 PEF	RIODS					

TEXT BOOKS

- 1. Hillier and Lieberman "Introduction to Operations Research", TMH, 2000.
- 2. R.Panneerselvam, "Operations Research", PHI, 2006

3. Hamdy ATaha, "Operations Research - An Introduction", Prentice Hall India, 2003.

REFERENCE BOOKS

- 1. Philips, Ravindran and Solberg, "Operations Research", John Wiley, 2002.
- 2. Ronald L.Rardin, "Optimization in Operation Research" Pearson Education Pvt. Ltd. New Delhi, 2005."

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	To understand ethical issues, environmental impact and acquire management skills
CO2	To Understand about the linear programming techniques
CO3	To Understand about the Non Linear programming techniques
CO4	To Understand about interior point methods of solving problems.
CO5	To Understand the dynamic programming method

IT1513	INFORMATION STORAGE AND MANAGEMENT	L	Т	Р	2
		3	0	0 3	3

- To understand the storage architecture and available technologies.
- To learn to establish & manage datacenter.
- To learn security aspects of storage & data center.

UNIT I	STORAGE TECHNOLOGY	9
Review data	creation and the amount of data being created and understand the value of data	
to a busines	s, challenges in data storage and data management, Solutions available for data	604
storage, Co	re elements of a data center infrastructure, role of each element in supporting	CO1
business ac	ivities.	
UNIT II	STORAGE SYSTEMS ARCHITECTURE	9
Hardware and	d software components of the host environment, Key protocols and concepts used	
by each com	ponent ,Physical and logical components of a connectivity environment ,Major	
physical com	ponents of a disk drive and their function, logical constructs of a physical disk,	
access chara	cteristics, and performance Implications, Concept of RAID and its components,	
Different RAI	D levels and their suitability for different application environments: RAID 0, RAID	CO2
1, RAID 3, R	AID 4, RAID 5, RAID 0+1, RAID 1+0, RAID 6, Compare and contrast integrated	
	storage systems , lligh-level architecture and working of an intelligent storage	
system.		
UNIT III	INTRODUCTION TO NETWORKED STORAGE	9
Evolution of	letworked storage, Architecture, components, and topologies of FC-SAN, NAS,	
	Benefits of the different networked storage options, understand the need for long-	
	ng solutions and describe how CAS full fill the need, understand the	CO3
	ess of the different networked storage options for different application	
environments	•	
UNIT IV	INFORMATION AVAILABILITY, MONITORING & MANAGING	9
	DATACENTERS	
List reasons	for planned/unplanned outages and the impact of downtime, Impact of downtime	
-Business co	ontinuity (BC) and disaster recovery (DR) ,RTO and RPO, Identifysingle points of	
failure in a	storage infrastructure and list solutions to mitigate these failures, architecture of	CO4
backup/reco	very and the different backup/ recovery topologies, replication technologies and	
their role in	ensuring information availability and business continuity, Remote replication	

technologies and their role in providing disaster recovery and business continuity capabilities. Identify key areas to monitor in a data center, Industry standards for data center monitoring and management, Key metrics to monitor for different components in a storage infrastructure, Key management tasks in a data center

UNIT V SECURING STORAGE AND STORAGE VIRTUALIZATION

9

Information security, Critical security attributes for information systems, Storage security domains, List and analyzes the common threats in each domain, Virtualization technologies, block-level and file-level virtualization technologies and processes.

CO5

TOTAL: 45 PERIODS

TEXT BOOKS

EMC Corporation, "Information Storage and Management: Storing, Managing, and Protecting Digital Information", Wiley, India, 2010

REFERENCE BOOKS

- 1. Marc Farley, —Building Storage Networksll, Tata McGraw Hill ,Osborne, 2001.
- 2. Robert Spalding, —Storage Networks: The Complete Reference—, Tata McGraw Hill , Osborne, 2003.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Select from various storage technologies to suit for required application.
CO2	Apply security measures to safeguard storage & farm
CO3	understand the nature of networked storage
CO4	Have knowledge of Data Centers
CO5	Analyze QoS on Storage.

IT1514	SOFTWARE RELIABILITY	L	T	Р	С
		3	0	0	3

- Learn different definitions of software quality
- Know different notions of defects and classify them
- Understand the basic techniques of data collection and how to apply them
- Learn software metrics that define relevant metrics in a rigorous way
- Gain confidence in ultra-high reliability

UNIT I	INTRODUCTION TO SOFTWARE RELIABILITY	9				
Basic Concept	ts - Failure and Faults - Environment - Availability -Modeling -uses -	CO1				
requirements re	eliability metrics – design & code reliability metrics – testing reliability metrics.	CO1				
UNIT II	SOFTWARE RELIABILITY MODELING	9				
Concepts - G	seneral Model Characteristic – Historical Development of models – Model					
Classification s	scheme – Markovian models – General concepts – General Poisson Type	CO2				
Models – Binomial Type Models – Poisson Type models – Fault reduction factor for Poisson						
Type models.						
UNIT III	COMPARISON OF SOFTWARE RELIABILITY MODELS	9				
Comparison Cr	riteria – Failure Data – Comparison of Predictive Validity of Model Groups –					
Recommended	Models - Comparison of Time Domains - Calendar Time Modeling - Limiting	000				
Resource Con	cept - Resource Usage model - Resource Utilization - Calendar Time	CO3				
Estimation and	confidence Intervals					
UNIT IV	FUNDAMENTALS OF MEASUREMENT	9				
Measurements	in Software Engineering – Scope of Software metrics – Measurements theory –	004				
Goal based Fra	mework – Software Measurement Validation.	CO4				
UNIT V	MEASURING SOFTWARE PRODUCT	9				
Measurement of	of Internet Product Attributes - Size and Structure - External Product Attributes	CO5				
 Measurement 	t of Quality – Software Reliability: Measurement and Prediction.	553				
	TOTAL : 45 PEF	RIODS				

TEXT BOOKS

- 1. John D. Musa, —Software Reliability Engineeringll, Tata McGraw Hill, 1999
- 2. John D. Musa, Anthony Iannino, KazuhiraOkumoto, —Software Reliability Measurement, Prediction, Application, Series in Software Engineering and Technologyll, McGraw Hill, 1987

REFERENCE BOOKS

1. Norman Fenton, James Bieman, —Software Metrics: A Rigorous and Practical Approachll, 3rd edition, CRC Press, 2015

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Perform some simple statistical analysis relevant to software measurement data
CO2	Use from practical examples both the benefits and limitations of software metrics
CO3	Analyze for quality control and assurance
CO4	Understand about fundamentals of measurement
CO5	Analyze the performance of the software Product

COs				PROGRAM SPECIFIC OUTCOMES (PSOs)

CS1515	FUNDAMENTALS OF DIGITAL IMAGE PROCESSING	L	Т	Р	C
	(Common to CSE)	3	0	0	3

- To become familiar with digital image fundamentals
- To get exposed to simple image enhancement techniques in Spatial and Frequency domain.
- To learn concepts of degradation function and restoration techniques.
- To study the image segmentation and representation techniques.
- To become familiar with image compression and recognition methods

UNIT I	DIGITAL IMAGE FUNDAMENTALS	9				
Steps in Digital	Il Image Processing - Components - Elements of Visual Perception - Image					
Sensing and A	cquisition – Image Sampling and Quantization – Relationships between pixels –	CO1				
Color image fu	ındamentals – RGB, HSI models, Two-dimensional mathematical preliminaries,	COI				
2D transforms	– DFT, DCT.					
UNIT II	IMAGE ENHANCEMENT	9				
Spatial Domai	n: Gray level transformations – Histogram processing – Basics of Spatial					
Filtering-Smoo	othing and Sharpening Spatial Filtering, Frequency Domain: Introduction to	CO2				
Fourier Transfe	orm- Smoothing and Sharpening frequency domain filters - Ideal, Butterworth	COZ				
and Gaussian	filters, Homomorphic filtering, Color image enhancement					
UNIT III	IMAGE RESTORATION	9				
Image Restora	ation – degradation model, Properties, Noise models – Mean Filters – Order					
Statistics – Ada	aptive filters – Band reject Filters – Band pass Filters – Notch Filters – Optimum	CO3				
Notch Filtering	– Inverse Filtering – Wiener filtering					
UNIT IV	IMAGE SEGMENTATION	9				
Edge detection	n, Edge linking via Hough transform – Thresholding – Region based					
segmentation -	- Region growing - Region splitting and merging - Morphological processing-	CO4				
erosion and d	ilation, Segmentation by morphological watersheds – basic concepts – Dam	CO4				
construction –	Watershed segmentation algorithm.					
UNIT V	IMAGE COMPRESSION AND RECOGNITION	9				
Need for data	compression, Huffman, Run Length Encoding, Shift codes, Arithmetic coding,					
JPEG standard, MPEG. Boundary representation, Boundary description, Fourier Descriptor,						
Regional Des	criptors - Topological feature, Texture - Patterns and Pattern classes -					

Recognition based on matching.

TOTAL: 45 PERIODS

TEXT BOOKS

1. Software Testing And Quality Assurance-Theory and Practice, Kshirasagar Nak Priyadarshi Tripathy, John Wiley & Sons Inc,2008.

REFERENCE BOOKS

- 1. Software Quality Engineering: Testing, Quality Assurance, and Quantifiable Improvement, Jeff Tian, John Wiley & Sons, Inc., Hoboken, New Jersey. 2005.
- 2. Software Quality Assurance From Theory to Implementation, Daniel Galin, Pearson Education Ltd UK, 2004.
- 3. Software Quality Assurance, Milind Limaye, TMH, New Delhi, 2011

COURSE OUTCOMES

Upon completion of the course, students will be able to

- CO1 Familiar with the process of verification, validation and understand the process of applying tests to software and the fundamental components of a test case.
- CO2 Derive test cases from software requirement specifications including being able to partition input and output domains, form test specifications, and identify valid combinations of input.
- CO3 Distinguish between methods of judging test case adequacy and how to design tests that will accomplish the obligations of such methods.
- CO4 Understand how to build models of system behavior and prove that their obey required properties.
- CO5 Make logical arguments that prove the correctness of program implementations and write code to automate test execution and analysis.

IT1614	KNOWLEDGE ENGINEERING	L	Т	Р	С
		3	0	0	3

- To learn about first order logics
- To acquire knowledge about reasoning
- To apply object-oriented concepts for various expert systems
- To assess uncertainty using non monotonic logic
- To understand various action and planning strategies for problem solving

UNIT I INTRODUCTION	9
Knowledge Representation and Reasoning – First order Logic – Syntax- Semantics Pragmatics	
- Expressing Knowledge - Levels of Representation - Knowledge Acquisition and	CO1
Sharing - Sharing Ontologies - Language Ontologies - Language Patterns - Tools for	COI
Knowledge Acquisition	
UNIT II RESOLUTION AND REASONING	9
Proportional Case - Handling Variables and Quantifiers - Dealing with Intractability -	
Reasoning with Horn Clauses - Procedural Control of Reasoning - Rules in Production-	CO2
Description Logic - Issues in Engineering	
UNIT III REPRESENTATION	9
Object Oriented Representations – Frame Formalism – Structured Descriptions – Meaning and	
Entailment - Taxonomies and Classification - Inheritance - Networks - Strategies for	CO3
Defeasible Inheritance – Formal Account of Inheritance Networks	
UNIT IV DEFAULTS, UNCERTAINTY AND EXPRESSIVENESS	9
Defaults – Introduction – Closed World Reasoning – Circumscription – Default Logic imitations	
of Logic - Fuzzy Logic - Non monotonic Logic - Theories and World - Semiotics - Auto	
epistemic Logic - Vagueness - Uncertainty and Degrees of Belief - Non categorical Reasoning	CO4
- Objective and Subjective Probability- linguistic fuzzy rule-based classification system - fuzzy	
cognitive maps- fuzzy for large data	
UNIT V ACTIONS AND PLANNING	9
Explanation and Diagnosis – Purpose – Syntax, Semantics of Context – First Order Reasoning	
Modal Reasoning in Context - Encapsulating Objects in Context - Agents - Actions -	CO5
Situational Calculus - Frame Problem - Complex Actions - Planning -Strips- Planning as	503
Reasoning – Hierarchical and Conditional Planning	

TOTAL: 45 PERIODS

TEXT BOOKS

- 1. Michael K. Bergman "A Knowledge Representation Practionary: Guidance from Charles Sanders Peirce." Springer -2018.
- 2. Ronald Brachman, Hector Levesque, "Knowledge Representation and Reasoning ", The Morgan Kaufmann Series, First Edition.

REFERENCE BOOKS

- 1. John F. Sowa, "Knowledge Representation: Logical, Philosophical, and Computational Foundations", Brokes/Cole, First Edition, 2000.
- 2. Arthur B. Markman, "Knowledge Representation", Lawrence Erlbaum Associates, 1998.
- 3. Elaine Rich and Kevin Knight, "Artificial Intelligence", Tata McGraw-Hill Publishing Company Ltd., New Delhi, Third Edition, ISBN: 13:978-0-07-008770-5, 2010.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Formulate problem in first order logic and ontologies
CO2	Improve resolution and reasoning with horn clauses
CO3	Apply object-oriented abstractions for knowledge representation
CO4	Solve problems with uncertainty using fuzzy rules
CO5	Design and develop applications with action and planning

MG1615	ENGINEERING ETHICS AND HUMAN VALUES	L	Р	T	С
	(Common to CSE)	3	0	0	3

- 1. Students will understand the importance of Values and Ethics in their Personal lives and professional careers
- 2. The students will learn the rights and responsibilities
- 3. Responsibilities of employee, team member and a global citizen.

UNIT I	HUMAN VALUES	9				
Morals, values	and Ethics – Integrity – Work ethic – Service learning – Civic virtue – Respect					
for others – Liv	ring peacefully – Caring – Sharing – Honesty – Courage – Valuing time –	CO1				
Cooperation –	Commitment – Empathy – Self confidence – Character – Spirituality.					
UNIT II	Engineering Et	9				
Senses of 'Eng	ineering Ethics' – Variety of moral issues – Types of inquiry – Moral dilemmas					
- Moral Autono	omy – Kohlberg's theory – Gilligan's theory – Consensus and Controversy	CO2				
- Models of pro	ofessional roles - Theories about right action – Self-interest – Customs and	COZ				
Religion – Use	s of Ethical Theories					
UNIT III	Engineering as Social Ex	9				
Engineering as	Experimentation – Engineers as responsible Experimenters – Codes of Ethics	CO3				
- A Balanced (Outlook on Law – The Challenger Case Study	003				
UNIT IV	Safety, Responsibilities and Ri	9				
Safety and Ris	k – Assessment of Safety and Risk – Risk Benefit Analysis and Reducing Risk					
- The Three M	ile Island and Chernobyl Case Studies					
Collegiality and	Loyalty – Respect for Authority – Collective Bargaining – Confidentiality	CO4				
- Conflicts of I	nterest – Occupational Crime – Professional Rights – Employee Rights –					
Intellectual Pro	perty Rights (IPR) – Discrimination					
UNIT V	Global Is	9				
Multinational C	corporations – Environmental Ethics – Computer Ethics – Weapons Development					
 Engineers as Managers – Consulting Engineers – Engineers as Expert Witnesses and 						
Advisors – Mo	ral Leadership – Sample Code of Conduct					
	TOTAL : 45 PEF	RIODS				

TEXT BOOKS

1. Mike W. Martin and Roland Schinzinger, "Ethics in Engineering", Tata McGraw Hill, New Delhi, 2nd Edition, 2009.

REFERENCE BOOKS

- 4. Edmund G Seebauer and Robert L Barry, "Fundametals of Ethics for Scientists and Engineers", Oxford University Press, Oxford, 2001

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Understanding basic purpose of profession, professional ethics and various moral and social
	issues.
CO2	Awareness of professional rights and responsibilities of a Engineer, safety and risk benefit
	analysis of a Engineer
CO3	Acquiring knowledge of various roles of Enbgineer In applying ethical principles at various
	professional levels
CO4	Professional Ethical values and contemporary issues

MAPPING OF COS WITH POS AND PSOS

2008

- 3. Dana Moore, Raymond Budd, William Wright, Professional Python Frameworks Web 2.0 John wiley and sons, 2008
- 4. Programming with Django and TurboGears, Wiley Publishing
- 5. Carlos De La Guardia, Python Web Frameworks, OReilly

REFERENCE BOOKS

- 1. Sue Spielman ,The Struts Framework 1: A Practical guide for Java Programmers, 1st Edition. Elsevier 2002
- 2. Adrian Holovaty Jacob Kaplan-Moss, The Definitive Guide to Django: Web Development Done Right, Apress, 2009
- 3. Mark Ramm, Rapid Web applications with TurboGears, Prentice Hall. 2009

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Analyze the fundamentals of web framework
CO2	Use the concept of Java web framework
CO3	Implement the concept using Struts framework
CO4	Apply the concept of python web framework to the problem solutions.
CO5	Critically analyze the various Web frameworks.

IT1715	AUGMENTED AND VIRTUAL REALITY	L	Р	T	С
		3	0	0	3

- To introduce the relevance of this course to the existing technology through demonstrations, case studies and applications with a futuristic vision along with socio-economic impact and issues
- To understand virtual reality, augmented reality and using them to build Biomedical engineering applications
- To know the intricacies of these platform to develop PDA applications with better optimality

UNIT I VIRTUAL REALITY AND VIRTUAL ENVIRONMENTS	9
The historical development of VR: Scientific landmarks Computer Graphics, Real-time	
computer graphics, Flight simulation, Virtual environments, Requirements for VR, benefits of	CO1
Virtual reality. HARDWARE TECHNOLOGIES FOR 3D USER INTERFACES: Visual Displays	COI
Auditory Displays, Haptic Displays, Choosing Output Devices for 3D User Interfaces	
UNIT II 3D USER INTERFACE INPUT HARDWARE	9
Input device characteristics, Desktop input devices, Tracking Devices, 3D Mice, Special	
Purpose Input Devices, Direct Human Input, Home - Brewed Input Devices, Choosing Input	CO2
Devices for 3D Interfaces	
UNIT III SOFTWARE TECHNOLOGIES	9
Database - World Space, World Coordinate, World Environment, Objects - Geometry, Position	
/ Orientation, Hierarchy, Bounding Volume, Scripts and other attributes, VR Environment - VR	
Database, Tessellated Data, LODs, Cullers and Occluders, Lights and Cameras, Scripts,	CO3
Interaction - Simple, Feedback, Graphical User Interface, Control Panel, 2D Controls,	003
Hardware Controls, Room / Stage / Area Descriptions, World Authoring and Playback, VR	
toolkits, Available software in the market	
UNIT IV 3D INTERACTION TECHNIQUES	9
3D Manipulation tasks, Manipulation Techniques and Input Devices, Interaction Techniques for	
3D Manipulation, Deign Guidelines - 3D Travel Tasks, Travel Techniques, Design Guidelines -	
Theoretical Foundations of Wayfinding, User Centered Wayfinding Support, Environment	
Centered Wayfinding Support, Evaluating Wayfinding Aids, Design Guidelines - System	
Control, Classification, Graphical Menus, Voice Commands, Gestrual Commands, Tools,	
Mutimodal System Control Techniques, Design Guidelines, Case Study: Mixing System	CO4
Control Methods, Symbolic Input Tasks, symbolic Input Techniques, Design Guidelines,	
Beyond Text and Number entry . DESIGNING AND DEVELOPING 3D USER INTERFACES:	
Strategies for Designing and Developing Guidelines and Evaluation. VIRTUAL REALITY	
APPLICATIONS: Engineering, Architecture, Education, Medicine, Entertainment, Science,	
Training.	

Augmented and Mixed Reality	9
UNIT V	
Augmented and Mixed Reality, Taxonomy, technology and features of augmented reality,	
difference between AR and VR, Challenges with AR, AR systems and functionality,	
Augmented reality methods, visualization techniques for augmented reality, wireless displays	CO5
in educational augmented reality applications, mobile projection interfaces, marker-less	COS
tracking for augmented reality, enhancing interactivity in AR environments, evaluating AR	
systems.	

TOTAL: 45 PERIODS

SEMESTER VII PROFESSIONAL ELECTIVE – IV

IT1721	STORAGE AREA NETWORKS	L	Т	P	2
		3	0	0 3	3

- To Identify key challenges in managing information and analyze different storage networking technologies and virtualization
- To Know about components and the implementation of NAS
- Understand CAS architecture and types of archives and forms of virtualization
- Understand the storage infrastructure and management activities
- Understand the Securing Infrastructure.

UNIT I	Storage System	9					
Introduction t	o Information Storage: Evolution of Storage Architecture, Data Center						
Infrastructure,	Virtualization and Cloud Computing. Data Center Environment: Application, Host						
(Compute), Co	onnectivity, Storage. Data Protection: RAID: RAID Implementation Methods,	CO1					
RAID Technic	ues, RAID Levels, RAID Impact on Disk Performance. Intelligent Storage						
Systems: Com	ponents of Intelligent Storage System, Storage Provisioning.						
UNIT II	Storage Networking Technologies	9					
Fibre Channe	Storage Area Networks: Components of FC SAN, FC connectivity, Fibre						
Channel Archi	tecture, Zoning, FC SAN Topologies, Virtualization in SAN. IP SAN and FCoE:						
iSCSI, FCIP, F	CoE. Network Attached Storage: Components of NAS, NAS I/O Operation, NAS	CO2					
File-Sharing P	rotocols, File-Level Virtualization, Object-Based Storage and Unified Storage:						
Object-Based	Storage Devices, Content-Addressed Storage, Unified Storage.						
UNIT III	Backup, Archive and Replication	9					
Introduction to	Business Continuity: Information Availability, BC Terminology, BC Planning						
Lifecycle, Failu	re Analysis, BC Technology Solutions. Backup and Archive: Backup Methods,						
Backup Topole	ogies, Backup Targets, Data Deduplication for Backup, Backup in Virtualized						
Environments,	Data Archive. Local Replication: Replication Terminology, Uses of Local	CO3					
Replicas, Loca	al Replication Technologies, Local Replication in a Virtualized Environment.						
Remote Repli	cation: Remote Replication Technologies, Three-Site Replication, Remote						
Replication and	d Migration in a Virtualized Environment.						
UNIT IV	Cloud Computing and Virtualization	9					
Cloud Enablin	ng Technologies, Characteristics of Cloud Computing, Benefits of Cloud	CO4					
Cloud Enabling Technologies, Characteristics of Cloud Computing, Benefits of Cloud							

Cloud Challenges and Cloud Adoption Considerations. Virtualization Appliances: Black Box Virtualization, In-Band Virtualization Appliances, Outof-Band Virtualization Appliances, High Availability for Virtualization Appliances, Appliances for Mass Consumption. Storage Automation and Virtualization: Policy-Based Storage Management, Application-Aware Storage Virtualization, Virtualization-Aware Applications.

UNIT V Securing and Managing Storage Infrastructure

9

Securing and Storage Infrastructure: Information Security Framework, Risk Triad, Storage Security Domains, Security Implementations in Storage Networking, Securing Storage Infrastructure in Virtualized and Cloud Environments.

CO₅

Monitoring the Storage Infrastructure, Storage Infrastructure Management activities, Storage Infrastructure Management Challenges, Information Lifecycle management, Storage Tiering.

TOTAL: 45 PERIODS

TEXT BOOKS

1. Information Storage and Management, Author: EMC Education Services, Publisher: Wiley ISBN: 9781118094839

REFERENCE BOOKS

1. Storage Virtualization, Author: Clark Tom, Publisher: Addison Wesley Publishing Company ISBN: 9780321262516

COURSE OUTCOMES

Upon completion of the course, students will be able to

- CO1 Identify key challenges in managing information and analyze different storage networking technologies and virtualization
 CO2 Explain components and the implementation of NAS
 CO3 Describe CAS architecture and types of archives and forms of virtualization
 CO4 Illustrate the storage infrastructure and management activities
 CO5 Illustrate the Securing Infrastructure
 - **MAPPING OF COS WITH POS AND PSOS**

COs		PROGRAM OUTCOMES (POs)												PROGRAM SPECIFIC OUTCOMES (PSOs)

IT1722	NoSQL DATABASE	L	Т	Р	С
		3	0	0	3

- Define, compare and use the four types of NoSQL Databases (Document-oriented, KeyValue Pairs, Column-oriented and Graph).
- Demonstrate an understanding of the detailed architecture, define objects, load data, query data and performance tune Column-oriented NoSQL databases.
- Explain the detailed architecture, define objects, load data, query data and performance tune Document-oriented NoSQL databases.

UNIT I NoSQL Basics	9								
Why NoSQL? The Value of Relational Databases, Getting at Persistent Data, Concurrency,									
Integration, A (Mostly) Standard Model, Impedance Mismatch, Application and Integration									
Databases, Attack of the Clusters, The Emergence of NoSQL, Aggregate Data Models;									
Aggregates, Example of Relations and Aggregates, Consequences of Aggregate Orientation,	CO1								
Key-Value and Document Data Models, Column-Family Stores, Summarizing Aggregate-									
Oriented Databases. More Details on Data Models; Relationships, Graph Databases,									
Schemaless Databases, Materialized Views, Modeling for Data Access,									
UNIT II Distribution Models	9								
Distribution Models; Single Server, Sharding, Master-Slave Replication, Peer-to-Peer									
Replication, Combining Sharding and Replication. Consistency, Update Consistency, Read	CO2								
Consistency, Relaxing Consistency, The CAP Theorem, Relaxing Durability, Quorums. Version	002								
Stamps, Business and System Transactions, Version Stamps on Multiple Nodes									
UNIT III Map-Reduce	9								
Map-Reduce, Basic Map-Reduce, Partitioning and Combining, Composing Map-Reduce									
Calculations, A Two Stage Map-Reduce Example, Incremental Map-Reduce Key-Value									
Databases, What Is a Key-Value Store, Key-Value Store Features, Consistency, Transactions,	CO3								
Query Features, Structure of Data, Scaling, Suitable Use Cases, Storing Session Information,	CO3								
User Profiles, Preference, Shopping Cart Data, When Not to Use, Relationships among Data,									
Multioperation Transactions, Query by Data, Operations by Sets									
UNIT IV Document Databases	9								
Document Databases, What Is a Document Database?, Features, Consistency, Transactions,	CO4								
Availability, Query Features, Scaling, Suitable Use Cases, Event Logging, Content									
Management Systems, Blogging Platforms, Web Analytics or Real-Time Analytics,	604								
ECommerce Applications, When Not to Use, Complex Transactions Spanning Diferent									

Operations, Queries against Varying Aggregate Structure					
UNIT V	Graph Databases	9			
Availability, Q	ases, What Is a Graph Database?, Features, Consistency, Transactions, uery Features, Scaling, Suitable Use Cases, Connected Data, Routing, Dispatch, Based Services, Recommendation Engines, When Not to Use.	CO5			
	TOTAL · 45 PER	RIODS

SEMESTER VIII PROFESSIONAL ELECTIVE – V

IT1811	INFORMATION THEORY AND CODING	L	Т	Р	С
		3	0	0	3

- Understand error-control coding.
- Understand encoding and decoding of digital data streams.
- Be familiar with the methods for the generation of these codes and their decoding techniques.
- Be aware of compression and decompression techniques.
- Learn the concepts of multimedia communication.

UNIT I	INFORMATION THEORY	9
Information -	Entropy, Information rate, classification of codes, Kraft McMillan inequality,	
Source coding	theorem, Shannon-Fano coding, Huffman coding, Extended Huffman coding -	CO1
Joint and con-	ditional entropies, Mutual information - Discrete memoryless channels - BSC,	COT
BEC - Channe	el capacity, Shannon limit.	
UNIT II	SOURCE CODING: TEXT, AUDIO AND SPEECH	9
Text: Adaptive	Huffman Coding, Arithmetic Coding, LZW algorithm – Audio: Perceptual coding,	
Masking techn	niques, Psychoacoustic model, MEG Audio layers I,II,III, Dolby AC3 - Speech:	CO2
Channel Voco	der, Linear Predictive Coding	
UNIT III	SOURCE CODING: IMAGE AND VIDEO	9
Image and Vio	leo Formats – GIF, TIFF, SIF, CIF, QCIF – Image compression: READ, JPEG –	
Video Compre	ession: Principles-I,B,P frames, Motion estimation, Motion compensation, H.261,	CO3
MPEG standar	rd	
UNIT IV	ERROR CONTROL CODING: BLOCK CODES	9
Definitions and	Principles: Hamming weight, Hamming distance, Minimum distance decoding -	
Single parity of	codes, Hamming codes, Repetition codes - Linear block codes, Cyclic codes -	CO4
Syndrome cald	culation, Encoder and decoder - CRC	
UNIT V	ERROR CONTROL CODING: CONVOLUTIONAL CODES	9
Convolutional	codes - code tree, trellis, state diagram - Encoding - Decoding: Sequential	CO5
search and Vit	erbi algorithm – Principle of Turbo coding	
	TOTAL : 45 PER	RIODS

TEXT BOOKS

IT1812	ELECTRONIC COMMERCE	L	Т	Р	С
		3	0	0	3

- Discuss fundamentals of e-commerce, types and applications.
- Evaluate the role of the major types of information systems in a business environment and their relationship to each other
- Assess the impact of the Internet and Internet technology on business electronic commerce and electronic business
- Identify the major management challenges for building and using information systems and learn how to find appropriate solutions to those challenges.
- Learn strategies for e-commerce, Mobile Commerce, Wireless Application Protocol, WAP technology and Mobile Information devices.

UNIT I	INTRODUCTION	9						
Definition of E	Electronic Commerce, E-Commerce: technology and prospects, incentives for							
engaging in e	lectronic commerce, needs of E-Commerce, advantages and disadvantages,	CO1						
framework, Imp	pact of E-commerce on business, E-Commerce Models.							
UNIT II	NETWORK INFRASTRUCTURE FOR E- COMMERCE	9						
Internet and	Intranet based E-commerce- Issues, problems and prospects, Network							
Infrastructure,	Network Access Equipments, Broadband telecommunication (ATM, ISDN,	CO2						
FRAME RELA	AY). Mobile Commerce: Introduction, Wireless Application Protocol, WAP	CO2						
technology, Mo	obile Information device.							
UNIT III	WEB SECURITY	9						
Security Issues	s on web, Importance of Firewall, components of Firewall, Transaction security,							
Emerging clier	nt server, Security Threats, Network Security, Factors to consider in Firewall	CO3						
design, Limitat	ion of Firewalls.							
UNIT IV	ENCRYPTION	9						
Encryption ted	chniques, Symmetric Encryption: Keys and data encryption standard, Triple							
encryption, Se	ecret key encryption; Asymmetric encryption: public and private pair key	CO4						
encryption, Dig	gital Signatures, Virtual Private Network.							
UNIT V	ELECTRONIC PAYMENTS	9						
Overview, The SET protocol, Payment Gateway, certificate, digital Tokens, Smart card, credit								
card, magneti	c strip card, E-Checks, Credit/Debit card based EPS, online Banking.EDI							

Application in business, E- Commerce Law, Forms of Agreement, Govt. policies and Agenda.

TOTAL: 45 PERIODS

TEXT BOOKS

1. Ravi Kalakota, Andrew Winston, "Frontiers of Electronic Commerce", Addison Wesley.

REFERENCE BOOKS

- 1. Pete Lohsin, John Vacca "Electronic Commerce", New Age International
- 2. Goel, Ritendra "E-commerce", New Age International
- 3. Laudon, "E-Commerce: Business, Technology, Society", Pearson Education
- 4. Bajaj and Nag, "E-Commerce the cutting edge of Business", TMH
- 5. Turban, "Electronic Commerce 2004: A Managerial Perspective", Pearson Education

COURSE OUTCOMES

Upon completion of the course, students will be able to

_	·
CO1	Understand the basic concepts and technologies used in the field of management information
	systems
CO2	Understand the processes of developing and implementing information systems
CO3	Be aware of the ethical, social, and security issues of information systems
CO4	Develop an understanding of how various information systems work together to accomplish the
	information objectives of an organization
CO5	Understand the role of information systems in organizations, the strategic management
	processes, and the implications for the management

COs				PROGRAM SPECIFIC OUTCOMES (PSOs)

IT1813	AFFECTIVE COMPUTING	L	Т	Р	С
		3	0	0	3

- To learn emotional recognition techniques.
- To gain a broader knowledge and understanding of the various affective computing models.
- To learn about various machines developed using human emotion.

UNIT I	Introduction	9
Affective Co	omputing and the Challenge of mood measurement and forecasting. Affective	
phenomena	: emotion, mood, attitude/sentiment, personality. Computers, robots, smartphones	CO1
with emotio	nal intelligence.	
UNIT II	Emotion Theory	9
Dual-proces	theories of emotion, Constructivist theories, Appraisal theories. Affective	
Technology	nteraction and Empathy: Computational Appraisal Theory, reinforcement learning	CO2
based appro	aches, recognizing emotional context, facial affect recognition	
UNIT III	Emotionand Perception	9
Ethical issue	s related to emotion and AI, Emotionally Intelligent Human Computer Interaction,	
Emotion and	Perception, Decision-making, and Creativity, Emotion and Learning, Physiology of	CO3
Emotion, Be	navioral game theory, Neurological Mechanisms involved in Emotion,	
UNIT IV	Affect Recognition	9
Affect Reco	gnition by Wearable's and other Machines, Communicating Frustration/Stress in	
Autism and	d in Customer Experience, Responding to User Emotion to Reduce User	004
Frustration,	Inducing Emotion, Robots/Agents that "have" Emotion, Expression of Emotion by	CO4
Machines/A	gents/Synthetic characters	
UNIT V	Ethical Implications of Affective Computing	9
Philosophic	al, Social, Ethical Implications of Affective Computing, Machine/Mobile Empathy	CO5
and Emotio	nal Support, Lie Detection and Stress Detection.	605
		<u> </u>

TOTAL: 45 PERIODS

TEXT BOOKS

- 1.Affective Computing and Interaction: Psychological, Cognitive and Neuroscientific Perspectives by DidemGökçay and GülsenYildirim, IGI Global.
- 2. The Encyclopedia of Human-Computer Interaction by Jonas Lowgren, John M. Carroll, Marc

Hassenzahl, and Thomas Erickson, Interaction Design Foundation

REFERENCE BOOKS

- 1. Affective Computing by R.W. Picard, MIT Press.
- 2. The Oxford Handbook of Affective Computing by R.A. Calvo, S.K. D'Mello, J. Gratch, and A. Kappas,Oxford University Press.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Have a good understanding of the role of emotion
CO2	Have a good understanding of machine interaction.
CO3	Have an understanding of the aesthetic aspect of machine design.
CO4	Develop systems to reduce the emotional gap between humans and machines
CO5	Develop systems to reduce the emotional gap all within the context of interactions.

IT1815	SECURE CODING	L	Т	Р	С
		3	0	0	3

- This course aims to provide an understanding of the various security attacks and knowledge to recognize and remove common coding errors that lead to vulnerabilities.
- Itgives an outline of the techniques for developing a secure application.

UNIT I	Introduction	9							
Security, CIA	Triad, Viruses, Trojans, and Worms In a Nutshell, Security Concepts- exploit,								
threat, vulnera	bility, risk, attack. Malware Terminology: Rootkits, Trapdoors, Botnets, Key								
loggers, Hone	ypots. Active and Passive Security Attacks. IP Spoofing, Tear drop, DoS,								
DDoS,XSS, SO	QL injection, Smurf, Man in middle, Format String attack. Types of Security	CO1							
Vulnerabilities-	buffer overflows, Invalidated input, race conditions, access-control problems,								
weaknesses in authentication, authorization, or cryptographic practices. Access Control									
Problems									
UNIT II	Need for secure systems	9							
Proactive Secu	urity development process, Secure Software Development Cycle (S-SDLC),								
Security issues	s while writing SRS, Design phase security, Development Phase, Test Phase,	CO2							
Maintenance P	hase, Writing Secure Code – Best Practices SD3 (Secure by design, default and	COZ							
deployment), S	ecurity principles and Secure Product Development Timeline.								
UNIT III	Threat modelling process and its benefits	9							
Identifying the	Threats by Using Attack Trees and rating threats using DREAD, Risk Mitigation								
Techniques an	nd Security Best Practices. Security techniques, authentication, authorization.	CO3							
Defence in Dep	oth and Principle of Least Privilege.								
UNIT IV	Secure Coding Techniques	9							
Protection agai	inst DoS attacks, Application Failure Attacks, CPU Starvation Attacks, Insecure								
Coding Practice	es In Java Technology. ARP Spoofing and its countermeasures. Buffer Overrun-								
Stack overrun,	Heap Overrun, Array Indexing Errors, Format String Bugs. Security Issues in C								
Language: Stri	ng Handling, Avoiding Integer Overflows and Underflows and Type Conversion	CO4							
Issues- Memor	y Management Issues, Code Injection Attacks, Canary based countermeasures								
using StackGu	ard and Propolice. Socket Security, Avoiding Server Hijacking, Securing RPC,								
ActiveX and DO	COM								
UNIT V	Database and Web-specific issues	9							
SQL Injection 7	Techniques and Remedies,Race conditions, Time of Check Versus Time of Use	CO5							

and its protection mechanisms. Validating Input and Page 21 of 46 Interprocess Communication, Securing Signal Handlers and File Operations. XSS scripting attack and its types – Persistent and Non persistent attack XSS Countermeasures and Bypassing the XSS Filters.

TOTAL: 45 PERIODS

TEXT BOOKS

1. Writing Secure Code, Michael Howard and David LeBlanc, Microsoft Press, 2nd Edition, 2004

REFERENCE BOOKS

- 1. Buffer Overflow Attacks: Detect, Exploit, Prevent by Jason Deckar, Syngress, 1st Edition, 2005
- 2. Threat Modeling, Frank Swiderski and Window Snyder, Microsoft Professional, 1st Edition, 2004.

COURSE OUTCOMES

Upon completion of the course, students will be able to

•	•
CO1	To implement security as a culture and show mistakes that make applications vulnerable to
	attacks.
CO2	To understand various attacks like DoS, buffer overflow, web specific, database specific, web-
	spoofing attacks
CO3	To demonstrate skills needed to deal with common programming errors that lead to most
	security problems and to learn how to develop secure applications.
CO4	To identify the nature of the threats to software and incorporate secure coding practices
	throughout the planning and development of the product.
CO5	Able to properly handle application faults, implement secure authentication, authorization and
	data validation controls used to prevent common vulnerabilities.

SEMESTER VIII PROFESSIONAL ELECTIVE – VI

IT1821	IOT PLATFORM FOR SMART CITY PLANNING	L	Т	Р	С
		3	0	0	3

- Concepts of Internet of Things.
- IoT Architecture and Terminologies.
- IoT working platform for different system.
- IoT standards for smart city planning.
- IoT applications on different sectors.

UNIT I	INTRODUCTION TO IOT	9						
Overview and	Introduction - Internet of Things (IoT) - Web of Things (WoT) - Cloud of Things -							
Need for IoT	on Cloud - Services in the Cloud for the Internet of Things - Applications of IoT -	CO1						
Detailed Doma	ain Model.							
UNIT II	IOT ARCHITECTURE	9						
IoT Architectu	re - Sensor Layer - Gateway and Network Layer - Management Service Layer -							
Application La	ayer - IoT Enabling Technologies - Addressing Schemes - Data Storage and	CO2						
Analytics - V	isualization - Connected Domains - Connected Home -Connected Worker -	CO2						
Connected Au	tomobile - Connected Industry.							
UNIT III	IOT PLATFORMS DESIGN METHODOLOGY	9						
IoT Systems -	- Intel IoT Framework - Qualcomm IoT Framework - Microsoft IoT Framework -							
ARM IoT Fra	mework - Logical Design - Programming IoT platform (eg: Python, Mono C# ,	CO3						
Objective-C, F	Ruby), Raspberry Pi - Program for Firmware – Case Studies							
UNIT IV	IOT STANDARDS	9						
	OT standards - IOT and Smart City Standards and Policies: Global perspective –							
	rch and Standardization in Europe – Indian Standards formulation – Sectional	CO4						
•	d composition – Challenges in standardization - Digital infrastructure							
UNIT V	IOT APPLICATIONS	9						
Lighting as s	ervice – Smart Parking -Smart metering – Smart water management- Smart							
energy- Smart solid waste management - Smart mobility - Smart governance- Challenges in								
IoT Managem	ent.

 - Second Edition, Wiley Publisher, 2012.
- 2. Uckelmann, Dieter, Mark Harrison, and Florian Michahelles, "Architecting the Internet of Things". SpringerScience & Business Media, 2011.

REFERENCE BOOKS

- 1. ArshdeepBahga, Vijay Madisetti, "Internet of Things: A Hands-on Approach", 2014.
- 2. Doukas, Charalampos, Building internet of things with the Arduino, CreateSpace Independent Publishing Platform, 2012.
- 3. Lu, Yan, Yan Zhang, Laurence T. Yang, HuanshengNing. "The Internet of Things: From RFID to the NextGeneration Pervasive Networked Systems", CRC Press.
- 4. Massimo Banzi, "Getting Started with Arduino (Make: Projects)", O'Reilly Media. 2008.
- Samuel Greengard, "The Internet of Things (The MIT Press Essential Knowledge series)", MIT Press, 2015.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Analyze the different concepts and theories of Internet of Things.
CO2	Assess the various components of IoT architecture.
CO3	Perform the IoT applications in programming platform
CO4	Adopt the IoT standards for smart city planning
CO5	Apply the understandings of IoT in different sectors of smart city planning.

Arvind Narayanan, Joseph Bonneau, Edward Felten, Andrew Miller, and Steven Goldfeder. Bitcoin and cryptocurrency technologies: a comprehensive introduction. Princeton University Press, 2016. (Free download available)

REFERENCE BOOKS

Joseph Bonneau et al, SoK: Research perspectives and challenges for Bitcoin and cryptocurrency, IEEE Symposium on security and Privacy, 2015 (article available for free download) { curtain raiser kind of generic article, written by seasoned experts and pioneers}.

- 2. J.A.Garay et al, The bitcoin backbone protocol analysis and applications EUROCRYPT 2015 LNCS VOI 9057, (VOLII), pp 281-310. (Also available at eprint.iacr.org/2016/1048)
- 3. R.Pass et al, Analysis of Blockchain protocol in Asynchronous networks, EUROCRYPT 2017, (

eprint.iacr.org/2016/454)

4. R.Pass et al, Fruitchain, a fair blockchain, PODC 2017 (eprint.iacr.org/2016/916).

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	List and describe differences between proof-of-work and proof-of-stake consensus
CO2	Understand the basics of cryptocurrency
CO3	Interact with a blockchain system by sending and reading transactions.
CO4	Explain design principles of Ethereum.
CO5	Design, build, and deploy a distributed application.

- 4. George Lugar, .Al-Structures and Strategies for and Strategies for Complex Problem solving, 4/e,2002, Pearson Educations.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Apply basics of Fuzzy logic and neural networks
CO2	Explain Expert System and implementation
CO3	Apply Knowledge representation and semantic in Knowledge representation.
CO4	Develop some familiarity with current research problems and research methods in Al.
CO5	Demonstrate and Illustrate about functionalities of Robots and Robotics.

CS1821	SOFTWARE DEFINED NETWORKS	L	Т	Р	С
	(Common to CSE)	3	0	0	3

- To learn the fundamentals of software defined networks.
- To understand the separation of the data plane and the control plane.
- To study about the SDN Programming.
- To study about the various applications of SDN

UNIT I	INTRODUCTION	9
History of S	oftware Defined Networking (SDN) - Modern Data Center - Traditional Switch	
Architecture	 Why SDN – Evolution of SDN – How SDN Works – Centralized and Distributed 	CO1
Control and	Date Planes	
UNIT II	OPEN FLOW & SDN CONTROLLERS	9
Open Flow S	Specification – Drawbacks of Open SDN, SDN via APIs, SDN via HypervisorBased	CO2
Overlays – S	DN via Opening up the Device – SDN Controllers – General Concepts	COZ
UNIT III	DATA CENTERS	9
Multitenant a	and Virtualized Multitenant Data Center - SDN Solutions for the Data Center	CO3
Network – V	_ANs – EVPN – VxLAN – NVGRE	003
UNIT IV	SDN PROGRAMMING	9
Programming	SDNs: Northbound Application Programming Interface, Current Languages and	
Tools, Comp	osition of SDNs - Network Functions Virtualization (NFV) and Software Defined	CO4
Networks: Co	oncepts, Implementation and Applications	
UNIT V	SDN	9
Juniper SDN	Framework – IETF SDN Framework – Open Daylight Controller – Floodlight	CO5
Controller –	Bandwidth Calendaring – Data Center Orchestration	003
	TOTAL : 45 PER	≀IODS

TEXT BOOKS

- Paul Goransson and Chuck Black, —Software Defined Networks: A Comprehensive Approach, First Edition, Morgan Kaufmann, 2014.
- 2. Thomas D. Nadeau, Ken Gray, —SDN: Software Defined Networks, O'Reilly Media, 2013.

REFERENCE BOOKS

- 3. Fei Hu, Editor, —Network Innovation through Open Flow and SDN: Principles and Design, CRC Press, 2014.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Analyze the evolution of software defined networks
CO2	Express the various components of SDN and their uses
CO3	Explain the use of SDN in the current networking scenario
CO4	Design and develop various applications of SDN
CO5	Understand about SDN frameworks

OPEN ELECTIVES - I & II

OBT101	INDUSTRIAL BIOTECHNOLOGY	L	Т	Р	С
		3	0	0	3

OBJECTIVE

❖ To motivate students to excel in research and to practice the technologies in the field of Industrial biotechnology. To provide students with a solid understanding of Biotechnology fundamentals and applications required to solve real life problems. To provide students with an academic environment that is aware of professional excellence and leadership through interaction with professional bodies

UNIT I OVERVIEW OF THE CELL 9 Cell, structure and properties, prokaryotic and eukaryotic cells, structural organization and function of intracellular organelles; Cell wall, Nucleus, Mitochondria, Golgi bodies, Lysosomes, Endoplasmic reticulum, Peroxisomes and Chloroplast. CO1 UNIT II MICROBIAL GROWTH: PURE CULTURE TECHNIQUES 9 Enrichment culture techniques for isolation of chemoautotrophs, chemoheterotrophs and CO2

Enrichment culture techniques for isolation of chemoautotrophs, chemoheterotrophs and photosynthetic microorganisms. The definition of growth, mathematical expression of growth, Growth curve, availability of oxygen, culture collection and maintenance of cultures.

Media formulation: principles of microbial nutrition, formulation of culture medium, selective media, factors influencing the choice of various carbon and nitrogen sources, vitamins, minerals, precursors and antifoam agents. Importance of pH.

UNIT III MANAGEMENT OF WASTE Management of Contaminated land, lake sediments and Solid Waste, Anaerobic digestion, Biostimulation, Bioaugmentation, Phytoremediation, Natural attenuation, Vermicomposting

UNIT IV BIOREMEDIATION

CO4

9

Definition, constraints and priorities of Bioremediation, Types of bioremediation, In-situ and Exsitu bioremediation techniques, Factors affecting bioremediation. Bioremediation of Hydrocarbons. Lignocellulosic Compounds.

UNIT V BIOENERGY AND BIOMINING

CO₅

9

Bio energy: Energy and Biomass Production from wastes, biofuels, bio hydrogen and biomass. Biomining: Bioleaching, monitoring of pollutants, microbially enhanced oil recovery, microbial fuel cells.

TOTAL: 45 PERIODS

TEXT BOOKS

- 1. Molecular Biology of cell, Alberts. B et al. Developmental Biology, SF Gilbert, Sinauer Associates Inc.
- 2. AVN Swamy, Industrial Pollution Control Engineering, 2006, Galgotia Publication,

REFERENCE BOOKS

1. Environmental Biotechnology - Allan Stagg.

COURSE OUTCOMES

Upon completion of the course, students will be able to

- CO1 Design, perform experiments, analyze and interpret data for investigating complex problems in Biotechnology, Engineering and related fields.
- CO2 Decide and apply appropriate tools and techniques in biotechnological manipulation.
- CO3 | Justify societal, health, safety and legal issues
- CO4 Understand his responsibilities in biotechnological engineering practices
- CO5 Understand the need and impact of biotechnological solutions on environment and societal context keeping in view need for sustainable solution.

- 3. Nanoscience: Nanotechnologies and Nanophysics, Dupas C., Houdy P., Lahmani M., Springer-Verlag Berlin Heidelberg, 2007

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Demonstrate the understanding of length scales concepts, nanostructures and nanotechnology
CO2	Understand the different classes of nanomaterials.
CO3	Identify the CVD, MOCVD
CO4	Outline the applications of nanotechnology and
CO5	Develop an ability to critically evaluate the promise of a nanotechnology device.

OEC103 BASICS OF EMBEDDED SYSTEMS AND IOT L T P C 3 0 0 3

OBJECTIVES:

- Understand the concepts of embedded system design and analysis
- · Learn the architecture and programming of ARM processor
- Be exposed to the basic concepts of embedded programming
- · Learn the concepts of IOT

UNIT I INTRODUCTION TO EMBEDDED SYSTEM

9

Complex systems and microprocessors— Embedded system design process - Design methodologies- Design flows - Requirement Analysis — Specifications-System analysis and architecture design — Quality Assurance techniques—Design example: Model train controller.

UNIT II BASICS OF ARM ARCHITECTURE AND PERIPHERAL 9 INTERFACING

ARM Architecture Versions – ARM Architecture – Instruction Set – Stacks and Subroutines – Features of the LPC 214X Family – Peripherals – The Timer Unit – Pulse Width Modulation Unit – UART – Block Diagram of ARM9 and ARM Cortex M3 MCU

UNIT III EMBEDDED PROGRAMMING CONCEPTS

9

Components for embedded programs- Models of programs- Assembly, linking and loading – compilation techniques- Program level performance analysis – Software performance optimization – Program level energy and power analysis and optimization – Analysis and optimization of program size- Program validation and testing

UNIT IV INTRODUCTION TO IOT

9

Functional blocks of an IoT system - Basics of Physical and logical design of IoT - IoT enabled domains - Difference between IoT - Passive and active sensors - Different applications of sensors - IoT front-end hardware Case Studies - Smart Parking, Air Pollution Monitoring.

UNIT V COMMUNICATION PROTOCOLS FOR EMBEDDED AND 10T

Embedded Networking: Introduction-Serial/Parallel Communication - Serial communication protocols- RS485 - Synchronous Serial Protocols - Serial Peripheral Interface (SPI) - Inter Integrated Circuits (I2C). IoT Infrastructure - 6LowPAN - IPv6 - Wi-Fi, Bluetooth, ZigBee..

TOTAL: 60 PERIODS

TEXT BOOKS:

- Marilyn Wolf, —Computers as Components Principles of Embedded Computing System DesignII, Third Edition —Morgan Kaufmann Publisher (An imprint from Elsevier), 2012. (UNIT I, II, III, IV)
- 2. ArshdeepBahga, Vijay Madisetti, "Internet of Things, A Hands-on-Approach", 1st Edition, Universities press Pvt. Ltd., India, 2015.
- 3. Daniel Minoli, "Building the Internet of Things with IPv6 and MIPv6, 1st Edition, John Wiley & Sons", Inc, USA, 2013

REFERENCES:

- 1. Adrian McEwen and Hakim Cassimally, "Designing the Internet of Things", 1st Edition, John Wiley & Sons Ltd, UK, 2014
- 2. Peter Waher, "Learning Internet of Things", 1st Edition, Packt Publishing Ltd, UK, 2015.
- 3. Charles Bell, "Beginning Sensor Networks with Arduino and Raspberry Pi", 1st Edition, Apress Publishers, USA, 2013.
- 4. Raj Kamal, Internet of Things, Architecture and Design Principles, McGraw-Hill, 2017

COURSE OUTCOMES:

By the end of this course, the student should be able to:

CO1	Understand the Embedded System Design Process
CO2	Describe the architecture and programming of ARM processor
CO3	Outline the concepts of embedded system programming
CO4	Explain the basic concepts of IOT
CO5	Model Networked systems with basic protocols

OEE101 BASIC CIRCUIT THEORY Т 3 3 0 **OBJECTIVES** To introduce electric circuits and its analysis To impart knowledge on solving circuit equations using network theorems To introduce the phenomenon of resonance in coupled circuits. To introduce Phasor diagrams and analysis of three phase circuits **BASIC CIRCUITS ANALYSIS** UNIT I 9 Resistive elements - Resistors in series and parallel circuits; Ohm's Law; Kirchoffs laws -CO1 methods of analysis-Mesh current and node voltage. NETWORK REDUCTION AND THEOREMS FOR DC CIRCUITS **UNIT II** 9 Network reduction- voltage and current division, source transformation, star delta conversion; Network theorems- Thevenins and Norton Theorems, Superposition Theorem, CO₂ Maximum power transfer theorem, Reciprocity Theorem, Millman's theorem. **UNIT III ANALYSIS OF AC CIRCUITS** 9 Introduction to AC circuits- Inductive reactance, Capacitive reactance, Phasor diagrams, real power, reactive power, apparent power, power factor; RL, RC, RLC networks; Network CO₃ reductions- voltage and current division, source transformation; Mesh and node analysis; Network theorems- Thevenins and Norton Theorems, Superposition Theorem, Maximum power transfer theorem, Reciprocity Theorem, Millman's theorem. **UNIT IV** THREE PHASE CIRCUITS 9 A.C. circuits – Average and RMS value, Phasor Diagram, Power, Power Factor and Energy; Analysis of three phase 3-wire and 4-wire circuits with star and delta connected loads, CO₄ balanced & un balanced; phasor diagram of voltages and currents; power measurement in three phase circuits. **UNIT V** RESONANCE AND COUPLED CIRCUITS 9 Series and parallel resonance - frequency response, Quality factor and Bandwidth; Self and CO₅ mutual inductance; Coefficient of coupling; Tuned circuits – Single tuned circuits. **TOTAL: 45 PERIODS TEXT BOOKS** 1. William H. Hayt Jr, Jack E. Kemmerly and Steven M. Durbin, "Engineering Circuits Analysis", McGraw Hill publishers, edition, New Delhi, 2013. 2. Charles K. Alexander, Mathew N.O. Sadiku, "Fundamentals of Electric Circuits", Second Edition, McGraw Hill, 2013.

3. Allan H. Robbins, Wilhelm C. Miller, "Circuit Analysis Theory and Practice", Cengage Learning

India, 2013.

REFERENCE BOOKS

- 7. Sudhakar A and Shyam Mohan SP, "Circuits and Network Analysis and Synthesis", McGraw Hill, 2015.

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1	Ability to introduce electric circuits and its analysis
CO2	Ability to impart knowledge on solving circuit equations using network theorems
CO3	Ability to introduce the phenomenon of resonance in coupled circuits.
CO4	Ability to introduce Phasor diagrams and analysis of three phase circuits
CO5	Ability to impart knowledge on resonance and coupled circuits

OEE103	INTRODUCTION TO RENEWABLE ENERGY SYSTEMS	L	Р	Т	С
		3	0	0	3

- ❖ About the stand alone and grid connected renewable energy systems.
- Design of power converters for renewable energy applications.
- Wind electrical generators and solar energy systems.
- Power converters used for renewable energy systems.

UNIT I	INTRODUCTION		9				
generation on energy resour	aspects of electric energy conversion: impacts of renewable energy environment (cost-GHG Emission) - Qualitative study of different renewable ces: Solar, wind, ocean, Biomass, Fuel cell, Hydrogen energy systems and ole energy systems.	СО	1				
UNIT II	ELECTRICAL MACHINES FOR RENEWABLE ENERGY CONVERSION		9				
Reference the	ory fundamentals-principle of operation and analysis: IG and PMSG	СО	2				
UNIT III	POWER CONVERTERS		9				
Solar: Block diagram of solar photo voltaic system -Principle of operation: line commutated converters (inversion-mode) - Boost and buck-boost converters- selection of inverter, battery sizing, array sizing Wind: Three phase AC voltage controllers							
UNIT IV	ANALYSIS OF WIND AND PV SYSTEMS		9				
•	peration of fixed and variability speed wind energy conversion systems and Grid connection Issues -Grid integrated PMSG, SCIG Based WECS, grid ar system	СО	4				
UNIT V	HYBRID RENEWABLE ENERGY SYSTEMS		9				
•	rid Systems- Range and type of Hybrid systems- Case studies of Wind-PV er Point Tracking (MPPT).	СО	5				
	TOTAL : 45 P	ERIO	DS

OME104	INDUSTRIAL SAFETY ENGINEERING	L	Т	Р	С	
		3	0	0	3	

- ❖ To provide exposure to the students about safety and health provisions related to hazardous processes as laid out in Factories act 1948
- ❖ To familiarize students with powers of inspectorate of factories
- ❖ To help students to learn about Environment act 1986 and rules framed under the act.
- ❖ To provide wide exposure to the students about various legislations applicable to an industrial unit.
- ❖ To prepare onsite and offsite emergency plan.

UNIT I	FACTORIES ACT – 1948	9						
processes, we	norities – inspecting staff, health, safety, provisions relating to hazardous elfare, working hours, employment of young persons – special provisions – procedures-Tamil Nadu Factories Rules 1950 under Safety and health chapters et 1948	CO1						
UNIT II	ENVIRONMENT ACT – 1986	9						
General powers of the central government, prevention, control and abatement of environmental pollution-Biomedical waste (Management and handling Rules, 1989-The noise pollution (Regulation and control) Rules, 2000-The Batteries (Management and Handling Rules) 2001- No Objection certificate from statutory authorities like pollution control board. Air Act 1981 and Water Act 1974: Central and state boards for the prevention and control of air pollution-powers and functions of boards – prevention and control of air pollution – fund – accounts and audit, penalties and procedures.								
UNIT III	MANUFACTURE, STORAGE AND IMPORT OF HAZARDOUS CHEMICAL RULES 1989	9						
- information	uties of authorities – responsibilities of occupier – notification of major accidents to be furnished – preparation of offsite and onsite plans – list of hazardous and s – safety reports – safety data sheets.	CO3						
UNIT IV	OTHER ACTS AND RULES	9						
Indian Boiler Act 1923, static and mobile pressure vessel rules (SMPV), motor vehicle rules, mines act 1952, workman compensation act, rules – electricity act and rules – hazardous wastes (management and handling) rules, 1989, with amendments in 2000- the building and other construction workers act 1996., Petroleum rules, Gas cyclinder rules-Explosives Act 1983-Pesticides Act								
UNIT V	INTERNATIONAL ACTS AND STANDARDS	9						
•	Safety and Health act of USA (The Williames - Steiger Act of 1970) – Health and ct (HASAWA 1974, UK) – OSHAS 18000 – ISO 14000 – American National itute (ANSI).	CO5

AUDIT COURSES

AD1001	CONSTITUTION OF INDIA	L	Т	Р	С
		2	0	0	0

OBJECTIVES

- Teach history and philosophy of Indian Constitution.
- Describe the premises informing the twin themes of liberty and freedom from a civil rights perspective.
- Summarize powers and functions of Indian government.
- Explain emergency rule.
- Explain structure and functions of local administration.

UNIT I	INTRODUCTION	!
•	aking of the Indian Constitution-Drafting Committee- (Composition & Working) - f the Indian Constitution-Preamble-Salient Features	CO,
UNIT II	CONTOURS OF CONSTITUTIONAL RIGHTS & DUTIES	!
Freedom of	Rights-Right to Equality-Right to Freedom-Right against Exploitation Right to Religion-Cultural and Educational Rights-Right to Constitutional Remedies aciples of State Policy-Fundamental Duties	CO
UNIT III	ORGANS OF GOVERNANCE	!
President-Go	composition-Qualifications and Disqualifications-Powers and Functions-Executive overnor-Council of Ministers-Judiciary, Appointment and Transfer of Judges, is Powers and Functions	co
UNIT IV	EMERGENCY PROVISIONS	
Emergency F	Provisions - National Emergency, President Rule, Financial Emergency	CO4

UNIT V	LOCAL ADMINISTRATION		9	1
--------	----------------------	--	---	---

District's Administration head- Role and Importance-Municipalities- Introduction- Mayor and role of Elected Representative-CEO of Municipal Corporation-Pachayati raj- Introduction- PRI- Zila Pachayat-Elected officials and their roles- CEO ZilaPachayat- Position and role-Block level Organizational Hierarchy (Different departments)-Village level- Role of Elected and Appointed officials-Importance of grass root democracy
