(57) Abstract : The proposed invention is a Smart City Waste Management system integrating IoT, Machine Learning, and Wireless Sensor Networks to enhance solid waste management efficiency and sustainability. IoT sensors monitor waste levels and environmental conditions in real-time, transmitting data to central servers via Wireless Sensor Networks. Machine Learning algorithms analyze this data to optimize waste collection schedules and routes, predict waste generation patterns, and perform predictive maintenance on equipment. This system reduces operational costs, minimizes the carbon footprint, and prevents waste bin overflows, thereby improving public health and safety. The data-driven approach also supports effective recycling and waste diversion programs, contributing to the overall sustainability of urban environments. Through its innovative use of technology, the system addresses traditional waste management inefficiencies and aligns with smart city initiatives.
